Landscape and Urban Forest requirements in Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. These landscape standards shall include, but not be limited to, standards for provision of street trees in town centers and along public roadways, canopy trees and landscaped islands within parking lots, and special consideration of patriarch tree preservation. These standards will be developed to reflect the intent that town and neighborhood centers will be developed in an urban character with minimized setbacks and an emphasis on dense, mixed-use development. Various land uses in the Toe and the Heel shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5, Environmental Management, Tallahassee and Development Code or the Leon County EMA, whichever is applicable.

Policy 13.1.8: Agricultural and Silvicultural Activities **(EFF. 12/10/02; REV. EFF. 7/20/05)**

It is the intent of this Policy to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to insure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Toe and the Heel up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Toe and Heel.

(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Toe and Heel, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or sub-division plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the site plan or subdivision and to all land included in these parcels, such as land proposed to serve as buffer or open space.

(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Toe and Heel in accordance with the "2000 Silviculture Best Management Practices" as may be amended from time to time, Florida Department of Agriculture and Consumer Services, and existing local government ordinances.

(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber-harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

Policy LU 13.1.9 Alternative Heel Program **(Eff. 7/20/05)**

Notwithstanding any other provision of this comprehensive plan, at the election of the landowner or an authorized developer as much as 800 acres in the Heel as depicted on Figure 13-5 may be developed as a separate project, without regard to other development in the Welaunee Critical Planning Area, with a land use designation of "Residential Estate" and a zoning designation of "Residential Acre." Such development shall be reviewed by the City as a residential subdivision and shall be required to meet all normal and customary requirements for such a development under the City's land development regulations, including but not limited to the EMO. Any portion of the Heel developed under this alternative program shall be exempt from the Critical Area Plan except for the following provisions:

(1) LU 13.1.1(6)
(2) LU 13.1.1(8)
(3) LU 13.1.1(9)
(4) LU 13.1.2(1)
(5) LU 13.1.3(1)(H)
(6) LU 13.1.4(1)(F)
(7) LU 13.1.4(1)(J)
(8) LU 13.1.4(3)(A)
(9) LU 13.1.4(3)(B)
(10) LU 13.1.4(3)(C)
(11) LU 13.1.4(3)(D)
(12) LU 13.1.5(1)
(13) LU 13.1.5(6)
(14) LU 13.1.5(10) as modified
(15) LU 13.1.6(8)
(16) LU 13.1.6(10)
(17) LU 13.1.6(11)
(18) LU 13.1.8

Any portion of the Heel depicted in Figure 13-5 not developed under this alternative program shall be subject to the Critical Area Plan as it otherwise would apply. Uses and maximum densities and intensities of use for such portion shall be allocated pro rata based on the uses and maximum densities and intensities of use on Table 5-2 of the data and analysis report for the "Welaunee Critical Area Plan – Toe and Heel" (Jan. 17, 2002).

Objective 13.2: Development Concept for the Welaunee Arch **(Eff. 12/10/02; Rev. Eff. 1/11/21)**

The intent of the Welaunee Arch Master Plan is to provide an area-wide plan for the portion of the Welaunee Critical Planning Area located north of Interstate-10 and west of Miccosukee Road (i.e. the "Arch"). This master plan sets the standards and guidelines to coordinate one or more implementing development plans such that the development of the Arch results in a new, integrated community with a variety of land uses, diverse neighborhoods and mixed-use centers, a region-serving activity center, active and passive recreational options, and abundant open space. The development of the Arch consistent with this master plan shall be implemented in phases, connected by a multi-modal transportation system, served by regional, master planned stormwater facilities, and designed in ways that protect natural resources.

Policy 13.2.1: Concept. **(EFF. 1/11/21)**

This Welaunee Arch Master Plan satisfies the requirements of the Tallahassee-Leon County Comprehensive Plan for a planned development master plan in order to foster development on the Welaunee Arch with a region-serving, mixed-use activity center; residential areas with a strong sense of place and a range of diverse housing choices; transportation choices with linkage to commercial services and jobs; and planned recreation and open space.

Policy 13.2.2: Discourage Urban Sprawl. **(EFF. 1/11/21)**

The Welaunee Arch is located wholly within the Urban Services Area. Development within the Arch will discourage urban sprawl by, among other things, directing growth to a next-in-line area identified for future urban development since 1990; promoting walkable, connected neighborhoods that support a range of housing choices; implementing a multimodal transportation system that supports the internal capture of transportation trips; creating a balance of residential and nonresidential land uses through integrated, mixed-use centers and diverse housing types in close proximity to nonresidential uses; promoting the efficient and cost-effective provision or extension of public facilities and services; protecting and preserving natural resources; protecting environmentally sensitive lands; and providing public recreation and open space.

Policy 13.2.3: Implementation. **(EFF. 1/11/21)**

The Welaunee Arch Master Plan shall be implemented by one or more Planned Unit Development (PUD) Concept Plans, Regulating Plans with Form-based Codes, or other implementing plan as allowed by the Comprehensive Plan at the time of development. All such plans are referred to herein as Planned Development Concept Plans or PUD Concept Plans. Such PUD Concept Plans shall be consistent with this master plan and contain guidelines and requirements for land use categories, transportation facilities, access management, and other specific design standards. All PUD Concept Plans shall be consistent with the stormwater facility master plan and with transportation plans for the Phase of the Arch in which they are located, as developed and approved prior to or concurrent with the initial PUD Concept Plan for that Phase. The phasing of development in the Arch shall be consistent with necessary infrastructure and supporting services and the phasing requirements of Policy 13.2.5. Development Phases and PUD Concept Plans shall consider previously approved PUD Concept Plans within the Arch and anticipated development based on Figures 13-5 through 13-7 such that open space, stormwater, and transportation systems are planned and implemented consistent with the Policies in this Welaunee Arch Master Plan portion of the Welaunee Critical Area Plan.

A PUD Concept Plan may address only a portion of a Phase or may address more than one Phase. The minimum size for the initial PUD Concept Plan for any Phase of the Arch shall be 350 acres. Subsequent PUD Concept Plans shall be implemented consistent with this Master Plan and the applicable implementing plan standards allowed by the Comprehensive Plan at the time of development.

LAND USE

Policy 13.2.4: Land Use Districts. (EFF. 1/11/21)

The Master Plan forms the basis upon which organizing elements are oriented to convey the overall urban form. Lands within the Welaunee Arch shall be planned for the generalized land uses described in this Policy and Table 1. As depicted on Figure 13-5, the Welaunee Arch shall be designed with the following land use districts:

(1) **Northeast Gateway District –** The intent of the Northeast Gateway District is to provide an area that capitalizes on the location of a potential future interchange with Interstate-10 and Welaunee Boulevard by including well-designed, region-serving commercial and employment uses. The Northeast Gateway District as identified on Figure 13-5 shall be comprised of:

a. Activity Center. An activity center zone shall be a mixed use zone including between 75 and 280 acres. The activity center zone shall be located east of the residential zone, as generally depicted on Figure 13-5, and no closer than 1,000 feet from the Buckhead subdivision. This zone shall contain a diverse mixture of region-serving commercial, office, hotel, and other non-residential uses with a trade area extending beyond the Welaunee Arch. This zone may also contain higher-density residential and public and civic uses that can contribute to the center's vitality and sustainability. Residential densities in this zone shall have a minimum of 10 dwelling units per acre and a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Non-residential intensities shall range from 4,000 square feet per acre to 30,000 square feet per acre. The mixture of uses shall be 10% to 55% residential and community services uses and 45% to 90% non-residential uses. The activity center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

b. **Employment Center.** An employment center zone shall be a mixed-use zone located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities and shall contain 75 to 280 acres. Employment centers are intended to contain a mix of uses and not be a single-use environment. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure

including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed in Employment Center zones except when located above the ground floor in mixed-use buildings. Development intensities of non-residential uses in the employment center zone shall range from 8,000 square feet per acre to 40,000 square feet per acre. This zone shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. The development of a PUD Concept Plan that includes this zone shall include coordination with Star Metro to include preliminary plans for transit connectivity between this zone and other mixed-use zones in the Arch. The employment center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

c. **Residential.** A residential zone shall be located between the Buckhead subdivision and the mixed-use zones as generally depicted on Figure 13-5. This residential zone shall include between 30 and 100 acres. Residential development density shall be no less than 2 dwelling units per acre and not exceed 6 dwelling units per acre. Accessory dwelling units shall not count towards the residential density in this zone.

d. **Open Space/Greenway.** The Open Space and Greenway area within the Northeast Gateway District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with the development standards of Policy 13.2.37. Specifically, an open space zone shall be located along the border with the established Buckhead Neighborhood serving as a buffer between the existing Buckhead Neighborhood and new development in the Arch. This zone shall be no less than 250 feet wide and will include the Welaunee Greenway and existing utility easements. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(2) **West Arch District** – The intent of the West Arch District is to provide an area with a mixed-use center that serves residents of both Welaunee via Welaunee Boulevard and Killearn Neighborhoods via Shamrock South. It is the intent of this District to allow the highest density and intensity development within the mixed-use center, gradually transitioning to lower densities and intensities as distance

from the mixed-use center increases. The West Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the West Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone.

b. Town Center. A town center zone shall be a mixed-use development planned as a compact, efficient node between 20 and 120 acres in size. A town center shall contain uses that serve surrounding neighborhoods as well as those traveling through the area. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, open space, and civic, religious and institutional uses (including day care services for children and adults). The Town Center shall include uses mixed horizontally and vertically. It is the design intent to plan for multiple storefronts and multiple retailers in the town center, so all of the available retail space is not aggregated into one or two "big-box" stores.

Development intensities in the town center shall range from 4,000 square feet per acre up to 30,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 50,000 gross square feet. Residential densities shall be no less than 8 dwelling units per acre up to a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. The mixture of uses shall be 10% to 55% residential and community services and 45% to 90% non-residential uses. Town centers shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. Community open space in the form of public squares and greens or urban forest canopy areas shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

c. **Village Center.** A village center zone shall allow small retail, specialty retail, office, restaurants, services, open space, residential and other uses (including day care services for children and adults) that support residential uses within the District. This zone is also intended to function as a neighborhood focal point and is envisioned to have churches, town squares, and other civic, religious, and institutional uses. The village center zone shall range in size from 5 to 50 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape with street trees and landscaping, and other such solutions, shall be utilized to create a pedestrian friendly, walkable center. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages.

The mixture of uses shall be 0% to 50% residential and community services and 50% to 100% non-residential uses. Development intensities in the village center zone shall range from 4,000 square feet per acre to 20,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 30,000 gross square feet. Residential development in the Village Center shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens or urban forest canopy areas shall be planned as the focal point of a village center. No minimum on-site open space shall be required for each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

d. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In the neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use zones that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods. Residential development shall be limited to a minimum of 2 dwelling units per acre with a maximum density of 10 dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway.

f. **Open Space/ Greenway.** The Open Space and Greenway area within the West Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(3) **North Arch District** – The intent of the North Arch District is to provide an area with a mixed-use center that serves residents of Welaunee, Killearn, and the residents along Roberts Road and Crump Road. The North Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the North Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone as defined in the West Arch District policy.

b. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall be not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. Residential development shall be a minimum of 2 dwelling units per acre and shall not exceed a density of 10

dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the North Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated Open Space.

Additionally, high quality native forests in the North Arch District shall be protected, preserved, and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

e. **Regional Park.** A regional park with active recreation may be located in the North Arch District. If a regional park is designated within this District, it shall be designed to include connectivity with the trail system around any high-quality successional forests/native forests as described in the open space zone for this District.

(4) **Conservation Design District** - The intent of the Conservation Design District is to provide an area that is primarily residential in nature with a small village center. The residential development is intended to be arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. The village center is intended to include non-residential uses in a location that minimizes the number of miles residents drive to meet their daily needs and promote the internal capture of vehicular trips. The Conservation Design District as identified on Figure 13-5 shall be comprised of:

a. **Clustered Residential.** The cluster residential zone shall be comprised of clustered development that sets aside a minimum of 50% open space as a reserve area, comprised of such things as special development zones, preservation and conservation features, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, and stormwater facilities designed as a community amenity. Adjacent open space as designated on

~~Figure 13-5 and consistent with Policy 13.2.37 may be included in the Conservation Design District reserve area calculations for cluster development. The development area shall be the area not set aside as reserve area and shall comprise no more than 50% of the total conservation design district. Within this district, development area shall be located on the least environmentally sensitive areas; be contiguous to the greatest extent practicable; and allow maximum open space to be easily maintained in the reserve area. The development area shall be developed at a minimum of two dwelling units per acre and a maximum of 12 dwelling units per acre. Planned Unit Developments may provide for a density bonus up to 20 dwelling units per acre where more area is set aside than required or where greenways, trails, or other passive recreational opportunities are provided in the reserve area.~~

~~The conservation design district shall contain a mixture of housing types. Allowable housing types include single family detached homes, single family attached homes, duplexes, triplexes, fourplexes, courtyard buildings (a 1 to 3.5 story detached structure consisting of multiple side by side and/or stacked dwelling units oriented around a courtyard or series of courtyards), and cottage courts (a group 1 to 1.5 story detached structures arranged around a shared court visible from the street). The conservation design district shall not contain greater than 80% of any one housing type. Accessory dwelling units are allowable per City of Tallahassee land development code. Accessory dwelling units do not count towards the overall density and do not count as a different housing type for the purpose of requiring a mixture of housing types. Design standards for this District shall include Dark Sky principles to prevent and reduce light pollution.~~

~~The acreage of the reserve area shall be preserved as open space consistent with Policy 13.2.37, shall incorporate existing or planned public or private open space and greenspace to the greatest extent practicable, and shall be of sufficient size and buffered to ensure the protection of all critical on-site resources that are to be preserved and to accommodate authorized uses which includes natural open space, passive recreation uses (e.g., greenways, picnic areas or open fields), stormwater facilities, or other environmental conservation purposes.~~

~~All preservation areas, special development zones, conservation areas, archaeological sites and view-shed areas within designated protection zones for canopy roads shall be incorporated into the reserve area to the greatest extent practicable.~~

~~Stormwater management facilities which are otherwise permissible are allowed in the reserve area provided that the facilities are located outside of preservation areas, canopy road zones, naturally forested areas, special development zones, and meet either of the applicable following two standards:~~

i. Stormwater management facilities shall have side slopes of flatter than 4:1, and/or
ii. Stormwater management facilities shall have appropriate tree and plant species that visually integrates the stormwater facility into the overall reserve area.

All such facilities shall be designed as community amenities, with trails, observation decks, or platforms where appropriate.

b. **Village Center.** The Conservation Design District shall include a Village Center Zone subject to the design standards for a Village Center zone in the West Arch District Policy.

c. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed10,000 gross square feet.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the Conservation Design District includes all open space and reserve area within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37 and shall be included in the reserve area calculations for cluster development. At a minimum 50% of this District shall be designated as Open Space.

High quality successional forests and native forests as defined in the Tallahassee-Leon County Comprehensive Plan Glossary in the Conservation Design District shall be protected and preserved and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features

Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

Core canopy or core forests, as defined in the City of Tallahassee's Urban Forest Master Plan, that is part of the fragmentation class of Core Canopy (>500 acres) and shown on the Preliminary Environmental Map (Figure 13-6), shall be protected, included in the open space area, and shall be connected to greenways and open space that function as wildlife corridors. These areas may be included in the reserve area calculations for cluster development. Potential locations of core forest areas that are part of the fragmentation class of Core Canopy (>500 acres) are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

(5)**Residential Reserve District** - The Residential Reserve District as identified on Figure 13-5 is intended to be residential in nature, arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. This District is also intended to maintain compatibility with established residential development along Roberts Road and Crump Road. The Residential Reserve District shall be subject to the Clustered Residential policy of the Conservation Design District with a maximum density of 6 dwelling units per acre and a minimum reserve area requirement of 60%. The Residential Reserve District shall include open space buffers of a minimum width of 250 feet to Roberts Road and Crump Road that may include the Welaunee Greenway system, open space, and reserve area from cluster subdivision development. The Residential Reserve District may alternatively be established as Open Space through an optional Alternative Development Program as established in Policy 13.2.44.

(6) **Open Space** – Open Space area shall be incorporated into each District. Districts shown in Figure 13-5 include the adjacent open space. The Primary Open Space System shall be designed as a connected network of open space as generally depicted on Welaunee Arch Map, Figure 13-5, which shall include Conservation and Preservation areas as generally depicted on the Preliminary Environmental Features Map, Figure 13-6, aesthetic open space, Greenways, and the Perpetual Drainage Easement held by the City and County. A minimum of 20% of Phase 1, 50% of Phase 2, 60% of Phase 3, and 40% of the total gross area of the Arch shall be designated Open Space unless offset through the Alternative Development Program in Policy 13.2.44. Conservation and Preservation Areas as defined in Policy 1.3.1 and 1.3.4 of the Conservation Element account for approximately 19% of the overall gross area of the Welaunee Arch. The remainder of the designated open space, which will include approximately 21% of the overall gross area, shall consist of open space incorporated into the development plan for each District or part of the Primary Open Space System. The Open Space Area shall be subject to

the design and development criteria in Policy 13.2.37. The Conservation and Preservation Areas shall be subject to the design and development criteria of Policy 13.2.38.

Policy 13.2.5: Phasing. **(EFF. 1/11/21)**

Development of the Arch shall be implemented in phases consistent with this plan and necessary infrastructure (including water and sewer) and supporting services (including adequate schools, police and fire service). Phase 1 shall include the Gateway District, West Arch District, and the North Arch District. Phase 2 shall include the Conservation Design District. Phase 3 shall include the Residential Reserve District. A PUD Concept Plan may address only a portion of a phase or may address more than one phase. Phase 1 of the Welaunee Arch must include one Town Center Zone and one Village Center Zone, either of which can be located in the West Arch District or North Arch District.

Phase 2 shall not be developed until 1,500 dwelling units and 150,000 square feet of non-residential uses have been constructed in Phase 1.

Phase 3 shall not be developed until at least 70% of the gross acreage of Phase 2 is included in an adopted PUD Concept Plan. Sub phases or stages of each phase may be developed in separate PUD Concept Plans.

It is the intent that infrastructure improvements occur contemporaneous with development. This timing of infrastructure with development prevents stranded or early investment in infrastructure.

Table 1. Land Uses in the Welaunee Arch

District	Zone	Size	Nonresidential Intensity	Residential Density	Mixture
Northeast Gateway District (Phase 1)	Activity Center	75-280 acres	4,000-30,000 SF/acre	10-20 DU/acre	10-55% residential 45-90% nonresidential
	Employment Center	75-280 acres	8,000-40,000 SF/acre	n/a[1]	n/a[1]
	Residential	30-100 acres	n/a	2-6 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
West Arch District (Phase 1)	Town Center[2]	20-120 acres	4,000-30,000 SF/acre	8-20 DU/acre	10-55% residential 45-90% nonresidential
	Neighborhood	¼-½ mile from Town Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
North Arch District (Phase 1)	Village Center[2]	5-50 acres	4,000-20,000 SF/acre	4-14 DU/acre	0-50% residential 50-100% nonresidential
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	
	Open Space	Min. 20% of gross area in Phase 1			
Conservation Design District (Phase 2)	Village Center	5-50 acres	4,000-20,000 SF/acre	4-14 DU/acre	
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a

~~I. Land Use~~

	~~Conservation Design Clustered Residential~~	~~Maximum 50% of Conservation Design District~~	~~n/a~~	~~2-12 DU/acre~~	
	~~Open Space~~	~~Min. 50% gross area as Reserve Area in Phase 2.~~			
~~Residential Reserve (Phase 3)~~	~~Residential Reserve Clustered Residential~~	~~40% of Residential Reserve District~~	~~n/a~~	~~0-6 DU/acre~~	
	~~Open Space~~	~~60% gross area as Reserve Area in Phase 3.~~			
~~Open Space[3,4]~~	~~Open Space~~	~~Minimum of 20% of Phase 1; 50% of Phase 2; no less than 60% of Phase 3; and no less than 40% of total area in Welaunee Arch. Open Space includes Conservation and Preservation Areas, Reserve Area, and Primary Open Space Areas.~~			
	~~Conservation/ Preservation[5]~~	~~Approximately 900 acres (19% of the Arch)~~			
	~~Other Open Space~~	~~Approximately 1000 acres (21% of the Arch)~~			

~~1. Residential uses permitted only above ground floor in mixed-use buildings~~

~~2. Town Center Zone and Village Center Zone are permitted in West Arch District and North Arch District, provided one of each zone is located in Phase 1.~~

~~3. Open Space, including Conservation and Preservation Areas and Greenways shall be incorporated into all development Phases.~~

~~4. Open Space requirements apply unless offset through the Alternative Development Program in Policy 13.2.44.~~

~~5. Precise size and location of Conservation and Preservation Areas to be determined through a Natural Features Inventory.~~

~~*Policy 13.2.6: Development Totals.* **(EFF. 1/11/21)**~~

~~Densities and intensities for development of the Arch shall be consistent with Policy 13.2.4 and other policies of this master plan. The maximum development for the Arch shall not exceed 12,500 residential units and 3,000,000 square feet of non-residential development.~~

Policy 13.2.7: Development Standards for Mixed-Use Zones. **(Eff. 1/11/21)**

The Activity Center, Employment Center, Town Center, and Village Centers (collectively "Mixed-Use Zones") shall be subject to the following development standards in addition to the requirements of Policy 13.2.4:

(1) PUD Concept Plans that include mixed-use zones shall include specific design standards, public facility standards, and building standards, such that the district develops as a compact, walkable urban district. At a minimum, the form-based code or design standards shall address relationship between building facades and the public realm, the form and mass of buildings in relation to one another, and the scale and types of streets and blocks. Design standards shall also minimize driveway cuts along sidewalks facilities by requiring alleys, shared access points, and/or structured parking facilities.
(2) Development in the Mixed-Use Zones may request a waiver from the requirements in the Environmental Management Ordinance for natural area, landscaping and buffers for the purpose of maximizing intensity and density within the mixed-use zone.
(3) Stormwater detention and treatment facilities for Mixed-Use Zones shall be designed in accordance with applicable standards and should be located outside of a Mixed-Use Zones in order to promote a compact pedestrian-oriented arrangement of land uses. Stormwater facilities may be located within mixed-use zones if alternative sites are not reasonably available outside of mixed-use zones or where stormwater facilities can be integrated with pedestrian friendly environments. PUD Concept Plans shall include design standards for stormwater facilities that are consistent with the intent of the zone.
(4) Building heights in mixed-use centers shall not exceed 65 feet from grade.

Policy 13.2.8: Inclusionary housing. **(Eff. 1/11/21)**

Development within the Welaunee Arch shall comply with any ordinances in effect at the time of development that address the need for affordable or inclusionary housing. Each PUD Concept Plan shall include a Housing Plan designed to achieve compliance with the City's Inclusionary Housing Ordinance, or other affordable and inclusionary housing ordinances in effect, by buildout of the area governed by that Concept Plan.

Policy 13.2.9: Housing affordability. **(Eff. 1/11/21)**

In addition to complying with ordinances in effect at the time of development that address the need for affordable or inclusionary housing, a range of housing choices shall be provided to accommodate diverse income levels, age groups, people with a range of abilities, and housing needs. Granny flats, garage apartments, and other accessory dwelling units will not be included in unit or density calculations or transportation impact analyses. The range of housing options provided shall be based on the land use districts and zones within each District. No land use district or zone within a district that allows residential development shall limit housing types to only single-family detached homes.

In order to promote a range of housing types and choices, the City of Tallahassee shall incentivize the development of workforce housing within ¼ mile of mixed-use zones or transit hubs. The City shall also incentivize the provision of housing for low-income and very-low income families, seniors, and/or people with disabilities. Incentives shall be incorporated into PUD Concept Plans and may include increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures such as the incentives allowed in the City's Inclusionary Housing Ordinance.

Policy 13.2.10: Community Facilities. **(EFF. 1/11/21)**

Community Services, Light Infrastructure, Community Parks, and Neighborhood Parks shall be allowed uses in any land use district or zone consistent with the intent of each district and zone.

Policy 13.2.11: Essential Services. **(EFF. 1/11/21)**

Mixed-use centers and residential neighborhoods shall be designed to facilitate essential services, such as fire, police, and emergency medical services consistent with generally accepted response times. PUD Concept Plans shall include the locations of essential services upon request by and through coordination and formal agreement with the City of Tallahassee and/or the Leon County School Board.

Policy 13.2.12: Landscaping. **(EFF. 1/11/21)**

All landscaped areas, except athletic playing fields and golf course fairways and greens, shall utilize drought-resistant native plant materials from the "Florida Friendly Landscaping™ Guide to Plant Selection and Landscape Design" or other regionally appropriate plant material guide approved by the City. Landscaping may not include invasive species listed by the Florida Exotic Pest Plan Council. Landscaping in mixed-use and neighborhood zones shall include shade trees planted as street trees. PUD concept plans may include incentives, such as reduced tree mitigation, for shade trees planted as street trees outside of mixed use and neighborhood zones.

Policy 13.2.13: Crime Prevention through Design. **(EFF. 1/11/21)**

Integrated mixtures of uses shall be located and designed consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement, and natural access control.

Policy 13.2.14: General Compatibility. **(EFF. 1/11/21)**

Development in the Welaunee Arch shall be compatible with adjoining land uses through measures including but not limited to density and height limitations, setbacks, and

vegetative and open space buffers. Unless otherwise specified in this master plan, buffers are not required between or within land use districts in the Welaunee Arch.

Policy 13.2.15: Compatibility with Existing Residential Development. **(EFF. 1/11/21)**

To facilitate compatibility with the existing residential developments located east of Centerville Road and west of Miccosukee Road that are designated as Residential Preservation or Urban Residential-2 on the Future Land Use Map, land in the Welaunee Arch that is within 1,000 feet of such neighborhoods as measured from the boundary of the neighborhood shall be limited to open space, greenways, and residential uses with a maximum density of 6 dwelling units per acre comparable to the Residential Preservation Land Use Category. Mixed Use Land Use districts shall extend no closer than 1,000 feet from these existing residential developments. The location and size of each specific use category shall be depicted on a Planned Unit Development (PUD) Concept Plan.

Policy 13.2.16: Interim Uses. **(EFF. 1/11/21)**

Agricultural and silvicultural uses, whether existing or new, shall be an allowed interim use in any area of the Welaunee Arch on which development is planned to occur, up to and until the start of actual construction on the applicable land.

TRANSPORTATION

Policy 13.2.17: Transportation System. **(EFF. 1/11/21)**

The Welaunee Arch shall be served by a transportation system designed to optimize mobility. Major thoroughfares shall be generally located as depicted on Welaunee Arch Transportation Map, Figure 13-7, with the final location and design to be based upon site-specific environmental, engineering, and related considerations. Thoroughfares connecting through the Arch to areas beyond the Arch shall be arterials designed as boulevards for high vehicular capacity and moderate speeds not to exceed a design speed of 45 miles per hour with sidewalks on both sides of the roadway and bicycle facilities. Thoroughfares connecting mixed use areas within the Arch shall be collectors designed as avenues with high vehicular capacity and low to moderate speeds not to exceed a design speed of 30 miles per hour with sidewalks on both side of the roadway and bicycle facilities. On thoroughfares, a shared use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for the sidewalk on one side of the road and the bike lanes for that facility. Within mixed-use centers and neighborhoods, where feasible based on engineering design criteria and the protection of environmental features, a grid of interconnected streets will provide alternative travel paths. Energy efficiency shall be accomplished in areas that are intended for greater densities and intensities through support of frequent transit service and providing a safe, comfortable and attractive environment for pedestrians and cyclists. Transportation facility needs, including planned future corridors and projected deficiencies on existing facilities surrounding the Arch, resulting from projected development in the Arch as identified through traffic models completed as part of the I-10 Interchange PD&E and/or updates to MPO Long Range Transportation Plans shall be adopted into the applicable Mobility Element

policies and/or figures and updates to the Capital Improvements Element when applicable.

Policy 13.2.18: Internal Trip Capture. **(EFF. 1/11/21)**

The transportation system, along with the mixture of uses, shall be designed to achieve an internal capture of at least 20% of the vehicular trips generated on-site at buildout. To achieve this minimum internal capture rate, mixed-use and neighborhood zones shall be developed with a mixture of uses and higher density residential development located adjacent to non-residential uses. Residential zones shall be connected to mixed use zones by a network of sidewalks, shared use paths, and bicycle facilities designed to provide safe, comfortable transportation options. Transit facilities shall be coordinated with Star Metro to ensure infrastructure that supports connectivity to various transit routes.

Policy 13.2.19: Northeast Gateway/Welaunee Boulevard. **(EFF. 1/11/21)**

The Northeast Gateway, which is a major infrastructure project for the entire Welaunee Critical Planning Area, consists of region-serving roads to distribute traffic north, south, east and west from a potential I-10 interchange at Welaunee Boulevard, which was recommended in the Florida Department of Transportation (FDOT) Master Plan Update on February 28, 2013. North of I-10, the roadways that make up the Northeast Gateway include the extension of Welaunee Boulevard from south of I-10 north through the Arch, and the extension of Shamrock South from Centerville Road to U.S. 90 (Mahan Drive). Welaunee Boulevard and Shamrock South Extension are programmed to be constructed by the Blueprint Intergovernmental Agency consistent with the voter-approved Northeast Gateway project and may be phased based upon trip demand. Within the Arch, both Welaunee Boulevard and Shamrock South Extension shall be designed to function as a complete street to promote mobility for multiple users – pedestrians, bicyclists, motorists, and transit riders of all ages. No residential driveways shall connect directly to Welaunee Boulevard or Shamrock South Extension.

Policy 13.2.20: I-10 Flyover or Interchange. **(EFF. 1/11/21)**

Welaunee Boulevard shall connect to a flyover across I-10 or a potential interchange, if approved by the Federal Highway Administration, in order to facilitate vehicular movement to Welaunee Boulevard south of I-10. Any flyover or potential interchange shall meet federal requirements to ensure the safe and efficient use of I-10.

Welaunee Boulevard shall connect to a potential interchange with Interstate-10, subject to approval by the Federal Highway Administration and the Florida Department of Transportation. The potential interchange of Welaunee Boulevard and Interstate-10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange that supports a gridded street network and city blocks on the north side of Interstate-10. The gridded street system shall serve to divert traffic onto a network of town center streets and shall support an environment that

prioritizes pedestrian mobility. Welaunee Boulevard may pass over Interstate 10 unless and until such time that a potential interchange is approved and constructed.

Policy 13.2.21: Right-of-Way Reservation. **(Eff. 1/11/21)**

The landowner shall reserve for future conveyance the right-of-way for Welaunee Boulevard, the Shamrock South Extension, and the I-10 Flyover or Interchange as generally depicted on Welaunee Arch Transportation Map, Figure 13-7. The terms of such reservation shall be consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990, as restated and amended. Rights-of-way shall be restricted to transportation facilities and compatible infrastructure.

Policy 13.2.22: Complete Streets. **(Eff. 1/11/21)**

The transportation system shall be designed with complete streets in accordance with Objective 1.2 [M] and associated policies in the Mobility Element. A PUD Concept Plan shall provide in mixed-use centers for complete streets that include safe and convenient pedestrian facilities reasonably free from hazards and adequately separated from streets that carry high volumes of vehicular traffic and create a reasonable and direct route between destinations. Sidewalks shall be provided on both sides of local streets in mixed-use zones. Sidewalks shall be provided on at least one side of local streets in zones that allow only residential development.

Policy 13.2.23: Bicycle Facilities. **(Eff. 1/11/21)**

A PUD Concept Plan shall include a network of bicycle facilities, including on-street and off-street facilities, which should be coordinated with the open space areas of the Arch. The intent is to provide safe and convenient movement for bicycles reasonably free from hazard and providing a reasonable and direct route between destinations. Bicycle facilities shall be designed where practical to connect to similar facilities in other PUD Concept Plans. Where feasible, a shared-use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for sidewalks and bike lanes. Protected bicycle lanes may be incorporated where feasible. Where bicycle, pedestrian, and/or shared use path facilities intersect the Welaunee Greenway, opportunities shall be provided to access the Greenway.

Policy 13.2.24: Parking in Mixed-Use Centers. **(Eff. 1/11/21)**

In mixed-use centers, vehicular parking shall be located on the street, in parking structures, or off-street at the street level. Off-street parking shall be provided in the rear of buildings where feasible based on engineering design standards and the protection of environmental features, or on the side of buildings and shall be limited in size and scale through such measures as shared parking, parking credits, and maximum parking limits. PUD Concept Plans may include incentives, such as reduced parking or setback requirements, for the use of building-mounted solar systems on parking structures.

~~Policy 13.2.25: Canopy Roads.~~ **~~(Eff. 1/11/21)~~**

~~Direct access to Canopy Roads shall not be permitted for any residential or nonresidential uses except parks or open space. Road access to the Welaunee Arch shall be provided from Miccosukee Road at no more than three locations. Road access to the Arch shall be provided from Centerville Road in no more than two locations. Canopy Road Zones shall be provided along Miccosukee Road and Centerville Road in addition to the Welaunee Greenway. PUD Concept Plans may include incentives, such as reduced tree mitigation, in return for new roadways being designed and planted with shade trees consistent with the requirements for future canopy road designation.~~

~~Policy 13.2.26: Transit.~~ **~~(Eff. 1/11/21)~~**

~~Mixed use centers are intended to be designed with transit as a component of the multimodal transportation system in the Welaunee Arch. As PUDs are developed, coordination with Star Metro shall occur to ensure the plan accommodates necessary infrastructure to support anticipated transit service. PUDs shall address connectivity between mixed use zones and the transit hub identified in Policy 13.1.4.~~

~~Policy 13.2.27: Electric, Connected and Automated Vehicles.~~ **~~(Eff. 1/11/21)~~**

~~As PUDs are developed, coordination with the Planning Department and the City's Public Infrastructure departments shall occur to ensure the plan accommodates necessary infrastructure to support charging infrastructure for electric vehicles and infrastructure to support Connected and Automated Vehicles (CAV). PUDs may include incentives, such as reduced parking and setback requirements, for development that is electric vehicle capable or electric vehicle ready by providing for the future installation and use of Electric Vehicle Supply Equipment (EVSE) in accordance with the National Electrical Code. Incentives will be greater for electric vehicle-ready than for electric vehicle-capable developments.~~

~~Policy 13.2.28: Transportation Concurrency.~~ **~~(Eff. 1/11/21)~~**

~~Prior to approval, PUD Concept Plans shall be required to demonstrate sufficient capacity of concurrency facilities to meet the standards for level of service for the existing population, previously permitted development and for the proposed development plan in accordance with the City of Tallahassee Concurrency requirements. This demonstration shall include a transportation analysis for limited access, arterial, and collector roads, including the Northeast Gateway/Welaunee Boulevard, in accordance with the City Concurrency Management System Policy and Procedures Manual. If the City's transportation concurrency system is replaced with a Mobility Fee or another alternative mobility funding system, PUD Concept Plans shall comply with the mobility funding system in place at the time.~~

~~PUBLIC FACILITIES AND SERVICES~~

~~*Policy 13.2.29: Adequate Public Facilities and Services.* **(EFF. 1/11/21)**~~

~~The supply and delivery of safe and adequate public facilities shall accommodate existing and future development consistent with the Comprehensive Plan. Development in the Welaunee Arch shall be served by adequate public facilities and services as required by law and consistent with the Welaunee Urban Services-Development Agreement, as restated and amended. Public facilities and services may be phased and financed, constructed, owned, operated, or maintained by any entity allowed by law, including but not limited to independent or dependent special districts, property owner associations, homeowner associations, or any combination of such entities. Any such entity may finance public facilities through any means allowed by law.~~

~~*Policy 13.2.30: Utilities.* **(EFF. 1/11/21)**~~

~~Potable water, sanitary sewer, and electricity service shall be provided by the City pursuant to the Welaunee Urban Services-Development Agreement, as restated and amended. Private providers shall provide telecommunications services. The installation of utilities may be phased consistent with the level-of-service and availability standards of the Tallahassee-Leon County Comprehensive Plan. Utility infrastructure improvements shall occur consistent with the general timing of development, instead of the infrastructure being provided well before development occurs. This timing of infrastructure with development is intended to ensure that there is no stranded or early investment in infrastructure waiting for future development to occur.~~

~~*Policy 13.2.31: Clean Energy.* **(EFF. 1/11/21)**~~

~~PUD Concept Plans may incorporate strategies and standards that are consistent with the City of Tallahassee's Clean Energy Resolution or any clean energy plan adopted by the City subsequent to the resolution. PUD Concept Plans shall comply with applicable clean energy and renewable energy ordinances in effect at the time of development. PUDs may include additional incentives to encourage energy efficiency.~~

~~*Policy 13.2.32: Energy Efficient Environmental Design.* **(EFF. 1/11/21)**~~

~~Planned Unit Development Concept Plans may provide for incentives such as increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures in each District where developments incorporate Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar systems that generate threshold MW levels of electricity. Alternatively, PUD Concept Plans may provide for utility fee or other similar exaction offsets commensurate to estimated energy efficiency gains from incorporating Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar~~

systems that generate threshold MW levels of electricity. This policy does not apply to the Residential Reserve Zone.

Policy 13.2.33: Stormwater Management. **(EFF. 1/11/21)**

Prior to approval of the first PUD Concept Plan, a Stormwater Facilities Master Plan (SFMP) shall be prepared for the entirety of the Welaunee Arch. The Stormwater Facilities Master Plan must be reviewed and approved by the City before PUD Concept Plans can be approved. For areas not included in a PUD, the stormwater plan may be conceptual and generalized based upon the projected development allowed by this master plan accounting for non-developable areas.

The SFMP shall take into consideration stormwater flows from full build out conditions from any upstream, off-site property. However, nothing herein shall relieve the upstream, off-site properties from complying with applicable environmental ordinances or standards. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance; establish infrastructure requirements necessary to manage stormwater in compliance with local, state, and federal regulations; document the phasing, implementation, and easement reservations necessary to serve projected full build out; and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land uses, soils and topographic data, and the conceptual land use plan (Figures13-5 through 13-7). The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under projected full build-out conditions. Flood extents delineated by the SFMP shall identify the 100-year flood exclusion area under the full build-out condition. No habitable structures shall be constructed within the post-development, full build-out 100-year floodplains or 100-year flood exclusion areas. The SFMP shall incorporate low-impact design best management practices to encourage the disconnection of impervious surfaces and increase the removal of nutrients from stormwater discharges. The SFMP shall also evaluate the existing nutrient pollutant loading to Class III surface water resources and ensure net improvement in the post development condition. The SFMP scope of work must be approved by the City prior to development of the SFMP.

The Stormwater Facilities Master Plan shall identify the feasibility and location of regional stormwater facilities and how they should be designed and constructed as amenities within parks or publicly accessible areas. Stormwater facilities shall be located outside wetlands and floodplains. Stormwater facilities may be located in Open Space that is not wetland or floodplain subject to design standards in a PUD Concept Plan and consistent with protection of conservation and preservation lands required by the comprehensive plan and the Environmental Management Ordinance.

Policy 13.2.34. Wetlands and Floodplains. **(EFF. 1/11/21)**

Development shall minimize encroachment into wetland habitat areas by ensuring that public and private roads avoid crossing wetlands or require that such crossings are cited at the narrowest point of a wetland allowing for an efficient transportation design while maintaining the continuity of identified wildlife corridors. No net reduction in floodplain storage shall be permitted within the 100-year floodplain. Otherwise floodplains shall be managed consistent with the Comprehensive Plan Conservation Element.

Wetland acreage and function within the Welaunee Arch shall be protected through compliance with local, state, and federal environmental permitting requirements. For purposes of permanent protection of Conservation and Preservation lands designated on Figure 13-6 the delineation of wetlands shall be based upon the jurisdictional determination by the governing agency.

Wetlands depicted on Figure 13-6 utilized for mitigation within the Welaunee Arch shall be made subject to conservation easements consistent with the requirements of the authorizing regulatory agency. These easements will be defined in a manner that serves as permitted mitigation for wetland and other impacts or species relocation. To the extent authorized by federal, state, and local permitting agencies, Conservation and Preservation Lands association with the PUD Concept Plan under consideration may be utilized for achieving any mitigation requirements. The mitigation conservation easement area shall allow passive recreation facilities and shall be subject to a management plan.

Policy 13.2.35. Florida Springs and Aquifer Protection. **(EFF. 1/11/21)**

Wakulla Spring is an impaired first magnitude Outstanding Florida Springs. Planned development for the Welaunee Arch is within the springshed boundaries of the Upper Wakulla River and Wakulla Spring Basin Management Action Plan. Development activities associated with the project have the potential to impact water quality; therefore, PUD Concept Plans shall mitigate potential nutrient loadings by implementing measures such as proper treatment and disposal of wastewater, stormwater, and the implementation of adequate sediment and erosion control practices to mitigate any surface water impacts.

Policy 13.2.36: Schools. **(EFF. 1/11/21)**

Each PUD Concept Plan shall be analyzed for impacts on public schools based upon then-applicable pupil generation rates utilized by Leon County Schools. Schools shall be located in relation to neighborhoods in order to serve residents, provide a focal point for the neighborhoods, and be safely accessible by pedestrians and bicyclists. The co-location of schools, civic spaces, and active parks is encouraged. The City and County shall adhere to the Public School Concurrency and Facility Planning Interlocal Agreement, as required by Section 1013.33, F.S., which establishes procedures for, among other things, coordination and sharing of information; planning processes; school siting procedures; site design and development plan review; and school concurrency implementation. Prior

~~to site plan approval of the 500th residential dwelling unit in Phase 1, a 10-acre site shall be reserved for future dedication to the Leon County School Board proximate to residential areas, a Town or Village center and the primary open space system with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.~~

~~*Policy 13.2.37: Fire and Emergency Services.* **(EFF. 1/11/21)**~~

~~Upon request of the City, PUD Concept Plans shall include identified sites for fire and/or emergency services in coordination and formal agreement with the City.~~

~~RECREATION, OPEN SPACE and CONSERVATION~~

~~*Policy 13.2.38: Primary Open Space System.* **(EFF. 1/11/21)**~~

~~The intent of the Open Space and Conservation strategy is to identify, conserve, manage, restore, and protect significant natural resources during and after development of the Welaunee Arch in accordance with the Conservation Element of the Tallahassee-Leon County Comprehensive Plan and consistent with this Master Plan. No less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the gross area in the Welaunee Arch shall be designated Open Space which shall include the Primary Open Space System, Conservation and Preservation Areas, Greenways, and other designated open space in each development District.~~

~~Open Space shall comprise no less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the total gross area within the Welaunee Arch, or approximately 1,900 acres. Of the Open Space, approximately 900 acres (19% of the total gross area of the Welaunee Arch) are designated Conservation or Preservation Areas as defined in policies 1.3.1 and 1.3.4 of the Conservation Element. The precise size and location of Conservation and Preservation Areas shall be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes such Conservation and Preservation area. The remainder of the Open Space, approximately 1,000 acres (21% of the total gross area of the Welaunee Arch), shall be open space incorporated into the development plan for each District or part of the Primary Open Space System.~~

~~Open Space shall include Conservation Areas and Preservation Areas, Canopy Road Zones, Greenways, and aesthetic open space. Outside of these designated areas, the additional Open Space shall prioritize additional buffers around Conservation and Preservation Features, areas that provide continuous and contiguous connectivity of Open Space, additional buffers for Canopy Road Zones, additional areas around the Core canopy or core forests that are part of the fragmentation class of Core Canopy (>500 acres), additional areas that support the network of wildlife corridors, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, priority planting areas identified in the Urban Forest Master Plan, and stormwater facilities designed as a community amenity.~~

~~The Welaunee Arch shall contain a primary open space system concept that will contain the majority of the open space requirements within a connected corridor as depicted on Figure 13-5. This connected, continuous network of open space constitutes a fundamental building block of the Arch and is intended to serve multiple purposes including but not limited to protection of conservation and preservation areas. The Primary Open Space System shall include Conservation and Preservation areas. Primary Open Space may also include buffers for residential areas and canopy roads, greenways, environmentally sensitive areas, including wildlife corridors, aesthetic open space, active and passive recreation areas, and community gathering spaces. The Primary Open Space may be incorporated into any PUD Concept Plan to satisfy requirements of the Environmental Management Ordinance. Constructed stormwater facilities consistent with Policy 13.2.33 may be utilized to satisfy open space requirements in a PUD Concept Plan.~~

~~Primary open space systems, together with other open space and green spaces set aside to meet the urban forest and landscape requirements shall also meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. The intent of this policy will be achieved through the following:~~

~~(1) Credits for open space requirements, wetland mitigation, slope mitigation, stormwater management and/or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Arch.~~

~~(2) Areas with severe and significant slopes that are not located in the open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code.~~

~~(3) The Open Space systems shall be open to the general public and be designed to include and provide connections with the Miccosukee Canopy Road Greenway and Welaunee Greenway at multiple locations and to integrate internal recreational~~

~~multi-use paths with the greenways trails. Connections to future regional greenways shall be considered in the design of open space.~~

~~(4) The open space systems shall be designed to provide additional buffering for existing designated canopy road zones.~~

~~(5) Open space may be privately owned or dedicated to the public by conveyance to a general-purpose or special-purpose local government entity; or be designated a part of a statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the Conservation and Preservation areas in accordance with local government regulations.~~

~~(6) The open space systems shall be governed by one or more management plans approved by the City in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of Conservation and Preservation areas shall be provided by conservation easements and other measures consistent with Chapter 5 – Environmental Management, Tallahassee Land Development Code. Conservation and Preservation areas placed in conservation easements may be used towards satisfying the urban forest and landscaping requirements of Chapter 5 – Environmental Management, Tallahassee Land Development Code. A single management plan may be adopted for all open space and conservation and preservation area lands.~~

~~(7) Any Open Space area located within the geographic boundary of a PUD Concept Plan Shall be included in the lands to be designated as Open Space/Greenway as a result of approval of that PUD Concept Plan. If additional Open Space area are required to meet the minimum Open Space area for that Phase set forth in Policy 13.2.4(6) then such additional land will be designated as such from the adjacent Primary Open Space system as shown in Figure 13-5. To the extent that a PUD Concept Plan provides Open Space acreage beyond the required minimum, subsequent PUD Concept Plans are entitled to a credit for the additional acreage provided in proceeding PUD Concept Plans.~~

~~(8) Acreage in the primary open space system shall be counted towards satisfying the open space requirements established in PUD Concept Plans.~~

~~(9) The following guidelines shall apply to uses within the open space system as established in PUD Concept Plans:~~

a. ~~Passive recreation improvements that are natural resource-oriented, such as hiking, biking, and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular access only, provided these activities are located such that impacts to conservation and preservation areas are minimized and the overall purpose of the conservation easement is maintained.~~

b. ~~Active Recreation uses may be constructed in the open space area within each development district and in the primary open space system outside of Conservation and Preservation areas.~~

c. ~~Wildlife management areas may be included in the primary open space systems protective measures addressed in the management plans, including a wildlife habitat management plan, in accordance with Chapter 5 – Environmental Management, Tallahassee Land Development Code.~~

d. ~~Public roads and utilities may cross through the open space systems and buffers if the impacts are minimized. The location of the roads shown on Figure 13-5 are approximate.~~

e. ~~Stormwater Management facilities may be located in the open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to Chapter 5 – Environmental Management, Tallahassee Land Development Code. Each stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. If stormwater facilities are contained in the open space system, the public and/or private entities responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facilities level of service. The SFMPs shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation or preservation areas.~~

(10) ~~To promote creation of the open space systems and their integration into the planned mixed-use communities with appropriate credit, PUD Concept Plans shall establish an open space requirement that includes credit for the open space system, protected preservation and conservation areas, areas of constructed landscape, and the minimum onsite landscaping required for individual sites set forth in Policy 13.2.12. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designated to meet or exceed, on a cumulative basis, the Landscape and Urban Forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code. These landscape standards shall include, but not be limited to, standards for provision of street trees in mixed use zones, along public roadways, shade trees and landscaped islands within parking lots, and patriarch tree preservation. These standards will be developed to reflect the intent that town~~

and neighborhood centers will be developed in an urban context with minimal setbacks and an emphasis on dense, mixed use development. Various land uses in the Arch shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code.

(11) The portion of the Arch bordering Miccosukee Road shall be designated as Open Space and shall include the Canopy Road Zone for Miccosukee Road. An additional area with a minimum width of 75 feet along the length of the Canopy Road Zone shall be designated as open space. The Canopy Road Zone and contiguous Open Space area shall serve as a wildlife corridor that terminates in the core forest area that is part of the fragmentation class of Core Canopy (>500 acres) in the Conservation Design District as shown on the Preliminary Environmental Map (Figure 13-6). This area may serve as a greenway as long as the greenway does not preclude the ability of the area to serve as a wildlife corridor.

Policy 13.2.39: Conservation and Preservation Lands. **(EFF. 1/11/21)**

Lands identified for permanent preservation and conservation are shown generally on the Preliminary Environmental Map (Figure 13-6) as Designated Wetlands, 100-year Floodplains, and High-Quality Successional forests/Native Forest. These protected areas create a regionally significant environmental and open space framework that protects the natural flows of water and preserves wildlife habitat while allowing limited, low-impact human access to natural spaces, where appropriate.

These allocations are intended to protect significant environmental resources on the Welaunee Arch and account for approximately 900 acres or approximately 19% of the total gross area of the Welaunee Arch. The precise size and location of Conservation and Preservation Lands shall be determined through a Natural Features Inventory to be conducted prior to or concurrent with the initial PUD Concept Plan for each Phase of the Welaunee Arch in which the feature is located. Additional environmental resources will be designated as Open Space as addressed in this Master Plan.

Conservation and Preservation lands shall be subject to a management plan to be reviewed and approved concurrent with the PUD Concept Plan that includes the applicable Conservation and Preservation lands. Such management plan shall address wildlife preservation, maintenance of native species diversity, management of the natural environment, restoration of environmental resources where warranted, and responsibility for long term management. Such management plan shall include measures to protect the values for which such lands were designated, including wildlife habitat and corridors, and may include conservation easements and other measures consistent with the Environmental Management Ordinance. Conservation and Preservation lands may be

utilized for public access, including trails, subject to the Environmental Management Ordinance. To the extent allowed by local, state, or federal law, Conservation or Preservation lands may be utilized to achieve mitigation required by permits. A single management plan may be adopted for all open space and conservation and preservation area lands.

Lands that are not otherwise identified as Conservation and Preservation Lands on Figure 13-6 and are identified as areas suitable for future development may contain areas of natural upland or wetland communities. These resources will be identified through the Natural Features Inventory process and protected as required by the Comprehensive Plan's Conservation Element and will be incorporated into the lands identified as Open Space and Greenways consistent with the overall conservation and development strategy for the Welaunee Arch planning area.

Conservation easements for Conservation and Preservation lands shall be effective before or concurrent with the effective dates of the PUD Concept Plan for which they are granted. Protection of the lands identified in the Preliminary Environmental Features Map shall be phased or staged in coordination with the PUD Concept Plans. The required preservation of both Conservation and Preservation Lands within the Welaunee Arch will occur in conjunction with the PUD Concept Plan approvals and will be in place in advance of actual physical development within the PUD for which the Conservation and Preservation Lands are being protected. All identified Conservation and Preservation Lands within the Preliminary Environmental Features Map shall be subject to permanent preservation no later than the date of actual physical development commencing within the final PUD Concept Plan for the Welaunee Arch.

Policy 13.2.40: Recreation Areas. **(EFF. 1/11/21)**

A PUD Concept Plan shall provide for reasonable public access to parks, recreation areas, natural areas, and open space. A multi-use trail system will be included that will link these areas where feasible to residential neighborhoods, mixed-use centers, schools, civic spaces, employment, recreation and open space, parks, and the Welaunee Greenway and Miccosukee Canopy Road Greenway.

Policy 13.2.41. Historic and Cultural Resources. **(EFF. 1/11/21)**

Through the completion of Natural Features Inventories, Planned Unit Developments shall identify historic and cultural resources including archaeological sites, historic structures and districts, and historic cemeteries. PUDs shall include standards sensitive to locating, assessing, and avoiding

potential adverse impacts to these resources. At a minimum, these standards shall comply with applicable state and local regulations. Where feasible based on the geographic

location of the resource and appropriate given the historic and cultural context of resource, informational and interpretive signage may be considered for these resources.

Policy 13.2.42: Natural Area Resident Notifications. **(EFF. 1/11/21)**

PUD Concept Plans will include notification requirements for informing residents, once development is completed, with information on how to avoid human-bear conflicts and notices of proximity to areas that are actively managed with prescribed fires.

Policy 13.2.43: Perpetual Drainage Easement. **(EFF. 1/11/21)**

The Perpetual Drainage Easement across the Welaunee Arch shall be subject to the Order Clarifying Definition of Perpetual Drainage Easement, entered by Leon County Circuit Court on March 13, 1997. Lands within the Perpetual Drainage Easement shall be considered Open Space and may be utilized for active and passive recreation facilities and activities, including but not limited to, walking and bicycle trails, and playgrounds associated with development of lands owned by the landowner within the altered or undisturbed floodplains so long as the function of the easement is not impaired.

Policy 13.2.44: Welaunee Greenway. **(EFF. 1/11/21)**

The Welaunee Greenway shall consist at a minimum of an 8.4-mile-long shared-use trail corridor along the northeast, north, and west perimeter of the Arch, and shall be developed consistent with adopted local government plans, including the Greenways Master Plan. As defined in the Tallahassee-Leon County Greenways Master Plan, "The Greenway will range from approximately 75' to 150' in width in much of the corridor with greater widths in select areas due to wetlands and stream flow ways. This corridor will be comprised of the existing edge canopy and understory and the Welaunee firebreak road which may provide a readymade trail alignment. The preserved canopy and understory along the other side of the firebreak road will be preserved to provide privacy from adjacent roadways and homes." The final design of the Welaunee Greenway shall be determined through the Blueprint Intergovernmental Agency's Northeast Gateway project and may consider other, non-paved trail surface treatments consistent with the Greenways Master Plan. Trail crossings and trailheads may be located in the Canopy Road Zone and the design of such facilities shall strive to minimize impacts to the tree canopy. The Welaunee Greenway shall connect to the existing Miccosukee Canopy Road Greenway to create a 17-mile linear park loop and a pedestrian bridge across Interstate-10. Connections shall be provided to and from the Greenway from interior multi-use trails along roadways or from other open space areas. The Welaunee Greenway shall be subject to a management plan approved by the City that is consistent with the policies of this master plan. A single management plan may be adopted for all open space, conservation and preservation area lands, and the Welaunee Greenway. Public roadways and utilities may cross through the Welaunee Greenway at points specified as road crossings on the land use and transportation maps, or at additional points if necessary, provided the crossing includes restoration of the Greenway and open space area. PUD Concept Plans that include or are adjacent to the Welaunee Greenway or Miccosukee Canopy Road Greenway shall provide access to those facilities. Development of the Arch should be

incentivized through the PUD process to provide pedestrian and bicycle connectivity to the Greenway, particularly where it interfaces with Open Space areas and associated trail systems.

Policy 13.2.45: Alternative Development Program. **(Eff. 1/11/21)**

Notwithstanding any other provision of this Master Plan, at the election of the PUD applicant, PUD Concept Plans in Phase 1 and Phase 2 may offset open space and urban forest mitigation requirements through an optional alternative development program that preserves additional open space area within the Residential Reserve District (Phase 3). The intent of this Alternative Development Program is to incentivize preservation of a large area of open space in the northeast area of the Welaunee Arch that may be designated as a wildlife habitat area. Participation in this alternative development program is optional and must be agreed to by the PUD Concept Plan applicant and the owner of the property that would be used for the offset. Participation in this alternative development program is subject to all of the following provisions:

(1) Open Space Requirement Offset. PUD Concept Plans in any District of Phase 1 or Phase 2 may offset the open space requirements for that District by preserving lands in the Residential Reserve District (Phase 3) as open space.
   a. The offset shall be calculated on a per acre basis with a 15% bonus, resulting in an exchange of a 1.15 acre reduction in the open space requirement of the receiving District for each 1 acre of preserved open space in the Residential Reserve District. This exchange shall reduce the overall open space requirement for the Welaunee Arch by the net bonus amount (0.15 acres for each 1 acre preserved).
   b. The reserve area requirements for cluster residential zones in Phase 2 shall be offset concurrently with the open space requirements for any PUD Concept Plan including a cluster subdivision.
   c. Under the Alternative Development Program, preservation or conservation areas in the Residential Reserve District may count towards the open space requirements in the Conservation Design District. Conservation and Preservation areas in the Residential Reserve District shall be integrated with the Welaunee Habitat Park.
   d. If this Alternative Development Program is exercised, total Open Space in Phase 1 shall not be less than 15%, the total Open Space in Phase 2 shall not be less than 25%, and the overall total Open Space in the Arch at buildout shall not be less than 37%.
   e. The open space offset shall not apply within the area 1,000 feet from the Buckhead Neighborhood as identified in Policy 13.2.15.

(2) Urban Forest Mitigation Offset. PUD Concept Plans in Phase 1 and Phase 2 may offset required urban forest mitigation requirements in any District by preserving lands in the Residential Reserve District (Phase 3) as open space.

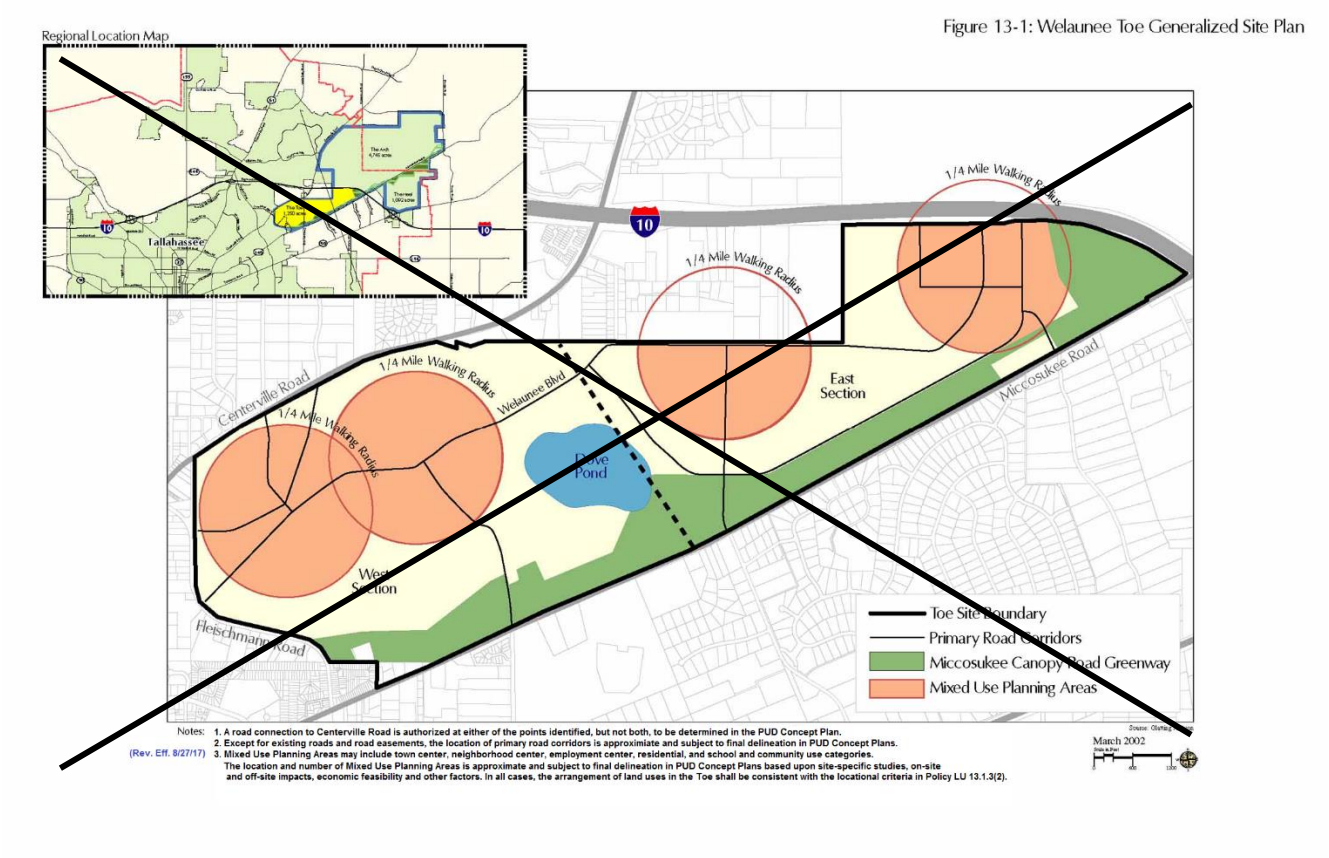
a. ~~The urban forest mitigation requirement offset through this program is exchanged based on the urban forest mitigation value of the land being established as Open Space in the Residential Reserve District. The mitigation value of the preserved open space shall be calculated with an additional 10% mitigation credits which may offset urban forest impacts in Phase 1 and Phase 2.~~

(3) ~~All lands located in the Residential Reserve District, designated as Phase 3 on the Land Use Districts Map (Figure 13-5), are eligible for preservation under this alternative development program. Priority for preservation under this program shall be in the following order: 1) lands in the Residential Reserve District (Phase 3) that do not meet the definition of a preservation area or conservation area 2) any designated conservation and preservation areas in Residential Reserve District (Phase 3) as generally depicted on the Preliminary Environmental Features Map or as determined through a subsequent natural feature inventory. Priority shall be given to property along the eastern boundary of the Residential Reserve District with subsequent lands preserved under this alternative development program being contiguous with this area.~~

(4) ~~Protection of the open space area in the Residential Reserve District (Phase 3), including any preservation or conservation areas, shall be provided by conservation easements, covenants, or other measures consistent with City Growth Management Department's adopted regulations. The lands preserved as open space under this alternative development plan shall be subject to the criteria of Policy 13.2.38 regarding Conservation and Preservation Areas. Any conservation easements established under this alternative development program shall be issued to the City of Tallahassee as the sole grantee and beneficiary. While open space area in the Residential Reserve District remains in private ownership, any conservation easements, covenants, or other measures shall allow for continued use of the preserved open space for silviculture operations of planted pine stands which adhere to Florida Division of Forestry Best Management Practices. Lands preserved under this development program for urban forest mitigation offsets may not be utilized for silviculture operations.~~

(5) ~~Welaunee Habitat Park. Notwithstanding the phasing requirements in policy 13.2.5, at such time when all lands in in the Residential Reserve District have been preserved as open space under this alternative development program, or at such time when the final PUD Concept Plan for the Welaunee Arch is approved, the preserved Open Space in the Residential Reserve District, including the Conservation and Preservation lands, shall be designated as a Habitat Park. The Habitat Park shall be subject to the requirements of Policies 13.2.37 and 13.2.38. Prior to establishment of the Habitat Park, the existing uses of the property shall be permitted. Any previously established conservation easements shall remain in effect on lands in the Habitat Park. Passive recreation improvements that are~~

~~natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the Welaunee Habitat Park. Active Recreation uses are not permitted in the Welaunee Habitat Park.~~



~~(6) By adoption of a separate ordinance, the City may create and administer a Welaunee Habitat Park credit bank. The Welaunee Habitat Park credit bank would facilitate the purchase of lands in the Residential Reserve District (Phase 3) and the sale of open space and tree mitigation credits in accordance with this development program. The Welaunee Habitat Park credit bank may be established independent of and prior to the creation of the Welaunee Habitat Park. If the City creates a Welaunee Habitat Park credit bank, consideration may be given to utilizing the credit bank to offset open space requirements and urban forest mitigation requirements associated with the development of properties located in other growth priority areas inside the Urban Services Area.~~

~~(7) If stormwater facilities are contained within the Residential Reserve District, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within preserved open space and conservation or preservation areas.~~

~~(8) Any lands in the Residential Reserve District not preserved as open space in accordance with this alternative development plan may be included in a PUD Concept Plan and development under the Residential Reserve District development guidelines in Policy 13.2.4(4). Development of the Residential Reserve District on remaining lands shall be clustered in the portion of the site that will result in the least environmental impact. Lands preserved as open space offset under this Alternative Development Program shall not count towards the 60% reserve area requirements for development of any remaining developable land in the Residential Reserve District.~~

I. Land Use

TOTALS	715	1,291 DUs 686,224 GSF	377	816 DUs 457,248 GSF	1,092	2,107 DUs 1,143,472 GSF

Notes:

1. Acreage totals are based on conceptual planning and are only approximate. Acreage totals may change based on final development review.

2. Residential land use includes above-street units in town and neighborhood centers. No acreage has been allocated to these units because they will be located above nonresidential uses.

3. Retail uses shall comprise between 50% and 70% of total Phase 1 development in town and neighborhood centers with office uses to comprise between 30% and 50%. At buildout, the mix of uses in town and neighborhood centers shall be approximately 67% retail and 33% office.

4. Office and light industrial uses shall comprise between 75% and 95% of total Phase 1 development in employment centers with retail uses to comprise between 5% and 25%. At buildout, the mix of uses in employment centers shall be approximately 90% office and light industrial with approximately 10% retail.

5. Total includes 24 acre site for Leon County School Board for a 500 pupil elementary school with stormwater management facilities in off-site regional systems. Institutional uses in town, neighborhood and employment centers are included in square footage totals for those areas.

6. Although under State ownership, the Miccosukee Canopy Road Greenway shall be considered within the Welaunee Critical Planning Area for planning purposes.

7. Total includes stormwater management facilities, road rights-of-way and other community infrastructure.

8. These figures may be modified pro-rata to represent buildout if Heel is developed under Policy 13.1.9. (REV. EFF. 7/20/05)

Drainage Basin Study Areas

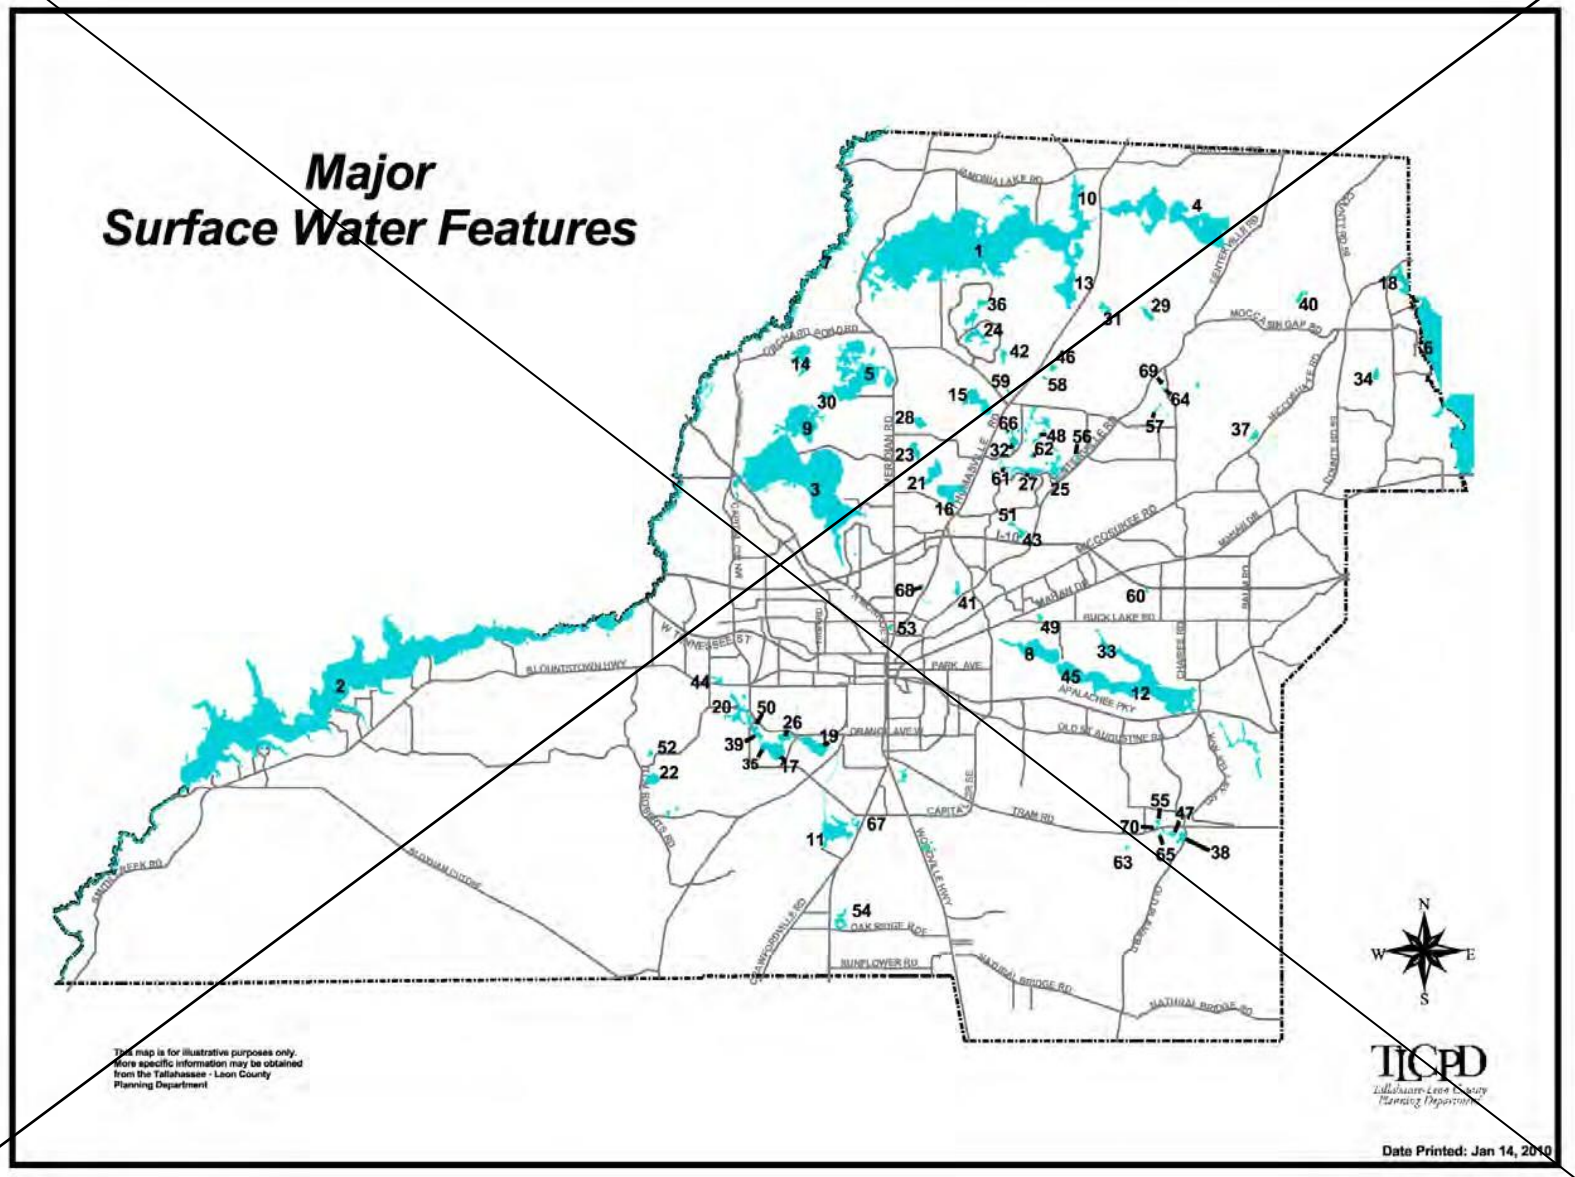
Goal 14 [L] (Leon County only) (Eff. 12/15/03)

Leon County and the City of Tallahassee will work cooperatively to further identify and address the special characteristics and needs of sub-areas of the City and County. This goal shall be implemented through the following objective and policy:

Objective 14.1 [L] (Leon County only) (Eff. 12/15/03)

By 2004, the City and County shall commence a process to evaluate the environmental conditions and issues relating to major drainage basin study areas of the county including but not limited to the following basins: Fred George, Lake Iamonia, Lake Jackson, Lake Lafayette, Lake Miccosukee, Lake Munson, Ochlockonee, St. Marks, and Woodville Recharge, to be used as one basis for sector plans and other major planning decisions of the local government. This evaluation shall address matters such as protection of conservation and preservation areas (as defined within this Plan), flooding, water quality, aquifer protection, and other issues as identified by the local governments. This evaluation shall be conducted cooperatively by the City and County, irrespective of jurisdictional boundaries, and the evaluation shall be based on technical and scientific information.

Policy 14.1.1 [L] (Leon County only) **(Eff. 12/15/03)**



Sector planning shall be implemented as determined appropriate by the City or County; however, sector planning involving a joint effort of both jurisdictions, shall be encouraged. These sector plans may address elements such as land use, transportation, housing, economic development, environmental protection, infrastructure phasing, development standards and any other matter as identified by the local government. These sector planning efforts shall take into consideration the data gathered through the implementation of Objective 14.1 and shall use this information as background environmental data necessary for the completion of sector planning efforts.

Policy 14.1.2 [L] (Leon County only) **(Eff. 12/15/03)**

The data collected or gathered through the implementation of Objective 14.1 shall be used as a basis for determining whether or not future amendment to the Comprehensive Plan or land development regulations is necessary. However, Goal 14 and its associated Objective 14.1 are not intended to replace existing Comprehensive Plan policies related to environmental protection or storm water management. Instead, this goal and its associated objective is intended to support and aid in the implementation of existing Comprehensive Plan policies and is to be considered additive in this regard.

MOBILITY

GOALS, OBJECTIVES AND POLICIES

Overall Goal (EFF. 12/15/11)

Establish a safe, energy efficient multi-modal transportation system that provides mobility for pedestrians, bicyclists, transit users, motorized vehicle users, users of rail and aviation facilities, supports public health through active living, and is sensitive to the cultural and environmental amenities of Tallahassee and Leon County.

Goal 1: [M] (EFF. 12/15/11)

MOTORIZED, BICYCLE, AND PEDESTRIAN CIRCULATION

Establish and maintain a safe, convenient, energy efficient, and environmentally sound automobile, transit, bicycle and pedestrian transportation system, capable of moving people of all ages and abilities as well as goods.

Objective 1.1: [M] **(EFF. 12/15/11)**

LAND USE AND TRANSPORTATION COORDINATION

Coordinate transportation and land use systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce vehicle miles traveled and greenhouse gases, and to enhance pedestrian and bicycle mobility and transit accessibility.

Policy 1.1.1: [M] **(EFF. 12/15/11)**

Identification and programming of new road projects or substantial improvements to existing roads shall be consistent with the Future Land Use Element of the Comprehensive Plan and specifically the Urban Service Area strategy to promote urban infill and discourage urban sprawl.

Policy 1.1.2: [M] **(EFF. 12/15/11)**

Designate energy efficiency districts in areas that are intended for greater densities and intensities to support frequent transit service and where primary priority is to be placed on providing a safe, comfortable and attractive environment for pedestrians and cyclists. For each district:

1. evaluate and modify, if necessary, the zoning and land development regulations to ensure standards that will support compact, walkable, mixed-use development; and
2. adopt and maintain a connectivity plan identifying needed bicycle, pedestrian, roadway, and transit projects to increase connectivity and safety, minimize travel

distances for pedestrians and cyclists, and provide connections to other parts of the City, County, and Capital Region;

3. Coordinate with the Capital Region Transportation Planning Agency to include the Mobility District Plan priorities in Long Range Transportation Plan updates.

Policy 1.1.3: [M] **(EFF. 12/15/11)**

Promote the Downtown as an 18-hour activity center by supporting development of housing, restaurants, and cultural activities to encourage use beyond working hours.

Policy 1.1.4: [M] **(EFF. 12/15/11)**

Promote neighborhood parks to reduce the need for long distance trips for recreation.

Policy 1.1.5: [M] **(EFF. 12/15/11)**

Maintain a Greenways Master Plan that integrates pedestrian and bicycle mobility into a linear park and open space system that connects local, regional, and state facilities, with specific emphasis on connections within Downtown and energy efficiency districts.

Policy 1.1.6: [M] **(EFF. 12/15/11)**

A functional transportation network shall be coordinated and maintained with the Florida State University, Florida A&M University, and Tallahassee Community College master plans to link those educational institutions and provide access to transit and surrounding supporting land uses.

Policy 1.1.7: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain ordinances providing for safe and convenient on-site traffic flow, considering motorized and non-motorized vehicle parking.

Policy 1.1.8: [M] **(EFF. 12/15/11)**

Development projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Appropriate improvements or enhancements to the multimodal network shall be required as a condition of development approval, such as, but not limited to, the following:

a) Full accommodations for pedestrian access and movement, including shaded sidewalks, benches and enhanced crossings;
b) Full accommodations for bicycles, including lockers, showers, and racks;
c) Direct connections to the regional bicycle/pedestrian network;
d) Installation of shared use paths in accordance with FDOT recognized standards;
e) Well-designed accommodations for transfer of passengers at designated transit facilities;
f) Preferential parking for rideshare participants;

g) Well-designed access for motor vehicle passenger drop-offs and pick-ups at designated transit facilities and at commercial and office development sites;
h) Full accommodation for the mobility impaired, including parking spaces, sidewalks and ramps for handicapped access;
i) Weather protection at transit stops.

Policy 1.1.9: [M] **(EFF. 12/15/11)**

Designation of Multimodal Transportation District (MMTD). In accordance with the provisions of Florida Statute 163.3180(15), the City of Tallahassee and Leon County hereby establish a Multimodal Transportation District, as shown in the Multimodal District Boundaries Map, for the purpose of promoting walking, bicycling and transit use in order to reduce dependence on the automobile. Those roadways and associated rights-of-way shown as boundaries for the MMTD shall be considered part of the MMTD.

Policy 1.1.10: [M] **(EFF. 12/15/11; REV. EFF. 7/19/13)**

MMTD Residential Density Bonus. In order to increase redevelopment and infill development, residential densities within the MMTD may be increased up to 35% above the maximum allowed in the Residential Densities Range Table. This bonus shall not apply to lands designated Residential Preservation. Further bonuses may be applied to the Downtown. Eligibility criteria for these bonuses will be established within the land development regulations and shall include design standards facilitating pedestrian oriented site and building design with enhanced pedestrian access and amenities, urban scale development, innovative parking strategies, integrated mix of land uses, and other urban design features.

Policy 1.1.11: [M] **(EFF. 12/15/11)**

Land Use Within the MMTD. The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the district boundary(ies) and modify them as necessary to provide for appropriate densities, intensities and mixture of land uses to support 18-hour activity and multimodal transportation, based on the following targets:

a) A center(s) consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to mass transit facilities;
b) Ratio of uses:
    i. Residential = 20%-60%
    ii. Nonresidential (office, commercial, light industrial, etc.) = 30%-70%
    iii. Public spaces (open space, parks, recreational, squares, etc.) = 5%-15%;
c) Specifically to facilitate walking and bicycling as an alternative to driving, areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses;
d) In order to support redevelopment in the urban center of Tallahassee that could support ten minute transit headways and/or light rail, an areawide (excluding open space) residential density of at least 20 units per acre, recognizing that some areas, such as Central Core, may have densities in excess of 150 units per acre and others in

established neighborhoods and areas designated Residential Preservation may have significantly less.

Policy 1.1.12: [M] **(EFF. 12/15/11)**

MMTD and Energy Efficiency District Urban Design and Land Development Regulations. Adopt and maintain land development regulations that ensure new construction and infill or redevelopment will contribute positively to the character and livability of the MMTD and energy efficiency districts, based on the following:

1. Buildings and blocks oriented to provide pedestrians and bicyclists easy access and a visually interesting environment;
2. Maximum block (length or perimeter);
3. Easy access to/from transit stops and surrounding land uses;
4. Recognition of more intense densities & intensities around center(s);
5. Special design considerations to support compatibility between uses, particularly between residential and non-residential uses;
6. Creating active sidewalks with buildings opening onto streets;
7. Transparency (i.e., windows) and active uses at ground levels;
8. Parking generally located to the sides and rear, internal to blocks, and/or in structured of off-site facilities;
9. Maximum parking standards that discourage single-occupant vehicle commuting and reinforce non-auto modes, but not so limited as to adversely impact the viability and vitality of the MMTD;
10. The use of shared parking;
11. For multifamily developments, pricing of parking separately from the units;
12. Recognizing that parking demand may change over time as more multimodal infrastructure and mixed uses are developed, building parking facilities such that they may be readapted for more active uses in the future.

Policy 1.1.13: [M] **(EFF. 12/15/11)**

Transit in the MMTD and Energy Efficiency Districts. The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside of these areas, transit stops and waiting areas shall be safe and comfortable, and intermodal connections shall be made where feasible.

1. Priority should be given to funding of improvements that increase the availability, speed, frequency, duration and reliability of transit serving these areas.
2. StarMetro shall coordinate with the Capital Region Transportation Planning Agency regarding the provision of transit centers, super stops, and other facilities for the transfer of passengers to and from these areas through potential regional connections.
3. Benches, signage, lights, and covered or enclosed waiting areas shall be used to create safe, comfortable transit stops.
4. Bicycle parking at transit stops and bicycle racks on buses shall be provided as a means to interface bicycle travel with public transit.

Policy 1.1.14: [M] **(EFF. 7/17/21)**

The City of Tallahassee and Leon County will support the implementation of the Capital Region Transportation Planning Agency's (CRTPA's) Tallahassee-Leon County Bicycle and Pedestrian Master Plan, adopted by the CRTPA in 2020, to the extent that it does not conflict with goals, objectives, and policies in this Comprehensive Plan.

Objective 1.2: [M] **(EFF. 12/15/11)**

COMPLETE STREETS

The transportation system shall be designed and operated to provide safe, convenient and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 1.2.1: [M] **(EFF. 12/15/11)**

Recognizing that urban, suburban, and rural areas have different needs, develop and maintain context sensitive design standards for transportation facilities to protect and enhance community character and enhance the safety and desirability of walking, cycling, and transit.

Policy 1.2.2: [M] **(EFF. 12/15/11)**

Safe and convenient facilities for pedestrians, cyclists and transit users shall be evaluated for all new road and road widening projects. Specifically, all road projects, including resurfacing projects, shall be evaluated for the addition of bicycle lanes or paved shoulders, and transit shelters where they did not previously exist.

Policy 1.2.3: [M] **(EFF. 12/15/11)**

Establish and maintain a safe and effective system of bicycle lanes, sidewalks, and shared-use paths in conjunction with existing and planned roadways and the Greenways Master Plan. Where design criteria allow and safe operation will occur, separate bicycle and pedestrian traffic from vehicular traffic. Provide adequate and secure bicycle parking facilities at major destinations.

Policy 1.2.4: [M] **(EFF. 12/15/11)**

In coordination with the Capital Region Transportation Planning Agency, maintain a bicycle and pedestrian master plan and pursue implementation funding.

Policy 1.2.5: [M] **(EFF. 12/15/11)**

Designate preferred entrance corridors into and connecting Tallahassee and Leon County, and adopt and maintain land development regulations to convert them into shaded pedestrian ways over time.

Policy 1.2.6: [M] **(Eff. 12/15/11)**

Require a scenic roadway assessment, environmental assessment, and landscape component in the planning and construction of new roads, and in the improvement of existing roads.

Policy 1.2.7: [M] **(Eff. 12/15/11)**

Require that all new or rebuilt multi-lane (four or six-lane) arterial and major collector streets be constructed with grassed and/or landscaped medians where sufficient right-of-way can be obtained, unless limited by environmental constraints.

Policy 1.2.8: [M] **(Eff. 12/15/11)**

Provide a safe, accessible environment and support active living for students by: developing and maintaining programs to increase biking and walking to schools; prioritizing sidewalk and bicycle infrastructure within a two mile radius of primary schools; and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 1.2.9: [M] **(Eff. 12/15/11)**

Special consideration shall be given to areas with concentrations of students, seniors, low-income families or others that are more dependent on modes other than the automobile to provide a safe, accessible environment.

Policy 1.2.10: [M] **(Eff. 12/15/11)**

Educate the population on the health benefits of non-motorized modes of transportation. Increase safety to those who choose to walk or ride a bicycle by educating the public on existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 1.2.11: [M] **(Eff. 12/15/11)**

Enforce vehicle, bicycle and pedestrian regulations concerning obedience of traffic control signals and devices, use of pedestrian crosswalks, walking along the roadway, etc. Provide proper pavement markings and signage to enhance recognition of bicycle lanes and pedestrian crossings.

Policy 1.2.12: [M] **(Eff. 12/15/11)**

Adopt and maintain a City and County sign ordinance to control sign and billboard placement and limit lighted and motion activated sign usage.

Policy 1.2.13: [M] **(EFF. 12/15/11)**

Wherever feasible, bury utility lines. Priority should be given to areas where underground utilities can be incorporated into roadway construction and reconstruction projects.

Policy 1.2.14: [M] **(EFF. 12/15/11)**

Coordinate the transportation systems in Tallahassee and Leon County with one another and with the programs of the Capital Region Transportation Planning Agency and the Florida Department of Transportation to implement land use, transportation, and parking policies that promote transportation choice and to overcome identified deficiencies in the multimodal transportation network.

Objective 1.3: [M] **(EFF. 12/15/11)**

ENVIRONMENTAL AND NEIGHBORHOOD PROTECTION

Evaluate and minimize impacts of transportation projects on the natural environment and neighborhood integrity by using transportation demand reduction strategies to maximize existing roadway capacity, reduce the need for new roadway construction or expansion, reduce peak time traffic, reduce vehicle miles traveled, and reduce greenhouse gas emissions and other environmentally damaging pollutants.

Policy 1.3.1: [M] **(EFF. 12/15/11)**

Evaluate the natural features of Leon County, as delineated in the future land use and conservation elements, to avoid fragmenting and degrading regionally significant natural resources, wildlife corridors, greenways, and aquifers when planning new or expanding existing transportation facilities.

Policy 1.3.2: [M] **(EFF. 12/15/11)**

Reduce demand for more and wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling and walking.

Policy 1.3.3: [M] **(EFF. 12/15/11)**

Coordinate with Commuter Services of North Florida and state agencies regarding transportation demand reduction strategies such as staggered work hours for major employers, ridesharing, and parking fees.

Policy 1.3.4: [M] **(EFF. 12/15/11)**

Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.3.5: [M] **(EFF. 12/15/11)**

Require an analysis that measures environmental and neighborhood impact prior to funding any new roadway alignments, construction, or changes to the traffic circulation system. The level and type of review may vary with the anticipated impact, and shall include community involvement.

Policy 1.3.6: [M] **(EFF. 12/15/11)**

Require tree plantings, where practical, for both new and old roads to increase screening, beauty, runoff control and reduction of summer heat. Existing trees shall be protected during transportation system development and maintenance.

Policy 1.3.7: [M] **(EFF. 12/15/11)**

Aesthetically enhance and provide added environmental protection to existing and new transportation corridors by the following methods which include but are not limited to:

a) Incorporating for new, or increasing for existing corridors, the number of green spaces/open spaces and pedestrian oriented areas.
b) Recognizing plantations as a significant part of the natural landscape when roads are being designed in areas of the County where they are present.
c) Encouraging the use of native vegetation and natural systems such as swales to control runoff.
d) Maintaining natural ground cover, canopy and understory where new roads are built.
e) Design public infrastructure improvements to minimize development impacts to protect designated canopy roads consistent with the Conservation Element.
f) Applying access management strategies that enhance the character of transportation corridors and gateways to the community by promoting shared access and consolidated signage and preserving green space for landscaping.

Objective 1.4: [M] **(EFF. 12/15/11)**

CONNECTIVITY & ACCESS MANAGEMENT

Reduce vehicle trip demand, increase access and safety for cyclists and pedestrians, and preserve the integrity of the transportation system with effective connectivity and access management programs.

Policy 1.4.1: [M] **(EFF. 12/15/11)**

Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system without negatively impacting either development.

Policy 1.4.2: [M] **(Eff. 12/15/11)**

Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through traffic on neighborhoods.

Policy 1.4.3: [M] **(Eff. 12/15/11)**

Within the Urban Service Area, require private developers to include bikeways and pathways or sidewalks within proposed developments and connecting to surrounding land uses.

Policy 1.4.4: [M] **(Eff. 12/15/11)**

All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 1.4.5: [M] **(Eff. 12/15/11)**

All development plans shall incorporate and continue all sub-arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 1.4.6: [M] **(Eff. 12/15/11)**

Connections to and from energy efficiency districts. The transit, bike, and pedestrian networks within energy efficiency districts shall recognize the districts as activity nodes and thus logically interconnect with and service the surrounding areas.

Policy 1.4.7: [M] **(Eff. 12/15/11)**

Energy Efficiency District Network and Connectivity. Energy efficiency districts shall have a dense, interconnected network of local and collector streets, sidewalks, bikelanes, and shared-use paths in accordance with the following:

1. The street, bicycle, and pedestrian network shall be comprised of a system of interconnected and direct routes with a connectivity index of 50 or more polygons per square mile;
2. For areas with a connectivity index below 50, the missing links in the network shall be identified and eliminated where feasible through the development and capital improvement process;
3. Prioritization of connectivity projects shall recognize the importance of areas with high concentrations of pedestrian activity and of areas where connections are needed to ensure easy access between transportation modes, with particular attention to bicycle and pedestrian access to schools, transit stops and regional greenway or trail systems.
4. Direct bicycle and pedestrian connections shall be provided within and between residential areas and supporting community facilities and services, such as

shopping areas, employment centers, transit stops, neighborhood parks, and schools.

5. The local street circulation pattern shall maximize access to individual lots and activity center destinations (e.g. schools, commercial areas, parks).

Policy 1.4.8: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, considering impacts to all modes and users.

Policy 1.4.9: [M] **(EFF. 12/15/11)**

No new lot or parcel shall be platted or created along arterial or collector roadways that would result in connection spacing that does not comply with the applicable local or FDOT connection spacing standard.

Policy 1.4.10: [M] **(EFF. 12/15/11)**

Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access, rather than the maximum available for that property frontage.

Policy 1.4.11: [M] **(EFF. 12/15/11)**

Service roads shall be used for access to development in the area surrounding new freeway interchanges and shall be separated from interchange ramps at a distance that conforms with the applicable FDOT or local access spacing standards, in order to preserve safe and efficient traffic operations in the interchange area. Circulation systems for interchange area development shall be continuous and designed to support both vehicular and pedestrian mobility.

Policy 1.4.12: [M] **(EFF. 12/15/11)**

Flexibility shall be provided in administration of access spacing standards to accommodate minor deviations, where appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Policy 1.4.13: [M] **(EFF. 12/15/11)**

As Capital Circle is converted to a high capacity, multi-lane arterial, future access points shall be limited so that the improved roadway will function more efficiently and safely for

its intended purpose. In order to protect traffic capacity of the improved roadway and to assure public safety, the following policies will apply:

1) No new parcel shall be platted nor created through subdivision that results in a parcel with sole access to Capital Circle. Consolidation of two or more parcels that currently have access to Capital Circle into a parcel with a single access to Capital Circle shall be permitted;
2) New development abutting Capital Circle shall contribute to the development of a supporting system of local or collector roads, service roads, and/or shared access systems (e.g. joint use driveways), as an alternative to individual driveway access.
3) Where individual driveways must be provided to preserve reasonable access to a development site, applicants shall enter an agreement to cooperate in any future project to consolidate access points or to share access with abutting properties as opportunities arise.

Objective 1.5: [M] **(EFF. 12/15/11)**

LEVELS OF SERVICE

Establish transportation level of service (LOS) standards in order to measure the impacts of new development on, and to prioritize improvements to, the transportation system.

Policy 1.5.1: [M] **(EFF. 12/15/11)**

The peak hour roadway level of service for Tallahassee and Leon County is established as follows:

Table 1: Peak hour roadway level of service

Functional Classification	**Inside the USA**	**Outside the USA**
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D / E*	C
Major and Minor Collectors	D / E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 1.5.2: [M] **(EFF. 12/15/11)**

The level of service on all roadway facilities on the state highway system operating at the state recommended adopted minimum level of service standard or better at the time of adoption of the Comprehensive Plan will be maintained at the state adopted minimum level of service standard or a more strict local standard for the facility (if required adopted as part of the Plan). Level of service will be based on revised peak hour data compiled after Plan adoption.

Policy 1.5.3: [M] **(EFF. 12/15/11, REV. EFF. 8/9/2012)**

The Roadway Level of Service Standards established under Goal 1.5, and as may be duplicated in the Capital Improvements Element, may be waived if a mobility fee program is adopted into the local concurrency management manuals by the City and/or County Commissions. If implemented, the mobility fee program shall:

1) account for the fact that development further from activity nodes creates greater fiscal and environmental costs to the community;
2) support compact, mixed use development and redevelopment within adopted energy efficiency districts.

Policy 1.5.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County Concurrency Management systems will accumulate all development impacts, both below and above threshold standards, to determine cumulative impact of individual development orders. Cumulative impacts of all development will be monitored in order to maintain adopted level of service standards.

Policy 1.5.5: [M] **(EFF. 12/15/11)**

MMTD Areawide Multimodal Level of Service Standards and Performance Targets. In order to create community design that supports mobility, the following performance standards are established for the Multimodal Transportation District.

Table 2: MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards (Pursuant to F.S. 163.3180(15)(c))			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

In addition, because areawide level of service measures based on computer models do not recognize the full breadth of conditions affecting pedestrian, cycling, and transit comfort, safety and convenience, the following performance targets are also established. It is recognized these targets may take more than the 20-year planning period of this document to achieve, but are provided as continuing guidance for plan updates and capital investments.

Table 3: MMTD Areawide Multimodal Performance Targets

a) Areawide modal split:		
	Trips that both originate & end within the district	Trips originating or ending outside the district (not including pass through trips)
Transit	40%	25%
Bike/pedestrian	30%	10%
Automobile	30%	65%
b) Bicycle and Pedestrian Mobility		
i)	Formally designated north/south & east/west bicycle routes functioning at LOS C or better are provided at 1½ mile intervals	
ii)	All buses are equipped with bicycle racks	

iii)	All sidewalk and bicycle facilities within ½ mile of StarMetro transfer points function at LOS C or better;
iv)	All superstops are equipped with bicycle parking
v)	All intersections within ½ mile of StarMetro transfer points incorporate features to support safe and comfortable crossing for pedestrians and cyclists
c) Transit Mobility	
i)	All employees and dwelling units are within ¼ mile of a transit stop
ii)	80% of transit routes operate with 20 minute headways or less
iii)	80% of employees and dwelling units are served by routes operating at least 16 hours a day
iv)	40% of transit stops include benches, signage, lights, and covered or enclosed waiting areas
v)	80% of employees and dwelling units are within 1 mile of a StarMetro transfer point.
d) In Relation to Educational Uses	
i)	All pedestrian and bicycle facilities within 2 miles of primary schools function at LOS C or better
ii)	50% of students at Florida State University (FSU), Florida A&M University (FAMU), and Tallahassee Community College (TCC) commute to campus via non-auto modes
iii)	At least three satellite parking facilities for students are located outside of the MMTD but within a 20 minute transit ride of FSU, FAMU, or TCC

Policy 1.5.6: [M] **(EFF. 12/15/11)**

Transportation Concurrency within the MMTD. Pursuant to F.S. 163.3180(15)(c), development permits may be issued in reliance upon all planned community design capital improvements that are financially feasible over the development or redevelopment timeframe for the MMTD, without regard to the period of time between development or redevelopment and the scheduled construction of the capital improvements. Reflecting the purpose of a MMTD to promote higher density infill and to create a safe, desirable environment for pedestrians, the capital improvements plan will reflect primary emphasis on bicycle, pedestrian, and transit projects.

Policy 1.5.7: [M] **(EFF. 8/9/12)**

Changes to roadway segment capacity that result from the reduction or restriction of automobile laneage from existing conditions in order to implement multimodal or other non-automobile-oriented comprehensive planning goals will not require transportation concurrency mitigation. An analysis shall be conducted of transportation and land use impacts on parallel roadways that would result from the lane changes.

Objective 1.6: [M] **(EFF. 12/15/11)**

CORRIDOR PRESERVATION

Identify right-of-way needed for planned future transportation improvements and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service for concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities on the community.

Policy 1.6.1: [M] **(EFF. 12/15/11)**

The City and County shall adopt and maintain corridor management ordinances, in accordance with subsection 337.273(6), F.S., which are designed to protect future transportation corridors designated in the Tallahassee-Leon County Comprehensive Plan from development encroachment, to provide for right-of-way acquisition, and to mitigate potential adverse impacts on affected property owners.

Policy 1.6.1(a): [M] **(EFF. 12/15/11)**

Development orders may require conveyance of transportation rights-of-way consistent with a Future ROW Needs Map and Future Right-of-Way Needs and Access Classifications Table, as a condition of plat or development approval, provided that any required dedication shall not exceed the amount of land that is roughly proportionate to the impacts of the development on the transportation network.

Policy 1.6.2: [M] **(EFF. 12/15/11)**

Acquire and maintain sufficient right-of-way when building new roads or widening old facilities in order to protect waterbodies, wetlands, and flood plains. Plan corridor alignments to avoid environmentally sensitive areas and where this is not possible, acquire wide roadside buffers and prohibit driveways by purchase of access rights, as necessary, to prevent development from occurring within the environmentally sensitive area, as a result of the roadway availability.

Policy 1.6.3: [M] **(EFF. 12/15/11)**

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Future Right-of-Way Needs Map and the Long Range Transportation Plan.

Table 4: Future Right-of-Way Needs Without an Existing Corridor Alignment

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW (ft.)[1,3]**
Blueprint Principal Arterial[4]	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

Notes:

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.
2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based

upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of-way needs for future corridors:
   a. Space for sidewalks to provide safe and convenient movement of pedestrians.
   b. The provision of bike lanes or separate bike paths.
   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.
   d. Accommodation of stormwater at the surface or in storm drains.
   e. Accommodation of auxiliary lanes at intersections.
   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.
   g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns.

2) Planned ROW needs for Capital Circle from Centerview to W. Tennessee, as accepted by the Blueprint Intergovernmental Agency on November 19, 2001.

Policy 1.6.4: [M] **(EFF. 12/15/11)**

All proposed development plans on designated future transportation corridors shall be reviewed for consistency with the Future Right-of-Way Needs Map, the Long Range Transportation Plan, and any specific alignment or engineering studies and shall be consistent with identified right-of-way needs for designated future transportation corridors as a condition of development approval.

Policy 1.6.5: [M] **(EFF. 12/15/11)**

The Future Right-of-Way Needs Map shall be reviewed, and updated if necessary, every five years concurrent with the Long Range Transportation Plan update, or more frequently as necessary to address the growth and mobility needs of the local government.

Policy 1.6.6: [M] **(EFF. 12/15/11)**

City and County Staff shall consult with the Florida Department of Transportation in determining conceptual alignments, acquiring future right-of-way, and reviewing proposed development that substantially impacts state highways designated for improvement in the Tallahassee-Leon County Comprehensive Plan to ensure that local decisions are consistent with state and federal policy, and to ensure that development

activity does not substantially impair the viability of the future state transportation corridor.

Policy 1.6.7: [M] **(EFF. 12/15/11)**

Explore land banking policies, procedures and funding options to facilitate early acquisition of right-of-way for designated future transportation corridors.

Policy 1.6.8: [M] **(EFF. 12/15/11)**

Right-of-way acquisition shall be facilitated by the establishment of a program to identify, prioritize, and acquire needed right-of-way consistent with the Right-of-Way Needs Map and Capital Improvements Element.

Policy 1.6.9: [M] **(EFF. 12/15/11)**

Where needed right-of-way is identified in the energy efficiency district connectivity plans, such projects shall also be included on the Right-of-Way Needs Map and/or in the Long Range Transportation Plan.

Goal 2: [M] (EFF. 12/15/11)

TRANSIT

Capture a five to ten percent mode share through the development and improvement of the mass transit system so that transit is seen as a viable alternative to the automobile as a means of transportation.

Objective 2.1: [M] **(EFF. 12/15/11)**

IMPLEMENTATION STRATEGIES

In coordination with the Metropolitan Planning Organization, City of Tallahassee, Leon County and the Florida Department of Transportation, expand the integration of mass transit planning into the overall transportation delivery system by coordination of the short-range transit operations plan, Transit Development Plan, Bicycle and Pedestrian Master Plan and Long Range Transportation Plan development.

Policy 2.1.1: [M] **(EFF. 12/15/11)**

Land use regulations shall be developed which emphasize pedestrian movement and the use of transit.

Policy 2.1.2: [M] **(EFF. 12/15/11)**

Systematically extend and/or modify transit routes within the urban area to provide access to major employment, shopping, and business, recreational and other activity centers.

Policy 2.1.3: [M] **(EFF. 12/15/11)**

Coordinate the location and design of office parks to foster ride sharing and transit use.

Policy 2.1.4: [M] **(EFF. 12/15/11)**

Discourage single occupancy vehicle use through design criteria for new development and innovative programs such an employee pass program.

Policy 2.1.5: [M] **(EFF. 12/15/11)**

Encourage the elimination of the subsidy of public employee parking to encourage ride sharing and transit use.

Policy 2.1.6: [M] **(EFF. 12/15/11)**

Develop and maintain a marketing strategy and campaign to inform the public on mass transit and to increase ridership.

Policy 2.1.7: [M] **(EFF. 12/15/11)**

The potential impacts upon transit shall be determined and utilized in evaluating highway projects when planning new roads or capacity expansions to existing roads.

Policy 2.1.8: [M] **(EFF. 12/15/11)**

For purposes of evaluating transit level of service over the Plan Horizon and to implement the Regional Mobility Plan goal of a 10% modal split, the local government should expand coverage to serve 80 to 89 percent of the residential population within the Urban Service Area by a transit route along an arterial or collector roadway within approximately 1/2 mile.

Policy 2.1.9: [M] **(EFF. 12/15/11)**

Revisions to and expansion of transit service will be based on existing and major trip generators and densities to provide efficient mass transit services.

Policy 2.1.10: [M] **(EFF. 12/15/11)**

Future transit planning for Tallahassee and Leon County will include provisions for determining the location of transit regional transfer facilities and/or superstops.

Policy 2.1.11: [M] **(EFF. 12/15/11)**

To provide efficient transit for Tallahassee and Leon County, future transit planning will address provisions for efficient and frequent service based on trip generations and density of land uses, safe and convenient transit facilities and adaptation for the special needs of the transportation disadvantaged.

Objective 2.2: [M] **(EFF. 12/15/11)**

TRANSIT ALTERNATIVES

Adopt and maintain a plan for expanding the transit system beyond buses.

Policy 2.2.1: [M] **(EFF. 12/15/11)**

Initiate a study to evaluate the alternative types of transit in relation to their potential use in the City.

Policy 2.2.2: [M] **(EFF. 12/15/11)**

Develop a long-range master plan for building the transit system type determined to be most feasible in Policy 2.2.1.

Objective 2.3: [M] **(EFF. 12/15/11)**

PROTECTION OF FUTURE TRANSIT CORRIDORS

Develop and maintain a plan that identifies future transit rights-of-way and corridors and provides means of protecting and acquiring such areas.

Policy 2.3.1: [M] **(EFF. 12/15/11)**

Existing and future transit rights-of-way and corridors shall be identified as a part of the comprehensive plan for integrating transit into the existing transportation system.

Policy 2.3.2: [M] **(EFF. 12/15/11)**

Incentives to encourage the donation of transit rights-of-way and corridors shall be developed.

Policy 2.3.3: [M] **(EFF. 12/15/11)**

Development agreements and land use regulations shall be utilized to preserve future transit corridors.

Objective 2.4: [M] **(Eff. 12/15/11)**

Funding of Transit

By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.

Policy 2.4.1: [M] **(Eff. 12/15/11)**

Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.

Policy 2.4.2: [M] **(Eff. 12/15/11)**

Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program.

Objective 2.5: [M] **(Eff. 12/15/11)**

Transportation for Disadvantaged

Provide for full implementation of the requirements of Chapter 427, Florida Statutes and Section 3046(a)(9) of the SAFETEA-LU Act regarding planning and coordination of human services transportation in meeting the needs of the transportation disadvantaged.

Policy 2.5.1: [M] **(Eff. 12/15/11)**

A needs assessment of the transportation disadvantaged shall be undertaken.

Policy 2.5.2: [M] **(Eff. 12/15/11)**

An assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs.

Policy 2.5.3: [M] **(Eff. 12/15/11)**

A strategy to meet identified unmet needs shall be developed with emphasis being given to meeting the needs of the transportation disadvantaged (i.e., those individuals who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase transportation).

Goal 3: [M] (EFF. 12/15/11)

AVIATION

Provide for adequate capacity and safe, appropriate airport facilities to meet the demand for Commercial Service, cargo, military, and General Aviation services and to enhance aviation and airport development opportunities, with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Objective 3.1: [M] (EFF. 12/15/11)

LONG TERM IMPLEMENTATION GUIDELINES

Expand and improve on a phased, incremental basis, the aviation facilities at and the access to Tallahassee Regional Airport to meet the transportation needs of the Capital Region while maintaining consistency with all elements of the comprehensive plan. The Tallahassee Regional Airport Master Plan will be maintained and monitored on an ongoing basis to ensure that implementation of the plan meets the aviation needs of the area.

Policy 3.1.1: [M] (EFF. 12/15/11)

Implement the Tallahassee Regional airport Master Plan for the Year 2005 and implement the recommendations of the Tallahassee Regional Airport Noise Compatibility Plan.

Objective 3.2: [M] (EFF. 12/15/11)

ACCESS TO AIRPORT

Access routes to the Tallahassee Regional Airport will be integrated with the street and highway planning process of the City, County, MPO, and Florida DOT. Alternative modal choices will be studied as part of the mass transportation planning process.

Policy 3.2.1: [M] (EFF. 12/15/11)

An appropriate gateway from the airport to Downtown/Capitol Center/University destinations shall be designated and improved. Such improvements shall consider roadway capacity, adjacent land uses, landscaping, and incorporation of future mass transportation facilities.

Policy 3.2.2: [M] (EFF. 12/15/11)

Conduct a feasibility study to determine the need for, type of, and proposed location of mass transportation services between the airport and priority destinations within the urban area.

Policy 3.2.3: [M] **(EFF. 12/15/11)**

The interface between the roadway network and the airport vehicle circulation system shall be designed, constructed, and signalized (when warranted) to provide efficient on-site and off-site traffic flow.

Policy 3.2.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee will coordinate any aviation facilities plan with U.S. Army Corps of Engineers, the Federal Aviation Administration, the MPO, military service, the FDOT 5 Year Transportation Plan and the Continuing Florida Aviation System Planning Process.

Policy 3.2.5: [M] **(EFF. 12/15/11)**

The Traffic Circulation and Mass Transit sub-elements shall consider future airport access needs.

Objective 3.3: [M] **(EFF. 12/15/11)**

CRITERIA FOR OPERATION AND MODIFICATION TO AIRPORT

Operation of and modification to Tallahassee Regional Airport shall take into account impacts to adjacent land uses, the natural resources, and the community in general.

Policy 3.3.1: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall take into account the potential for noise and safety hazards to surrounding land uses.

Policy 3.3.2: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall be accomplished so as to be compatible with nearby natural resources.

Policy 3.3.3: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall be consistent with the conservation element.

Policy 3.3.4: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall mitigate structural and non-structural impact on adjacent natural resources.

Policy 3.3.5: [M] **(EFF. 12/15/11)**

Additional parking shall be provided in ways that minimize impervious surfaces and that maintain the appearance of the airport terminal.

Policy 3.3.6: [M] **(EFF. 12/15/11)**

Aesthetics shall be considered in any future airport facility design.

Objective 3.4: [M] **(EFF. 12/15/11)**

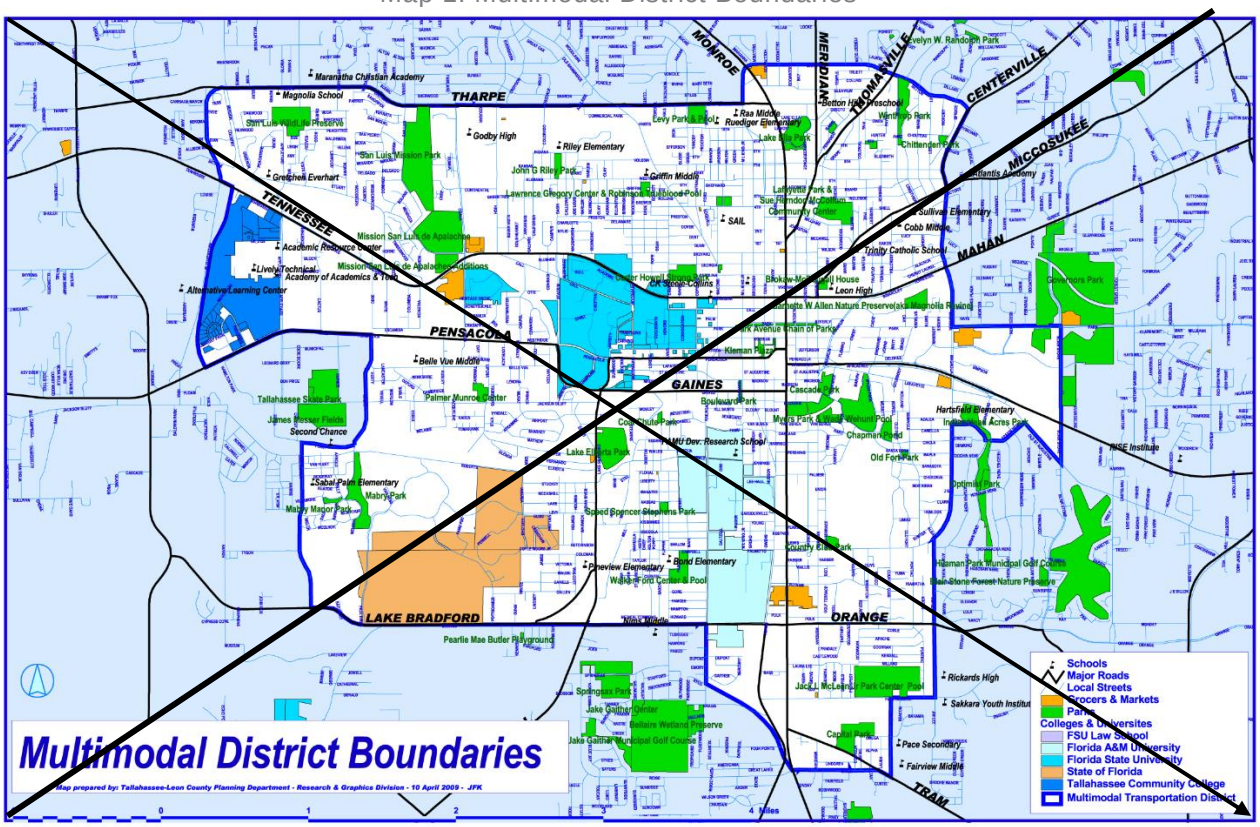
LAND USE IN ADJACENT AREAS

Development near the airport shall occur in ways and at locations compatible with the airport's operation and expansion and with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Policy 3.4.1: [M] **(EFF. 12/15/11)**

Land use decisions in the vicinity of the Tallahassee Regional Airport shall only be permitted if compatible with the current and future operation of the airport facility and the future land use element.

Policy 3.4.2: [M] **(EFF. 12/15/11)**



Residential development or other noise-sensitive land uses shall not be permitted within the predicted 65 Ldn noise contours without the use of mitigative noise control measures. Incompatible land uses in airport approach zones shall not be permitted. The high noise contours associated with the airport shall be publicized.

Policy 3.4.3: [M] **(EFF. 12/15/11)**

Additional land uses shall not be permitted in airport zones if, due to structural height, they hinder airport operation or reduce navigable airspace.

GLOSSARY

ACCESS: **(EFF. 6/25/96)** The means of vehicular entry to or exit from property to or from a public or private road.

ACLF: **(EFF. 7/16/90)** Means adult congregate living facility as defined in Section 400.402 of the Florida Statutes.

ACQUISITION: **(EFF. 7/16/90)** Includes purchase, land exchange, donation, easement, assisting private owners in obtaining tax advantages, etc. "Purchase" shall include all acquisition costs, such as surveying and title insurance.

ACTIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are facility oriented, i.e. swimming pools, ball fields, tennis courts.

ADJOINING LAND USES: **(EFF. 8/17/92)** Land uses on parcels which are touching or contiguous to each other, as distinguished from lying near to or adjacent. For purposes of this Plan, land uses on parcels that are separated from each other by a local or a minor collector street or roadway shall also be considered adjoining; land uses on parcels that are separated by a major collector or an arterial street or roadway or by a railroad right of way shall not be considered adjoining.

ADVANCED AIR MOBILITY: Vehicles and infrastructure associated with vertical take-off and landing (VTOL), air taxis, electric and hybrid short-to-medium distance aircraft. These vehicles may be piloted or autonomous and carry either passengers or cargo.

ADVANCED WASTEWATER TREATMENT: **(EFF. 4/10/09)** Treatment of sewage that goes beyond the secondary or biological wastewater treatment stage and includes the removal of nutrients such as phosphorus and nitrogen and a high percentage of suspended solids and biochemical oxygen demand.

AFFORDABLE HOUSING: **(REV. EFF. 7/20/05; REV. EFF. 12/24/10)** Housing that costs no more than 33% of the annual income of a household earning 80% or less of area median income (AMI) for homeownership and 60% AMI or less for rental housing, adjusted for the number of people in the household, as defined by the U.S. Department of Housing and Urban Development (HUD) annually.

AGRICULTURE: **(EFF. 7/6/15)** The production, keeping or maintenance, for sale, lease or personal use, of plants and/or animals useful to humans, including, but not limited to, the growing of crops, dairying, grazing, the raising and maintenance of poultry and other livestock, horticulture, nursery, forestry, and sod farms. Commercial feed lots, the raising of furbearing animals, riding academies, livery or boarding stables or dog kennels are not considered to be normal agricultural uses.

AGRITOURISM: **(EFF. 7/6/15)** Any agricultural related activity consistent with a bona fide farm or ranch or in a working forest which allows members of the general public to view or enjoy activities related to farming, ranching, historical, cultural or harvest-your-own attractions for recreational, entertainment or educational purposes.

ALTERED FLOODPLAINS: **(EFF. 7/16/90)** Areas within the 100 year floodplain that have been either ditched, drained, filled or have had structures built on them, any of which have diminished the flood storage capacity of the floodplain.

ALTERED WETLANDS: **(EFF. 8/17/92)** Wetlands that have been degraded to the extent their ecological function has been detrimentally impaired and the likelihood that they cannot be re-established except through a distinct program of man-made mitigation. Wetlands that can have beneficial function restored through natural processes will not be considered altered.

ARCHAEOLOGICAL SITE: **(EFF. 7/16/90)** A location that has yielded or may yield information on history or prehistory.

AREA PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the urban service area, including but not limited to community parks and sports complexes.

BASIC LIVING SHELTER: **(EFF. 7/16/90)** Means a dwelling unit which, at a minimum, is structurally sound, includes indoor plumbing, has a functional heating source, and provides protection to its inhabitants from the elements.

BEST MANAGEMENT PRACTICES: **(EFF. 7/16/90)** Those practices and principles designed to reduce and manage non-point source pollution and in some cases, protect wildlife and habitat. These principles and practices are generally outlined in the latest updated version of various BMP manuals including “Silviculture Best Management Practices,” “Best Management Practices,” “A Landowners Handbook for Controlling Erosion for Forestry Operations,” “Management Guidelines for Forested Wetlands,” “DER: Florida Development Manual, A Guide to Sound Land and Water Management,” and other publications on best management practices that are accepted by the industries and regulatory bodies. The local government reserves the right to add to or alter BMPs in specific instances as part of development agreements or development orders.

BUFFER: **(EFF. 6/25/96)** Open spaces, planted areas, fences, walls, berms, any combination thereof, or any other structure or design mechanism that is used to physically separate or screen one land use from another so as to visually shield and/or mitigate potential negative impacts.

BUSINESS ACCELERATOR: **(EFF. 5/31/18)** An organization that offers a range of support services and funding opportunities for startup businesses, including capital and investment, mentorship, office space and supply chain resources.

BUSINESS INCUBATOR: **(EFF. 5/31/18)** Organizations that help new and startup companies develop by providing services such as management training or office space, and are often a good path to capital from investors.

CANOPY ROAD: **(EFF. 7/16/90)** Road designated by local government as having significant aesthetic, cultural and historical value.

CAPITAL FACILITIES: **(EFF. 7/16/90)** Means transportation systems or facilities, including roads, mass transit, bikeway, sidewalk and aviation facilities; sewer systems or facilities; solid waste systems or facilities; drainage and stormwater management systems or facilities; potable water systems or facilities; education systems or facilities; parks and recreation systems or facilities; and health systems or facilities.

CAPITAL INFRASTRUCTURE: **(REV. EFF. 8/17/92)** Consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

CAPITOL CENTER PLANNING COMMISSION: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

CDBG: **(EFF. 7/16/90)** Means the Community Development Block Grant, as authorized under Title I of the Housing and Community Development Act of 1974.

CLOSED BASIN: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

CLUSTERING: **(EFF. 12/7/99)** The grouping together of structures and infrastructure on a portion of a development site with the balance remaining undeveloped or reserved as green space, which may or may not be used for development at a later date.

COMMERCIAL: **(REV. EFF. 6/25/96)** Generally, an activity or business involving the sale of goods and/or services carried out for profit.

> **MINOR**: **(EFF. 7/16/90)** Provide for the sale of convenience goods and services to the immediate residential area. Gross floor area—less than 20,000 square feet except at a local street intersection where maximum allowable is 10,000 square feet.
>
> **NEIGHBORHOOD**: **(REV. EFF. 9/19/91)** Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods. Gross floor area—20,000 to 100,000 square feet. Except at intersection of collectors where maximum allowable is 50,000 square feet.

COMMUNITY: **(EFF. 7/16/90)** Same functions of neighborhood commercial but on a larger scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items. Gross floor area—100,000 to 200,000 square feet.

REGIONAL: **(EFF. 7/16/90)** Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings. Gross floor area - 200,000 to 1,000,000 square feet.

HIGHWAY: **(EFF. 7/16/90)** Provide for consumer oriented retail services designed for drive-in convenience. Gross floor area - 1,000 to 10,000 square feet.

COMMERCIALIZATION CENTERS: **(EFF. 5/31/18)** Facilities designed to further develop technologies through research partnerships, assistance with patents, and support for delivering products to the market through licensing and the creation of companies.

COMMUNITY FACILITIES: **(REV. EFF. 8/17/92)** Facility or service which may be public or privately owned, established, and intended to provide significant public benefit.

COMMUNITY SERVICES: **(EFF. 7/16/90; REV. EFF. 8/27/17)** A facility owned or operated by a public or private entity or agency that provides a service or significant public benefit directly to the general public, such as libraries, religious facilities, police/fire stations, hospitals, museums, and schools.

LIGHT INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 1/19/20)** Water wells, water tanks, sewage pump stations, electric substations, and solar power stations and systems.

HEAVY INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 12/24/10; REV. EFF. 1/19/20)** Government operational facilities, which have significant off-site impacts. Also included are such facilities operated by semi-public or private utility providers. These facilities shall include but are not limited to:

Waste-to-energy facilities
Materials recovery facilities
Sanitary sewer facilities
Sanitary sewer percolation ponds
Sewage treatment plants
Airports
Power generating stations (non-solar powered)
Landfills
Sludge disposal facilities
Incinerators
Correctional facilities
Water treatment plants
Outdoor storage facilities
Vehicle maintenance facilities
Solid waste transfer station
Correctional facilities

POST-SECONDARY: **(EFF. 7/16/90)** Public or private - Universities, colleges, vocational/technical schools.

COMMUNITY PARK: **(EFF. 7/16/90)** Means those parks that serve several neighborhoods with total populations of up to 25,000 and have a service area of up to a three mile radius. "Ride-to" facilities that are also accessible to bicyclists and pedestrians shall be included.

COMPATIBILITY: **(EFF. 5/31/18)** A condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition.

CONSERVATION: **(EFF. 7/16/90)** Allowing only carefully planned development activities to occur on a site; development activities must be compatible with the perpetuation of the ecological resources on the site.

CONSERVATION SUBDIVISION: **(EFF. 7/1/04)** A residential or mixed-use development that has been developed utilizing a design approach in which a significant fraction of the parent tract(s) is reserved as permanently protected open space and the remaining fraction of the land is developed. Under this design approach, development is clustered or concentrated on the least environmentally or otherwise significant portions of the development site.

CONTEXT SENSITIVE DESIGN: Land use and streetscape design that prioritizes physical and social context, while also preserving scenic, aesthetic, historic, and environmental resources, to provide mobility and safety for all users in a way that is reflective of the specific area in which the development and/or roadway is constructed.

COUNTYWIDE PARK: **(EFF. 7/16/90)** Means those park facilities that serve the entire county population, including but not limited to regional parks, boat landings and parks, golf courses, state parks, including university recreation areas, and national forest lands.

COWORKING SPACES: **(EFF. 5/31/18)** Shared workplaces or offices that facilitate the social gathering of a group of people who are still working independently. Unlike in a typical office, those utilizing coworking spaces are usually not employed by the same organization. Coworking spaces are often attractive to work-at-home professionals, independent contractors, or people who travel frequently.

DENSITY: **(EFF. 12/7/99)** *see* Gross Density

DENSITY NEUTRAL: **(EFF. 7/1/04)** As applied to Conservation Subdivisions, means that the allowable density achieved through the utilization of the conservation subdivision design approach shall not exceed the maximum density established for the Future Land Use Map category and base zoning district applicable to the subject property or properties.

DEVELOPMENT: **(EFF. 7/16/90)** Any proposed change in the use or character of the land, including but not limited to, land clearing or the placement of any structure or site improvement on the land except for silviculture activities employing best management practices.

DILAPIDATED: **(EFF. 7/16/90)** Means a structure which does not provide safe and adequate shelter in its present condition and endangers the health, safety and well-being of the occupants. A structure in the dilapidated classification cannot be economically repaired. A house is dilapidated when it has one or both of the following conditions:

1) Inadequate original construction such that it does not provide adequate protection against the elements;
2) Defects which would cost over 50% of the total value of the shelter to repair.

DRAINAGE BASIN: **(EFF. 12/7/99)** The area defined by topographic boundaries which contributes stormwater to a watershed or drainage system, including all areas artificially added to the basin.

ECOTOURISM: **(EFF. 7/6/15)** Tourism that focuses on the appreciation of natural areas, wildlife, or cultural and historical resources and strives to minimize ecological impact or damage. This nature-based tourism involves education and interpretation of the natural environment and is managed to be ecologically sustainable. Activities may include cycling, camping, fishing, hunting, paddling, hiking, birding, visiting scenic byways, agritourism, and wildlife viewing.

ENDANGERED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish and wildlife or plant naturally occurring in Florida, whose prospects of survival are in jeopardy due to modification or loss of habitat; over utilization for commercial, sporting, scientific or educational purposes; disease; predation; inadequacy of regulatory mechanisms; or other natural or man-made factors affecting his continued existence.

~~**ENTERPRISE ZONE**: **(EFF. 7/16/90)** Means an area in the state designated pursuant to Section 290 of the Florida Statutes and approved by the Secretary of the Department of Community Affairs.~~

ENVIRONMENTALLY SIGNIFICANT LANDS: **(EFF. 7/16/90)** Areas that provide breeding, wintering or foraging habitat, for federal, state, and locally listed plant and animal species; flood plains, wetlands, native forests and vegetated areas.

~~**FEDERAL UNIFORM RELOCATION ACT**: **(EFF. 7/16/90)** Means the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as passed and subsequently amended by the Congress of the United States.~~

FLOOD OR **FLOODING**: **(EFF. 1/23/09)** A temporary condition of partial or complete inundation of normally dry land or wetlands from the overflow of water bodies or watercourses in response to stormwater runoff, or from excessive overland flow of stormwater, or the accumulation of stormwater runoff in a closed basin.

FLOODPLAIN: **(EFF. 1/23/09)** An area of land susceptible to being flooded by stormwater. Floodplains are normally designated in terms of their probability of flooding with a specified period, such as one, ten, 25, 50, and 100 years.

FLOODWAY: **(EFF. 7/16/90; REV. EFF. 1/23/09)** That part of the floodplain associated with the channel of a river, steam, or other watercourse, or waterbodies and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation of the floodway.

FLOOR AREA RATIO: **(EFF. 6/25/96)** A measure of development intensity expressed as a ratio of the gross floor area of all buildings on a site divided by the total area of the site.

FLORIDA CAPITOL CENTER PLANNING DISTRICT: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

FLORIDA MASTER SITE FILE: **(EFF. 7/16/90)** A clearinghouse for information on archaeological sites, buildings and historic resource surveys. Inclusion in the Florida Master Site File does not necessarily mean that the resource possesses historic, architectural, archaeological or cultural significance, or is worthy of preservation.

FREEWAYS: **(EFF. 7/1/04)** Roadways that provide the highest level of mobility and are intended to carry the greatest amount of traffic at the highest speeds. Accordingly, freeway mainlanes provide no direct access to property and access to the freeway is provided only at interchanges and ramps.

FUNCTIONAL AREA OF AN INTERSECTION: **(EFF. 7/1/04)** The area beyond the physical intersection that comprises decision and maneuver distance, plus any required vehicle storage length, and is protected through corner clearance standards and connection spacing standards.

GREEN SPACE: **(EFF. 7/16/90)** Means that part of a lot open and unobstructed from its lowest level upward which is accessible to all residents on the lot, except as may be required for safety, and which is not used for off-street parking, streets, drives, refuse storage or other utility or building purposes.

GREEN INFRASTRUCTURE: Infrastructure that uses plants, soils, and other media to capture and treat stormwater. It relies on the natural processes of filtration, infiltration, and evapotranspiration to manage stormwater

GROSS DENSITY: **(EFF. 7/16/90)** Means the number of dwelling units per gross acre, an area of land containing forty three thousand, five hundred sixty (43,560) square feet including rights-of-way, common areas and the like. All residential densities referred to in the plan shall be gross densities unless otherwise noted.

GROUNDWATER RESOURCE PROTECTION: **(EFF. 7/16/90)** Areas determined to have high recharge to the aquifer and/or area where the potential for groundwater contamination is high.

GROUP HOME: **(EFF. 7/16/90)** Means a facility which provides a living environment for unrelated residents who operate as the functional equivalent of a family, including such supervision and care as may be necessary to meet the physical, emotional and social needs of the residents. Adult congregate living facilities comparable in size to group homes are included in this definition. It shall not include rooming or boarding homes, clubs, fraternities, sororities, monasteries or convents, hotel, residential treatment facilities, nursing homes, or emergency shelters.

HAZARD: **(EFF. 4/10/09)** Means a condition that exposes human life or property to harm from a man-made technological, or natural disaster.

HAZARD MITIGATION: **(EFF. 4/10/09)** Means any action taken to reduce or eliminate the exposure of human life or property to harm from a man-made or natural disaster.

HAZARDOUS WASTE: **(EFF. 7/16/90)** Means solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible or incapacitating reversible illness, or may pose a substantial present or potential hazard to human health or the environment when improperly transported, disposed of, stored, treated, or otherwise managed.

HEAVY INDUSTRIAL: **(EFF. 7/16/90; REV. EFF. 5/31/18)** Heavy industrial uses have or may have substantial offsite impacts, such as noise, vibrations, smoke, dust and particulate matter, and noxious or odorous gases. Heavy industrial uses typically depend on access to Strategic Intermodal System (SIS) facilities, rail facilities, or airport facilities.

HIGH QUALITY SUCCESSIONAL FOREST: **(REV. EFF. 12/10/91; REV. EFF. 7/19/13)** High quality successional forest shall mean a medium quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." These forests typically show signs of past disturbances, but still retain a good distribution of high quality indicator species. A medium quality natural community generally possesses the following characteristics:

1) The floristic composition contains many of the more common species typical of the natural community type, although most rare species are absent;
2) The community may contain invasive exotic plants that could be controlled through management;
3) The community has likely had some past disturbance, but not to the extent that the potential for recovery or restoration to a high quality natural community is significantly impaired (unauthorized activities in high quality successional forest areas resulting in a violation of the ordinances will not be excluded from protection as such).

HISTORIC RESOURCE: **(EFF. 7/16/90)** Means all areas, districts, or sites containing properties listed on the Florida Master Site File, the National Register of Historical Places, or designated by a local government as historically, architecturally or archaeologically significant.

HYDRAULIC FRACTURING: **(EFF. 5/31/18)** The process by which fractures are created by pumping fluids at high pressure into target rock formations to stimulate the flow of natural gas or oil, increasing the volumes that can be recovered.

INNOVATION DISTRICTS: **(EFF. 5/31/18)** Geographic areas that are physically compact, walkable, and transit-accessible where educational institutions, university-affiliated research and development facilities, and/or technology-focused companies cluster and connect with startup companies, business incubators, and business accelerators. Innovation Districts are mixed-use areas that provide housing, office, and retail in addition to the educational and business uses.

INTEGRATED ACCESS: **(EFF. 12/10/91)** The permitting of ingress and egress to a parcel of land in a manner which will minimize disruptions of the traffic flow due to turning movements on the local, collector, or arterial street on which the parcel fronts. Integrated access may include the requirement of shared access or the use of frontage or rear access roads.

INTENSITY: **(EFF. 12/7/99)** A measurement of the extent of land development, including the consumption or use of the space above, on, or below ground; examples of intensity measurement may include: the measurement of the use of or demand on facilities or services, allowed square footage or a floor area ratio of non-residential development, or the number of dwelling units per acre of residential development.

INTERMODAL: The term intermodal generally describes facilities that are used to move freight and cargo, as well as their transfer stations. Such facilities may include ports, railroad freight yards, freight/commercial airports, and the highways and railways that connect these facilities.

INTERSECTION: **(EFF. 6/25/96)** The point where the centerlines of two or more roads meet or cross and where allowance is made for the interchange of vehicular traffic.

LAND DEVELOPMENT REGULATIONS: **(EFF. 7/16/90)** Ordinances enacted by governing bodies for the regulation of any aspect of development, and including any local government zoning, rezoning, subdivision, building construction, or sign regulations, or any other regulations controlling the development of the land.

LDN: **(EFF. 7/16/90)** Means that measure of noise known as the Average Day-Night Sound Level rating which is the yearly energy average of the A-weighted sound level (to approximately the frequency response of the ear) integrated over a 24-hour period.

LEVEL OF SERVICE: **(EFF. 7/16/90)** Means an indicator of the extent or degree of service provided by, or proposed to be provided by a facility based on or related to the operational characteristics of the facility. Level of service shall indicate the capacity per unit of demand for each facility.

LEVELS OF SERVICE: (EFF. 7/16/90)

A Represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.

B Is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable.

C Is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

D Represents high density, but stable flow. Speed and freedom to maneuver are severely restricted.

E Represents operating conditions at or near the capacity level. All speeds are reduced. Freedom to maneuver within the traffic stream is extremely difficult.

LIGHT INDUSTRIAL: **(EFF. 7/16/90, REV. EFF. 5/31/18)** Light Industrial uses typically constrain potentially offensive impacts onsite, either through complete enclosure or a combination of enclosure and screening. Light Industrial uses shall include the finishing of products composed of previously manufactured component parts (such as the assembly of apparel or food processing excluding slaughter); and any manufacturing, storage, or distribution of products unlikely to cause any of the following impacts to be detected off-site: odor, noise, fumes or dispersion of waste, or radiation. Ancillary commercial uses designed to serve adjacent workers may be permitted. Light Industrial uses are not dependent upon direct access to rail facilities for off-loading and on-loading. Mixed Use Industrial sites allow light industrial uses supported by training facilities, offices, restaurants, small scale commercial storefronts, factory tours, retail, ancillary residential and/or open space uses.

LISTED SPECIES: **(EFF. 7/16/90)** Any plant or animal listed by the county, state or federal governments as an endangered or threatened species, or a species of special concern.

LIVE-WORK UNITS: **(EFF. 7/20/05)** Residential structures with their own lots, designed to accommodate and that include both living facilities and commercial/office components within the structure or on the same lot. The non-residential uses allowed in live-work units are “destination” businesses that do not rely on passerby and drive-by traffic, but more typically have visitation by appointment.

LOCALLY DESIGNATED HISTORIC RESOURCE: **(EFF. 7/16/90)** A resource that has been designated as historic under the Tallahassee-Leon County Zoning Code and that undergoes design review by the Tallahassee-Leon County Architectural Review Board.

LOCAL PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the corporate city limits, including but not limited to neighborhood parks and passive recreation facilities.

LOCAL STREETS: **(REV. EFF. 7/1/04)** Local streets collect traffic from adjacent land uses and other minor streets (cul-de-sacs, loops, alleys, lanes) and channel it to the collector/arterial system. Local streets are intended to carry the lowest traffic volumes at the lowest speeds, discourage through traffic (usually do not carry traffic between two streets of a higher classification), and to provide access to abutting land.

LOW IMPACT DEVELOPMENT: **(EFF. 4/10/09)** A land planning and engineering design approach that focuses on minimizing adverse impacts of development on water quality. This approach is implemented by replicating the pre-development hydrologic regime of the development site through infiltrating, filtering, storing, evaporating, and detaining stormwater runoff close to its source.

MAJOR COLLECTOR: **(REV. EFF. 7/1/04)** Major collector roadways channel traffic between arterials, from other collector streets to the arterial system, and from a major activity center to the arterial street system. Major collectors may carry relatively high traffic volumes.

MAJOR DETERIORATION: **(EFF. 7/16/90)** Means a dwelling unit which has major defects requiring extensive repairs. The unit will not necessarily provide safe and decent shelter unless the repairs are made. These housing units usually have critical defects of a substantial nature, such as:

1) Holes, open cracks, rotted or missing materials over a large part of the foundation, walls, roof or chimney;
2) Substantial sagging of floors, walls or roof,
3) Extensive damage by storm, fire or flood.

MAKERSPACES: **(EFF. 5/31/18)** Collaborative work spaces with tools available for the purposes of enabling people to design, prototype and create manufactured works that typically would not be possible to create with the resources available to individuals working alone. Makerspaces are intended to provide access to equipment, community, and education. Makerspaces often have a variety of equipment, such as 3D printers, laser cutters, CNC (Computer Numerical Control) machines, soldering irons, or sewing machines.

MASS TRANSIT: **(EFF. 7/16/90)** Means passenger transportation service, usually local in scope, that is available to any person who pays a prescribed fare. It operates on established schedules along designated routes or lines with specific stops and is designed to move relatively large number of people at one time.

MICROMOBILITY: The term micromobility is used to describe emerging transportation alternatives such as e-scooters, e-bikes, and electric skateboards. It is frequently used in describing bikeshare and e-scooter share schemes.

MINING: **(EFF. 5/31/18)** Mining uses have the potential for substantial offsite impacts and alterations to the land structure on and around the mining site. Mining uses shall include the mining and quarrying of sand, gravel, clay, limestone, ceramic, and refractory minerals. Mining uses do not include hydraulic fracturing. Mining uses typically depend on a transportation system that can support large and heavy trucks.

MINOR ARTERIAL: **(REV. EFF. 7/1/04)** Minor arterial roadways interconnect with and augment the principal arterial system. They are similar in function to principal arterials, but accommodate trips of more moderate length and distribute travel to geographic areas smaller than that of the principal arterial system. Therefore, they provide a somewhat higher degree of property access than principal arterials.

MINOR COLLECTOR: **(REV. EFF. 7/1/04)** Minor collector roadways channel traffic from minor streets to the major collector/arterial system, between other collectors, and from activity centers to a street of higher classification. Minor collectors provide access to adjoining properties and generally have lower volumes, shorter trip lengths, and fewer through trips than major collectors.

MISSING MIDDLE HOUSING: This type of housing is represented as house-scale buildings with multiple units, such as duplexes, fourplexes, cottage courts, and cluster housing types, that fit seamlessly into existing residential neighborhoods, offering more housing options and supporting walkability. These types are frequently "missing" from the typical Florida housing market.

MITIGATION: **(EFF. 7/16/90)** To lessen or eliminate the impact of development on a significant historic resource. Mitigation can include the modification of project plans to ensure preservation of the significant resource, landscape buffering, adaptive use of a historic building, archaeological salvage, or historic or photographic documentation or the resource.

MSTU/MSBU: **(EFF. 7/16/90)** Means municipal service taxing units or municipal service benefit units, as authorized and defined in Florida Statutes, Chapter 125.01 (1)(q).

MULTIMODAL: The term multimodal describes supporting the presence of a variety of transportation options including but not limited to walking, biking, rolling (wheelchair et al.), micromobility (e-scooters et al.), freight, trolly, bus, train, etc. The term is generally used to emphasize alternatives to vehicular modes of transportation.

NATIONAL REGISTER OF HISTORIC PLACES: **(EFF. 7/16/90)** A federal listing of culturally significant buildings, structures, objects, sites and districts in the United States. This program was established by Congress in 1935 and is maintained by the United States Department of the Interior.

NATIVE FOREST: **(EFF. 7/16/90; REV. EFF. 7/19/13)** Native forest shall mean a high quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." A high quality natural community generally possesses the following characteristics:

1) The plant species composition is dominated by high quality indicator species which are typical of their natural community type;
2) The community may contain invasive exotic plants that could be controlled through management;
3) Evidence of historical disturbance may be present, but the disturbance has not destroyed or prevented the re-establishment of a high quality natural community type.

NATURAL ACCESS CONTROL: **(EFF. 12/10/02)** A design concept directed primarily at decreasing opportunities for criminal activities by denying access to crime targets and creating a perception of risk for potential offenders. Natural access control is developed by designing streets, parking areas, sidewalks, building entrances, and neighborhood gateways, which clearly indicate public routes and discourage access to private areas with structural elements.

NATURAL SURVEILLANCE: **(EFF. 12/10/02)** A design concept directed primarily at identifying potential undesired r criminal activities. Natural surveillance is promoted by features that provide day and night visibility from windows, doors, and porches that oversee parking areas, pedestrian areas, play areas, building entrances, and similar areas.

NATURAL VEGETATION: **(EFF. 7/16/90)** The trees and plants occurring on a site prior to development, alteration or clearing of that site.

NEIGHBORHOOD PARK: **(EFF. 7/16/90)** Means those parks that serve as the focus for neighborhood units with a population of up to 5,000 and have a service area of approximately one-half mile and are accessible primarily to pedestrian and bicyclists.

NET ACRE: **(EFF. 7/16/90)** The amount of usable land area, exclusive of impervious areas and areas subject to environmental constraints.

NEW DEVELOPMENT: **(EFF. 7/16/90)** Means all land development activity subject to a development order after the adoption of this Comprehensive Plan, except those that shall be granted vested rights pursuant to the Plan itself.

OFFICE: **(REV. EFF. 6/25/96)** Generally, a room, group of rooms, or building used primarily for conducting the affairs of a business, profession, service, industry or government. An office shall not include the sale of goods for a profit as its primary use. For purposes of this Plan, the following are categories of office intensity:

MINOR: **(REV. EFF. 6/28/95)** Converted residence at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum of 2,500 square feet if located on a local street.

MAJOR: **(REV. EFF. 6/28/95)** An office building or buildings with more than a .25 floor area ratio, or at least 10,000 square feet. This includes a series of buildings within a subdivision that when combined is equal to or exceeds these thresholds.

OFF-SITE MITIGATION: **(EFF. 7/1/04) CITY OF TALLAHASSEE ONLY**—To compensate for the impacts of development on significant environmental resources in areas deemed important for infill or related conversions of land use by preserving, restoring and enhancing the environmental functions of ecosystems elsewhere.

ON-SITE SYSTEM: **(EFF. 7/16/90)** Means any sanitary sewer system designed and built to serve a single parcel of land, i.e. septic tank or package treatment plant with capacity sized to:

a) Meet the demand for a single parcel of land and its intended use
b) Meet the projected demand for a single parcel of land after its subdivision

An on-site system may serve more than one parcel but only to correct an existing environmental problem.

OPEN SPACE: **(EFF. 7/1/04)** Means undeveloped lands suitable for passive recreation or conservation uses. In the context of Conservation Subdivisions, Open Space refers to lands subject to a required conservation easement. These lands may include Conservation and Preservation features defined in this Plan, or agricultural or silvicultural properties, that are managed to preserve or promote environmental and aesthetic resources.

PASSIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are natural resource oriented, i.e. hiking trails, boat landings, neighborhood parks.

PEAK HOUR: **(REV. EFF. 8/17/92)** Means the period during which the maximum amount of travel occurs. The period when demand for transportation service is heaviest.

PLANT COMMUNITY: **(EFF. 7/16/90)** A natural association of plants that is dominated by one or more prominent species, or possesses a characteristic physical and discernible attribute.

~~**POLYGON CONNECTIVITY INDEX**: **(EFF. 4/10/09)** A measure of connections within a transportation network. A polygon is created when elements of the transportation network connect and create closed loops, thus allowing a traveler to make a loop on its perimeter. The more polygons there are within an area, the more route options exist for a traveler. More polygons equal a higher connectivity index and a higher degree of mobility.~~

POPULATION ACCOMMODATION RATIO (PAR): **(EFF. 4/18/02)** The Population Accommodation Ratio (PAR) is the relationship between the supply of land available for development and the expected population growth over a period of time. A PAR of 2.00 means that there is twice the supply of land available for development compared to the expected population growth over a period of time. A PAR of 1.50 means there is 50% more land available for development than is needed for the expected population growth over a period of time.

PRESERVATION: **(EFF. 7/16/90)** Establishing strict requirements for the maintenance of significant ecological resources in a natural state. Activities should be in strict compliance with an effort to perpetuate the ecological value of the site or surrounding areas, including maintenance of listed plant and animal species.

PRESERVE AREAS: **(EFF. 7/16/90)** Vegetative areas required to be preserved by law.

PRINCIPAL ARTERIAL: **(REV. EFF. 7/1/04)** Principal arterial roadways are designed to carry the next highest level of mobility and are intended to carry substantial traffic volumes over relatively long distances and at relatively high speeds. Direct property access may be provided but must be carefully managed to avoid creating unsafe and congested conditions and to preserve mobility.

PRIVATE RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Recreational resources provided by the private sector.

COMMERCIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities operated by the private sector as for profit or not-for profit.

RESIDENTIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities located within and associated with residential developments.

PROOF OF CONCEPT CENTERS: **(EFF. 5/31/18)** Facilities designed to provide services related to financial capital, business support, and university research to promote the adoption and further development of programs that aid technologies through phases between patenting and the creation of marketable products.

PUBLIC FACILITY: **(EFF. 7/16/90)** Means capital facilities that are owned by a governmental entity.

RECREATIONAL:

PASSIVE: **(EFF. 7/16/90)** Natural resource oriented, (hiking trails, boat landings, neighborhood parks).

ACTIVE: **(EFF. 7/16/90)** Facility oriented, (swimming pools, ball fields, tennis courts).

REGIONAL PARK: **(EFF. 7/16/90)** Means a large resource based area which serves the entire county. Such a park should serve a minimum of 100,000 population and be within a 30 minute driving time of that population.

REGULATED CLOSED BASINS: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface, at least 10 acres in size, for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

REHABILITATION: **(EFF. 7/16/90)** The act or process of returning a property to a state of utility through repair or alteration which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its historical, architectural, and cultural values.

RESEARCH AND DEVELOPMENT: **(EFF. 5/31/18)** Research and Development uses shall have minimal offsite impacts and include facilities for developing technologies related to the physical and life sciences. Facilities may include laboratories, wet laboratories, classrooms, commercialization centers, coworking spaces, makerspaces, craftsman studios, proof of concept centers, and related facilities. Active and passive recreation, open space, hotels, restaurants, and limited retail and residential are allowed as ancillary uses to support the collaborative nature of research and development centers.

RESIDENTIAL: **(REV. EFF. 6/25/96)** Land that is used for or proposed to be used for the principal purpose of providing dwelling unit(s) for human habitation.

LOW: **(EFF. 7/16/90)** 0-8 dwelling units per acre

MEDIUM: **(EFF. 7/16/90)** 8-16 dwelling units per acre

HIGH: **(EFF. 7/16/90)** 16-50 dwelling units per acre

URBAN: **(EFF. 1/19/02)** 51 units to 150 units

RESPONSIBLE MANAGEMENT ENTITY: **(EFF. 4/10/09)** A legal entity that has the technical, managerial, and financial capacity to ensure viable long-term, cost-effective, centralized management, operation, and maintenance of decentralized wastewater systems in accordance with appropriate regulations and generally accepted accounting principles. Viability is defined as the capacity of a responsible management entity to provide adequate technical, managerial, and financial resources to protect the public health and the environment consistently, in perpetuity, and at a minimal cost to taxpayers.

SANITARY SEWER FACILITIES: **(EFF. 7/16/90)** Means structures or systems designed for the collection, transmission, treatment, or disposal of sewage and includes trunk mains, interceptors, treatment plants and disposal systems.

SANITARY SEWER SERVICE: **(EFF. 7/16/90)** Means sewer service provided by sanitary sewer designed to serve a large service area and usually more than one land use type. These facilities have the intent and potential for expansion of their service areas.

SCHOOLS: **(EFF. 6/26/98)** Facilities intended primarily for the education of children pre-kindergarten through twelfth grade, children identified as exceptional regardless of age or grade, or for the vocational or community education of high school age students and adults. Unless otherwise stated elsewhere in the Plan, this term refers to public and private schools.

SECTION 8 PROGRAM: **(EFF. 7/16/90)** Means those programs authorized under the renumbered Section 8 of the United States Housing Act of 1937. These programs allow the Department of Housing and Urban Development to contract directly with the owner of existing, new, or rehabilitated units for the payment of the difference between a contract rent not exceeding a fair market rate for the dwelling and a specified percentage of the tenant's gross income.

SEVERE GRADES: **(EFF. 7/16/90)** Slopes greater than 20%.

SILVICULTURE: **(EFF. 7/6/15) A** practice, operation, or process following accepted forest management principles whereby the crops constituting forests are tended, harvested, and reforested.

SOLID WASTE: **(EFF. 7/16/90)** Means sludge from a waste treatment works, water supply treatment plant, or air pollution control facility or garbage, rubbish, refuse or other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from domestic, industrial, commercial, mining, agricultural, or governmental operations (as defined by Section 9J-5.002(88), F.A.C.).

SPECIAL NEEDS HOUSING: **(EFF. 7/16/90)** Means that part of the housing provision system designed to fulfill the demand of a household or individual who needs assistance, either permanent or temporary, in obtaining basic shelter, including but not limited to very low and low income handicapped individuals, homeless persons, group homes for persons with physical, emotional or cognitive disabilities, shelters for battered victims, adult congregate living facilities, and halfway houses for the non-criminal or non-delinquent.

SPECIES OF SPECIAL CONCERN: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: A species, subspecies or isolated population which warrants special protection, recognition or consideration because it has an inherent significant vulnerability to habitat modification, environmental alteration, human disturbances, or substantial human exploitation which, in the foreseeable future may result in its becoming a threatened species; may already meet certain criteria for designation as a threatened species but for which conclusive data are limited or lacking; may occupy such an unusually vital and essential ecological niche that should it decline significantly in numbers or distribution, other species would be adversely affected to a significant degree, or has not significantly recovered from past population depletion.

STARTUP COMPANY: **(EFF. 5/31/18)** An entrepreneurial venture that is typically a newly emerged, fast-growing business that aims to meet a marketplace need by developing a viable business model around an innovative product, service, process or a platform.

SUBSTANDARD HOUSING: **(EFF. 7/16/90)** Means any structure which falls within the structural conditions defined as “major deterioration” and “dilapidated.”

SUPERSTOPS: **(EFF. 4/10/09)** Transit stops that will serve as transfer stations for two or more routes, removing the need for riders to go to a single, centralized location to make transfers.

TERRITORIAL REINFORCEMENT DESIGNS: **(EFF. 12/10/02)** Create or extend the spheres of influence of legitimate users of designed environments. Properly designed environments allow legitimate users to develop a sense of territorial control, while potential offenders (perceiving the legitimate user control of the environment) are discouraged from attempting criminal activities. Territorial reinforcement is promoted by features that distinguish private spaces from public spaces with the use of fences, gateways, hedges, and similar design strategies.

THREATENED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish, wildlife and plants naturally occurring in Florida which exists in such small populations as to become endangered if it is subjected to increased stress as a result of further modifications of its environment.

THROUGH TRIPS: **(EFF. 6/07/01)** A through trip is one that has neither a beginning point nor a destination point contained within the subject area or on a particular roadway segment.

TRAIL ORIENTED DEVELOPMENT (TrOD): Trail Oriented Development is designed to locate buildings in immediate proximity to multi-use path transportation corridors with the intention of connecting or relating residences and businesses to the nearby trail facilities. Generally TrOd is compact, walkable, pedestrian and bike-oriented, and mixed-use.

TRANSIT ORIENTED DEVELOPMENT (TOD): Transit Oriented Development is designed to be compact, walkable, pedestrian-oriented, and mixed-use development that is centered near and around transit. TOD supports vibrant communities with a mix of commercial, residential, office and entertainment uses.

TRANSPORTATION CORRIDOR: **(EFF. 7/16/90)** Means a broad geographical band that follows a general directional flow or connects major sources of trips. It may contain a number of streets and highways and transit lines or routes.

TRANSPORTATION SYSTEM: **(EFF. 7/16/90)** Means a coordinated system made up of one or several modes of transportation serving a common purpose of the movement of people, goods, or both.

UNDEVELOPED FLOODWAY/FLOODPLAIN: **(EFF. 7/16/90)** A floodway/floodplain which has not been altered.

VULNERABLE ROAD USER: The term vulnerable road use describes transportation systems users outside of vehicles. It includes pedestrians, cyclists, wheelchair/powerchair users, micromobility users, et al

WATER BODY AND NATURAL WATER BODY: **(EFF. 7/16/90)** A water body is a depression in the ground that normally and continually contains surface water. This is opposed to a wet depression that holds water only intermittently. There are some types of wetlands that are examples of areas that hold water only certain times of the year. A natural water body is a depression in the ground existing in and produced by nature, not man-made, and occurring due to the operation of the ordinary course of nature that normally and continually contains surface water or has historically held surface water on a continuing basis.

WET LABORATORIES: **(EFF. 5/31/18)** Laboratories where chemicals, drugs, or other materials are handled in liquid solutions or volatile phases, requiring direct ventilation and specialized piped utilities (typically water and various gases).

WETLAND: **(REV. EFF. 6/28/02; REV. EFF. 7/19/13)** Wetlands mean those areas included within the landward extent of surface waters of the state, pursuant to applicable rules in the Florida Administrative Code, or any area which is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and which under normal circumstances does support a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligated hydrophytic macrophytes that are typically adapted to areas having soils conditions described in this definition. These species, due to morphological, physiological, or reproductive adaptations have the ability to grow, reproduce, or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps and marshes, bayheads, bogs, cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps, and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto. The City of Tallahassee and Leon County intend to continue to protect isolated wetlands and wetlands on properties held by a single owner. Isolated wetlands and wetlands in one ownership must meet the State of Florida's definition for wetlands with regard to percent composition of wetland plant species, hydrologic indicators, and soils (Chapter 62-340, F.A.C.)

CITY OF TALLAHASSEE

NOTICE OF PUBLIC HEARING

NOTICE IS HEREBY GIVEN that the Tallahassee City Commission will conduct public hearings, and the public may be heard on Dec. 10, 2025, at 6:00 p.m. in the City Hall Commission Chambers, 300 S. Adams St., Tallahassee, FL to consider adoption of the following ordinance(s):

Ordinance No. 25-O-02AA

AN ORDINANCE OF THE CITY OF TALLAHASSEE AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM; MOBILITY ELEMENT; AND GLOSSARY; PROVIDING FOR SEVERABILITY AND CONFLICTS; AND PROVIDING AN EFFECTIVE DATE.

Ordinance No. 25-O-23

AN ORDINANCE OF THE CITY OF TALLAHASSEE UPDATING THE CAPITAL IMPROVEMENTS ELEMENT OF THE 2030 TALLAHASSEE/LEON COUNTY COMPREHENSIVE PLAN; PROVIDING FOR SEVERABILITY AND CONFLICTS; AND PROVIDING AN EFFECTIVE DATE.

Ordinance No. 25-O-24

AN ORDINANCE OF THE CITY OF TALLAHASSEE, FLORIDA, 3 AMENDING CHAPTER 10 OF THE LAND DEVELOPMENT CODE; 4 REVISING PERMITTED PRINCIPAL USES FOR THE C-1, C-2, AND CP 5 ZONING DISTRICTS; PROVIDING FOR CONFLICTS, SEVERABILITY 6 AND AN EFFECTIVE DATE.

Ordinance No. 25-O-27

AN ORDINANCE OF THE CITY OF TALLAHASSEE, 3 FLORIDA; AMENDING CHAPTER 9 OF THE LAND DEVELOPMENT 4 CODE CONCERNING CERTIFIED RECOVERY RESIDENCES; 5 PROVIDING FOR CONFLICTS, SEVERABILITY AND AN EFFECTIVE 6 DATE.

Ordinance No. 25-O-28

AN ORDINANCE OF THE CITY OF TALLAHASSEE, FLORIDA, 3 AMENDING CHAPTERS 16 AND 17 OF THE CODE OF GENERAL 4 ORDINANCES; PROVIDING FOR CONFLICTS; PROVIDING FOR 5 SEVERABILITY; AND PROVIDING FOR AN EFFECTIVE DATE.

Interested parties may appear at the meeting and be heard with respect to the proposed ordinance(s).

If a person decides to appeal any decision made by the City Commission with respect to any matter considered at such hearing, they will need a record of the proceedings and should ensure that a verbatim record of the proceedings is made, which record includes the testimony and evidence upon which the appeal is to be based.

Copies of said ordinance(s) may be inspected in the Office of the City Treasurer-Clerk, City Hall, 300 S. Adams St., Tallahassee, FL or by calling (850) 891-8130. Copies are also available online at: http://www.boarddocs.com/fla/talgov/Board.nsf/Public

In accordance with the provisions of the American with Disabilities Act (ADA), any person requiring special accommodations at the hearing or meeting because of a disability or physical impairment should contact the City Treasurer-Clerk's Office during business hours at 850-891-8130. Requests should be submitted at least two business days prior to the meeting. For those who are hearing or speech impaired, please contact the Florida Relay Service by dialing 7-1-1, or (800) 955-8771 (TTY), or (800) 955-8770 (Voice) for aid in contacting our Office.

Leon County
Board of County Commissioners
Agenda Item#25

December 9, 2025

To:	Honorable Chairman and Members of the Board
From:	Vincent S. Long, County Administrator
Title:	Adoption Public Hearing on the Comprehensive Plan Update

Review and Approval:	Vincent S. Long, County Administrator
Department/Division Review and Approval:	Ken Morris, Assistant County Administrator Nawfal Ezzagaghi, Assistant County Administrator Artie White, Director, Planning, Land Management & Community Enhancement (PLACE) Mike Alfano, Director, Planning
Lead Staff/ Project Team:	Susan Poplin, Administrator of Comprehensive Planning Tyler Maldonado, Principal Planner Adam Moran, Planner II Ed Young, GIS Coordinator

---

Statement of Issue:

This item requests the Board conduct the adoption public hearing and adopt an ordinance amending the Land Use and Mobility Elements of the 2030 Tallahassee-Leon County Comprehensive Plan (Attachment #1) pursuant to Section 163.3184, Florida Statutes (F.S.). If adopted by both the Board and City Commission, the current Land Use Element and Mobility Element will be replaced by the proposed Land Use and Mobility Element.

Fiscal Impact:

None.

Staff Recommendation:

Option #1: Conduct the adoption public hearing and adopt the proposed ordinance (Attachment #1), thereby adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan, subject to the City Commission's adoption of the proposed amendments in accordance with Policy 1.8.1 of the Intergovernmental Coordination Element.

Report and Discussion

Background:

At its November 18, 2025, meeting, the Board accepted a status report on the proposed Land Use and Mobility Element (LME), provided policy direction for specific updates to the proposed LME, and directed staff to schedule the adoption public hearing on the proposed LME for December 9, 2025. The item requests the Board conduct the adoption public hearing and adopt an ordinance (Attachment #1) amending the existing Land Use and Mobility Elements of the 2030 Tallahassee-Leon County Comprehensive Plan with the proposed LME, subject to the City Commission also adopting the proposed amendments in accordance with Policy 1.8.1 of the Intergovernmental Coordination Element. The adoption hearing for the City Commission is scheduled for December 10, 2025.

This item advances the following FY 2022 – FY 2026 Strategic Initiatives:

- *Complete a comprehensive review and revision to the Land Use Element of the Comprehensive Plan. (2022-13)*
- *Host community outreach events on the Vision 2025 Comprehensive Plan Land Use and Mobility Elements Update to share information and solicit input from citizens, advocacy groups, and neighborhood representatives. (2024-83)*

These particular Strategic Initiatives align with the Board's Environment and Governance Strategic Priorities:

- *(EN3) Promote orderly growth and sustainable practices.*
- *(G3) Inform and engage citizens through multiple outreach platforms to ensure consistent, high-value, transparent communication on our most important issues.*

The Board and City Commission initiated an update to the Tallahassee-Leon County Comprehensive Plan (Plan), beginning with the Land Use and Mobility Elements—Comprehensive Plan Elements that guide future growth, development, and transportation planning. Launched in late 2022, the

current effort to revise the Plan reflects current conditions, complies with statutory requirements, and aligns with the community's long-term vision based on extensive public engagement.

On February 25, 2025, the Board and City Commission held a Joint Workshop to review draft goals and objectives and provided policy direction for the proposed LME. Feedback from both Commissions was used to refine the draft documents in preparation for formal review.

The Tallahassee-Leon County Local Planning Agency (LPA) held a public hearing on April 1, 2025, following several work sessions to review the proposed LME. The LPA voted to recommend transmittal of the proposed LME to the Board and City Commission.

At its May 13, 2025, meeting, the Board held the Transmittal Public Hearing and voted to transmit the proposed LME and supporting data analysis to the State Land Planning Agency (Florida Commerce) and other state and regional review agencies for the 30-day review period pursuant to Section 163.3184, F.S.

During this same period, the City Commission considered the companion transmittal on June 11, 2025. In response to citizen concerns regarding residential density, neighborhood compatibility, and growth patterns, the City Commission deferred transmittal and directed staff to conduct additional community engagement before proceeding.

Subsequently, at its July 8, 2025 meeting, the Board directed staff to undertake additional public engagement focused on the proposed LMEs, to compile and summarize community feedback, and to return to the Board with a status report, policy recommendations, and a revised project schedule for consideration prior to adoption.

While the County's engagement process was underway, the City continued its review of the proposed LME. In response to community concerns about the proposed Urban and Sub-Urban Residential Preservation Future Land Use Categories (FLUCs), the City held a community meeting on August 18, 2025, attended by representatives from numerous neighborhood associations. Based on feedback from that meeting, the City Commission voted on August 20, 2025, to retain the existing Residential Preservation FLUC with revisions to address legally established nonconforming uses. The City Commission then held its Transmittal Hearing on September 17, 2025, and voted to transmit the proposed LME—incorporating the updated Residential Preservation policies—to the State Land Planning Agency and review agencies.

The Board received a status update on November 18, 2025, that provided a thorough summary of the input received through the Board-directed community engagement. At that meeting, the Board provided policy direction to staff on specific updates to the proposed LME. Additionally, the Board directed staff to schedule the adoption public hearing for December 9, 2025. This item provides a proposed ordinance (Attachment #1) for Board consideration for the adoption public hearing. This item recommends that the Board approve the adoption of the proposed Ordinance to amend the Land Use and Mobility Elements and revise the Plan's Glossary (Option #1).

Policy 1.8.1 of the Intergovernmental Coordination Element of the Tallahassee-Leon County Comprehensive Plan requires approval by both the Board and the City Commission for text amendments, including amendments to the Urban Services Area (USA), to become effective.

Should the Board approve the adoption of the proposed LME (Option #1), and the City Commission also approves adoption of the proposed LME at its adoption public hearing, the adopted LME and related Glossary update will again be submitted to the Florida Department of Commerce and commenting agencies for a compliance review. The proposed LME would become effective 31 days after the State Land Planning Agency notifies the local governments that the plan amendment package is complete.

Analysis:

The proposed Land Use and Mobility (LME) Goals, Objectives, and Policies (Attachment #1) provide a roadmap for what the Tallahassee-Leon County community will look like in the future with the population growth projected between today and 2050.

Purpose of the Comprehensive Plan and Relationship to Land Development Codes

The Tallahassee-Leon County Comprehensive Plan is intended to express the community's plan for how growth and development occur in the City of Tallahassee and Leon County. The current Comprehensive Plan includes Goals, Objectives, and Policies regarding how land is developed to accommodate projected population growth, how infrastructure is planned and provided to support anticipated growth, how natural features are protected, and how various other factors that promote a high quality of life are addressed in the community. The Comprehensive Plan also includes the land use plan that reflects assigned future land use designations on a Future Land Use Map (FLUM). The Plan gives direction to programs and activities, and to regulation through land development codes, including zoning districts. When the update is completed, an assessment of the existing land development codes is needed to ensure that they implement the intent of the Comprehensive Plan including the FLUM and remain consistent with the Comprehensive Plan.

Implementation of the FLUM Through Zoning

Zoning districts defined in the City and County's respective Land Development Codes and reflected on the respective City and County official zoning maps implement the FLUM. In some cases, a Future Land Use Category (FLUC) is implemented by only one or two zoning districts. For example, the Urban Fringe FLUC is implemented by the Urban Fringe zoning district, the Recreation and Open Space zoning district, or a Planned Unit Development. In other cases, a FLUC may be implemented by numerous zoning districts. For example, the Suburban FLUC can be implemented by twenty-two different zoning districts. The zoning districts that implement the Suburban FLUC range from Residential Acre (RA) allowing up to one unit per acre to Medium Density Residential (MR) allowing up to 16 units per acre and from Neighborhood Commercial (C-1) allowing up to 12,500 square feet of commercial development per acre to Medical Arts Commercial (CM) allowing up to

80,000 square feet per acre. The current effort to update the FLUM does not change the current zoning designation of any property and allows existing districts to remain in place. Future zoning changes will continue to be assessed as required by the Comprehensive Plan and the land development codes.

Public Engagement

Public engagement for the LME Update was extensive, with opportunities for participation provided at multiple stages of the project. Attachment #2, *Comprehensive Plan Update Project History*, documents this process and outlines the various points at which the community was invited to provide input. Building on these earlier efforts, the consultant team conducted additional outreach activities tailored to the project's needs, which included the following:

- Ambassador Program (Throughout project)
- Educational Roadshow (September 18 - 20, 2023)
- Roundtable Discussions (September 26 - 29, 2023)
- Vision Survey (October - November 2023)
- Community Building Blocks Survey (December 2023 - February 2024)
- Strengthen, Transform, Enhance, and Preserve (STEP) Framework Workshops (January 29 - 30, 2024)
- Comprehensive Plan/Land Development Code Assessment Sessions (December 2024)
- Public Survey on Goals and Objectives (February - March 2024)
- Local Planning Agency Workshop on LME Goals and Objectives (February 4, 2025)
- Committees and Stakeholders Meeting (February 26, 2025)
- Community Engagement Meeting (March 3, 2025)
- Local Planning Agency Workshop on Future Land Use Map and Land Use Categories (March 11, 2025)
- Public Survey on Goals, Objectives, and Policies (March - April 2025)
- Local Planning Agency Public Hearing (April 1, 2025)

In addition to the consultant-led outreach, the Planning Department conducted further public engagement to gather input from community members and organizations on the draft LME Goals, Objectives, and Policies. Feedback was collected through public surveys and comments submitted directly to staff, and is summarized in Attachment #3, *Public Comment*. This input was reviewed and incorporated where it aligned with community values, data analysis, other elements of the Comprehensive Plan, applicable state statutes, and the overall purpose of the Plan. Comments deemed more appropriate for implementation through the land development code have been set aside for consideration during future updates to that code.

Data Analysis

The proposed Comprehensive Plan update must be supported by appropriate data and analysis, as required by state law. Sections 163.3177(6)(a) and (b), Florida Statutes, specify minimum

requirements, including population projections; existing land uses and natural resources; the availability of public facilities and services; transportation circulation; and projected transportation levels of service. Business Impact Estimates (BIEs) for both the City and the County were also completed as required and are included as Attachment #4. These BIEs are available on the respective City and County websites. All supporting data and analyses for the Comprehensive Plan update are publicly accessible at: https://www.compplantlc.com/pages/dataandanalysis.

Housing Needs Assessment:

As part of the required data and analysis supporting the Comprehensive Plan update, an evaluation of future housing needs was completed to assess whether projected growth can be supported by existing and anticipated housing supply. This analysis identifies the additional housing units likely to be required through 2050 and examines current market conditions to understand existing shortages and pressures.

Projected population growth in Leon County is expected to create demand for approximately **23,000 additional housing units by 2050**. This estimate reflects the projected addition of roughly 41,500 residents over the next 25 years, calculated using the county's average household size (2.28 persons) and a standard housing multiplier (1.25).

The local housing market is already experiencing supply pressures. As of July 2025, Tallahassee and Leon County have an estimated housing supply of 3.8 months. Although this represents an improvement from the pandemic period—when supply dropped below three months—it remains below the six-month supply that the National Association of Realtors identifies as a balanced market. Markets operating below this threshold typically experience faster price increases.

Beyond overall supply constraints, specific housing types face additional shortages. The Florida Apartment Association reports a deficit of 2,825 apartment units across all income levels in the Tallahassee Metro Area. Analyses by the University of Florida's Shimberg Center further indicate a shortfall of 7,855 affordable rental units for households earning less than 50 percent of the area median income.

Meeting this future housing demand depends on the amount and type of land available for development within the Urban Services Area (USA). The following section reviews current land capacity and considerations related to potential USA adjustments.

Growth in the USA – which is approximately 107,498 acres- will predominantly be accommodated on larger, undeveloped parcels such as the Colin English property and Welaunee Critical Planning Area Plan areas. As shown in Attachment #5, approximately 65% of the acreage inside the Urban Services Area (USA) is identified as low-density residential and, as such, has limited infill development and redevelopment potential. Additionally, parcels identified as vacant on Attachment #5 do not inherently mean that they are available or that they are not constrained by environmental features or other factors that limit development.

Given the high percentage of land within the Urban Services Area (USA) designated for low-density uses—and the limited number of parcels that are both vacant and developable—an expansion of the USA is warranted to accommodate projected growth. The proposed changes add approximately 3,800 acres (and remove approximately 1000 acres, mainly in public areas such as the national Forest) for a net increase of approximately 2,800 acres. This expansion serves to align the USA boundary with property lines, transportation corridors, and geographic features, rather than bisecting individual properties. The expansion also includes areas adjacent to existing or planned developments, such as Southwood on the south side and the area north of Bannerman Road (east of North Meridian Road), where subdivision of land has already occurred.

As shown on the proposed Future Land Use Map (FLUM), properties within the proposed expansion generally retain their existing allowable densities, intensities, and uses. In one instance, properties included in the expansion are designated as Planned Development, which will require approval of a Master Plan prior to any development. The USA concept continues to be applied in the proposed LME to direct growth to appropriate areas and to ensure that development is supported by planned services.

Planned Development Master Plans

Areas designated as Planned Development on the FLUM require the adoption of a Master Plan before any development may occur. Adopted policies in the Land Use Element state that "*a Planned Development Master Plan shall be adopted as an area plan that is consistent with, but independent of the Comprehensive Plan.*" In keeping with this principle, the proposed LME removes the adopted Southeast Sector Plan and Welaunee Critical Area Plan from the Comprehensive Plan. Both the Southeast Sector Plan and the Welaunee Critical Area Plan remain adopted Master Plans with no changes proposed. Changes to these Master Plans will still require a public process with relevant Board or City Commission approval, and any future development within these areas must be consistent with the appropriate master plan.

The Southeast Sector Plan and Welaunee Critical Area Plan are included in Attachment #6. To support this structure, language has been added to the Planned Development FLUC to reiterate that these Master Plans remain the Master Plans for these areas, as well as indicating that the Capital Circle Office Complex Planned Unit Development serves as the Master Plan for that specific Planned Development area.

Statutory Requirements

The proposed LME replaces the existing separate Future Land Use Element and Mobility Element of the Comprehensive Plan. As such, the proposed LME must meet both the requirements of Section 163.3177(6)(a), F.S., for Land Use, and (6)(b) for Transportation. Attachment #7 provides a

comprehensive review demonstrating how the proposed Goals, Objectives, and Policies satisfy both sets of statutory requirements and maintain internal consistency within the Comprehensive Plan.

Comprehensive Plans must also be internally consistent across all elements. Attachment #8 illustrates how the Goals, Objectives, and Policies in the currently adopted Land Use and Mobility Elements relate to those proposed in the LME, offering a clear crosswalk between the existing structure and the updated framework.

Section 163.3177, F.S., identifies requirements for a map series. Attachment #9 presents the required map series with Natural and Historic Resources as well as Mobility Maps. As required by statute, these maps include surface waters, wetlands, flood zones, soils, historic district boundaries, potable water wells, transportation concurrency management areas, and the transportation system. Based on comments from Florida Commerce on the transmittal packages submitted for review following the Board's and the City Commission's transmittal hearings, the map series was updated as described in more detail below.

Glossary Updates

Attachment #10 includes new and revised terms to add to the Comprehensive Plan Glossary. The proposed amendment also removes outdated terms from the Glossary that are not used in any Element of the Comprehensive Plan.

Previous Direction from the Board and City Commission

At the February 25, 2025, Joint Workshop with the Board and City Commission, the Commissioners provided direction for the following to be addressed in the draft LME:

- Including policies and subsequent updates to land development code regulations that incentivize redevelopment along major roads and gateway corridors by allowing increased densities and intensities along with urban design standards.
- Addressing existing legally non-conforming uses, specifically in the Lake Protection FLUC, in ways that both improve water quality and achieve high-quality development.
- Coordinating and incorporating the efforts of the Woodville Sense of Place Plan with updates to the Comprehensive Plan and subsequent updates to the County land development code.
- Evaluating densities allowed in the Rural FLUC and identifying areas on the south side of unincorporated Leon County that should have higher allowable densities and intensities.
- Eliminating parking minimums from the Comprehensive Plan and land development codes.

Based on the direction from the Board and City Commission, the following components are included in the Draft Goals, Objectives, and Policies:

Incentivizing development on major roadways and gateways: The proposed FLUM incorporates higher density and intensity land uses along major corridors. Additionally, proposed Policy 2.6.2 specifically addresses Gateway corridors, including South Monroe, North Monroe, and the West Pensacola Street corridors. Proposed Policy 1.2.4 also aims to enhance gateway corridors through access management, preserved green space for landscaping, and consolidated signage.

Non-conforming uses in the Lake Protection FLUC: The Lake Protection FLUC (Policy 2.8.7) includes a provision that allows uses that are compatible with surrounding area and meets water quality standards for the Lake Jackson Basin to be considered permitted uses. It also provides for the development of a Lake Protection Corridor zoning district that can address uses and design standards along North Monroe Street to improve the corridor.

Woodville Sense of Place Plan: The Woodville Sense of Place is included in Policy 2.6.4. to acknowledge the potential future adoption and the need to align the Comprehensive Plan and land development codes, as necessary, when that effort is completed.

Higher Densities on the Southside: The proposed FLUM changes properties inside the USA that are currently designated Rural to higher density/intensity land uses. This was primarily on the south side of Leon County. Having areas designated Rural inside the USA is inconsistent because Rural is intended for areas that do not have and are not planned to have urban services, while the USA is specifically intended to be where urban services exist or are planned.

Additionally, the Woodville Sense of Place policy (Policy 2.6.4) may further support higher density and intensity in areas around Woodville as recommendations from that planning process are developed. Proposed Policy 2.2.6 also streamlines the transition of properties designated Rural or Rural Residential to higher density or intensity when sewer services become available, reinforcing the broader intent to guide development to areas with appropriate infrastructure.

Parking Minimums: The Comprehensive Plan does not include any parking minimums. Proposed Policy 2.7.4 states that minimum parking requirements shall not be applied to areas designated Urban Center of the FLUM and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD. The proposed policy enables parking minimums to be eliminated (or reduced/made flexible as determined by the City Commission) in the City's Land Development Code. Additionally, proposed Policy 6.8.5 enables parking minimums to be reduced or eliminated for other types of development, including transit-oriented development, trail-oriented development, and mixed-use developments.

LPA Workshops and Public Hearing through April 1, 2025

The Local Planning Agency (LPA) has a significant role in review and recommendation for the comprehensive plan update. Leading up to public hearing on April 1, 2025, the LPA held three workshops where it received information and progressively considered and made recommendations

for the Land Use and Mobility Element (LME) Goals, Objectives, and Policies, and the Future Land Use Map. These workshops are summarized as follows:

- January 7, 2025 Workshop: Introductory Workshop on the comprehensive plan and plan update that included roles, process, and potential schedule.
- February 4, 2025 Workshop: Workshop to review the draft Land Use and Mobility Element Goals and Objectives that resulted in recommendations to incorporate Neighborhood First Plans and address housing diversity.
- March 11, 2025 Workshop: Workshop on the Draft FLUM and FLUCs that resulted in additional compatibility provisions for Residential Preservation and data generation to identify the magnitude of changes for the land use plan (See Attachment #11).

At the February and March workshops, the LPA proposed revisions that were incorporated into the proposed drafts, were shared with the public and the Commissions.

Subsequent to the workshops, the LPA held a public hearing on April 1, 2025, to consider the proposed amendments to the LME of the Tallahassee-Leon County Comprehensive Plan for transmittal to the Commissions.

Staff provided a presentation highlighting policies addressing natural resources protection, neighborhood character preservation, densities and intensities, the FLUM, the USA, and transportation policies for connectivity and safety. The LPA received comments from nine (9) public speakers.

After discussion, the LPA voted unanimously to:

- Transmit the proposed Land Use and Mobility Element to the Board and City Commission;
- Request the City Commission consider rescheduling the transmittal hearing to May 14, 2025; and
- Incorporate edits to the proposed Urban Residential Preservation, Sub-Urban Residential Preservation, and the Lake Protection FLUCs to address concerns with densities and commercial uses.

The proposed policies were revised to address the LPA recommendations; however, subsequent Board and City Commission direction has resulted in the removal of the Urban Residential Preservation and Sub-Urban Residential Preservation FLUCs.

Additional Neighborhood Outreach

The City Commission considered transmittal of the proposed plan update at its June 11, 2025, meeting. In response to citizen concerns regarding residential density, neighborhood compatibility, and growth patterns, the City Commission deferred transmittal and directed staff to conduct additional community engagement before proceeding.

Subsequently, at its July 8, 2025 meeting, the Board directed staff to undertake additional public engagement focused on the proposed Land Use and Mobility Elements, to compile and summarize community feedback, and to return to the Board with a status report, policy recommendations, and a revised project schedule for consideration prior to adoption. Following that direction, staff launched a countywide community engagement effort.

While the County's engagement process was underway, the City continued its review of the proposed LME. In response to community concerns about the proposed Urban and Sub-Urban Residential Preservation Future Land Use Categories (FLUCs), the City held a community meeting on August 18, 2025, attended by representatives from numerous neighborhood associations. Based on feedback from that meeting, the City Commission voted on August 20, 2025, to retain the existing Residential Preservation FLUC, with revisions to address legally established nonconforming uses. The City Commission then held its Transmittal Hearing on September 17, 2025, and voted to transmit the proposed LME—incorporating the updated Residential Preservation policies—to the state review agencies. The proposed LME in Attachment #1 reflects these changes.

LME Changes June – September 2025

The following section details the revisions made to the proposed LME between June and September 2025. Comments were received by state agencies in response to the proposed plan transmitted May 13, 2025, by Leon County, and several of the changes described below were directed to address technical assistance comments from Florida Commerce and the Florida Department of Environmental Protection (FDEP).

Planning Periods

Policy 2.1.1 was updated to provide the specific years covered by the short term 10-year planning period and specify that the planning periods are to be considered for amendment during the Evaluation and Appraisal Review process using relevant and appropriate data and analysis of public facilities. This update addresses the technical assistance comment from Florida Commerce.

Density and Intensity Incentives

Policy 3.6.4 was updated to establish a maximum density and intensity standard for proposed density bonuses that facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. This update addresses the technical assistance comment from Florida Commerce.

Future Transportation Maps

The map series was updated to include a functional classification map, a map of planned roadway improvements with the number of lanes, and a context classification map. This update addresses the technical assistance comment from Florida Commerce.

Mahan Gateway Node

Mahan Gateway Nodes are calibrated to the Sub-Urban Mixed-Use Commercial FLUC proposed along the Mahan Corridor. The nodes will continue to be implemented by the existing Mahan Corridor Node and Mahan Corridor Ring zoning districts.

Community Facilities and Community Services

According to the current definition in the glossary of the Comprehensive Plan, Community Facilities include community services, light infrastructure, heavy infrastructure, and post-secondary uses. Community Facilities are allowed in all FLUCs subject to intensity standards included in the FLUCs. Further limitations on Community Facilities are established in implementing zoning districts. Updates to the proposed LME reflect the correct use of the terms "Community Facilities" and "Community Services" depending on the intent of specific FLUCs.

Lake Protection Land Use and Lake Jackson Basin Area

Upon the County's transmittal hearing to the State agencies, FDEP raised concerns about the County's proposed FLUM modification from Rural to Lake Protection in proximity to the Lake Jackson Aquatic Preserve and the inclusion of the area within the USA. The City does not have jurisdiction over the FLUM designations in the unincorporated area but the Board and City Commission must both approve the boundary of the USA.

Based on the extent of the proposed USA boundary expansion over environmentally sensitive features within this area of the Lake Jackson basin, and comments from the State, the County recommended revisions to the unincorporated area FLUM and USA boundary. See Attachment #12 Urban Services Area Revisions Summary. These revisions included the removal of the proposed Lake Protection Node at Meridian Road and Bannerman Road/Orchard Pond Parkway, the reduction of area proposed for the inclusion in the USA, the maintenance of lands designated Rural on the FLUM in the vicinity of the lakes, and the removal of the planned development provision for Lake Protection.

At the July 8, 2025, Board meeting, revisions to the proposed comprehensive plan amendment affecting the Lake Jackson basin and the Lake Protection FLUC were presented in a map which reduced the area previously proposed for inclusion in the USA, specifically by reverting back to the existing USA boundary along the western side of North Meridian Road, and the removal of the proposed Lake Protection Node from the intersection of Meridian Road and Bannerman Road-Orchard Pond Parkway. The proposed USA depicted an expansion east of Meridian Road to include areas that were previously developed and parcels previously subdivided for development.

The Board directed staff to develop and implement a comprehensive public participation plan designed to actively engage residents. These efforts, detailed further in this report, garnered additional feedback from the unincorporated community, stakeholders, and reviewing agencies regarding this particular issue.

Transmittal by the City Commission on September 17, 2025

At its September 17, 2025, meeting, the City Commission voted to transmit the proposed LME and Glossary revisions, revised as detailed above, to the State Land Planning Agency as presented at the Transmittal Public Hearing.

Additional Community Engagement in the Unincorporated Area September – October 2025

As indicated earlier, at the July 8, 2025, meeting, the Board directed staff to conduct additional public engagement on the proposed LME and to bring back a status report with a summary of community input and a revised project schedule for the Board's consideration.

Following the July 8, 2025, meeting, staff scheduled community open houses across the County, developed materials for the public engagement, and began promoting the engagement through coordination with Leon County Community and Media Relations (CMR) staff. Information was shared via County social media platforms and press releases, fliers were put up at community centers where the open houses would be held, staff attended activity group meetings at community centers to inform citizens of the upcoming meetings, and staff gave interviews with local media outlets who covered the engagement efforts with reporting in several mediums. The schedule of community open houses in unincorporated Leon County included meetings at:

- Lake Jackson Community Center on Thursday, September 25, 2025
- Miccosukee Community Center on Monday, September 29, 2025
- Chaires Community Center on Tuesday, September 30, 2025
- Fort Braden Community Center on Wednesday, October 1, 2025
- Bradfordville Community Center on Wednesday, October 8, 2025
- Woodville Community Center on Wednesday, October 15, 2025, and Tuesday, October 21, 2025

Community engagement sessions on the LME at the Woodville Community Center were included in the larger engagement on the County's Woodville Sense of Place Plan because of the relevance and relationship between the Comprehensive Plan and the Sense of Place Plan.

November 18, 2025 Status Report

A Status Report detailing this engagement, the feedback received, and additional analysis on the topics raised was presented to the Board at its November 18, 2025, meeting. At that meeting, the Board directed staff to incorporate 13 policy recommendations into the LME. The Board also directed staff to initiate a text amendment for the 2026 Comprehensive Plan Amendment Cycle to add a policy to Intergovernmental Coordination Policy 1.8.2 that requires large-scale map amendments, small-scale map amendments of 10 acres or more for properties designated Residential Preservation, Lake Protection, or Rural, and USA boundary expansions to come to the Board as a

workshop or an agenda item prior to a Transmittal or Adoption Public Hearing. The 13 policy recommendations, which have been incorporated into the materials presented in this item at the Board's direction were to:

1. Adjust the Urban Services Area (USA) east of Meridian Road where development patterns already reflect urban or previously subdivided parcels.
2. Do not expand the USA or change land use designations west of Meridian Road to protect the Lake Jackson Basin and maintain established rural and environmental protections.
3. Maintain the USA boundary in the Chaires Area as previously transmitted to the State Land Planning Agency and review agencies.
4. Change the Bexar property designation from *Sub-Urban Neighborhood* to *Sub-Urban Mixed-Use Commercial* to reflect the 2019 Comprehensive Plan amendment.
5. Maintain the Fort Braden Rural Community boundary as transmitted, with a minor expansion to include two parcels currently partially designated as Rural Community.
6. Clarify Rural Community density standards by limiting properties without sewer to a maximum of two dwelling units per acre and maintaining up to eight units per acre where central sewer service is available, primarily within the Woodville area.
7. Clarify that public schools are directed to the USA, while remaining allowable in all Future Land Use Categories (FLUCs) except Natural Areas.
8. Confirm that existing Planned Developments—Southwood, Colin English, and Welaunee—continue to be governed by their adopted master plans.
9. Clarify the Lake Protection FLUC to emphasize sewer connections and redevelopment of existing developed nodes, with central sewer required in Conservation Subdivisions and Lake Protection Nodes along U.S. Highway 27 to achieve maximum density.
10. Confirm that Mahan Gateway Nodes correspond to the Sub-Urban Mixed-Use Commercial FLUC and remain implemented through existing Mahan Corridor Node and Ring zoning districts.
11. Standardize terminology to ensure consistent use of "Community Facilities" and "Community Services" throughout the LME, aligned with the Comprehensive Plan glossary and implementing zoning districts.
12. Remove the Urban and Sub-Urban Residential Preservation FLUCs and replace them with updated language addressing non-conforming uses, as directed by the City Commission on August 20, 2025.
13. Revise the Natural Areas FLUC to recognize the State's authority to manage publicly owned lands consistent with approved management plans, including the use of prescribed fire.

At the November 18, 2025, meeting, the Board discussed several topics that were included in the agenda materials, presented by staff, or raised by Board members in response to citizen comment. The following sections provide a summary of this discussion and additional relevant information as requested by the Board.

USA Expansion East of Meridian Road (Policy Recommendation #1)

Discussion on the impacts of expanding the USA boundary by 1,485 acres, east of Meridian Road, was focused on the development potential of the properties in the proposed expansion. This expansion includes parcels that have a density higher than Urban Fringe/Rural Residential (which acts as a buffer between urbanized and rural areas), parcels that have already been developed or subdivided, and included parcels currently split by the USA. The allowable densities and intensities today will remain in place in this area. The only practical effect of the USA expansion east of Meridian Road is that the area will be included in future planning for infrastructure (i.e., future water and sewer master plans will account for this area being within the USA). This supports the future extension of central water and sewer to developed parcels and enables undeveloped parcels to be served by these systems as they become available. Future connections or development on central water and sewer will enhance protections for Lake Iamonia and Lake Jackson, which receive drainage from this area.

Extending infrastructure to large, undeveloped tracts can create conditions conducive to subdivision and subsequent development. However, the area east of Meridian Road is already characterized by a mix of developed parcels and parcels previously subdivided for development, with relatively few large undeveloped properties remaining. Incorporating this area without modifying the underlying land use designation would not stimulate additional development activity, as the extension of the USA itself does not confer any new development entitlements beyond those already in place.

Maintaining Proposed USA Expansion Near Chaires (Policy Recommendation #3)

Discussion on the impacts of the net USA expansion of 1,408 acres south of Apalachee Parkway was also discussed. This expansion was first presented to the Board at the May 13, 2025. Discussion of this topic was focused on potential impacts to Old St. Augustine Road, a designated canopy roadway, should development occur on several large acre properties in this area. The properties in question are proposed to be designated as Planned Development or Rural Residential.

For the properties designated as Planned Development, a master plan would need to be adopted by the Board for these properties prior to development activity. The master plan requirements of the Planned Development FLUC require that the master plan shall provide for a development pattern of the area that is less oriented to the use of automobiles and include things such as: How natural features on-site will be protected; major transportation system improvements that are consistent with adopted transportation plans (this would include showing an extension of Orange Avenue through the development, which would alleviate traffic pressure on Old St. Augustine Road); impacts to surrounding areas and protection of canopy roads; how the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses; and how the unique characteristics of the area, including cultural, environmental, and historic resources, will be addressed. As such, any potential development for this area will be required to go through an extensive public vetting process and require that the Board adopt a master plan for the area, addressing the raised concerns, before development may occur.

For the properties designated Rural Residential, there is no change in the allowable development from what is currently allowed.

Lake Protection Conservation Subdivision Standards

Discussion at the November 18, 2025, meeting also included the Lake Protection conservation subdivision standards. As proposed, the base density for the Lake Protection FLUC will remain 1 unit for two acres. For properties wishing to utilize the conservation subdivision procedure, 60% of property would be put into a conservation reserve and the remaining 40% of the property will be able to develop at 2 units per acre. This is the density currently allowed. The proposed Lake Protection FLUC adds a provision allowing properties wishing to utilize this process that have access to central water and sewer to set aside 60% of their property for conservation and develop at 4 units per acre. The proposed increase only applies to conservation subdivisions that have access to water and sewer. The intent is to incentivize the utilization of the conservation subdivision approach over traditional development by providing an increase in density that makes the water and sewer connections more feasible so that more land in the Lake Jackson basin is put into conservation easements.

Data Analysis

Section 163.3177(6)(a) and (b), F.S., require amendments to be based on data analysis as defined in those provisions. Staff, working with the consultant team for the project, developed the data analysis required by statute and made them available on the project website at https://www.compplantlc.com/pages/dataandanalysis. The data analysis has been twice submitted to State and review agencies and been found in compliance. This analysis includes medium population projections as published by the Office of Economic and Demographic Research, as required by Section 163.3177(1)(f)(3). The Community Audit available on the Data Analysis page discusses conservation and environmental lands, easements, analyses of housing, economic development data, placemaking, existing land uses, future land use analyses, infill development, vacant and underutilized lands, development potential based on the Future Land Uses, major developments, and current development trends.

As reflected in Attachment #5, the development potential analysis in the Community Audit was further refined to evaluate vacant parcels and potential redevelopment. This analysis highlights that substantial portions of the community lie within Future Land Use Categories (FLUCs) that inherently limit development or redevelopment potential—such as Residential Preservation, Lake Protection, Rural, Government Operation, and other restrictive categories. In addition, many vacant parcels are located in areas not well suited for residential use, such as commercial subdivisions.

The analysis also does not account for parcel-specific constraints that can limit development feasibility, including environmental features, physical site conditions, subdivision regulations, infrastructure capacity, urban forest requirements, parking and setback standards, and height limitations. These factors are typically addressed during the site-planning stage. Finally, a parcel

identified as vacant does not necessarily indicate that it is available for development, as ownership, access, environmental constraints, and other considerations may limit its actual suitability.

Section 163.3177(6)(a)4., F.S., states: "*The amount of land designated for future planned uses shall provide a balance of uses that foster vibrant, viable communities and economic development opportunities and address outdated development patterns, such as antiquated subdivisions. The amount of land designated for future land uses should allow the operation of real estate markets to provide adequate choices for permanent and seasonal residents and business and may not be limited solely by the projected population. The element shall accommodate at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period unless otherwise limited under s. 380.05, including related rules of the Administration Commission*." Accordingly, by ensuring that the LME provides at least the amount of land needed to accommodate medium population growth projections, it meets statutory requirements while also allowing for additional land capacity beyond the minimum necessary. The analyses provided satisfy these requirements. As noted above, the data analysis was submitted to the State Land Planning Agency and review agencies as part of the transmittal packages following both the Board's and the City Commission's respective transmittal hearings. All comments related to the data analysis for the proposed LME have been addressed. See Attachment #13 for all comments received from State and review agencies.

Next Steps in the Adoption of the LME

The proposed LME was updated following the Board's November 18, 2025, meeting to incorporate the policy direction provided by the Board at that meeting.

Policy 1.8.1 of the Intergovernmental Coordination Element requires both the Board and City Commission to adopt amendments to the text of the Comprehensive Plan. As such, the proposed LME is not considered adopted unless or until both the City Commission and Board adopt the proposed LME.

The City Commission will be holding an Adoption Public Hearing on December 10, 2025. The proposed Land Uses on the Future Land Use map reflects lands in unincorporated Leon County for Board consideration and lands within City limits for City Commission consideration. Aside from the land uses on the FLUM being specific to each jurisdiction, the proposed LME for City Commission consideration contains the same Goals, Objectives, and Policies and the same USA as the proposed LME in Attachment #1 for Board consideration. Should the Board and City Commission fail to agree on a change, it will not be included in the adopted LME.

If the LME is adopted (Option #1) by both the Board and City Commission, the adopted amendment will be submitted to the Florida Department of Commerce and other reviewing agencies for a 30-day compliance review. The proposed LME would become effective 31 days after the State Land Planning Agency notifies the local government that the plan amendment package is complete.

Options:

1. Conduct the adoption public hearing and adopt the proposed ordinance (Attachment #1), thereby adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan, subject to the City Commission's adoption of the proposed amendments in accordance with Policy 1.8.1 of the Intergovernmental Coordination Element.
2. Conduct the adoption public hearing and do not adopt the proposed ordinance (Attachment #1), thereby not adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan.
3. Board direction.

Recommendation:

Option #1

LEON COUNTY ORDINANCE NO.

AN ORDINANCE OF THE BOARD OF COUNTY COMMISSIONERS OF LEON COUNTY, FLORIDA, AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM; MOBILITY ELEMENT; AND GLOSSARY PROVIDING FOR APPLICABILITY AND EFFECT; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; PROVIDING FOR A COPY TO BE ON FILE WITH THE TALLAHASSEE-LEON COUNTY PLANNING DEPARTMENT; AND PROVIDING FOR AN EFFECTIVE DATE.

RECITALS

WHEREAS, Chapters 125 and 163, Florida Statutes, empowers the Board of County Commissioners of Leon County to prepare and enforce comprehensive plans for the development of the County; and

WHEREAS, Sections 163.3161 through 163.3215, Florida Statutes, the Community Planning Act, empowers and requires the Board of County Commissioners of Leon County to (a) plan for the County's future development and growth; (b) adopt and amend comprehensive plans, or elements or portions thereof, to guide the future growth and development of the County; (c) implement adopted or amended comprehensive plans by the adoption of appropriate land development regulations; and (d) establish, support, and maintain administrative instruments and procedures to carry out the provisions and purposes of the Act; and

WHEREAS, Ordinance 90-30 was enacted on July 16, 1990, to adopt the Tallahassee-Leon County 2010 Comprehensive Plan for the unincorporated area of Leon County. The City of Tallahassee also adopted a plan for its municipal area by separate ordinance; and

WHEREAS, the horizon year for the Tallahassee-Leon County Comprehensive Plan is now 2030 and the Comprehensive Plan is now known as the Tallahassee-Leon County 2030 Comprehensive Plan; and

WHEREAS, pursuant to Section 163.3184, Florida Statutes, the Board of County Commissioners of Leon County has held several public work sessions, public meetings, and public hearings on the proposed amendment to the comprehensive plan, with due public notice having been provided, to obtain public comment, and has considered all written and oral comments received during said work sessions, public meetings and public hearings; and

WHEREAS, pursuant to Section 163.3184, Florida Statutes, the Board of County Commissioners of Leon County transmitted copies of the proposed amendment to the comprehensive plan to the Florida Department of Commerce as the State Land Planning Agency and other state and regional agencies for written comment; and

WHEREAS, pursuant to Section 163.3184, Florida Statutes, the Board of County Commissioners of Leon County held a public hearing with due public notice having been provided on the proposed amendment to the comprehensive plan; and

WHEREAS, the Board of County Commissioners of Leon County further considered all oral and written comments received during such public hearing, including the data collection and analyses packages, the recommendations of the Tallahassee-Leon County Local Planning Agency, and the Objections, Recommendations, and Comments Report of the Florida Department of Commerce; and

WHEREAS, in exercise of its authority, the Board of County Commissioners of Leon County has determined it necessary and desirable to adopt the amendment to the comprehensive plan to preserve and enhance present advantages; encourage the most appropriate use of land, water and resources, consistent with the public interest; overcome present handicaps; and deal effectively with

future problems that may result from the use and development of land within Leon County, and to meet all requirements of law;

BE IT ORDAINED BY THE BOARD OF COUNTY COMMISSIONERS OF LEON COUNTY, FLORIDA, that:

Section 1. Purpose and Intent.

This Ordinance is hereby enacted to carry out the purpose and intent of, and exercise the authority set out in the Community Planning Act, Sections 163.3161 through 163.3215, Florida Statutes, as amended.

Section 2. Text Amendment.

The Ordinance does hereby adopt the following portion of the text attached hereto as Exhibit "A," and made a part hereof, as an amendment to the Tallahassee-Leon County 2030 Comprehensive Plan, as amended, and does hereby amend "The Tallahassee-Leon County 2030 Comprehensive Plan," as amended, in accordance therewith, being an amendment to the following Plan element:

A. Consolidates the Future Land Use and Mobility Elements into the Land Use and Mobility Element;

B. Replaces the Land Use Element text and maps, including the Future Land Use Map and Addendum;

C. Replaces the Mobility Element text and maps; and

D. Revises the plan's Glossary of terms.

Section 3. Applicability and Effect.

The applicability and effect of this amendment to the 2030 Comprehensive Plan shall be as provided by the Community Planning Act, Sections 163.3161 through 163.3215, Florida Statutes, and this Ordinance, and shall apply to all properties under the jurisdiction of Leon County.

Section 4. Conflict with Other Ordinances and Codes.

All ordinances or parts of ordinances of the Code of Laws of Leon County, Florida, in conflict with the provisions of this Ordinance are hereby repealed to the extent of such conflict.

Section 5. Severability.

If any word, phrase, clause, section, or portion of this Ordinance is declared by any court of competent jurisdiction to be void, unconstitutional, or unenforceable, then all remaining provisions and portions of this Ordinance shall remain in full force and effect.

Section 6. Copy on File.

To make the Tallahassee-Leon County 2030 Comprehensive Plan available to the public, a certified copy of the enacting ordinance, as well as certified copies of the Tallahassee-Leon County 2030 Comprehensive Plan and these updates thereto, shall also be located in the Tallahassee-Leon County Planning Department. The Planning Director shall also make copies available to the public for a reasonable publication charge.

Section 7. Effective Date.

The effective date of this ordinance shall be after adoption by both the City Commission and County Commission and 31 days after the state land planning agency notifies the local governments that the plan amendment package is complete or as provided in section 163.3184(3)(c)(4), Florida Statutes.

DONE, ADOPTED, AND PASSED by the Board of County Commissioners of Leon County, Florida, this _____ day of _____, 2025.

LEON COUNTY, FLORIDA

By:_____
Christian Caban, Chairman
Board of County Commissioners

ATTESTED BY:
Gwendolyn Marshall Knight, Clerk of Court
& Comptroller, Leon County, Florida

LAND USE AND MOBILITY ELEMENT

GOALS, OBJECTIVES AND POLICIES

Goal 1 [LM] – A Healthy Environment:

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 1.1 – Identification of Natural Resources and Historic Features (City of Tallahassee/Leon County):

Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Policy 1.1.1 – Geographic Data (City of Tallahassee/Leon County):

Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network Primary Springs Protection Zone
- Perpetual conservation easements

Policy 1.1.2 – Designated Canopy Roads (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties (City of Tallahassee/Leon County): Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Policy 1.1.4– Soils and Water Features (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Objective 1.2 – Preservation of Natural Areas (City of Tallahassee/Leon County):
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 1.2.1 – Acquisition of Conservation and Preservation Lands (City of Tallahassee/Leon County):
The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

Policy 1.2.2 – Environmental Analysis (City of Tallahassee/Leon County):
Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation (City of Tallahassee/Leon County):
The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features (City of Tallahassee/Leon County):
The City and the County shall consider context-based beautification, landscaping, and stormwater facility and land development regulations that provide environmental protection measures for transportation corridors, where feasible by:

a. Increasing the amount of site and adjacent green spaces/open spaces.
b. Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff.

c. Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built.
d. Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan.
e. Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

Policy 1.2.5 – Connected Open Space (City of Tallahassee/Leon County):
Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected greenspaces.

Policy 1.2.6 – Conservation Element (City of Tallahassee/Leon County):
Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

Objective 1.3 – Access to Parks and Recreation (City of Tallahassee/Leon County):
Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

Policy 1.3.1 – Greenways and Trails Master Plan (City of Tallahassee/Leon County):
The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

Policy 1.3.2 – Urban Recreation Spaces (City of Tallahassee/Leon County):
Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces (City of Tallahassee/Leon County):
All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation (City of Tallahassee/Leon County):
All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Objective 1.4 – Urban Forests (City of Tallahassee/Leon County):
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

Policy 1.4.1 – Priority Planting Sites (City of Tallahassee/Leon County):
The City and County shall identify priority planting sites to guide the planting of trees to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

Policy 1.4.2 – Species Suitability (City of Tallahassee/Leon County):
The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

Policy 1.4.3 – Public Tree Inventory (City of Tallahassee/Leon County):
The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

Policy 1.4.4 – Public Development Tree Prioritization (City of Tallahassee/Leon County):
Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

Policy 1.4.5 – Private Development Tree Standards (City of Tallahassee/Leon County):
Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees.

Objective 1.5 – Green infrastructure (City of Tallahassee/Leon County):
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

Policy 1.5.1 – Community Wide Green Infrastructure (City of Tallahassee/Leon County):
The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide a feasible opportunity for street-level stormwater management.

- Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors.
- Support off-site regional stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).
- Supporting transit and alternative transportation modes.

Policy 1.5.2 – Site Specific Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Policy 1.5.3 – Design Guidelines for Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

Objective 1.6 – Community Resilience (City of Tallahassee/Leon County):
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

Policy 1.6.1 – Energy Efficiency (City of Tallahassee/Leon County):
The City and County shall develop regulations and design standards for compact development and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

Policy 1.6.2 – Multimodal Connectivity (City of Tallahassee/Leon County):
Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

Policy 1.6.3 – Smart Growth Strategies for Community Resilience (City of Tallahassee/Leon County):
The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

Policy 1.6.4 – Urban Heat Islands (City of Tallahassee/Leon County):
The local governments shall develop strategies that minimize effects of heat islands, such strategies may include:

a. Tree and vegetation cover.
b. Green roofs and rooftop gardens.
c. Roof coatings or materials with high albedo that significantly reflect heat away from a building.
d. Alternative pavements that mitigate heat island effects.

Policy 1.6.5 – Resiliency of Transportation Facilities (City of Tallahassee/Leon County):
Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.6.6 – Urban Forests and Climate Resilience (City of Tallahassee/Leon County):
Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

Objective 1.7 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

Policy 1.7.1 – Key Regional Partners (City of Tallahassee/Leon County):
Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

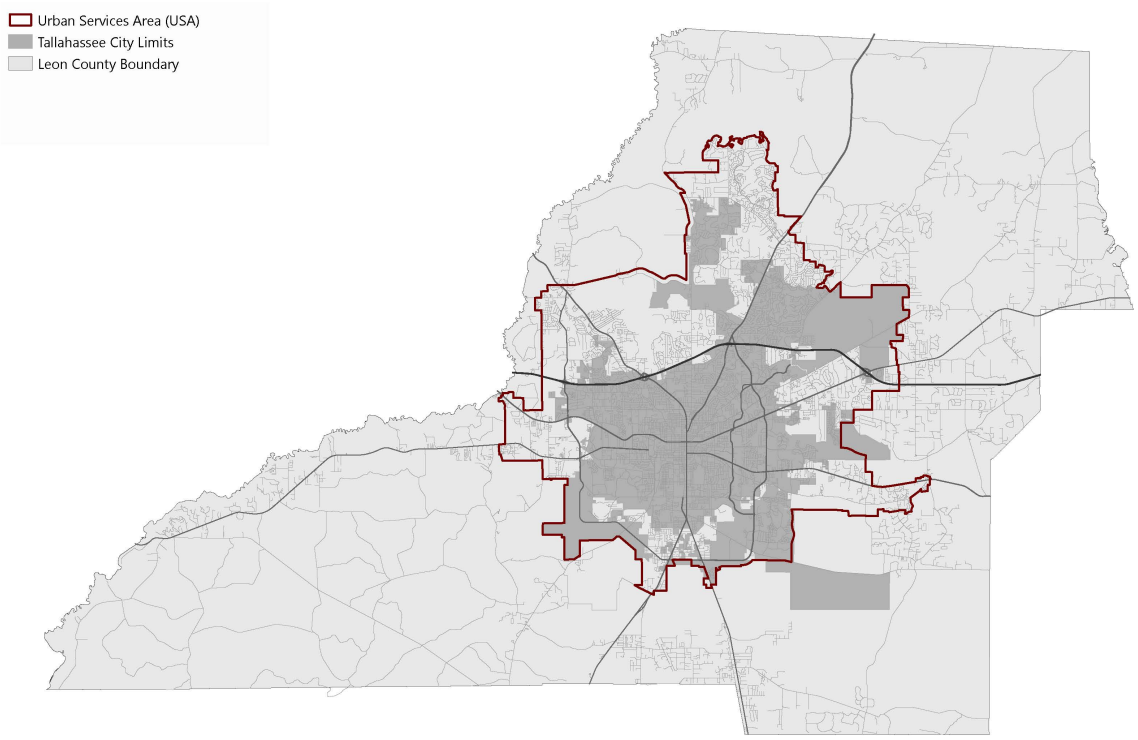
Policy 1.7.2 – Colleges and Universities (City of Tallahassee/Leon County):
Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide a variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.



Objective 2.1 – Growth and Population Accommodation (City of Tallahassee/Leon County):
Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

Policy 2.1.1 – Comprehensive Planning Periods (City of Tallahassee/Leon County):
The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

Policy 2.1.2 – Population Projections (City of Tallahassee/Leon County):
Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

Objective 2.2 – Efficient Growth (City of Tallahassee/Leon County):
To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Policy 2.2.1 – Urban Services Area (USA) (City of Tallahassee/Leon County):

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

Policy 2.2.2 – Improvement of Capital Infrastructure (City of Tallahassee/Leon County):

Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

Policy 2.2.3 – Planning for Urban Services (City of Tallahassee/Leon County):

Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

Policy 2.2.4 – Urban Services Outside of the Urban Services Area (City of Tallahassee/Leon County):

Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process. Emergency repairs and improvements necessary to maintain the public health, safety, and well-being shall be allowed without inclusion in the capital improvement planning process.

Policy 2.2.5 – Densities and Intensities (City of Tallahassee/Leon County):
Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map, and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

Policy 2.2.6 – Exceptions to the Urban Services Area (City of Tallahassee/Leon County):
Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and Rural Community in Woodville or west of the Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

Policy 2.2.7 – Roadway Improvements (City of Tallahassee/Leon County):
The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

Policy 2.2.8 – Adaptive Reuse, Infill Development, and Redevelopment (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

Policy 2.2.9 – Greyfields & Brownfields (City of Tallahassee/Leon County):
The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses where appropriate, waiver of development fees or some combination of the two.

Policy 2.2.10 – Transportation Corridors (City of Tallahassee/Leon County):
Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 334.03(29)—and protect it from development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below. This map,

table and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW Width (ft.)[1-3]**
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Actual road location and design will be determined by specific corridor alignment studies, engineering studies, or other design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of- way needs for future corridors:

   a. Space for sidewalks to provide safe and convenient movement of pedestrians.

   b. The provision of bike lanes or separate bike paths.

   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

   d. Accommodation of stormwater at the surface or in storm drains.

   e. Accommodation of auxiliary lanes at intersections.

   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

   g. Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

Corridor Preservation Map

Objective 2.3 – Public Infrastructure (City of Tallahassee/Leon County):
Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Policy 2.3.1 – Public Facilities Siting (City of Tallahassee/Leon County):
Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

Policy 2.3.2 – Public Infrastructure Resilience (City of Tallahassee/Leon County):
To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

Policy 2.3.3 – School Siting Review & Criteria (City of Tallahassee/Leon County):
All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

Objective 2.4 – Preservation of Rural Areas (City of Tallahassee/Leon County):
Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

Policy 2.4.1 – Transfer of Development Rights (City of Tallahassee/Leon County):
A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

Policy 2.4.2 – Criteria for Urban Service Area Expansion (City of Tallahassee/Leon County):
To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

Objective 2.5 – Reconnecting Urban Sprawl (City of Tallahassee/Leon County):
Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 2.5.1 – Suburban retrofit (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way.
- Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

Objective 2.6 – Recognizable Places (City of Tallahassee/Leon County):
Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces (City of Tallahassee/Leon County):
The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

Policy 2.6.2 – Gateway Corridors (City of Tallahassee/Leon County):
Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

Policy 2.6.3 – North Monroe Corridor (City of Tallahassee/Leon County):
In addition to the Gateway Corridor components identified in Policy 2.6.2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.4 – Woodville Sense of Place (Leon County):

Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.5 – Future Downtown Development (City of Tallahassee):

The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

Policy 2.6.6 – Bradfordville Study Area (Leon County):

The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

Objective 2.7 (City of Tallahassee) – Multimodal Transportation District (MMTD):

Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 2.7.1 – MMTD Implementation (City of Tallahassee):

The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

Policy 2.7.2 Land Use Within the MMTD (City of Tallahassee):

The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

a. Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities.

b. Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD (City of Tallahassee):

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

e. Parking location.

Policy 2.7.4 – Minimum Parking Requirements (City of Tallahassee):

Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

Policy 2.7.5 – Transit in the MMTD (City of Tallahassee):

The MMTD shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation (City of Tallahassee):

Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

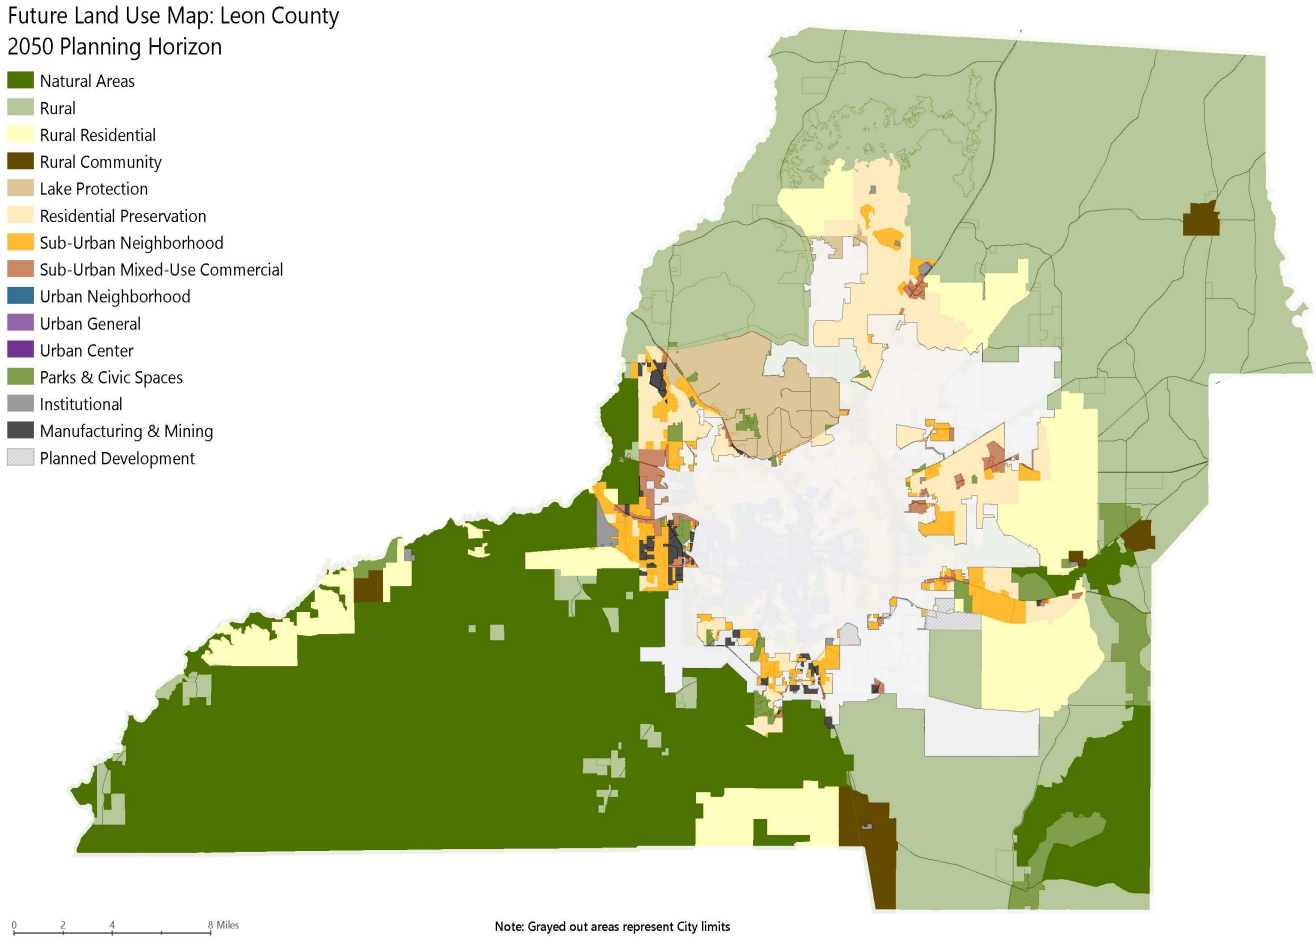
Policy 2.7.7 – MMTD Evaluation (City of Tallahassee):

The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.

Objective 2.8 – Community Context (City of Tallahassee/Leon County):

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses,

transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.



Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map (City of Tallahassee/Leon County):

Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses (City of Tallahassee/Leon County):

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories within the Urban Services Area with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Future Land Map

Future Land Use Categories (FLUCs)

Policy 2.8.3 – Natural Areas Future Land Use Category (City of Tallahassee/Leon County):

State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. No residential uses shall exceed a density of one dwelling unit per 10 acres.

The following special conditions shall apply to the Natural Areas future land use category:

1. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.
2. Accessory uses directly associated with the operation of silvicultural, wildlife conservation, and recreational hunting shall be allowed.
3. Light infrastructure shall be allowed within the Natural Areas future land use category, provided there is no reasonable alternative location outside of Natural Areas future land use areas that provide the same public benefit.
4. State forests managed by the Florida Forest Service may be managed with frequent prescribed fire to meet ecological restoration and maintenance, wildlife habitat improvement, forest pest prevention, access and aesthetic control, and hazardous fuel reduction objectives in accordance with their respective 10-year Land Management Plans (F.s. 253.034).

Policy 2.8.4 – Rural Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of one dwelling unit per 10 acres.

Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways with development standards provided in land development code regulations for these nodes, except for non-residential uses supporting ecotourism activities, which shall be allowed near the waterbodies and natural features that are the focus of the ecotourism activity.

Community services, light infrastructure, and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 5,000 square feet per acre, with the primary structure not to exceed 7,500 square feet.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, or natural resource-based ecotourism activities are prohibited. This includes, but is not limited to, golf course, drag strips, and racetracks.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

The following special conditions shall apply to the Rural Land Use category:

1. Development proposals within the Rural Land Use category shall be evaluated for compatibility with adjacent agricultural and silvicultural uses and shall consider the land management activities associated with such uses, including prescribed fires which result in smoke. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural Land Use category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Services Area or a designated Rural Community.
3. Non-residential development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register as of July 6, 2015, shall be considered conforming.
5. Because urban services are not planned or programmed for areas within the Rural land use category, the Rural land use category shall not be applied to properties within the Urban Services Area.

Policy 2.8.5 – Rural Residential Future Land Use Category (Leon County):

The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

Community facilities, minor commercial activities, and minor offices are permitted. The maximum allowable gross square footage in Rural Residential may not exceed 20,000 square feet per acre for minor commercial and 100,000 square feet per acre for neighborhood commercial and shall be further detailed in the land development code.

Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

The following special conditions shall apply to the Rural Residential Land Use category:

1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.
2. To protect rural areas from premature development, facilitate infill and redevelopment inside the Urban Services Area, and in recognition of the significant area already mapped as Rural Residential, no additional lands designated Rural or Rural Residential shall be converted to a more dense or intense land use category unless it is within the Urban Services Area and adjoining lands are also within the designated Urban Services Area.
3. Existing, lawfully established, non-residential uses within the Rural Residential land use category that are compatible with surrounding uses shall be considered permitted uses.
4. Existing lots of record shall be considered vested for the purposes of single-family residential use regardless of lot size or density provided all other development standards can be met.
5. Drive-in and drive-thru facilities are not permitted in Rural Residential.

Policy 2.8.6 – Rural Community Future Land Use Category (Leon County):
The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of 2 dwelling units per acre. Where central sewer is available, the maximum density allowed is 8 dwelling units per acre.

Community facilities, minor offices and small to moderate-sized commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage clustering of businesses to discourage "strip" development, provide for utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

The following special conditions shall apply to the Rural Community Land Use category:

1. Water and wastewater systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development.
2. Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements.

Policy 2.8.7 – Lake Protection Future Land Use Category (City of Tallahassee/Leon County):

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary. The boundaries of the Lake Protection category may be applied to areas outside but adjacent to the Lake Jackson basin where application of the category promotes cohesive development patterns along a mixed-use corridor or node.

The Lake Protection category shall allow for residential uses at a density of one dwelling unit per two acres. To encourage compact and efficient development, three density bonus options are available for properties within the category:

- A residential density of up to 4 dwelling units per acre may be permitted within developments designed as a Conservation Subdivision, where served by central water and sewer systems.
- A residential density of up to 8 dwelling units per acre may be permitted within the Lake Protection Corridor (LPC) zoning district, where served by central water and sewer systems.
- A residential density of up to 20 dwelling units per acre may be permitted for properties on US Highway 27 within the Lake Protection Node (LPN) zoning district, where served by central water and sewer systems, and where design standards, including buffering to adjacent low and density residential, as established in the land development code is met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted within areas designated with the LPN and LPC zoning districts. Within these districts, single use, non-residential development shall be allowed at a maximum intensity of 10,000square feet per acre in the LPC zone and 20,000 square feet per acre in the LPN zone where buffering to low-density residential as established in the land development code is met. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 square feet per acre in the LPC zone and a bonus of 10,000 square feet per acre in the LPN zone.

Community services, light infrastructure, and recreational uses shall be permitted. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet per acre.

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The local governments shall implement the Lake Protection Land Use Category with a minimum of three zoning districts, including Lake Protection, LPC, and LPN.
2. The LPN zoning district shall only be permitted at the following intersections:
    a. Highway 27 North and Sessions Road
    b. Highway 27 North and Capital Circle NW/Old Bainbridge Road
    c. Highway 27 North and Fred George Road
    d. Bannerman Road and Bull Headley Road

    The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.
3. The LPC zoning district shall only be permitted along Highway 27. The exact extent of the LPC shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the centerline of Highway 27 and shall not include areas within a Special Development Zone (SDZ).
4. As an alternative to large-lot developments, Conservation Subdivisions shall be permitted within the Lake Protection land use category and shall include the following:
    a. Contain a minimum of 60% open space preserved in perpetuity through a conservation easement and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity; and
    b. Be developed at a maximum gross density of two dwelling units per acre or a maximum gross density of four dwelling units per acre when served by central water and sewer systems.
5. Land development regulations shall include stormwater treatment standards for all development and redevelopment within the Lake Protection land use category. To

encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites.

6. Minimum open space requirements, Low Impact Development strategies, and maximum building footprints shall be included as development standards for the zoning districts implementing the Lake Protection land use category. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.

7. The land development regulations shall provide provisions for legally established non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards, including buffering to adjacent low-density uses, and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.8.8 – Residential Preservation Future Land Use Category (City of Tallahassee/Leon County):

Characterized by existing homogeneous residential areas within the community that are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development primarily will consist of infill due to the built-out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterials and expressways should be planned to minimize impacts within this category. Single family, townhouse, duplexes and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in this policy, existing legally established residential uses exceeding 6 units per acre shall be deemed conforming. Such uses may rebuild to existing building lot coverage percentage and density. Expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Nonresidential uses, other than community facilities and recreational facilities are not permitted. Community facilities are limited to a maximum of 60% impervious surface.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria:

1) Existing land use within the area is predominantly residential
2) Majority of traffic is local in nature
   a) Predominance of residential uses front on local street
   b) Relatively safe internal pedestrian mobility
3) Densities within the area generally of six units per acre or less
4) Existing residential type and density exhibits relatively homogeneous patterns
5) Assessment of stability of the residential area, including but not limited to:
   a) Degree of home ownership
   b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) Limitation on future commercial intensities adjoining low-density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by meeting land development regulation requirements for buffers, screenings, landscaping, noise, setbacks and stepbacks to be compatible with low density residential development in terms of size and appearance. The factors cited in paragraph (d) below shall be used when determining the compatibility and design techniques. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

b) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low-density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide screening or buffering between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (d) below shall be considered when determining compatibility and design techniques.

The design and layout of expanding or redeveloping light industrial uses adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Institutional Special District or the Manufacturing and Mining Special District t and applicable Land Development Regulations.

c) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions.

Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.

d) Land use compatibility with low-density residential preservation neighborhoods

A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. The following factors shall continue be maintained in the land development regulations used to determine whether a new development is compatible with existing low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor.

e) Limitations on Planned Unit Developments in the Residential Preservation land use category.
Planned Unit Developments proposed within the interior of a Residential Preservation area designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities. Principal uses within the district shall include residential development, neighborhood commercial, and neighborhood supportive facilities such as community facilities, recreational amenities, and light infrastructure.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 dwelling units per acre. Allowed residential building types are single-family detached, single-family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

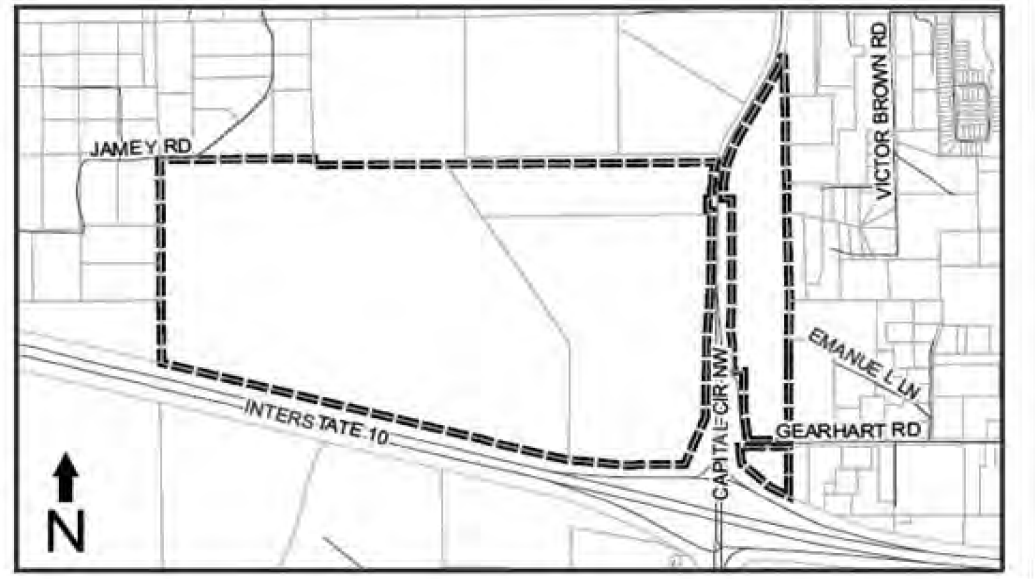
Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

The following special conditions shall apply to the Sub-Urban Neighborhood Future Land Use category:

1. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Sub-Urban Neighborhood land use.
2. If central sanitary sewer is not available, non-residential development is limited to a maximum of 900 gallons of wastewater flow per day. Community service facilities are limited to no more than 5,000 square feet, or a sewage flow not to exceed 900 gallons per day. Also, refer to Sanitary Sewer Policies 1.2.3 and 2.1.2 of the Utilities Element of the Comprehensive Plan for additional requirements.

Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities. An integrated pedestrian and bicycle access system shall be provided to afford safe and accessible foot and bike travel between the land uses. The district is intended to facilitate efficient traffic flow by allowing only land uses developed with comprehensively planned access, egresses, and internal circulation systems through the land development review and approval process.



Residential land uses at a maximum density of up to 45 dwelling units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential

uses. Mass transit stops should be located at large commercial centers with appropriate connections established between commercial and residential areas to reduce the automobile dependency of residents and employers. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated.

Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre except for in the scenarios outlined in the special conditions below.

The following special conditions shall apply in the Sub-Urban Mixed Use Commercial Land Use Category:

1. Except within mixed-use centers, larger-scale commercial development shall be buffered from residential neighborhoods.
2. If development within the Sub-Urban Mixed Use Commercial Land Use Category only contains residential land uses, at least 5% of the gross site must be used for passive or active open space such as pocket parks, green space, or trails. The required 5% of the site shall be contiguous.
3. Non-residential development that is a part of a mixed-use development that includes medical centers may have an intensity of up to 80,000 square feet per acre, and up to 176,000 square feet per acre if it includes a hospital.
4. Park Place is a designated Regional Activity Center subject to the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code.

Park Place meets the parameters for a Regional Activity Center as defined in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the map above. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur

consistent with the guiding land use policies within the local comprehensive plan and the land development code.

Policy 2.8.11 – Urban Neighborhood Future Land Use Category (City of Tallahassee):
The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities. The Urban Neighborhood area shall be characterized by a mix of uses on small lots, with residential uses being the predominant type, and a street network that generally connects to residential neighborhoods along corridors or behind the uses fronting major collectors or arterial roadways. Non-residential neighborhood-scale uses are allowed and intended to integrate into the surrounding neighborhood. Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum gross density of 26 dwelling units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

A maximum intensity for commercial uses of 30,000 square feet per acre and a maximum intensity for office uses of 30,000 square feet per acre are allowed. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. The number of parking spaces may be reduced to reflect increased pedestrian access.

The following special conditions shall apply to the Urban Neighborhood Land Use Category:

1. Design and development standards for the Urban Neighborhood area shall detail the placement, scale, and relationship between buildings and the street, including landscaping standards, to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Urban Neighborhood land use category.

Policy 2.8.12 – Urban General Future Land Use Category (City of Tallahassee):
The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities that are arranged in a manner to promote walkability and bikeability, or reduce automobile use. This category includes a variety of building types, short setbacks, wide sidewalks,

and a street scape with trees, typically defining medium-sized blocks within walking distance of high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities.

A maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for commercial uses of 60,000 square feet per acre and a maximum intensity for office uses of 60,000 square feet per acre are allowed.

Development in this category located along public frontages shall incorporate uses that emphasize and encourage pedestrian foot traffic and contribute towards a visually-interesting environment for the adjacent public realm. This can be achieved through methods such as high percentage of transparency, frequent pedestrian opening with connections to adjacent streetscapes, and human-scaled architectural details. Development that is primarily served by automobile traffic and generates low foot traffic shall be subject to a maximum intensity of 30,000 square feet per acre.

The following special conditions shall apply to the Urban General Land Use Category:

1. Design and development standards in the land development regulations for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and safety, and a continuous walkable street network throughout the district.
2. Development standards in the Tallahassee Land Development Code may not require minimum parking requirements for uses in the Urban General land use category.
3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district.
4. Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements.
5. The land development regulations shall include standards for development that do not incorporate uses that emphasize and encourage pedestrian foot traffic or contribute towards a visually-interesting environment for the adjacent public realm. Standards shall include requirements such as enhanced bicycle and pedestrian amenities and streetscaping features, building façade enhancements, and building placement.

Policy 2.8.13 – Urban Center Future Land Use Category (City of Tallahassee):
The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to

pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed-use, pedestrian, bike and transit- oriented development.
2. Future Expansion of the Urban Center land use shall be subject to the following requirements.
    a. The proposed parcels shall be:
        i. Within the existing Downtown Overlay; and
        ii. Contiguous to the existing Urban Center FLUM area.
        iii. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.
        iv. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.8.14 – Special Development Districts (City of Tallahassee/Leon County):
The following Special Development Districts are created to address unique uses and areas throughout the community:

- Manufacturing and Mining – Heavy industrial land uses that do not, typically, have a defined intensity or density and may have the potential to create significant offsite impacts to surrounding areas, have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic, and vibrations that are not regulated by federal and/or state laws shall be regulated by the City and County.
- Institutional - Heavy infrastructure community facilities which may be public or privately owned or established that provide significant public benefit but may have the potential to create off-site impacts.
- Parks and Civic Spaces – City, County, State and Federal areas utilized for passive and/or active recreation uses. The principal land use will not, typically, have a defined density

or intensity.

- Planned Development – Large, undeveloped land areas within the Urban Services Boundary that are generally under single ownership that are required to be master planned prior to development.

Special Development Districts shall be subject to the provisions of the Comprehensive Plan except where otherwise specified by federal and state laws.

Policy 2.8.15 – Manufacturing and Mining Special District (City of Tallahassee/Leon County):

Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services Area.

Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.

The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

- Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
- Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties.
- Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent impacts offsite or require mitigation and/or minimization techniques for impacts. Ancillary commercial

uses designed to serve adjacent workers may be permitted.

The following special conditions shall apply to the Manufacturing and Mining Special District:

1. Noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented or mitigated to avoid negative impacts on properties in the vicinity of these uses. The City and Leon County Land Development Code shall provide minimum mitigation standards.
2. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Special District.
3. Site plans must demonstrate the protection of adjacent non-industry and non-mining properties through development standards outlined in the land development codes.
4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
5. Hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidizing, and similar activities, commonly referred to as fracking, are not permitted uses in the Industry and Mining Land Use.

Policy 2.8.16 – Institutional Special District (City of Tallahassee/Leon County):

The purpose of this Special District is to provide lands for heavy infrastructure community facilities that must obtain federal and/or state approvals to be located, modified and/or expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90 percent of the entire site when located within the Urban Service Boundary or 75 percent of the entire site when located outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

The following special conditions shall apply to the Institutional Special District:

1. Institutional land uses have the potential to create offsite impacts to surrounding areas. Because institutional uses vary in their operations and their potential offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.
2. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from institutional uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Policy 2.8.17 – Parks and Civic Spaces Special District (City of Tallahassee/Leon County):

The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces.

The following special conditions shall apply to the Parks and Civic Spaces Special District:

1. Commercial active recreation land uses shall be established through the Planned Unit Development process.
2. Because commercial active recreation land uses vary in their operations and potential offsite impacts, the Planned Unit Development shall establish standards to address the potential offsite impacts, including, but not limited to noise, lighting, and traffic access and congestion.

Policy 2.8.18 – Planned Development Special District (City of Tallahassee/Leon County):

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned Development Special District is located.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

The following special conditions shall apply to the Planned Development Special District:

1. Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, public or private open space) that are integrated with each other, as well as with the unique characteristics of the development area.
2. Master Plans shall identify the following:
    a. Boundary of area subject to Planned Development.
    b. General depiction of mix, location and intensities of future land uses.
    c. Activities permitted within each land use.

d. Total dwelling units.

e. Total square footage of non-residential development.

f. How natural resources on-site will be protected.

g. Major transportation system improvements that are consistent with adopted transportation plans.

h. Capacity maintenance, bicycle, and pedestrian accessibility, impacts to surrounding areas and protection of canopy roads, if applicable.

i. Address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development.

j. Facilities and development requirements to provide alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit.

k. An infrastructure plan which identifies the type, demand, and general location of needed utilities in relation to existing and scheduled utilities in the areas of the development.

l. The location and adequacy of proposed schools, parks, and open space.

m. How the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses.

n. How the development will comply with applicable affordable housing policies and/ordinances.

o. How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed.

p. A set of development guidelines that will direct the development of implementing PUD/PUDs. These guidelines shall address, but not be limited to, building height, setbacks, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.

3. Previous approved Comprehensive Plan Area Plans shall constitute a Master Plan as required by this policy. The Southeast Sector Plan serves as the Master Plan for Southwood, Colin English Properties, and the former Southside DRI lands. The Welaunee Critical Area Plan serves as the Master Plan for the Welaunee Toe, Heel, and Arch. The Capital Circle Office Complex Planned Unit Development Master Plan Concept shall serve as the Master Plan for this area, and shall be exempted from the four use requirement of this policy.

4. Approved Master Plans are to be implemented by one or more Planned Unit Developments. Minimum size requirements for Planned Unit Developments within the district shall be established in the land development code. Minor and major amendments to the Master Plan may be approved through the Planned Unit Development requirements and procedures. The Planned Unit Development may serve as the Master Plan if it meets the requirements for a Master Plan enumerated in this policy.

5. Easements, right-of-way and other improvements located throughout the Planned Development District boundary may be required to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the

Master Plan.

6. Subdivision of a portion of a Planned Development District for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource-based recreation use shall not be contingent upon the adoption of a Master Plan or PUD.
7. Subdivision and development of a portion of a Planned Development area for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan or PUD. The land development code shall establish the process and requirements for siting and development of new schools and the expansion of existing schools. The conservation, preservation, passive recreation, educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduce the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.
8. Separate Master Plans may be approved for each Planned Development District that is divided by an interstate or arterial highway that limits integration across the entire development.
9. As demands from a rapidly increasing population may require the expansion of the Urban Service Boundary in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.
10. Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development areas shall be designated as Planned Development on the adopted Future Land Use Map and Zoning Map.

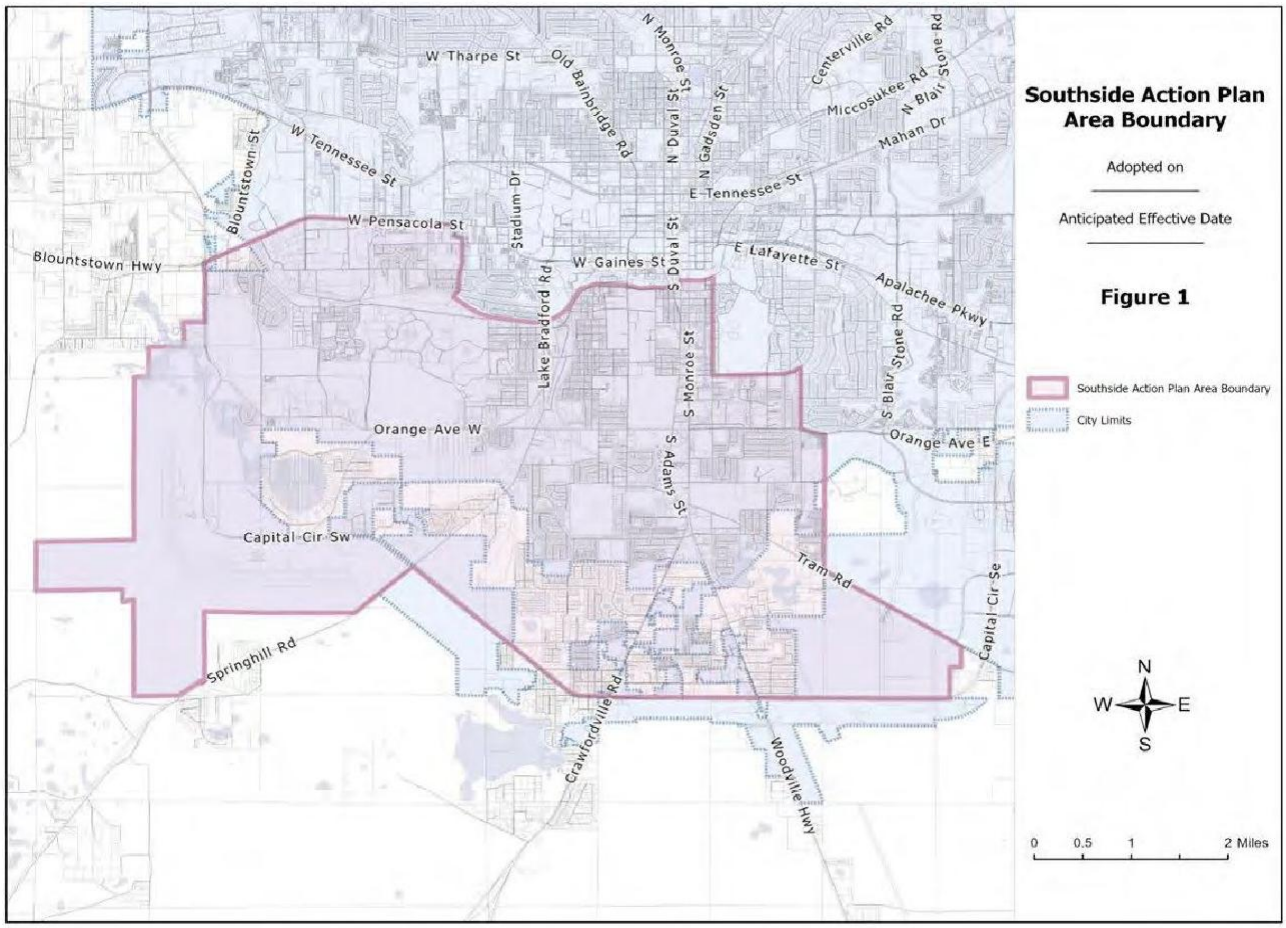
Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community facilities, including schools, community centers, and libraries.

Objective 3.1 – Residential Character (City of Tallahassee/Leon County):
Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.



Policy 3.1.1 – Residential Character Criteria (City of Tallahassee/Leon County):
Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

Policy 3.1.2 – Housing Diversity (City of Tallahassee/Leon County):
Maintain a viable mix of available residential densities to accommodate a variety of housing types.

Policy 3.1.3 – Healthy Food Options (City of Tallahassee/Leon County):
The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

Objective 3.2 – Southside Action Plan (City of Tallahassee/Leon County):
Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Policy 3.2.1 – Southside Action Plan Area (City of Tallahassee/Leon County):
The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

Policy 3.2.2 – Beautification (City of Tallahassee/Leon County):
Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Policy 3.2.3 – Investment (City of Tallahassee/Leon County):
Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Policy 3.2.4 – Active and Engaged Citizens (City of Tallahassee/Leon County):
Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

Policy 3.2.5 – Southside Action Plan Evaluation and Update (City of Tallahassee/Leon County):
The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

Objective 3.3 – Connectivity Access Management (City of Tallahassee/Leon County):
Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

Policy 3.3.1 – Access Management Design (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

Policy 3.3.2 – Intersection and Interchange Restrictions (City of Tallahassee/Leon County):
Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

Policy 3.3.3 – Unified Access and Circulation Plans (City of Tallahassee/Leon County):
Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.4 – Access Management Improvements (City of Tallahassee/Leon County):
Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that:

1. Address the transition of vehicles from arterial roadways to internal circulation systems.
2. Prioritize the redesign of median openings that are inadequately designed.
3. Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

Policy 3.3.5 – State Road Access Management (City of Tallahassee/Leon County):
The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Policy 3.3.6 – Neighborhood Through-Traffic (City of Tallahassee/Leon County):
Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies.

Policy 3.3.7 – Consolidated Properties (City of Tallahassee/Leon County):
Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

Policy 3.3.8 – Development Near Interchanges (City of Tallahassee/Leon County):
Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

Policy 3.3.9 – Access Management Deviations (City of Tallahassee/Leon County):
Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Objective 3.4 – Equitable Distribution of Land Uses (City of Tallahassee/Leon County):
Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

Policy 3.4.1 – Distribution of Land Uses (City of Tallahassee/Leon County):
The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

Policy 3.4.2 – Public Investments (City of Tallahassee/Leon County):
The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

Objective 3.5 – Safety (City of Tallahassee/Leon County):
Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

Policy 3.5.1 – Public Infrastructure Design (City of Tallahassee/Leon County):
Public infrastructure, relevant to transportation, shall be designed to increase the safety of its

users through strategies such as the application of context-based design and design speed, Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization, pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures

Objective 3.6 – Land Development Regulations (City of Tallahassee/Leon County):
Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 3.6.1 – Criteria for Amendments to Land Development Regulations (City of Tallahassee/Leon County): Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

Policy 3.6.2 – Implementing Zoning Districts (City of Tallahassee/Leon County):
Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

Policy 3.6.3 – Site Requirements (City of Tallahassee/Leon County):
Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Context-based transit amenities
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise mitigation

Policy 3.6.4 – Density and Intensity Incentives (City of Tallahassee/Leon County):
Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the respective Future Land Use Category by up to 20%. Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

Policy 3.6.5 – Planned Unit Developments (City of Tallahassee/Leon County):
The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

Policy 3.6.6 – Non-Conforming Uses (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on:

- The impact of the non-conformity to conforming land uses adjacent to the non-conformity.
- A determination that the non-conformity is not detrimental to public health, safety, and welfare.
- The ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between non-conforming uses which are to be terminated or amortized, and legally established non-conforming uses in nonresidential designations which may continue, but not be expanded.

Policy 3.6.7 – Previously Vested Development (City of Tallahassee/Leon County):
Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

Policy 3.6.8 – Landfill Redevelopment (City of Tallahassee/Leon County):
Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

Objective 3.7 – Urban Design (City of Tallahassee/Leon County):
Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging,

accessible, and safe public spaces.

Policy 3.7.1 – Design Principles and Priorities (City of Tallahassee/Leon County):
General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

Policy 3.7.2 – Crime Prevention through Environmental Design (City of Tallahassee/Leon County):
Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to:

- Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private.
- Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces.
- Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users.
- Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability.
- CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

Policy 3.7.3 – Design Criteria for Mobility Hubs (City of Tallahassee/Leon County):
New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Goal 4 [LM] – Greater Housing Diversity:

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
    - Neighborhoods that are diverse in use and population.
    - Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
    - Places that offer inclusive access to public spaces and community institutions.

Objective 4.1 – Missing Middle Housing (City of Tallahassee/Leon County):
Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

Policy 4.1.1 – Accessory Dwelling Units (ADUs) (City of Tallahassee/Leon County):
Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

Policy 4.1.2 – Missing Middle Housing as Conforming Uses (City of Tallahassee/Leon County):
Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

Policy 4.1.3 – Community Character Analysis (City of Tallahassee/Leon County):
In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

Policy 4.1.4 – Pattern Books (City of Tallahassee/Leon County):
Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

Objective 4.2 – Mobility-Based Housing Incentives (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

Policy 4.2.1 – Coordinate Transit with Land Use (City of Tallahassee):
As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

Policy 4.2.2 – Transit-Oriented Development (TOD) Design Standards (City of Tallahassee/Leon County):
Land development regulations shall include design standards to encourage the following principles around transit centers:

- Site centers in locations with highest ridership potential and development opportunities.
- Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development.
- Create a range of densities with highest at centers, tapering down to existing neighborhoods.
- Design centers for seamless pedestrian connections to surrounding development.
- Create public plaza directly fronting one or more sides of the center building where feasible.
- Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible.
- Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets.
- Enhance multi-modal connections, making transfers easy, direct, and comfortable.
- Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas.
- Use centers as catalysts for major redevelopment of area and create placemaking around centers.

Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within ¼ mile of a transit stop. This density bonus shall

not apply to the Residential Preservation land use category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4 – Coordinate Trails with Land Use (City of Tallahassee/Leon County):
As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.

Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards (City of Tallahassee/Leon County):
Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

Policy 4.2.6 – Trail-Oriented Development (TrOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 1/2 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Objective 4.3 – Affordability (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

Policy 4.3.1 – Inclusionary Housing Policy (City of Tallahassee/Leon County):
As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

Policy 4.3.2 – Establishing Community Land Trusts (City of Tallahassee/Leon County):
To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing models that:

- Do not include resale restrictions, or
- Include resale restrictions that are temporary, forgiven, or set to expire over time, or
- Rely on local government land donations without long-term affordability guarantees.

Policy 4.3.3 – Requirements of Community Land Trusts (City of Tallahassee/Leon County):

To qualify for local government assistance, Community Land Trusts shall:

- Require permanent affordability.
- Require that owners live in the homes as their primary residence.
- Include resale formulas in land leases.

Policy 4.3.4 – Affordable Housing Design Standards (City of Tallahassee/Leon County):

Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

Policy 4.3.5 – Affordable Housing Density Bonus (City of Tallahassee/Leon County):

Land development regulations shall include provisions that allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

Objective 4.4 – Family Heir Subdivisions (City of Tallahassee/Leon County):

Provide a hardship provision by which owners of property outside of the Urban Services Area who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

Policy 4.4.1 – Family Heir Subdivision Eligibility (City of Tallahassee/Leon County):

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Objective 5.1 – Economic Health (City of Tallahassee/Leon County):
Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

Policy 5.1.1 – Economic Development Strategic Plan (City of Tallahassee/Leon County):
The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan.

Objective 5.2 – Airport Access (City of Tallahassee):
Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

Policy 5.2.1 – Airport Master Plan (City of Tallahassee):
The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

Objective 5.3 – Freight and Cargo (City of Tallahassee/Leon County):
Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

Policy 5.3.1 – Intermodal Centers (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall maintain an inventory of intermodal freight centers, including the locations, types of facilities, and activities of the centers.

Policy 5.3.2 – Tallahassee International Airport (City of Tallahassee/Leon County):
Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

Policy 5.3.3 – Transportation Access (City of Tallahassee/Leon County):
Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal freight centers, or other freight transfer locations.

Objective 5.4 – Resilience Planning (City of Tallahassee/Leon County):
Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

Policy 5.4.1 – Post Disaster Redevelopment Plan (City of Tallahassee/Leon County):
The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

Policy 5.4.2 – Local Mitigation Strategy (City of Tallahassee/Leon County):
The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

Objective 5.5 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

Policy 5.5.1 – Regional Economic Development Coordination (City of Tallahassee/Leon County):
The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

Policy 5.5.2 – Grant Funding Opportunities (City of Tallahassee/Leon County):
Local governments shall pursue grant opportunities for projects or programs of regional significance.

Goal 6 [LM] – A Balanced Transportation Network:

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

Objective 6.1 – Land Use and Transportation Coordination for Livability (City of Tallahassee/Leon County):

Coordinate land use and transportation systems to foster vibrant communities across context areas with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl (City of Tallahassee/Leon County):

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities (City of Tallahassee/Leon County):

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts to the multi-modal transportation network.

Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors (City of Tallahassee/Leon County):
Transportation corridor maps showing the future land uses shall be developed and maintained to reflect the enhanced coordination between land use and transportation including new construction and improvements, reflecting the intended context classification.

Policy 6.1.4 (City of Tallahassee/Leon County) – Retrofit for Livability:
Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

Objective 6.2 – Network Connectivity Improvement (City of Tallahassee/Leon County) :
Improve the balance of transportation options, connectivity, and capacity of the multimodal transportation network.

Policy 6.2.1 – Enhance Connectivity (City of Tallahassee/Leon County):
Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

Policy 6.2.2 – Future Right-of-Way Needs (City of Tallahassee/Leon County):
Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through appropriate development review and other processes, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 6.2.3 – Build and Enhance the Network (City of Tallahassee/Leon County):
Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 6.2.4 – Corridor Management and Preservation (City of Tallahassee/Leon County):
Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

Policy 6.2.5 – Interconnectivity for Development (City of Tallahassee/Leon County):
Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments when such connection has the potential to reduce the vehicular traffic on the external street system.

Policy 6.2.6 – Continuation of Streets (City of Tallahassee/Leon County):
All development plans shall incorporate and continue all sub arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 6.2.7 – Interconnectivity to Adjacent Uses (City of Tallahassee/Leon County):
Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

Objective 6.3 – Context Based Mobility (City of Tallahassee/Leon County):
Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

Policy 6.3.1 – Local Context Classification and Safe Systems (City of Tallahassee/Leon County):
A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use and zoning, and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

Policy 6.3.2 – Context Classification Application (City of Tallahassee/Leon County):
The context classification system shall be applied to City and County roadway resurfacing and enhancement projects in a manner that reflects the future vision and context of the area, and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

Policy 6.3.3 – Context Classification Map (City of Tallahassee/Leon County):
By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification Map and the Future Land Use Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

Policy 6.3.4 – Downtown Traffic (City of Tallahassee/Leon County):
By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

Policy 6.3.5 – Lane Repurposing (City of Tallahassee/Leon County):
Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Policy 6.3.6 – One-Way Pair Studies (City of Tallahassee/Leon County):
Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements. The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 6.3.7 – Speed Management (City of Tallahassee/Leon County):
By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

Policy 6.3.8 – Level of Service (LOS) (City of Tallahassee/Leon County):
Peak Hour Roadway Level of Service is established below and shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS) (City of Tallahassee):
In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

Objective 6.4 – Complete Streets (City of Tallahassee/Leon County):
Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 6.4.1 – Project Evaluation (City of Tallahassee/Leon County):
Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

Policy 6.4.2 – Share Transportation Information (City of Tallahassee/Leon County):
The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.3 – Bicycle and Pedestrian Network (City of Tallahassee/Leon County):
The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan (City of Tallahassee/Leon County):
In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature

upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

Policy 6.4.5 – Safe Routes to Schools (City of Tallahassee/Leon County):
Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 6.4.6 – Community Gateways (City of Tallahassee/Leon County):
Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

Policy 6.4.7 – Scenic Roadway Assessments (City of Tallahassee/Leon County):
In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

Policy 6.4.8 – Maintenance of Traffic (City of Tallahassee/Leon County):
When construction or repair work infringes on regular corridor operation, a project specific Maintenance of the Traffic Plan shall be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

Policy 6.4.9 – Multi-Modal Safety and Access (City of Tallahassee/Leon County):
Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction.
- A documented absence of current or future need.
- Procedures and criteria for approving exceptions will be identified in the Land Development Code.

New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and shall use innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 6.4.10 – Applicability (City of Tallahassee/Leon County):
All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present.

Policy 6.4.11 – Equity (City of Tallahassee/Leon County):
The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

Policy 6.4.12 – Design Standards (City of Tallahassee/Leon County):
Land Development Codes that apply to all development policies and programs shall be revised by 2030 to use the latest professionally accepted design guidance, standards, and recommendations for Complete Streets in coordination with the designated context classification Guidance resources shall include, but need not be limited to:

- Federal Highway Administration's Manual on Uniform Traffic Control Devices
- Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook)
- National Association of City Transportation (NACTO) published guidelines
- American Association of State Highway and Transportation Official (AASHTO) published guidelines
- U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach

Policy 6.4.13 – Pavement Markings and Signage (City of Tallahassee/Leon County):
All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

Policy 6.4.14 – Two-Way Left Turn Lane Replacement (City of Tallahassee/Leon County):
Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

Policy 6.4.15 – Measuring Progress (City of Tallahassee/Leon County):
The success of this Complete Streets Objective shall be measured by the Planning Department

with assistance by the City and County during the Evaluation and Appraisal Review process, using but not limited to, the following performance measures:

- Total miles of new designated bike lanes
- Total miles of new shared-use paths (paved and natural surface)
- Total miles of neighborhood bikeways signed, marked, or constructed
- Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.)
- Number and type of crosswalk and intersection improvements and new installations
- Number of revenue service miles traveled by transit vehicles
- Rates of crashes, injuries, and fatalities by mode, as available
- Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices.
- Number of exceptions to this policy granted

The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

Policy 6.4.16 – Coordination with Placemaking Plans (City of Tallahassee/Leon County):
Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

Objective 6.5 – Bicycle Facilities (City of Tallahassee/Leon County):
Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance (City of Tallahassee/Leon County):
All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

Policy 6.5.2 – Bicycle Facilities in New Development (City of Tallahassee/Leon County):
New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at all non-residential uses, multi-family uses and other key destinations. Bicycle and trail connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

Objective 6.6 – Pedestrian Facilities (City of Tallahassee/Leon County):
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

Policy 6.6.1 – Pedestrian Level of Comfort (City of Tallahassee/Leon County):
As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 6.6.2 – Crosswalks (City of Tallahassee/Leon County):
Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Local Context Classification.

Policy 6.6.3 – Pedestrian Infrastructure for New Development (City of Tallahassee/Leon County):
New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

Objective 6.7 – Mobility Hubs (City of Tallahassee/Leon County):
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

Policy 6.7.1 – Implementation of Mobility Hubs (City of Tallahassee/Leon County):
Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

Policy 6.7.2 – Mobility Hubs Location Coordination (City of Tallahassee/Leon County):
The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

Policy 6.7.3 – Mobility Hubs Design Guidelines Requirements (City of Tallahassee/Leon County):
Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

Objective 6.8 – Transportation Demand Management (City of Tallahassee/Leon County):
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.1 – Encourage Alternate Transportation Modes (City of Tallahassee/Leon County):
Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure (City of Tallahassee/Leon County):
City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 6.8.3 – Land Development Patterns (City of Tallahassee/Leon County):
The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

Policy 6.8.4 – Shared Parking Criteria (City of Tallahassee/Leon County):
Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

Policy 6.8.5 – Parking Reduction for Certain Development Types (City of Tallahassee/Leon County):
City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

Policy 6.8.6 – Private Parking Lots (City of Tallahassee/Leon County):
City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

Policy 6.8.7 – Drop-Off & Pick-Up Zones (City of Tallahassee/Leon County):
The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

Policy 6.8.8 – Intelligent Transportation Systems (ITS) (City of Tallahassee/Leon County):
City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.8.9 – Traffic Operations Management (City of Tallahassee/Leon County):
The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

Objective 6.9 – Transportation for the Disadvantaged (City of Tallahassee/Leon County):
Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk.

Policy 6.9.1 – Human Services Transportation (City of Tallahassee/Leon County):
Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

Policy 6.9.2 – Transport to Destinations (City of Tallahassee/Leon County):
Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

Policy 6.9.3 – Affordable and Cost-Effective Service (City of Tallahassee/Leon County):
Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on-demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

Policy 6.9.4 – Transportation Disadvantaged Needs Assessment (City of Tallahassee/Leon County):

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

Objective 6.10 – Transit (City of Tallahassee/Leon County):

Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

Policy 6.10.1 – Transit Development Plan (City of Tallahassee):

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 6.10.2 – Pedestrian Infrastructure Connectivity (City of Tallahassee/Leon County):

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

Policy 6.10.3 – Southside Transit (City of Tallahassee/Leon County):

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

Policy 6.10.4 – Employment and Activity Center Service (City of Tallahassee):

Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Policy 6.10.5 – Transit Corridors (City of Tallahassee/Leon County):

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

Objective 6.11 – Aviation (City of Tallahassee/Leon County):

Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

Policy 6.11.1 – Adjacent Land Use Compatibility (City of Tallahassee/Leon County):
Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 6.11.2 – Airport Master Plan (City of Tallahassee):
The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

Policy 6.11.3 – Compatibility of Land Use (City of Tallahassee/Leon County):
Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 6.11.4 – Compatibility for Noise and Safety (City of Tallahassee/Leon County):
Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

Policy 6.11.5 – Advanced Air Mobility (City of Tallahassee/Leon County):
Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas and not located within areas that may create compatibility issues. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

Objective 6.12 – Rail (City of Tallahassee/Leon County):
Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

Policy 6.12.1 – Railroad Crossings (City of Tallahassee/Leon County):
Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

Objective 6.13 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan and manage transportation systems that extend beyond jurisdictional boundaries.

Policy 6.13.1 – Consistency with State Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

Policy 6.13.2 – Consistency with Regional Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 6.13.3 – Consistency with Local Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

Policy 6.13.4 – Signal Coordination Plans (City of Tallahassee/Leon County):

Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

Policy 6.13.5 – Project Planning Partnerships (City of Tallahassee/Leon County):

Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

Policy 6.13.6 – Evacuation Routes (City of Tallahassee/Leon County):

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.

Policy 6.13.7 – Emerging Technology (City of Tallahassee/Leon County):

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

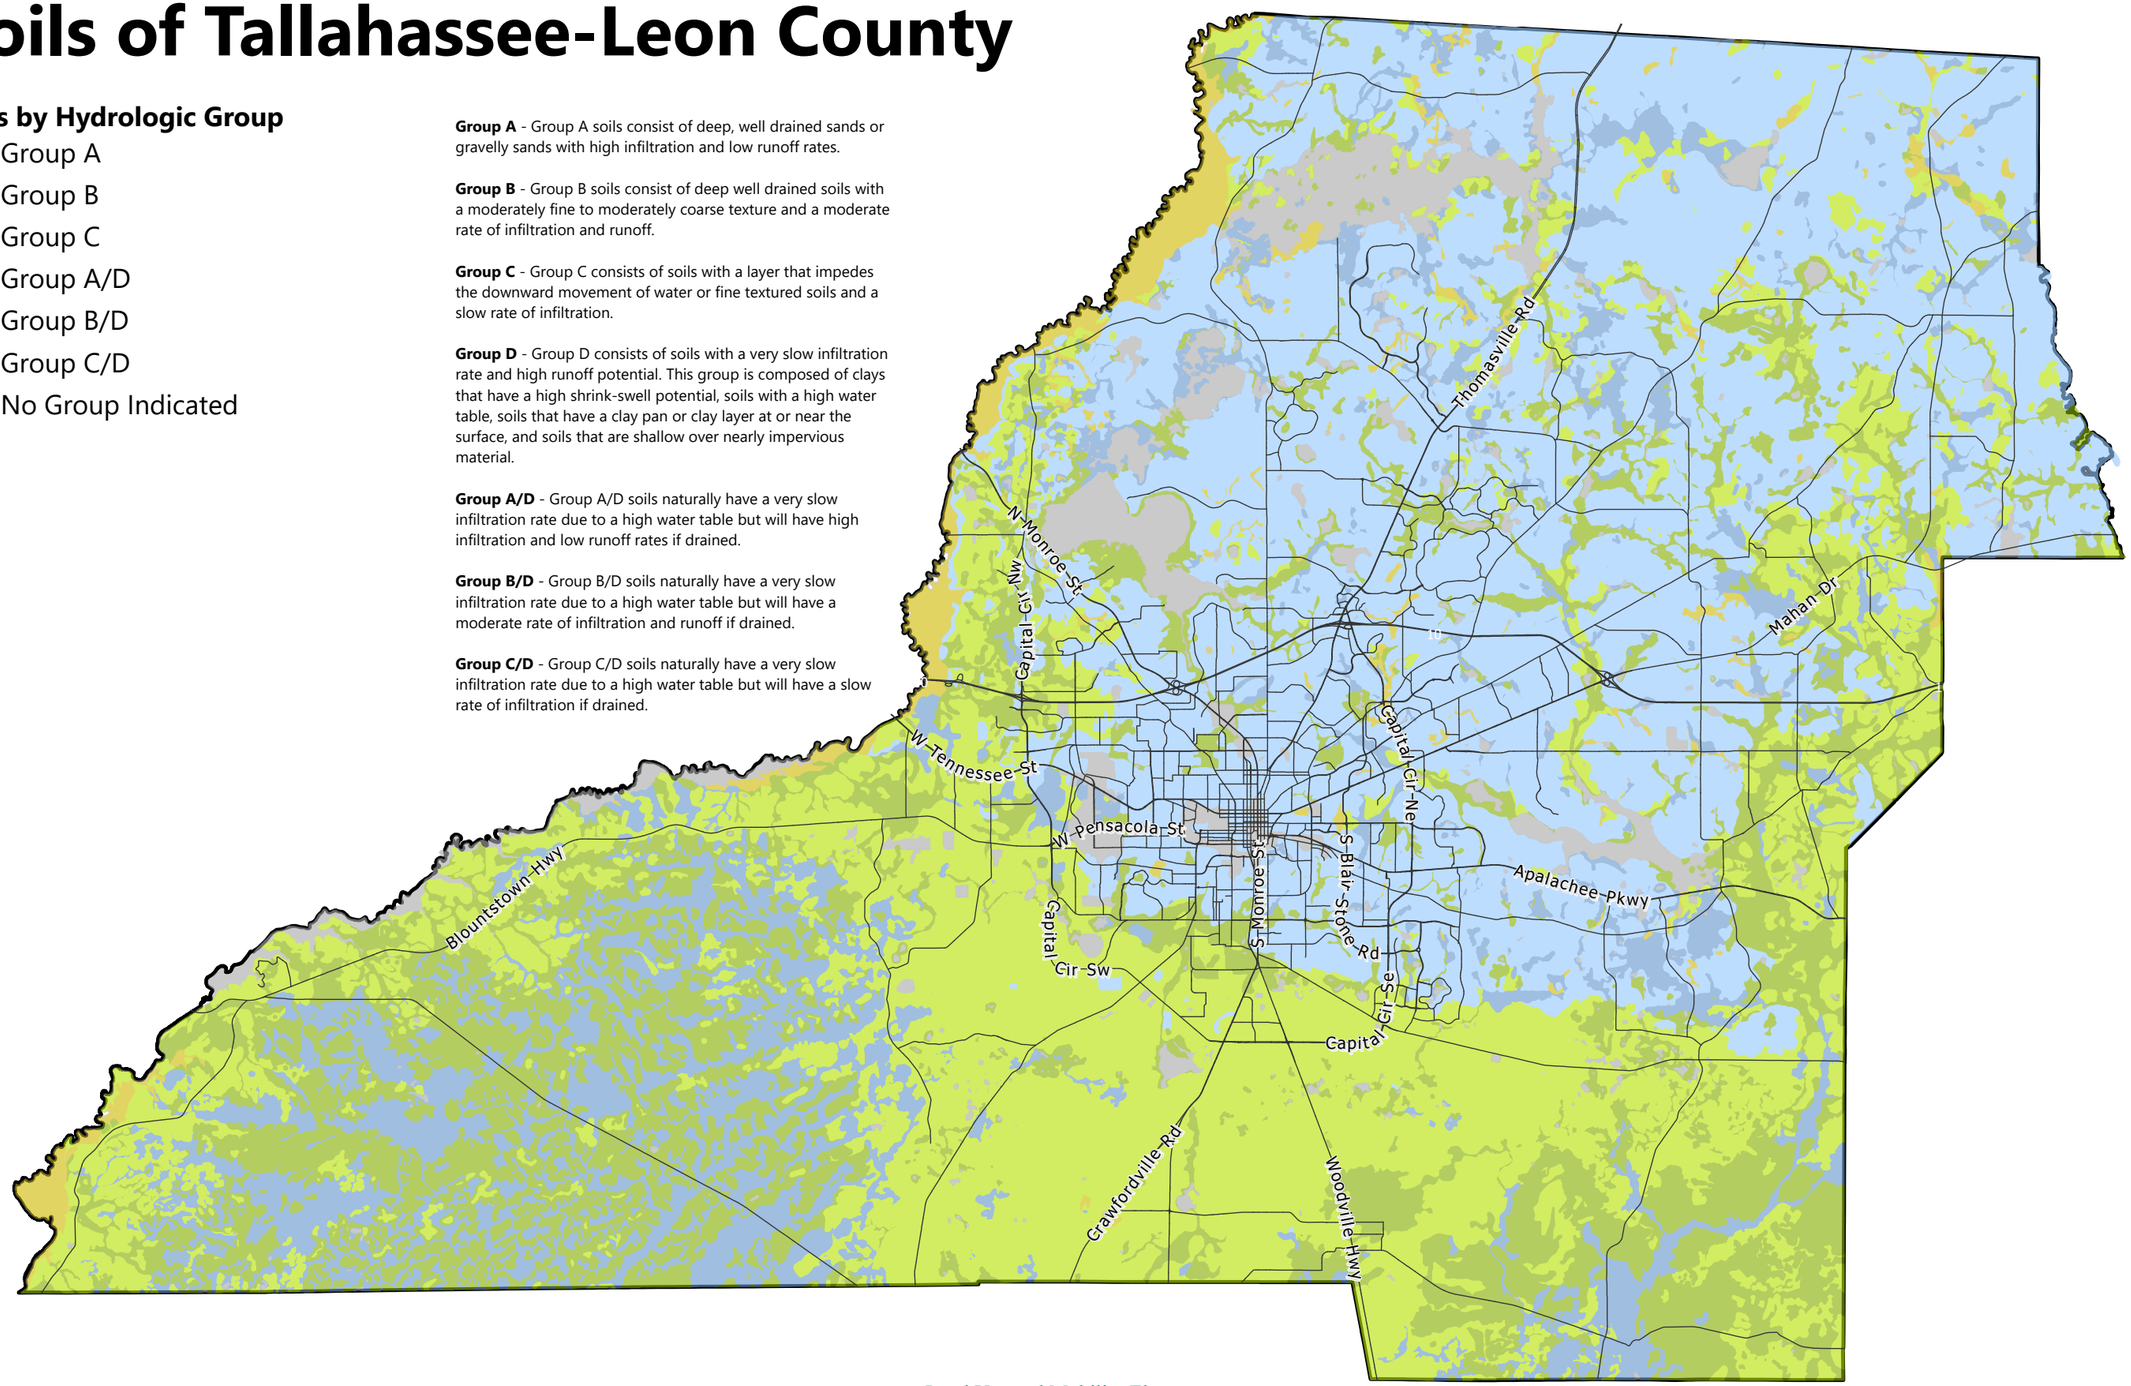
Soils of Tallahassee-Leon County

Soils by Hydrologic Group

- Group A
- Group B
- Group C
- Group A/D
- Group B/D
- Group C/D
- No Group Indicated

Group A - Group A soils consist of deep, well drained sands or gravelly sands with high infiltration and low runoff rates.

Group B - Group B soils consist of deep well drained soils with a moderately fine to moderately coarse texture and a moderate rate of infiltration and runoff.



Group C - Group C consists of soils with a layer that impedes the downward movement of water or fine textured soils and a slow rate of infiltration.

Group D - Group D consists of soils with a very slow infiltration rate and high runoff potential. This group is composed of clays that have a high shrink-swell potential, soils with a high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material.

Group A/D - Group A/D soils naturally have a very slow infiltration rate due to a high water table but will have high infiltration and low runoff rates if drained.

Group B/D - Group B/D soils naturally have a very slow infiltration rate due to a high water table but will have a moderate rate of infiltration and runoff if drained.

Group C/D - Group C/D soils naturally have a very slow infiltration rate due to a high water table but will have a slow rate of infiltration if drained.

LAND USE

GOALS, OBJECTIVES AND POLICIES

Goal 1: [L] (EFF. 7/16/90)

The Comprehensive Plan shall protect and enhance the quality of life in this community by providing economically sound educational, employment, cultural, recreational, commercial, industrial and professional opportunities to its citizens while channeling inevitable growth into locations and activities that protect the natural and aesthetic environments and residential neighborhoods.

GROWTH MANAGEMENT/ URBAN SERVICES AREA

Objective 1.1: [L] (EFF.7/16/90; REV. EFF. 7/26/06; REV. EFF. 12/24/10)

Direct development to those areas which have in place, or have agreements to provide, the land and water resources, fiscal abilities, and the service capacity to accommodate growth in an environmentally acceptable manner. This shall be accomplished in part through the establishment and maintenance of an Urban Service Area (USA) concept. This Urban Service Area (USA) concept is based upon a desire to have Tallahassee and Leon County grow in a responsible manner, with infrastructure provided economically and efficiently, and surrounding forest and agricultural lands protected from unwarranted and premature conversion to urban land use. An urban service strategy provides for well managed, orderly growth, which preserves natural resources and promotes fiscal responsibility. The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development.

Policy 1.1.1: [L] **(REV. EFF. 7/20/05)**

In order to discourage urban sprawl, new development shall be concentrated in the urban service area plus in the Woodville Rural Community future land use category and the rural communities of Capitola, Chaires, Ft. Braden and Miccosukee, as designated on the future land use map.

Policy 1.1.2: [L] **(REV. EFF. 12/10/91)**

Improvement of capital infrastructure shall be provided within the designated urban service area and shall be phased over the life of the plan.

I. Land Use

Policy 1.1.3: [L] **(REV. EFF. 12/10/91; REV. EFF. 7/26/06)**

Capital infrastructure designed to support urban density outside the Urban Service Area shall be prohibited except as described below. Capital infrastructure which is designed or intended to provide services to the population of the Urban Service Area may be located outside the Urban Service Area. This policy includes but is not limited to landfill, spray irrigation facilities, and inter-county transportation roadways.

Capital improvement projects or expenditures designed to support urban density outside of the Urban Service Area will not occur outside the designated Urban Service Area unless a demonstrated hardship can be shown to occur for existing development or residents as of February 1, 1990. A demonstrated hardship refers to:

- Replacement of existing facilities due to deterioration or destruction from natural disaster.
- A public health and/or safety problem if no improvements are made (example - contaminated water wells).
- Potential of severe environmental degradation if no improvements are made (example - failing septic tanks).

The capacity of these facilities shall be limited to that necessary to serve development existing on or prior to February 1, 1990.

Policy 1.1.4: [L] **(REV. EFF. 7/20/05)**

Central water and sewer may be provided in areas designated as Rural Community, Woodville Rural Community, and enclaves within the Woodville Rural Community designated for Residential Preservation on the future land use map.

Policy 1.1.5: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Future Land Use Map densities and intensities are intended to reflect the availability of capital infrastructure. Capital infrastructure, which supports higher land use densities and intensities, consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

Policy 1.1.6: [L] **(EFF. 7/16/90)**

Areas within the urban service area will receive urban level capital facilities and services according to the schedule established in the Capital Improvements Element.

Policy 1.1.7: [L] **(EFF. 7/16/90)**

Higher density and mixed use development and its ancillary activities shall be channeled into locations which have proper access to the existing transportation system; minimal environmental constraints; sufficient stormwater treatment capacity; compatible existing land use and readily available sewer and water infrastructure.

Policy 1.1.8: [L] **(EFF. 7/26/06; REV. EFF. 12/24/10)**

The size of the USA is related to the projected fiscal capacity of the local government to provide urban infrastructure. An assessment of changing conditions over the 20-year period of the plan is built in through the required seven year Evaluation and Appraisal Report (EAR) and the annual capital improvements process. The integrity of the USA concept is maintained by strict adherence to the premise of not funding or scheduling major capital improvement projects outside the USA, Rural Communities or the Woodville Rural Community in conjunction with a policy of discouraging premature use and underutilization of land designated for urban development. Additionally, the size of the USA should be limited to reflect the ability of the public to provide infrastructure, limitations of environmental constraints and existing development and to provide for a phasing mechanism to the Plan Horizon.

The area within the USA is sized to accommodate approximately 50% more vacant land than is necessary to accommodate the population growth expected within the USA from 1993 to the Plan Horizon. It is expected that a USA sized 50% larger than our vacant land needs will provide sufficient constraint for growth management policies to be effective, while not over constraining the supply of vacant land.

Policy 1.1.9: [L] **(EFF. 7/26/06)**

In order to achieve efficient and effective use of infrastructure and land, residential density within the USA shall average no less than 2 dwelling units per gross acre. Some future land use categories may establish higher minimum densities and minimum intensity requirements for nonresidential development. Attainment of minimum densities and intensities will be measured and reported annually and be evaluated at a minimum during subsequent Evaluation and Appraisal Reports and adjustments to the Comprehensive Plan necessary to achieve this measure will be recommended as warranted in the future.

Policy 1.1.10: [L] **(EFF.7/16/90; RENUMBERED EFF. 7/26/06; FORMERLY POLICY 1.1.8.)**

Compliance with the Conservation Element shall be met prior to consideration of requirements in the Land Use Element.

Policy 1.1.11: [L] **(REV. EFF. 3/14/07; REV. EFF. 1/7/10)**

The growth management strategy of the Tallahassee-Leon County Comprehensive Plan is designed to be implemented by a series of instruments which include:

1) An **Urban Service Area** strategy to guide and coordinate land use densities and intensities with the availability of capital infrastructure and to discourage urban sprawl.

2) A **Land Use Map** to graphically distribute broad categories of land use and allowable densities and intensities. In conjunction with the Land Use Map, an environmental overlay system has been included which depicts the general

location of environmental features which are to be preserved as required by the Conservation Element, or to which development limitations will apply as identified in the Conservation Element.

3) A **Future Right-of-Way Needs Map** to graphically represent planned future transportation projects in the City of Tallahassee (City) and Leon County (County) and a table of projects indicating the project termini and access classifications. This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected. Objectives and policies related to the Future Right-of-Way Needs Map are provided in the Transportation Element. **(EFF. 7/1/04)**

4) **Commercial Site Location** standards, which apply to certain Future Land Use Categories other than Central Core, Central Urban, Village Mixed Use, Suburban, Bradfordville Mixed Use, Planned Development and Woodville Rural Community shall be implemented through the Land Development Regulations, are intended to integrate commercial land uses into the transportation network and development patterns in order to assure accessibility by the general public. **(REV. EFF. 3/14/07; REV. EFF. 1/7/10)**

5) **Land Use Category Summaries** for each Future Land Use which in conjunction with the land use map provide the allowable densities and intensities of uses use on specific sites.

6) The **Planned Development Future Land Use Category** applies to large land holdings that will be developed for a mix of land uses. **(REV. EFF. 3/14/07)**

7) Descriptions of eight different **Mixed Use development patterns** which establish development pattern intent, allowed density and intensity, development pattern location criteria, and development pattern access criteria within the Bradfordville Mixed Use Category (see Objective 1.7) **(REV. EFF. 3/14/07)**

8) **Goals, Objectives and Policies** which further add guidance by outlining courses of action to be taken in conjunction within the instruments listed above to further assure implementation.

These instruments do not act independently of each other. Rather, they combine to form a set of parameters in which land use decisions are made consistent with a growth management strategy designed to address the issues important to the community.

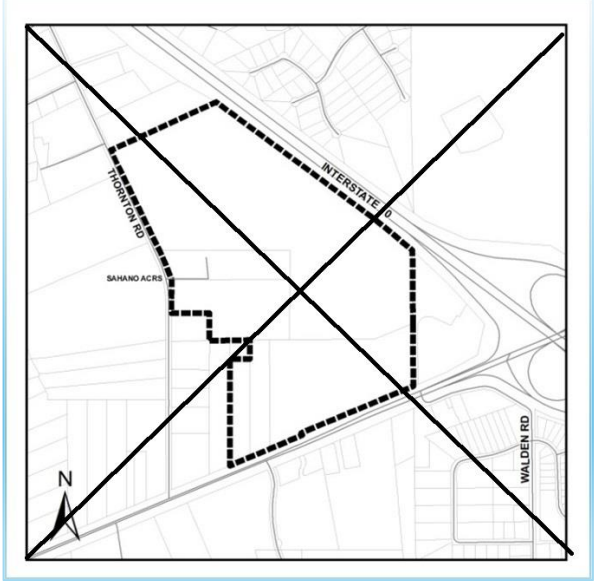
Policy 1.1.12: [L] **(EFF. 8/9/12)**

The parcel shown on the map below at the intersection of I-10 and US Highway 90 is within the designated Urban Service Area (USA), as defined in Section 163.3164(50), Florida Statutes, having public services and facilities, including, but not limited to, central water and sewer capacity and roads. As a parcel within a designated statutory USA, proposed development within the parcel is exempt from the development of regional impact process pursuant to Section 380.06(29)(c)3, Florida Statutes. As part of this

exemption, any future development on the subject parcels shall, in addition to applicable Comprehensive Plan policies, address the following objectives:

(a) Provide opportunities for a "main street" component that allows on street parking,

(b) Provide landscaping, buffering and screening or any of the three options for aesthetic enhancements if building facades are not oriented towards Thornton Road and US 90,



(c) Incorporate storm water management facilities and natural features as amenities into the project's overall design concept,

(d) Incorporate a consistent design theme for freestanding signage throughout the property,

(e) Coordination of appropriate location for mass transit stops and pedestrian connections to development on the property at the time of development,

(f) Buildings will incorporate architectural features and patterns that provide visual interest such as building facades that are not uniform in mass or scale and height and pedestrian scale facade treatments such as canopies, overhangs, arcades, gabled entryways, and porticos.

Map 1: I-10 and Mahan US 90 DRI Exemption Area

DEVELOPMENT IN RELATION TO ENVIRONMENTAL CONSTRAINTS

Objective 1.2: [L](EFF. 7/16/90; REV. EFF. 4/10/09)

Coordinate the location of land uses with local soil conditions, topography, and aquifer vulnerability as well as available services.

I. Land Use

Policy 1.2.1: [L] Leon County only **(EFF. 7/16/90)**

Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use.

Policy 1.2.1: [L] City of Tallahassee only **(REV. EFF. 7/1/04)**

Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Such off-site mitigation plans shall recognize the contribution of preserved significant grades to community character, ameliorating the impacts of stormwater, and providing conditions for native plant communities.

Policy 1.2.2: [L] Leon County only **(REV. EFF. 9/19/91)**

The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize site designs that fit the topography, not changing the topography to fit the design. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of-way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.

Policy 1.2.2: [L] City of Tallahassee only **(REV. EFF. 7/1/04)**

The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize site designs that fit the topography, not changing the topography to fit the design, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of-way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.

Policy 1.2.3: [L] **(REV. EFF. 12/7/99)**

I. Land Use

(a) The local governments shall maintain a map indicating the locations of all known operating and abandoned land fill sites. As the location of additional abandoned land fill sites become known, this map shall be revised accordingly.

(b) By 2001, local government will include requirements in their land development regulations that the development of any property within a mapped landfill site shall be required to submit information relating to the subsurface geology of the property necessary to assure that future development of the site will not adversely impact the health, safety or welfare of the public.

(c) By 2001, local governments will include requirements in their land development regulations that regulate the location of stormwater facilities or conveyance systems within any abandoned landfills.

Policy 1.2.4: [L] **(EFF. 4/10/09)**

By 2010, local government shall adopt in the Land Development Regulations a mapped Primary Spring Protection Zone for Wakulla Springs based on the Leon County Aquifer Vulnerability Assessment. Accompanying land development regulations for the Primary Spring Protection Zone shall be developed as indicated in Policy 4.2.5 of the Conservation Element to aid in the protection of Wakulla Springs. These efforts shall be coordinated with Wakulla County.

Policy 1.2.5: [L] **(EFF. 4/10/09)**

1. By 2014, local government shall develop and maintain as part of the local geographic information system database areas of known hazards.

2. By 2014, local government will include requirements in their land development regulations that mitigate and/or prevent future development in areas of known hazards. The land development regulations shall also contain provisions for the mitigation of existing development in areas of known hazards so as to prevent repetitive hazard losses.

LEVEL OF SERVICE (REGULATIONS)

Objective 1.3: [L] **(EFF. 7/16/90)**

Achieve and maintain the adopted level of service standards set forth within the Tallahassee-Leon County Comprehensive Plan.

Policy 1.3.1: [L] **(EFF. 7/16/90)**

Before a development order or permit is issued, local government shall ensure that the adopted level of service standards for the affected public facilities will be maintained in accordance with the Concurrency Management System.

Policy 1.3.2: [L] **(REV. EFF. 12/16/94)**

Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the degree of compliance with the goals, objectives and policies of the Comprehensive Plan and the land use development matrix, which is intended to be a pictorial representation of existing policies in the plan, as implemented by the land development regulations. Overall densities and intensities should be consistent with capital facilities and services being available at the adopted level.

Policy 1.3.3: [L] **(REV. EFF. 12/10/91)**

Environmental and development ordinances shall include the following:

(a) Explicit and strict protection of environmentally sensitive areas, thus minimizing future costs to taxpayers by prohibiting unsound uses; and

(b) Availability and use of the conservation and preservation overlays as detailed in the Conservation Element prior to the issuance of development orders.

(c) Apportioning development costs so that those fees collected from the existing population be applied to elimination of current "deficits" in levels of service, while those fees collected in new developments are applied to maintain levels of service established by the entire community. Maintenance and enhancements to the adopted levels of service shall be the responsibility of both. This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer.

(d) Policies and procedures in the land development regulations shall ensure that the range of development types by percentage distribution are monitored and maintained.

This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer.

Policy 1.3.4: [L] **(DEL. EFF. 3/14/07)**

Reserved

LAND DEVELOPMENT REGULATIONS

Objective 1.4: [L] **(REV. EFF. 7/20/05)**

Maintain a set of specific and detailed Land Development Regulations, which implement and are consistent with the goals, objectives and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 1.4.1: [L] **(REV. EFF. 12/10/91)**

Density and intensity incentives shall be established within the required land development regulations to encourage growth in areas which minimize and mitigate development's negative impact on the natural and aesthetic environment.

Policy 1.4.2: [L] **(REV. EFF. 12/16/94; REV. EFF. 1/7/10)**

The Comprehensive Plan shall establish guidelines for the application of traditional zoning districts in order to implement a future land use regulatory system that is more predicable than area-wide application of mixed use performance zoning. These traditional zoning districts shall specify a range of allowable land use within each district. In certain land use designations, mixed use performance zoning will be retained to integrate land uses which may be otherwise incompatible. Development regulations shall include development and design standards. Allowed land uses within a future land use category shall be implemented by one or more specific zoning districts consistent with the intent of a future land use category. The development and application of specific zoning districts to a zoning map implementing the Comprehensive Plan shall be based upon furthering the intent of the Comprehensive Plan:

(a) Zoning district use classifications shall be developed, based upon the Comprehensive Plan, existing land use patterns, previous zoning which continues to direct land use and development standards, and accepted guidelines for land use impact classifications and service requirements;

(b) Specific zoning districts shall be implemented through the application of the zoning district classification system as guided by the Comprehensive Plan.

(c) All zoning decisions will be made by the governing Commission based upon a finding of the furthering of and consistency with the intent of the Comprehensive Plan, in recognition of Land Use Policy 1.1.10, which establishes the supremacy of the Conservation Element.

(d) Specific zoning districts will be applied within the Urban Service Area except for University Transition, Activity Center, Central Urban, Central Core land use designations and Mixed Use parcels greater than 200 acres in area. Extension of site specific zoning beyond the Urban Service Area and to other areas is consistent with the intent of the Comprehensive Plan.

Policy 1.4.3: [L] **(DEL. EFF. 7/25/03)**

Reserved

Policy 1.4.4: [L] **(DEL. EFF. 7/20/05)**

Reserved

Policy 1.4.5: [L] **(REV. EFF. 3/14/07)**

The Tallahassee-Leon County Comprehensive Plan, its future land use map and future land use categories as defined within the Plan, the land use summary charts which are intended to be a pictorial representation of existing policies in the comprehensive plan, and land development regulations adopted by local government as provided in the Plan shall in combination provide a unified system for the regulation of land use. Land use

regulations shall be consistent with the intended functions, land uses and intensity of the land use category designated on the future land use map.

(a) Any requested text amendment to the Comprehensive Plan shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of the Plan;

(b) Any requested amendment to the Future Land Use Map shall be evaluated for consistency with the adopted Goals, Objectives, and Policies of the Plan as well as consistency with and the furtherance of the intent of the requested future land use category;

(c) Any request for a change in zoning use classification and specific zoning district mapping within a future land use category shall be evaluated for consistency with the adopted Goals, Objectives, and Policies of the Plan as well as consistency with and the furtherance of the intent of the future land use category in which it is located;

(d) The determination that a particular land use is permitted within a zoning district shall be made based upon a listing of allowable land uses within a zoning district or that an unlisted land use is substantially similar to allowable uses within the same district.

Policy 1.4.6: [L] **(EFF. 7/16/90; REV. EFF. 4/10/09)**

By 2014, land development regulations will include standards for the regulation of future land use categories, subdivision, signage, and areas subject to seasonal or periodic flooding and areas of known hazards. Regulations concerning areas subject to seasonal or periodic flooding shall be consistent with all applicable state and federal regulations.

Policy 1.4.7: [L] **(EFF. 7/16/90)**

The adopted land development regulations shall include requirements for stormwater management, open space, and convenient on-site traffic flow (including need).

Policy 1.4.8: [L] **(EFF. 7/16/90)**

The land use development matrix shall be adopted as part of the comprehensive plan and shall in conjunction with the future land use map and the goals, objectives and policies contained within the individual elements be used in evaluating future land use decisions.

Policy 1.4.9: [L] **(EFF. 7/16/90)**

Changes in classification of highways and streets that affect the allowable uses of property as set forth in the land development matrix and the comprehensive plan shall be considered plan amendments and shall be required to follow the plan amendment process.

Policy 1.4.10: [L] **(REV. EFF. 12/16/94)**

The land development regulations shall provide for zoning districts which shall indicate which land uses are allowed, prohibited, or conditional with specified constraints consistent with the criteria set forth in the narrative intent of the future land use categories, the land use development matrix which is intended to be a pictorial representation of existing policies in the Comprehensive Plan, and the Goals, Objectives, and Policies of the Comprehensive Plan.

(a) In those future land use categories that encourage a mixing of land uses, the land development regulations shall contain provisions that facilitate multiple land uses within the same site, the same development, or the same structure.

(b) When appropriate, the land development regulations may provide for zoning districts that allow for two or more land use types, consistent with the intent of the future land use category.

(c) The land development regulations may also provide for zoning districts that further divide any of the allowed land use types into two or more subsets.

Policy 1.4.11: [L] **(EFF. 9/19/91)**

The land development regulations shall include standards and criteria such as minimum open space requirements (between 25% and 10% depending on the land use and existing vegetation), internal circulation and minimum setbacks and buffers for uncomplimentary land uses. These buffer requirements will contain buffer widths between land uses, required number of trees and shrubs per linear foot of buffer, opacity of the buffer, etc. Additional buffering requirements may be related to Planned Unit Developments (PUDs).

Policy 1.4.12: [L] **(EFF. 9/19/91)**

(a) The intent of Site Plan and PUD planning and design requirements shall be to encourage and require the development of urban living and work spaces that minimize impacts to the natural environment. Environmental impacts shall be minimized through the development and redevelopment of compact and efficient urban land use patterns that closely integrate living and work spaces while maintaining compatibility through specified performance design criteria. Neighborhood and inter-site compatibility shall be implemented through site planning and design criteria that require objectionable impacts of particular land use activities to be internally located within site or building designs, rather than relying exclusively on standard landscape and setback buffering methods to reduce perimeter oriented objectionable impacts.

(b) Objectionable impacts of service and delivery areas, refuse and recycling collection areas, as well as the outdoor storage and work areas generally associated with commercial and residential buildings shall be planned to minimize off-site impacts.

(c) Site Plan and PUD requirements shall minimize impacts to the natural environment resulting from urban sprawl by not only identifying and protecting

environmentally sensitive lands, but just as importantly by limiting urban sprawl into less environmentally sensitive lands through the implementation of compact and efficient urban development and redevelopment.

Policy 1.4.13: [L] **(REV. EFF. 3/14/07)**

The intent of designating roads as nonresidential is to recognize existing nonresidential development patterns and to allow for planned mixed-use or nonresidential developments. As such, street access requirements contained in the Land Use Summary Charts are waived for those streets designated as nonresidential by clearly defining areas where existing development patterns will be allowed to continue. It also serves to protect residential and residential components such as elementary schools and neighborhood parks from adverse impacts of nonresidential development as well as protecting nonresidential development from the encroachment of residential uses.

The designation of a nonresidential street does not exempt any potential development along the street from further concurrency or consistency review.

Roadway access limitations and locational criteria from the nonresidential road classification system do not apply to the Woodville Rural Community, Suburban, Bradfordville Mixed Use, Planned Development, Village Mixed Use and Urban Residential 2 Future Land Use Categories. Roadway access limitations and locational criteria for these categories shall be established in Land Development Regulations.

Policy 1.4.14: [L] **(EFF. 8/17/92)**

Compile a list and waive access standards for non-residential minor collector and local streets based on the following criteria:

a) It is part of a platted non-residential subdivision.

b) It is part of an approved PUD.

c) It has over 66% of its developed frontage in non-residential land uses and essentially functions as an access road for these developments. The designation of these streets is a recognition of existing development patterns and is intended to permit future development compatible with existing land uses and consistent with road capacity and design. These streets will be reviewed by the respective elected Commission on a case by case basis and may be designated as non-residential streets.

A segment of a road, meeting the above criteria, may be designated a non-residential if it will not result in non-residential traffic impacting residential areas on other segments of the road or in the adjacent area. (A segment is the road length between two intersecting roads).

Policy 1.4.15: [L] **(EFF. 8/17/92; REV. EFF. 5/31/18)**

Waive access standards for heavy industrial land uses within the Heavy Industrial Future Land Use category and Industry and Mining Future Land Use category. This will be done

in conjunction with adopting a policy which waives local and minor collector access standards for all planned industrial and commercial development.

Policy 1.4.16: [L] **(EFF. 8/17/92)**

Unless otherwise specifically stated, all time lines stated in the Comprehensive Plan are intended to mean by December 31 of the stated year.

Policy 1.4.17: [L] (City of Tallahassee only) **(EFF. 8/17/92; REV. EFF. 6/6/08)**

New minor office uses may be permitted access to a local residential street in the Central Urban and University Transition land use categories within the city limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential land use in the vicinity.

Policy 1.4.18: [L] (City of Tallahassee only) **(REV. EFF. 3/14/07; REV. EFF. 6/6/08)**

New minor commercial uses shall not be permitted access to a local residential street within the city limits of Tallahassee. This limitation shall not apply to the Bradfordville Mixed Use, Suburban, Planned Development, Central Urban, University Transition, and Village Mixed Use Categories which establish street access standards by Land Development Regulations.

Policy 1.4.19: [L] **(EFF. 1/19/02)**

New commercial, office and residential land uses within the Gaines Street Corridor Study Area may be permitted access to any street classification or designation. Access limitations may be further restricted based on the Gaines Street Revitalization plan.

Policy 1.4.20: [L] **(REV. EFF. 7/25/03)**

Community services which are religious facilities to be used solely for religious functions, volunteer fire stations in the Rural or Agriculture/Silviculture/Conservation future land use categories, and community services that are operated by public agencies and are located outside of the Urban Service Area may be permitted access onto a local street only after a higher level of review as specified in the Land Development Regulations. Land development regulations shall require site design criteria addressing impacts which include, but are not limited to: peak use traffic, noise, building orientation and setbacks or any other potential negative impacts affecting adjacent residential uses or the residential character of the surrounding area. Religious facilities that have day care, recreation facilities, schools, or other similar ancillary activities shall not be permitted to access a local street.

I. Land Use

Policy 1.4.21: [L] **(EFF. 7/1/94; REV. EFF. 7/20/05)**

The land development regulations shall provide for minor and major office uses, minor commercial uses, and low and medium density residential uses with access to minor collector streets and, in specific instances, to local streets, as well as the relaxation of parking, landscape, and buffering standards to encourage a wider variety of uses and greater range of economic development opportunities in the Central Urban future land use category, without creating conditions leading to the conversion of midtown residential enclaves, which although not meeting all of the criteria for inclusion in and protection by the Residential Preservation future land use category, remain viable for residential use and provide important housing opportunities in close proximity to the downtown area, the universities, and employment centers.

The intent of these land development regulations is to promote the infill of vacant blocks and tracts and/or the redevelopment of existing non-residential areas. These additional land development regulations shall also establish criteria to avoid creation of low-density residential enclaves for neighborhoods that satisfy some but not most of the general criteria for the Residential Preservation category.

To facilitate this, the land development regulations shall, at a minimum, provide the following techniques: allowing utilization of the Urban Planned Unit Development zoning district; allowing for the establishment of *Live-work units* with access to any (functional) classification of street; and, allowing for the establishment of proprietary zoning districts tailored to fit neighborhood or sub-neighborhood conditions, reflecting local preferences and incorporating applicable restrictions for mitigating impacts relating to allowable use, traffic circulation and access design, parking, building design, orientation, and height.

Policy 1.4.22: [L] **(EFF. 7/1/04)**

Waive all street access, intersection and adjoining use restrictions for allowed uses internal to the Activity Center future land use category. The exception to this policy is that access shall be prohibited to any local street within a recorded or unrecorded residentially platted subdivision. It is not the intent of this policy to waive landscaping or buffer requirements.

Policy 1.4.23: [L] **(EFF. 7/1/04)**

By 2005, the Tallahassee-Leon County Comprehensive Plan and the implementing City and County land development regulations shall include provisions relating to regional recreational facilities. These regulations shall establish a definition of regional recreational facilities and shall specify the Future Land Use Map categories and zoning districts that regional recreational facilities are allowable with and shall require a greater level of review and additional site design criteria to address the off-site impacts of regional recreation uses. Impacts addressed shall include, but be not limited to: peak use traffic, hours of operation, lighting, noise, building orientation, buffers and setbacks, or any other potential negative impacts of such uses affecting adjacent or nearby residential uses or residential character of the nearby area.

NON-CONFORMING USES AND NONCOMPLYING CHARACTERISTICS

Objective 1.5: [L] (EFF. 7/16/90)

Provide a procedure within the land development regulations which will substantially mitigate or lead to the eventual elimination of nonconforming land uses created by the adoption of this plan.

Policy 1.5.1: [L] (REV. EFF. 6/28/95)

Existing land uses which are nonconforming to the Comprehensive Plan may be reviewed by the local government at the request of the owner in order to determine the degree on nonconformity. The review may result in:

1) A determination that the impact of the nonconformity is minimal upon surrounding conforming land use and is not detrimental to the public health, safety and welfare and as a result, the nonconforming status is waived; or

2) A determination that the impact of the nonconformity may be substantially mitigated in which the development may attain conforming status by implementing the required mitigation steps; or

3) A determination that the nonconformity has substantial impacts which may not be overcome by any mitigation procedures and as such the development shall remain in a nonconforming status and such use shall terminate according to law.

Policy 1.5.2: [L] (EFF. 6/28/95)

A legally established single family residential use shall be considered a conforming use of land in all Comprehensive Plan land use designations. However, this conforming status shall not be interpreted to preclude the use of property adjoining a low density use for an otherwise permitted non-residential use if the low density residential use accesses an arterial or major collector roadway.

Policy 1.5.3: [L] (DEL. EFF. 8/1/07)

Reserved

Policy 1.5.4: [L] (EFF. 6/28/95)

The local government shall implement development regulations which distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses in nonresidential designations which may continue, but not be expanded.

Policy 1.5.5: [L] (EFF. 6/28/95)

The local government shall implement development regulations which distinguish between nonconforming use of property and noncomplying physical characteristics or features of the use. This procedure shall allow for the continued conforming use of the

noncomplying physical features, and shall require correction of non-structural, noncomplying physical features prior to any conforming expansion of use.

Objective 1.6: [L] (Eff. 6/28/95; Del. Eff. 1/7/10)

Reserved

Bradfordville Mixed Use Development Patterns (applies to Bradfordville Study Area Only)

Objective 1.7: [L] (Rev. Eff. 3/14/07)

The Comprehensive Plan provides an overall vision for the community. The arrangement of land uses is a major factor in achieving this vision. Within the Bradfordville Mixed Use Future Land Use Category, land uses may be further separated to achieve efficient and environmentally sound development patterns and to promote the Plan's overall vision. This objective and its policies describe the development patterns associated with the Bradfordville Mixed Use Future Land Use Category.

The following statements of intent express, in part, the overall vision of the community as established in the Comprehensive Plan. These statements of intent explain the basis for the development patterns described in the following policies and shall be achieved through the zoning process and other Land Development Regulations as appropriate. Application of these development patterns in combination with each other is expected to achieve these intents. Individual development patterns may only partially achieve the following purposes:

a) Provide opportunity for residential, shopping, employment, education and recreation use within walking distance of each other;

b) Promote higher density housing and concentrations of nonresidential activity in close proximity to each other;

c) Provide for a range of housing opportunities which does not isolate families or individuals based upon age, income or race;

d) Ensure that mapping of zoning districts is consistent the long term protection of environmental features;

e) Ensure that mapping of zoning districts will be appropriate to location, access and surrounding land use;

f) Ensure that mapping of zoning districts is consistent with the phasing and availability of infrastructure;

g) Encourage a mix of complimentary land uses and concentrations of mixed use development in appropriate locations;

h) Promote development patterns which reduce trip length and/or the need for private automobile travel;

i) Ensure that zoning implementation does not promote sprawl development, nor concentrations of single use development; and

j) Scale development densities and intensities to provide a range of appropriately located development patterns.

Policy 1.7.1: [L] **(REV. EFF. 3/14/07)**

Low Density Residential Development Pattern

INTENT–The low density residential development pattern is intended to provide for a wide range of housing types and opportunities within the low density range. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential use be allowed. Some low density residential areas may be restricted to limited density zoning due to existing development patterns, or environmental or utility constraints, while other areas may have zoning districts that allow for a broad range of density.

DENSITY/INTENSITY–Areas designated Low Density Residential shall not have a gross density greater than 8 dwelling units per acre. Nonresidential development shall not have a gross building area exceeding 10,000 square feet per acre.

LOCATION–Bradfordville Mixed Use Area is appropriate for zoning Low Density Residential development patterns. Other areas appropriate for zoning Low Density Residential activities may include: Areas in Bradfordville Mixed Use where intensity of uses is constrained or limited due to environmental features or lack of adequate infrastructure; and Bradfordville Mixed Use areas in proximity to Village Centers. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location.

ACCESS–Areas zoned for the Low Density Residential development pattern shall have public street access.

Policy 1.7.2: [L] **(REV. EFF. 3/14/07)**

Medium Density Residential Development Pattern

INTENT–The Medium Density Residential development pattern is intended to encourage a wide range of medium density housing opportunities in close proximity to more intensive nonresidential uses, both which can be efficiently served by existing or planned infrastructure, including mass transit. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential use be allowed.

DENSITY/INTENSITY–Areas designated Medium Density Residential shall not have a gross density greater than 16 dwelling units per acre. Minimum density shall be 6 dwelling units per acre unless constraints of concurrency or natural features would preclude attainment of the minimum density. Nonresidential development shall not have a gross building area exceeding 20,000 square feet per acre.

LOCATION–Areas designated Bradfordville Mixed Use on the Future Land Use Map are appropriate for zoning of Medium Density Residential Areas. Additional criteria for zoning are as follows: Areas of existing medium density development; Areas of transition from more intensive use to Low Density Residential and Residential Preservation; Areas in proximity to higher intensity uses; Areas served by mass transit service; Areas in

proximity to community schools, parks, and public greenways; Areas along arterial and collector roadways; and Areas adjacent to the Village Center, Suburban Corridor, and Urban Pedestrian Center Mixed Use development patterns. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location.

ACCESS - Areas zoned for the Medium Density Residential development pattern shall have access to an arterial or collector roadway.

Policy 1.7.3: [L] **(REV. EFF. 3/14/07)**

Low Density Residential Office Development Pattern

INTENT–The Low Density Residential Office development pattern is intended to provide areas for office employment and residential uses in close proximity to each other. While conversion of existing residential structures on arterial and collector streets to office use is a situation where this development pattern will be applied, this development pattern should not be applied to such an extent that it would disrupt the viability of residential neighborhoods and adjacent residential properties. Zoning districts will be created to distinguish Residential Office areas by density and intensity, so that developments are scaled appropriately to their setting. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential or office use be allowed in a manner which would ensure the protection of adjacent uses.

DENSITY/INTENSITY–Redevelopment or reuse of existing residential or office uses in this development pattern shall have a maximum gross density of eight dwelling units per acre and/or an intensity not to exceed the floor area of the existing structure. New development in the Low Density Residential Office Development Pattern shall have a maximum gross density of eight dwelling units per acre and nonresidential gross building area shall not exceed 10,000 square feet per acre and non-residential gross building area shall not exceed 10,000 square feet per acre. For mixes of residential and non-residential development on one parcel an overall limit to building floor area will be set at 12,500 square feet per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning of Low Density Residential Office for low density/low intensity uses. Additional criteria are as follows: Transition areas between Medium Density Residential, Village Center, and Urban Pedestrian Center Mixed Use development patterns to Low Density Residential and Residential Preservation; and Transitional land use areas along arterial and collector roadways and Areas of Low Density Residential Office as a principal land use along arterial and collector roadways.

ACCESS–Areas zoned for the Low Density Residential Office development pattern shall have access to an arterial or collector roadway.

Policy 1.7.4: [L] **(REV. EFF. 3/14/07)**

Medium Density Residential Office Development Pattern

INTENT–The Medium Density Residential Office development pattern is intended to provide areas for office employment and residential uses in close proximity to each other.

The Residential Office development pattern is intended in some locations to serve as an employment and residential area with medium densities and intensities. Zoning districts will be created to distinguish Medium Density Residential Office areas by density and intensity, so that developments are scaled appropriately to their setting. It is also intended that community facilities (Recreation, Community Services, Light Infrastructure and Post-Secondary Schools) related to residential or office use be allowed in a manner which would ensure the protection of adjacent uses. Ancillary first floor commercial use may also be permitted in Medium Density Residential Office.

DENSITY/INTENSITY–Residential use within this development pattern shall have a minimum density of 6 dwelling units per acre unless constraints of concurrency or natural features would preclude attainment of the minimum density and a maximum density of 16 dwelling units per acre in Bradfordville Mixed Use and nonresidential use shall not have a gross building area exceeding 20,000 square feet per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning of Medium Density Residential Office density medium intensity uses. Additional criteria for mapping these areas are as follows: Areas of existing offices and multi-family uses; Areas adjacent to Medium Density Residential, Village Center, Suburban Corridor, and Urban Pedestrian Center Mixed Use development patterns; and Areas of Medium Density Residential Office as a principal land use along arterial and collector roadways.

ACCESS – Areas zoned for the Medium Density Residential Office development pattern shall have access to an arterial or collector roadway.

Policy 1.7.5: [L] **(REV. EFF. 3/14/07)**

Village Center Development Pattern

INTENT–The Village Center development pattern is intended to provide locations for offices and commercial uses which provide goods and services, that people frequently use, in close proximity to their homes. Village Centers are intended to be compact and not promote strip commercial development; therefore, zoning districts implementing this development pattern will include limitations on arterial and collector street frontage and maximum development pattern size, not to exceed 20 acres and 200,000 square feet of commercial use per parcel, except a Village Center may be as large as 30 acres if its gross square footage does not exceed 250,000 square feet. Village Centers are characterized by a scale and design that is compatible with nearby residential areas and zoning districts implementing this development pattern will include appropriate development standards. Zoning districts may include additional thresholds in order to size Village Centers in relation to the needs of the surrounding area. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to the principal use of this development pattern be allowed in a manner which would ensure the protection of adjacent uses.

DENSITY/INTENSITY–Nonresidential development shall not exceed 12,500 square feet of a gross building area per acre for Village Centers 20 acres and less. Nonresidential development shall not exceed 250,000 square feet of gross building area for Village Centers from 20 to 30 acres in size. Residential use is permitted on the second floor and

above, above office or commercial use, up to a maximum density of sixteen dwelling units per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning Village Centers. Additional criteria for zoning these areas are as follows: Areas adjacent to low and medium density residential development; and Areas adjacent to the Residential Preservation Future Land Use category and Low Density Residential, Medium Density Residential, Suburban Corridor, and Urban Pedestrian Center Corridor Mixed Use development patterns.

ACCESS–Areas zoned for the Village Center development pattern shall have access to an arterial or collector roadway.

Policy 1.7.6: [L] **(REV. EFF. 3/14/07)**

Suburban Corridor Development Pattern

INTENT–The Suburban Corridor development pattern is intended to accommodate existing development patterns representing a broad range of commercial, light industrial, and office uses which typically serve a regional or sub-regional population. Office use, and commercial use up to 200,000 square feet per parcel is allowed. Medium density residential use is also appropriate within this development pattern in order to promote a living working environment and make efficient use of infrastructure. It is also intended that community facilities (Recreation, Community Services and Light and Heavy Infrastructure) be allowed. Suburban Corridors are characterized by a linear pattern of single use development along arterial roadways, low floor area ratios and large impervious surface parking areas which are generally larger than the use that they serve. This pattern of development makes inefficient use of infrastructure and has a disproportionate impact upon the environment. Increases in land area zoned for the Suburban Corridor to accommodate a single use development are inconsistent with the Comprehensive Plan, except for increases in areas zoned for Suburban Corridor which permit an allowed use with an existing structure to expand. The intent of this exception is to encourage the continued use of existing structures, rather than the relocation of business to outlying locations. Reusing existing single use sites for multiple use developments, adding new uses to single use sites and/or new multiple use developments in the Suburban Corridor that share parking facilities, have parking structures and/or have high floor area ratios shall be facilitated by Land Development Regulations.

DENSITY/INTENSITY–Nonresidential development shall not have a gross building area exceeding 25,000 square feet per acre. Residential use shall not exceed sixteen dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

LOCATION–Bradfordville Mixed Use areas, which already exhibit the type of uses and intensity associated with the Suburban Corridor development pattern may be appropriate to be zoned Suburban Corridor. An increase in the area designated for Suburban Corridor may occur through limited expansion of the existing Suburban Corridors. In deciding whether to expand an existing Suburban Corridor, the following criteria shall be considered: Lack of suitably located land which can accommodate the Suburban Corridor development pattern; and Access to arterials with high traffic volumes, surrounded by

relatively low density and intensity uses, such as the Residential Preservation Future Land Use Category and Low Density Residential development pattern. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location. Expanding existing or establishing new Suburban Corridors shall require demonstration that more than one land use will be included in the expansion area.

ACCESS—Areas zoned for the Suburban Corridor development pattern shall have access to an arterial roadway.

Policy 1.7.7: [L] **(REV. EFF. 3/14/07; REV. EFF. 12/24/10)**

Urban Pedestrian Center Development Pattern

INTENT–The Urban Pedestrian Center is intended to encourage compact, linear and pedestrian scale urban development along arterial roadways that provide a wide range of uses and activities to serve both the corridor itself and surrounding areas. Although some areas within the Urban Pedestrian Center are currently of lower density and intensity, it is intended that Urban Pedestrian Centers will develop and redevelop with higher densities and floor area ratios. The arterial roadway along which the Urban Pedestrian Center is located is characterized by relatively high volume traffic with lower traffic speeds and served by mass transit. Zoning districts which implement the Urban Pedestrian Center will include urban design standards which establish criteria that will promote pedestrian activity. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) may also be allowed in a manner which would ensure the protection of the allowable uses within and adjacent to this development pattern. Residential use, office use, and commercial use up to 200,000 square feet per parcel is allowed.

DENSITY/INTENSITY–Nonresidential development in Bradfordville Mixed Use shall not exceed 20,000 square feet of gross building area per acre. Residential development in Bradfordville Mixed Use shall have a minimum density of 6 dwelling units per acre and shall not exceed sixteen dwelling units per acre. Building height shall not exceed six stories.

LOCATION–Bradfordville Mixed Use areas where the Urban Pedestrian Center is a transition between low density residential uses and more intensive uses may be appropriate for zoning of an Urban Pedestrian Center. Additional criteria for zoning these areas are as follows: Areas proximate to medium and high density residential land uses in urban areas; Areas proximate to higher intensity Mixed Use Development patterns, such as Medium Density Residential, Low and Medium Density Residential Office and Village Center; and Areas within walking distance of transit and along corridors designated for alternate transportation (per the most current adopted Long Range Transportation Plan).

ACCESS–Areas zoned for the Urban Pedestrian Center development pattern shall have access to an arterial roadway.

Policy 1.7.8: [L] **(REV. EFF. 3/14/07)**

Light Industrial Development Pattern

I. Land Use

INTENT–The Light Industrial development pattern is intended to provide areas for industrial and warehousing activities, including storage, service commercial, office and assembly activities. It is intended that regulations implementing this development pattern will preclude non-light industrial uses which would limit or interfere with industrial development. It is also intended that community facilities (Recreation, Community Services, Post-Secondary Schools, and Light and Heavy Infrastructure) may be allowed in a manner which would ensure the protection of the allowable uses within and adjacent to this development pattern. Office use, and commercial use up to 10,000 square feet per parcel, is allowed.

INTENSITY/DENSITY–Nonresidential development shall not exceed 25,000 square feet of gross building area per acre. Residential use (intended for a watchman or guard) shall not exceed one dwelling unit per industrial use. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

LOCATION–Areas within Bradfordville Mixed Use that are currently developed with industrial uses may be appropriate for zoning as Light Industrial. New areas within Bradfordville Mixed Use that may be appropriate for zoning as Light Industrial include: Areas proximate to interstate and intrastate highways and highways which connect to cities in adjacent counties.

ACCESS—Areas zoned for the Light Industrial development pattern shall have access to an arterial roadway.

Policy 1.7.9: [L] **(REV. EFF. 3/14/07)**

Table 1: Bradfordville Mixed Use Development Patterns

BRADFORDVILLE MIXED USE	Development Patterns	Allowed Land Uses	Density	Intensity
Primary: (From 68 - 82%)	Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	Up to 8 UNITS/ACRE	10,000 SQ FT/AC
	Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	Up to 8 UNITS/ACRE	10,000 SQ FT/AC
Secondary: (25% or less of Bradfordville Mixed Use)	Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 UNITS/ACRE	20,000 SQ FT/AC
	Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post Secondary Schools	Up to 16 UNITS/ACRE	20,000 SQ FT/AC
	Village Center	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light Infrastructure & Community Service	Up to 16 UNITS/ACRE	12,500 SQ FT/AC
Tertiary: (7% or less of Bradfordville Mixed Use)	Urban Pedestrian Center	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light Infrastructure & Community Service	Up to 16 UNITS/ACRE (1)	20,000 SQ FT/AC
	Suburban Corridor	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light & Heavy Infrastructure & Community Service	Up to 16 UNITS/ACRE	25,000 SQ FT/AC
	Light Industrial	Ancillary Residential, Office, Commercial up to 10,000 SQ FT, Light Industrial, Recreation, Light & Heavy Infrastructure, Community Service & Post Secondary Schools	1 unit / develop-ment	20,000 SQ FT/AC

Notes: (1) 8 units/acre minimum for exclusively residential

Goal 2: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Provide for a high quality of life by planning for population growth, public and private development and redevelopment and the proper distribution, location and extent of land uses by type, density and intensity consistent with adequate levels of services and efficient use of facilities and the protection of natural resources and residential neighborhoods.

RESIDENTIAL LAND USE

Objective 2.1: [L] **(REV. EFF. 7/20/05)**

Enhance the livability of existing neighborhoods and in new neighborhoods provide for future mixed residential areas which will accommodate growth and provide a wide choice of housing types, densities and prices as well as commercial opportunities based on performance criteria. In furtherance of this, maintain a system of land development regulations and ordinances which will facilitate the implementation of the policies adopted in relation to residential land use. These shall include but not be limited to:

1) Setback requirements from natural waterbodies and wetlands
2) Buffering requirements
3) Open space requirements
4) Landscape requirements
5) Tree protection
6) Stormwater management requirements

Policy 2.1.1: [L] **(REV. EFF. 6/28/95; REV. EFF. 7/26/06; REV. EFF. 5/31/18)**

Protect existing residential areas from encroachment of incompatible uses that are destructive to the character and integrity of the residential environment. Comprehensive Plan provisions and Land Development Regulations to accomplish this shall include, but are not limited to:

a) Inclusion of a Residential Preservation category on the Future Land Use Map.

b) Limitations on future commercial intensities adjoining low density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the commercial uses and the low density residential uses; and are to allow only those commercial activities which are compatible with low density residential development in terms of size and appearance.

c) Limitations on future higher density residential adjoining low density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the higher density residential uses and the low density residential uses.

d) Limitations on future light industry adjoining low and medium density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the light industrial uses and the low density residential uses.

e) Prevention or mitigation of off-site impacts from Industry and Mining uses.

f) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions. Such development requirements will also apply if ancillary facilities are proposed in conjunction with religious facilities, and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the low density residential uses.

Policy 2.1.2: [L] **(EFF. 7/16/90)**

Prohibit residential development where physical constraints or hazards exist, or require the density and design to be adjusted accordingly. Such constraints or hazards include but are not limited to flood, storm or slope hazards and unstable soil or geologic conditions.

Policy 2.1.3: [L] **(REV. EFF. 8/17/92)**

Require clustering of residential units on non-environmentally significant portions of parcels where conservation or preservation overlay districts exist elsewhere on the site. Net density on parcels where clustering is required on the developable portion of the parcel where the units are clustered shall not exceed double the allowable density for the land use category in which the parcel is located.

Policy 2.1.4: [L] **(EFF. 7/16/90)**

Residential densities shall not be permitted that would exceed the ability of local government or other providers to provide capital facilities and services in a cost effective manner.

Policy 2.1.5: [L] (City of Tallahassee) **(EFF. 7/16/90)**

Residential developments shall be designed to include a system of internal and inter-neighborhood circulation which promotes pedestrian and bicycle mobility. Within the Urban Service Area, sidewalks shall be required to provide pedestrian mobility.

Policy 2.1.5: [L] (Leon County) **(REV. EFF. 12/10/91)**

Bicycle facilities within residential developments shall only be required along major collectors or other streets with a higher functional classification.

Policy 2.1.6: [L] **(EFF. 7/16/90)**

Criteria shall be established within local development regulations which require within residential developments the provision of non-residential land uses such as parks, school sites and potential walk-to minor commercial and office opportunities.

Policy 2.1.7: [L] **(REV. EFF. 8/17/92)**

Criteria established within the subdivision ordinances shall set aside land for active and passive contiguous green space in order to provide for accessible recreation and/or open space areas for all neighborhoods.

Policy 2.1.8: [L] **(REV. EFF. 7/26/06; REV. EFF. 1/7/10)**

Maintain a viable mix of available residential densities to accommodate a variety of housing types. Current residential densities are summarized below:

RESIDENTIAL DENSITIES RANGE (REV. EFF. 12/15/11; REV. EFF. 7/19/13)

Table 2: Residential Densities Range

Future Land Use Category	Maximum Gross Density - Dwelling Units (DU)/Acre (Ac)[1]	Minimum Gross Density Dwelling Units (DU)/Acre (Ac)
Rural	1 DU/10 AC	No minimum
Urban Fringe	1 DU/3 AC (standard) or 1 DU/3 AC (Conservation subdivision)	No minimum
Urban Residential	10 DU/AC	4 DU/AC
Urban Residential 2	20 DU/AC [2]	No minimum
Village Mixed Use	20 DU/AC [2]	No minimum
Suburban	20 DU/AC [2]	No minimum
Planned Development	20 DU/AC [2]	No minimum
Bradfordville Mixed Use [2]	20 DU/AC	No minimum
Central Urban [2, 3]	45 DU/AC	No minimum
Activity Center [2, 3]	45 DU/AC	No minimum
University Transition [2, 3]	50 DU/AC	No minimum
Central Core [2, 3] (EFF.1/7/10)	150 DU/AC (EFF. 1/19/02)	No minimum
Rural Community	4 DU/AC	No minimum
Residential Preservation [2]	6 DU/AC	No minimum
Lake Talquin Recreation/Urban Fringe [4]	1 DU/3 AC (standard)	No minimum
Lake Protection [4]	1 DU/2 AC (standard)	No minimum

Notes:

[1] Maximum gross density is based on the gross acreage of the site and may not be achievable after addressing applicable land development regulations (e.g., parking, stormwater, and other regulations that may limit maximum development potential).

[2] Density ranges can be increased up to 25% above the maximum limits listed above for the purpose of providing affordable housing units, consistent with Policy 2.1.14 [LU].

[3] Density ranges can be increased up to 35% above the maximum limits listed above for the purpose of encouraging infill development and redevelopment, consistent with Mobility Element Policy 1.1.10 [M] (Eff. 12/15/11; Rev. Eff. 7/19/13)
[4] Clustering Option Available

Policy 2.1.9: [L] (Leon County) **(REV. EFF. 6/6/08)**

Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations.

a) Family Heir Subdivisions

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan.

b) Non-Family Heir Subdivisions

To avoid a disproportionate impact on owners of small parcels of property, each parcel of property in single ownership as of February 1, 1990, in the Urban Fringe, and Rural and Lake Talquin Recreation/Urban Fringe areas may be developed at a maximum density of two units per acre, for the first six dwelling units on such parcel, including existing dwelling units. This provision for non-family heir subdivisions shall expire on February 1, 2010 at 12:01 a.m. when such subdivisions shall no longer be permitted.

Policy 2.1.9: [L] (City of Tallahassee) **(REV. EFF. 6/6/08)**

Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations.

a) Family Heir Subdivisions

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan.

b) Non-Family Heir Subdivisions

~~To avoid a disproportionate impact on owners of contiguous property 25 acres or less in size in single ownership as of February 1, 1990, in the Urban Fringe, and Rural and Lake Talquin Recreation/Urban Fringe areas may be developed at a maximum density of two units per acre, for the first six dwelling units on such parcel, including existing dwelling units. This provision for non-family heir subdivisions shall expire on February 1, 2010 at 12:01 a.m. when such subdivisions shall no longer be permitted.~~

~~*Policy 2.1.10: [L]* **(DEL. EFF. 7/6/15)**~~

~~*Reserved*~~

~~*Policy 2.1.11: [L]* **(EFF. 1/19/02; REV. EFF. 6/6/08)**~~

~~Criteria for approval of Central Urban development shall be established in the Land Development Regulations.~~

~~*Policy 2.1.12: [L]* **(DEL. EFF. 6/6/08)**~~

~~*Reserved*~~

~~*Policy 2.1.13: [L]* **(EFF. 8/17/92)**~~

~~Existing adjoining land uses are not to be a factor in determining the suitability for residential development which would allow high and medium density residential uses to be located anywhere in the University Transitional land use category.~~

~~*Policy 2.1.14: [L]* **(EFF. 6/07/01; REV. EFF. 7/26/06)**~~

~~The land development regulations may contain provisions that allow for densities greater than otherwise provided in the respective future land use classifications specified within the Land Use Element in exchange for the construction of affordable housing units. These density bonuses shall be limited to a density no greater than 25% higher than would otherwise be allowed within the respective future land use classification. In addition, to ensure that the additional density does not create unacceptable adverse impacts, the land development regulations shall provide additional qualifying criteria which must be met in order to qualify for the density bonus. At a minimum, these criteria should ensure:~~

~~1) that the development seeking the density bonus will be providing affordable housing units;~~

~~2) that the development seeking the density bonus is located within the urban services area, in a location where zoning allows density of greater than 2 dwelling units per acre and where infrastructure, utilities, and public services are adequate and sufficient to meet the projected demands associated with the requested additional density; and,~~

~~I. Land Use~~

3) ~~that the design and orientation of the development seeking the density bonus is compatible with the surrounding land use character, particularly with any low density residential neighborhoods. Building size and massing, site layout and design, architectural characteristics, and landscaping will be components of this criterion.~~

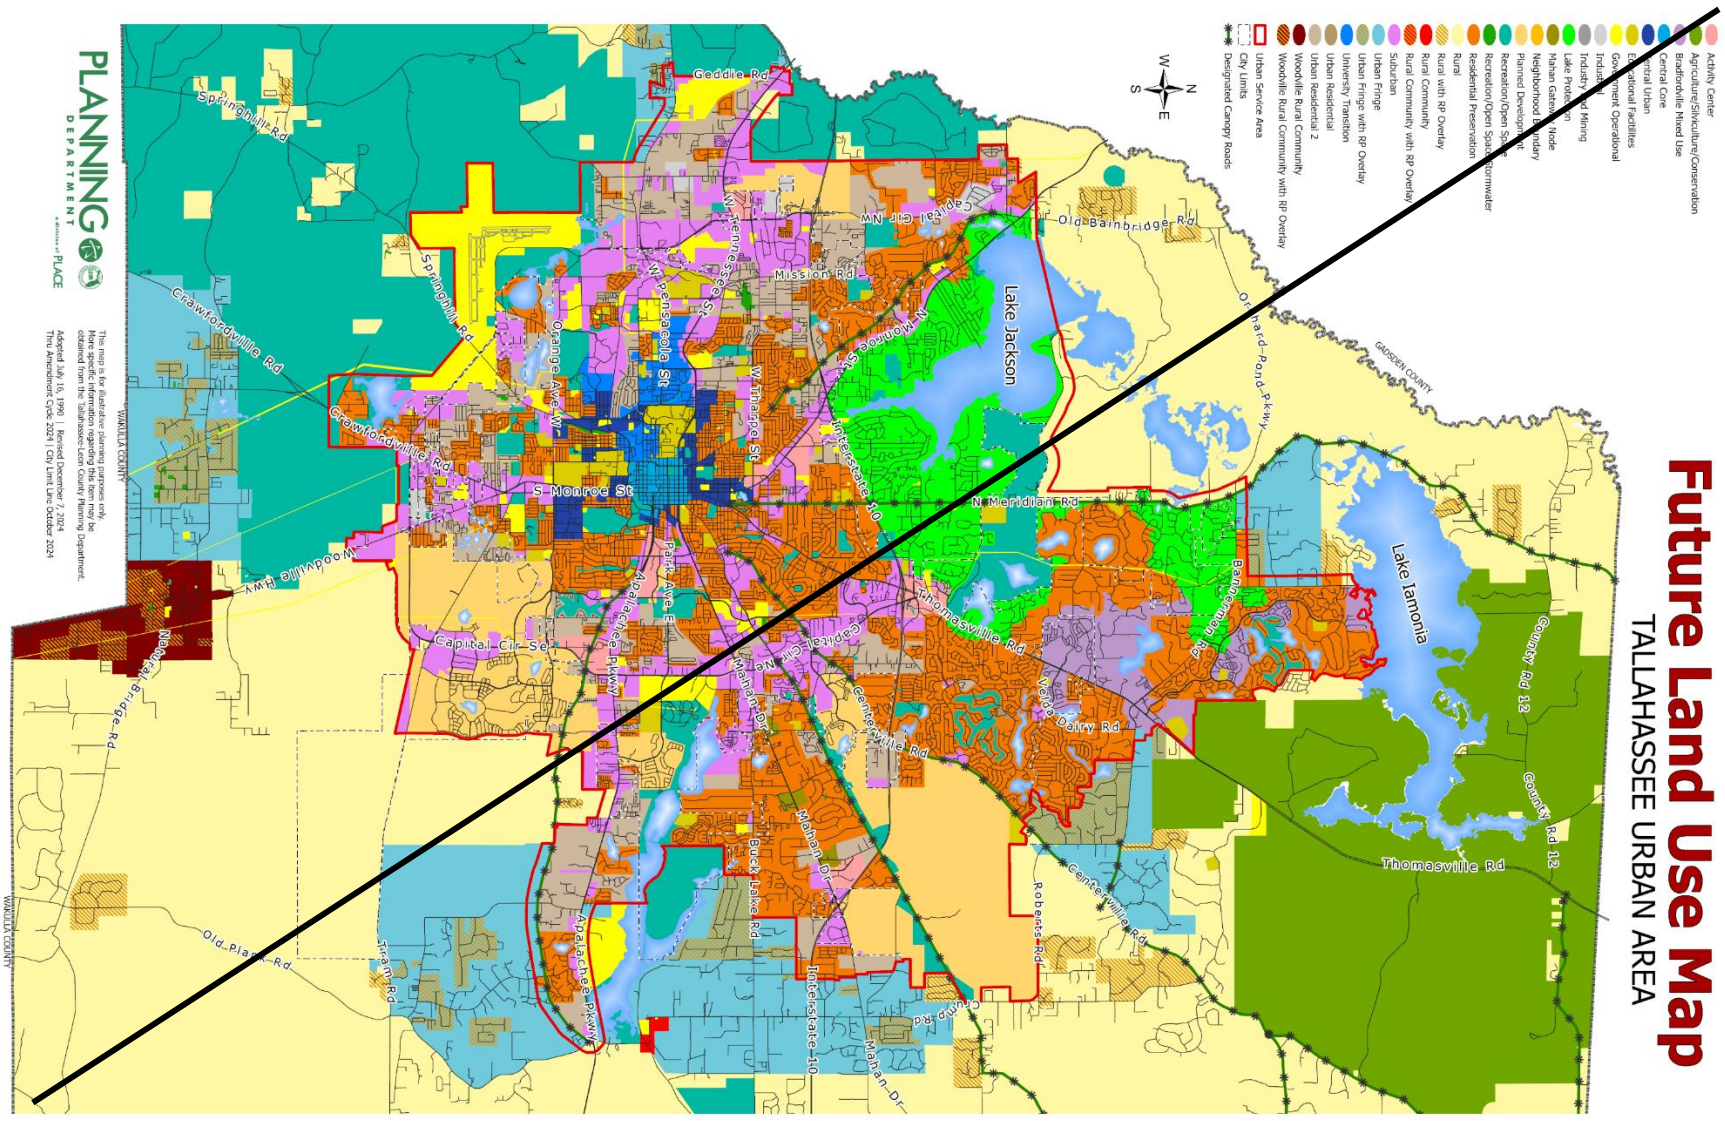
~~The land development regulations may further restrict the density bonus to be provided in proportion to the quantity of affordable housing units to be provided in the development seeking the density bonus.~~

~~In addition, in order to provide the site design flexibility necessary to accommodate these density bonuses, the land development regulations shall contain provisions that allow for a reduction or elimination of requirements to set aside land for urban forest or landscaping, subject to the following criteria:~~

1) ~~the development meets all of the above criteria for density bonuses;~~

2) ~~no less than 10% of the dwelling units within the development will be affordable housing units;~~

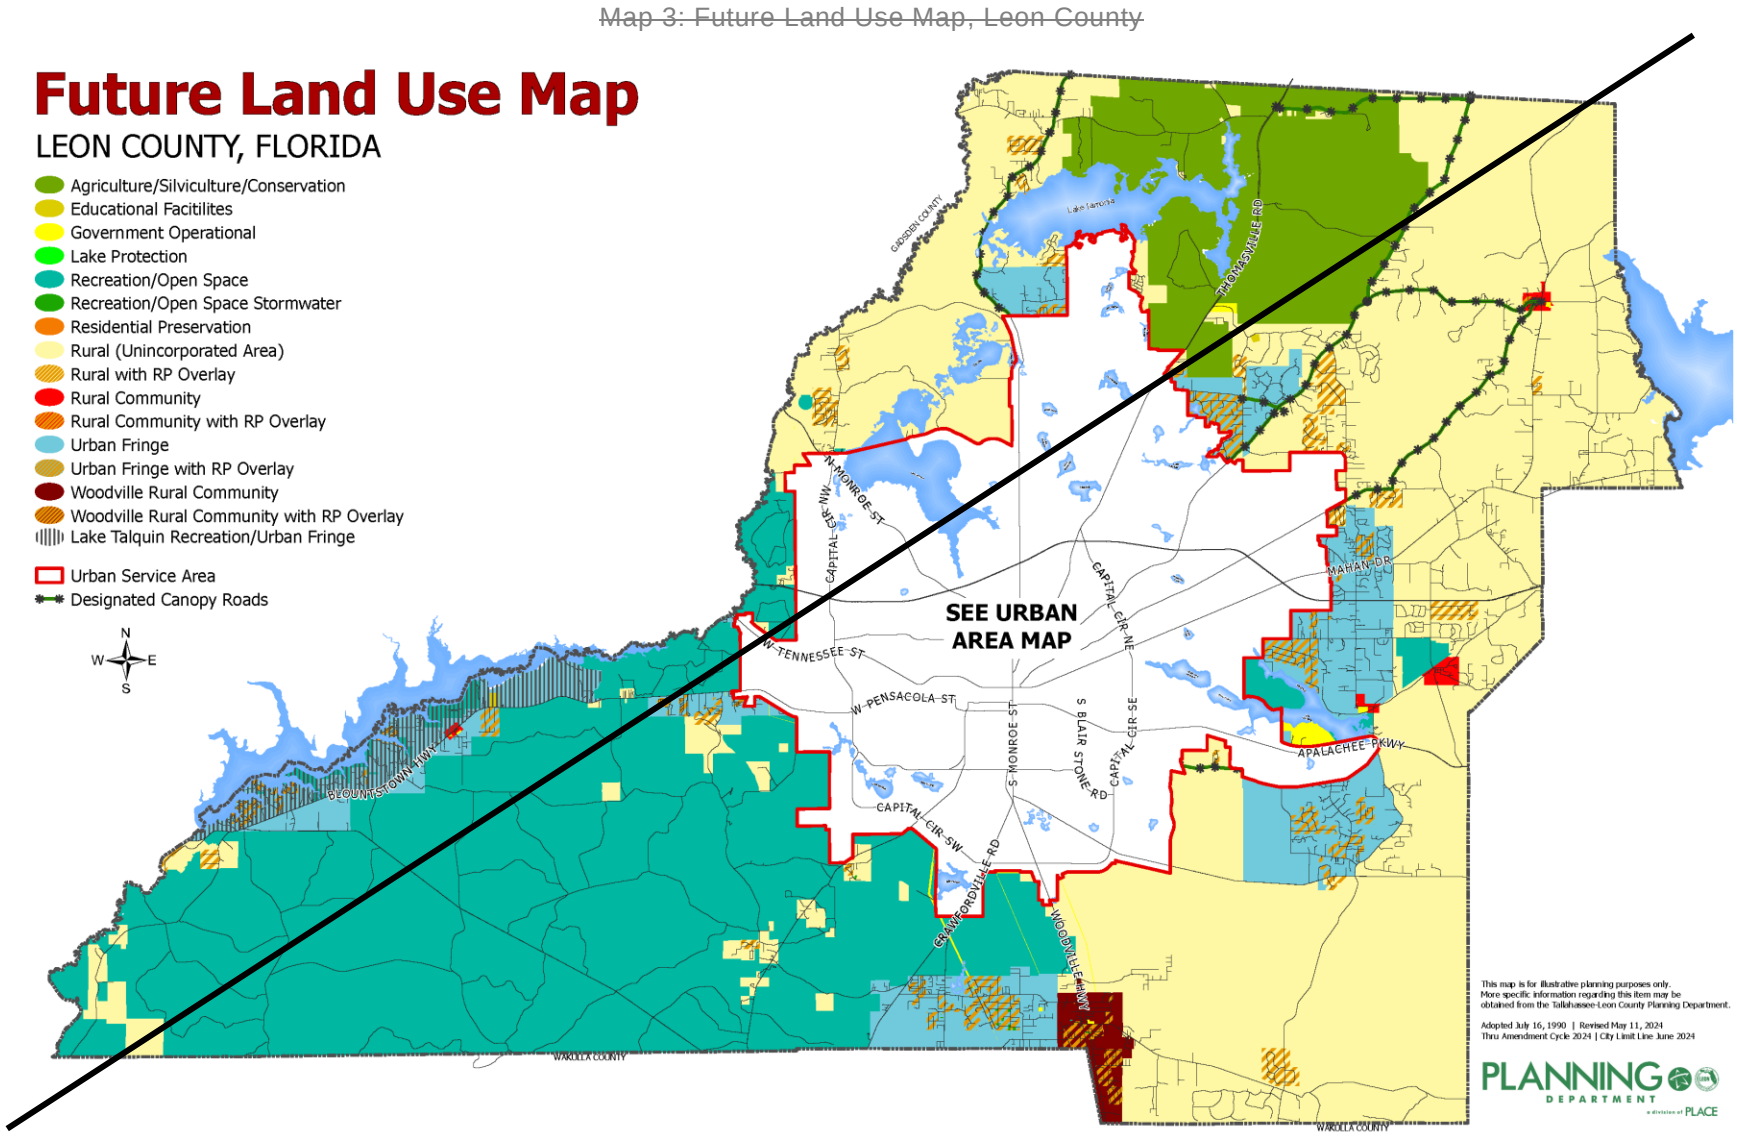
3) ~~the reduction or elimination of requirements to set aside land for urban forest or landscaping shall not have an adverse impact to any Preservation or Conservation feature;~~



4) ~~the development shall provide the minimum landscaping necessary to ensure compatibility with adjoining land uses; and~~

5) ~~the development adheres to the general principles of Traditional Neighborhood Design, the Front Porch Florida program, and Crime Prevention Through Environmental Design (CPTED).~~

~~The land development regulations may base any reduction or elimination of requirements to set aside land for urban forest or landscaping on the quantity or percentage affordable housing units in the development and the proximity of the development to areas targeted for urban infill, redevelopment or more intensive land uses.~~



~~I. Land Use~~

~~Map 2: Future Land Use Map, Tallahassee Urban Area~~

~~I. Land Use~~

~~Map 3: Future Land Use Map, Leon County~~

~~I. Land Use~~

~~FUTURE LAND USE MAP CATEGORIES~~

~~Objective 2.2: [L] (REV. EFF. 7/26/06)~~

~~To coordinate future land uses with suitable topography and soil conditions, the protection of natural resources and with the availability of adequate infrastructure through the establishment of a Future Land Use Map depicting appropriate land use categories. In order to fulfill this intent, the Land Use Plan establishes policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community.~~

~~The Tallahassee-Leon County Comprehensive Plan shall promote appropriate location of land uses and regulation of development~~

~~density and intensity based upon: (1) protection of conservation and preservation features; (2) compatibility with adjacent existing and future residential land uses; (3) access to transportation facilities in keeping with their intended function; and (4) the availability of infrastructure.~~

~~The Plan shall also establish policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community and are shown on the following maps:~~

~~NOTES APPLICABLE TO URBAN AREA FUTURE LAND USE MAP (REV. EFF. 3/14/07)~~

~~Parcels 21-26-35-C-0010, 21-26-35-C-0020, 21-26-35-C-130 may be developed as an independent living facility for the elderly only if a Planned Unit Development is approved which includes Parcels 21-26-51-000-0040, 21-26-51-000-0050, and 21-26-51-000-120. Development intensity on the vacant parcels is limited to 45 units and 34,000 square feet and building height is limited to three stories. If the Planned Unit Development is not completed or approved, the vacant parcels shall only be developed as low-density residential development allowed under the R-1 or R-2 zoning districts.~~

~~Parcel 11-08-20-630-0000 shall only be developed with general office that may include a lending institution with a drive-through facility on the first floor. The total amount of development is limited to 30,000 square feet. The architecture and site design must be consistent with the adjacent Thomasville Road/I-10 Planned Unit Development. Site plans must be submitted to the Live Oak Plantation and Piedmont Neighborhood Associations, the 1300 Live Oak Plantation Property Owners Association, as well as the developers of the Thomasville Road/I-10 Planned Unit Development for comments prior to submitting the site plan to the City.~~

~~The area designated University Transition with hatching is subject to Transportation Element Objective 2.2, which may limit density to less than the maximum permitted by the category.~~

I. Land Use

NOTES APPLICABLE TO LEON COUNTY FUTURE LAND USE MAP **(REV. EFF. 6/19/07)**

The allowable density is limited to 200 single-family residential dwelling units on parcels 15-17-20-224-0000 and 15-20-20-034-0000 combined and no non-residential development is permitted on these parcels. Also, for these parcels at least 50% of the entire combined acreage must be placed in permanent open space. The permanent protection of this open space shall be further defined through the PUD process.
(Parcels) 12-02-20-602-0000 and 12-11-20-202-0000 will be developed at a cumulative density no greater than 81 residential detached units.

Policy 2.2.1: [L]

RURAL/AGRICULTURE **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; REV. EFF. 12/24/10; REV. EFF. 7/6/15; REV. EFF. 1/19/20)**

INTENT

Leon County's agricultural and silvicultural lands have a long and productive history. They have served as both a source of food and materials for urbanized areas of the County and as a significant economic engine for the region. Decades of suburbanization have dramatically reduced the amount of arable land available for agriculture and silviculture within the County. These lands are now at a premium and require protection to ensure that they remain viable, unfragmented, and productive for future generations.

The intent of the Rural category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

To promote infill and redevelopment within the Urban Service Area (USA) and Rural Communities, higher density residential, and non-residential activities that are not functionally related to and supportive of agriculture, silviculture and other natural resource based activities shall be prohibited within the Rural category.

ALLOWABLE USES, DENSITIES, AND INTENSITIES

1. Residential

   The Rural category shall allow for single family residential uses at a maximum density of one (1) dwelling unit per ten (10) gross acres.

2. Non-residential

   Agriculture, silviculture, and other natural resource based activities shall comprise the primary non-residential uses within the Rural category.

   Consistent with Florida's Right to Farm Act, bona-fide agricultural uses, on land classified as agricultural land by the Leon County Property Appraiser, shall not be subject to a non-residential intensity limitation.

Non-residential uses functionally related to and directly in support of agricultural, silvicultural, and other natural resource based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 sq. ft. per gross acre. The location of such uses shall be limited to the intersection of major collector and arterial or arterial and arterial designated roadways. Total development at any one intersection shall not exceed 10,000 sq. ft.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional standards and limitations shall be included in the land development code.

3. Community and Recreational Facilities

Community services and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 2,000 sq. ft. per gross acre.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, natural resource based, or ecotourism activities, including, but not limited to golf courses, drag strips, and racetracks for motorized vehicles, are prohibited.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

SPECIAL CONDITIONS

The following special conditions shall apply to the Rural future land use category:

1. Development proposals within the Rural area shall be evaluated for compatibility with adjacent agricultural uses and shall consider the land management activities associated with such uses. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Service Area or a designated Rural Community.
3. Non-residential and light infrastructure development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register at the time of adoption of this amendment shall be considered conforming.

Policy 2.2.2: [L]

URBAN FRINGE* **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; REV. EFF. 4/10/09; REV. EFF. 12/24/10; REV. EFF. 12/15/11)**

The Urban Fringe category is intended to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Service Area. To protect Rural areas from premature development, facilitate infill and redevelopment inside the Urban Service Area, and in recognition of the significant area already mapped as Urban Fringe, no additional lands designated Rural or Urban Fringe as of August 26, 2006 shall be converted to a more dense or intense land use category unless adjoining lands are also within the designated Urban Service Area boundary or the designated Woodville Rural Community. Conversions to the Woodville Rural Community designation shall be consistent with the Transfer of Development Units provision in Policy 4.2.5: [C].

Conventional subdivision of land in the Urban Fringe may be permitted at a density of up to one unit per three acres. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivision developments are allowed and encouraged. Conservation Subdivision design in Urban Fringe may be permitted at a density of up to one unit per three gross acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land.

Appropriately sized minor commercial activities and minor offices are permitted. Industrial, office and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

Policy 2.2.3: [L]

RESIDENTIAL PRESERVATION **(EFF. 7/16/90; REV. EFF. 7/26/06; REV. EFF. 4/10/09; REV. EFF. 5/31/18)**

Characterized by existing homogeneous residential areas within the community which are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions. Future development primarily will consist of infill due to the built out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterial and/or expressways should be planned to minimize impacts within this category. Single family, townhouse and cluster housing may be permitted within a range of up to six units per acre. Consistency with surrounding residential type and density shall be a major determinant in granting development approval.

For Residential Preservation areas outside the Urban Service area the density of the residential preservation area shall be consistent with the underlying land use category.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria.

1) Existing land use within the area is predominantly residential

2) Majority of traffic is local in nature

a) Predominance of residential uses front on local street
b) Relatively safe internal pedestrian mobility

3) Densities within the area generally of six units per acre or less

4) Existing residential type and density exhibits relatively homogeneous patterns

5) Assessment of stability of the residential area, including but not limited to:

a) Degree of home ownership
b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) The creation of transitional development area (TDA) for low density residential developments.

Higher density residential developments proposed for areas adjoining an established neighborhood within the residential preservation land use category shall provide a transitional development area along the shared property line in the higher density residential development. The development density in the transitional development area shall be the maximum density allowed in the Residential Preservation land use category. Development within the transitional development area shall be designed, sized and scaled to be compatible with the adjoining residential preservation area.

Transitional development areas shall be non-mapped areas and shall be approved at the time of site plan approval. The factors cited in paragraph (c) below shall be considered when determining the size of transitional development areas. The land development regulations shall specify development thresholds for the implementation of transitional development areas.

b) Limitation on future commercial intensities adjoining low density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by providing a transitional development area between the commercial uses and residential preservation uses and only those commercial activities which are compatible with low density residential development in terms of size and appearance shall be allowed. The factors cited in paragraph (c) below shall be used when determining the compatibility, design techniques and the size of transitional development areas. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

c) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide screening, buffering, or a transitional development area between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (c) below shall be considered when determining compatibility, design techniques and the size of the transitional development area.

The design and layout of expanding or redeveloping light industrial uses and adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Research and Innovation Land Use category or the Industry and Mining Land Use category and applicable Land Development Regulations.

d) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions. Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities, and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.

e) Land use compatibility with low density residential preservation neighborhoods

A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. At a minimum, the following factors shall be considered to determine whether a proposed development is compatible with existing or proposed low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor. These factors shall also be used to determine the size of transitional development areas.

f) Limitations on Planned Unit Developments in the Residential Preservation land use category.

Planned Unit Developments proposed within the interior of a Residential Preservation designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

The existing predominant development density patterns in Residential Preservation are listed in paragraph (g) below. Within 18 months of adoption, the PUD regulations shall be amended to include provisions addressing the preservation of established residential preservation designated areas. Said provisions shall address any proposed increase in density and the factors cited in paragraph (e) above.

g) Limitations on resubdivision of lots within established Residential Preservation designated areas.

To protect established single family neighborhoods from density intrusions, consistency within the recorded or unrecorded subdivision shall be the primary factor in granting approval for development applications. Consistency for the purposes of this paragraph shall mean that parcels proposed for residential development shall develop consistent with the lot size and density of the recorded or unrecorded subdivision.

1. Guidance on the resubdivision of lots in recorded and unrecorded single family subdivisions shall be provided in the Land Development Code.
2. Parcels proposed for residential development shall develop at densities generally consistent with the density of existing residential development in the recorded or unrecorded subdivision with the exception of parcels abutting arterial and/or major collector roadways which may be permitted up to six dwelling units per acre.

   There may be two distinct density patterns in the Residential Preservation land use category as shown below:

Existing land use character of the subdivision	Gross residential density
Homogenous, very low density single family detached units (City Only)	0-3.6 dwelling units per acre (generally consistent with density of the subdivision)
Low density single family detached and/or non-single family detached units (including but not limited to townhomes and duplexes)	0-6.0 dwelling units per acre (generally consistent with density of the subdivision)

This section shall not be construed as to restrict the development of building types allowed by the applicable zoning district.

Policy 2.2.4: [L]

VILLAGE MIXED USE **(REV. EFF. 12/23/96; REV. EFF. 7/26/06; REV. EFF. 3/14/07)**

To create traditional neighborhood developments with an emphasis on low to medium density residential land use, small to medium scale commercial shopping opportunities for area residents, schools and small to moderate scale churches, and recreational and leisure oriented amenities for the enjoyment of area residents. Development in this category shall require compliance with traditional neighborhood development standards to be established in the Land Development Regulations. New development in this category requires the establishment of a true, mixed-use project, either through buildings that integrate a mixture of uses or series of buildings that result in a compatible mix of uses. Integration includes the establishment of pedestrian connections, shared public spaces, streetscapes that focus on people before automobiles and parking designs that minimize their visibility. Commercial development shall be of a walkable scale and intensity. Residential development shall include a mix of housing densities and housing types.

Traditional neighborhood development regulations shall include specific criteria to ensure that development in this category results in walkable, mixed-use neighborhoods that satisfy a variety of housing needs and provide easy access to goods and services. The regulations shall require:

- A minimum of 40 acres per project unless the proposed project compatibly integrates with existing development abutting the project to establish an effective area of at least 40 acres that is consistent with traditional neighborhood development standards;
- A high degree of connectivity;
- Flexible greenspace requirements;

- Design and amenities that facilitates pedestrian access throughout each development;
- Minimum densities that are consistent with the Village Mixed Use Intensity Guidelines;
- Maximum setback requirements and standards that orient entrances and windows toward streets and pedestrian facilities;
- A mix of uses that is consistent with the Village Mixed Use Intensity Guidelines; and
- Requirements for public spaces that are readily accessible by pedestrians.

Development shall comply with the Village Mixed Use Intensity Guidelines. The scale of all nonresidential land uses shall be limited to preclude large automobile-oriented retail businesses and to ensure that non-residential uses remain accessible to pedestrians living in surrounding residences. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. In village centers, the number of spaces may be reduced to reflect increased pedestrian access. These characteristics are reflective of the village life-style. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

Village Mixed Use Intensity Guidelines **(REV. EFF. 3/14/07)**

Table 3: Village Mixed Use Intensity Guidelines

Minimum Percentage of Land Use by Acreage (1)	Development Patterns	*Allowed Land Uses (3)*	Residential Density (2)	Non-Res Intensity
10% of net area	Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	0 to 8 units/ acre	10,000 SQ. FT. per acre
5% of net area	Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	0 to 8 units/ acre	13,000 to 20,000 SQ. FT. per acre
10% of net area	Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 units/ acre	12,500 SQ. FT. per acre
5% of net area	Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post-Secondary Schools	8 to 16 units/ acre	17,000 to 25,000 SQ. FT. per acre

I. Land Use

Minimum Percentage of Land Use by Acreage (1)	Development Patterns	*Allowed Land Uses (3)*	Residential Density (2)	Non-Res Intensity
5% of net area	Village Center	Residential, Office, Commercial up to 50,000 SQ FT, maximum business size. Centers shall not be located closer than ¼ mile to another village center or commercial development including more than 20,000 SQ FT of floor area.	8 to 20 units/ acre	17,000 to 40,000 SQ. FT. per acre
10% of gross area	Public Spaces	Recreation and cultural facilities, plazas, trails, parks and other public gathering places		

Notes:

(1) All percentages except public spaces are based on net area to be defined in the land development regulations as excluding undevelopable land;

(2) Densities apply to residential acreage only.

(3) All projects in the Village Mixed Use category must have a discernible center with a minimum of 10,000 retail and/or office. The project must also have a minimum of 50 residential units in order to ensure a mixed use project is developed on site.

An essential component of Village Mixed Use is residential land use. The village also will require small shops and some services to serve nearby residents. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Office and commercial development in scale with surrounding residential areas are appropriate. Allowed land uses within the Village Mixed Use Future Land Use Category shall be regulated by zoning districts that implement the intent of this category, and reflect the unique land use patterns, character, and availability of infrastructure in the different Village Mixed Use areas. In areas lacking the necessary infrastructure, the Land Development Regulations may necessitate a lower intensity interim use that the maximum intensities established in this Plan. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure, as well as compatibility with and appropriate connectivity to existing residential neighborhoods. Industrial development is prohibited in this Future Land Use Category.

Policy 2.2.5: [L]

SUBURBAN **(EFF. 3/14/07)**

To create an environment for economic investment or reinvestment through the mutually advantageous placement of employment and shopping opportunities with convenient access to low to medium density residential land uses. Employment opportunities should be located near residential areas, if possible within walking distance. This category recognizes the manner in which much of Tallahassee-Leon County has developed since the 1940s. The category predominantly consists of single-use projects that are interconnected whenever feasible. Mixed-use projects and the principles of traditional neighborhood developments are encouraged, though not required. The Suburban category is most suitable for those areas outside of the Central Core. However, additional

areas inside the Central Core may be designated as appropriate based on existing land use pattern.

To complement the residential aspects of this development pattern, recreational opportunities, cultural activities, commercial goods and services should be located nearby. To reduce automobile dependency of residents and employers alike, mass transit stops should be located at large commercial centers and appropriate street and pedestrian connections established between commercial and residential areas. Except within mixed use centers, larger scale commercial development should be buffered from adjacent residential neighborhoods.

Development shall comply with the Suburban Intensity Guidelines. Business activities are not intended to be limited to serve area residents; and as a result may attract shoppers from throughout larger portions of the community.

Suburban Intensity Guidelines **(EFF. 3/14/07; REV. EFF. 7/14/14; REV. EFF. 5/31/18)**

Table 4: Suburban Intensity Guidelines

Development Patterns	*Allowed Land Uses*	Gross Residential Density	Non-Res Intensity	Percentage Mix of Uses
Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	0 to 8 UNITS/ ACRE (4)	10,000 SQ FT/ACRE	65-80%
Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	0 to 8 UNITS/ ACRE (4)	10,000 SQ FT/ACRE (5)	
Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 UNITS/ ACRE	20,000 SQ FT/ACRE	
Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post-Secondary Schools	8 to 20 UNITS/ ACRE	20,000 SQ FT/ACRE (6)	
Village Center	Residential, Office, Commercial up to 50,000 SQ FT, maximum business size. Centers shall not be located closer than ¼ mile to another village center or commercial development including more than 20,000 SQ FT of floor area.	8 to 16 UNITS/ ACRE	12,500 SQ FT/ACRE per parcel for center 20 acres or less (7)	
Urban Pedestrian Center	Residential, Office, Commercial, Recreation, Light Infrastructure & Community Service	6 to 16 UNITS/ ACRE (3)	Up to 20,000 SQ FT/ACRE (3)	35-50%
Suburban Corridor	Residential, Office, Commercial, Recreation, Light & Heavy Infrastructure & Community Service	Up to 16 UNITS/ ACRE	Up to 25,000 SQ FT/ACRE (8)	

I. Land Use

Development Patterns	Allowed Land Uses	Gross Residential Density	Non-Res Intensity	Percentage Mix of Uses
Medical Center	Residential, Office, Commercial, Recreation, Light Infrastructure & Community Service	6 to 20 UNITS/ ACRE (1)	80,000 SQ FT/ACRE (2)	
Business Park	Office, Residential and Commercial	Up to 16 UNITS/ ACRE	20,000 SQ FT/ ACRE	5-10%

Notes:
(1) 8 units/acre minimum for exclusively residential;
(2) Hospitals up 176,000 sq ft/acre;
(3) 20 units/acre and 40,000 sq ft/acre for multiple use development; Combined residential and non-residential development may have up to 40,000 SF and up to a six story building. Residential use, office use and commercial use is allowed.
(4) Low Density Residential and Residential Office development patterns can have a minimum of 1 unit per acre if water and sewer are not available.
(5) The maximum square footage is increased to 12,500 SF if the project is a mixed-use development.
(6) The maximum square footage increases to 40,000 SF per acre and maximum height increases to six stories if 50% of parking is structured. This provision only applies to areas previously designated as Mixed Use C
(7) 250,000 SF of total development permitted on 20 to 30 acre centers.
(8) Storage areas may be 50,000 SF per acre. Office and Retail is allowed.

While mixed land uses are encouraged in the Suburban Future Land Use Category, the more prevalent pattern will be a compatibly integrated mix of single-use developments that include low and medium density residential, office, and retail development. Allowed land uses within the Suburban Future Land Use Category shall be regulated by zoning districts which implement the intent of this category, and which recognize the unique land use patterns, character, and availability of infrastructure in the different areas within the Suburban Future Land Use Category. In those areas lacking the necessary infrastructure, the Land Development Regulations may designate a low intensity interim use. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure.

Policy 2.2.6: [L]

BRADFORDVILLE MIXED USE **(Rev. Eff. 12/23/96; Rev. Eff. 7/26/06; Rev. Eff. 3/14/07) (Applies to Bradfordville Study Area Only)**

The Bradfordville Mixed Use Category is depicted on the Future Land Use Map. The category establishes differing proportions of allowed land uses and land use densities and intensities and is intended to be implemented by zoning districts which will reflect eight different development patterns which are described in Objectives 1.7 and 6.1.

The Mixed Use Development patterns shall be applied through zoning and Land Development Regulations in a manner consistent with the Future Land Use Map delineation of Bradfordville Mixed Use. These eight different development patterns are not intended to be mapped as part of the Future Land Use Map, rather they are intended to serve as a mechanism to assure that the appropriate location and mixture of land uses occur within the category.

Commercial development allocations in the Bradfordville Mixed Use Future Land Use Category are intended to limit gross leasable square footage per parcel as defined in the Land Development Regulations.

Intended Function: Create a village atmosphere with an emphasis on low to medium density residential land use, small scale commercial shopping opportunities for area residents, schools and churches, and recreational and leisure-oriented amenities for the enjoyment of area residents.

The intensity of all nonresidential land uses shall be kept minimal to reduce the intrusive impact upon the residential land use. The intensity of all nonresidential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be minimal. These characteristics are reflective of the village life-style.

The essential component of Bradfordville Mixed Use is residential land use. The low to medium density residential development will be located to provide for maximum land use compatibility and enjoyment of recreational and leisure opportunities (recreational land uses are included in the description of Community Facilities). The village will also allow small shops and some services to serve nearby residents. Emphasis on commercial uses shall be limited to convenience, grocery, and small pharmacies and offices. Office and commercial development in scale with and meeting the needs of the surrounding predominately residential area are appropriate.

It is also possible that appropriate sites within the area designated for Bradfordville Mixed Use may be developed for enclosed industrial uses. These are land uses that would usually be considered incompatible with the mixed use village, but due to site conditions, with careful design and facility planning, may be successfully integrated. Compatibility is also protected by allowing few such uses and limiting their size (development intensity).

All of the development patterns are appropriate within Bradfordville Mixed Use as described in Policy 1.7.9 [L]. The development pattern descriptions established under Objective 1.7 guide the density and intensity, location and access to areas of complementary land use.

Allowed land uses within the Bradfordville Mixed Use future land use category shall be regulated by zoning districts which implement the intent of this category, and which recognize the unique land use patterns, character, and availability of infrastructure in the different areas within the Bradfordville Mixed Use future land use category. In those areas lacking the necessary infrastructure, the Land Development Regulations may designate a low intensity interim use. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure.

Policy 2.2.7: [L]

HEAVY INDUSTRIAL **(Eff. 12/10/91; Rev. Eff. 7/26/06; Renumbered 3/14/07; Rev. Eff. 5/31/18)**

Contains industrial uses which have or may have substantial off-site impacts. These areas have locational criteria more stringent than residential or commercial. Off-site impacts

require extensive buffering and/or relative distance from other land uses. Ancillary commercial uses designed to serve adjacent workers may be permitted. Other commercial and residential land uses are prohibited due to the encroachment factor. No additional property shall be designated with the Heavy Industrial Land Use category. Amendments to the Future Land Use Map adopted for the purposes of developing heavy industrial uses shall be designated with the Industry and Mining Land Use category.

Policy 2.2.8: [L]

CENTRAL URBAN **(REV. EFF. 6/07/01; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 6/6/08)**

Characterized by older developed portions of the community that are primarily located adjacent to or in close proximity to the urban core and major universities. Intended to provide a variety of residential types (up to 45 DU/AC), employment (includes light manufacturing), office and commercial activities. Infill and potential redevelopment and/or rehabilitation activity should be encouraged. Actual siting of land uses within the category are dependent on implementing zoning districts. Roadway access standards are determined by application of land development regulations. Land use intensity is intended to be higher (up to 20,000 sq. ft. for minor commercial uses; up to 100,000 sq. ft. for neighborhood commercial uses; and up to 200,000 sq. ft. for community commercial uses) due to the presence of requisite capital infrastructure and location of employment and activity centers.

Policy 2.2.9: [L]

HIGH INTENSITY URBAN ACTIVITY CENTER**(EFF. 7/16/90; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

Designed to function as urban activity centers by primarily providing for community wide or regional commercial activities located in proximity to multi-family housing and office employment centers. Intended to provide large scale commercial activities to serve retail needs of large portions of the population. Promotes efficiency of the transportation system by consolidating trips and discouraging unabated sprawl of commercial activities. Planned, integrated development is required to promote synergy between the different allowable land uses. An integrated pedestrian mobility system designed to provide safe and accessible foot and bike travel between the land uses shall be stressed in granting development approvals. Access and egress to Activity Centers as well as internal vehicle travel shall be planned in a comprehensive manner in order to facilitate traffic movement. Residential development shall be permitted up to 45 dwelling units per acre.

Policy 2.2.10: [L]

CENTRAL CORE **(EFF. 1/19/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/7/10; REV. EFF. 7/19/13)**

The current Central Core of Tallahassee has a strong government presence. However, the character of this area has changed since 2002 to a more mixed use center with new office, commercial, retail and residential uses. The Central Core of Tallahassee is intended to

expand into a vibrant 18-hour urban activity center with quality development. The emphasis in this area is intended to shift from cars to pedestrian, bike and transit modes of transportation. The development regulations within the Central Core area have to be amended to allow for a more urban kind of development where the primary emphasis is on pedestrian, bike and transit modes of transportation. The Central Core area is within the Downtown Overlay. The City of Tallahassee intends to promote mix of uses and higher densities and intensities within its Central core, while promoting multiple modes of transportation. The City shall establish Design Guidelines for this area in order to allow for more mixed use, pedestrian, bike and transit oriented development. Residential development may be permitted up to 150 units per acre.

Any development with density of more than 10 dwelling units per acre shall be consistent with the design standards identified in Policy 1.1.10 [M] subject to further clarification in the Land Development Code.

The future expansion of the Central Core FLUM will be limited to only those parcels within the Downtown Overlay District when:

- The proposed parcels are contiguous to existing central core FLUM area;
- The proposed parcel has all the infrastructure available;
- The proposed parcel has to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.2.11: [L]

RURAL COMMUNITY***(REV. EFF. 6/28/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

The Rural Community future Land Use Designation is intended to distinguish long-established unincorporated communities located outside of the urban service area. These communities have existing concentrations of residential land use at densities typically less than those desirable within an urban area (gross densities are typically less than 2 dwelling units per acre and the most intensely developed portions rarely exhibit net densities above 4 dwelling units per acre). The intensity and layout of development within these communities more closely reflect rural design characteristics than urban design characteristics, with home sites and businesses typically being situated on larger lots, with greater setback than their urban counterparts, and while some commercial development in these communities occurs in the geographically compact "nodes", located at or near the intersections of major roads, it is also common to find established existing linearly developed commercial areas along limited portions of State Highway frontage. Communities so designated have grown as historically independent communities outside of the urban area and not extensions of urban sprawl. As such, this future land use designation recognizes that these communities typically have their own small, business-commercial "districts", where minor offices and small to moderate-sized commercial development provide local and surrounding rural residents access to basic shopping opportunities accordingly, the intensity of non-residential development is limited to a maximum of 50,000 square feet building and 50,000 square feet per parcel. Residential development may be permitted up to 4 dwelling units per acre. Development intensity

may be further limited according to the absence or presence of central water and sewer service, roadway capacity, and environmental limitations. Although some urban services may be available to serve development within areas designated Rural Community, urban services are not prerequisites for the limited development intensities allowed within these areas. Central sewer and water systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development or functions as a growth node.

Policy 2.2.12: [L]

WOODVILLE RURAL COMMUNITY* **(REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 4/10/09)**

The Woodville Rural Community shares many of the same characteristics as other Rural Communities, but has experienced different types of growth pressures than the other areas designated as Rural Community. Therefore it has received a separate Future Land Use designation with specific objectives and policies to address the issues unique to Woodville. Non-residential development is limited to a maximum of 50,000 square feet per building and 50,000 square feet per parcel; residential development is limited to a density of 4 dwelling units per acre. Through the transfer of development units system provided for in Policy 4.2.5 [C] residential densities of up to 8 dwelling units per acre may be allowed.

*Category located outside of designated Urban Service Area.

Policy 2.2.13: [L]

EDUCATIONAL FACILITIES **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This category contains:

(1) All public schools including elementary, middle school, high school, and post-secondary.

(2) All public lands for which educational facilities are proposed or planned.

(3) Private facilities with capacities for over three hundred students are also included in this category.

Permitted uses in this land use category are limited to educational facilities and ancillary community services to serve the student population, or the community in general. Allowed land uses within the Educational Facilities future land use category shall be regulated by zoning districts which implement the intent of this category.

Policy 2.2.14: [L]

RECREATION/OPEN SPACE **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This category contains:

(1) Government owned lands which have active or passive recreational facilities, historic sites, forests, cemeteries, or wildlife management areas.

(2) Privately owned lands which have golf courses, cemeteries, or wildlife management areas.

Permitted uses include passive recreation and silviculture. Active recreation facilities are included if the site is within the USA or a rural community.

Policy 2.2.15: [L]

RECREATION/OPEN SPACE - STORMWATER FACILITY **(EFF. 7/2/99; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This is a sub-category of the Institutional Recreation/Open Space category. This category is intended for government owned stormwater facilities.

Included in this category are the following:

(1) Government owned lands which serve as structural or non-structural stormwater facilities.
(2) The primary function of land in this category is stormwater attenuation, stormwater treatment for water quality, or stormwater conveyance.
(3) These areas may be used for passive parks that do not contain any permanent structure. Allowable open space uses include parks, nature preserves, cultivation, grazing, and unimproved pervious parking areas.

Policy 2.2.16: [L]

GOVERNMENT OPERATIONAL **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 12/24/10)**

Contains facilities, which include those defined on the Land Use Development Matrix as Community Services, Light Infrastructure, Heavy Infrastructure, and Post-Secondary, that provide for the operation of and provision of services on property owned or operated by local, state and federal government. The government facilities may include services and uses provided by private entities operating on property owned by the local, state, or federal government. These facilities shall include, but are not limited to:

Airports*	Offices
Correctional Facilities	Outdoor Storage Facilities
Courts	Police/Fire Stations
Electric Generating Facilities	Sanitary Sewer Percolation Ponds
Electric Sub-Stations	Sanitary Sewer Pump Stations
Health Clinics	Sanitary Sewer Sprayfields
Libraries	Vehicle Maintenance Facilities

Incinerators	Waste to Energy
Materials Recovery Facilities	Water Tanks
Museums	Water Treatment Plants
Postal Facilities	Water Wells

*Includes services and uses provided by private entities that are commonly located at commercial service airports.

Policy 2.2.17: [L]

UNIVERSITY TRANSITION**(REV. EFF. 12/14/04; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/7/10)**

The University Transition land use category may only be applied through amendment to the Future Land Use Map to lands located generally within the rectangle created by the Florida State University main campus and Florida A & M University, Tallahassee Community College/Lively Technical Institute campuses and Innovation Park. Specifically, lands lying west of South Adams Street, South of West Tennessee Street, north of Orange Avenue and adjoining Innovation Park and Tallahassee Community College to the east. It is intended to be a compact land use category that provides higher density residential opportunities near the campuses, serving both to provide opportunities for student housing near the universities and to protect existing residential neighborhoods located away from the campuses from student housing encroachment. However, it is not intended that this category be applied in a manner that would encourage or facilitate the premature conversion of existing viable single-family residential neighborhoods. The category is intended to transition from present industrial and lower density residential uses to those more compatible with vibrant urban areas and shall remain within a compact area located in close proximity land owned by the universities and existing areas designated as University Transition.

Higher density residential redevelopment of up to 50 DU/AC is allowed to provide housing for students and close in housing opportunities to the downtown for professionals. Retail commercial limited to a smaller scale classification to provide essential services to immediate residents and ancillary needs of universities such as book stores and photo copying establishments may be permitted. State and private offices properly designed and scaled to surrounding uses may be permitted as well as central parking facilities, artistic studios and workshops. Restaurants, movie theaters, lounges and other entertainment commercial uses shall be permitted as commercial. Development regulations which allow flexibility in their design and operation to permit such uses as outdoor cafe and gardens shall be incorporated into zoning code. Pedestrian pathways and access systems shall be designed to connect universities, downtown, civic/arts center, and residential and commercial areas to cut down on dependence of automobile travel. Design controls shall be employed to provide land use compatibility by offsetting potential negative impacts.

The areas within the Gaines Street Revitalization Plan Study Area will have up to 100 DU/AC.

I. Land Use

Policy 2.2.18: [L]

LAKE PROTECTION **(REV. EFF. 12/22/95; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 7/14/14; REV. EFF. 7/6/15)**

INTENT

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. Historically, the lake has suffered from water quality issues associated with rapid urbanization and large-scale roadway projects. Lake Jackson's water quality has improved since adoption of the Comprehensive Plan, due in large part to the adoption of stringent stormwater treatment standards and the implementation of capital projects; however, nutrient levels in the Lake remain elevated and the Lake continues to be designated "Impaired" by the Florida Department of Environmental Protection.

The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner with minimal impact to water quality. The Lake Protection category is the basis for regulation and, where appropriate, limitation of development and redevelopment of land within the Lake Jackson Basin. The bounds of this category are to be the Lake Jackson basin boundary adjusted to include contributing watersheds but excluding existing, more intensely developed areas south of Interstate 10 and areas outside the Urban Service Area.

ALLOWABLE USES, DENSITIES, AND INTENSITIES

1. Residential

The Lake Protection category shall allow for residential uses at a base density of one (1) dwelling unit per two (2) gross acres.[1] To encourage compact and efficient development, two density bonus options are available for properties within the category:

i) A residential density of up to two (2) dwelling units per gross acre may be permitted within developments designed as a Clustered Subdivision.
ii) A residential density of up to eight (8) dwelling units per gross acre may be permitted within the Lake Protection Node (LPN) zoning district.

[1] (Leon County) Any development affecting real property located in whole or in part within the Lake Protection Future Land Use Map category west of US 27 North for which an initial Planned Unit Development Concept or Final Development Plan was approved before January 1, 2005 shall be vested for all uses, intensities and densities set forth in the PUD Concept Plan Ordinance. Said PUD shall be entitled to rely on the closed basin exemption previously set forth in this section if the Commission determined prior to January 1, 2005 that the PUD met the requirements for such closed basin exceptions and that such determination has not been overturned by a court of competent jurisdiction at the time vested rights are sought under this provision. If a court of competent jurisdiction invalidates such a PUD due to reasons unrelated to whether the property met the requirements for the closed basin exception, any new or modified PUD application relating to the same real property shall be vested for the uses, intensities and densities of the previously approved PUD. All development within said certified closed basins approved pursuant to this provision shall be approved through the PUD amendment process, except that in unincorporated Leon County a one-into-two residential lot split exemption shall be processed according to the established County procedures instead of the PUD process.

2. Mixed-use & Non-residential

Non-residential and mixed-use development (including, but not limited to, office and commercial uses) within the Lake Protection category may only be permitted within areas designated with the Lake Protection Node (LPN) zoning district. Within this district, single use, non-residential development shall be allowed at a maximum intensity of 10,000 square feet (S.F.) per gross acre. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 S.F. per gross acre, for a total of 12,500 S.F. per gross acre.

3. Community and Recreational Facilities

Community services, light infrastructure, and recreational uses shall be permitted within the Lake Protection (LP) and Lake Protection Node (LPN) zoning districts. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet (S.F.) per gross acre.

SPECIAL CONDITIONS

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The Lake Protection Node zoning district shall only be permitted at the following intersections:

- Highway 27 North and Sessions Road
- Highway 27 North and Capital Circle NW/Old Bainbridge Road
- Highway 27 North and Fred George Road
- Bannerman Road and Bull Headley Road

The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations, but generally shall not extend beyond ¼ mile from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.

2. As an alternative to large-lot developments, Clustered Subdivisions shall be permitted within the Lake Protection zoning district. Clustered Subdivisions shall:

- Contain a minimum of 60% contiguous open space preserved in perpetuity and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity;
- Be developed at a maximum density of two (2) dwelling units per gross acre; and,
- Be served by central water and sewer systems.

3. A volume control based stormwater treatment standard shall be required for all development and redevelopment within the Lake Protection land use category. This standard shall ensure that runoff volumes in excess of the pre-development runoff volume shall be retained for all storm events up to a 100-year, 24-hour duration storm. To encourage redevelopment in the Lake Protection category, a partial credit may be applied toward existing impervious surface on previously developed sites.

4. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.
5. Existing, lawfully established, non-residential uses within the Lake Protection land use category that are compatible with surrounding uses and meet all water quality standards for the Lake Jackson Basin shall be considered permitted uses.

Policy 2.2.19: [L]

LAKE TALQUIN RECREATION/URBAN FRINGE* **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This is a category that is specific to the eastern shore area of Lake Talquin north of State Highway 20. This area has unique characteristics in that it has developed to a large extent with weekend or vacation homes along the lake. This category is intended to allow one unit per three acres or one unit per acre if the development is clustered on 25% of the site. This is intended to protect environmentally sensitive areas until the critical areas study is completed.

A critical areas study will be required for this area in order to ascertain the environmental impacts of further development in this area as well as a strategy to provide services. Once the critical areas study has been completed, allowable densities, based on the information from the study, will be reassessed.

*Category located outside of designated Urban Service Area.

Policy 2.2.20: [L]

AGRICULTURE/SILVICULTURE/CONSERVATION **(REV. EFF. 6/28/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/19/20; REV. EFF 7/25/24)**

Conserving large tracts of plantation and former plantation land, forest land, agriculture and silviculture lands and wildlife and conservation and recreational hunting areas is an efficient means of protecting natural resources that constitute important physical, social, aesthetic and economic assets to all of the residents of Leon County. The expansion of urban development into agriculture/ silviculture/ conservation areas creates conflicts between farm and urban activities that encourage the premature conversion of agricultural and silvicultural land to other uses, and results in the loss of open space and natural beauty. The designation of land as ASC substantially protects the continued existence of the land for agriculture, silviculture, forest wildlife conservation and recreational hunting purposes, and otherwise promotes the public health, safety and general welfare of the residents of Leon County.

Extensions of Community Services (libraries, religious facilities, and police/fire stations) and Light Infrastructure (water wells, water tanks, sewage pump stations, and electric substations) within all ASC areas is allowed. Solar facilities shall comply with the setback and landscape buffer area criteria for other similar uses in this land use category. Very low residential density not to exceed 1 unit per 10 acres, is also allowed within the entire

ASC land use category. Accessory uses directly associated with the operation of agriculture, silvicultural, wildlife conservation, recreational hunting and permitted residential uses shall be allowed.

Areas which meet the criteria for inclusion in the ASC category include, but are not limited to the tracts known as Foshalee, Cherokee and Horseshoe plantations, and the Tall Timbers Research, Inc. ownerships. These large ownership properties are in the Rural Zoning District and some of the smaller portions of the properties within the District currently have minor commercial uses or have had such in the past.

In recognition of the existence of those uses, the need to provide nodes of non-residential land use between long distances of rural plantation lands to serve the needs of pass-by traffic, and the need for a potential expansion of similar uses such as office uses that are currently not permitted in the Rural Land Use District portions of the properties lying within the ASC Land Use Category may be developed utilizing the Planned Unit Development process for rezoning to allow the expansion of uses permitted within a special development district provided that the proposed ASC PUD meets and addresses the following criteria:

(A) The development parcel and Planned Unit Development is located in only one quadrant of the intersection of a Minor Collector or Major Collector and an Arterial Roadway of parcels in excess of 200 acres in size; and
(B) Other quadrants must be dedicated as a conservation easement in perpetuity.
(C) The arterial road frontage of the lands surrounding the proposed development remains in its natural state for a minimum of 500 feet from the right of way in a Conservation Easement;
(D) The development area for the non residential component of the PUD is a maximum of 30 acres; and
(E) The area to be dedicated as a Conservation Easement in perpetuity is conveyed prior to the issuance of Environmental Management permits; and
(F) The following site plan and design criteria are incorporated into the overall PUD:
    (1) Parking is buffered from the adjacent roadways;
    (2) Clustering of buildings and parking areas is utilized; and
    (3) A maximum of 10,000 square feet per structure not to exceed 50,000 gross square feet in total of non-residential is provided; and
    (4) Asphalt/concrete areas are minimized by providing grassed overflow parking, etc.; and
    (5) A limitation to a maximum of 30% total impervious area is utilized; and
    (6) Maximum building height is limited to two (2) stories; and
    (7) The overall PUD site is limited to one access entrance to the arterial roadway and one access to the collector roadway and provides internal connection to the overall parent parcel; and
    (8) There is an architecturally consistent theme that reflects the regional plantation vernacular throughout the development; and
    (9) The development incorporates an overall infrastructure plan (sewer, water, fire, sheriff, garbage, etc.) designed to serve the proposed development without extending existing services; and
    (10) Retail uses are limited to tourist-related retail, convenience stores (including gasoline sales), restaurants, and hotel/motel lodging. Office uses are limited

to civic and social organizations, offices serving primarily rural and agricultural/silvicultural needs, membership sports and recreations clubs, cultural and educational retreat facilities, and research and testing services related to agriculture/silviculture and plantations. Recreational uses are limited to museums, art galleries, and botanical and zoological gardens.

Policy 2.2.21: [L]

NEIGHBORHOOD BOUNDARY **(EFF. 7/25/03; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 11/26/20)**

Intent: This future land use category is intended to create a transition area between residential development and more intensive development such as higher density multi-family and higher intensity non-residential development while still preserving roadway capacity through access management practices. Where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan, this future land use category may also be used to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses.

Allowable Uses: Low-density residential including duplexes, townhomes, triplexes, and quadplexes; and non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, bed and breakfast inns and community services. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or any other use having drive-through facilities, are not allowed in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic.

Intensity/Density: Density and intensity standards for residential and non-residential development shall be established within the implementing zoning district's development standards. In no case shall the maximum density established exceed eighteen (18) dwelling units per acre. Non-residential structures are permitted up to a maximum of 20,000 square feet of gross building floor area per acre.

Design Standards: The land development regulations shall establish design standards to promote compatibility with adjacent residential development.

Location and Orientation: The location of this land use category shall either serve as a buffer between residential development and more intensive development or to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan. Those properties currently within the Lake Protection land use category may not be amended to the Neighborhood Boundary land use category.

Access Management: The land development regulations shall specify specific vehicular access management requirements that will serve to mitigate possible negative impacts to roadways associated with the implementation of this category.

I. Land Use

Policy 2.2.22: [L] **(EFF. 1/7/10; MAHAN DRIVE LAND USE CATEGORIES DEL. 1/7/10)**

MAHAN GATEWAY NODE LAND USE CATEGORY

INTENT

The Mahan Gateway Node land use category is applicable only within the Mahan Drive Corridor Study area (see reference map below). The application of this land use category and associated implementation regulations to the Mahan Drive Corridor is intended:

- To preserve existing residential preservation neighborhoods;
- To create an attractive gateway into Florida's Capital City, Tallahassee;
- To foster an appropriate mix and location of land uses along the corridor to preserve the scenic and residential character of a majority of the corridor;
- To provide for the potential development of commercial and retail developments within designated nodes along the corridor;
- To prohibit strip commercial development along the corridor;
- To maximize and promote efficient use of infrastructure within the Tallahassee-Leon County Urban Service Area;
- To facilitate the development and provision of transit service along the corridor;
- To promote pedestrian activities by providing neighborhood-serving commercial and office uses within walking distance of one another, nearby to existing and future residential developments; and
- To promote shorter vehicular trips for adjacent neighborhood residents and to increase usage of non-vehicular transportation modes.

ALLOWABLE LAND USES, DENSITY AND INTENSITY

1. Residential

   The Mahan Gateway Node shall provide for low to medium density residential development, ranging in maximum permitted density from 4-16 dwelling units per acre. The maximum residential density shall be allowed in the mixed use zoning district(s) as defined below. Residential uses and types ranging from single family detached houses to multi-family residential structures shall be allowed.

2. Mixed-use & Non-Residential

   Mixed-use developments and non-residential uses such as a combination of commercial/office uses and residential uses, shall be allowed within the Mahan Gateway Node future land use category based on the following intensity standards.

   iii) Maximum non-residential uses shall not exceed 12,000 gross square feet per acre. The highest intensity of non-residential uses shall be allowed in mixed-use developments, which combine residential and non-residential uses in a common plan of development.

   iv) Mixed-use development must include a residential component. The land development regulations shall specify the percentage range for the residential component.

3. Community Facilities

The Mahan Gateway Node future land use category shall allow community facilities related to residential uses including but not limited to religious facilities, libraries, police/fire stations, elementary and middle schools. Leon County shall consider siting public community facilities needed to support development in the Mahan Drive corridor, within the Mahan Gateway Node future land use category. Density transfers shall be allowed for properties dedicated and accepted by the appropriate local government for the location of public community facilities within these nodes.

IMPLEMENTATION DISTRICTS

In order to achieve the intent of the Mahan Gateway Node future land use category, the future land use category shall be implemented through zoning districts, based on the criteria cited below and further defined in the land development regulations.

Mixed-use zoning district(s)

The Mahan Gateway Node future land use category shall include at least one mixed-use zoning district which shall allow for medium density residential uses, non-residential uses and a combination of medium density residential uses and non-residential uses (mixed-use developments).

Mixed-use zoning district(s) for Mahan Gateway Node shall be guided by the following requirements:

1. Location

i) The areas immediately surrounding the intersections of Mahan Drive and the following streets: Dempsey Mayo Road, Edenfield Road and Thornton Road and as further defined in the land development regulations.

ii) The properties designated Residential Corridor Node (Future Land Use Map Amendment 2005-2-M-015) east of Highland Drive and on the south side of Mahan Drive.

Mixed-use zoning district(s) shall have frontage on Mahan Drive and shall be limited in its extent along Mahan Drive as further defined in the land development. The depth of the district(s) shall be specified in the land development regulations.

2. Limitation on Non-Residential Uses: The land development regulations shall establish limits for the location of non-residential structures along the designated cross streets cited in subparagraph (a) above.

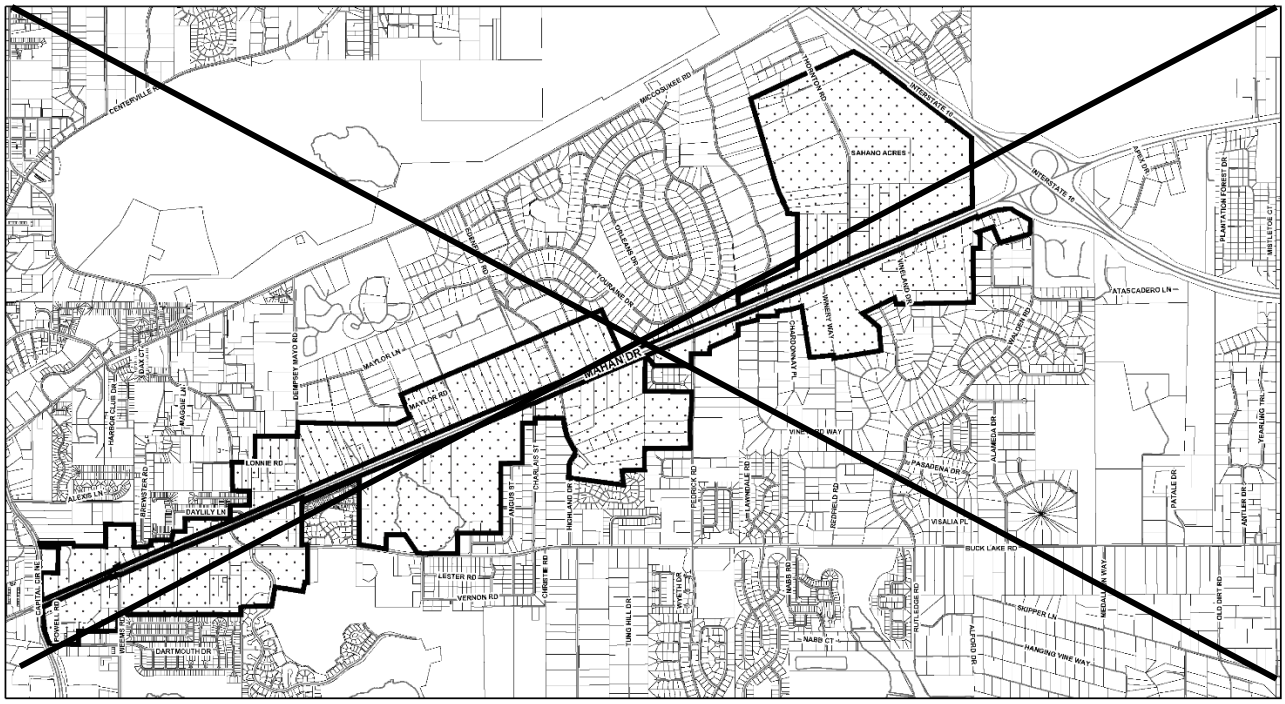
3. Access Management: Where feasible, practical and safe, access to Mahan Drive and the intersecting streets associated with each node shall be limited to one access driveway per node quadrant. Temporary access may be allowed until the desired interconnectivity for each node quadrant is achieved. The land development regulations shall specify criteria for access management, including, if necessary, the development of an access management plan.

4. Adjacency to Residential Preservation: Properties not currently designated Residential Corridor Node, as January 30, 2009, shall not be designated/zoned

in a manner to allow the mixed-use zoning district(s) to abut areas designated Residential Preservation. This provision is not applicable when the abutting properties in the Residential Preservation area have been developed with community facility uses. The mixed-use zoning district(s) are intended to be located in the core area of each designated node, around the identified arterial/collector roadway intersection with Mahan Drive.

5. Incentives for Unified Master Plan: To encourage, within the maximum development density and intensity standards, the combined development of properties within the Mahan Gateway Node future land use category, Leon County and/or the City of Tallahassee shall provide development incentives to property owners/developers within a node quadrant who proposed a binding master plan for a significant amount of the acreage or multiple properties within a node quadrant. The land development regulations shall provide a framework and guiding principles for the development of master plan(s) under this policy and the incentives to be provided.

Residential zoning district(s)



At least one residential zoning district shall be created and shall include all properties within the Mahan Gateway Node that are not designated mixed-use zoning district. The residential zoning district(s) shall develop primarily with residential uses and shall function as a transition area between the higher intensity/density uses allowed in the mixed-use zoning district(s) and the surrounding Residential Preservation areas. The residential zoning district(s) can also provide for community facilities and other neighborhood related uses as allowed by other policies in the comprehensive plan.

IMPLEMENTING LAND DEVELOPMENT REGULATIONS

The land development regulations may create density ranges to ensure compatibility with existing residential developments and other gateway development criteria. Standards addressing design elements to regulate development within the Mahan Gateway Node may include but are not limited to requirements addressing roofs, building scale, exterior building materials, building setbacks and height, fenestration, buffering, landscaping, solid waste disposal, parking lighting, transit oriented development, and signs. Such standards shall be included in the adopted land development regulations.

~~**I. Land Use**~~

~~Map 4: Mahan Drive Corridor Study Area~~

MAHAN DRIVE CORRIDOR STUDY AREA

I. Land Use

Policy 2.2.23: [L]

URBAN RESIDENTIAL **(EFF. 7/20/05; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/22/16)**

The primary intent of the Urban Residential land use category, which is to be applied only within the Urban Services Area, is to encourage medium density (4-10 dwelling units per acre) housing, thereby promoting infill development, reducing urban sprawl, and maximizing the efficiency of infrastructure. The implementing zoning district shall contain design standards as well as locational criteria in order to accomplish these goals. The Urban Residential category allows townhouses, single-family detached, two-family, and multiple-family dwelling units as well as community facilities related to residential uses. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. Urban Residential may serve as a transition category between lower density residential categories and more intensive development such as higher density residential and/or office land uses or major roadways where alternative modes of transportation are available to support the increased residential densities. The category is not intended to be applied within the interior of an existing neighborhood, unless to correct, legal non-conforming uses and/or densities. The maximum residential density within the Urban Residential is 10 DU/AC and the minimum is 4 DU/AC.

Policy 2.2.24: [L]

URBAN RESIDENTIAL 2**(REV. EFF. 7/26/06; REV. EFF. 3/14/07; REV. EFF. 1/22/16)**

The primary intent of the Urban Residential 2 land use category, which is to be applied only within the Urban Services Area, is to encourage a range of density (20 dwelling units per acre) housing, thereby promoting infill development, reducing urban sprawl, and maximizing the efficiency of infrastructure. The implementing zoning district(s) shall contain design standards as well as locational criteria in order to accomplish these goals. The Urban Residential 2 category allows townhouses, single-family detached, two-family, and multiple-family dwelling units as well as open space/recreation and community facilities related to residential uses. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. Urban Residential 2 may serve as a transition category between lower density residential categories and more intensive development such as higher density residential and/or office land uses or major roadways where alternative modes of transportation are available to support the increased residential densities. The category is not intended to be applied within the interior of an existing designated residential preservation area, unless to correct, legal non-conforming uses and/or densities. The maximum residential density within the Urban Residential 2 category is 20 units per acre.

Policy 2.2.25: [L]

PLANNED USE OVERLAY DISTRICT **(EFF. 7/25/03; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

I. Land Use

Planned Use Overlay District is an overlay district that may be applied on any specific property inside the Urban Service Area, except for those properties currently within the Lake Protection land use category. The regulatory conditions pertaining to this overlay district shall be adopted by ordinance as an amendment to the Future Land Use Map of this Comprehensive Plan.

The Planned Use Overlay District is created to allow the consideration of unique, innovative or narrowly defined land use proposals that, because of the specificity of the applied regulatory conditions, can be found compatible with the character of the surrounding land uses and the environmental conditions of the subject land. This district may allow residential and non-residential uses that might otherwise not be allowed in the underlying land use category, subject to unique design features or other regulatory conditions adopted to promote compatibility with adjacent areas. Such features include but are not limited to recreational areas, mixed use development, buffering, and landscaping. Development within this overlay shall result in an integrated plan of development. and each adopted Planned Use Overlay District designation shall address the following: the intent of the specific overlay district designation, density and intensity; permitted uses; access and interconnectivity by car, foot, bicycle, and transit; trip generation and trip capture; identification and protection of environmental features; open space; buffering of adjacent uses when necessary; and unique design features.

Applicants seeking amendment of the Future Land Use map in order to apply this overlay district to (a) specified parcel(s) shall be required to meet with those registered neighborhood association(s), if any, within ¼ mile circumference of the amendment site prior to the first scheduled public hearing regarding the specific development proposal. This meeting shall be in addition to the normal Comprehensive Plan amendment notice procedures and requirements. Due to the requirements above, applicants shall be required to request the application of the Planned Use Overlay District prior to the relevant Comprehensive Plan amendment application deadline. Planned Unit Development zoning shall be required to implement each Planned Use Overlay District and the entitlements granted through the application of the Planned Use Overlay District may be further limited by the Planned Unit Development zoning requirements. However, the minimum size requirement for Planned Unit Development shall not apply.

In the event that the Future Land Use Map overlay district has been applied to a site and no Planned Unit Development zoning has received approval by action of the City or County within 18 months of land use designation effective date, the Planned Use Overlay District shall be deemed null and void and shall be removed from the Future Land Use Map, leaving the original and underlying land use category in place. If, subsequent to the amendment to the Planned Unit Development (PUD) zoning district, the applicant seeks to rezone the property from PUD to another zoning district, the rezoning must be consistent with the underlying and existing Future Land Use Map category unless an amendment to the Future Land Use Map is also sought and approved. In instances where rezonings to zoning districts other than the required PUD zoning district and amendments to the Future Land Use Map, if necessary, are approved the Planned Unit Overlay District shall be deemed null and void.

Policy 2.2.26: [L]

~~I. Land Use~~

~~LAND USE DEVELOPMENT MATRIX~~ **(REV. EFF. 7/26/06; REV. EFF. 3/14/07; REV. EFF. 6/6/08)**

~~The land use development matrix depicts set performance criteria from which an individual can measure the development potential of any parcel of property. In effect the matrix provides guidance as to where a parcel would fall on the permittable development ranges outlined within the future land use categories. As mentioned earlier, the relationships within the matrix are based upon the policies included within the individual elements of the plan. The matrix measures a parcel's development potential based on the following land use principles:~~

~~(1) The parcel's designation on the future land use map.~~
~~(2) Its potential compatibility with surrounding existing land use.~~
~~(3) The degree of accessibility to the parcel (commercial uses only).~~
~~(4) Potential land use in relation to the function of the road which will carry traffic resulting from any subsequent development of the parcel.~~
~~(5) Environmental constraints on site.~~
~~(6) Availability of sewer and water.~~

~~The review standards outlined above are listed across the top of the matrix. Potential land uses beginning with minor commercial and ending with heavy industrial are listed vertically and are measured in relation to the review standards listed across the top. Each cell of the matrix contains an inherent policy based on the relationship between the proposed land use for that parcel (vertical axis) and a performance standard (horizontal axis). An "X" in that cell indicates the proposed use would be allowed. Conversely, an "O" indicates that the proposed use is not allowed. All cell blocks which are applicable to a proposed land use must contain an "x" in order for the proposal to be allowed. Thus an individual would locate the proposed land use along the vertical axis and review along the row of cells next to it in a left to right direction to determine which conditions would allow or prohibit the proposed use. As stated under the performance concept, each site is individually measured for suitability in relation to performance standards. As a result, growth management guidance is provided.~~

~~(Note: The Land Use Development Matrix does not apply to Bradfordville Mixed Use, Suburban, Research and Innovation, Industry and Mining, Urban Residential 2, Village Mixed Use, Planned Development, Central Core, Central Urban, University Transition, and Woodville Rural Community.)~~ **~~(REV. EFF. 6/28/02; REV. EFF. 3/14/07; REV. EFF. 6/6/08; REV. EFF. 1/7/10; REV. EFF. 5/31/18)~~**

~~Policy 2.2.27: [L]~~ **~~(EFF. 5/31/18)~~**

~~RESEARCH AND INNOVATION LAND USE~~

~~INTENT~~

~~Districts that support research and innovation are key components of an economic development strategy for the City of Tallahassee and Leon County. Maintaining lands used for research and innovation and expanding these uses in appropriate areas are necessary for job creation, flexibility to adapt to changing economic trends, and economic diversification essential for the community's future.~~

~~I. Land Use~~

~~The intent of the Research and Innovation Land Use category is to recognize the variety of uses that occur in these districts and to facilitate the location of jobs relative to the homes of people who can provide critical talent in skilled trades.~~

~~Research and Innovation uses should be encouraged in areas with access to transit, bicycle, and pedestrian facilities. Because of the need for infrastructure and public services, the Research and Innovation Land Use shall only apply to areas located within the Urban Services Area.~~

~~ALLOWABLE LAND USES, DENSITIES, AND INTENSITIES~~

~~The Research and Innovation Land Use category accommodates a variety of uses that may have similar demands on public infrastructure. Research and Development and Innovation District uses are allowable in the Research and Innovation Land Use.~~

1. ~~Research and Development – Research and Development uses shall be permitted at a maximum intensity of 45,000 square feet of gross building floor area per acre. Mixed use Research and Development projects may include commercial, office (other than the research and development uses), and residential uses. These ancillary uses may not exceed 40% of the total gross square footage of a Research and Development project.~~
2. ~~Innovation District – Innovation Districts may include up to 45,000 square feet of gross building floor area per acre. The mixture of uses shall emphasize the technological and collaborative nature of these districts by including in the buildable square footage up to 80% in Innovation District, Research and Development, or compatible Light Industrial uses, up to 40% residential uses, and up to 40% in other non-residential support uses. Design standards detailed in the land development code shall provide for the protection of adjacent non-research and innovation properties by arranging the residential uses and non-research and innovation uses as a buffer or transition to adjacent properties.~~

~~SPECIAL CONDITIONS~~

~~The following special conditions shall apply to the Research and Innovation Future Land Use category:~~

1. ~~Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Research and Innovation Land Use.~~
2. ~~Site plans must demonstrate the protection of adjacent non-research and innovation properties through development standards outlined in the land development codes.~~
3. ~~A plan for vehicular access to and from the site addressing delivery trucks and specialized equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.~~

~~I. Land Use~~

~~*Policy 2.2.28: [L]* **(EFF. 5/31/18)**~~

~~INDUSTRY AND MINING LAND USE~~

~~INTENT~~

~~Advanced manufacturing, industrial uses, and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional industrial uses. Industry and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.~~

~~Industry and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. Because of the need for infrastructure and public services, the Industry and Mining Land Use shall only apply to areas located within the Urban Services Area.~~

~~Because industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.~~

~~ALLOWABLE LAND USES, DENSITIES, AND INTENSITIES~~

~~The Industry and Mining Land Use category accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Industry and Mining Land Use.~~

1. ~~Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.~~
2. ~~Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties. All mining uses are subject to fencing requirements as identified in the land development regulations. Mining uses may be subject to an Environmental Resource Permit (ERP) pursuant to Chapter 373, F.S., and Rule 62-330, Florida Administrative Code (F.A.C.) and mandatory reclamation requirements pursuant to Chapter 378, F.S., and Rule 62C-39, F.A.C.~~
3. ~~Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. All applicable development must comply with Title 14 Code of Federal Regulations Part 77.9 Construction or alteration requiring notice. Those industries that have the potential to result in any other pollution of the air or ground shall adhere to existing local, state and federal operational or industry standards, and avoid or mitigate these potential impacts.~~

~~I. Land Use~~

~~These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent substantial impacts off-site or require mitigation and/or minimization techniques for impacts. Ancillary commercial uses designed to serve adjacent workers may be permitted.~~

~~SPECIAL CONDITIONS~~

~~The following special conditions shall apply to the Industry and Mining Land Use category:~~

1. ~~Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Land Use.~~
2. ~~Site plans must demonstrate the protection of adjacent non-industry and mining properties through development standards outlined in the land development codes.~~
3. ~~A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.~~
4. ~~Hydraulic fracturing, commonly referred to as fracking, is not a permitted use in the Industry and Mining Land Use.~~

X – Land use is compatible/allowable.
0 – Land use incompatible/not allowable
1 – PUD or site plan review
2 – Planned unit development required, except for cemeteries or for religious facilities to be used solely for religious functions. P.U.D. requirement will apply if ancillary facilities are proposed in in conjunction with religious facilities.
3 – Permitted where sufficient stormwater management capacity exists within the basin
4 – Consistent with aquifer recharge policies contained within the Conservation Element
5 – Permitted outside of Urban Service Boundary
6 – Permitted only at those intersection quadrants which previously have been developed
7 – Permitted in conjunction with mixed use project (footnote deleted)
8 – Cluster development required (Max. 12 DUA/C)
10 – Agricultural related only
11 – No access to canopy road
12 – Residence for security or caretaker personnel allowed
13 – Office use permitted if ancillary to industrial use
14 – Intended for lower level of density range
15 – Secondary access only approved in conjunction with site plan, PUD or DRI
16 – Direct access allowed outside urban service area or on previously platted lot
17 – Primary access to canopy road permitted only when alternate access to non-canopy roads is unavailable. Primary access shall be restricted to one driveway designed to mitigate impacts. Planned development required for approval.
18 – Commercial restricted to 50,000 sq ft
19 – Permitted in county portion of category. (Resultant runoff must be retained on site) P.U.D. required
20 – Permitted on lots greater than ½ acre (Sewer Policy 2.1.3)
21 – Permitted for appropriate facilities located outside of Urban Service Area (Sewer Policy 1.3.7)
22 – May be permitted for sandmines or borrow pits (Conservation Policy 3.2.2)
23 – Commercial limited to one quadrant of the intersection
24 –Access allowed outside the Urban Service Area for Community Services operated by public agencies
26 – Minor Offices permitted access onto local streets within Neighborhood Boundary category only
27 –Density limited to 10 Dwelling units per acre

NA = Not applicable
* = To be used in conjunction with Future Land Use Map and applicable goals, objectives and policies contained within the Comprehensive Plan

(A) – An incompatible land use may be permitted with an adequate buffer when its incompatibility with an adjoining land use is along rear property lines. This does not apply to heavy industrial adjoining residential.

(B) – Non-residantail uses permitted on all streets and intersections designated as non-residential streets

(C) – Applies to the specific environmentally significant area on site and the plan requires site specific assessment of development impact on endangered, threatened and species of special concern (plants and animals)

(D) – This portion of the matrix does not apply when existing land use is nonconforming

(E) – May be waived pursuant to land use policy 3.1.5. or if commercial contained within Mixed Use PUD or DRI development

(F) – See Transportation Policy 1.6.4

(G) – Existing adjoining land uses, access, intersection restrictions are not a factor in Activity Center as per conditions of land Use policy 1.4.22

Effective 11-13-20
Cycle 20-01 ESR

Note:
Matrix is intended to be a pictorial representation of existing policies in the Comprehensive Plan.

DOES NOT APPLY TO BRADFORDVILLE MIXED USE, SUBURBAN, URBAN RESIDENTIAL 2, VILLAGE MIXED USE, PLANNED DEVELOPMENT, UNIVERSITY TRANSITION, DOWNTOWN, WOODVILLE RURAL COMMUNITY, CENTRAL URBAN, RESEARCH AND INNOVATION, OR INDUSTRY AND MINING.

CONSERVATION SUBDIVISIONS

Objective 2.3: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 8/1/07)

Conservation Subdivision land development regulations in the County shall continue to provide design options and guidelines for the development of Conservation Subdivisions that advance environmental resource protection or restoration or promote infill and redevelopment. The City may adopt similar provisions.

Policy 2.3.1: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

To minimize the threat of premature conversion of rural land, including properties supporting bona fide agriculture and silviculture, the Conservation Subdivision option shall not be allowed within the Rural Future Land Use category, with the exception of those areas designated as Rural Residential within the Bradfordville Sector Plan.

Policy 2.3.2: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 12/15/11)**

Within the land development regulations, local government shall define for various Future Land Use categories in which Conservation Subdivisions are allowed, any applicable density bonus incentives, and the minimum percentages of parent tract(s) to be protected as contiguous open space within Conservation Subdivisions. It shall be the intent to establish higher open space percentages for the less dense Future Land Use Map categories.

Policy 2.3.3: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

To better judge the impacts of Conservation Subdivisions on the demands for services and the effects of coordinating protected open space, local government may phase the implementation of Conservation Subdivisions within Future Land Use Categories more dense than Urban Fringe via the adoption of land development regulation provisions, beginning with Urban Fringe Future Land Use category and those areas designated as Rural Residential within the Bradfordville Sector Plan.

Policy 2.3.4: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Conservation Subdivisions may be zoned as Planned Unit Developments (PUDs) or the land development regulations shall be otherwise crafted in order to provide the necessary flexibility with respect to setbacks, minimum lot sizes, street widths, and parking requirements etc. to increase the likelihood of employing this site design option and foster the long term viability and usefulness of the open space subject to the required conservation easement.

Policy 2.3.5: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Preservation features defined in Policies 1.3.4 [C] and 1.3.5 [C] shall be incorporated into the open space of any Conservation Subdivision. Conservation features defined in Policy 1.3.1 [C], archaeological sites, bona fide agriculture and silviculture, viewsheds of canopy roads and of other open space shall be incorporated into the open space of a Conservation Subdivision to the greatest extent practicable.

The Planning and respective Growth Management departments shall encourage the use of Conservation Subdivisions wherever parent tracts have been demonstrated to contain bona fide agriculture and silviculture, environmentally significant features, historically or archaeologically significant resources, or direct connections with existing or planned greenway corridors identified in either the Tallahassee-Leon County Greenway Master Plan or the Blueprint 2000 Project Definitions Report.

Policy 2.3.6: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

In the implementation of Conservation Subdivisions, all critical on-site resources that are to be preserved shall be of adequate size and buffered to ensure protection of the resource.

Policy 2.3.7: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Where possible, local government shall require protected open space(s) within conservation subdivisions to be established adjacent or contiguous with existing or planned greenspace, whether public or private.

Policy 2.3.8: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

In the implementation of Conservation Subdivisions, local government shall require open space and related resources to be placed under a permanent easement that runs with the land. Said easement may be assigned to (1) local government or (2) a local or national land trust that is a 501(c)(3) organization for which conservation of resources is a principal goal and which can provide reasonable assurance it has financial and staff resources to monitor and manage the easement in accordance with the intent of the Objective 2.2 [L] and its supporting policies.

Policy 2.3.9: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Local Government shall require all applications for Conservation Subdivisions to prepare a management plan for all protected open space and a dedicated source of revenues to ensure that all appropriate management activities are undertaken on a regular basis and that all terms of the conservation easement are monitored and enforced.

Policy 2.3.10: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Local and State Government shall be encouraged to enter into agreements with the managers of protected open space within Conservation Subdivisions where it would be

mutually advantageous to consolidate management activities between the subdivision and any adjoining public lands.

Policy 2.3.11: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

It shall be the policy of the Property Appraiser's office to assess at the minimum rate or charge the applicable fee to all land preserved within a Conservation Subdivision, including property in bona fide agricultural and silvicultural use. However, the appraised value of associated developed land shall reflect any added value provided by proximity to protected open space.

Policy 2.3.12: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Conservation Subdivisions shall be encouraged to include a range of housing types and sizes, and shall not be exempt from any adopted applicable affordable housing provisions.

Goal 3: [L] (EFF. 7/16/90; REV. EFF. 7/26/06)

Tallahassee-Leon County should continue to grow with an emphasis on selected growth that pays for itself through the provision of well-paid jobs and economic leverage factors which enhance the quality of life of the community.

COMMERCIAL LAND USE

Objective 3.1: [L] (REV. EFF. 7/20/05)

Provide for convenient, aesthetically pleasing and environmentally sound commercial opportunities which are easily accessible through planned integration into the existing transportation network. In furtherance of this objective, maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to commercial land use.

Policy 3.1.1: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Commercial development shall occur only in locations that are appropriate to its service and trade area and that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities. Commercial sites are determined through the use of site location standards contained within policy 3.1.2 below. The intensity of the commercial use is dependent upon the land use category which the potential site is in and the functional roadway classification of the immediate adjacent roads. Individual road classifications are depicted on the functional roadway classification map found within the Transportation Element.

I. Land Use

Policy 3.1.2: [L] **(REV. EFF. 12/23/96; REV. EFF. 6/28/02; REV. EFF. 7/26/06)**

Allowed commercial development in the Mixed Use Category shall be determined in accordance with Objective 1.7 and the development pattern policies. Allowed commercial development in the Woodville Rural Community Category shall be determined in accordance with Objective 3.4 and subsequent implementing policies. In other Future Land Use Categories, development type and location standards for minor, neighborhood, community, regional, and highway commercial sites shall be as outlined below. These requirements are intended to group commercial land use toward intersections to provide access and prevent strip commercialization. Stringent access criteria which may include increased design considerations or the construction of frontage or service roads for development approval may be applied for commercial sites not located according to the commercial site location standards.

A. COMMERCIAL CLASSIFICATIONS

1. MINOR COMMERCIAL
   a. Major Function
      Provide for sale of convenience goods and services to immediate residential area.
   b. Location
      1) On or near the intersection (access within 330 feet of the centerline of the intersection) of local and arterial, collector and arterial, collector and collector; or
      2) May be located within Planned Development provided it is located and designed to meet commercial needs of the majority of the residents of the development.
      3) If on a local street, only one quadrant of the intersection shall be used for commercial purposes.
   c. Trade Area
      Generally within one mile and not considered as an attractor.
   d. Site Area
      Two acres or less. One-half acre if located on a local street.
   e. Range of Gross Floor Area
      Less than 20,000 square feet. Maximum 10,000 sq. ft. if located on a local street.
   f. Design Standards
      1) Aesthetically compatible with adjacent uses.
      2) Adequate buffering, screening, landscaping and architectural treatment if integrated into neighborhood.
      3) Sufficient parking; properly designed and safe internal traffic circulation.
2. NEIGHBORHOOD COMMERCIAL
   a. Major Function
      Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods.

b. Leading Tenants (examples)
Supermarket, drugstore and postal substation.

c. Location*
At the intersection* of major collector and arterial or arterial and arterial or major collector and major collector. Only one neighborhood commercial development will be allowed at the intersection of a major collector and arterial road. Commercial development at the intersections of major collectors shall be restricted to 50,000 sq. ft. Planned integrated access to the transportation system is required.
* See definition of *Intersection* in Glossary.

d. Radius of Primary Trade Area
One to three miles.

e. Site Area
Minimum two acres.

f. Range of Gross Floor Area
20,000 to 100,000 square feet.

3. COMMUNITY COMMERCIAL
a. Major Function
Same functions of neighborhood commercial but on a large scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items.

b. Leading Tenants (examples)
Supermarket, drug store, minor department stores, home improvement center, variety or discount center.

c. Location
At the intersection of arterials. Prohibited on designated canopy roads. Planned integrated access to the transportation system required.

d. Radius of Trade Area
Five miles or 15 to 20 minutes driving time. Service distinct geographical quadrants or three or more combinations of neighborhoods within community.

e. Site Area
Minimum ten acres.

f. Range of Gross Floor Area
20,000 to 100,000 square feet.

4. REGIONAL COMMERCIAL
a. Major Function
Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings.

b. Leading Tenants (examples)
One or more full line department stores.

c. Location

Integrated into local transportation system and accessible by combination of arterials, major collectors, expressways and interstate highways. Potential on-site and off-site transportation improvements which may include additional turn lanes, intersection improvements, and frontage roads, may be required to provide adequate ingress and egress. Prohibited on designated canopy roads. Restricted to high intensity urban activity center land use category.

d. Radius of Primary Trade Area

Regional

e. Site Area

Minimum thirty-five acres.

f. Range of Gross Floor Area

200,000 to 1 million square feet.

5. HIGHWAY COMMERCIAL

a. Major Function

Provide for consumer oriented retail services designed for drive-in convenience.

b. Leading Tenants (examples)

Fast food franchise, liquor store, automotive service (i.e. oil change), convenience stores.

c. Location

At the intersection of arterial or collector streets in accordance with the Land Development Matrix, with driveway access to those streets, or integrated into the transportation network through a system of shared access or an access road system.

Unless the proposed development is at an intersection, it must be accessed from a frontage or service road with parking in the rear, or screened from the road by substantial existing or landscape vegetation if located in the front or side of the commercial establishment. Shared access may be authorized by local government only if prior or existing development precludes the use of a frontage or service road.

Structural setbacks from the road in these situations must be sufficient to accommodate the access road, and any front parking and landscaping. If the site has existing commercial use on both sides, and has road frontage of no more than 150 feet, the access requirement does not apply.

d. Radius of Trade Area

May serve immediate area but relies heavily on passerby traffic.

e. Site Area

One-half to two acres.

f. Range of Gross Floor Area

1,000 to 10,000 square feet

g. Design Standards
1) Adequate setback
2) Aesthetic landscaping
3) Rear parking or substantial screening if located in front or side

Policy 3.1.3: [L] **(EFF. 7/16/90)**

Commercial development shall provide adequate and appropriate landscaping, open space and buffering and be architecturally designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas.

Policy 3.1.4: [L] **(REV. EFF. 7/1/94; REV. EFF. 12/24/10)**

Commercial development shall be designed to protect the design volume of the roads and streets which it impacts. Design requirements may include but not be limited to:

1) Shared access
2) Acceleration and deceleration lanes
3) Right in and right out limited access and,
4) Access via frontage and/or service roads

During development of the Long Range Transportation Plan, the City of Tallahassee and Leon County will adopt ordinances incorporating specific criteria for the following policy provisions. The arterial and collector roadways which will incorporate front or rear service roads will be delineated.

Level One - Short Range Service Road Implementation:

Roadways designated for short range service road implementation will incorporate service roads as part of the development or coordinate, design and schedule implementation of the service road in conjunction with adjacent development.

Level Two - Long Range Service Road Implementation:

Roadways designated for long range service road implementation will provide development setbacks for future service roads but will in the interim incorporate ingress and egress access controls to minimize traffic friction entering and leaving the roadway system. Immediate implementation of frontage roads may be required on parcels with frontage exceeding 275 feet.

Policy 3.1.5: [L] **(REV. EFF. 8/17/92)**

Commercial site location access standards may be waived except in low density residential areas if:

a) Access to the proposed non-residential development from either an arterial or major collector shall be by way of a frontage road, rear service road or existing local road which serves as a frontage or service road, unless the site has existing commercial uses on both sides: and the proposed site has no more than 150 feet of frontage on the major collector or arterial; and,

b) Parking for the proposed site is in the rear or screened from the road by existing or landscape vegetation if located in front of the commercial establishment or,
c) The planned unit development process is utilized and the adjoining properties are commercially developed.

Policy 3.1.6: [L] **(Eff. 9/19/91)**

Development along federal and state highways will be limited so as to control the adverse effects of strip commercial land uses. The commercial location standards of Land Use Policy 3.1.2. and the design options of Land Use Policy 3.1.4. shall specifically apply, along with other plan policies that have the effect of protecting the design capacity of federal and state highways.

Objective 3.2: [L] (Eff. 6/28/95)

Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planned integration into the existing transportation network.

Policy 3.2.1: [L] **(Eff. 6/28/95)**

Unless otherwise provided for by specific policies for the future land use categories in this Plan, site location standards for the location of minor and major office development shall be consistent with the following minimum criteria:

Minor offices shall include converted residences at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum size shall be 2,500 square feet if located on a local street. Minor offices may access a local street in the unincorporated area. Within the City, minor offices may access a local street if it is a designated nonresidential street.

Major offices shall include office buildings that exceed one or more of the minor office thresholds and unless specifically permitted by other Plan policies, shall be limited to having access to a major collector or arterial road.

Bradfordville Mixed Use and Suburban Future Land Use Category Nonresidential Development Category

Objective 3.3: [L] (Eff. 12/23/96; Rev. Eff. 3/14/07)

Commercial and nonresidential development in the Bradfordville Mixed Use and Suburban Future Land Use Categories will be located consistent with the intended functions of the categories. The negative effects of commercial and nonresidential development on adjacent development and on roadway capacity will be mitigated through site design and locational standards in the land development regulations. Comprehensive Plan goals and objectives regarding the promotion of transit, bicycling and walking, and the preservation of roadway capacity will be incorporated into the design of commercial and nonresidential development.

Policy 3.3.1: [L] **(EFF. 12/23/96; REV. EFF. 3/14/07)**

Zoning for commercial development in the Suburban and Bradfordville Mixed Use Future Land Use Category shall occur only in locations that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities.

a. Regulation of Impacts

The Land Development Regulations shall establish zoning districts and development standards that mitigate the impacts of the allowed commercial uses. The impacts of commercial development that may require additional regulation include, but are not limited to, hours of operation, outdoor sales lots, night lighting, traffic volume and flow, noise, odor, signage, or other such impacts.

b. Location of Commercial and Nonresidential Zoning Districts

The Land Development Regulations shall establish zoning districts within Bradfordville Mixed Use and Suburban Future Land Use Categories that insure that the location of commercial and nonresidential zoning districts will provide for the appropriate integration of uses and the protection of residential areas consistent with Plan policies. Commercial zoning districts shall be geographically compact and located at or near the intersections of major roads or in a manner that reflects the existing linear development pattern.

Policy 3.3.2: [L] **(EFF. 12/23/96)**

The zoning districts which allow commercial and nonresidential development shall require adequate and appropriate landscaping, open space and buffering and be designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas. In order to minimize the negative visual and off-site impacts of commercial development, the Land Development Regulations shall provide for development standards regulating commercial and nonresidential development as follows:

1) The Land Development Regulations shall provide for the following development standards for commercial and nonresidential development, which include, but are not limited to:

   a) Mass and height compatible with adjacent uses.
   b) Adequate buffering, screening, landscaping and architectural treatment if adjoining a residential area.
   c) Sufficient parking designed to minimize noise and visual impacts to adjoining residential areas, and safe internal vehicular and pedestrian circulation.
   d) Interconnections for vehicular and pedestrian traffic between adjacent nonresidential development
   e) Vehicular access to and from the site shall be designed to discourage traffic through adjoining residential areas.
   f) Provide for easy and safe pedestrian access to adjoining residential areas.

2) A commercial or nonresidential development accessing a minor collector, local street, or located adjoining a residential area shall be compatible with residential development in terms of its off-site impacts as defined in Land Use Policy 3.3.1.a.

The Land Development Regulations shall define as allowed uses the specific uses and provide for development standards which further the intent of this policy.

Policy 3.3.3: [L] **(EFF. 12/23/96)**

The Land Development Regulations shall regulate commercial development access to protect the safe and efficient operating characteristics of roads and streets. Commercial development shall meet access management criteria as set forth in the Land Development Regulations. In order to reduce the negative impact of commercial development to the volume of the road, the Land Development Regulations shall contain provisions which encourage the reduction in the number of commercial access points by requiring the sharing of access by two or more commercial developments for those uses that result in a large number of vehicular trips. Access management design requirements provided for in the Land Development Regulations may include but not be limited to:

a) Shared access;
b) Acceleration and deceleration lanes;
c) Right in and right out limited access and,
d) Access via frontage and/or service roads;
e) Minimum uninterrupted throat lengths for access drives;
f) Minimum lot width and depth requirements for allowing the full range of commercial uses;
g) Access provisions for transit and safe pedestrian movement both internal to the site and to adjacent properties.

COMMERCIAL (RETAIL, SERVICES, AND OFFICE) DEVELOPMENT IN THE WOODVILLE RURAL COMMUNITY FUTURE LAND USE CATEGORY

Objective 3.4: [L] **(EFF. 6/28/02)**

Commercial (retail, service, and office) development in the Woodville Rural Community Future Land Use Category will be consistent with the intended function of the Rural Community Future Land Use Category. The scale and intensity of commercial land use will reflect the location and size of the Rural Community in which it is situated; commercial and other non-residential development will be located, oriented, and designed in a manner that promotes compatibility with adjacent land uses and facilitates safe and efficient access for both vehicular and pedestrian traffic; and utilizes access management to protect the safe and efficient operation of the public highway and street system. Non-residential land use intensity is limited to 10,000 square feet per acre, not to exceed a maximum of 50,000 square feet per building and 50,000 square feet per parcel, except that principle structures for warehousing, storage, and mini-warehousing principal uses may have a gross floor area of no greater than 20,000 square feet per acre.

Policy 3.4.1: [L] **(EFF. 6/28/02)**

Objective 3.4 will be met through the enactment and implementation of land development regulations, including zoning district regulations, which address commercial development in the Woodville Rural Community Future Land Use Category.

Policy 3.4.2: [L] **(EFF. 6/28/02)**

Zoning Districts allowing commercial development in the Woodville Rural Community Land Use Category shall only be located where ensuing development can occur in a manner that would be compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities, in accordance with the following criteria:

a) Regulation of Impacts

The Land Development Regulations shall establish zoning districts and development standards that mitigate the impacts of the allowed commercial uses. The impacts of commercial development that may require additional regulation include, but are not limited to: outdoor sales lots, night lighting, traffic access, noise, signage, or other such impacts.

b) Location of Commercial Zoning Districts

The zoning districts that allow commercial land uses within the Woodville Rural Community Future Land Use Category shall ensure that commercial uses are located in a manner that minimizes the incompatible land use impacts. Commercial zoning districts shall be geographically compact and located at or near the intersections of major roads, with the sole exception of those zoning districts located in a manner that recognizes established linear commercially-developed areas along limited portions of State Highway frontage.

c) Access

The zoning districts that allow commercial land uses within the Woodville Rural Community Future Land Use Category shall establish access management standards that promote safe, convenient, and efficient movement of vehicular traffic within the public street system. These access management standards shall ensure the viability and safety of other modes of travel are not compromised for the purpose of limiting or controlling access. The zoning districts may allow access to a local street provided such access does not adversely impact residential areas or neighborhoods. The zoning districts shall prohibit commercial and non-residential access to a canopy road except as provided for by Conservation Policy 3.4.10.

Policy 3.4.3: [L] **(EFF. 6/28/02)**

In order to minimize the negative visual and off-site impacts of commercial development, the Land Development Regulations shall provide for development standards regulating commercial development. The Land Development Regulations shall establish specific regulations, standards, and/or limitations for commercial development and design aspects including, but not limited to:

- Mass and height compatible with adjacent uses.
- Adequate buffering, screening, landscaping and treatment of other design details as may be appropriate to further compatibility with adjoining residential areas.

- Location of parking facilities to minimize noise and visual impacts to adjoining residential areas, and facilitate safe internal vehicular and pedestrian circulation.
- Interconnections for vehicular and pedestrian traffic between adjacent non-residential development.
- Limitations on vehicular access to and from the site to discourage traffic through adjoining residential areas.

Policy 3.4.4: [L] **(Eff. 6/28/02)**

The Land Development Regulations shall regulate commercial development access. Commercial development shall meet access management criteria as set forth in the Land Development Regulations. The Land Development Regulations shall contain provisions which encourage the reduction in the number of commercial access points. Access management design requirements provided in the Land Development Regulations may include, but not be limited to:

a) Shared access;
b) Access provisions for safe pedestrian movement both internal to the site and to adjacent properties;
c) Limited direct access to commercial parking from residential streets.

Industrial Land Use

Objective 4.1: [L] (Rev. Eff. 7/20/05)

Provide opportunities for the location of industrial land uses in accessible areas with applicable available infrastructure while promoting protection from encroaching non-compatible land uses. To accomplish this, local government will maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to industrial land use.

Policy 4.1.1: [L] **(Eff. 7/16/90)**

Industrial land shall be located in areas appropriate to its special needs and constraints including but not limited to consideration of: topography; choice and flexibility in site selection; access by truck, air or rail; commuter access for home-to-work trips; utilities; air and water quality considerations; proximity to supportive and related land uses; and compatibility with neighboring uses.

Policy 4.1.2: [L] **(Eff. 7/16/90)**

The timing and location of industrial development shall be permitted only with the availability and adequacy of existing or planned services and facilities.

Policy 4.1.3: [L] **(Rev. Eff. 12/23/96; Rev. Eff. 3/14/07; Rev. Eff. 5/31/18)**

~~Industrial development shall be located in such a manner as to prohibit industrial traffic through predominantly residential areas. Land Development Regulations shall address access standards for Industry and Mining uses to protect predominantly residential areas from traffic impacts traffic generated by industrial development.~~

~~*Policy 4.1.4: [L]* (EFF. 7/16/90; REV. EFF. 5/31/18)~~

~~Environmental impacts, infrastructure availability, transportation and land use compatibility criteria, as pictorially depicted on the matrix, shall be major factors in reviewing and approving Industry and Mining Land Uses.~~

~~PUBLIC FACILITIES LAND USE~~

~~Objective 5.1: [L] (EFF. 7/16/90)~~

~~Coordinate the future plans of State government, School Board, the institutions of higher learning, and other applicable entities with this Comprehensive Plan.~~

~~*Policy 5.1.1: [L]* (DEL. EFF. 8/16/07)~~

~~*Reserved*~~

~~*Policy 5.1.2: [L]* (REV. EFF. 7/20/05)~~

~~All proposals to site public schools, including post-secondary schools, shall be reviewed for consistency with the entire Comprehensive Plan. Such reviews shall be made in conjunction with the School Board to promote to the greatest extent possible, opportunities for residential, shopping, employment, education and recreation within walking distance of each other, and to encourage development patterns which reduce trip length and/or the need for private automobile trips.~~

~~Objective 5.2: [L] (EFF. 7/16/90)~~

~~By 1992, establish standards and regulations for the location of public facilities.~~

~~*Policy 5.2.1: [L]* (EFF. 7/16/90; REV. EFF. 4/10/09)~~

~~Develop regulations that will apply to the siting of public facilities and buildings. By 2014, local government shall also develop regulations that ensure the siting of critical facilities from within hazard areas and include provisions for the mitigation of existing critical facilities located in hazard areas.~~

~~*Policy 5.2.2: [L]* (EFF. 12/7/99; REV. EFF. 5/31/18)~~

Land development regulations shall establish the maximum allowable dimension of water distribution pipelines necessary to support urban intensity development. Water distribution pipelines that do not exceed this dimension shall be considered public facilities, necessary to support urban development, and allowed within all land use categories. New water distribution pipelines in excess of the established dimension limit for public facilities shall be considered as industrial uses and shall be required to be located within the Government Operational or Industry and Mining land use category.

Objective 5.3: [L] (Rev. Eff. 7/20/05)

All decisions regarding land requirements for future utility facilities shall be consistent with the goals, objectives, and policies of the plan so as to ensure the availability of suitable land for those facilities.

Policy 5.3.1: [L] (Eff. 7/16/90)

Based on population projections, master plans for future utility facilities shall include an assessment of land needs for those facilities, and the Capital Improvements Element shall be amended, in conjunction with the annual budget processes of the City and the County, to include costs and sources of revenues for those facilities.

Policy 5.3.2: [L] (Eff. 7/16/90)

By 1991, land development regulations shall include regulatory standards for the provision of public facilities.

Policy 5.3.3: [L] (Eff. 8/17/92)

All land uses permitted within the Educational Facilities, Recreation/Open Space, and Government Operational future land use categories shall, upon the transfer of land designated Institutional to an individual or private entity, require a future land use map amendment before any use other than existing, may occur.

Plan Implementation and Procedures
Critical Areas Study

Goal 6: [L] (Eff. 6/28/95)

The City and County will identify existing undeveloped areas within the Urban Service Area that are expected to undergo rapid development on a large scale. Planning guidelines will be developed for these areas on a systematic basis, with the planning implementation mechanism being dependent upon the size of the undeveloped area. By planning for undeveloped areas in a comprehensive manner, a mixture of integrated uses may be provided that are predominantly self-supporting, rather than predominantly dependent on public funding for additional infrastructure, and place a greater emphasis on pedestrian mobility and transportation alternatives. Nothing in this section shall negate the requirement for developments of regional impact to comply with Chapter 380 F.S.

Planned Development
Objective 6.1: [L](Rev. Eff. 12/23/96; Rev. Eff. 11/26/21)

This Future Land Use Category is intended to identify large land holdings that will be developed for various mixes of land uses, resulting in different types of commercial and residential neighborhoods. This category is assigned to large, undeveloped tracts of land for which more detailed planning is required to establish the most appropriate mix and arrangement of uses in accordance with this objective and the related policies. Developments in this category are intended to have a mix of uses that results in greater internal capture of automotive trips and a net fiscal benefit for local governments.

The intensities of development in planned development categories mirror the intensities authorized in the Suburban Future Land Use Category until a Planned Development Master Plan is completed and an amendment reflecting the Planned Development Master Plan is adopted into the Comprehensive Plan.

The mix of uses shall be established at the time of development through the planned unit development processes in accordance with this objective and related policies. Each Planned Development shall include a mix of residential unit types and complementary non-residential uses that, at build-out of the project, result in an internal capture of at least 20 percent of the trips generated by the development.

Policy 6.1.1: [L](Rev. Eff. 12/23/96; Rev. Eff. 3/14/07; Rev. Eff. 11/26/21)

Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership, including contiguous parcels under the same ownership or control, and encompassing more than 200 acres shall be defined as Planned Development Areas. These Planned Development Areas shall require, prior to subdivision or development:

- Allocation of future land uses and intensities through the Comprehensive Plan amendment process in conjunction with approval of the Planned Development Master Plan;

- Approval of a Planned Development Master Plan for development of all contiguous land holdings as an area plan that is consistent with, but not formally adopted as part of the Comprehensive Plan. The Planned Development Master Plan shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development;
- Approval of a PUD, subject to Type D review as specified in the Zoning Code, that is consistent with the Planned Development Master Plan and identifies the specific criteria for development with the Planned Development. PUD approval may be granted in phases where a portion of the property is to be developed at any given time. If a Planned Unit Development is completed and approved for the entire contiguous Planned Development area along with the other Planned Development Master Plan requirements identified in Policy 6.1.2, the Planned Unit Development may serve as the Planned Development Master Plan once reflected in the Comprehensive Plan through a plan amendment.
- To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Planned Development Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, open space, and/or public that are integrated with each other, as well as with the unique characteristics of the Planned Development Area.

*Policy 6.1.2: [L]***(REV. EFF. 6/28/95; REV. EFF. 3/14/07; EFF. 11/26/21)**

Except as provided by Policy 6.1.3, prior to approval of development or subdivision within Planned Development Areas, a Planned Development Master Plan shall be adopted as an area plan that is consistent with, but independent of the Comprehensive Plan. If a Planned Unit Development is completed and approved for the entire contiguous Planned Development area along with the other Planned Development Master Plan requirements identified in Policy 6.1.2, the Planned Unit Development may serve as the Planned Development Master Plan once reflected in the Comprehensive Plan through a plan amendment. The Comprehensive Plan shall be amended concurrently with the Planned Development Master Plan to allocate the mix, locations and intensities of future land uses as well as any public facilities required to serve proposed land uses. No comprehensive plan amendment shall be required if the Planned Development Master Plan is consistent with the Suburban land use category and the Planned Development does not create an inconsistency with the Comprehensive Plan.

The Master Plan shall identify the following:

a) Boundary of area subject to Planned Development;
b) General depiction of mix, location and intensities of future land uses;
c) Activities permitted within each land use;
d) Total dwelling units;
e) Total square footage of non-residential development;
f) How natural resources on-site will be protected;
g) Major transportation system improvements that are consistent with adopted transportation plans and address the impacts to the surrounding area, including canopy roads and required interconnections. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility, and protection of

~~canopy roads, if applicable. The Master Plan will also address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development;~~

~~h) Facilities and development requirements to provide for alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit;~~

~~i) A facilities plan which identifies the type, demand, and general location of needed utilities (including a master stormwater plan) in relation to existing and scheduled utilities in the areas of the development, as well as the location and adequacy of proposed schools, parks and open space;~~

~~j) How the development will reduce transportation demand by allowing for internal trip capture of at least 20% at project build-out through a mixture of uses that includes at least four of the following: residential; commercial; office; recreational, public, open space and light industrial;~~

~~k) How the development will comply with applicable affordable and inclusionary housing ordinances;~~

~~l) How the development will provide for the recreational needs of the community;~~

~~m) How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed;~~

~~n) A phasing plan showing the phasing of future land uses for the area and the minimum and maximum allowable densities and intensities, total dwelling units, and total square footage; and~~

~~o) A set of development guidelines that will direct the development of subsequent site specific development projects as part of a PUD. These guidelines shall address, but not be limited to, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.~~

~~*Policy 6.1.3: [L]*~~ ~~**(REV. EFF. 12/7/99; REV. EFF. 3/14/07)**~~

~~a) A portion of a Planned Development Area not exceeding either 20% of the Planned Development Area or 200 acres, whichever is less, may be developed through the PUD process as established in the LDRs prior to the submittal of a Planned Development Master Plan for the remainder of the Planned Development. This advanced portion must include at least two different land uses (excluding public and recreation) unless the applicant can justify that the parcel size would not support that amount of uses. In this case, the applicant is still required to develop a mixed use project for the advanced portion. As part of the PUD approval, the applicant shall submit a map of all contiguous land holdings. Easements, right-of-way and other improvements located throughout and needed to serve the larger development may be required to be dedicated in conjunction with this development in advance of the Master Plan. This option shall not be used to reduce the overall area below the Planned Development threshold and any development authorized in advance of Master Plan approval must be included in the Master Plan. This option shall not be utilized by subsequent property owners resulting from the use of this option;~~

~~b) It is the intent of local government to allow timely installation of facilities and infrastructure recognized by the City and/or County Commission as being important for the orderly growth of the community. Subdivision of a portion of a Planned Development for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource based recreation use shall not be contingent upon the adoption of a Master Plan and PUD Districts, but the applicant shall be required to submit a management plan to be approved by the local government in lieu of a PUD or site plan. Subdivision and development of a portion of a Planned Development for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan and PUD Districts, but shall be required to follow the review procedures for a PUD. Onsite infrastructure needed primarily for the future development of the Planned Development shall not be included as part of the advance development option provided in this paragraph. The educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.~~

~~*Policy 6.1.4: [L]* (EFF. 12/7/99; REV. EFF. 3/14/07)~~

~~For Planned Developments that are split by an interstate highway that limits integration across the entire development, separate Master Plans and implementing PUDs may be adopted for each side. Subdivision or development of an area on one side of the interstate shall be dependent upon the prior adoption of a Master Plan for that side of the interstate only.~~

~~*Policy 6.1.5: [L]* (EFF. 6/28/95; REV. EFF. 3/14/07)~~

~~Local governments are authorized to adopt Land Development Regulations necessary to implement the Planned Development provisions as set forth in this objective and related policies. Planned Development Master Plans (including major modifications and minor amendments) shall be approved by the governmental entity having legal jurisdiction. The implementing PUDs shall also be approved by that governmental entity having legal jurisdiction for the lands included in the PUD.~~

~~*Policy 6.1.6: [L]* (EFF. 3/14/07)~~

~~The City of Tallahassee and Leon County shall establish a process in their respective land development codes, which provides for review and comment of Planned Development Master Plans by adjacent local governments and the Leon County School Board. The process shall establish for review and comment by state and regional agencies, if appropriate, and a pre-application meeting for City, County, and School Board staff to discuss proposed development impacts; and shall contain time frames for processing a Planned Development Master Plan approval.~~

~~I. Land Use~~

~~*Policy 6.1.7: [L]* **(EFF. 6/28/95; REV. EFF. 3/14/07)**~~

~~Planned Developments which are to be developed at urban densities and provided with urban services shall be considered appropriate for annexation.~~

~~*Policy 6.1.8: [L]* **(EFF. 3/14/07)**~~

~~Those lands included in the Southeast Sector Plan and the Welaunee Critical Area Plan, which were approved consistent with the Critical Area Plan provisions of the Comprehensive Plan, are not subject to this section and are entitled to all uses, densities and intensities set forth in those plans. Any major modifications or increases in overall density/intensities would require these projects to conform to the Planned Development requirements.~~

~~FUTURE PLANNED DEVELOPMENT AREAS~~

~~Objective 6.2: [L]**(EFF. 6/28/95; REV. EFF. 3/14/07)**~~

~~As demands from a rapidly increasing population may require the expansion of the Urban Service Area in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.~~

~~*Policy 6.2.1: [L]* **(EFF. 12/23/96; REV. EFF. 3/14/07)**~~

~~Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development Areas shall be designated such as part of the adopted Future Land Use Map and Zoning Map.~~

DOWNTOWN OVERLAY DISTRICT (EFF. 7/1/94; Objective 9.1: [L] REV. EFF. 1/7/10; REV. EFF. 7/6/15)

Promote revitalization, reinvestment and redevelopment characterized by site design which is pedestrian friendly and contains a mix of land uses which are designed to achieve compatibility.

Policy 9.1.1: [L] (EFF. 7/1/94; REV. EFF. 1/7/10; RENUMBERED 7/6/15)

Within those areas of the overlay that have a Residential Preservation land use designation, the Downtown Overlay designation is not intended to allow the development of nonresidential, or higher density than the Residential Preservation designation.

Policy 9.1.2: [L] (REV. EFF. 1/7/10; RENUMBERED 7/6/15)

Those parcels within the Downtown Overlay (except Gaines Street Corridor Study Area) are eligible to be added to the Central Core FLUM when

- The proposed parcels are contiguous to existing Central Core FLUM area;
- The proposed parcel has all the infrastructure available;
- The proposed parcel has to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the current Central Core FLUM for the proposed development).

Policy 9.1.3: [L] (REV. EFF. 1/7/10; RENUMBERED 7/6/15)

The City shall establish special design standards in this overlay district in order to encourage more urban development. These regulations include but are not limited to:

- Pedestrian oriented design standards;
- Reduced parking requirements;
- Flexibility in landscape, and buffer standards;
- Increased sidewalk and streetscape requirements.

Policy 9.1.4: [L] (REV. EFF. 1/7/10; RENUMBERED 7/6/15)

The City shall adopt Land Development Regulations to establish eligibility criteria (Such as minimum density) for developments in order to receive the incentives allowed under the Downtown Overlay goal.

REDEVELOPMENT

Objective 9.2: [L](FORMERLY OBJ. 1.6; REV. EFF. 1/7/10)

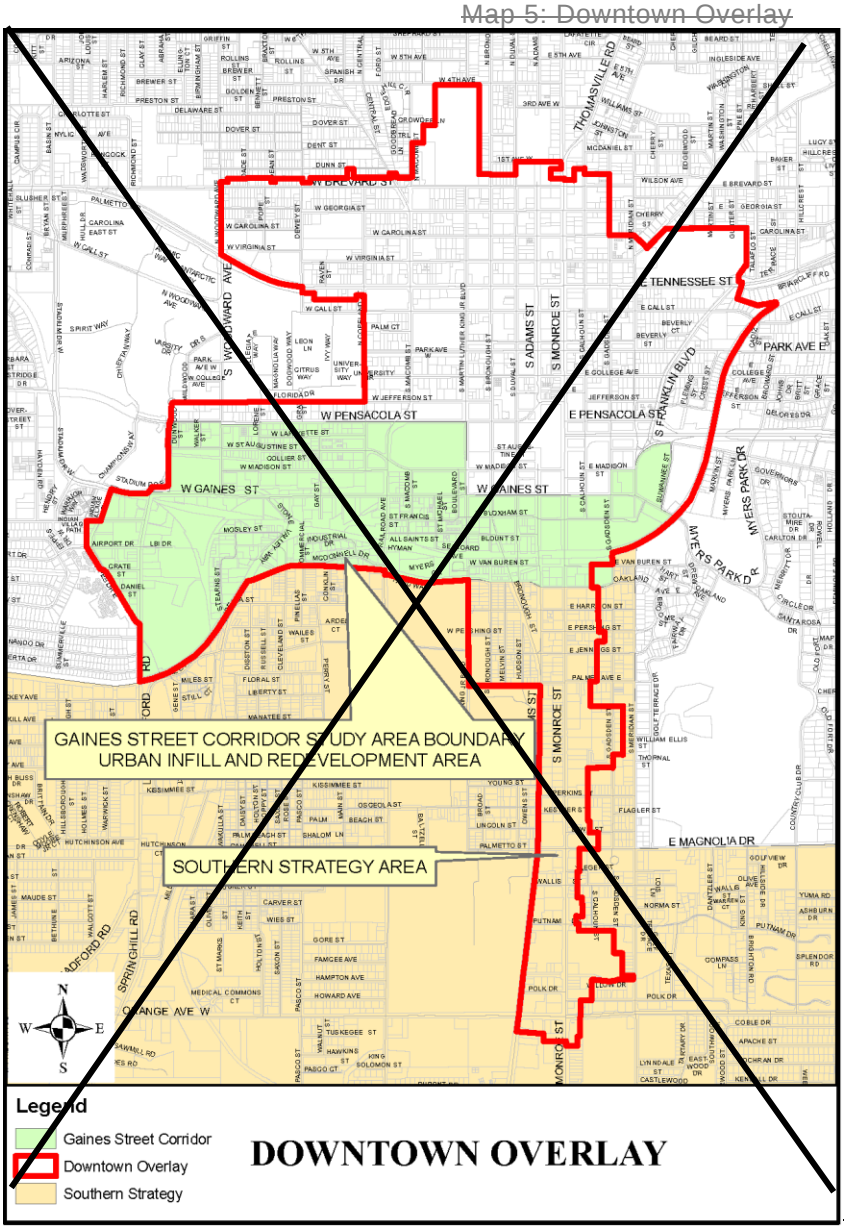
Provide a strategic framework to encourage redevelopment within the City of Tallahassee. The strategies should be implemented in such a manner as to convey an economic

advantage for redevelopment without compromising the urban design and environmental quality of the community.

Policy 9.2.1: [L] **(EFF. 6/28/95; REV. EFF. 1/7/10)**

As part of the Redevelopment Strategy, the Gaines Street Corridor Study Area is designated as an Urban Infill and Redevelopment Area for the purpose of targeting economic development, housing, transportation, community revitalization and preservation, and land use incentives to encourage urban infill and redevelopment within the urban core of the community. This area is depicted on the Downtown Overlay map as "Gaines Street Corridor Study Area Urban Infill and Redevelopment Area."

Policy 9.2.2: [L]



Reserved

Policy 9.2.3: [L] **(EFF. 12/8/00; FORMERLY POL. 1.6.4; REV. EFF. 1/7/10)**

For the Gaines Street Corridor Study Area the maximum density permitted is 100 dwelling units per acre. Densities within specific districts may be further restricted based on the Gaines Street Revitalization plan.

~~I. Land Use~~

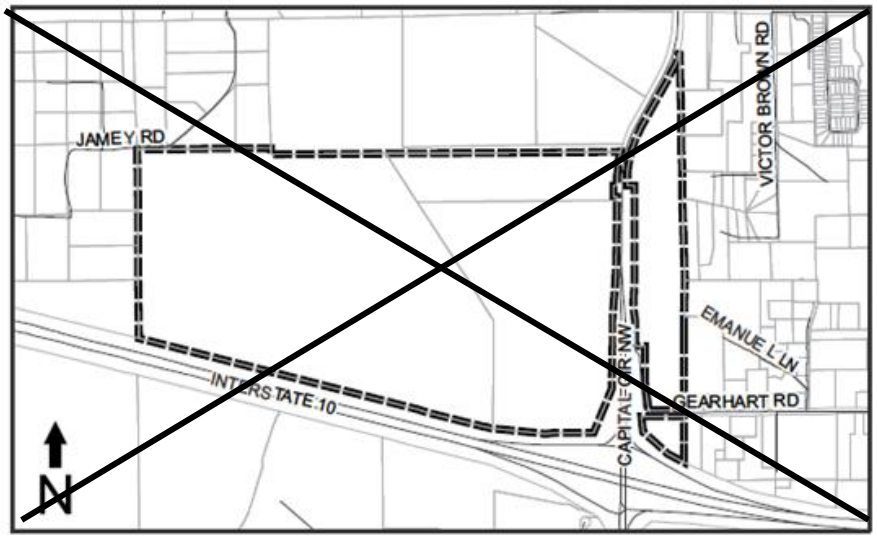
~~Map 5: Downtown Overlay~~

~~DRI THRESHOLDS FOR A REGIONAL ACTIVITY CENTER~~

~~Objective 9.3: [L] (EFF. 1/7/10)~~

~~To encourage functional mixed use development, and to encourage revitalization and redevelopment, the Commissions may choose to designate specific land as a statutory "Regional Activity Center" (RAC), pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C., to allow development of the specified land at greater density and intensity without necessarily obligating the developer to proceed through the Development of Regional Impact (DRI) process.~~

I. Land Use



Policy 9.3.1: [L] **(EFF. 1/7/10)**

After the City of Tallahassee or Leon County designates a statutory Regional Activity Center (RAC, pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C.), subsequent development approvals will include requirements for developers to provide necessary transportation system, drainage, protection of environmentally sensitive areas as defined in the Conservation Element, and utility infrastructure to support the RAC densities and intensities.

Policy 9.3.2: [L] **(EFF. 8/9/12)**

It is the intent of the local government to designate Park Place as a Regional Activity Center pursuant to Objective 9.3 [L] to use the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code. Park Place meets the parameters for a Regional Activity Center as defined in Section 380.06(2)(e), Florida Statutes, and in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the following map. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan.

Map 6: Park Place Activity Center

SOUTHEAST SECTOR PLAN

Objective 10.1: [L] - Southeast Sector Plan (EFF. 5/20/96; REV. EFF. 8/25/08)

In keeping with the City's and County's commitment to promote the Southern Strategy, and to satisfy the Comprehensive Plan requirements for a comprehensive development plan for the Southwood property within the urban service area, the local governments hereby adopt the Southeast Sector Planned Development, known as the Southeast Sector Plan, that is consistent with Objective 6.1 [L] and its associated policies and with the Comprehensive Plan's Urban Service Area policies, that promotes innovative planning, promotes compact development strategies and protects the natural resources of the area. This plan shall contain design standards that promote compact commercial development, walk to shopping, higher density housing in close proximity to offices, commercial uses and employment centers. The same attention will be given to alternate modes of transportation and pedestrian mobility as is given to automobile transportation. Innovative ways may be developed to protect natural resources, the major focus being on the continued protection of conservation and preservation areas within the Southeast Sector Planning Area (Figure 10.A).

Policy 10.1.1: [L] - Southeast Sector Plan Overview **(REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)**

The Southeast Sector Plan is hereby developed for an area in southeast Tallahassee and Leon County (see the Southeast Sector Planning Area map, Figure 10.A). For the Southwood, Colin English Properties, and the former Southside DRI lands, the Southeast Sector Plan shall constitute the Planned Development Master Plan consistent with Objective 6.1 [L] and its associated policies.

The following densities, intensities and development standards are hereby established for the Southeast Sector Planning Area:

A. Percent Mix of Land Uses Required:

The following percent mixes of land uses shall be required for the Southeast Sector Planning Area. The percentages shall be applied separately to both Southwood and the Colin English properties. In addition, the percentages shall also be applied separately to the former Southside DRI properties outside of Southwood within the Southeast Sector Plan.

(1) 40-60% of the land area in residential development

(2) 10-30% of the land area in commercial, office and/or industrial development

(3) 10-15% of the land area in community facilities/services and utility easements and recreational facilities.

(4) 20-30% of the land in open space/greenways. Open space shall comprise a minimum of 22% of each of the Southwood PUD and Colin English properties.

B. Densities and Intensities:

(1) The maximum densities and intensities for development within the Southeast Sector Planning Area are established in Policy 10.1.2.

C. Phasing:

(1) The Southeast Sector Planning Area will be permitted to develop in phases.

(2) Southwood has an approved Development of Regional Impact DRI development order and Planned Unit Development PUD zoning. These approvals establish the development entitlements and master plan for the Project. For this reason, the Southwood entitlements and development phasing are not identified in Table A below. The maximum and minimum densities and intensities for the Implementing Land Use Districts for Southwood are established in Policy 10.1.2.

(3) Additional development beyond Phase I of the English lands shall require a comprehensive plan amendment supported by adequate data and analysis if the Phase I lands (approximately 601 acres) have not been built consistent with the mix of uses established herein.

(4) No particular percent mix of uses within Phase I for the English properties will be required to meet or exceed the percent requirements for the total Southeast Sector Plan acreage and percentage of mix amounts.

TABLE A: ENGLISH PROPERTY DENSITIES, INTENSITIES AND PHASING **(REV. EFF. 8/25/08; REV. EFF. 11/26/21)**

	Maximum Residential Units	Minimum Residential Densities	Maximum Non-Residential	Hotel	Hospital
Phase I					
Colin English Phase I (603 acres)	6,030	As required by Policy 10.1.2 [L]	3,606,000 GSF		
Phase II					
Colin English Phase II (458 acres)	4,580	As required by Policy 10.1.2 [L]	2,740,000 GSF		

Notes:

The Colin English Property densities and intensities are those found within the Suburban Land Use Category consistent with Objective 6.1 [L].

D. Land Use Location Criteria:

(1) Industrial development, if constructed, is to be located in the southwest quadrant of the Southeast Sector Planning Area, primarily utilizing Tram Road and Capital Circle. Industrial development is not required in this quadrant; therefore, the quadrant may have no industrial development at buildout.

(2) Office development, and commercial (retail/possible hotel) uses to be located primarily in the northwest quadrant of the Southeast Sector Planning Area (English property, primarily utilizing Blair Stone Road) and surrounding the Capital Circle Office Center.

~~(3) Medium Density Residential to be located primarily, but not solely limited to areas adjacent to the Capital Circle Office Center and interspersed with office development in the northwest quadrant. Priority shall be given to areas adjacent to the Capital Circle Office Center.~~

~~(4) Low Density Residential to develop primarily in the northeast quadrant of the Southeast Sector Planning Area (Old St. Augustine Road vicinity), and secondarily in the northwest and southeast quadrants (perhaps as golf course communities).~~

~~(5) Large Lot Single Family Residential development to develop primarily in, but not limited to, the southeast quadrant of the Southeast Sector Planning Area;~~

~~(6) Community Facilities and Services to be located within each quadrant of the Southeast Sector Planning Area;~~

~~E. Affordable Housing:~~

~~Development must comply with applicable affordable and inclusionary housing ordinances.~~

~~F. Additional Requirements:~~

~~(1) A school site parcel for an elementary school at thirty (30) acres shall be set aside on the English Property, based on a projected build-out population of approximately 30,000. One elementary school shall be located on the English property and the other two schools shall be located on the Southwood property, provided that each of the public school sites on the Southwood property may be the location of a pre-kindergarten through grade 8 facility with the agreement of the Leon County School Board. The school site shall be located proximate to residential areas and shall be collocated with other compatible public facilities to the extent possible.~~

~~(2) In accordance with community wide requirements of the Comprehensive Plan, the Capital Improvements Element shall be amended to reflect the 5 year plan for the provision of urban services in accordance with this sector plan.~~

~~(3) Parcel # 31-03-20-602-000-0 and that portion of parcel # 31-11-20-001-000-0 which is directly south of parcel #602 shall be designated as low density residential and be limited to no more than three units per acre.~~

~~(4) No additional acreage within the Urban Service Area may be added to the Southeast Sector Planning Area except by a Comprehensive Plan Amendment. Any addition to the Southeast Sector Planning Area must be in conformance with the guidelines and standards of the Southeast Sector Plan Objective 10.1 and implementing policies 10.1.1 through 10.1.7.~~

~~*Policy 10.1.2: [L] SESP Implementing Land Use Districts* **(REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)**~~

I. Land Use

The Southeast Sector Planning Area shall be developed utilizing the following implementing PUD districts that allows a range of types of residential, commercial, office and industrial uses with varying densities and *intensities*:

(A) NEIGHBORHOOD VILLAGE CENTER - VC

Designed to serve as the center of the neighborhood, and discourage commercial strip development and sprawl along roadways.

- Each Village Center shall have a consistent design theme and complementary palate of materials.
- Village centers shall provide ample open space to allow for community gatherings or public events.
- Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

TNDs (Traditional Neighborhood Districts) and VCs (Village Center) implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial village center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan.

Development in the VCs may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or a VC in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the VC district. Local government shall conduct an environmental assessment at the time of an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in a TND or VC district prior to designating the boundaries of conservation and preservation areas, if present, within a TND or VC to determine the extent and location of conservation and preservation features. TNDs and VCs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

Allowed Uses:

- Community facilities: Community Services and Light Infrastructure
- Office uses
- Commercial land uses
- Residential uses in conformance with the Medium Density standards
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8
- Assisted Living Facilities

~~I. Land Use~~

~~Residential Densities:~~
~~Minimum Density 4 DU/AC~~
~~Maximum Density 16 DU/AC~~
~~Maximum Floor Area Ratio:~~

~~1.0 for parcels larger than 20,000 sq. ft.~~
~~2.0 for parcels 20,000 sq. ft. or smaller~~

~~Minimum Floor Area Ratio:~~
~~0.5 F.A.R.~~

~~Clustering may be permitted provided maximum densities are not exceeded.~~

~~(B) TRADITIONAL NEIGHBORHOOD DISTRICT - TND~~

~~Location mix and configuration of land uses are designed to encourage alternatives to automobiles and provide more identifiable pedestrian-friendly neighborhoods. More restrictive planning and architectural standards will be applied in order to maintain traditional town form.~~

~~TNDs and VCs implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial Village Center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan. The specific development criteria and phasing for the TNDs and VCs shall be included in the LDRs and be determined by local government.~~

~~TNDs will locate close to Village Centers, parks and recreation, employment; allow for a variety of housing types which promote increased density; use energy saving concepts in block and building designs; be located within close proximity to Village Centers, High Intensity Urban Centers and Mixed Use Office Parks; and be designed for bicycle and pedestrian accessibility.~~

~~Allowed Uses:~~
- ~~Community facilities: light infrastructure.~~
- ~~Restricted to mid-rise, multi-unit townhouses and row houses, attached residential units and single-unit townhouses and row houses.~~
- ~~Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.~~
- ~~Accessory commercial use which is subordinate to the principal residential use.~~
- ~~Specific densities and intensities, ratio of uses and implementation criteria shall be contained in the zoning code.~~

~~Residential Densities:~~
~~Minimum Density 4 DU/AC~~
~~Maximum Density 16 DU/AC~~

~~Clustering may be permitted provided maximum densities are not exceeded.~~

Development in the TNDs may obtain a waiver from the requirements in the EMO and EMA for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements, provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or VC in order to promote a compact pedestrian oriented arrangement of land uses except in situations where alternative sites for stormwater are available consistent with the intent of the TND district. Local government shall conduct at the time of an application for development or prior to rezoning, consistent with Conservation Policy 1.1.1 in a TND or VC district, an environmental assessment prior to designating the boundaries of conservation and preservation areas, if present, within a TND to determine the extent and location of conservation and preservation features. TNDs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

(C) MEDIUM DENSITY RESIDENTIAL - MDR

Provides moderate-density housing located within walking and biking distance of civic facilities, retail, schools and employment.

- Design of MDR shall use energy saving concepts and maximize roadway connections.
- Elementary schools shall be provided within close proximity and land will be reserved.
- All collectors and arterials shall have bike and pedestrian paths.
- It is the intent to have bike and pedestrian facilities as important as automobiles in regard to mobility when designing MDR areas.

Allowed Uses:

- Multi-family residential.
- Single-family attached and detached residential.
- Golf courses and recreation facilities.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure.
- Community parks and recreation areas shall be located within close proximity to the residential uses.
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood and the design, parking, and signage should reflect this intent.
- Assisted Living Facilities

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 20 DU/AC

Clustering may be permitted provided the maximum density is not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(D) Low Density Residential - LDR

Provides for low-density residential units which are not necessarily convenient to shopping and employment areas. Density shall be between 2 to 8 units per acre.

Allowed Uses:

- Detached and attached single-family residential
- Parks, golf courses, recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood, and the design, parking and signage should reflect this intent.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 8 DU/AC

Clustering may be permitted provided the maximum densities are not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(E) Large Lot Single Family Residential - LSF

Provide single-family residential uses in keeping with the rural character of outlying areas. This category is most likely not located conveniently to shopping and employment. Minimum size of lots will be 1/3 acre; maximum size of lots shall be 5 acres.

Allowed Uses:

- Detached single-family residential
- Golf courses and recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure.

Residential Densities:
Minimum Density 1 DU/5 AC
Maximum Density 3 DU/AC
Clustering may be permitted provided maximum densities are not exceeded.

(F) Mixed Use Office/Commercial - MUOC

Provides for higher-intensity commercial uses that are more intense than uses located in Village Centers. Intended as activity centers and shall include public plazas and other amenities.

- Uses and intensities shall be designed for maximum internal capture of shopping and business trips.
- Maximum pedestrian accessibility internal to the office/commercial centers.
- Centers shall be designed to blend with TND/MDR districts.
- Provide mass transit accessibility if transit is available, and
- May have regional stormwater facilities.

Allowed Uses:

- Community facilities: community services, light infrastructure and post-secondary educational facilities
- Community Commercial uses (100,000 to 200,000 square feet)
- Regional Commercial (200,000 to 1 million square feet)
- Office- Allows office uses 10,000 square feet or greater. The intent is to allow commercial and service-oriented uses as an accessory use within an office building.
- Medium Density Residential in association with nonresidential uses.
- Hotels
- Medical facilities and institutional uses, including assisted living facilities. Hospitals may be permitted if based on design criteria such as access and building scale in relation to adjacent uses, as described in the LDRs.
- Golf Courses
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Maximum Floor Area Ratios:
2.0 F.A.R.

(G) MIXED USE INDUSTRIAL - MUI

Provides for the location of manufacturing, warehouses, distribution centers, and research and development uses, with some commercial uses allowed that are designed to accommodate the needs of the industrial park work force.

- Commercial uses shall be provided within walking distance of work place.
- Equal access for mass transit, automotive, bicycle and pedestrian modes of transportation shall be provided.

Allowed Uses:

- Community facilities
- Light and heavy industrial
- Research and development
- Showroom warehouses
- Office associated with industrial and distribution uses
- Retail designed to serve the work force of the industrial park
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Maximum Floor Area Ratios:
1.0 for nonresidential uses

(H) OFFICE/RESIDENTIAL

The Office/Residential district shall contain a variety of office and residential uses that range from duplexes to townhouses to multi-family. The residential uses will be integrated with the office development. The Office/Residential district shall be located in areas where there is access to collector and arterial roadways, and where the emerging development pattern is not predominantly low-density residential. In order to provide for a more pedestrian-friendly environment that efficiently utilizes land area and provides for interaction between the uses, large expanses of surface parking will be discouraged in favor of shared parking, mid-block parking, and parking garages. Provision will be made to serve this district with mass transit. Commercial uses may be permitted as ancillary uses to the office uses and located within office buildings.

Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Allowed Uses:

- Community facilities: community services, light infrastructure, and post-secondary
- Office uses- not to exceed 300,000 sq. ft.
- Commercial uses- not to exceed 10,000 sq. ft., contained within office building.
- Hotels- May be permitted based on design criteria such as access and scale of the building in relation to adjacent uses, as described in the LDRs.

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC

Floor Area Ratio (F.A.R.):
Maximum F.A.R. of .25 for parcels greater than 20,000 sq. ft.
Minimum F.A.R. of 1.0 for parcels smaller than 20,000 sq. ft.

(I) SOUTHWOOD TOWN CENTER - TC

Designed to serve as the pedestrian-oriented urban center of Southwood, containing a wide range of commercial, entertainment, residential, office and community services at urban intensities.

Development in the TC district may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for the TC district shall be designed in accordance with applicable standards and shall be located outside of the TC district in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the TC district. Local government shall conduct an environmental assessment at the time of

an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in the TC district prior to designation of the boundaries of conservation and preservation areas, if present, within the TC district, to determine the extent and location of conservation and preservation features. The TC district shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

Allowed Uses:

- Commercial, including retail, entertainment and hotel uses.
- Residential, including assisted living, at the full range of densities in LDR and MDR. Residential uses may be collocated with compatible nonresidential uses in the same buildings.
- Office.
- Institutional.
- Community Facilities, such as police/fire stations and churches.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Mixture of Uses:

Development within the TC district shall include a mixture of uses consistent with the following minimums:

- 60,000 square feet of commercial
- 200 residential units

Additional development may include any other uses permitted in the TC district, such as office, institutional/community facilities, medical and assisted living facilities. Maximum development shall be limited by the allowable densities and maximum Floor Area Ratios (FAR).

Residential Densities:

Minimum Density 2 DU/AC (no minimum density for residential uses second story and above for commercial or office uses)
Maximum Density 20 DU/AC

Specific densities and intensities, ratio of uses and implementation criteria, including standards to promote pedestrian-scale mixed-use development, will be included in the zoning code.

Maximum Floor Area Ratio:

2.0 F.A.R.

Minimum Floor Area Ratio:

0.25 F.A.R.

(J) MIXED USE EDUCATIONAL/INSTITUTIONAL - MUEI

I. Land Use

Provides for educational, institutional and civic uses, and related activities including residential, which includes assisted living, office, sports and recreation, and related commercial uses, which include inns and hotels.

Allowed Uses:

- Schools, colleges and universities, museums, and civic facilities.
- Residential, including assisted living at the full range of densities in LDR and MDR.
- Sports and recreation facilities.
- Related supporting commercial facilities, including office, retail, inns and hotels.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 20 DU/AC

Maximum Floor Area Ratio:
1.0 F.A.R.

Minimum Floor Area Ratio:
0.25 F.A.R.

(K) HISTORIC HOUSE OVERLAY (HHO)

The existing main house on the Southwood property is a historical resource within the Southeast Sector Planning Area. In order to preserve the character of the house and its grounds while providing for its future use as a component of the development in the Southeast Sector Planning Area, the Southwood PUD shall establish an overlay zoning district on the house and surrounding grounds. The allowable uses within the overlay district shall be those uses allowed within the LSF district. The following additional uses shall also be allowed within the HHO district so long as the design is compatible with the surrounding LSF uses and the historic nature of the house:

- Bed and Breakfast Inn
- Restaurant
- Conference Center

Policy 10.1.3: [L] Transportation **(REV. EFF. 7/7/99; REV. EFF. 11/26/21)**

Transportation guidelines for the Southeast Sector Plan shall be as follows:

Transportation systems shall be designed to promote alternatives to single-occupancy vehicle travel and to capture internal trips. Emphasis will be placed on designing commercial, office, employment and higher-density residential areas to be pedestrian and bicycle friendly. Emphasis will also be placed on alternative transportation modes.

(a) Right of way shall be planned and dedicated for the ultimate laneage needed based on total build-out of the plan.

~~I. Land Use~~

~~(b) If mass transit is available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan, Mass transit routes shall be included along major roadways in coordination with Star Metro.~~

~~(c) All land development shall provide for bicycle and pedestrian modes of transport.~~

~~(d) Traffic calming devices will be utilized along roadways in areas with high pedestrian activity.~~

~~(e) Access to canopy roads can only be permitted for uses other than medium or high density residential uses, commercial, office uses, and then only if there is no access to an alternative roadway and one cannot be secured. New access points must be configured to share access.~~

~~(f) Access management standards will be developed and implemented for all roadways.~~

~~(g) Use of roundabouts will be encouraged at intersections.~~

~~(h) A 100 foot tract on both sides of the centerline of Old St. Augustine Road shall be dedicated to the City of Tallahassee along the entire length of the property in excess of 200 acres in common ownership adjoining Old St. Augustine Road between Capital Circle and the Urban Service Area boundary. For properties in common ownership in excess of 200 acres, access to Old St. Augustine Road within the Southeast Sector Study Area will be limited to the following: 1) the tract of land referred to in Section I of Policy 10.1.2; 2) a new north-south roadway up to 1/2 mile west of Southwood Plantation Road. This intersection with Old St. Augustine Road will be a four-way stop unless a more efficient design can be developed that provides the maximum protection for the canopy on Old St. Augustine Road; 3) Southwood Plantation Road.~~

~~(i) The recommendations that are produced by the Scenic Vista and Conservation Easement Acquisition Plan will be taken under advisement by the developer when designing development adjacent to Old St. Augustine Road.~~

~~(j) The Transportation Element will be amended to reflect the transportation network needed to serve development within the Southeast Sector Planning Area.~~

~~(k) Any alignment of a limited access roadway/parkway shall be required to follow the Comprehensive Plan amendment process and be consistent with the Long Range Transportation Plan.~~

~~(l) In order to protect the traffic capacity of Capital Circle within the Southeast Sector Planning Area, the Capital Circle Access Points plan is established and shall be implemented by LDRs. Subdivisions adjoining Capital Circle shall not allow creation of parcels with sole access to Capital Circle (see Figure 10.B).~~

~~I. Land Use~~

~~*Policy 10.1.4: [L] - Open Space/Greenways* **(REV. EFF. 7/7/99)**~~

~~The Southeast Sector Plan shall contain a pooled open space/greenway concept that will contain the majority of the open space requirements within a connected corridor. The following guidelines will be used in mapping the open space/greenway corridor:~~

~~(a) All conservation and preservation areas within the Southeast Sector Planning Area shall be mapped and protected consistent with Conservation Objective 1.3 and its implementing policies. In addition, the mapping of the open space/greenway corridor shall consider the location of conservation and preservation areas, except significant grades. Interconnected areas that best protect the conservation and preservation features of the area and provide open space will be included in the open space/greenway corridor. Consistent with the supporting data and analysis, such corridors shall constitute at least twenty-two percent of the Southeast Sector Planning Area. The City and the County will make all efforts to connect open space and greenways outside the Southeast Sector Planning Area to the open space/greenway system within the Southeast Sector Planning Area.~~

~~(b) Conservation and preservation areas shall be protected as required by the Comprehensive Plan.~~

~~(c) The mapped open space/greenway area will be generally mapped for the sector plan. Field verification of the exact delineation shall be conducted by a qualified biologist and approved by the Growth Management Department that has jurisdiction at the time development permits are sought.~~

~~(d) The following uses will be allowed and designated in the mapped open space/greenways areas:~~

~~(1) Passive recreation - Improvements that are natural resource-oriented, such as hiking and biking trails, boat landings and passive parks, may be constructed in passive recreation areas. Public access will be assured in designated passive recreation areas.~~

~~(2) Stormwater management facilities may be located in designated open space areas. This does not preclude the possible locating of stormwater facilities in preservation or conservation areas. Each facility and site must be evaluated individually in terms of impacts. The beneficial functioning of each preservation or conservation area is to be preserved. All stormwater facilities must meet the requirements of the EMA and EMO and must be consistent with the comprehensive plan.~~

~~(3) Wildlife management areas.~~

~~(4) Public roadways and utilities may cross through these areas if no alternative route can be secured.~~

~~(5) Golf courses (active recreation) are not permitted in conservation/preservation areas or in open space/greenways, but they may abut open space/greenways and conservation and preservation areas. Golf courses may cross these areas so long as the crossing does not adversely affect such areas and is consistent with the comprehensive plan.~~

All open space/greenway corridors shall have a management plan approved by the local government with jurisdiction that maintains these open space/greenway areas to protect the values for which these areas were designated. This may include but not be limited to: aesthetic open space, wildlife habitat, interconnection, preservation of floodplains and protection of conservation and preservation areas.

(c) Open space/greenway corridors may be privately owned or dedicated to the public by conveyance to a general or special purpose local governmental entity, or be designated as part of the statewide system of greenways and trails pursuant to State law. Privately owned, open space/greenway corridor areas shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development.

It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas with proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

Policy 10.1.5: [L] – Interrelationships **(REV. EFF. 7/7/99; REV. EFF. 8/25/08)**

The interrelationship between the sector plan, the Comprehensive Plan, and the implementing PUDs is defined as follows:

- The Southeast Sector Plan shall focus on land use decisions that avoid the promotion of strip commercial development along arterial roadways. The implementing PUDs for this sector plan shall be designed to avoid strip commercialization of arterial roadways. The sector plan shall reflect land uses along arterials, which do not promote strip commercial development.
- An objective and policies setting the guidelines for the development of the Southeast Sector Planning Area shall be adopted into the Comprehensive Plan.
- Within the implementing PUDs the Southeast Sector Planning Area may contain architectural controls, densities, intensities and criteria specific to each implementing PUD district provided for in Policy 10.1.2 [L].
- Specific criteria related to development districts, transportation, access management, architectural controls and specific development standards will be contained within the applicable LDRs implementing PUDs.
- The mapped open space requirements will count as the open space required in the EMO/EMA. Any open space dedicated outside the mapped area must meet all EMO/EMA requirements. The 10% site design alternative of the EMO/EMA will not be allowed in the Southeast Sector Planning Area

- ~~Parcels that contain significant grades may be developed as long as best management practices are used, such as off-grade construction, minimum-grade changes and structures designed to accommodate the slopes.~~
- ~~All land uses that border the study area shall be consistent with the adjacency requirements in the Comprehensive Plan.~~
- ~~Access to canopy roads can only be permitted for low-density or large-lot single-family residential uses and only if there is no access to an alternative roadway and one cannot be secured. Roadways within the Southeast Sector Plan will be designed so that access to canopy roads will not be necessary.~~
- ~~With the approval of the regulating authority, individual small closed basins within the DRI boundary may be aggregated into larger closed basin perimeters. The closed basin requirements of the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) will apply within these larger closed basin areas, however, the Developer will have the flexibility to convey water between the smaller depressions within the boundary of the individual aggregated closed basin perimeters. Inter basin transfers out of any aggregated closed basin perimeter will not be allowed without a variance from the inter basin transfer restrictions in the EMO/EMA. Such a variance may be approved only if condition (c) of (3) of subsection 4.2.(3)(c) of the EMO/condition (c) of Article VII Section 10-188 of the EMA is met. If the receiving basin is itself a closed basin, pre/post volume control and all other closed basin requirements of the EMO/EMA will apply to the receiving basin.~~
- ~~The applicant may request approval for a minor amount of development that may proceed prior to the issuance of the final development order. This development will consist of a sales office, limited commercial/office development and a limited number of model homes. This area will not exceed 25 acres (exclusive of right of way) and will meet access, environmental and Comprehensive Plan policy requirements. The specific amount of development that can occur pursuant to this policy shall be identified in the DRI Development Order.~~

~~*Policy 10.1.6: [L] – Implementation*~~ ~~**(Eff. 5/20/96; Rev. Eff. 8/25/08)**~~

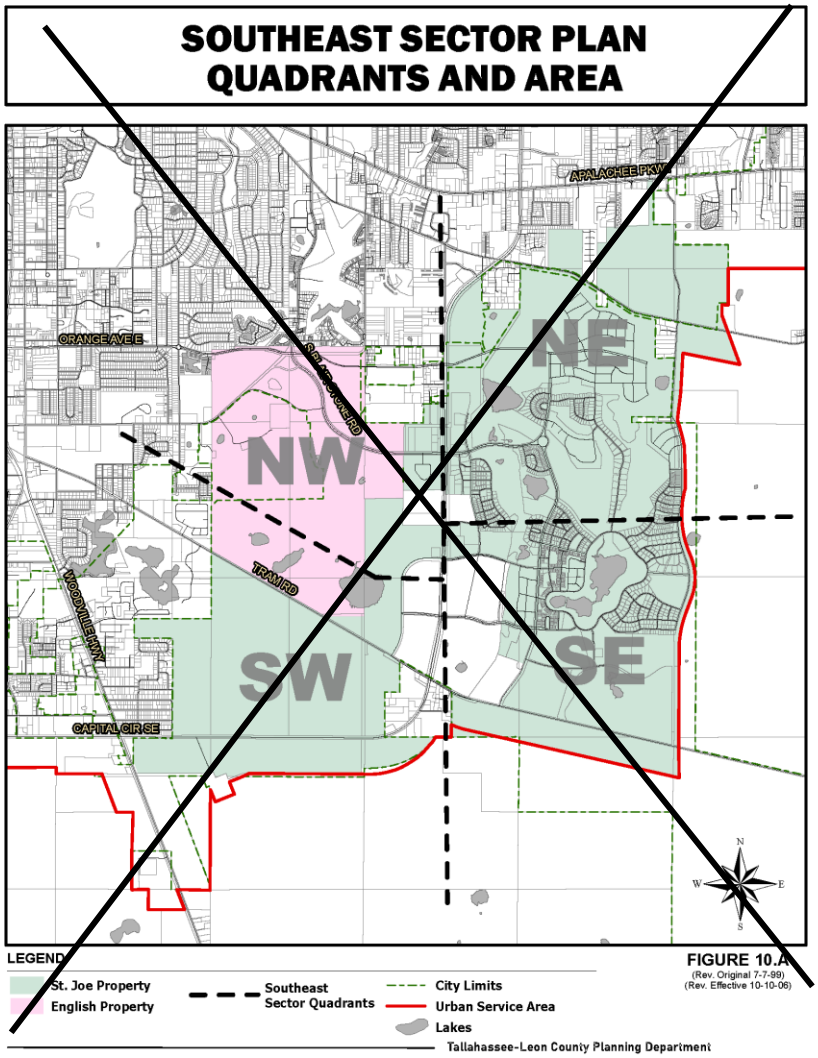
~~A framework for detailed implementation of the development standards and requirements will be contained in the implementing PUDs. They shall include but not be limited to:~~

- ~~Detailed definition of each district area in the zoning code. Also included will be design, development, transportation and density requirements for each district in sufficient detail to accomplish the intent of each district.~~
- ~~Detailed criteria developed in order to adequately implement all the bicycle, pedestrian, access management and roadway design guidelines listed in the transportation guidelines policy (10.1.3).~~
- ~~Access management criteria developed and implemented through the zoning code. It shall address access for all modes of transportation and shall include but not be limited to pedestrian, bicycle, mass transit, emergency vehicle, disabled, and car/van pooling.~~

- Unless otherwise specified in the Southeast Sector Plan amendment, the procedures and requirements in the Comprehensive Plan will be applicable to this area.

Policy 10.1.7: [L] - Specific Southeast Sector Land Development Regulations **(EFF. 5/20/96)**

The LDRs related to specific requirements will be amended to reflect any criteria or requirements related to environmental constraints specific to the Southeast Sector Plan guidelines, as adopted in the Comprehensive Plan.



Policy 10.1.8: [L] - Agriculture and Silviculture Uses **(REV. EFF. 7/7/99)**

It is the intent of the requirements in this amendment to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Southeast Sector Planning Area.
(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Southeast Sector Planning Area, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or subdivision plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the subdivision or site plan and to all land included in these parcels, such as land proposed to serve as buffer or open space.
(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Southeast Sector Planning Area in accordance with "1993 Silviculture Best Management Practices," Florida Department of Agriculture and Consumer Services, or its successor, and existing local government ordinances.
(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

~~Southside Action Plan~~

~~Goal 11: [L] – Southside Action Plan (Eff. 8/5/23)~~

~~A plan shall be developed and monitored to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this goal, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the~~

Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Objective 11.1 [L] – Beautification(Eff. 8/5/23)

Beautify and enhance both public and private spaces across the Southside Action Plan area by improving maintenance and increasing investment.

Policy 11.1.1: [L] (Eff. 8/5/23)

Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Objective 11.2: [L] Investment (Eff. 8/5/23)

Direct collaborative efforts of both the public and private sectors towards an increase of homeownership, diverse development and redevelopment types, business variety, and infrastructure in the Southside Community.

Policy 11.2.1: [L] (Eff. 8/5/23)

Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public.

Policy 11.2.2: [L] (Eff. 8/5/23)

Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

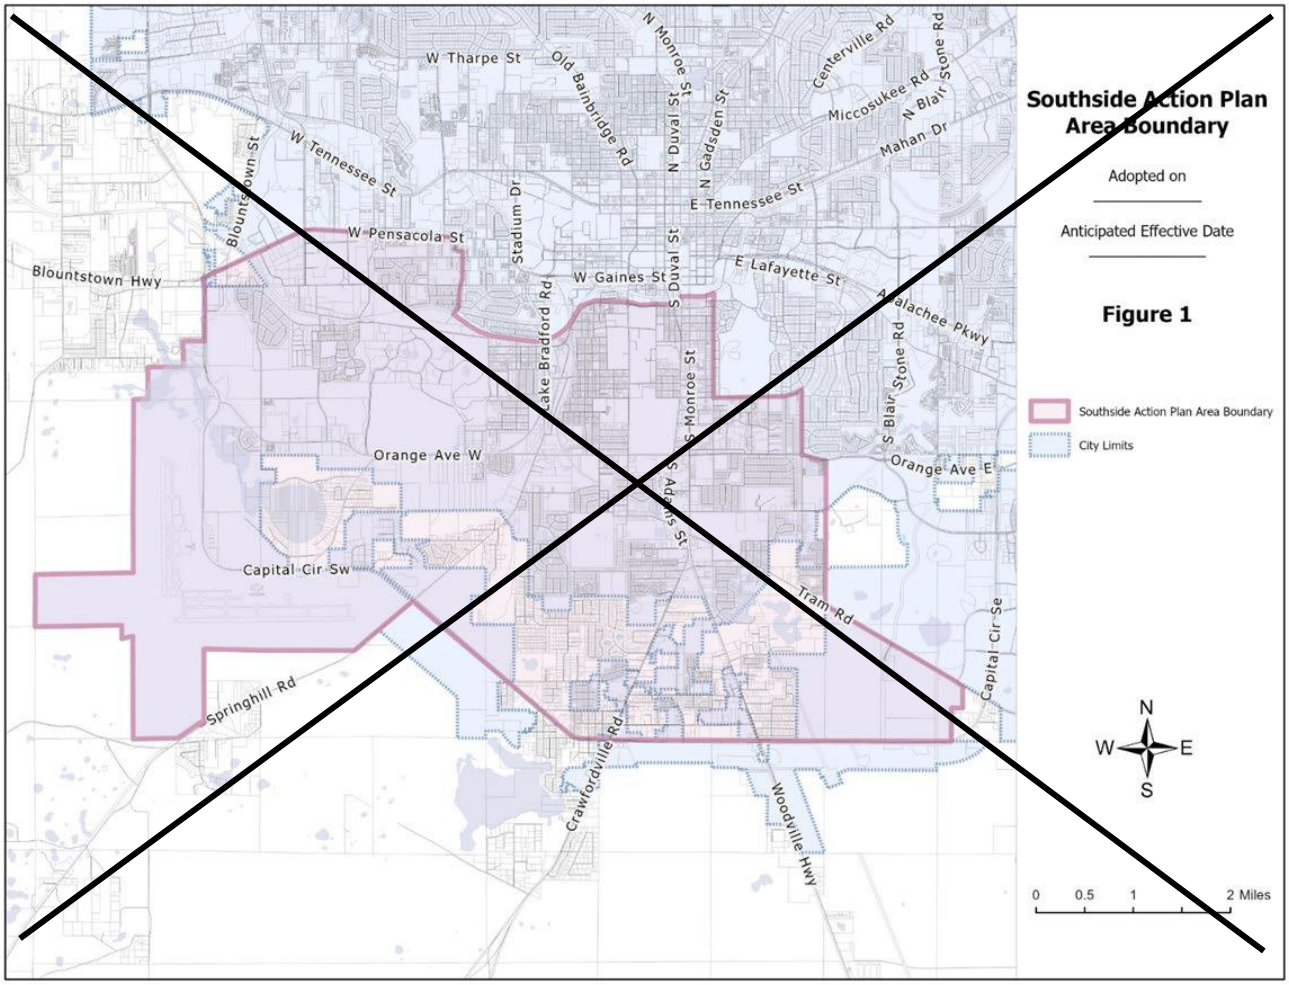
Objective 11.3: [L] Engaged and Activated Citizens (Eff. 8/5/23)

Foster community involvement and celebration of the Southside.

~~I. Land Use~~

~~*Policy 11.3.1: [L]* **(EFF. 8/5/23)**~~

~~Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.~~



~~Objective 11.4: [L] Southside Action Plan Evaluation and Update; Relation to Other Goals, Objectives & Policies(EFF. 8/5/23)~~

~~*Policy 11.4.1: [L]* **(EFF. 8/5/23)**~~

~~The Tallahassee-Leon County Planning Department will monitor project implementation of the Southside Action Plan by reporting annually on Objective 11.1, 11.2, and 11.3; in coordination with the Leon County and the City of Tallahassee strategic plans.~~

~~*Reserved*~~

~~CENTRAL CORE AREA (DEL. EFF. 4/10/09)~~

Welaunee Critical Area Plan

Goal 13: [L] (Eff. 12/10/02)

Guide planned development within the Welaunee Critical Planning Area through implementation of a critical area plan which includes a mixture of integrated land uses that are predominantly self-supporting rather than dependent upon public funding, places a greater emphasis on pedestrian mobility and transportation alternatives, provides new employment opportunities near major transportation arteries and protects natural systems in an urbanized setting.

Objective 13.1: Planned Development through 2020 (Eff. 12/10/02)

By 2020, the Welaunee Critical Planning Area may develop in the portions which are south of Interstate 10 ("Toe") and south of Miccosukee Road and north of U.S. 90 ("Heel") with a development pattern that includes predominantly walkable neighborhoods, mixed-use centers, a major employment center, diversity of housing choices, protection of conservation and preservation areas, and a transportation system which accommodates both vehicular and non-vehicular transportation.

Policy 13.1.1: Plan Overview for Toe and Heel **(Eff. 12/10/02; Rev. Eff. 7/20/05; Rev. Eff. 8/27/17)**

The Toe and Heel shall develop as new mixed-use communities that provide employment opportunities, protect natural resources in an urbanized setting and emphasize pedestrian mobility and transportation alternatives. The intent of this policy is to locate employment and shopping in close proximity to residential land uses, provide activities that serve area residents as well as shoppers and employees from outside the area, offer housing to diverse socio-economic groups, establish recreation, educational, and cultural activities nearby, reduce automobile dependency of residents and employers, place public transportation facilities in population and employment centers, and protect natural systems within the context of a mixed-use built environment. The intent of this policy will be achieved through phased development consistent with these guidelines:

(1) A buildout population of approximately 5,950 for the Toe and 4,600 for the Heel.

(2) A buildout employment of approximately 1,240 jobs in the Toe and 3,560 jobs in the Heel.

(3) Development which reflects the following general allocation of land uses on an acreage basis:

(A) Residential uses on 35 percent to 45 percent of the Toe and 30 percent to 40 percent of the Heel.

(B) Retail and office uses on 3 percent to 8 percent of the Toe and retail, office and light industrial uses on 15 percent to 25 percent of the Heel.

~~I. Land Use~~

~~(C) Primary open space and recreation uses (excluding the Miccosukee Canopy Road Greenway) on 15 percent to 25 percent of the Toe and 20 percent to 30 percent of the Heel.~~

~~(D) Community facilities and institutional, educational, civic and similar uses on 15 percent to 25 percent of the Toe and 10 percent to 20 percent of the Heel.~~

~~(4) The Toe and Heel may develop in phases consistent with necessary infrastructure and services and, for the Heel, consistent with the phasing schedules on Table 13-2, which is based on projections of densities and intensities of use derived from the corresponding acreage. Sub phases or stages of each phase may be developed in separate PUDs. The Toe and the Heel may be developed concurrently. Table 13-2 is attached as part of this Objective.~~

~~(5) A comprehensive plan amendment shall be required in order to exceed the projected total number of residential units or the projected total nonresidential square footage for the Heel, as set forth in Table 13-2. Such an amendment shall be consistent with the requirements of Objective LU 6.2 and its supporting policies.~~

~~(6) Development will comply with any ordinances in effect at the time of development that address the need for affordable housing. In addition, development shall comply with any other applicable requirements at the time of development.~~

~~(7) Specific guidelines and requirements for land use categories, transportation, access management, and other specific design standards shall be included in one or more PUD Concept Plans applicable to the Toe or Heel, respectively. Each PUD Concept Plan shall be adopted by the local government with jurisdiction before any development may take place on the parcel or tract included in the PUD Concept Plan, except as otherwise allowed pursuant to Policy LU 6.2.4. Each PUD Concept Plan shall be consistent with development guidelines and general design standards herein.~~

~~(8) Land Use Goal 13, its supporting objectives, policies and data and analysis, and all activities undertaken leading to and including adoption, is not intended to be considered evidence of a unified plan of development for purposes of §380.0651(4), F.S.~~

~~(9) The Toe and Heel will be developed with the infrastructure required to serve permitted development, including but not limited to water, sewer, stormwater management and on-site and off-site transportation mitigation, consistent with this Comprehensive Plan and all applicable regulations.~~

~~(10) Development within the Toe and Heel shall be aggregated under the City's concurrency regulations, as currently interpreted and applied by the City; unless, at some time in the future, the concurrency regulations are revised so that aggregation is not required for such development.~~

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.1.9.

Policy 13.1.2: Primary Open Space Systems and Greenways **(EFF. 12/10/02; REV. EFF. 7/20/05)**

The primary open space systems for the Toe and Heel are defined as connected, continuous networks of open space. They constitute fundamental building blocks of these planned communities and are intended to serve multiple purposes in an urbanized setting, including but not limited to protection of conservation and preservation areas. Primary open space systems may include but are not limited to conservation and preservation areas, buffers for environmentally sensitive areas, pathways to facilitate pedestrian and bicycle mobility, aesthetic open space, passive recreation opportunities and community gathering places. Primary open space systems, together with other green spaces set aside to meet the Urban Forest and landscape requirement shall also meet the requirements of the comprehensive plan, Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. The intent of this policy will be achieved through implementation of the following guidelines:

(1) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by policy LU 6.2.4, a Natural Features Inventory consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable, shall be submitted for the entire Toe or the entire Heel respectively.

(2) Credits for open space, wetland mitigation, slope mitigation, stormwater management or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Toe, or Heel, respectively.

(3) Areas with severe and significant slopes that are not located in the primary open space systems shall be protected in site specific plans in accordance with the Comprehensive Plan, Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable.

(4) Wetlands, watercourses and water bodies, except Dove Pond, shall be protected by a 50-foot natural buffer from the jurisdictional wetland line where adjacent to developable land. If Dove Pond is not included as part of a regional stormwater management system to provide flood protection for downstream off-site properties as provided by Policy LU 13.1.5 and Policy LU 13.1.7, then Dove Pond shall be protected by a 50 foot natural buffer from jurisdictional wetlands where adjacent to developable land.

(5) The primary open space systems shall be open to the general public and be designed to provide connections with the Miccosukee Canopy Road Greenway at multiple locations, and to integrate internal recreational multi-use paths with the

greenway's trails. Connections to future regional greenways shall be considered in the design of the primary open space systems.

(6) The primary open space systems shall be designed to provide additional buffering as established in PUD Concept Plans for designated canopy road protection zones, in addition to the required 100-foot setback, where feasible.

(7) The primary open space system in the Heel may include a portion of the existing Miles Johnson Road with the consent of the local government with jurisdiction and construction of new roads adjacent to and on each side of the Miles Johnson Road roadbed and canopy.

(8) Primary open space may be privately owned, or be dedicated to the public by conveyance to a general- or special-purpose local governmental entity; or be designated as part of the statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the conservation and preservation areas in accordance with local government regulations.

(9) The primary open space systems shall each have a management plan approved by the local government with jurisdiction in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of the primary open space systems, including any preservation or conservation areas located within them, shall be provided by conservation easements and other measures consistent with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, except as otherwise provided by Policy LU 13.1.5 and Policy LU 13.1.7. Conservation easements within the City will be required consistent with City Growth Management Department's written policy. Conservation and preservation areas placed in conservation easements may be used toward satisfying the urban forest/ landscaping requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(10) Acreage in the primary open space systems shall be counted toward satisfying the open space requirement established in PUD Concept Plans as provided by Policy LU 13.1.7.

(11) The following guidelines shall apply to uses within the primary open space systems as established in PUD Concept Plans:

(A) Passive recreation improvements that are natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular and pedestrian access only, provided these activities are reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.

~~(B) Wildlife management areas may be included in the primary open space systems with protective measures addressed in the management plans, in accordance with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.~~

~~(C) Public roads and utilities may cross through the primary open space systems if no alternative route can be secured and impacts are minimized. Except for existing roads and specifically located existing road access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3, Toe Generalized Transportation Plan and Figure 13-4, Heel Generalized Transportation Plan, are approximate.~~

~~(D) Stormwater management facilities may be located in the primary open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. Dove Pond may be utilized as part of a regional stormwater management system to provide flood protection for downstream off-site property owners in the Tri-Basin Study Area as provided the criteria in Policy LU 13.1.5 (4) and Policy LU 13.1.7 are met. Each other stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. If stormwater facilities are contained within the primary open space, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. Conservation and preservation areas are not to be used as conveyances for increased stormwater rates from development. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation and/or preservation areas.~~

~~(E) Access facilities for canoes and other watercraft without internal combustion engines may be located in the primary open space system. Fueling facilities shall not be allowed. If access facilities are located in conservation or preservation areas these activities shall be reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.~~

~~(12) The cemetery in the Toe shall be protected as provided by state law. The churches owning the cemetery should fence the cemetery and prohibit disturbance.~~

~~Policy 13.1.3: Land Use~~ **~~(EFF. 12/10/02; REV. EFF. 7/20/05; REV. EFF. 8/27/17)~~**

I. Land Use

The Toe and Heel shall contain an integrated mixture of uses that allows a broad range of residential, commercial, office, employment, recreation and civic, institutional and community uses with varying densities and intensities of use. The intent of this policy is to create a community pattern of multiple neighborhoods that are compact and walkable, with a mixture of uses, diversity of housing types and prices, and interconnected fine-grained street systems. A mix of uses should be encouraged throughout each phase of development and at buildout. Neighborhood densities and development intensities generally should be arranged in a hierarchical continuum radiating from center to edge. Pedestrian accessibility should be given precedence over automobile convenience as established in PUD Concept Plans.

(1) Land uses in the Toe and Heel shall be assigned on the basis of the following categories as established in PUD Concept Plans:

(A) EMPLOYMENT CENTER

Employment centers shall be located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities. Employment centers are intended to contain a mix of uses and not be a single-use environment. They shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. An employment center shall range in size between 15 acres and 150 acres. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed except when located above the ground floor in mixed-use office buildings.

Development intensities shall range from 8,000 square feet per acre to 15,000 square feet per acre. Ground-floor, pedestrian-friendly uses should be included to provide walk-to shopping opportunities. A minimum five percent on-site open space requirement shall be required for each preliminary plat in an employment center.

(B) TOWN CENTER

Town centers shall be planned as compact, efficient nodes. Traffic calming measures such as onstreet parking, buildings close to the road with parking in back, streetscape, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. A town center shall range in size between 10 to 30 acres and contain uses that serve surrounding neighborhoods as well as those traveling through the area. Uses shall be mixed horizontally and vertically to the maximum extent feasible. It is the design intent to plan for multiple storefronts and multiple retailers in town centers so all of the available retail space is not aggregated into one or two "big-box" stores. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, and civic, religious and institutional uses (including day care services for children and adults).

Development intensities in town centers shall range from 8,000 square feet per acre up to 20,000 square feet per acre. Residential densities shall be allowed up to 16 dwelling units per acre with no minimum density required. Residential uses shall be encouraged above ground floor retail and other nonresidential uses. Town centers shall be planned on a block system with a gridded road network and on-street parking.

Stormwater management facilities shall be located outside of town centers to promote a compact, pedestrian-oriented development pattern except where alternative sites for stormwater facilities are not reasonably available. Community open space in the form of public squares and greens shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat.

(C) NEIGHBORHOOD CENTER

Neighborhood centers shall allow small retail, specialty retail, office, restaurants, services, residential and other uses (including day care services for children and adults) that support residential uses within a neighborhood. These centers are also intended to function as a neighborhood focal point and are envisioned to have churches, town squares, and other civic, religious, and institutional uses. The neighborhood centers shall range in size from 5 to 8 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape, and other such solutions, shall be utilized to create a pedestrian-friendly, walkable center.

Development intensities in the neighborhood center shall range from 4,000 square feet per acre to 12,500 square feet per acre. The maximum residential density in the neighborhood center shall be 16 units per acre. No minimum density shall be required. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens shall be planned as the focal point of a neighborhood center. No minimum on-site open space shall be required for each preliminary plat.

(D) MULTI-FAMILY RESIDENTIAL

Multi-family residential areas shall include residential units with a maximum density of 16 units per acre and a minimum density of 8 units per acre. Allowable uses include town homes, apartments, condominiums and other multi-family uses, single-family attached and detached residential units, office as a ground-floor use with residential uses above or in a live-work unit, civic, religious and institutional uses, infrastructure including stormwater management facilities, parks and recreation. A minimum 10 percent on-site open space shall be required on each preliminary plat.

(E) RESIDENTIAL HIGH DENSITY

Residential high-density areas should be within easy walking distance of town and neighborhood centers and/or arranged along either side of some of the internal roads. The maximum allowable density shall be 10 units per acre and

~~the minimum density should be 4 units per acre. Allowable uses include residential, civic, religious and institutional uses, parks and recreation, and infrastructure including stormwater facilities. A minimum of 10 percent on-site open space shall be required on each preliminary plat.~~

~~(F) RESIDENTIAL MEDIUM DENSITY~~

~~Residential medium density areas shall include single-family residential uses up to a maximum density of 4 units per acre with a minimum density of 2 units per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. These areas shall have an interconnected local road system with a range of lot sizes. A minimum of 15 percent on-site open space shall be required on each preliminary plat.~~

~~(H) RESIDENTIAL LOW DENSITY~~

~~Residential low-density areas shall include single-family residential uses with a maximum density of 2.5 units per acre and a minimum of 1 unit per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.~~

~~(I) RESIDENTIAL ESTATE~~

~~Residential estate areas shall include single family residential uses up to a density of up to 1 unit per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.~~

~~(J) SCHOOLS AND COMMUNITY USES~~

~~The school and community uses category is intended for public and private schools, as well as a broad range of community, civic, religious and institutional uses, including but not limited, to libraries, fire stations, police stations, civic educational centers, places of worship and supporting uses, community centers and clubhouses. School support facilities are also allowable, and include but are not limited to, play fields, gymnasiums, and other education-related uses. A minimum of 15 percent on-site open space shall be required on each preliminary plat.~~

~~(2) Land uses should develop on the Toe, shown in Figure 13-1, consistent with the following locational criteria as established in PUD Concept Plans:~~

~~(A) One or more town centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.~~

~~(B) One or more neighborhood centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.~~

~~(C) Town and neighborhood centers shall be located within a one-quarter mile walking radius from the majority of the denser residential areas.~~

~~(D) Town and neighborhood centers, higher-density residential areas and the primary open space system shall be located proximate to school and community uses when feasible.~~

~~(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space systems when feasible.~~

~~(F) Residential medium density areas generally shall be located within one-quarter mile walking distance from town and neighborhood centers.~~

~~(G) Residential low density and residential estate areas shall be located outside the one-quarter mile walking radius from town and neighborhood centers. Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either residential low density or residential estate.~~

~~(H) Institutional uses (including but not limited to an elementary school, senior citizens' activity center, assisted living facility, adult living facility, rehabilitation center, and adult care/memory unit) may be located in any land use district in the Toe.~~

~~(3) Unless developed pursuant to Policy LU 13.1.9, land uses should develop on the Heel, shown on Figure 13-2, consistent with the following locational criteria as established in PUD Concept Plans:~~

~~(A) Employment centers should be located as follows:~~

~~(i) An employment center should be proximate to the interchange of Interstate 10 and U.S. 90 and be compatible with nearby residential and mixed-use development. This employment center shall have direct access to an arterial, which will traverse the Heel.~~

~~(ii) An employment center should be located in the southern section of the Heel with direct access to U.S. 90. To minimize traffic loadings on U.S. 90, this employment center shall be connected to the Heel by internal roadways.~~

~~(B) No more than one town center may be located in the central section of the Heel proximate to residential areas. Employment centers should be located preferably within a one-quarter mile walking radius of the town center to provide restaurants, services, retail and other uses for employees.~~

~~(C) No more than two neighborhood centers may be located in the northern section of the Heel within a one-quarter mile walking radius of nearby residential development. No more than one neighborhood center may be located in the central section of the Heel.~~

~~(D) Town or neighborhood centers shall be located at the center of a one-quarter mile walking radius from the majority of the denser residential areas.~~

(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space system when feasible.

(F) Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either single-family residential low density or single-family residential estate.

(G) Residential estate areas should be located in the northeastern section of the Heel adjacent to existing estate-type rural residential areas on adjacent lands.

Policy 13.1.4: Transportation **(EFF.12/10/02; REV.EFF.7/20/05; REV. EFF. 8/27/17)**

The transportation systems on the Toe and Heel, in addition to the arrangement of land uses, shall be designed to capture internal trips, promote alternatives to single-occupancy vehicle travel and support a mixed-use development pattern. The transportation network for the Toe and Heel shall support and enhance livable community concepts while meeting level of service standards. It is the intent of this policy to create communities and supporting transportation systems that encourage walkability and pedestrian accessibility, provide a road network with connectivity on-site and to surrounding areas, relieve pressure on canopy roads, minimize environmental impacts and encourage transit and other modes of transportation. Except for existing roads and specifically located existing access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3 Toe Generalized Transportation Plan and Figure 13-4 Heel Generalized Transportation Plan are approximate.

(1) These general transportation guidelines shall apply on the Toe and Heel as established in PUD Concept Plans and shown in Figure 13-3 and Figure 13-4, respectively:

(A) A fine-grained network of internal roads shall provide alternative travel routes and ensure that all roadways operate at acceptable levels of service at buildout.

(B) All land uses shall provide for alternative modes of transportation, with connections to the transit hub and bus shelters. The nature of and extent of any required accommodations shall vary based upon business size.

(C) Recreational and alternative transportation multi-use paths shall be planned internally for bicycle and pedestrian travel and shall be incorporated into the primary open space systems when feasible. The paths shall accommodate bicyclists, pedestrians and other forms of recreational use and connect to the Miccosukee Canopy Road Greenway at multiple locations consistent with the Miccosukee Canopy Road Greenway Management Plan.

(D) Multi-modal facilities (for motorists, cyclists, and pedestrians) shall be provided on all collector and arterial roads.

~~(E) Traffic-calming measures shall be utilized on local roads where significant pedestrian activity is expected.~~

~~(F) All access roads through a designated canopy road protection zone shall minimize disturbance to the canopy and understory in consultation with the City's Urban Forester. Utilities shall be collocated in these access roads when feasible.~~

~~(G) Transit shall be encouraged through planning and design by focusing density in areas where transit can serve the largest number of potential passengers. Bus shelters shall be provided by the developer at locations designated by Taltran.~~

~~(H) The road network in the Toe shall:~~

~~(i) Promote and enhance a livable community pattern, including mixed use and a pedestrian environment;~~

~~(ii) Protect the adjacent canopy roads by relieving traffic pressure on them;~~

~~(iii) Enhance the scale and pedestrian accessibility of town and neighborhood centers along Welaunee Boulevard, and~~

~~(iv) Provide for adequate road capacity to serve the development.~~

~~(I) Whenever possible, neighborhoods need to be interconnected and not solely dependent upon Welaunee Boulevard for ingress and egress. The street pattern should be planned to accommodate the highest frequency of street crossings in the town and neighborhood centers with decreasing frequency through residential areas and the least number of crossings in low density or "country" areas.~~

~~(J) No residential driveways shall connect directly to Welaunee Boulevard or the Shamrock South extension on the Heel. Direct access to canopy roads shall not be permitted for any residential or non-residential uses. Roadways within the Toe and the Heel will be designed so road access through designated canopy road protection zones will not be necessary except as otherwise expressly allowed in Policy 13.1.4.~~

~~(2) The following transportation guidelines shall apply in the Toe as established in PUD Concept Plans and shown in Figure 13-3:~~

~~(A) A transit hub for the transfer of passengers between bus routes shall be provided in a town or neighborhood center. The transit hub shall include facilities to accommodate up to four buses on a site not to exceed two acres and which is adjacent to available parking that can accommodate park and ride vehicles.~~

~~(B) Road access to the Toe from Miccosukee Road shall occur only within the existing road access easements across the Miccosukee Canopy Road Greenway at Arendell Way and Edenfield Road. In addition, road access to the Toe from Miccosukee Road at Dempsey Mayo within the existing road access easement may be approved in a PUD Concept Plan if it is determined by the local government with jurisdiction, based on analysis, that such a connection would~~

have a desirable impact on the Miccosukee Canopy Road. All impacts to the canopy road protection zone from such access roads shall be minimized.

(C) Road access to the Toe from Fleischmann Road shall be provided in accordance with City standards and subject to City approval.

(D) Road access to the Toe from Centerville Road shall be provided at one location.

(E) Welaunee Boulevard shall be designed consistent with a mixed-use development pattern and a pedestrian-friendly environment.

(i) It is the intent to promote the Welaunee Boulevard corridor as a "livable" roadway that supports and enhances a pedestrian-friendly environment. The character of this roadway, and the land uses along it, should be protected to ensure that strip development and auto-dependent land uses do not occur. Welaunee Boulevard should be designed to minimize changes to the natural contours of the landscape and vegetated areas along its length. Welaunee Boulevard should be designed so that the character of the roadway changes along its corridor.

(ii) In the "town" sections, Welaunee Boulevard should have a narrower right-of-way with roadway sections to be determined at the time of the PUD Concept Plans which may include on-street parking. Buildings should be placed close to the right-of-way with parking located behind. Pedestrians should have priority in the town and neighborhood centers. The highest number of road connections from the adjacent street network should occur in the town sections. Higher density residential uses and non-residential uses should be planned in the town sections.

(iii) In the "country" sections, land uses along the roadway should be lower density residential or open space. In these country sections, the design of the road shall minimize environmental impacts by utilizing split profile sections and wide medians to respond to topography and preserve vegetation. Right-of-way width shall vary consistent with the character of the area it is traversing while meeting level of service demands. Right-of-way in these areas shall accommodate medians with landscaping and may provide for an "eyebrow" road or, if necessary, accommodate a split-section profile for the purpose of minimizing environmental impacts.

(F) Welaunee Boulevard shall connect to an interchange with Interstate 10 subject to approval by Federal Highway Administration and Florida Department of Transportation. The interchange of Welaunee Boulevard and Interstate 10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange, which supports a gridded street system and city blocks on the south side of I-10. The gridded street system should serve to divert traffic onto a network of town center streets and should support a pedestrian environment. Until an interchange is approved and constructed, Welaunee Boulevard may pass over Interstate 10.

(G) Construction of Welaunee Boulevard shall be phased to accommodate transportation impacts from approved development of the Toe. The roadway phases shall be consistent with the Urban Services-Development Agreement

between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement) and shall be established in PUD Concept Plans in a manner that complies with the adequate public facilities requirements of this comprehensive plan and the land development code.

(3) The following transportation guidelines shall apply in the Heel as established in PUD Concept Plans and shown in Figure 13-4:

(A) Road access to the Heel from U.S. 90 shall occur in compliance with Florida Department of Transportation rules including the Shamrock South extension, which will traverse the Heel.

(B) Contingent upon approval by the Tallahassee-Leon County M.P.O., the Shamrock South extension between Miccosukee Road and U.S. 90 will be shown on the 2025 updated long-range transportation plan as a component of the cost-feasible plan, consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Service Agreement).

(C) Road access to the Heel from Miccosukee Road shall occur only at the existing Miles Johnson Road intersection and the Shamrock South extension, which will traverse the Heel, including the Miccosukee Canopy Road Greenway.

(D) Two roads may be constructed adjacent to the Miles Johnson Road roadbed and canopy if the local government with jurisdiction approves of incorporation of the existing Miles Johnson Road into the primary open space system.

(4) In PUD Concept Plans, the local government with jurisdiction shall require development on the Toe and Heel, respectively, to implement Transportation Demand Management (TDM) strategies, as appropriate, to reduce single-occupancy vehicle trips. Such strategies may include, but are not limited to, alternative work schedules, transportation allowances (carpool and vanpool programs), guaranteed ride home programs, telecommuting, transit supportive facilities (bus stops, shelters, etc.), and additional bicycle and pedestrian facilities and equipment.

Policy 13.1.5: Public Facilities **(EFF. 12/10/02; REV. EFF. 7/20/05)**

Public facilities shall be provided to serve residential and non-residential uses on a phased basis consistent with the level-of-service and availability standards of this comprehensive plan. The intent of this policy is to provide infrastructure needed to serve development that is predominantly self-supporting rather than predominantly dependent upon public funding consistent with the Urban Services Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement). The intent of this policy will be achieved through implementation of the following guidelines:

~~**I. Land Use**~~

~~(1) Potable water, sanitary sewer, electricity and natural gas service shall be provided to development on the Toe and Heel pursuant to the existing Urban Services-Development Agreement.~~

~~(2) All stormwater management facilities shall be designed to meet treatment standards for Outstanding Florida Waters (OFW) (i.e. the first .75 inches of rainfall) or the applicable local standard, whichever is greater. Maintenance responsibility for all stormwater management facilities shall be provided as established in the Stormwater Facilities Master Plan and the Urban Services Agreement. Facilities which are dedicated to the City must be constructed to City standards.~~

~~(3) Dove Pond may be incorporated into a regional stormwater management system and be utilized for the storage of treated stormwater to provide flood protection for downstream off-site property owners provided:~~

~~(A) It can be shown through the completion of an Environmental Impact Analysis (EIA) incorporated into a Stormwater Facilities Master Plan (SFMP) that, with any increase in flood volume or flood stage, the wetlands and associated conservation and preservation areas are minimally impacted.~~

~~(B) Such use may be undertaken only with the landowner's express approval.~~

~~(C) Public agencies shall pay a pro rata share of capital costs based on the off-site stormwater runoff to be stored in Dove Pond during flood events, provided the landowner makes available the necessary land or rights of use at no cost to the public contemporaneous with issuance of a final local development order which establishes and allocates buildout stormwater capacity for the Toe.~~

~~(D) Local government funding shall not be utilized for the portion of any stormwater management facilities necessary to accommodate on-site development.~~

~~(E) Criteria in Policy 13.1.7 are also achieved.~~

~~(4) To provide flood protection for downstream off-site property owners in the Tri-Basin Study Area, inter-basin transfers of stormwater may be permitted between sub-basins of the Welaunee Closed Basin and from the Welaunee Closed Basin to the Lafayette Oaks and Pedrick Closed Basins through a public conveyance system. Such transfers may occur only from Dove Pond as provided by this policy and Policy LU 13.1.7 and shall be deemed consistent with Policy 1.1.5 [SM], Policy 2.2.5 [C] and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, when they comply with these criteria:~~

~~(A) Approval by the local government with jurisdiction of a regional stormwater management plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to water quality, quantity and rate of discharge due to inter-basin transfers to the receiving watershed.~~

~~(B) Approval of public funding, in an adopted local government budget, for off-site stormwater management facilities required by the regional plan.~~

~~(5) Facilities which discharge to or from an isolated or aggregated closed basin shall provide storage for the post-development increase in runoff volume for the 100-year, 24-hour critical storm.~~

~~(6) Facilities which discharge to Lake Lafayette shall provide both treatment and attenuation for storms consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.~~

~~(7) The landowner shall reserve for future dedication, to the City of Tallahassee, a site for fire protection and emergency services, not to exceed two acres.~~

~~(8) Unless developed pursuant to Policy LU 13.1.9, a 24-acre site for a 500-pupil elementary school for Leon County Schools shall be reserved for future dedication to the Leon County School Board in the Heel proximate to residential areas, a town or neighborhood center and the primary open space system, with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.~~

~~(9) Public facilities and improvements necessary to serve development on the Toe and Heel may be financed, planned, established, acquired, constructed, reconstructed, enlarged, extended, equipped, operated or maintained by one or more community development districts subject to the requirements of Chapter 190, Florida Statutes.~~

~~(10) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by Policy LU 6.2.4, a Stormwater Facilities Master Plan (SFMP) shall be prepared by the applicant and approved by the local government for the entire Toe and the entire Heel. The SFMP shall accommodate stormwater flows from full build out conditions from any upstream offsite property and the entire Toe or the entire Heel, as applicable. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance, establish infrastructure requirements necessary to manage stormwater in compliance with local, state and federal regulations, document the phasing, implementation and easement reservations necessary to serve full build-out and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land use, soils and topographic data, the conceptual land use plan, stage and water quality monitoring data and the applicable results and findings of the Natural Features Inventory and Environmental Impact Assessment. The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under full build-out conditions. Flood extents delineated by the SFMP shall allow identification of the 100-year flood exclusion area. No habitable structures shall be constructed within the post-~~

development (full build-out) 100-year floodplain. The SFMP's scope of work shall be approved by local government prior to development of the SFMP.

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.1.9.

Policy LU 13.1.6: General Design Standards **(EFF. 12/10/02; REV. EFF. 7/20/05)**

PUD Concept Plans shall incorporate design standards that will insure and guide mixed-use, integrated development that is pedestrian-friendly. In addition to the general design standards set forth in other policies, which support Land Use Objective 13.1, PUD Concept Plans shall be consistent with these general design standards:

(1) Sidewalks shall be provided throughout the Toe and Heel as follows:

(A) On both sides of Welaunee Boulevard. Sidewalks shall also be provided on both sides of collector roads and arterial roads in the Toe.

(B) On both sides of the Shamrock South extension which will traverse the Heel and on all other arterial and collector roadways in the Heel.

(C) On both sides of all streets in employment centers, town centers, and neighborhood centers.

(D) On one side in residential low-density and residential estate areas.

(E) On one side (fronting residences) of the two roads running parallel to Miles Johnson Road if it is closed to through traffic and incorporated into the primary open space system.

(F) Sidewalks shall be provided on both sides of streets in residential medium-density and residential high-density areas.

(2) On-street parking shall be accommodated where feasible in neighborhood and town centers and shall be credited toward parking requirements as specified in PUD Concept Plans.

(3) In town and neighborhood centers, parking shall be provided in the rear of buildings to the maximum extent feasible. Buildings shall be oriented to the street and designed with minimal setbacks from the road to promote a pedestrian-friendly environment. Criteria for a variance from build-to and setback lines may be established in PUD Concept Plans.

(4) PUD Concept Plans shall include integrated parking management strategies designed to achieve more efficient utilization of parking resources, mitigate peak travel demand and optimize the return on investments in public right-of-way. Integrated parking management strategies may include shared parking plans, short-term parking plans, parking areas "unbundled" from specific buildings, parking spillover prevention measures and time-limit strategies for on-street parking. Reductions from generally applicable parking space standards shall be granted in PUD Concept Plans when justified on the basis of integrated parking

~~management strategies, the mixed-use character of various portions of the development or other professionally accepted methodology.~~

~~(5) Town centers shall be designed as a marketplace for a variety of retailers to ensure that not all retail space is aggregated into one or two single "big-box" retail buildings.~~

~~(6) Building heights in town centers and neighborhood centers shall not exceed 65 feet from grade. Building heights in other land use categories shall be established in PUD Concept Plans at heights compatible with development in mixed-use centers and other land uses.~~

~~(7) Property signage in non-residential areas shall be provided in a coordinated manner that is compatible with the architectural vernacular and scale of development. It shall be consistent with a master signage plan established in PUD Concept Plans.~~

~~(8) Landscaping in common areas, residential areas, along roadways and in town, neighborhood and employment centers shall utilize only drought-resistant native plant species in an approved plant list established in PUD Concept Plans.~~

~~(9) Landscaping in town centers, neighborhood centers, employment centers and residential areas located within a one-quarter mile walking distance of those centers shall include street trees identified in an approved plant list established in PUD Concept Plans.~~

~~(10) Stormwater management facilities shall be designed consistent with the "Stormwater and Erosion and Sediment Control Best Management Practices for Developing Areas" as described in Chapter 6 of the FDEP Florida Development Manual, Appendix F of the Concurrency Manual and subject to local government approvals. During construction, sediment and erosion control shall be required as specified in Chapter 8 of the "Erosion and Sediment Control Handbook" (Goldman, Jackson, Bursztynsky).~~

~~(11) Constructed stormwater management facilities may be utilized to satisfy the open space requirements established in the PUD Concept Plans if the following general design standards are met:~~

~~(A) Stormwater management facilities shall be designed and constructed using predominantly non-angular, freeform, curvilinear contouring that visually integrates the facility into the overall landscape design.~~

~~(B) Retaining walls may be incorporated to maximize storage volume and to minimize excessive grade changes or tree removal, but may not exceed 50 percent of the limits of the facilities perimeter and may not exceed six feet in height. Terraced side slopes utilizing multiple retaining walls may be used when augmented with landscaping between retaining walls.~~

~~(C) Stabilized side slopes exceeding 4:1 slopes shall be planted with either artificial, erosion-resistant materials or with appropriate vegetative cover.~~

~~(D) Perimeter landscaping is a part of the design of the stormwater facility for dry retention/detention facilities as well as wet detention/treatment facilities.~~

(12) Integrated mixtures of land uses shall be located and designed to be consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement and natural access control.

Policy 13.1.7: Allowances **(EFF. 12/10/02; REV. EFF. 7/20/05)**

Development shall be designed on the Toe and the Heel to be consistent with the thresholds for impacts established in the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. Notwithstanding any other provisions of this Comprehensive Plan, development of the Toe and Heel may be subject to the following provisions as established in PUD Concept Plans:

(1) To reduce downstream flooding of off-site property owners in the Tri-Basin Study Area, Dove Pond may be utilized for the storage of treated stormwater as provided by this policy and Policy LU 13.1.5. If after the completion of the Environmental Impact Analysis (EIA) and Stormwater Facilities Master Plan (SFMP) it can be shown that impact to the wetlands and associated conservation and preservation areas have been minimized and that the impact to conservation and preservation areas is determined to be greater than 5 percent as allowed in Comprehensive Plan Policy 1.3.11[C], the Public Linear Infrastructure Variance process may be utilized to authorize the public regional stormwater management facility subject to the following:

(A) Local government approval of a regional stormwater plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to wetlands, water quality, quantity and rate of discharge both on-site and off-site due to inter-basin transfers to the receiving watershed.

(B) Approval of public funding, in an adopted local government budget, for off-site stormwater management facilities required by the regional plan.

(C) Impacts shall be permitted only when demonstrated to be the minimal impacts reasonably necessary to implement the regional plan.

(2) If Dove Pond is not utilized as a public regional stormwater management facility, then use of Dove Pond as a stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(3) To promote creation of the primary open space systems and their integration into the planned mixed-use communities with appropriate credit, the PUD Concept Plans shall establish an open space requirement which includes credit for the primary open space system, protected preservation and conservation areas, areas of constructed landscape and the minimum on-site landscaping required for individual sites set forth in Policy LU 13.1.2. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designed to meet or exceed, on a cumulative basis, the

Landscape and Urban Forest requirements in Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. These landscape standards shall include, but not be limited to, standards for provision of street trees in town centers and along public roadways, canopy trees and landscaped islands within parking lots, and special consideration of patriarch tree preservation. These standards will be developed to reflect the intent that town and neighborhood centers will be developed in an urban character with minimized setbacks and an emphasis on dense, mixed-use development. Various land uses in the Toe and the Heel shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5, Environmental Management, Tallahassee and Development Code or the Leon County EMA, whichever is applicable.

Policy 13.1.8: Agricultural and Silvicultural Activities **(EFF. 12/10/02; REV. EFF. 7/20/05)**

It is the intent of this Policy to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to insure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Toe and the Heel up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Toe and Heel.

(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Toe and Heel, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or sub-division plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the site plan or subdivision and to all land included in these parcels, such as land proposed to serve as buffer or open space.

(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Toe and Heel in accordance with the "2000 Silviculture Best Management Practices" as may be amended from time to time, Florida Department of Agriculture and Consumer Services, and existing local government ordinances.

(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber-harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

Policy LU 13.1.9 Alternative Heel Program **(EFF. 7/20/05)**

Notwithstanding any other provision of this comprehensive plan, at the election of the landowner or an authorized developer as much as 800 acres in the Heel as depicted on Figure 13-5 may be developed as a separate project, without regard to other development in the Welaunee Critical Planning Area, with a land use designation of "Residential Estate" and a zoning designation of "Residential Acre." Such development shall be reviewed by the City as a residential subdivision and shall be required to meet all normal and customary requirements for such a development under the City's land development regulations, including but not limited to the EMO. Any portion of the Heel developed under this alternative program shall be exempt from the Critical Area Plan except for the following provisions:

(1) LU 13.1.1(6)
(2) LU 13.1.1(8)
(3) LU 13.1.1(9)
(4) LU 13.1.2(1)
(5) LU 13.1.3(1)(H)
(6) LU 13.1.4(1)(F)
(7) LU 13.1.4(1)(J)
(8) LU 13.1.4(3)(A)
(9) LU 13.1.4(3)(B)
(10) LU 13.1.4(3)(C)
(11) LU 13.1.4(3)(D)
(12) LU 13.1.5(1)
(13) LU 13.1.5(6)
(14) LU 13.1.5(10) as modified
(15) LU 13.1.6(8)
(16) LU 13.1.6(10)
(17) LU 13.1.6(11)
(18) LU 13.1.8

Any portion of the Heel depicted in Figure 13-5 not developed under this alternative program shall be subject to the Critical Area Plan as it otherwise would apply. Uses and maximum densities and intensities of use for such portion shall be allocated pro rata based on the uses and maximum densities and intensities of use on Table 5-2 of the data and analysis report for the "Welaunee Critical Area Plan – Toe and Heel" (Jan. 17, 2002).

Objective 13.2: Development Concept for the Welaunee Arch **(EFF. 12/10/02; REV. EFF. 1/11/21)**

The intent of the Welaunee Arch Master Plan is to provide an area-wide plan for the portion of the Welaunee Critical Planning Area located north of Interstate-10 and west of Miccosukee Road (i.e. the "Arch"). This master plan sets the standards and guidelines to coordinate one or more implementing development plans such that the development of the Arch results in a new, integrated community with a variety of land uses, diverse neighborhoods and mixed-use centers, a region-serving activity center, active and passive recreational options, and abundant open space. The development of the Arch consistent with this master plan shall be implemented in phases, connected by a multi-modal transportation system, served by regional, master planned stormwater facilities, and designed in ways that protect natural resources.

~~I. Land Use~~

Policy 13.2.1: Concept. **(EFF. 1/11/21)**

~~This Welaunee Arch Master Plan satisfies the requirements of the Tallahassee-Leon County Comprehensive Plan for a planned development master plan in order to foster development on the Welaunee Arch with a region-serving, mixed-use activity center; residential areas with a strong sense of place and a range of diverse housing choices; transportation choices with linkage to commercial services and jobs; and planned recreation and open space.~~

Policy 13.2.2: Discourage Urban Sprawl. **(EFF. 1/11/21)**

~~The Welaunee Arch is located wholly within the Urban Services Area. Development within the Arch will discourage urban sprawl by, among other things, directing growth to a next-in-line area identified for future urban development since 1990; promoting walkable, connected neighborhoods that support a range of housing choices; implementing a multimodal transportation system that supports the internal capture of transportation trips; creating a balance of residential and nonresidential land uses through integrated, mixed-use centers and diverse housing types in close proximity to nonresidential uses; promoting the efficient and cost-effective provision or extension of public facilities and services; protecting and preserving natural resources; protecting environmentally sensitive lands; and providing public recreation and open space.~~

Policy 13.2.3: Implementation. **(EFF. 1/11/21)**

~~The Welaunee Arch Master Plan shall be implemented by one or more Planned Unit Development (PUD) Concept Plans, Regulating Plans with Form-based Codes, or other implementing plan as allowed by the Comprehensive Plan at the time of development. All such plans are referred to herein as Planned Development Concept Plans or PUD Concept Plans. Such PUD Concept Plans shall be consistent with this master plan and contain guidelines and requirements for land use categories, transportation facilities, access management, and other specific design standards. All PUD Concept Plans shall be consistent with the stormwater facility master plan and with transportation plans for the Phase of the Arch in which they are located, as developed and approved prior to or concurrent with the initial PUD Concept Plan for that Phase. The phasing of development in the Arch shall be consistent with necessary infrastructure and supporting services and the phasing requirements of Policy 13.2.5. Development Phases and PUD Concept Plans shall consider previously approved PUD Concept Plans within the Arch and anticipated development based on Figures 13-5 through 13-7 such that open space, stormwater, and transportation systems are planned and implemented consistent with the Policies in this Welaunee Arch Master Plan portion of the Welaunee Critical Area Plan.~~

~~A PUD Concept Plan may address only a portion of a Phase or may address more than one Phase. The minimum size for the initial PUD Concept Plan for any Phase of the Arch shall be 350 acres. Subsequent PUD Concept Plans shall be implemented consistent with this Master Plan and the applicable implementing plan standards allowed by the Comprehensive Plan at the time of development.~~

LAND USE

Policy 13.2.4: Land Use Districts. (EFF. 1/11/21)

The Master Plan forms the basis upon which organizing elements are oriented to convey the overall urban form. Lands within the Welaunee Arch shall be planned for the generalized land uses described in this Policy and Table 1. As depicted on Figure 13-5, the Welaunee Arch shall be designed with the following land use districts:

(1) **Northeast Gateway District** – The intent of the Northeast Gateway District is to provide an area that capitalizes on the location of a potential future interchange with Interstate 10 and Welaunee Boulevard by including well-designed, region-serving commercial and employment uses. The Northeast Gateway District as identified on Figure 13-5 shall be comprised of:

a. Activity Center. An activity center zone shall be a mixed-use zone including between 75 and 280 acres. The activity center zone shall be located east of the residential zone, as generally depicted on Figure 13-5, and no closer than 1,000 feet from the Buckhead subdivision. This zone shall contain a diverse mixture of region-serving commercial, office, hotel, and other non-residential uses with a trade area extending beyond the Welaunee Arch. This zone may also contain higher-density residential and public and civic uses that can contribute to the center's vitality and sustainability. Residential densities in this zone shall have a minimum of 10 dwelling units per acre and a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Non-residential intensities shall range from 4,000 square feet per acre to 30,000 square feet per acre. The mixture of uses shall be 10% to 55% residential and community services uses and 45% to 90% non-residential uses. The activity center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

b. **Employment Center.** An employment center zone shall be a mixed-use zone located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities and shall contain 75 to 280 acres. Employment centers are intended to contain a mix of uses and not be a single-use environment. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure

including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed in Employment Center zones except when located above the ground floor in mixed-use buildings. Development intensities of non-residential uses in the employment center zone shall range from 8,000 square feet per acre to 40,000 square feet per acre. This zone shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. The development of a PUD Concept Plan that includes this zone shall include coordination with Star Metro to include preliminary plans for transit connectivity between this zone and other mixed-use zones in the Arch. The employment center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

c. **Residential.** A residential zone shall be located between the Buckhead subdivision and the mixed-use zones as generally depicted on Figure 13-5. This residential zone shall include between 30 and 100 acres. Residential development density shall be no less than 2 dwelling units per acre and not exceed 6 dwelling units per acre. Accessory dwelling units shall not count towards the residential density in this zone.

d. **Open Space/Greenway.** The Open Space and Greenway area within the Northeast Gateway District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with the development standards of Policy 13.2.37. Specifically, an open space zone shall be located along the border with the established Buckhead Neighborhood serving as a buffer between the existing Buckhead Neighborhood and new development in the Arch. This zone shall be no less than 250 feet wide and will include the Welaunee Greenway and existing utility easements. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(2) **West Arch District** – The intent of the West Arch District is to provide an area with a mixed-use center that serves residents of both Welaunee via Welaunee Boulevard and Killearn Neighborhoods via Shamrock South. It is the intent of this District to allow the highest density and intensity development within the mixed-use center, gradually transitioning to lower densities and intensities as distance

from the mixed-use center increases. The West Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the West Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone.

b. Town Center. A town center zone shall be a mixed-use development planned as a compact, efficient node between 20 and 120 acres in size. A town center shall contain uses that serve surrounding neighborhoods as well as those traveling through the area. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, open space, and civic, religious and institutional uses (including day care services for children and adults). The Town Center shall include uses mixed horizontally and vertically. It is the design intent to plan for multiple storefronts and multiple retailers in the town center, so all of the available retail space is not aggregated into one or two "big-box" stores.

Development intensities in the town center shall range from 4,000 square feet per acre up to 30,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 50,000 gross square feet. Residential densities shall be no less than 8 dwelling units per acre up to a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. The mixture of uses shall be 10% to 55% residential and community services and 45% to 90% non-residential uses. Town centers shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. Community open space in the form of public squares and greens or urban forest canopy areas shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

~~I. Land Use~~

~~e. **Village Center.** A village center zone shall allow small retail, specialty retail, office, restaurants, services, open space, residential and other uses (including day care services for children and adults) that support residential uses within the District. This zone is also intended to function as a neighborhood focal point and is envisioned to have churches, town squares, and other civic, religious, and institutional uses. The village center zone shall range in size from 5 to 50 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape with street trees and landscaping, and other such solutions, shall be utilized to create a pedestrian-friendly, walkable center. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages.~~

~~The mixture of uses shall be 0% to 50% residential and community services and 50% to 100% non-residential uses. Development intensities in the village center zone shall range from 4,000 square feet per acre to 20,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 30,000 gross square feet. Residential development in the Village Center shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens or urban forest canopy areas shall be planned as the focal point of a village center. No minimum on-site open space shall be required for each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.~~

~~d. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In the neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed 10,000 gross square feet.~~

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use zones that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods. Residential development shall be limited to a minimum of 2 dwelling units per acre with a maximum density of 10 dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway.

f. **Open Space/ Greenway.** The Open Space and Greenway area within the West Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(3) **North Arch District** – The intent of the North Arch District is to provide an area with a mixed-use center that serves residents of Welaunee, Killearn, and the residents along Roberts Road and Crump Road. The North Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the North Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone as defined in the West Arch District policy.

b. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall be not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. Residential development shall be a minimum of 2 dwelling units per acre and shall not exceed a density of 10

dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the North Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated Open Space.

Additionally, high quality native forests in the North Arch District shall be protected, preserved, and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

e. **Regional Park.** A regional park with active recreation may be located in the North Arch District. If a regional park is designated within this District, it shall be designed to include connectivity with the trail system around any high-quality successional forests/native forests as described in the open space zone for this District.

(4) **Conservation Design District** - The intent of the Conservation Design District is to provide an area that is primarily residential in nature with a small village center. The residential development is intended to be arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. The village center is intended to include non-residential uses in a location that minimizes the number of miles residents drive to meet their daily needs and promote the internal capture of vehicular trips. The Conservation Design District as identified on Figure 13-5 shall be comprised of:

a. **Clustered Residential.** The cluster residential zone shall be comprised of clustered development that sets aside a minimum of 50% open space as a reserve area, comprised of such things as special development zones, preservation and conservation features, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, and stormwater facilities designed as a community amenity. Adjacent open space as designated on

Figure 13-5 and consistent with Policy 13.2.37 may be included in the Conservation Design District reserve area calculations for cluster development. The development area shall be the area not set aside as reserve area and shall comprise no more than 50% of the total conservation design district. Within this district, development area shall be located on the least environmentally sensitive areas; be contiguous to the greatest extent practicable; and allow maximum open space to be easily maintained in the reserve area. The development area shall be developed at a minimum of two dwelling units per acre and a maximum of 12 dwelling units per acre. Planned Unit Developments may provide for a density bonus up to 20 dwelling units per acre where more area is set aside than required or where greenways, trails, or other passive recreational opportunities are provided in the reserve area.

The conservation design district shall contain a mixture of housing types. Allowable housing types include single family detached homes, single family attached homes, duplexes, triplexes, fourplexes, courtyard buildings (a 1 to 3.5 story detached structure consisting of multiple side by side and/or stacked dwelling units oriented around a courtyard or series of courtyards), and cottage courts (a group 1 to 1.5-story detached structures arranged around a shared court visible from the street). The conservation design district shall not contain greater than 80% of any one housing type. Accessory dwelling units are allowable per City of Tallahassee land development code. Accessory dwelling units do not count towards the overall density and do not count as a different housing type for the purpose of requiring a mixture of housing types. Design standards for this District shall include Dark Sky principles to prevent and reduce light pollution.

The acreage of the reserve area shall be preserved as open space consistent with Policy 13.2.37, shall incorporate existing or planned public or private open space and greenspace to the greatest extent practicable, and shall be of sufficient size and buffered to ensure the protection of all critical on-site resources that are to be preserved and to accommodate authorized uses which includes natural open space, passive recreation uses (e.g., greenways, picnic areas or open fields), stormwater facilities, or other environmental conservation purposes.

All preservation areas, special development zones, conservation areas, archaeological sites and view-shed areas within designated protection zones for canopy roads shall be incorporated into the reserve area to the greatest extent practicable.

Stormwater management facilities which are otherwise permissible are allowed in the reserve area provided that the facilities are located outside of preservation areas, canopy road zones, naturally forested areas, special development zones, and meet either of the applicable following two standards:

~~I. Land Use~~

i. ~~Stormwater management facilities shall have side slopes of flatter than 4:1, and/or~~
ii. ~~Stormwater management facilities shall have appropriate tree and plant species that visually integrates the stormwater facility into the overall reserve area.~~

~~All such facilities shall be designed as community amenities, with trails, observation decks, or platforms where appropriate.~~

b. ~~**Village Center.** The Conservation Design District shall include a Village Center Zone subject to the design standards for a Village Center zone in the West Arch District Policy.~~

c. ~~**Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed10,000 gross square feet.~~

d. ~~**Open Space/ Greenway.** The Open Space and Greenway area within the Conservation Design District includes all open space and reserve area within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37 and shall be included in the reserve area calculations for cluster development. At a minimum 50% of this District shall be designated as Open Space.~~

~~High quality successional forests and native forests as defined in the Tallahassee Leon County Comprehensive Plan Glossary in the Conservation Design District shall be protected and preserved and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features~~

~~Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.~~

~~Core canopy or core forests, as defined in the City of Tallahassee's Urban Forest Master Plan, that is part of the fragmentation class of Core Canopy (>500 acres) and shown on the Preliminary Environmental Map (Figure 13-6), shall be protected, included in the open space area, and shall be connected to greenways and open space that function as wildlife corridors. These areas may be included in the reserve area calculations for cluster development. Potential locations of core forest areas that are part of the fragmentation class of Core Canopy (>500 acres) are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.~~

~~*(5)***Residential Reserve District** - The Residential Reserve District as identified on Figure 13-5 is intended to be residential in nature, arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. This District is also intended to maintain compatibility with established residential development along Roberts Road and Crump Road. The Residential Reserve District shall be subject to the Clustered Residential policy of the Conservation Design District with a maximum density of 6 dwelling units per acre and a minimum reserve area requirement of 60%. The Residential Reserve District shall include open space buffers of a minimum width of 250 feet to Roberts Road and Crump Road that may include the Welaunee Greenway system, open space, and reserve area from cluster subdivision development. The Residential Reserve District may alternatively be established as Open Space through an optional Alternative Development Program as established in Policy 13.2.44.~~

~~*(6)*** **Open Space** – Open Space area shall be incorporated into each District. Districts shown in Figure 13-5 include the adjacent open space. The Primary Open Space System shall be designed as a connected network of open space as generally depicted on Welaunee Arch Map, Figure 13-5, which shall include Conservation and Preservation areas as generally depicted on the Preliminary Environmental Features Map, Figure 13-6, aesthetic open space, Greenways, and the Perpetual Drainage Easement held by the City and County. A minimum of 20% of Phase 1, 50% of Phase 2, 60% of Phase 3, and 40% of the total gross area of the Arch shall be designated Open Space unless offset through the Alternative Development Program in Policy 13.2.44. Conservation and Preservation Areas as defined in Policy 1.3.1 and 1.3.4 of the Conservation Element account for approximately 19% of the overall gross area of the Welaunee Arch. The remainder of the designated open space, which will include approximately 21% of the overall gross area, shall consist of open space incorporated into the development plan for each District or part of the Primary Open Space System. The Open Space Area shall be subject to

the design and development criteria in Policy 13.2.37. The Conservation and Preservation Areas shall be subject to the design and development criteria of Policy 13.2.38.

Policy 13.2.5: Phasing. **(EFF. 1/11/21)**

Development of the Arch shall be implemented in phases consistent with this plan and necessary infrastructure (including water and sewer) and supporting services (including adequate schools, police and fire service). Phase 1 shall include the Gateway District, West Arch District, and the North Arch District. Phase 2 shall include the Conservation Design District. Phase 3 shall include the Residential Reserve District. A PUD Concept Plan may address only a portion of a phase or may address more than one phase. Phase 1 of the Welaunee Arch must include one Town Center Zone and one Village Center Zone, either of which can be located in the West Arch District or North Arch District.

Phase 2 shall not be developed until 1,500 dwelling units and 150,000 square feet of non-residential uses have been constructed in Phase 1.

Phase 3 shall not be developed until at least 70% of the gross acreage of Phase 2 is included in an adopted PUD Concept Plan. Sub-phases or stages of each phase may be developed in separate PUD Concept Plans.

It is the intent that infrastructure improvements occur contemporaneous with development. This timing of infrastructure with development prevents stranded or early investment in infrastructure.

I. Land Use

Table 1. Land Uses in the Welaunee Arch

District	**Zone**	**Size**	**Nonresidential Intensity**	**Residential Density**	**Mixture**
Northeast Gateway District (Phase 1)	Activity Center	75-280 acres	4,000–30,000 SF/acre	10-20 DU/acre	10-55% residential 45-90% nonresidential
	Employment Center	75-280 acres	8,000-40,000 SF/acre	n/a[1]	n/a[1]
	Residential	30-100 acres	n/a	2-6 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
West Arch District (Phase 1)	Town Center[2]	20-120 acres	4,000–30,000 SF/acre	8-20 DU/acre	10-55% residential 45-90% nonresidential
	Neighborhood	¼-½ mile from Town Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
North Arch District (Phase 1)	Village Center[2]	5-50 acres	4,000–20,000 SF/acre	4-14 DU/acre	0-50% residential 50-100% nonresidential
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	
	Open Space	Min. 20% of gross area in Phase 1			
Conservation Design District (Phase 2)	Village Center	5-50 acres	4,000–20,000 SF/acre	4-14 DU/acre	
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a

I. Land Use

	Conservation Design Clustered Residential	Maximum 50% of Conservation Design District	n/a	2-12 DU/acre	
	Open Space	Min. 50% gross area as Reserve Area in Phase 2.			
Residential Reserve (Phase 3)	Residential Reserve Clustered Residential	40% of Residential Reserve District	n/a	0-6 DU/acre	
	Open Space	60% gross area as Reserve Area in Phase 3.			
Open Space[3,4]	Open Space	Minimum of 20% of Phase 1; 50% of Phase 2; no less than 60% of Phase 3; and no less than 40% of total area in Welaunee Arch. Open Space includes Conservation and Preservation Areas, Reserve Area, and Primary Open Space Areas.			
	Conservation/ Preservation[5]	Approximately 900 acres (19% of the Arch)			
	Other Open Space	Approximately 1000 acres (21% of the Arch)			

1. Residential uses permitted only above ground floor in mixed-use buildings

2. Town Center Zone and Village Center Zone are permitted in West Arch District and North Arch District, provided one of each zone is located in Phase 1.

3. Open Space, including Conservation and Preservation Areas and Greenways shall be incorporated into all development Phases.

4. Open Space requirements apply unless offset through the Alternative Development Program in Policy 13.2.44.

5. Precise size and location of Conservation and Preservation Areas to be determined through a Natural Features Inventory.

Policy 13.2.6: Development Totals. **(EFF. 1/11/21)**

Densities and intensities for development of the Arch shall be consistent with Policy 13.2.4 and other policies of this master plan. The maximum development for the Arch shall not exceed 12,500 residential units and 3,000,000 square feet of non-residential development.

Policy 13.2.7: Development Standards for Mixed-Use Zones. **(Eff. 1/11/21)**

The Activity Center, Employment Center, Town Center, and Village Centers (collectively "Mixed-Use Zones") shall be subject to the following development standards in addition to the requirements of Policy 13.2.4:

(1) PUD Concept Plans that include mixed-use zones shall include specific design standards, public facility standards, and building standards, such that the district develops as a compact, walkable urban district. At a minimum, the form-based code or design standards shall address relationship between building facades and the public realm, the form and mass of buildings in relation to one another, and the scale and types of streets and blocks. Design standards shall also minimize driveway cuts along sidewalks facilities by requiring alleys, shared access points, and/or structured parking facilities.
(2) Development in the Mixed-Use Zones may request a waiver from the requirements in the Environmental Management Ordinance for natural area, landscaping and buffers for the purpose of maximizing intensity and density within the mixed-use zone.
(3) Stormwater detention and treatment facilities for Mixed-Use Zones shall be designed in accordance with applicable standards and should be located outside of a Mixed-Use Zones in order to promote a compact pedestrian-oriented arrangement of land uses. Stormwater facilities may be located within mixed-use zones if alternative sites are not reasonably available outside of mixed-use zones or where stormwater facilities can be integrated with pedestrian friendly environments. PUD Concept Plans shall include design standards for stormwater facilities that are consistent with the intent of the zone.
(4) Building heights in mixed-use centers shall not exceed 65 feet from grade.

Policy 13.2.8: Inclusionary housing. **(Eff. 1/11/21)**

Development within the Welaunee Arch shall comply with any ordinances in effect at the time of development that address the need for affordable or inclusionary housing. Each PUD Concept Plan shall include a Housing Plan designed to achieve compliance with the City's Inclusionary Housing Ordinance, or other affordable and inclusionary housing ordinances in effect, by buildout of the area governed by that Concept Plan.

Policy 13.2.9: Housing affordability. **(Eff. 1/11/21)**

In addition to complying with ordinances in effect at the time of development that address the need for affordable or inclusionary housing, a range of housing choices shall be provided to accommodate diverse income levels, age groups, people with a range of abilities, and housing needs. Granny flats, garage apartments, and other accessory dwelling units will not be included in unit or density calculations or transportation impact analyses. The range of housing options provided shall be based on the land use districts and zones within each District. No land use district or zone within a district that allows residential development shall limit housing types to only single-family detached homes.

In order to promote a range of housing types and choices, the City of Tallahassee shall incentivize the development of workforce housing within ¼ mile of mixed-use zones or transit hubs. The City shall also incentivize the provision of housing for low-income and very-low income families, seniors, and/or people with disabilities. Incentives shall be incorporated into PUD Concept Plans and may include increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures such as the incentives allowed in the City's Inclusionary Housing Ordinance.

Policy 13.2.10: Community Facilities. **(EFF. 1/11/21)**

Community Services, Light Infrastructure, Community Parks, and Neighborhood Parks shall be allowed uses in any land use district or zone consistent with the intent of each district and zone.

Policy 13.2.11: Essential Services. **(EFF. 1/11/21)**

Mixed-use centers and residential neighborhoods shall be designed to facilitate essential services, such as fire, police, and emergency medical services consistent with generally accepted response times. PUD Concept Plans shall include the locations of essential services upon request by and through coordination and formal agreement with the City of Tallahassee and/or the Leon County School Board.

Policy 13.2.12: Landscaping. **(EFF. 1/11/21)**

All landscaped areas, except athletic playing fields and golf course fairways and greens, shall utilize drought-resistant native plant materials from the "Florida Friendly Landscaping™ Guide to Plant Selection and Landscape Design" or other regionally appropriate plant material guide approved by the City. Landscaping may not include invasive species listed by the Florida Exotic Pest Plan Council. Landscaping in mixed-use and neighborhood zones shall include shade trees planted as street trees. PUD concept plans may include incentives, such as reduced tree mitigation, for shade trees planted as street trees outside of mixed use and neighborhood zones.

Policy 13.2.13: Crime Prevention through Design. **(EFF. 1/11/21)**

Integrated mixtures of uses shall be located and designed consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement, and natural access control.

Policy 13.2.14: General Compatibility. **(EFF. 1/11/21)**

Development in the Welaunee Arch shall be compatible with adjoining land uses through measures including but not limited to density and height limitations, setbacks, and

vegetative and open space buffers. Unless otherwise specified in this master plan, buffers are not required between or within land use districts in the Welaunee Arch.

Policy 13.2.15: Compatibility with Existing Residential Development. **(EFF. 1/11/21)**

To facilitate compatibility with the existing residential developments located east of Centerville Road and west of Miccosukee Road that are designated as Residential Preservation or Urban Residential-2 on the Future Land Use Map, land in the Welaunee Arch that is within 1,000 feet of such neighborhoods as measured from the boundary of the neighborhood shall be limited to open space, greenways, and residential uses with a maximum density of 6 dwelling units per acre comparable to the Residential Preservation Land Use Category. Mixed Use Land Use districts shall extend no closer than 1,000 feet from these existing residential developments. The location and size of each specific use category shall be depicted on a Planned Unit Development (PUD) Concept Plan.

Policy 13.2.16: Interim Uses. **(EFF. 1/11/21)**

Agricultural and silvicultural uses, whether existing or new, shall be an allowed interim use in any area of the Welaunee Arch on which development is planned to occur, up to and until the start of actual construction on the applicable land.

TRANSPORTATION

Policy 13.2.17: Transportation System. **(EFF. 1/11/21)**

The Welaunee Arch shall be served by a transportation system designed to optimize mobility. Major thoroughfares shall be generally located as depicted on Welaunee Arch Transportation Map, Figure 13-7, with the final location and design to be based upon site-specific environmental, engineering, and related considerations. Thoroughfares connecting through the Arch to areas beyond the Arch shall be arterials designed as boulevards for high vehicular capacity and moderate speeds not to exceed a design speed of 45 miles per hour with sidewalks on both sides of the roadway and bicycle facilities. Thoroughfares connecting mixed use areas within the Arch shall be collectors designed as avenues with high vehicular capacity and low to moderate speeds not to exceed a design speed of 30 miles per hour with sidewalks on both side of the roadway and bicycle facilities. On thoroughfares, a shared use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for the sidewalk on one side of the road and the bike lanes for that facility. Within mixed-use centers and neighborhoods, where feasible based on engineering design criteria and the protection of environmental features, a grid of interconnected streets will provide alternative travel paths. Energy efficiency shall be accomplished in areas that are intended for greater densities and intensities through support of frequent transit service and providing a safe, comfortable and attractive environment for pedestrians and cyclists. Transportation facility needs, including planned future corridors and projected deficiencies on existing facilities surrounding the Arch, resulting from projected development in the Arch as identified through traffic models completed as part of the I-10 Interchange PD&E and/or updates to MPO Long Range Transportation Plans shall be adopted into the applicable Mobility Element

policies and/or figures and updates to the Capital Improvements Element when applicable.

Policy 13.2.18: Internal Trip Capture. **(Eff. 1/11/21)**

The transportation system, along with the mixture of uses, shall be designed to achieve an internal capture of at least 20% of the vehicular trips generated on-site at buildout. To achieve this minimum internal capture rate, mixed-use and neighborhood zones shall be developed with a mixture of uses and higher density residential development located adjacent to non-residential uses. Residential zones shall be connected to mixed use zones by a network of sidewalks, shared use paths, and bicycle facilities designed to provide safe, comfortable transportation options. Transit facilities shall be coordinated with Star Metro to ensure infrastructure that supports connectivity to various transit routes.

Policy 13.2.19: Northeast Gateway/Welaunee Boulevard. **(Eff. 1/11/21)**

The Northeast Gateway, which is a major infrastructure project for the entire Welaunee Critical Planning Area, consists of region-serving roads to distribute traffic north, south, east and west from a potential I-10 interchange at Welaunee Boulevard, which was recommended in the Florida Department of Transportation (FDOT) Master Plan Update on February 28, 2013. North of I-10, the roadways that make up the Northeast Gateway include the extension of Welaunee Boulevard from south of I-10 north through the Arch, and the extension of Shamrock South from Centerville Road to U.S. 90 (Mahan Drive). Welaunee Boulevard and Shamrock South Extension are programmed to be constructed by the Blueprint Intergovernmental Agency consistent with the voter-approved Northeast Gateway project and may be phased based upon trip demand. Within the Arch, both Welaunee Boulevard and Shamrock South Extension shall be designed to function as a complete street to promote mobility for multiple users – pedestrians, bicyclists, motorists, and transit riders of all ages. No residential driveways shall connect directly to Welaunee Boulevard or Shamrock South Extension.

Policy 13.2.20: I-10 Flyover or Interchange. **(Eff. 1/11/21)**

Welaunee Boulevard shall connect to a flyover across I-10 or a potential interchange, if approved by the Federal Highway Administration, in order to facilitate vehicular movement to Welaunee Boulevard south of I-10. Any flyover or potential interchange shall meet federal requirements to ensure the safe and efficient use of I-10.

Welaunee Boulevard shall connect to a potential interchange with Interstate-10, subject to approval by the Federal Highway Administration and the Florida Department of Transportation. The potential interchange of Welaunee Boulevard and Interstate-10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange that supports a gridded street network and city blocks on the north side of Interstate-10. The gridded street system shall serve to divert traffic onto a network of town center streets and shall support an environment that

prioritizes pedestrian mobility. Welaunee Boulevard may pass over Interstate 10 unless and until such time that a potential interchange is approved and constructed.

Policy 13.2.21: Right-of-Way Reservation. **(EFF. 1/11/21)**

The landowner shall reserve for future conveyance the right-of-way for Welaunee Boulevard, the Shamrock South Extension, and the I-10 Flyover or Interchange as generally depicted on Welaunee Arch Transportation Map, Figure 13-7. The terms of such reservation shall be consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990, as restated and amended. Rights-of-way shall be restricted to transportation facilities and compatible infrastructure.

Policy 13.2.22: Complete Streets. **(EFF. 1/11/21)**

The transportation system shall be designed with complete streets in accordance with Objective 1.2 [M] and associated policies in the Mobility Element. A PUD Concept Plan shall provide in mixed-use centers for complete streets that include safe and convenient pedestrian facilities reasonably free from hazards and adequately separated from streets that carry high volumes of vehicular traffic and create a reasonable and direct route between destinations. Sidewalks shall be provided on both sides of local streets in mixed-use zones. Sidewalks shall be provided on at least one side of local streets in zones that allow only residential development.

Policy 13.2.23: Bicycle Facilities. **(EFF. 1/11/21)**

A PUD Concept Plan shall include a network of bicycle facilities, including on-street and off-street facilities, which should be coordinated with the open space areas of the Arch. The intent is to provide safe and convenient movement for bicycles reasonably free from hazard and providing a reasonable and direct route between destinations. Bicycle facilities shall be designed where practical to connect to similar facilities in other PUD Concept Plans. Where feasible, a shared-use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for sidewalks and bike lanes. Protected bicycle lanes may be incorporated where feasible. Where bicycle, pedestrian, and/or shared use path facilities intersect the Welaunee Greenway, opportunities shall be provided to access the Greenway.

Policy 13.2.24: Parking in Mixed-Use Centers. **(EFF. 1/11/21)**

In mixed-use centers, vehicular parking shall be located on the street, in parking structures, or off-street at the street level. Off-street parking shall be provided in the rear of buildings where feasible based on engineering design standards and the protection of environmental features, or on the side of buildings and shall be limited in size and scale through such measures as shared parking, parking credits, and maximum parking limits. PUD Concept Plans may include incentives, such as reduced parking or setback requirements, for the use of building-mounted solar systems on parking structures.

~~I. Land Use~~

~~Policy 13.2.25: Canopy Roads.~~ **~~(Eff. 1/11/21)~~**

~~Direct access to Canopy Roads shall not be permitted for any residential or nonresidential uses except parks or open space. Road access to the Welaunee Arch shall be provided from Miccosukee Road at no more than three locations. Road access to the Arch shall be provided from Centerville Road in no more than two locations. Canopy Road Zones shall be provided along Miccosukee Road and Centerville Road in addition to the Welaunee Greenway. PUD Concept Plans may include incentives, such as reduced tree mitigation, in return for new roadways being designed and planted with shade trees consistent with the requirements for future canopy road designation.~~

~~Policy 13.2.26: Transit.~~ **~~(Eff. 1/11/21)~~**

~~Mixed use centers are intended to be designed with transit as a component of the multimodal transportation system in the Welaunee Arch. As PUDs are developed, coordination with Star Metro shall occur to ensure the plan accommodates necessary infrastructure to support anticipated transit service. PUDs shall address connectivity between mixed use zones and the transit hub identified in Policy 13.1.4.~~

~~Policy 13.2.27: Electric, Connected and Automated Vehicles.~~ **~~(Eff. 1/11/21)~~**

~~As PUDs are developed, coordination with the Planning Department and the City's Public Infrastructure departments shall occur to ensure the plan accommodates necessary infrastructure to support charging infrastructure for electric vehicles and infrastructure to support Connected and Automated Vehicles (CAV). PUDs may include incentives, such as reduced parking and setback requirements, for development that is electric vehicle capable or electric vehicle ready by providing for the future installation and use of Electric Vehicle Supply Equipment (EVSE) in accordance with the National Electrical Code. Incentives will be greater for electric vehicle ready than for electric vehicle capable developments.~~

~~Policy 13.2.28: Transportation Concurrency.~~ **~~(Eff. 1/11/21)~~**

~~Prior to approval, PUD Concept Plans shall be required to demonstrate sufficient capacity of concurrency facilities to meet the standards for level of service for the existing population, previously permitted development and for the proposed development plan in accordance with the City of Tallahassee Concurrency requirements. This demonstration shall include a transportation analysis for limited access, arterial, and collector roads, including the Northeast Gateway/Welaunee Boulevard, in accordance with the City Concurrency Management System Policy and Procedures Manual. If the City's transportation concurrency system is replaced with a Mobility Fee or another alternative mobility funding system, PUD Concept Plans shall comply with the mobility funding system in place at the time.~~

~~PUBLIC FACILITIES AND SERVICES~~

~~I. Land Use~~

~~*Policy 13.2.29: Adequate Public Facilities and Services.* **(EFF. 1/11/21)**~~

~~The supply and delivery of safe and adequate public facilities shall accommodate existing and future development consistent with the Comprehensive Plan. Development in the Welaunee Arch shall be served by adequate public facilities and services as required by law and consistent with the Welaunee Urban Services-Development Agreement, as restated and amended. Public facilities and services may be phased and financed, constructed, owned, operated, or maintained by any entity allowed by law, including but not limited to independent or dependent special districts, property owner associations, homeowner associations, or any combination of such entities. Any such entity may finance public facilities through any means allowed by law.~~

~~*Policy 13.2.30: Utilities.* **(EFF. 1/11/21)**~~

~~Potable water, sanitary sewer, and electricity service shall be provided by the City pursuant to the Welaunee Urban Services-Development Agreement, as restated and amended. Private providers shall provide telecommunications services. The installation of utilities may be phased consistent with the level-of-service and availability standards of the Tallahassee Leon County Comprehensive Plan. Utility infrastructure improvements shall occur consistent with the general timing of development, instead of the infrastructure being provided well before development occurs. This timing of infrastructure with development is intended to ensure that there is no stranded or early investment in infrastructure waiting for future development to occur.~~

~~*Policy 13.2.31: Clean Energy.* **(EFF. 1/11/21)**~~

~~PUD Concept Plans may incorporate strategies and standards that are consistent with the City of Tallahassee's Clean Energy Resolution or any clean energy plan adopted by the City subsequent to the resolution. PUD Concept Plans shall comply with applicable clean energy and renewable energy ordinances in effect at the time of development. PUDs may include additional incentives to encourage energy efficiency.~~

~~*Policy 13.2.32: Energy Efficient Environmental Design.* **(EFF. 1/11/21)**~~

~~Planned Unit Development Concept Plans may provide for incentives such as increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures in each District where developments incorporate Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar systems that generate threshold MW levels of electricity. Alternatively, PUD Concept Plans may provide for utility fee or other similar exaction offsets commensurate to estimated energy efficiency gains from incorporating Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar~~

~~systems that generate threshold MW levels of electricity. This policy does not apply to the Residential Reserve Zone.~~

~~*Policy 13.2.33: Stormwater Management.* **(EFF. 1/11/21)**~~

~~Prior to approval of the first PUD Concept Plan, a Stormwater Facilities Master Plan (SFMP) shall be prepared for the entirety of the Welaunee Arch. The Stormwater Facilities Master Plan must be reviewed and approved by the City before PUD Concept Plans can be approved. For areas not included in a PUD, the stormwater plan may be conceptual and generalized based upon the projected development allowed by this master plan accounting for non-developable areas.~~

~~The SFMP shall take into consideration stormwater flows from full build out conditions from any upstream, off-site property. However, nothing herein shall relieve the upstream, off-site properties from complying with applicable environmental ordinances or standards. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance; establish infrastructure requirements necessary to manage stormwater in compliance with local, state, and federal regulations; document the phasing, implementation, and easement reservations necessary to serve projected full build out; and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land uses, soils and topographic data, and the conceptual land use plan (Figures13-5 through 13-7). The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under projected full build-out conditions. Flood extents delineated by the SFMP shall identify the 100-year flood exclusion area under the full build-out condition. No habitable structures shall be constructed within the post-development, full build-out 100-year floodplains or 100-year flood exclusion areas. The SFMP shall incorporate low-impact design best management practices to encourage the disconnection of impervious surfaces and increase the removal of nutrients from stormwater discharges. The SFMP shall also evaluate the existing nutrient pollutant loading to Class III surface water resources and ensure net improvement in the post development condition. The SFMP scope of work must be approved by the City prior to development of the SFMP.~~

~~The Stormwater Facilities Master Plan shall identify the feasibility and location of regional stormwater facilities and how they should be designed and constructed as amenities within parks or publicly accessible areas. Stormwater facilities shall be located outside wetlands and floodplains. Stormwater facilities may be located in Open Space that is not wetland or floodplain subject to design standards in a PUD Concept Plan and consistent with protection of conservation and preservation lands required by the comprehensive plan and the Environmental Management Ordinance.~~

Policy 13.2.34. Wetlands and Floodplains. **(EFF. 1/11/21)**

Development shall minimize encroachment into wetland habitat areas by ensuring that public and private roads avoid crossing wetlands or require that such crossings are cited at the narrowest point of a wetland allowing for an efficient transportation design while maintaining the continuity of identified wildlife corridors. No net reduction in floodplain storage shall be permitted within the 100-year floodplain. Otherwise floodplains shall be managed consistent with the Comprehensive Plan Conservation Element.

Wetland acreage and function within the Welaunee Arch shall be protected through compliance with local, state, and federal environmental permitting requirements. For purposes of permanent protection of Conservation and Preservation lands designated on Figure 13-6 the delineation of wetlands shall be based upon the jurisdictional determination by the governing agency.

Wetlands depicted on Figure 13-6 utilized for mitigation within the Welaunee Arch shall be made subject to conservation easements consistent with the requirements of the authorizing regulatory agency. These easements will be defined in a manner that serves as permitted mitigation for wetland and other impacts or species relocation. To the extent authorized by federal, state, and local permitting agencies, Conservation and Preservation Lands association with the PUD Concept Plan under consideration may be utilized for achieving any mitigation requirements. The mitigation conservation easement area shall allow passive recreation facilities and shall be subject to a management plan.

Policy 13.2.35. Florida Springs and Aquifer Protection. **(EFF. 1/11/21)**

Wakulla Spring is an impaired first magnitude Outstanding Florida Springs. Planned development for the Welaunee Arch is within the springshed boundaries of the Upper Wakulla River and Wakulla Spring Basin Management Action Plan. Development activities associated with the project have the potential to impact water quality; therefore, PUD Concept Plans shall mitigate potential nutrient loadings by implementing measures such as proper treatment and disposal of wastewater, stormwater, and the implementation of adequate sediment and erosion control practices to mitigate any surface water impacts.

Policy 13.2.36: Schools. **(EFF. 1/11/21)**

Each PUD Concept Plan shall be analyzed for impacts on public schools based upon then-applicable pupil generation rates utilized by Leon County Schools. Schools shall be located in relation to neighborhoods in order to serve residents, provide a focal point for the neighborhoods, and be safely accessible by pedestrians and bicyclists. The co-location of schools, civic spaces, and active parks is encouraged. The City and County shall adhere to the Public School Concurrency and Facility Planning Interlocal Agreement, as required by Section 1013.33, F.S., which establishes procedures for, among other things, coordination and sharing of information; planning processes; school siting procedures; site design and development plan review; and school concurrency implementation. Prior

~~to site plan approval of the 500th residential dwelling unit in Phase 1, a 10-acre site shall be reserved for future dedication to the Leon County School Board proximate to residential areas, a Town or Village center and the primary open space system with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.~~

~~*Policy 13.2.37: Fire and Emergency Services.* **(EFF. 1/11/21)**~~
~~Upon request of the City, PUD Concept Plans shall include identified sites for fire and/or emergency services in coordination and formal agreement with the City.~~

~~RECREATION, OPEN SPACE and CONSERVATION~~

~~*Policy 13.2.38: Primary Open Space System.* **(EFF. 1/11/21)**~~
~~The intent of the Open Space and Conservation strategy is to identify, conserve, manage, restore, and protect significant natural resources during and after development of the Welaunee Arch in accordance with the Conservation Element of the Tallahassee-Leon County Comprehensive Plan and consistent with this Master Plan. No less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the gross area in the Welaunee Arch shall be designated Open Space which shall include the Primary Open Space System, Conservation and Preservation Areas, Greenways, and other designated open space in each development District.~~

~~Open Space shall comprise no less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the total gross area within the Welaunee Arch, or approximately 1,900 acres. Of the Open Space, approximately 900 acres (19% of the total gross area of the Welaunee Arch) are designated Conservation or Preservation Areas as defined in policies 1.3.1 and 1.3.4 of the Conservation Element. The precise size and location of Conservation and Preservation Areas shall be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes such Conservation and Preservation area. The remainder of the Open Space, approximately 1,000 acres (21% of the total gross area of the Welaunee Arch), shall be open space incorporated into the development plan for each District or part of the Primary Open Space System.~~

~~I. Land Use~~

~~Open Space shall include Conservation Areas and Preservation Areas, Canopy Road Zones, Greenways, and aesthetic open space. Outside of these designated areas, the additional Open Space shall prioritize additional buffers around Conservation and Preservation Features, areas that provide continuous and contiguous connectivity of Open Space, additional buffers for Canopy Road Zones, additional areas around the Core canopy or core forests that are part of the fragmentation class of Core Canopy (>500 acres), additional areas that support the network of wildlife corridors, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, priority planting areas identified in the Urban Forest Master Plan, and stormwater facilities designed as a community amenity.~~

~~The Welaunee Arch shall contain a primary open space system concept that will contain the majority of the open space requirements within a connected corridor as depicted on Figure 13-5. This connected, continuous network of open space constitutes a fundamental building block of the Arch and is intended to serve multiple purposes including but not limited to protection of conservation and preservation areas. The Primary Open Space System shall include Conservation and Preservation areas. Primary Open Space may also include buffers for residential areas and canopy roads, greenways, environmentally sensitive areas, including wildlife corridors, aesthetic open space, active and passive recreation areas, and community gathering spaces. The Primary Open Space may be incorporated into any PUD Concept Plan to satisfy requirements of the Environmental Management Ordinance. Constructed stormwater facilities consistent with Policy 13.2.33 may be utilized to satisfy open space requirements in a PUD Concept Plan.~~

~~Primary open space systems, together with other open space and green spaces set aside to meet the urban forest and landscape requirements shall also meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. The intent of this policy will be achieved through the following:~~

~~(1) Credits for open space requirements, wetland mitigation, slope mitigation, stormwater management and/or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Arch.~~

~~(2) Areas with severe and significant slopes that are not located in the open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code.~~

~~(3) The Open Space systems shall be open to the general public and be designed to include and provide connections with the Miccosukee Canopy Road Greenway and Welaunee Greenway at multiple locations and to integrate internal recreational~~

multi-use paths with the greenways trails. Connections to future regional greenways shall be considered in the design of open space.

(4) The open space systems shall be designed to provide additional buffering for existing designated canopy road zones.

(5) Open space may be privately owned or dedicated to the public by conveyance to a general-purpose or special-purpose local government entity; or be designated a part of a statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the Conservation and Preservation areas in accordance with local government regulations.

(6) The open space systems shall be governed by one or more management plans approved by the City in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of Conservation and Preservation areas shall be provided by conservation easements and other measures consistent with Chapter 5 — Environmental Management, Tallahassee Land Development Code. Conservation and Preservation areas placed in conservation easements may be used towards satisfying the urban forest and landscaping requirements of Chapter 5 – Environmental Management, Tallahassee Land Development Code. A single management plan may be adopted for all open space and conservation and preservation area lands.

(7) Any Open Space area located within the geographic boundary of a PUD Concept Plan Shall be included in the lands to be designated as Open Space/Greenway as a result of approval of that PUD Concept Plan. If additional Open Space area are required to meet the minimum Open Space area for that Phase set forth in Policy 13.2.4(6) then such additional land will be designated as such from the adjacent Primary Open Space system as shown in Figure 13-5. To the extent that a PUD Concept Plan provides Open Space acreage beyond the required minimum, subsequent PUD Concept Plans are entitled to a credit for the additional acreage provided in proceeding PUD Concept Plans.

(8) Acreage in the primary open space system shall be counted towards satisfying the open space requirements established in PUD Concept Plans.

(9) The following guidelines shall apply to uses within the open space system as established in PUD Concept Plans:

I. Land Use

a. Passive recreation improvements that are natural resource-oriented, such as hiking, biking, and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular access only, provided these activities are located such that impacts to conservation and preservation areas are minimized and the overall purpose of the conservation easement is maintained.
b. Active Recreation uses may be constructed in the open space area within each development district and in the primary open space system outside of Conservation and Preservation areas.
c. Wildlife management areas may be included in the primary open space systems protective measures addressed in the management plans, including a wildlife habitat management plan, in accordance with Chapter 5 – Environmental Management, Tallahassee Land Development Code.
d. Public roads and utilities may cross through the open space systems and buffers if the impacts are minimized. The location of the roads shown on Figure 13-5 are approximate.
e. Stormwater Management facilities may be located in the open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to Chapter 5 – Environmental Management, Tallahassee Land Development Code. Each stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Tallahassee Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. If stormwater facilities are contained in the open space system, the public and/or private entities responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facilities level of service. The SFMPs shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation or preservation areas.

(10) To promote creation of the open space systems and their integration into the planned mixed-use communities with appropriate credit, PUD Concept Plans shall establish an open space requirement that includes credit for the open space system, protected preservation and conservation areas, areas of constructed landscape, and the minimum onsite landscaping required for individual sites set forth in Policy 13.2.12. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designated to meet or exceed, on a cumulative basis, the Landscape and Urban Forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code. These landscape standards shall include, but not be limited to, standards for provision of street trees in mixed use zones, along public roadways, shade trees and landscaped islands within parking lots, and patriarch tree preservation. These standards will be developed to reflect the intent that town

and neighborhood centers will be developed in an urban context with minimal setbacks and an emphasis on dense, mixed use development. Various land uses in the Arch shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code.

(11) The portion of the Arch bordering Miccosukee Road shall be designated as Open Space and shall include the Canopy Road Zone for Miccosukee Road. An additional area with a minimum width of 75 feet along the length of the Canopy Road Zone shall be designated as open space. The Canopy Road Zone and contiguous Open Space area shall serve as a wildlife corridor that terminates in the core forest area that is part of the fragmentation class of Core Canopy (>500 acres) in the Conservation Design District as shown on the Preliminary Environmental Map (Figure 13-6). This area may serve as a greenway as long as the greenway does not preclude the ability of the area to serve as a wildlife corridor.

Policy 13.2.39: Conservation and Preservation Lands. **(EFF. 1/11/21)**

Lands identified for permanent preservation and conservation are shown generally on the Preliminary Environmental Map (Figure 13-6) as Designated Wetlands, 100-year Floodplains, and High-Quality Successional forests/Native Forest. These protected areas create a regionally significant environmental and open space framework that protects the natural flows of water and preserves wildlife habitat while allowing limited, low-impact human access to natural spaces, where appropriate.

These allocations are intended to protect significant environmental resources on the Welaunee Arch and account for approximately 900 acres or approximately 19% of the total gross area of the Welaunee Arch. The precise size and location of Conservation and Preservation Lands shall be determined through a Natural Features Inventory to be conducted prior to or concurrent with the initial PUD Concept Plan for each Phase of the Welaunee Arch in which the feature is located. Additional environmental resources will be designated as Open Space as addressed in this Master Plan.

Conservation and Preservation lands shall be subject to a management plan to be reviewed and approved concurrent with the PUD Concept Plan that includes the applicable Conservation and Preservation lands. Such management plan shall address wildlife preservation, maintenance of native species diversity, management of the natural environment, restoration of environmental resources where warranted, and responsibility for long term management. Such management plan shall include measures to protect the values for which such lands were designated, including wildlife habitat and corridors, and may include conservation easements and other measures consistent with the Environmental Management Ordinance. Conservation and Preservation lands may be

~~utilized for public access, including trails, subject to the Environmental Management Ordinance. To the extent allowed by local, state, or federal law, Conservation or Preservation lands may be utilized to achieve mitigation required by permits. A single management plan may be adopted for all open space and conservation and preservation area lands.~~

~~Lands that are not otherwise identified as Conservation and Preservation Lands on Figure 13-6 and are identified as areas suitable for future development may contain areas of natural upland or wetland communities. These resources will be identified through the Natural Features Inventory process and protected as required by the Comprehensive Plan's Conservation Element and will be incorporated into the lands identified as Open Space and Greenways consistent with the overall conservation and development strategy for the Welaunee Arch planning area.~~

~~Conservation easements for Conservation and Preservation lands shall be effective before or concurrent with the effective dates of the PUD Concept Plan for which they are granted. Protection of the lands identified in the Preliminary Environmental Features Map shall be phased or staged in coordination with the PUD Concept Plans. The required preservation of both Conservation and Preservation Lands within the Welaunee Arch will occur in conjunction with the PUD Concept Plan approvals and will be in place in advance of actual physical development within the PUD for which the Conservation and Preservation Lands are being protected. All identified Conservation and Preservation Lands within the Preliminary Environmental Features Map shall be subject to permanent preservation no later than the date of actual physical development commencing within the final PUD Concept Plan for the Welaunee Arch.~~

~~*Policy 13.2.40: Recreation Areas.* **(EFF. 1/11/21)**~~

~~A PUD Concept Plan shall provide for reasonable public access to parks, recreation areas, natural areas, and open space. A multi-use trail system will be included that will link these areas where feasible to residential neighborhoods, mixed-use centers, schools, civic spaces, employment, recreation and open space, parks, and the Welaunee Greenway and Miccosukee Canopy Road Greenway.~~

~~*Policy 13.2.41. Historic and Cultural Resources.* **(EFF. 1/11/21)**~~

~~Through the completion of Natural Features Inventories, Planned Unit Developments shall identify historic and cultural resources including archaeological sites, historic structures and districts, and historic cemeteries. PUDs shall include standards sensitive to locating, assessing, and avoiding~~

~~potential adverse impacts to these resources. At a minimum, these standards shall comply with applicable state and local regulations. Where feasible based on the geographic~~

location of the resource and appropriate given the historic and cultural context of resource, informational and interpretive signage may be considered for these resources.

Policy 13.2.42: Natural Area Resident Notifications. **(EFF. 1/11/21)**

PUD Concept Plans will include notification requirements for informing residents, once development is completed, with information on how to avoid human-bear conflicts and notices of proximity to areas that are actively managed with prescribed fires.

Policy 13.2.43: Perpetual Drainage Easement. **(EFF. 1/11/21)**

The Perpetual Drainage Easement across the Welaunee Arch shall be subject to the Order Clarifying Definition of Perpetual Drainage Easement, entered by Leon County Circuit Court on March 13, 1997. Lands within the Perpetual Drainage Easement shall be considered Open Space and may be utilized for active and passive recreation facilities and activities, including but not limited to, walking and bicycle trails, and playgrounds associated with development of lands owned by the landowner within the altered or undisturbed floodplains so long as the function of the easement is not impaired.

Policy 13.2.44: Welaunee Greenway. **(EFF. 1/11/21)**

The Welaunee Greenway shall consist at a minimum of an 8.4-mile-long shared-use trail corridor along the northeast, north, and west perimeter of the Arch, and shall be developed consistent with adopted local government plans, including the Greenways Master Plan. As defined in the Tallahassee-Leon County Greenways Master Plan, "The Greenway will range from approximately 75' to 150' in width in much of the corridor with greater widths in select areas due to wetlands and stream flow ways. This corridor will be comprised of the existing edge canopy and understory and the Welaunee firebreak road which may provide a readymade trail alignment. The preserved canopy and understory along the other side of the firebreak road will be preserved to provide privacy from adjacent roadways and homes." The final design of the Welaunee Greenway shall be determined through the Blueprint Intergovernmental Agency's Northeast Gateway project and may consider other, non-paved trail surface treatments consistent with the Greenways Master Plan. Trail crossings and trailheads may be located in the Canopy Road Zone and the design of such facilities shall strive to minimize impacts to the tree canopy. The Welaunee Greenway shall connect to the existing Miccosukee Canopy Road Greenway to create a 17-mile linear park loop and a pedestrian bridge across Interstate-10. Connections shall be provided to and from the Greenway from interior multi-use trails along roadways or from other open space areas. The Welaunee Greenway shall be subject to a management plan approved by the City that is consistent with the policies of this master plan. A single management plan may be adopted for all open space, conservation and preservation area lands, and the Welaunee Greenway. Public roadways and utilities may cross through the Welaunee Greenway at points specified as road crossings on the land use and transportation maps, or at additional points if necessary, provided the crossing includes restoration of the Greenway and open space area. PUD Concept Plans that include or are adjacent to the Welaunee Greenway or Miccosukee Canopy Road Greenway shall provide access to those facilities. Development of the Arch should be

incentivized through the PUD process to provide pedestrian and bicycle connectivity to the Greenway, particularly where it interfaces with Open Space areas and associated trail systems.

Policy 13.2.45: Alternative Development Program. **(EFF. 1/11/21)**

Notwithstanding any other provision of this Master Plan, at the election of the PUD applicant, PUD Concept Plans in Phase 1 and Phase 2 may offset open space and urban forest mitigation requirements through an optional alternative development program that preserves additional open space area within the Residential Reserve District (Phase 3). The intent of this Alternative Development Program is to incentivize preservation of a large area of open space in the northeast area of the Welaunee Arch that may be designated as a wildlife habitat area. Participation in this alternative development program is optional and must be agreed to by the PUD Concept Plan applicant and the owner of the property that would be used for the offset. Participation in this alternative development program is subject to all of the following provisions:

(1) Open Space Requirement Offset. PUD Concept Plans in any District of Phase 1 or Phase 2 may offset the open space requirements for that District by preserving lands in the Residential Reserve District (Phase 3) as open space.

a. The offset shall be calculated on a per acre basis with a 15% bonus, resulting in an exchange of a 1.15-acre reduction in the open space requirement of the receiving District for each 1-acre of preserved open space in the Residential Reserve District. This exchange shall reduce the overall open space requirement for the Welaunee Arch by the net bonus amount (0.15 acres for each 1 acre preserved).

b. The reserve area requirements for cluster residential zones in Phase 2 shall be offset concurrently with the open space requirements for any PUD Concept Plan including a cluster subdivision.

c. Under the Alternative Development Program, preservation or conservation areas in the Residential Reserve District may count towards the open space requirements in the Conservation Design District. Conservation and Preservation areas in the Residential Reserve District shall be integrated with the Welaunee Habitat Park.

d. If this Alternative Development Program is exercised, total Open Space in Phase 1 shall not be less than 15%, the total Open Space in Phase 2 shall not be less than 25%, and the overall total Open Space in the Arch at buildout shall not be less than 37%.

e. The open space offset shall not apply within the area 1,000 feet from the Buckhead Neighborhood as identified in Policy 13.2.15.

(2) Urban Forest Mitigation Offset. PUD Concept Plans in Phase 1 and Phase 2 may offset required urban forest mitigation requirements in any District by preserving lands in the Residential Reserve District (Phase 3) as open space.

~~I. Land Use~~

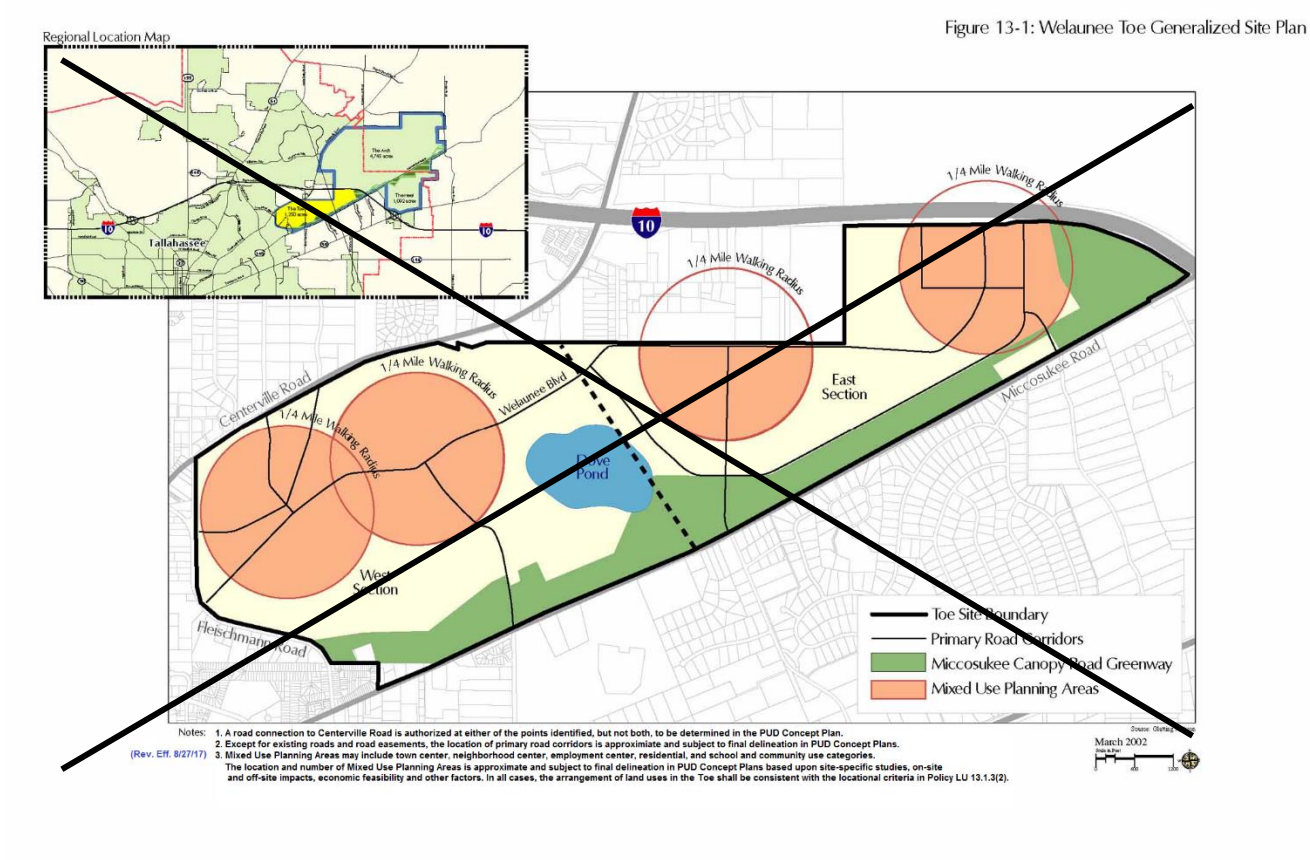
a. ~~The urban forest mitigation requirement offset through this program is exchanged based on the urban forest mitigation value of the land being established as Open Space in the Residential Reserve District. The mitigation value of the preserved open space shall be calculated with an additional 10% mitigation credits which may offset urban forest impacts in Phase 1 and Phase 2.~~

(3) ~~All lands located in the Residential Reserve District, designated as Phase 3 on the Land Use Districts Map (Figure 13-5), are eligible for preservation under this alternative development program. Priority for preservation under this program shall be in the following order: 1) lands in the Residential Reserve District (Phase 3) that do not meet the definition of a preservation area or conservation area 2) any designated conservation and preservation areas in Residential Reserve District (Phase 3) as generally depicted on the Preliminary Environmental Features Map or as determined through a subsequent natural feature inventory. Priority shall be given to property along the eastern boundary of the Residential Reserve District with subsequent lands preserved under this alternative development program being contiguous with this area.~~

(4) ~~Protection of the open space area in the Residential Reserve District (Phase 3), including any preservation or conservation areas, shall be provided by conservation easements, covenants, or other measures consistent with City Growth Management Department's adopted regulations. The lands preserved as open space under this alternative development plan shall be subject to the criteria of Policy 13.2.38 regarding Conservation and Preservation Areas. Any conservation easements established under this alternative development program shall be issued to the City of Tallahassee as the sole grantee and beneficiary. While open space area in the Residential Reserve District remains in private ownership, any conservation easements, covenants, or other measures shall allow for continued use of the preserved open space for silviculture operations of planted pine stands which adhere to Florida Division of Forestry Best Management Practices. Lands preserved under this development program for urban forest mitigation offsets may not be utilized for silviculture operations.~~

(5) ~~Welaunee Habitat Park. Notwithstanding the phasing requirements in policy 13.2.5, at such time when all lands in in the Residential Reserve District have been preserved as open space under this alternative development program, or at such time when the final PUD Concept Plan for the Welaunee Arch is approved, the preserved Open Space in the Residential Reserve District, including the Conservation and Preservation lands, shall be designated as a Habitat Park. The Habitat Park shall be subject to the requirements of Policies 13.2.37 and 13.2.38. Prior to establishment of the Habitat Park, the existing uses of the property shall be permitted. Any previously established conservation easements shall remain in effect on lands in the Habitat Park. Passive recreation improvements that are~~

natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the Welaunee Habitat Park. Active Recreation uses are not permitted in the Welaunee Habitat Park.



(6) By adoption of a separate ordinance, the City may create and administer a Welaunee Habitat Park credit bank. The Welaunee Habitat Park credit bank would facilitate the purchase of lands in the Residential Reserve District (Phase 3) and the sale of open space and tree mitigation credits in accordance with this development program. The Welaunee Habitat Park credit bank may be established independent of and prior to the creation of the Welaunee Habitat Park. If the City creates a Welaunee Habitat Park credit bank, consideration may be given to utilizing the credit bank to offset open space requirements and urban forest mitigation requirements associated with the development of properties located in other growth priority areas inside the Urban Services Area.

(7) If stormwater facilities are contained within the Residential Reserve District, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within preserved open space and conservation or preservation areas.

(8) Any lands in the Residential Reserve District not preserved as open space in accordance with this alternative development plan may be included in a PUD Concept Plan and development under the Residential Reserve District development guidelines in Policy 13.2.4(4). Development of the Residential Reserve District on remaining lands shall be clustered in the portion of the site that will result in the least environmental impact. Lands preserved as open space offset under this Alternative Development Program shall not count towards the 60% reserve area requirements for development of any remaining developable land in the Residential Reserve District.

I. Land Use

TOTALS	715	1,291 DUs 686,224 GSF	377	816 DUs 457,248 GSF	1,092	2,107 DUs 1,143,472 GSF

Notes:

1. Acreage totals are based on conceptual planning and are only approximate. Acreage totals may change based on final development review.

2. Residential land use includes above-street units in town and neighborhood centers. No acreage has been allocated to these units because they will be located above nonresidential uses.

3. Retail uses shall comprise between 50% and 70% of total Phase 1 development in town and neighborhood centers with office uses to comprise between 30% and 50%. At buildout, the mix of uses in town and neighborhood centers shall be approximately 67% retail and 33% office.

4. Office and light industrial uses shall comprise between 75% and 95% of total Phase 1 development in employment centers with retail uses to comprise between 5% and 25%. At buildout, the mix of uses in employment centers shall be approximately 90% office and light industrial with approximately 10% retail.

5. Total includes 24-acre site for Leon County School Board for a 500-pupil elementary school with stormwater management facilities in off-site regional systems. Institutional uses in town, neighborhood and employment centers are included in square footage totals for those areas.

6. Although under State ownership, the Miccosukee Canopy Road Greenway shall be considered within the Welaunee Critical Planning Area for planning purposes.

7. Total includes stormwater management facilities, road rights-of-way and other community infrastructure.

8. These figures may be modified pro rata to represent buildout if Heel is developed under Policy 13.1.9. (REV. EFF. 7/20/05)

I. Land Use

Drainage Basin Study Areas

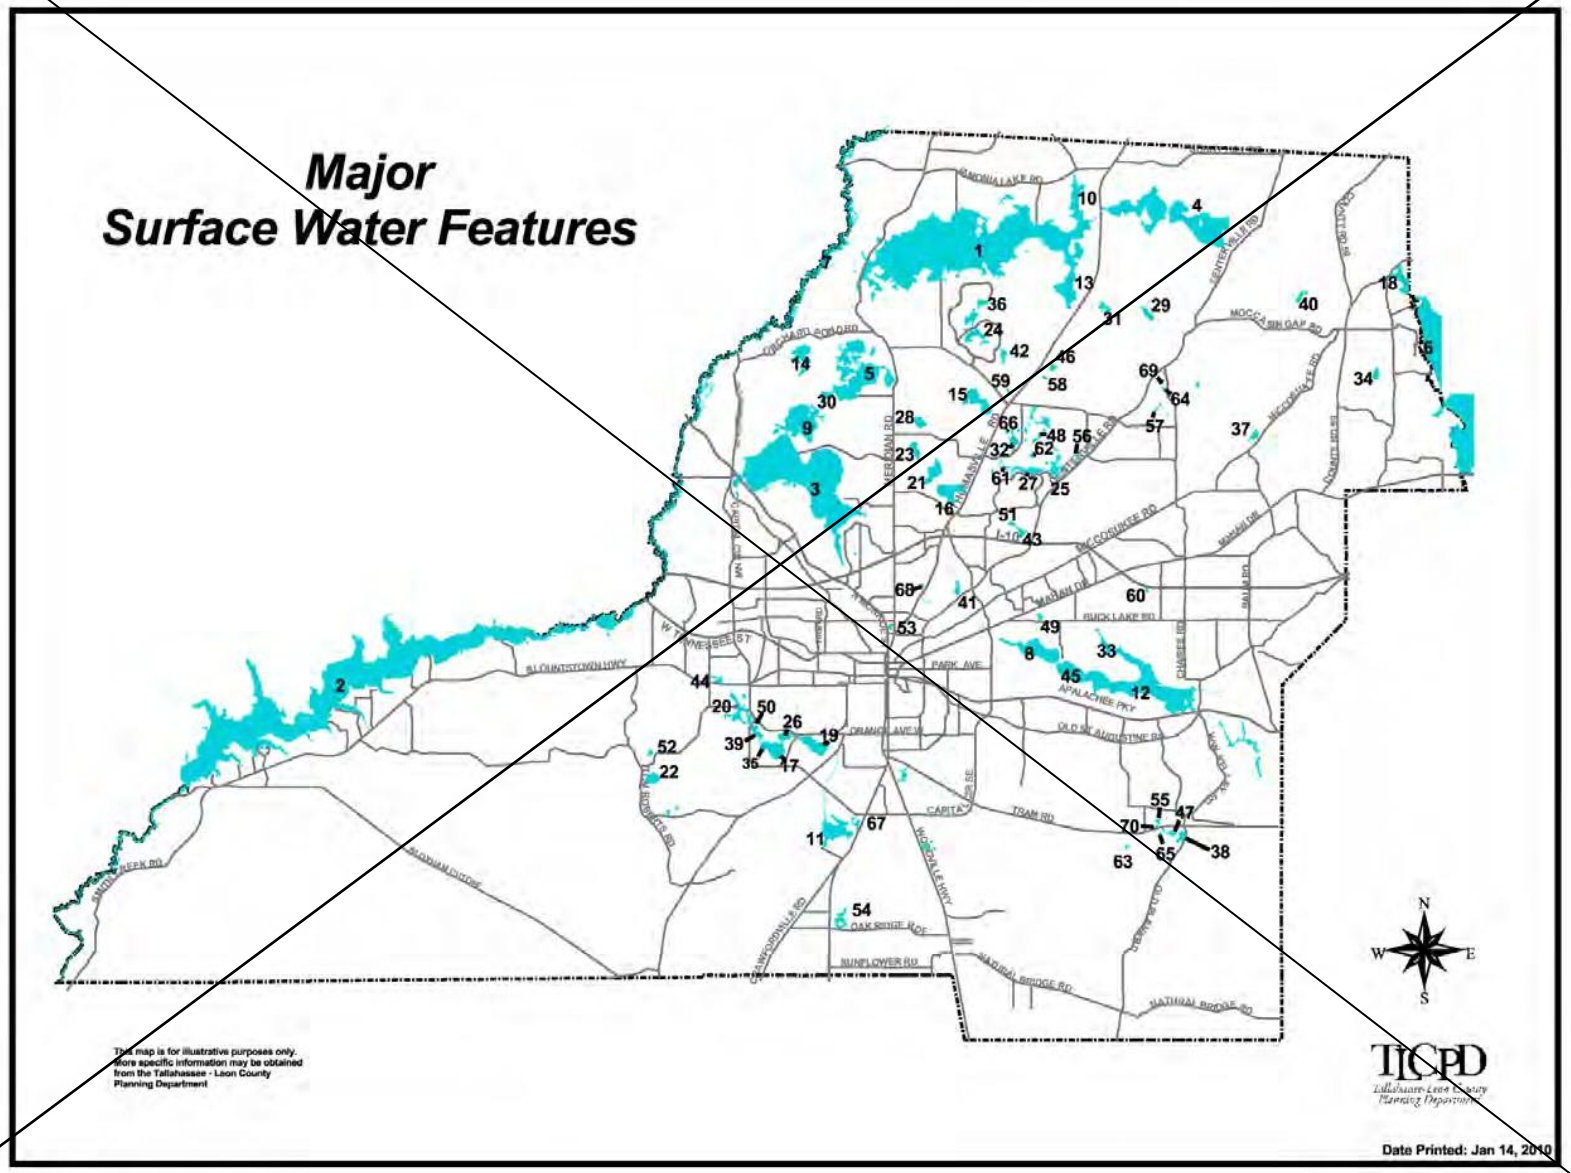
Goal 14 [L] (Leon County only) (Eff. 12/15/03)

Leon County and the City of Tallahassee will work cooperatively to further identify and address the special characteristics and needs of sub-areas of the City and County. This goal shall be implemented through the following objective and policy:

Objective 14.1 [L] (Leon County only) (Eff. 12/15/03)

By 2004, the City and County shall commence a process to evaluate the environmental conditions and issues relating to major drainage basin study areas of the county including but not limited to the following basins: Fred George, Lake Iamonia, Lake Jackson, Lake Lafayette, Lake Miccosukee, Lake Munson, Ochlockonee, St. Marks, and Woodville Recharge, to be used as one basis for sector plans and other major planning decisions of the local government. This evaluation shall address matters such as protection of conservation and preservation areas (as defined within this Plan), flooding, water quality, aquifer protection, and other issues as identified by the local governments. This evaluation shall be conducted cooperatively by the City and County, irrespective of jurisdictional boundaries, and the evaluation shall be based on technical and scientific information.

Policy 14.1.1 [L] (Leon County only) **(Eff. 12/15/03)**



Sector planning shall be implemented as determined appropriate by the City or County; however, sector planning involving a joint effort of both jurisdictions, shall be encouraged. These sector plans may address elements such as land use, transportation, housing, economic development, environmental protection, infrastructure phasing, development standards and any other matter as identified by the local government. These sector planning efforts shall take into consideration the data gathered through the implementation of Objective 14.1 and shall use this information as background environmental data necessary for the completion of sector planning efforts.

Policy 14.1.2 [L] (Leon County only) **(Eff. 12/15/03)**

The data collected or gathered through the implementation of Objective 14.1 shall be used as a basis for determining whether or not future amendment to the Comprehensive Plan or land development regulations is necessary. However, Goal 14 and its associated Objective 14.1 are not intended to replace existing Comprehensive Plan policies related to environmental protection or storm water management. Instead, this goal and its associated objective is intended to support and aid in the implementation of existing Comprehensive Plan policies and is to be considered additive in this regard.

MOBILITY

GOALS, OBJECTIVES AND POLICIES

Overall Goal (Eff. 12/15/11)

Establish a safe, energy efficient multi-modal transportation system that provides mobility for pedestrians, bicyclists, transit users, motorized vehicle users, users of rail and aviation facilities, supports public health through active living, and is sensitive to the cultural and environmental amenities of Tallahassee and Leon County.

Goal 1: [M] (Eff. 12/15/11)

Motorized, Bicycle, and Pedestrian Circulation

Establish and maintain a safe, convenient, energy efficient, and environmentally sound automobile, transit, bicycle and pedestrian transportation system, capable of moving people of all ages and abilities as well as goods.

Objective 1.1: [M] (Eff. 12/15/11)

Land Use and Transportation Coordination

Coordinate transportation and land use systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce vehicle miles traveled and greenhouse gases, and to enhance pedestrian and bicycle mobility and transit accessibility.

Policy 1.1.1: [M] **(Eff. 12/15/11)**

Identification and programming of new road projects or substantial improvements to existing roads shall be consistent with the Future Land Use Element of the Comprehensive Plan and specifically the Urban Service Area strategy to promote urban infill and discourage urban sprawl.

Policy 1.1.2: [M] **(Eff. 12/15/11)**

Designate energy efficiency districts in areas that are intended for greater densities and intensities to support frequent transit service and where primary priority is to be placed on providing a safe, comfortable and attractive environment for pedestrians and cyclists. For each district:

1. evaluate and modify, if necessary, the zoning and land development regulations to ensure standards that will support compact, walkable, mixed-use development; and
2. adopt and maintain a connectivity plan identifying needed bicycle, pedestrian, roadway, and transit projects to increase connectivity and safety, minimize travel

distances for pedestrians and cyclists, and provide connections to other parts of the City, County, and Capital Region;

3. Coordinate with the Capital Region Transportation Planning Agency to include the Mobility District Plan priorities in Long Range Transportation Plan updates.

Policy 1.1.3: [M] **(EFF. 12/15/11)**

Promote the Downtown as an 18-hour activity center by supporting development of housing, restaurants, and cultural activities to encourage use beyond working hours.

Policy 1.1.4: [M] **(EFF. 12/15/11)**

Promote neighborhood parks to reduce the need for long distance trips for recreation.

Policy 1.1.5: [M] **(EFF. 12/15/11)**

Maintain a Greenways Master Plan that integrates pedestrian and bicycle mobility into a linear park and open space system that connects local, regional, and state facilities, with specific emphasis on connections within Downtown and energy efficiency districts.

Policy 1.1.6: [M] **(EFF. 12/15/11)**

A functional transportation network shall be coordinated and maintained with the Florida State University, Florida A&M University, and Tallahassee Community College master plans to link those educational institutions and provide access to transit and surrounding supporting land uses.

Policy 1.1.7: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain ordinances providing for safe and convenient on-site traffic flow, considering motorized and non-motorized vehicle parking.

Policy 1.1.8: [M] **(EFF. 12/15/11)**

Development projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Appropriate improvements or enhancements to the multimodal network shall be required as a condition of development approval, such as, but not limited to, the following:

a) Full accommodations for pedestrian access and movement, including shaded sidewalks, benches and enhanced crossings;
b) Full accommodations for bicycles, including lockers, showers, and racks;
c) Direct connections to the regional bicycle/pedestrian network;
d) Installation of shared use paths in accordance with FDOT recognized standards;
e) Well-designed accommodations for transfer of passengers at designated transit facilities;
f) Preferential parking for rideshare participants;

g) Well-designed access for motor vehicle passenger drop-offs and pick-ups at designated transit facilities and at commercial and office development sites;
h) Full accommodation for the mobility impaired, including parking spaces, sidewalks and ramps for handicapped access;
i) Weather protection at transit stops.

Policy 1.1.9: [M] **(EFF. 12/15/11)**

Designation of Multimodal Transportation District (MMTD). In accordance with the provisions of Florida Statute 163.3180(15), the City of Tallahassee and Leon County hereby establish a Multimodal Transportation District, as shown in the Multimodal District Boundaries Map, for the purpose of promoting walking, bicycling and transit use in order to reduce dependence on the automobile. Those roadways and associated rights-of-way shown as boundaries for the MMTD shall be considered part of the MMTD.

Policy 1.1.10: [M] **(EFF. 12/15/11; REV. EFF. 7/19/13)**

MMTD Residential Density Bonus. In order to increase redevelopment and infill development, residential densities within the MMTD may be increased up to 35% above the maximum allowed in the Residential Densities Range Table. This bonus shall not apply to lands designated Residential Preservation. Further bonuses may be applied to the Downtown. Eligibility criteria for these bonuses will be established within the land development regulations and shall include design standards facilitating pedestrian oriented site and building design with enhanced pedestrian access and amenities, urban scale development, innovative parking strategies, integrated mix of land uses, and other urban design features.

Policy 1.1.11: [M] **(EFF. 12/15/11)**

Land Use Within the MMTD. The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the district boundary(ies) and modify them as necessary to provide for appropriate densities, intensities and mixture of land uses to support 18-hour activity and multimodal transportation, based on the following targets:

a) A center(s) consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to mass transit facilities;
b) Ratio of uses:
    i. Residential = 20%-60%
    ii. Nonresidential (office, commercial, light industrial, etc.) = 30%-70%
    iii. Public spaces (open space, parks, recreational, squares, etc.) = 5%-15%;
c) Specifically to facilitate walking and bicycling as an alternative to driving, areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses;
d) In order to support redevelopment in the urban center of Tallahassee that could support ten minute transit headways and/or light rail, an areawide (excluding open space) residential density of at least 20 units per acre, recognizing that some areas, such as Central Core, may have densities in excess of 150 units per acre and others in

established neighborhoods and areas designated Residential Preservation may have significantly less.

Policy 1.1.12: [M] **(EFF. 12/15/11)**

MMTD and Energy Efficiency District Urban Design and Land Development Regulations. Adopt and maintain land development regulations that ensure new construction and infill or redevelopment will contribute positively to the character and livability of the MMTD and energy efficiency districts, based on the following:

1. Buildings and blocks oriented to provide pedestrians and bicyclists easy access and a visually interesting environment;
2. Maximum block (length or perimeter);
3. Easy access to/from transit stops and surrounding land uses;
4. Recognition of more intense densities & intensities around center(s);
5. Special design considerations to support compatibility between uses, particularly between residential and non-residential uses;
6. Creating active sidewalks with buildings opening onto streets;
7. Transparency (i.e., windows) and active uses at ground levels;
8. Parking generally located to the sides and rear, internal to blocks, and/or in structured of off-site facilities;
9. Maximum parking standards that discourage single-occupant vehicle commuting and reinforce non-auto modes, but not so limited as to adversely impact the viability and vitality of the MMTD;
10. The use of shared parking;
11. For multifamily developments, pricing of parking separately from the units;
12. Recognizing that parking demand may change over time as more multimodal infrastructure and mixed uses are developed, building parking facilities such that they may be readapted for more active uses in the future.

Policy 1.1.13: [M] **(EFF. 12/15/11)**

Transit in the MMTD and Energy Efficiency Districts. The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside of these areas, transit stops and waiting areas shall be safe and comfortable, and intermodal connections shall be made where feasible.

1. Priority should be given to funding of improvements that increase the availability, speed, frequency, duration and reliability of transit serving these areas.
2. StarMetro shall coordinate with the Capital Region Transportation Planning Agency regarding the provision of transit centers, super stops, and other facilities for the transfer of passengers to and from these areas through potential regional connections.
3. Benches, signage, lights, and covered or enclosed waiting areas shall be used to create safe, comfortable transit stops.
4. Bicycle parking at transit stops and bicycle racks on buses shall be provided as a means to interface bicycle travel with public transit.

Policy 1.1.14: [M] **(EFF. 7/17/21)**

The City of Tallahassee and Leon County will support the implementation of the Capital Region Transportation Planning Agency's (CRTPA's) Tallahassee-Leon County Bicycle and Pedestrian Master Plan, adopted by the CRTPA in 2020, to the extent that it does not conflict with goals, objectives, and policies in this Comprehensive Plan.

Objective 1.2: [M] **(EFF. 12/15/11)**

COMPLETE STREETS

The transportation system shall be designed and operated to provide safe, convenient and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 1.2.1: [M] **(EFF. 12/15/11)**

Recognizing that urban, suburban, and rural areas have different needs, develop and maintain context sensitive design standards for transportation facilities to protect and enhance community character and enhance the safety and desirability of walking, cycling, and transit.

Policy 1.2.2: [M] **(EFF. 12/15/11)**

Safe and convenient facilities for pedestrians, cyclists and transit users shall be evaluated for all new road and road widening projects. Specifically, all road projects, including resurfacing projects, shall be evaluated for the addition of bicycle lanes or paved shoulders, and transit shelters where they did not previously exist.

Policy 1.2.3: [M] **(EFF. 12/15/11)**

Establish and maintain a safe and effective system of bicycle lanes, sidewalks, and shared-use paths in conjunction with existing and planned roadways and the Greenways Master Plan. Where design criteria allow and safe operation will occur, separate bicycle and pedestrian traffic from vehicular traffic. Provide adequate and secure bicycle parking facilities at major destinations.

Policy 1.2.4: [M] **(EFF. 12/15/11)**

In coordination with the Capital Region Transportation Planning Agency, maintain a bicycle and pedestrian master plan and pursue implementation funding.

Policy 1.2.5: [M] **(EFF. 12/15/11)**

Designate preferred entrance corridors into and connecting Tallahassee and Leon County, and adopt and maintain land development regulations to convert them into shaded pedestrian ways over time.

Policy 1.2.6: [M] **(Eff. 12/15/11)**

Require a scenic roadway assessment, environmental assessment, and landscape component in the planning and construction of new roads, and in the improvement of existing roads.

Policy 1.2.7: [M] **(Eff. 12/15/11)**

Require that all new or rebuilt multi-lane (four or six-lane) arterial and major collector streets be constructed with grassed and/or landscaped medians where sufficient right-of-way can be obtained, unless limited by environmental constraints.

Policy 1.2.8: [M] **(Eff. 12/15/11)**

Provide a safe, accessible environment and support active living for students by: developing and maintaining programs to increase biking and walking to schools; prioritizing sidewalk and bicycle infrastructure within a two mile radius of primary schools; and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 1.2.9: [M] **(Eff. 12/15/11)**

Special consideration shall be given to areas with concentrations of students, seniors, low-income families or others that are more dependent on modes other than the automobile to provide a safe, accessible environment.

Policy 1.2.10: [M] **(Eff. 12/15/11)**

Educate the population on the health benefits of non-motorized modes of transportation. Increase safety to those who choose to walk or ride a bicycle by educating the public on existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 1.2.11: [M] **(Eff. 12/15/11)**

Enforce vehicle, bicycle and pedestrian regulations concerning obedience of traffic control signals and devices, use of pedestrian crosswalks, walking along the roadway, etc. Provide proper pavement markings and signage to enhance recognition of bicycle lanes and pedestrian crossings.

Policy 1.2.12: [M] **(Eff. 12/15/11)**

Adopt and maintain a City and County sign ordinance to control sign and billboard placement and limit lighted and motion activated sign usage.

Policy 1.2.13: [M] **(EFF. 12/15/11)**

Wherever feasible, bury utility lines. Priority should be given to areas where underground utilities can be incorporated into roadway construction and reconstruction projects.

Policy 1.2.14: [M] **(EFF. 12/15/11)**

Coordinate the transportation systems in Tallahassee and Leon County with one another and with the programs of the Capital Region Transportation Planning Agency and the Florida Department of Transportation to implement land use, transportation, and parking policies that promote transportation choice and to overcome identified deficiencies in the multimodal transportation network.

Objective 1.3: [M] **(EFF. 12/15/11)**

ENVIRONMENTAL AND NEIGHBORHOOD PROTECTION

Evaluate and minimize impacts of transportation projects on the natural environment and neighborhood integrity by using transportation demand reduction strategies to maximize existing roadway capacity, reduce the need for new roadway construction or expansion, reduce peak time traffic, reduce vehicle miles traveled, and reduce greenhouse gas emissions and other environmentally damaging pollutants.

Policy 1.3.1: [M] **(EFF. 12/15/11)**

Evaluate the natural features of Leon County, as delineated in the future land use and conservation elements, to avoid fragmenting and degrading regionally significant natural resources, wildlife corridors, greenways, and aquifers when planning new or expanding existing transportation facilities.

Policy 1.3.2: [M] **(EFF. 12/15/11)**

Reduce demand for more and wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling and walking.

Policy 1.3.3: [M] **(EFF. 12/15/11)**

Coordinate with Commuter Services of North Florida and state agencies regarding transportation demand reduction strategies such as staggered work hours for major employers, ridesharing, and parking fees.

Policy 1.3.4: [M] **(EFF. 12/15/11)**

Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.3.5: [M] **(EFF. 12/15/11)**

Require an analysis that measures environmental and neighborhood impact prior to funding any new roadway alignments, construction, or changes to the traffic circulation system. The level and type of review may vary with the anticipated impact, and shall include community involvement.

Policy 1.3.6: [M] **(EFF. 12/15/11)**

Require tree plantings, where practical, for both new and old roads to increase screening, beauty, runoff control and reduction of summer heat. Existing trees shall be protected during transportation system development and maintenance.

Policy 1.3.7: [M] **(EFF. 12/15/11)**

Aesthetically enhance and provide added environmental protection to existing and new transportation corridors by the following methods which include but are not limited to:

a) Incorporating for new, or increasing for existing corridors, the number of green spaces/open spaces and pedestrian oriented areas.
b) Recognizing plantations as a significant part of the natural landscape when roads are being designed in areas of the County where they are present.
c) Encouraging the use of native vegetation and natural systems such as swales to control runoff.
d) Maintaining natural ground cover, canopy and understory where new roads are built.
e) Design public infrastructure improvements to minimize development impacts to protect designated canopy roads consistent with the Conservation Element.
f) Applying access management strategies that enhance the character of transportation corridors and gateways to the community by promoting shared access and consolidated signage and preserving green space for landscaping.

Objective 1.4: [M] **(EFF. 12/15/11)**

CONNECTIVITY & ACCESS MANAGEMENT

Reduce vehicle trip demand, increase access and safety for cyclists and pedestrians, and preserve the integrity of the transportation system with effective connectivity and access management programs.

Policy 1.4.1: [M] **(EFF. 12/15/11)**

Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system without negatively impacting either development.

Policy 1.4.2: [M] **(Eff. 12/15/11)**

Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through traffic on neighborhoods.

Policy 1.4.3: [M] **(Eff. 12/15/11)**

Within the Urban Service Area, require private developers to include bikeways and pathways or sidewalks within proposed developments and connecting to surrounding land uses.

Policy 1.4.4: [M] **(Eff. 12/15/11)**

All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 1.4.5: [M] **(Eff. 12/15/11)**

All development plans shall incorporate and continue all sub-arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 1.4.6: [M] **(Eff. 12/15/11)**

Connections to and from energy efficiency districts. The transit, bike, and pedestrian networks within energy efficiency districts shall recognize the districts as activity nodes and thus logically interconnect with and service the surrounding areas.

Policy 1.4.7: [M] **(Eff. 12/15/11)**

Energy Efficiency District Network and Connectivity. Energy efficiency districts shall have a dense, interconnected network of local and collector streets, sidewalks, bikelanes, and shared-use paths in accordance with the following:

1. The street, bicycle, and pedestrian network shall be comprised of a system of interconnected and direct routes with a connectivity index of 50 or more polygons per square mile;
2. For areas with a connectivity index below 50, the missing links in the network shall be identified and eliminated where feasible through the development and capital improvement process;
3. Prioritization of connectivity projects shall recognize the importance of areas with high concentrations of pedestrian activity and of areas where connections are needed to ensure easy access between transportation modes, with particular attention to bicycle and pedestrian access to schools, transit stops and regional greenway or trail systems.
4. Direct bicycle and pedestrian connections shall be provided within and between residential areas and supporting community facilities and services, such as

shopping areas, employment centers, transit stops, neighborhood parks, and schools.

5. The local street circulation pattern shall maximize access to individual lots and activity center destinations (e.g. schools, commercial areas, parks).

Policy 1.4.8: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, considering impacts to all modes and users.

Policy 1.4.9: [M] **(EFF. 12/15/11)**

No new lot or parcel shall be platted or created along arterial or collector roadways that would result in connection spacing that does not comply with the applicable local or FDOT connection spacing standard.

Policy 1.4.10: [M] **(EFF. 12/15/11)**

Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access, rather than the maximum available for that property frontage.

Policy 1.4.11: [M] **(EFF. 12/15/11)**

Service roads shall be used for access to development in the area surrounding new freeway interchanges and shall be separated from interchange ramps at a distance that conforms with the applicable FDOT or local access spacing standards, in order to preserve safe and efficient traffic operations in the interchange area. Circulation systems for interchange area development shall be continuous and designed to support both vehicular and pedestrian mobility.

Policy 1.4.12: [M] **(EFF. 12/15/11)**

Flexibility shall be provided in administration of access spacing standards to accommodate minor deviations, where appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Policy 1.4.13: [M] **(EFF. 12/15/11)**

As Capital Circle is converted to a high capacity, multi-lane arterial, future access-points shall be limited so that the improved roadway will function more efficiently and safely for

its intended purpose. In order to protect traffic capacity of the improved roadway and to assure public safety, the following policies will apply:

1) No new parcel shall be platted nor created through subdivision that results in a parcel with sole access to Capital Circle. Consolidation of two or more parcels that currently have access to Capital Circle into a parcel with a single access to Capital Circle shall be permitted;
2) New development abutting Capital Circle shall contribute to the development of a supporting system of local or collector roads, service roads, and/or shared access systems (e.g. joint use driveways), as an alternative to individual driveway access.
3) Where individual driveways must be provided to preserve reasonable access to a development site, applicants shall enter an agreement to cooperate in any future project to consolidate access points or to share access with abutting properties as opportunities arise.

Objective 1.5: [M] **(EFF. 12/15/11)**

LEVELS OF SERVICE

Establish transportation level of service (LOS) standards in order to measure the impacts of new development on, and to prioritize improvements to, the transportation system.

Policy 1.5.1: [M] **(EFF. 12/15/11)**

The peak hour roadway level of service for Tallahassee and Leon County is established as follows:

Table 1: Peak hour roadway level of service

Functional Classification	**Inside the USA**	**Outside the USA**
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D / E*	C
Major and Minor Collectors	D / E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 1.5.2: [M] **(EFF. 12/15/11)**

The level of service on all roadway facilities on the state highway system operating at the state recommended adopted minimum level of service standard or better at the time of adoption of the Comprehensive Plan will be maintained at the state adopted minimum level of service standard or a more strict local standard for the facility (if required adopted as part of the Plan). Level of service will be based on revised peak hour data compiled after Plan adoption.

Policy 1.5.3: [M] **(EFF. 12/15/11, REV. EFF. 8/9/2012)**

The Roadway Level of Service Standards established under Goal 1.5, and as may be duplicated in the Capital Improvements Element, may be waived if a mobility fee program is adopted into the local concurrency management manuals by the City and/or County Commissions. If implemented, the mobility fee program shall:

1) account for the fact that development further from activity nodes creates greater fiscal and environmental costs to the community;
2) support compact, mixed use development and redevelopment within adopted energy efficiency districts.

Policy 1.5.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County Concurrency Management systems will accumulate all development impacts, both below and above threshold standards, to determine cumulative impact of individual development orders. Cumulative impacts of all development will be monitored in order to maintain adopted level of service standards.

Policy 1.5.5: [M] **(EFF. 12/15/11)**

MMTD Areawide Multimodal Level of Service Standards and Performance Targets. In order to create community design that supports mobility, the following performance standards are established for the Multimodal Transportation District.

Table 2: MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards (Pursuant to F.S. 163.3180(15)(c))			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

In addition, because areawide level of service measures based on computer models do not recognize the full breadth of conditions affecting pedestrian, cycling, and transit comfort, safety and convenience, the following performance targets are also established. It is recognized these targets may take more than the 20 year planning period of this document to achieve, but are provided as continuing guidance for plan updates and capital investments.

Table 3: MMTD Areawide Multimodal Performance Targets

a) Areawide modal split:		
	Trips that both originate & end within the district	Trips originating or ending outside the district (not including pass through trips)
Transit	40%	25%
Bike/pedestrian	30%	10%
Automobile	30%	65%
b) Bicycle and Pedestrian Mobility		
i)	Formally designated north/south & east/west bicycle routes functioning at LOS C or better are provided at 1½ mile intervals	
ii)	All buses are equipped with bicycle racks	

iii)	All sidewalk and bicycle facilities within ½ mile of StarMetro transfer points function at LOS C or better;
iv)	All superstops are equipped with bicycle parking
v)	All intersections within ½ mile of StarMetro transfer points incorporate features to support safe and comfortable crossing for pedestrians and cyclists
c) Transit Mobility	
i)	All employees and dwelling units are within ¼ mile of a transit stop
ii)	80% of transit routes operate with 20 minute headways or less
iii)	80% of employees and dwelling units are served by routes operating at least 16 hours a day
iv)	40% of transit stops include benches, signage, lights, and covered or enclosed waiting areas
v)	80% of employees and dwelling units are within 1 mile of a StarMetro transfer point.
d) In Relation to Educational Uses	
i)	All pedestrian and bicycle facilities within 2 miles of primary schools function at LOS C or better
ii)	50% of students at Florida State University (FSU), Florida A&M University (FAMU), and Tallahassee Community College (TCC) commute to campus via non-auto modes
iii)	At least three satellite parking facilities for students are located outside of the MMTD but within a 20 minute transit ride of FSU, FAMU, or TCC

Policy 1.5.6: [M] **(EFF. 12/15/11)**

Transportation Concurrency within the MMTD. Pursuant to F.S. 163.3180(15)(c), development permits may be issued in reliance upon all planned community design capital improvements that are financially feasible over the development or redevelopment timeframe for the MMTD, without regard to the period of time between development or redevelopment and the scheduled construction of the capital improvements. Reflecting the purpose of a MMTD to promote higher density infill and to create a safe, desirable environment for pedestrians, the capital improvements plan will reflect primary emphasis on bicycle, pedestrian, and transit projects.

Policy 1.5.7: [M] **(EFF. 8/9/12)**

Changes to roadway segment capacity that result from the reduction or restriction of automobile laneage from existing conditions in order to implement multimodal or other non-automobile-oriented comprehensive planning goals will not require transportation concurrency mitigation. An analysis shall be conducted of transportation and land use impacts on parallel roadways that would result from the lane changes.

Objective 1.6: [M] **(EFF. 12/15/11)**

CORRIDOR PRESERVATION

Identify right-of-way needed for planned future transportation improvements and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service for concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities on the community.

Policy 1.6.1: [M] **(EFF. 12/15/11)**

The City and County shall adopt and maintain corridor management ordinances, in accordance with subsection 337.273(6), F.S., which are designed to protect future transportation corridors designated in the Tallahassee-Leon County Comprehensive Plan from development encroachment, to provide for right-of-way acquisition, and to mitigate potential adverse impacts on affected property owners.

Policy 1.6.1(a): [M] **(EFF. 12/15/11)**

Development orders may require conveyance of transportation rights-of-way consistent with a Future ROW Needs Map and Future Right-of-Way Needs and Access Classifications Table, as a condition of plat or development approval, provided that any required dedication shall not exceed the amount of land that is roughly proportionate to the impacts of the development on the transportation network.

Policy 1.6.2: [M] **(EFF. 12/15/11)**

Acquire and maintain sufficient right-of-way when building new roads or widening old facilities in order to protect waterbodies, wetlands, and flood plains. Plan corridor alignments to avoid environmentally sensitive areas and where this is not possible, acquire wide roadside buffers and prohibit driveways by purchase of access rights, as necessary, to prevent development from occurring within the environmentally sensitive area, as a result of the roadway availability.

Policy 1.6.3: [M] **(EFF. 12/15/11)**

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Future Right-of-Way Needs Map and the Long Range Transportation Plan.

Table 4: Future Right-of-Way Needs Without an Existing Corridor Alignment

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW (ft.)[1] [3]**
Blueprint Principal Arterial[4]	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

Notes:

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.
2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based

upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of-way needs for future corridors:
   a. Space for sidewalks to provide safe and convenient movement of pedestrians.
   b. The provision of bike lanes or separate bike paths.
   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.
   d. Accommodation of stormwater at the surface or in storm drains.
   e. Accommodation of auxiliary lanes at intersections.
   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.
   g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns.

2) Planned ROW needs for Capital Circle from Centerview to W. Tennessee, as accepted by the Blueprint Intergovernmental Agency on November 19, 2001.

Policy 1.6.4: [M] **(EFF. 12/15/11)**

All proposed development plans on designated future transportation corridors shall be reviewed for consistency with the Future Right-of-Way Needs Map, the Long Range Transportation Plan, and any specific alignment or engineering studies and shall be consistent with identified right-of-way needs for designated future transportation corridors as a condition of development approval.

Policy 1.6.5: [M] **(EFF. 12/15/11)**

The Future Right-of-Way Needs Map shall be reviewed, and updated if necessary, every five years concurrent with the Long Range Transportation Plan update, or more frequently as necessary to address the growth and mobility needs of the local government.

Policy 1.6.6: [M] **(EFF. 12/15/11)**

City and County Staff shall consult with the Florida Department of Transportation in determining conceptual alignments, acquiring future right-of-way, and reviewing proposed development that substantially impacts state highways designated for improvement in the Tallahassee-Leon County Comprehensive Plan to ensure that local decisions are consistent with state and federal policy, and to ensure that development

activity does not substantially impair the viability of the future state transportation corridor.

Policy 1.6.7: [M] **(EFF. 12/15/11)**

Explore land banking policies, procedures and funding options to facilitate early acquisition of right-of-way for designated future transportation corridors.

Policy 1.6.8: [M] **(EFF. 12/15/11)**

Right-of-way acquisition shall be facilitated by the establishment of a program to identify, prioritize, and acquire needed right-of-way consistent with the Right-of-Way Needs Map and Capital Improvements Element.

Policy 1.6.9: [M] **(EFF. 12/15/11)**

Where needed right-of-way is identified in the energy efficiency district connectivity plans, such projects shall also be included on the Right-of-Way Needs Map and/or in the Long Range Transportation Plan.

Goal 2: [M] (EFF. 12/15/11)

TRANSIT

Capture a five to ten percent mode share through the development and improvement of the mass transit system so that transit is seen as a viable alternative to the automobile as a means of transportation.

Objective 2.1: [M] **(EFF. 12/15/11)**

IMPLEMENTATION STRATEGIES

In coordination with the Metropolitan Planning Organization, City of Tallahassee, Leon County and the Florida Department of Transportation, expand the integration of mass transit planning into the overall transportation delivery system by coordination of the short-range transit operations plan, Transit Development Plan, Bicycle and Pedestrian Master Plan and Long Range Transportation Plan development.

Policy 2.1.1: [M] **(EFF. 12/15/11)**

Land use regulations shall be developed which emphasize pedestrian movement and the use of transit.

Policy 2.1.2: [M] **(EFF. 12/15/11)**

Systematically extend and/or modify transit routes within the urban area to provide access to major employment, shopping, and business, recreational and other activity centers.

Policy 2.1.3: [M] **(EFF. 12/15/11)**

Coordinate the location and design of office parks to foster ride sharing and transit use.

Policy 2.1.4: [M] **(EFF. 12/15/11)**

Discourage single occupancy vehicle use through design criteria for new development and innovative programs such an employee pass program.

Policy 2.1.5: [M] **(EFF. 12/15/11)**

Encourage the elimination of the subsidy of public employee parking to encourage ride sharing and transit use.

Policy 2.1.6: [M] **(EFF. 12/15/11)**

Develop and maintain a marketing strategy and campaign to inform the public on mass transit and to increase ridership.

Policy 2.1.7: [M] **(EFF. 12/15/11)**

The potential impacts upon transit shall be determined and utilized in evaluating highway projects when planning new roads or capacity expansions to existing roads.

Policy 2.1.8: [M] **(EFF. 12/15/11)**

For purposes of evaluating transit level of service over the Plan Horizon and to implement the Regional Mobility Plan goal of a 10% modal split, the local government should expand coverage to serve 80 to 89 percent of the residential population within the Urban Service Area by a transit route along an arterial or collector roadway within approximately 1/2 mile.

Policy 2.1.9: [M] **(EFF. 12/15/11)**

Revisions to and expansion of transit service will be based on existing and major trip generators and densities to provide efficient mass transit services.

Policy 2.1.10: [M] **(EFF. 12/15/11)**

Future transit planning for Tallahassee and Leon County will include provisions for determining the location of transit regional transfer facilities and/or superstops.

Policy 2.1.11: [M] **(EFF. 12/15/11)**

To provide efficient transit for Tallahassee and Leon County, future transit planning will address provisions for efficient and frequent service based on trip generations and density of land uses, safe and convenient transit facilities and adaptation for the special needs of the transportation disadvantaged.

Objective 2.2: [M] **(EFF. 12/15/11)**

TRANSIT ALTERNATIVES

Adopt and maintain a plan for expanding the transit system beyond buses.

Policy 2.2.1: [M] **(EFF. 12/15/11)**

Initiate a study to evaluate the alternative types of transit in relation to their potential use in the City.

Policy 2.2.2: [M] **(EFF. 12/15/11)**

Develop a long-range master plan for building the transit system type determined to be most feasible in Policy 2.2.1.

Objective 2.3: [M] **(EFF. 12/15/11)**

PROTECTION OF FUTURE TRANSIT CORRIDORS

Develop and maintain a plan that identifies future transit rights-of-way and corridors and provides means of protecting and acquiring such areas.

Policy 2.3.1: [M] **(EFF. 12/15/11)**

Existing and future transit rights-of-way and corridors shall be identified as a part of the comprehensive plan for integrating transit into the existing transportation system.

Policy 2.3.2: [M] **(EFF. 12/15/11)**

Incentives to encourage the donation of transit rights-of-way and corridors shall be developed.

Policy 2.3.3: [M] **(EFF. 12/15/11)**

Development agreements and land use regulations shall be utilized to preserve future transit corridors.

Objective 2.4: [M] **(Eff. 12/15/11)**

Funding of Transit

By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.

Policy 2.4.1: [M] **(Eff. 12/15/11)**

Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.

Policy 2.4.2: [M] **(Eff. 12/15/11)**

Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program.

Objective 2.5: [M] **(Eff. 12/15/11)**

Transportation for Disadvantaged

Provide for full implementation of the requirements of Chapter 427, Florida Statutes and Section 3046(a)(9) of the SAFETEA-LU Act regarding planning and coordination of human services transportation in meeting the needs of the transportation disadvantaged.

Policy 2.5.1: [M] **(Eff. 12/15/11)**

A needs assessment of the transportation disadvantaged shall be undertaken.

Policy 2.5.2: [M] **(Eff. 12/15/11)**

An assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs.

Policy 2.5.3: [M] **(Eff. 12/15/11)**

A strategy to meet identified unmet needs shall be developed with emphasis being given to meeting the needs of the transportation disadvantaged (i.e., those individuals who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase transportation).

Goal 3: [M] (EFF. 12/15/11)

AVIATION

Provide for adequate capacity and safe, appropriate airport facilities to meet the demand for Commercial Service, cargo, military, and General Aviation services and to enhance aviation and airport development opportunities, with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Objective 3.1: [M] (EFF. 12/15/11)

LONG TERM IMPLEMENTATION GUIDELINES

Expand and improve on a phased, incremental basis, the aviation facilities at and the access to Tallahassee Regional Airport to meet the transportation needs of the Capital Region while maintaining consistency with all elements of the comprehensive plan. The Tallahassee Regional Airport Master Plan will be maintained and monitored on an ongoing basis to ensure that implementation of the plan meets the aviation needs of the area.

Policy 3.1.1: [M] (EFF. 12/15/11)

Implement the Tallahassee Regional airport Master Plan for the Year 2005 and implement the recommendations of the Tallahassee Regional Airport Noise Compatibility Plan.

Objective 3.2: [M] (EFF. 12/15/11)

ACCESS TO AIRPORT

Access routes to the Tallahassee Regional Airport will be integrated with the street and highway planning process of the City, County, MPO, and Florida DOT. Alternative modal choices will be studied as part of the mass transportation planning process.

Policy 3.2.1: [M] (EFF. 12/15/11)

An appropriate gateway from the airport to Downtown/Capitol Center/University destinations shall be designated and improved. Such improvements shall consider roadway capacity, adjacent land uses, landscaping, and incorporation of future mass transportation facilities.

Policy 3.2.2: [M] (EFF. 12/15/11)

Conduct a feasibility study to determine the need for, type of, and proposed location of mass transportation services between the airport and priority destinations within the urban area.

Policy 3.2.3: [M] **(EFF. 12/15/11)**

The interface between the roadway network and the airport vehicle circulation system shall be designed, constructed, and signalized (when warranted) to provide efficient on-site and off-site traffic flow.

Policy 3.2.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee will coordinate any aviation facilities plan with U.S. Army Corps of Engineers, the Federal Aviation Administration, the MPO, military service, the FDOT 5 Year Transportation Plan and the Continuing Florida Aviation System Planning Process.

Policy 3.2.5: [M] **(EFF. 12/15/11)**

The Traffic Circulation and Mass Transit sub-elements shall consider future airport access needs.

Objective 3.3: [M] **(EFF. 12/15/11)**

CRITERIA FOR OPERATION AND MODIFICATION TO AIRPORT

Operation of and modification to Tallahassee Regional Airport shall take into account impacts to adjacent land uses, the natural resources, and the community in general.

Policy 3.3.1: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall take into account the potential for noise and safety hazards to surrounding land uses.

Policy 3.3.2: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall be accomplished so as to be compatible with nearby natural resources.

Policy 3.3.3: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall be consistent with the conservation element.

Policy 3.3.4: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall mitigate structural and non-structural impact on adjacent natural resources.

II. Mobility

Policy 3.3.5: [M] **(EFF. 12/15/11)**

Additional parking shall be provided in ways that minimize impervious surfaces and that maintain the appearance of the airport terminal.

Policy 3.3.6: [M] **(EFF. 12/15/11)**

Aesthetics shall be considered in any future airport facility design.

Objective 3.4: [M] **(EFF. 12/15/11)**

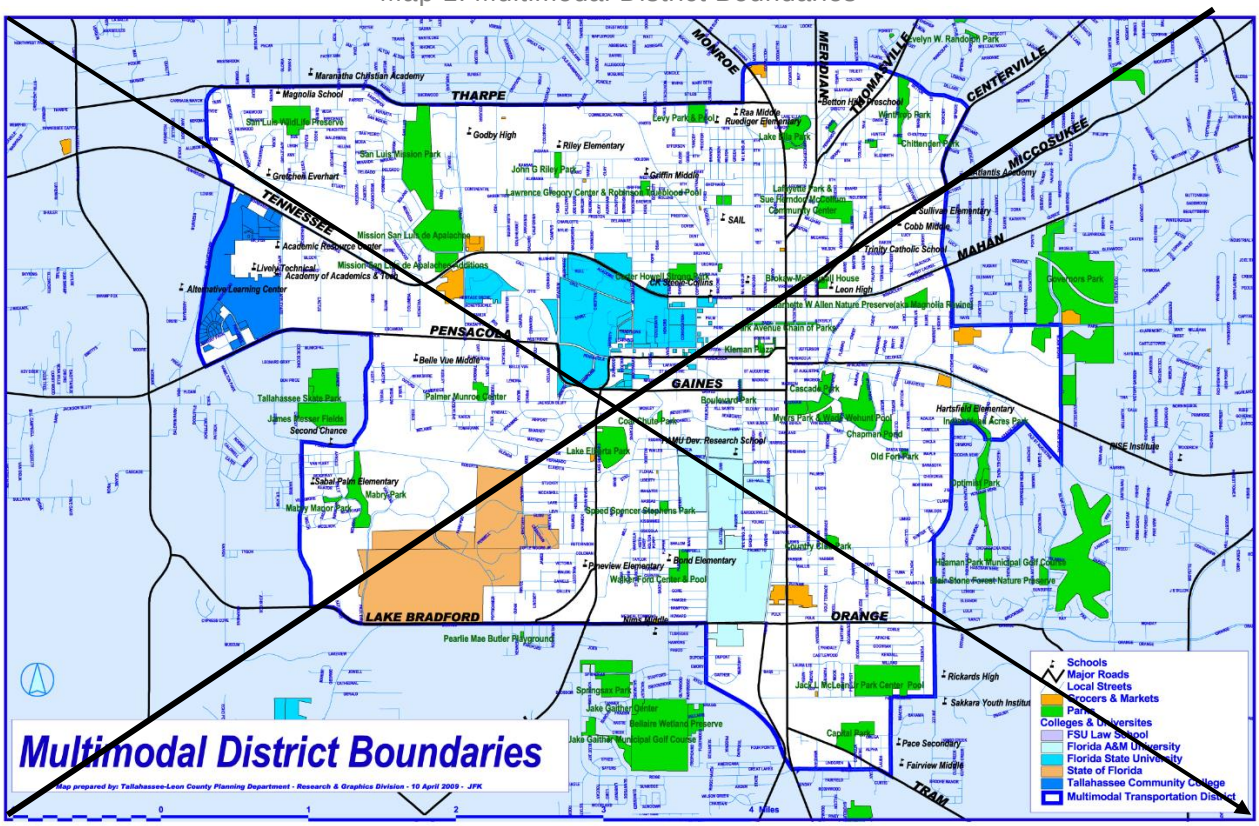
LAND USE IN ADJACENT AREAS

Development near the airport shall occur in ways and at locations compatible with the airport's operation and expansion and with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Policy 3.4.1: [M] **(EFF. 12/15/11)**

Land use decisions in the vicinity of the Tallahassee Regional Airport shall only be permitted if compatible with the current and future operation of the airport facility and the future land use element.

Policy 3.4.2: [M] **(EFF. 12/15/11)**



Residential development or other noise-sensitive land uses shall not be permitted within the predicted 65 Ldn noise contours without the use of mitigative noise control measures. Incompatible land uses in airport approach zones shall not be permitted. The high noise contours associated with the airport shall be publicized.

Policy 3.4.3: [M] **(EFF. 12/15/11)**

Additional land uses shall not be permitted in airport zones if, due to structural height, they hinder airport operation or reduce navigable airspace.

GLOSSARY

ACCESS: **(EFF. 6/25/96)** The means of vehicular entry to or exit from property to or from a public or private road.

ACLF: **(EFF. 7/16/90)** Means adult congregate living facility as defined in Section 400.402 of the Florida Statutes.

ACQUISITION: **(EFF. 7/16/90)** Includes purchase, land exchange, donation, easement, assisting private owners in obtaining tax advantages, etc. "Purchase" shall include all acquisition costs, such as surveying and title insurance.

ACTIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are facility oriented, i.e. swimming pools, ball fields, tennis courts.

ADJOINING LAND USES: **(EFF. 8/17/92)** Land uses on parcels which are touching or contiguous to each other, as distinguished from lying near to or adjacent. For purposes of this Plan, land uses on parcels that are separated from each other by a local or a minor collector street or roadway shall also be considered adjoining; land uses on parcels that are separated by a major collector or an arterial street or roadway or by a railroad right of way shall not be considered adjoining.

ADVANCED AIR MOBILITY: Vehicles and infrastructure associated with vertical take-off and landing (VTOL), air taxis, electric and hybrid short-to-medium distance aircraft. These vehicles may be piloted or autonomous and carry either passengers or cargo.

ADVANCED WASTEWATER TREATMENT: **(EFF. 4/10/09)** Treatment of sewage that goes beyond the secondary or biological wastewater treatment stage and includes the removal of nutrients such as phosphorus and nitrogen and a high percentage of suspended solids and biochemical oxygen demand.

AFFORDABLE HOUSING: **(REV. EFF. 7/20/05; REV. EFF. 12/24/10)** Housing that costs no more than 33% of the annual income of a household earning 80% or less of area median income (AMI) for homeownership and 60% AMI or less for rental housing, adjusted for the number of people in the household, as defined by the U.S. Department of Housing and Urban Development (HUD) annually.

AGRICULTURE: **(EFF. 7/6/15)** The production, keeping or maintenance, for sale, lease or personal use, of plants and/or animals useful to humans, including, but not limited to, the growing of crops, dairying, grazing, the raising and maintenance of poultry and other livestock, horticulture, nursery, forestry, and sod farms. Commercial feed lots, the raising of furbearing animals, riding academies, livery or boarding stables or dog kennels are not considered to be normal agricultural uses.

AGRITOURISM: **(EFF. 7/6/15)** Any agricultural related activity consistent with a bona fide farm or ranch or in a working forest which allows members of the general public to view or enjoy activities related to farming, ranching, historical, cultural or harvest-your-own attractions for recreational, entertainment or educational purposes.

ALTERED FLOODPLAINS: **(EFF. 7/16/90)** Areas within the 100 year floodplain that have been either ditched, drained, filled or have had structures built on them, any of which have diminished the flood storage capacity of the floodplain.

ALTERED WETLANDS: **(EFF. 8/17/92)** Wetlands that have been degraded to the extent their ecological function has been detrimentally impaired and the likelihood that they cannot be re-established except through a distinct program of man-made mitigation. Wetlands that can have beneficial function restored through natural processes will not be considered altered.

ARCHAEOLOGICAL SITE: **(EFF. 7/16/90)** A location that has yielded or may yield information on history or prehistory.

AREA PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the urban service area, including but not limited to community parks and sports complexes.

BASIC LIVING SHELTER: **(EFF. 7/16/90)** Means a dwelling unit which, at a minimum, is structurally sound, includes indoor plumbing, has a functional heating source, and provides protection to its inhabitants from the elements.

BEST MANAGEMENT PRACTICES: **(EFF. 7/16/90)** Those practices and principles designed to reduce and manage non-point source pollution and in some cases, protect wildlife and habitat. These principles and practices are generally outlined in the latest updated version of various BMP manuals including “Silviculture Best Management Practices,” “Best Management Practices,” “A Landowners Handbook for Controlling Erosion for Forestry Operations,” “Management Guidelines for Forested Wetlands,” “DER: Florida Development Manual, A Guide to Sound Land and Water Management,” and other publications on best management practices that are accepted by the industries and regulatory bodies. The local government reserves the right to add to or alter BMPs in specific instances as part of development agreements or development orders.

BUFFER: **(EFF. 6/25/96)** Open spaces, planted areas, fences, walls, berms, any combination thereof, or any other structure or design mechanism that is used to physically separate or screen one land use from another so as to visually shield and/or mitigate potential negative impacts.

BUSINESS ACCELERATOR: **(EFF. 5/31/18)** An organization that offers a range of support services and funding opportunities for startup businesses, including capital and investment, mentorship, office space and supply chain resources.

BUSINESS INCUBATOR: **(EFF. 5/31/18)** Organizations that help new and startup companies develop by providing services such as management training or office space, and are often a good path to capital from investors.

CANOPY ROAD: **(EFF. 7/16/90)** Road designated by local government as having significant aesthetic, cultural and historical value.

CAPITAL FACILITIES: **(EFF. 7/16/90)** Means transportation systems or facilities, including roads, mass transit, bikeway, sidewalk and aviation facilities; sewer systems or facilities; solid waste systems or facilities; drainage and stormwater management systems or facilities; potable water systems or facilities; education systems or facilities; parks and recreation systems or facilities; and health systems or facilities.

CAPITAL INFRASTRUCTURE: **(REV. EFF. 8/17/92)** Consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

CAPITOL CENTER PLANNING COMMISSION: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

CDBG: **(EFF. 7/16/90)** Means the Community Development Block Grant, as authorized under Title I of the Housing and Community Development Act of 1974.

CLOSED BASIN: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

CLUSTERING: **(EFF. 12/7/99)** The grouping together of structures and infrastructure on a portion of a development site with the balance remaining undeveloped or reserved as green space, which may or may not be used for development at a later date.

COMMERCIAL: **(REV. EFF. 6/25/96)** Generally, an activity or business involving the sale of goods and/or services carried out for profit.

> **MINOR**: **(EFF. 7/16/90)** Provide for the sale of convenience goods and services to the immediate residential area. Gross floor area—less than 20,000 square feet except at a local street intersection where maximum allowable is 10,000 square feet.
>
> **NEIGHBORHOOD**: **(REV. EFF. 9/19/91)** Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods. Gross floor area—20,000 to 100,000 square feet. Except at intersection of collectors where maximum allowable is 50,000 square feet.

COMMUNITY: **(EFF. 7/16/90)** Same functions of neighborhood commercial but on a larger scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items. Gross floor area—100,000 to 200,000 square feet.

REGIONAL: **(EFF. 7/16/90)** Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings. Gross floor area - 200,000 to 1,000,000 square feet.

HIGHWAY: **(EFF. 7/16/90)** Provide for consumer oriented retail services designed for drive-in convenience. Gross floor area - 1,000 to 10,000 square feet.

COMMERCIALIZATION CENTERS: **(EFF. 5/31/18)** Facilities designed to further develop technologies through research partnerships, assistance with patents, and support for delivering products to the market through licensing and the creation of companies.

COMMUNITY FACILITIES: **(REV. EFF. 8/17/92)** Facility or service which may be public or privately owned, established, and intended to provide significant public benefit.

COMMUNITY SERVICES: **(EFF. 7/16/90; REV. EFF. 8/27/17)** A facility owned or operated by a public or private entity or agency that provides a service or significant public benefit directly to the general public, such as libraries, religious facilities, police/fire stations, hospitals, museums, and schools.

LIGHT INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 1/19/20)** Water wells, water tanks, sewage pump stations, electric substations, and solar power stations and systems.

HEAVY INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 12/24/10; REV. EFF. 1/19/20)** Government operational facilities, which have significant off-site impacts. Also included are such facilities operated by semi-public or private utility providers. These facilities shall include but are not limited to:

Waste-to-energy facilities
Materials recovery facilities
Sanitary sewer facilities
Sanitary sewer percolation ponds
Sewage treatment plants
Airports
Power generating stations (non-solar powered)
Landfills
Sludge disposal facilities
Incinerators
Correctional facilities
Water treatment plants
Outdoor storage facilities
Vehicle maintenance facilities
Solid waste transfer station
Correctional facilities

POST-SECONDARY: **(EFF. 7/16/90)** Public or private - Universities, colleges, vocational/technical schools.

COMMUNITY PARK: **(EFF. 7/16/90)** Means those parks that serve several neighborhoods with total populations of up to 25,000 and have a service area of up to a three mile radius. "Ride-to" facilities that are also accessible to bicyclists and pedestrians shall be included.

COMPATIBILITY: **(EFF. 5/31/18)** A condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition.

CONSERVATION: **(EFF. 7/16/90)** Allowing only carefully planned development activities to occur on a site; development activities must be compatible with the perpetuation of the ecological resources on the site.

CONSERVATION SUBDIVISION: **(EFF. 7/1/04)** A residential or mixed-use development that has been developed utilizing a design approach in which a significant fraction of the parent tract(s) is reserved as permanently protected open space and the remaining fraction of the land is developed. Under this design approach, development is clustered or concentrated on the least environmentally or otherwise significant portions of the development site.

CONTEXT SENSITIVE DESIGN: Land use and streetscape design that prioritizes physical and social context, while also preserving scenic, aesthetic, historic, and environmental resources, to provide mobility and safety for all users in a way that is reflective of the specific area in which the development and/or roadway is constructed.

COUNTYWIDE PARK: **(EFF. 7/16/90)** Means those park facilities that serve the entire county population, including but not limited to regional parks, boat landings and parks, golf courses, state parks, including university recreation areas, and national forest lands.

COWORKING SPACES: **(EFF. 5/31/18)** Shared workplaces or offices that facilitate the social gathering of a group of people who are still working independently. Unlike in a typical office, those utilizing coworking spaces are usually not employed by the same organization. Coworking spaces are often attractive to work-at-home professionals, independent contractors, or people who travel frequently.

DENSITY: **(EFF. 12/7/99)** *see* Gross Density

DENSITY NEUTRAL: **(EFF. 7/1/04)** As applied to Conservation Subdivisions, means that the allowable density achieved through the utilization of the conservation subdivision design approach shall not exceed the maximum density established for the Future Land Use Map category and base zoning district applicable to the subject property or properties.

DEVELOPMENT: **(EFF. 7/16/90)** Any proposed change in the use or character of the land, including but not limited to, land clearing or the placement of any structure or site improvement on the land except for silviculture activities employing best management practices.

DILAPIDATED: **(EFF. 7/16/90)** Means a structure which does not provide safe and adequate shelter in its present condition and endangers the health, safety and well-being of the occupants. A structure in the dilapidated classification cannot be economically repaired. A house is dilapidated when it has one or both of the following conditions:

1) Inadequate original construction such that it does not provide adequate protection against the elements;
2) Defects which would cost over 50% of the total value of the shelter to repair.

DRAINAGE BASIN: **(EFF. 12/7/99)** The area defined by topographic boundaries which contributes stormwater to a watershed or drainage system, including all areas artificially added to the basin.

ECOTOURISM: **(EFF. 7/6/15)** Tourism that focuses on the appreciation of natural areas, wildlife, or cultural and historical resources and strives to minimize ecological impact or damage. This nature-based tourism involves education and interpretation of the natural environment and is managed to be ecologically sustainable. Activities may include cycling, camping, fishing, hunting, paddling, hiking, birding, visiting scenic byways, agritourism, and wildlife viewing.

ENDANGERED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish and wildlife or plant naturally occurring in Florida, whose prospects of survival are in jeopardy due to modification or loss of habitat; over utilization for commercial, sporting, scientific or educational purposes; disease; predation; inadequacy of regulatory mechanisms; or other natural or man-made factors affecting his continued existence.

~~**ENTERPRISE ZONE**: **(EFF. 7/16/90)** Means an area in the state designated pursuant to Section 290 of the Florida Statutes and approved by the Secretary of the Department of Community Affairs.~~

ENVIRONMENTALLY SIGNIFICANT LANDS: **(EFF. 7/16/90)** Areas that provide breeding, wintering or foraging habitat, for federal, state, and locally listed plant and animal species; flood plains, wetlands, native forests and vegetated areas.

~~**FEDERAL UNIFORM RELOCATION ACT**: **(EFF. 7/16/90)** Means the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as passed and subsequently amended by the Congress of the United States.~~

FLOOD OR **FLOODING**: **(EFF. 1/23/09)** A temporary condition of partial or complete inundation of normally dry land or wetlands from the overflow of water bodies or watercourses in response to stormwater runoff, or from excessive overland flow of stormwater, or the accumulation of stormwater runoff in a closed basin.

FLOODPLAIN: **(EFF. 1/23/09)** An area of land susceptible to being flooded by stormwater. Floodplains are normally designated in terms of their probability of flooding with a specified period, such as one, ten, 25, 50, and 100 years.

FLOODWAY: **(EFF. 7/16/90; REV. EFF. 1/23/09)** That part of the floodplain associated with the channel of a river, steam, or other watercourse, or waterbodies and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation of the floodway.

FLOOR AREA RATIO: **(EFF. 6/25/96)** A measure of development intensity expressed as a ratio of the gross floor area of all buildings on a site divided by the total area of the site.

FLORIDA CAPITOL CENTER PLANNING DISTRICT: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

FLORIDA MASTER SITE FILE: **(EFF. 7/16/90)** A clearinghouse for information on archaeological sites, buildings and historic resource surveys. Inclusion in the Florida Master Site File does not necessarily mean that the resource possesses historic, architectural, archaeological or cultural significance, or is worthy of preservation.

FREEWAYS: **(EFF. 7/1/04)** Roadways that provide the highest level of mobility and are intended to carry the greatest amount of traffic at the highest speeds. Accordingly, freeway mainlanes provide no direct access to property and access to the freeway is provided only at interchanges and ramps.

FUNCTIONAL AREA OF AN INTERSECTION: **(EFF. 7/1/04)** The area beyond the physical intersection that comprises decision and maneuver distance, plus any required vehicle storage length, and is protected through corner clearance standards and connection spacing standards.

GREEN SPACE: **(EFF. 7/16/90)** Means that part of a lot open and unobstructed from its lowest level upward which is accessible to all residents on the lot, except as may be required for safety, and which is not used for off-street parking, streets, drives, refuse storage or other utility or building purposes.

GREEN INFRASTRUCTURE: Infrastructure that uses plants, soils, and other media to capture and treat stormwater. It relies on the natural processes of filtration, infiltration, and evapotranspiration to manage stormwater

GROSS DENSITY: **(EFF. 7/16/90)** Means the number of dwelling units per gross acre, an area of land containing forty three thousand, five hundred sixty (43,560) square feet including rights-of-way, common areas and the like. All residential densities referred to in the plan shall be gross densities unless otherwise noted.

GROUNDWATER RESOURCE PROTECTION: **(EFF. 7/16/90)** Areas determined to have high recharge to the aquifer and/or area where the potential for groundwater contamination is high.

GROUP HOME: **(EFF. 7/16/90)** Means a facility which provides a living environment for unrelated residents who operate as the functional equivalent of a family, including such supervision and care as may be necessary to meet the physical, emotional and social needs of the residents. Adult congregate living facilities comparable in size to group homes are included in this definition. It shall not include rooming or boarding homes, clubs, fraternities, sororities, monasteries or convents, hotel, residential treatment facilities, nursing homes, or emergency shelters.

HAZARD: **(EFF. 4/10/09)** Means a condition that exposes human life or property to harm from a man-made technological, or natural disaster.

HAZARD MITIGATION: **(EFF. 4/10/09)** Means any action taken to reduce or eliminate the exposure of human life or property to harm from a man-made or natural disaster.

HAZARDOUS WASTE: **(EFF. 7/16/90)** Means solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible or incapacitating reversible illness, or may pose a substantial present or potential hazard to human health or the environment when improperly transported, disposed of, stored, treated, or otherwise managed.

HEAVY INDUSTRIAL: **(EFF. 7/16/90; REV. EFF. 5/31/18)** Heavy industrial uses have or may have substantial offsite impacts, such as noise, vibrations, smoke, dust and particulate matter, and noxious or odorous gases. Heavy industrial uses typically depend on access to Strategic Intermodal System (SIS) facilities, rail facilities, or airport facilities.

HIGH QUALITY SUCCESSIONAL FOREST: **(REV. EFF. 12/10/91; REV. EFF. 7/19/13)** High quality successional forest shall mean a medium quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." These forests typically show signs of past disturbances, but still retain a good distribution of high quality indicator species. A medium quality natural community generally possesses the following characteristics:

1) The floristic composition contains many of the more common species typical of the natural community type, although most rare species are absent;
2) The community may contain invasive exotic plants that could be controlled through management;
3) The community has likely had some past disturbance, but not to the extent that the potential for recovery or restoration to a high quality natural community is significantly impaired (unauthorized activities in high quality successional forest areas resulting in a violation of the ordinances will not be excluded from protection as such).

HISTORIC RESOURCE: **(EFF. 7/16/90)** Means all areas, districts, or sites containing properties listed on the Florida Master Site File, the National Register of Historical Places, or designated by a local government as historically, architecturally or archaeologically significant.

HYDRAULIC FRACTURING: **(EFF. 5/31/18)** The process by which fractures are created by pumping fluids at high pressure into target rock formations to stimulate the flow of natural gas or oil, increasing the volumes that can be recovered.

INNOVATION DISTRICTS: **(EFF. 5/31/18)** Geographic areas that are physically compact, walkable, and transit-accessible where educational institutions, university-affiliated research and development facilities, and/or technology-focused companies cluster and connect with startup companies, business incubators, and business accelerators. Innovation Districts are mixed-use areas that provide housing, office, and retail in addition to the educational and business uses.

INTEGRATED ACCESS: **(EFF. 12/10/91)** The permitting of ingress and egress to a parcel of land in a manner which will minimize disruptions of the traffic flow due to turning movements on the local, collector, or arterial street on which the parcel fronts. Integrated access may include the requirement of shared access or the use of frontage or rear access roads.

INTENSITY: **(EFF. 12/7/99)** A measurement of the extent of land development, including the consumption or use of the space above, on, or below ground; examples of intensity measurement may include: the measurement of the use of or demand on facilities or services, allowed square footage or a floor area ratio of non-residential development, or the number of dwelling units per acre of residential development.

INTERMODAL: The term intermodal generally describes facilities that are used to move freight and cargo, as well as their transfer stations. Such facilities may include ports, railroad freight yards, freight/commercial airports, and the highways and railways that connect these facilities.

INTERSECTION: **(EFF. 6/25/96)** The point where the centerlines of two or more roads meet or cross and where allowance is made for the interchange of vehicular traffic.

LAND DEVELOPMENT REGULATIONS: **(EFF. 7/16/90)** Ordinances enacted by governing bodies for the regulation of any aspect of development, and including any local government zoning, rezoning, subdivision, building construction, or sign regulations, or any other regulations controlling the development of the land.

LDN: **(EFF. 7/16/90)** Means that measure of noise known as the Average Day-Night Sound Level rating which is the yearly energy average of the A-weighted sound level (to approximately the frequency response of the ear) integrated over a 24-hour period.

LEVEL OF SERVICE: **(EFF. 7/16/90)** Means an indicator of the extent or degree of service provided by, or proposed to be provided by a facility based on or related to the operational characteristics of the facility. Level of service shall indicate the capacity per unit of demand for each facility.

LEVELS OF SERVICE: (EFF. 7/16/90)

A Represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.

B Is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable.

C Is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

D Represents high density, but stable flow. Speed and freedom to maneuver are severely restricted.

E Represents operating conditions at or near the capacity level. All speeds are reduced. Freedom to maneuver within the traffic stream is extremely difficult.

LIGHT INDUSTRIAL: **(EFF. 7/16/90, REV. EFF. 5/31/18)** Light Industrial uses typically constrain potentially offensive impacts onsite, either through complete enclosure or a combination of enclosure and screening. Light Industrial uses shall include the finishing of products composed of previously manufactured component parts (such as the assembly of apparel or food processing excluding slaughter); and any manufacturing, storage, or distribution of products unlikely to cause any of the following impacts to be detected off-site: odor, noise, fumes or dispersion of waste, or radiation. Ancillary commercial uses designed to serve adjacent workers may be permitted. Light Industrial uses are not dependent upon direct access to rail facilities for off-loading and on-loading. Mixed Use Industrial sites allow light industrial uses supported by training facilities, offices, restaurants, small scale commercial storefronts, factory tours, retail, ancillary residential and/or open space uses.

LISTED SPECIES: **(EFF. 7/16/90)** Any plant or animal listed by the county, state or federal governments as an endangered or threatened species, or a species of special concern.

LIVE-WORK UNITS: **(EFF. 7/20/05)** Residential structures with their own lots, designed to accommodate and that include both living facilities and commercial/office components within the structure or on the same lot. The non-residential uses allowed in live-work units are “destination” businesses that do not rely on passerby and drive-by traffic, but more typically have visitation by appointment.

LOCALLY DESIGNATED HISTORIC RESOURCE: **(EFF. 7/16/90)** A resource that has been designated as historic under the Tallahassee-Leon County Zoning Code and that undergoes design review by the Tallahassee-Leon County Architectural Review Board.

LOCAL PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the corporate city limits, including but not limited to neighborhood parks and passive recreation facilities.

LOCAL STREETS: **(REV. EFF. 7/1/04)** Local streets collect traffic from adjacent land uses and other minor streets (cul-de-sacs, loops, alleys, lanes) and channel it to the collector/arterial system. Local streets are intended to carry the lowest traffic volumes at the lowest speeds, discourage through traffic (usually do not carry traffic between two streets of a higher classification), and to provide access to abutting land.

LOW IMPACT DEVELOPMENT: **(EFF. 4/10/09)** A land planning and engineering design approach that focuses on minimizing adverse impacts of development on water quality. This approach is implemented by replicating the pre-development hydrologic regime of the development site through infiltrating, filtering, storing, evaporating, and detaining stormwater runoff close to its source.

MAJOR COLLECTOR: **(REV. EFF. 7/1/04)** Major collector roadways channel traffic between arterials, from other collector streets to the arterial system, and from a major activity center to the arterial street system. Major collectors may carry relatively high traffic volumes.

MAJOR DETERIORATION: **(EFF. 7/16/90)** Means a dwelling unit which has major defects requiring extensive repairs. The unit will not necessarily provide safe and decent shelter unless the repairs are made. These housing units usually have critical defects of a substantial nature, such as:

1) Holes, open cracks, rotted or missing materials over a large part of the foundation, walls, roof or chimney;
2) Substantial sagging of floors, walls or roof,
3) Extensive damage by storm, fire or flood.

MAKERSPACES: **(EFF. 5/31/18)** Collaborative work spaces with tools available for the purposes of enabling people to design, prototype and create manufactured works that typically would not be possible to create with the resources available to individuals working alone. Makerspaces are intended to provide access to equipment, community, and education. Makerspaces often have a variety of equipment, such as 3D printers, laser cutters, CNC (Computer Numerical Control) machines, soldering irons, or sewing machines.

MASS TRANSIT: **(EFF. 7/16/90)** Means passenger transportation service, usually local in scope, that is available to any person who pays a prescribed fare. It operates on established schedules along designated routes or lines with specific stops and is designed to move relatively large number of people at one time.

MICROMOBILITY: The term micromobility is used to describe emerging transportation alternatives such as e-scooters, e-bikes, and electric skateboards. It is frequently used in describing bikeshare and e-scooter share schemes.

MINING: **(EFF. 5/31/18)** Mining uses have the potential for substantial offsite impacts and alterations to the land structure on and around the mining site. Mining uses shall include the mining and quarrying of sand, gravel, clay, limestone, ceramic, and refractory minerals. Mining uses do not include hydraulic fracturing. Mining uses typically depend on a transportation system that can support large and heavy trucks.

MINOR ARTERIAL: **(REV. EFF. 7/1/04)** Minor arterial roadways interconnect with and augment the principal arterial system. They are similar in function to principal arterials, but accommodate trips of more moderate length and distribute travel to geographic areas smaller than that of the principal arterial system. Therefore, they provide a somewhat higher degree of property access than principal arterials.

MINOR COLLECTOR: **(REV. EFF. 7/1/04)** Minor collector roadways channel traffic from minor streets to the major collector/arterial system, between other collectors, and from activity centers to a street of higher classification. Minor collectors provide access to adjoining properties and generally have lower volumes, shorter trip lengths, and fewer through trips than major collectors.

MISSING MIDDLE HOUSING: This type of housing is represented as house-scale buildings with multiple units, such as duplexes, fourplexes, cottage courts, and cluster housing types, that fit seamlessly into existing residential neighborhoods, offering more housing options and supporting walkability. These types are frequently "missing" from the typical Florida housing market.

MITIGATION: **(EFF. 7/16/90)** To lessen or eliminate the impact of development on a significant historic resource. Mitigation can include the modification of project plans to ensure preservation of the significant resource, landscape buffering, adaptive use of a historic building, archaeological salvage, or historic or photographic documentation or the resource.

MSTU/MSBU: **(EFF. 7/16/90)** Means municipal service taxing units or municipal service benefit units, as authorized and defined in Florida Statutes, Chapter 125.01 (1)(q).

MULTIMODAL: The term multimodal describes supporting the presence of a variety of transportation options including but not limited to walking, biking, rolling (wheelchair et al.), micromobility (e-scooters et al.), freight, trolly, bus, train, etc. The term is generally used to emphasize alternatives to vehicular modes of transportation.

NATIONAL REGISTER OF HISTORIC PLACES: **(EFF. 7/16/90)** A federal listing of culturally significant buildings, structures, objects, sites and districts in the United States. This program was established by Congress in 1935 and is maintained by the United States Department of the Interior.

NATIVE FOREST: **(EFF. 7/16/90; REV. EFF. 7/19/13)** Native forest shall mean a high quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." A high quality natural community generally possesses the following characteristics:

1) The plant species composition is dominated by high quality indicator species which are typical of their natural community type;
2) The community may contain invasive exotic plants that could be controlled through management;
3) Evidence of historical disturbance may be present, but the disturbance has not destroyed or prevented the re-establishment of a high quality natural community type.

NATURAL ACCESS CONTROL: **(EFF. 12/10/02)** A design concept directed primarily at decreasing opportunities for criminal activities by denying access to crime targets and creating a perception of risk for potential offenders. Natural access control is developed by designing streets, parking areas, sidewalks, building entrances, and neighborhood gateways, which clearly indicate public routes and discourage access to private areas with structural elements.

NATURAL SURVEILLANCE: **(EFF. 12/10/02)** A design concept directed primarily at identifying potential undesired r criminal activities. Natural surveillance is promoted by features that provide day and night visibility from windows, doors, and porches that oversee parking areas, pedestrian areas, play areas, building entrances, and similar areas.

NATURAL VEGETATION: **(EFF. 7/16/90)** The trees and plants occurring on a site prior to development, alteration or clearing of that site.

NEIGHBORHOOD PARK: **(EFF. 7/16/90)** Means those parks that serve as the focus for neighborhood units with a population of up to 5,000 and have a service area of approximately one-half mile and are accessible primarily to pedestrian and bicyclists.

NET ACRE: **(EFF. 7/16/90)** The amount of usable land area, exclusive of impervious areas and areas subject to environmental constraints.

NEW DEVELOPMENT: **(EFF. 7/16/90)** Means all land development activity subject to a development order after the adoption of this Comprehensive Plan, except those that shall be granted vested rights pursuant to the Plan itself.

OFFICE: **(REV. EFF. 6/25/96)** Generally, a room, group of rooms, or building used primarily for conducting the affairs of a business, profession, service, industry or government. An office shall not include the sale of goods for a profit as its primary use. For purposes of this Plan, the following are categories of office intensity:

MINOR: **(REV. EFF. 6/28/95)** Converted residence at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum of 2,500 square feet if located on a local street.

MAJOR: **(REV. EFF. 6/28/95)** An office building or buildings with more than a .25 floor area ratio, or at least 10,000 square feet. This includes a series of buildings within a subdivision that when combined is equal to or exceeds these thresholds.

OFF-SITE MITIGATION: **(EFF. 7/1/04) CITY OF TALLAHASSEE ONLY**—To compensate for the impacts of development on significant environmental resources in areas deemed important for infill or related conversions of land use by preserving, restoring and enhancing the environmental functions of ecosystems elsewhere.

ON-SITE SYSTEM: **(EFF. 7/16/90)** Means any sanitary sewer system designed and built to serve a single parcel of land, i.e. septic tank or package treatment plant with capacity sized to:

a) Meet the demand for a single parcel of land and its intended use
b) Meet the projected demand for a single parcel of land after its subdivision

An on-site system may serve more than one parcel but only to correct an existing environmental problem.

OPEN SPACE: **(EFF. 7/1/04)** Means undeveloped lands suitable for passive recreation or conservation uses. In the context of Conservation Subdivisions, Open Space refers to lands subject to a required conservation easement. These lands may include Conservation and Preservation features defined in this Plan, or agricultural or silvicultural properties, that are managed to preserve or promote environmental and aesthetic resources.

PASSIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are natural resource oriented, i.e. hiking trails, boat landings, neighborhood parks.

PEAK HOUR: **(REV. EFF. 8/17/92)** Means the period during which the maximum amount of travel occurs. The period when demand for transportation service is heaviest.

PLANT COMMUNITY: **(EFF. 7/16/90)** A natural association of plants that is dominated by one or more prominent species, or possesses a characteristic physical and discernible attribute.

~~**POLYGON CONNECTIVITY INDEX**: **(EFF. 4/10/09)** A measure of connections within a transportation network. A polygon is created when elements of the transportation network connect and create closed loops, thus allowing a traveler to make a loop on its perimeter. The more polygons there are within an area, the more route options exist for a traveler. More polygons equal a higher connectivity index and a higher degree of mobility.~~

POPULATION ACCOMMODATION RATIO (PAR): **(EFF. 4/18/02)** The Population Accommodation Ratio (PAR) is the relationship between the supply of land available for development and the expected population growth over a period of time. A PAR of 2.00 means that there is twice the supply of land available for development compared to the expected population growth over a period of time. A PAR of 1.50 means there is 50% more land available for development than is needed for the expected population growth over a period of time.

PRESERVATION: **(EFF. 7/16/90)** Establishing strict requirements for the maintenance of significant ecological resources in a natural state. Activities should be in strict compliance with an effort to perpetuate the ecological value of the site or surrounding areas, including maintenance of listed plant and animal species.

PRESERVE AREAS: **(EFF. 7/16/90)** Vegetative areas required to be preserved by law.

PRINCIPAL ARTERIAL: **(REV. EFF. 7/1/04)** Principal arterial roadways are designed to carry the next highest level of mobility and are intended to carry substantial traffic volumes over relatively long distances and at relatively high speeds. Direct property access may be provided but must be carefully managed to avoid creating unsafe and congested conditions and to preserve mobility.

PRIVATE RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Recreational resources provided by the private sector.

COMMERCIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities operated by the private sector as for profit or not-for profit.

RESIDENTIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities located within and associated with residential developments.

PROOF OF CONCEPT CENTERS: **(EFF. 5/31/18)** Facilities designed to provide services related to financial capital, business support, and university research to promote the adoption and further development of programs that aid technologies through phases between patenting and the creation of marketable products.

PUBLIC FACILITY: **(EFF. 7/16/90)** Means capital facilities that are owned by a governmental entity.

RECREATIONAL:

PASSIVE: **(EFF. 7/16/90)** Natural resource oriented, (hiking trails, boat landings, neighborhood parks).

ACTIVE: **(EFF. 7/16/90)** Facility oriented, (swimming pools, ball fields, tennis courts).

REGIONAL PARK: **(EFF. 7/16/90)** Means a large resource based area which serves the entire county. Such a park should serve a minimum of 100,000 population and be within a 30 minute driving time of that population.

REGULATED CLOSED BASINS: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface, at least 10 acres in size, for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

REHABILITATION: **(EFF. 7/16/90)** The act or process of returning a property to a state of utility through repair or alteration which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its historical, architectural, and cultural values.

RESEARCH AND DEVELOPMENT: **(EFF. 5/31/18)** Research and Development uses shall have minimal offsite impacts and include facilities for developing technologies related to the physical and life sciences. Facilities may include laboratories, wet laboratories, classrooms, commercialization centers, coworking spaces, makerspaces, craftsman studios, proof of concept centers, and related facilities. Active and passive recreation, open space, hotels, restaurants, and limited retail and residential are allowed as ancillary uses to support the collaborative nature of research and development centers.

RESIDENTIAL: **(REV. EFF. 6/25/96)** Land that is used for or proposed to be used for the principal purpose of providing dwelling unit(s) for human habitation.

LOW: **(EFF. 7/16/90)** 0-8 dwelling units per acre

MEDIUM: **(EFF. 7/16/90)** 8-16 dwelling units per acre

HIGH: **(EFF. 7/16/90)** 16-50 dwelling units per acre

URBAN: **(EFF. 1/19/02)** 51 units to 150 units

RESPONSIBLE MANAGEMENT ENTITY: **(EFF. 4/10/09)** A legal entity that has the technical, managerial, and financial capacity to ensure viable long-term, cost-effective, centralized management, operation, and maintenance of decentralized wastewater systems in accordance with appropriate regulations and generally accepted accounting principles. Viability is defined as the capacity of a responsible management entity to provide adequate technical, managerial, and financial resources to protect the public health and the environment consistently, in perpetuity, and at a minimal cost to taxpayers.

SANITARY SEWER FACILITIES: **(EFF. 7/16/90)** Means structures or systems designed for the collection, transmission, treatment, or disposal of sewage and includes trunk mains, interceptors, treatment plants and disposal systems.

SANITARY SEWER SERVICE: **(EFF. 7/16/90)** Means sewer service provided by sanitary sewer designed to serve a large service area and usually more than one land use type. These facilities have the intent and potential for expansion of their service areas.

SCHOOLS: **(EFF. 6/26/98)** Facilities intended primarily for the education of children pre-kindergarten through twelfth grade, children identified as exceptional regardless of age or grade, or for the vocational or community education of high school age students and adults. Unless otherwise stated elsewhere in the Plan, this term refers to public and private schools.

SECTION 8 PROGRAM: **(EFF. 7/16/90)** Means those programs authorized under the renumbered Section 8 of the United States Housing Act of 1937. These programs allow the Department of Housing and Urban Development to contract directly with the owner of existing, new, or rehabilitated units for the payment of the difference between a contract rent not exceeding a fair market rate for the dwelling and a specified percentage of the tenant's gross income.

SEVERE GRADES: **(EFF. 7/16/90)** Slopes greater than 20%.

SILVICULTURE: **(EFF. 7/6/15)** **A** practice, operation, or process following accepted forest management principles whereby the crops constituting forests are tended, harvested, and reforested.

SOLID WASTE: **(EFF. 7/16/90)** Means sludge from a waste treatment works, water supply treatment plant, or air pollution control facility or garbage, rubbish, refuse or other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from domestic, industrial, commercial, mining, agricultural, or governmental operations (as defined by Section 9J-5.002(88), F.A.C.).

SPECIAL NEEDS HOUSING: **(EFF. 7/16/90)** Means that part of the housing provision system designed to fulfill the demand of a household or individual who needs assistance, either permanent or temporary, in obtaining basic shelter, including but not limited to very low and low income handicapped individuals, homeless persons, group homes for persons with physical, emotional or cognitive disabilities, shelters for battered victims, adult congregate living facilities, and halfway houses for the non-criminal or non-delinquent.

SPECIES OF SPECIAL CONCERN: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: A species, subspecies or isolated population which warrants special protection, recognition or consideration because it has an inherent significant vulnerability to habitat modification, environmental alteration, human disturbances, or substantial human exploitation which, in the foreseeable future may result in its becoming a threatened species; may already meet certain criteria for designation as a threatened species but for which conclusive data are limited or lacking; may occupy such an unusually vital and essential ecological niche that should it decline significantly in numbers or distribution, other species would be adversely affected to a significant degree, or has not significantly recovered from past population depletion.

STARTUP COMPANY: **(EFF. 5/31/18)** An entrepreneurial venture that is typically a newly emerged, fast-growing business that aims to meet a marketplace need by developing a viable business model around an innovative product, service, process or a platform.

SUBSTANDARD HOUSING: **(EFF. 7/16/90)** Means any structure which falls within the structural conditions defined as “major deterioration” and “dilapidated.”

SUPERSTOPS: **(EFF. 4/10/09)** Transit stops that will serve as transfer stations for two or more routes, removing the need for riders to go to a single, centralized location to make transfers.

TERRITORIAL REINFORCEMENT DESIGNS: **(EFF. 12/10/02)** Create or extend the spheres of influence of legitimate users of designed environments. Properly designed environments allow legitimate users to develop a sense of territorial control, while potential offenders (perceiving the legitimate user control of the environment) are discouraged from attempting criminal activities. Territorial reinforcement is promoted by features that distinguish private spaces from public spaces with the use of fences, gateways, hedges, and similar design strategies.

THREATENED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish, wildlife and plants naturally occurring in Florida which exists in such small populations as to become endangered if it is subjected to increased stress as a result of further modifications of its environment.

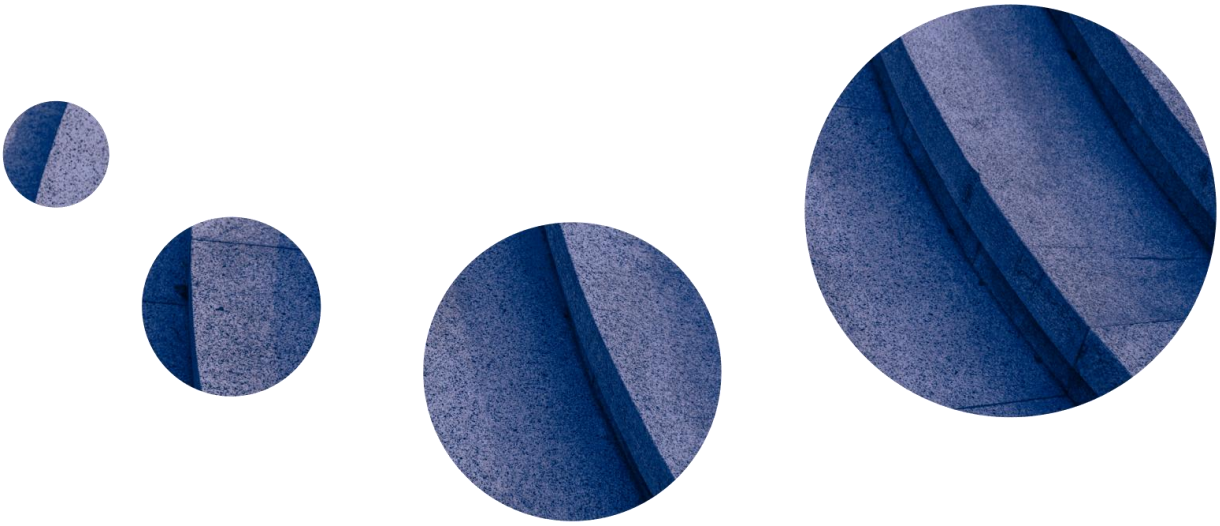
THROUGH TRIPS: **(EFF. 6/07/01)** A through trip is one that has neither a beginning point nor a destination point contained within the subject area or on a particular roadway segment.

TRAIL ORIENTED DEVELOPMENT (TrOD): Trail Oriented Development is designed to locate buildings in immediate proximity to multi-use path transportation corridors with the intention of connecting or relating residences and businesses to the nearby trail facilities. Generally TrOd is compact, walkable, pedestrian and bike-oriented, and mixed-use.

TRANSIT ORIENTED DEVELOPMENT (TOD): Transit Oriented Development is designed to be compact, walkable, pedestrian-oriented, and mixed-use development that is centered near and around transit. TOD supports vibrant communities with a mix of commercial, residential, office and entertainment uses.

TRANSPORTATION CORRIDOR: **(EFF. 7/16/90)** Means a broad geographical band that follows a general directional flow or connects major sources of trips. It may contain a number of streets and highways and transit lines or routes.

TRANSPORTATION SYSTEM: **(EFF. 7/16/90)** Means a coordinated system made up of one or several modes of transportation serving a common purpose of the movement of people, goods, or both.



UNDEVELOPED FLOODWAY/FLOODPLAIN: **(EFF. 7/16/90)** A floodway/floodplain which has not been altered.

VULNERABLE ROAD USER: The term vulnerable road use describes transportation systems users outside of vehicles. It includes pedestrians, cyclists, wheelchair/powerchair users, micromobility users, et al

WATER BODY AND NATURAL WATER BODY: **(EFF. 7/16/90)** A water body is a depression in the ground that normally and continually contains surface water. This is opposed to a wet depression that holds water only intermittently. There are some types of wetlands that are examples of areas that hold water only certain times of the year. A natural water body is a depression in the ground existing in and produced by nature, not man-made, and occurring due to the operation of the ordinary course of nature that normally and continually contains surface water or has historically held surface water on a continuing basis.

WET LABORATORIES: **(EFF. 5/31/18)** Laboratories where chemicals, drugs, or other materials are handled in liquid solutions or volatile phases, requiring direct ventilation and specialized piped utilities (typically water and various gases).

WETLAND: **(REV. EFF. 6/28/02; REV. EFF. 7/19/13)** Wetlands mean those areas included within the landward extent of surface waters of the state, pursuant to applicable rules in the Florida Administrative Code, or any area which is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and which under normal circumstances does support a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligated hydrophytic macrophytes that are typically adapted to areas having soils conditions described in this definition. These species, due to morphological, physiological, or reproductive adaptations have the ability to grow, reproduce, or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps and marshes, bayheads, bogs, cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps, and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto. The City of Tallahassee and Leon County intend to continue to protect isolated wetlands and wetlands on properties held by a single owner. Isolated wetlands and wetlands in one ownership must meet the State of Florida's definition for wetlands with regard to percent composition of wetland plant species, hydrologic indicators, and soils (Chapter 62-340, F.A.C.)

Comprehensive Plan Update Project History

The comprehensive plan update has occurred over the course of several years. The following information provides a summary of the actions and events through which the update has progressed, including participating entities, to the present time.

Board Action Prior to 2021

The Board's consistent action and direction to update the Comprehensive Plan, leading to the issuance of this RFP for consulting services on March 23, 2021, dates back a number of years.

At the FY 2014/15 Board of County Commissioners Strategic Planning Retreat held December 8, 2014, the Board of County Commissioners directed Planning Department staff to "align the land use and development plan with established community priorities, beginning with a comprehensive assessment and revision of the Land Use Element." This direction was ratified by the Board on January 27, 2015. A proposed scope and schedule were presented to the Board and City Commission at a Joint Workshop on May 26, 2015. The proposed scope and schedule were accepted by both the Board and City Commission. During the remainder of 2015, staff reformatted the Tallahassee-Leon County Comprehensive Plan to be more user-friendly and to implement the Board and City Commission direction, as detailed below.

Consistent with the accepted scope and schedule for the Comprehensive Plan update, Planning

Department staff began work in 2015 to conduct an evaluation of goals, objectives and policies of the Land Use Element. The purpose of this evaluation was to identify what types of actions were needed to update and improve the Land Use Element. This evaluation was developed and presented to the Board and City Commission as the *State of the Land Use Element* report in spring 2016, as presented below. The evaluation and development of the report identified several issues that need to be addressed in the update of the Land Use Element. Issues include:

- Inconsistencies with the format and content of Goals, Objectives, and Policies.
- A breakdown of the hierarchy of goals, Objectives, and Policies. This includes orphaned objectives (e.g. objectives and policies not associated with any goal).
- The inclusion of overly detailed development regulations more appropriately contained within the land development regulations.
- Objectives and policies referencing completed initiatives and policies that call for the creation of plans and guiding documents that have since been created.
- The inclusion of dates that have passed (some with deadlines dating back to 1991).
- Changes focused on statutory requirements and specific items of interest that lack a relationship to other elements of the plan (such as policy language directly copied and pasted from Florida Statutes without local context). In addition to these findings, this evaluation identified an opportunity to better integrate current community values into the Comprehensive Plan, specifically:
- Changed State regulations provide an opportunity to refocus policies on local priorities.
- An opportunity to integrate the Land Use and Mobility Elements to achieve shared land use and transportation goals.
- The opportunity to utilize a values-driven approach (an approach that uses community values to determine what data to collect and analyze) for these revisions to emphasize the community's vision and priorities for future growth and development.

The State of the Land Use Element report included the following recommendations:

- Move forward with a comprehensive revision to the Land Use Element to address the issues identified in this [*State of the Land Use Element*] report but maintain and expand on strong policies that continue to implement community goals for responsible growth and development.
- Utilize a values-based and data-informed planning approach to updating and revising the Land Use Element.
- Utilize recent community visioning efforts to identify current community values, priorities, and trends. Compile the findings of these analyses and integrate the results into the community outreach activities for the Comprehensive Plan Update project.
- Integrate the Land Use and Mobility Elements into a single element that jointly addresses land use and transportation.

The State of the Land Use Element report was provided to the Local Planning Agency on March 23, 2016. The report was accepted by the Board of County Commissioners and City Commission on April 12, 2016, and direction was given to staff to move forward to the next phase for updating the Comprehensive Plan by utilizing community visioning efforts. This activity was conducted to identify current community values, priorities, and trends that could be later incorporated into any Comprehensive Plan update, the outcome of which is presented below.

Preliminary Assessment of Community Values

At the joint April 12, 2016, meeting, the Board of County Commissioners and the City Commission directed staff to:

- Facilitate a discussion of community values and vision with the Board of County Commissioners and the City Commission prior to seeking additional public input.
- Refine and revise the list of preliminary community values based on direction from the Board of County Commissioners and the City Commission.
- Use the revised list of community values to develop a public participation strategy to outline an approach to gaining public feedback on community values.

To accomplish this direction, staff evaluated the following:

- County Commission's Strategic Plan
- City Commission's Key Priorities for 2016
- 2016 Work Plan for Sense of Place Districts
- 2035 Regional Mobility Plan
- 2040 Regional Mobility Plan
- Imagine Tallahassee
- Leon County Sales Tax Committee Final Recommendations regarding the continuation of the Local Government Infrastructure Surtax
- Blueprint 2000 and Beyond report
- Apalachee Ridge Estates Neighborhood Renaissance Plan
- Providence Neighborhood Renaissance Plan
- Capital Cascades Sector Plan
- Lake Bradford Sector Plan
- Oak Ridge Sector Plan
- South Monroe Sector Plan
- West Pensacola Sector Plan
- Southern Strategy Area Report
- South City Technical Assistance Panel Report

This evaluation was compiled into the Preliminary Assessment of Community Values report, which identified and summarized the major themes of these visioning efforts consistent with the direction received from the Board and City Commission on April 12, 2016. The Preliminary Assessment of Community Values was accepted by the City Commission on May 18, 2016, and the Board of County Commissioners on May 24, 2016. Direction was given to staff at that time to move forward with public engagement on the Community Vision.

Public Participation Strategy

Staff developed a public participation strategy consistent with the recommendation in the *State of the Land Use Element* and the direction from the Board of County Commissioners and the City Commission. The public participation strategy was accepted by the City Commission on October 19, 2016, and the Board of County Commissioners on October 25, 2016.

The *Public Participation Strategy* outlined an approach to engaging the community at each step of the process. Public participation would occur for the development of Community Values, then for the development of Land Use and Mobility Goals, then for the development of Objectives related to each goal, and again for the development of policies associated with the goals and objectives. The *Public Participation Strategy* also acknowledged, "Encouraging broad participation in the Comprehensive Plan update process includes engaging people who cannot attend public workshops or otherwise engage in the process because of a variety of personal constraints." To this end, both in-person and virtual public engagement was included in the strategy (even though this occurred pre-COVID-19). The implementation of the *Public Participation Strategy* can be seen in each of the subsequent steps in the process.

Public Engagement on Community Values

Consistent with the public participation strategy, staff developed the *Survey on Community Values* and made the survey available on April 5, 2017. The survey was open for responses until November 15, 2017. During this time, staff also hosted six Community Workshops across the community to gain input into the development of Community Values related to land use and mobility. The workshops were held on the following dates at the following locations:

- Monday, October 2, 2017 – Lake Jackson Community Center
- Thursday, October 5, 2017 – Community Room at Amtrak Center
- Monday, October 9, 2017 – Jack McLean Community Center
- Thursday, October 12, 2017 – Dorothy Spence Community Center
- Monday, October 23, 2017 – Bradfordville Community Center
- Monday, October 30, 2017 – Fort Braden Community Center

Summary of Public Input on Community Values

The *Summary of Public Input on Community Values* report was prepared to consolidate the input received from the public through both the survey and the community workshops. This report was accepted by the Local Planning Agency on January 2, 2018. The *Summary of Public Input on Community Values* was accepted by the Board of County Commissioners and City

Commission at a joint meeting on January 23, 2018. This outreach effort resulted in 1,093 people responding to the survey and at least 81 citizens attending a workshop.

The community values identified were:

1. Equity: The community values fairness and equity in providing services, safety, housing opportunities, economic opportunities, education, justice, and other elements that contribute to a high quality of life for all residents.
2. Livability: The community values fostering a safe, sustainable built environment that offers distinct, vibrant urban activity centers, nodes, neighborhood centers, key corridors, and green places for living, working, and recreating in the Capital Region.
3. Choice: The community values having lifestyle options and opportunities, and the freedom to make informed choices and decisions.
4. Opportunity: The community values having access to opportunities to flourish as individuals and as a community, and to improve our individual and collective lifestyles.
5. Stewardship: The community values the responsible management of our resources and assets.

Draft Land Use and Mobility Goals

Comprehensive plans in Florida are generally structured into thematic elements (e.g. land use, mobility, housing, etc.) with a hierarchy of goals for each element, objectives for each goal, and policies for each objective. To update the Land Use and Mobility Elements, the project built on the community values above and began with establishing goals for which objectives would be developed later and policies would subsequently be developed for the objectives.

Based on input from the *Survey on Community Values* and the public workshops, the preliminary community values and the land use and mobility principles were developed into draft land use and mobility goals.

The draft land use and mobility goals were:

1. A Healthy Community
2. A Robust Economy
3. Places Where People Want to Live, Work, and Play
4. Greater Housing Diversity [in terms of size, type, and price]
5. A Balanced Transportation Network

The draft goals were workshopped with the Local Planning Agency at a series of meetings and were accepted by the Local Planning Agency on January 2, 2018. The draft land use and mobility goals were accepted by the Board of County Commissioners and the City Commission at a joint meeting on February 27, 2018. Direction was given to staff to proceed with public engagement on the draft Goals.

Public Engagement on Draft Land Use and Mobility Goals

Staff hosted a series of public open houses across the community to gain input on the draft land use and mobility goals. The public open houses were held on the following dates at the following locations:

- Thursday, April 12, 2018 – Dorothy Spence Community Center
- Monday, April 16, 2018 – Lake Jackson Community Center
- Thursday, April 26, 2018 – Jack McLean Park Community Center
- Monday, April 30, 2018 – Golf Club at SummerBrooke
- Monday, May 7, 2018 – Fort Braden Community Center
- Monday, May 14, 2018 – Community Room at Amtrak Center

Additional input was gathered at a Joint City-County Bicycling Workgroup held on April 9, 2018 and at the Water Resources Committee on June 6, 2018. This outreach effort resulted in at least 128 citizens attending a workshop.

The community workshops facilitated small group discussions, where participants provided input on factors related to land use and mobility. The input received through these workshops was used in the refinement of Land Use and Mobility Goals and the initial development of draft objectives and policies for each of the goals.

Based on the input, the draft land use and mobility goals were edited to be:

1. Places Where People Want to Live, Learn, Work, and Play
2. A Healthy Community
3. A Robust Economy
4. Housing Options [e.g. size, type, price] for Our Diverse Population [i.e. single adults, adults without children, adults with children, single parent households, empty nesters, the elderly]
5. A Balanced Transportation Network

The summary of input received through these workshops was accepted by the Local Planning Agency on September 4, 2018. This summary was accepted by the Board and City Commission at a joint workshop on February 26, 2019. Direction was given to staff to review the various sector plans in the Land Use Element and to proceed with public engagement for the development of draft objectives.

Public Engagement on Draft Objectives

Building on previous public engagement consistent with the *Public Participation Strategy* and the preliminary analysis of relevant data, staff engaged the community again to gain input to inform the development of Land Use and Mobility Objectives and Policies. The input received on the draft land use and mobility goals can generally be classified into nine main themes. These themes are:

1. Affordability: Affordability of housing, transportation options, and office and retail space for small businesses.
2. Improved Access: Improved access to the places people need to meet their everyday needs.
3. Environment: Protecting natural areas and features that enhance our quality of life.
4. Housing: Allowing different types of housing to meet the needs of people in various stages of life.
5. Community Character: Maintaining the character of our community and neighborhoods through design and local architecture.
6. Safety and Comfort: Increasing safety and comfort on our streets, in our neighborhoods, and around the community.
7. Global Challenges: Planning ahead for how to address global challenges at the local level.
8. Energy and Environmental Efficiency: Using energy, land, and other resources in our community more efficiently.
9. Human Interaction: Fostering places where people interact to reduce social isolation and promote a sense of community.

Draft objectives that address these major themes were developed for each draft land use and mobility goals. These draft objectives were the focus of the next phase of public engagement

The public engagement for this phase (draft objectives) of the Land Use and Mobility Element included three primary ways for the public to provide input:

1. Digital Workshop: The Digital Workshop was intended to provide a mechanism by which the public could submit input on a variety of planning themes associated with land use and mobility without having to attend a set meeting.
2. Community Open Houses: The Community Open Houses were intended to provide a higher-level overview of concepts addressed in the Land Use and Mobility Element. Public Open Houses were held at the following locations:
    - February 28, 2019 - Jack McLean Community Center
    - March 4, 2019 - Bradfordville Community Center
    - March 5, 2019 - Fort Braden Community Center
    - March 7, 2019 - Dorothy Spence Community Center
    - March 14, 2019 - Community Room at Amtrak Center
    - March 27, 2019 - Pop-Up Event at CK Steele Plaza
    - March 28, 2019 - Miccosukee Community Center
    - April 2, 2019 - Senior Center
    - April 4, 2019 - Forestmeadows Athletic Center

3. Deep Dive Workshops: Deep Dive Workshops were intended to provide a more intensive review of draft objectives with opportunities for the public to identify additional data analysis that would be relevant to inform the objectives and considerations for different metrics that could be used to measure progress towards accomplishing the objectives. The following Deep Dive Workshops were held in-person:
    - March 18, 2019 - Workshop on Goal 1: Places Where People Want to Live, Learn, Work & Play
    - March 25, 2019 - Workshop on Goal 2: A Healthy Community
    - April 3, 2019 - Workshop on Goal 3: A Robust Economy
    - April 11, 2019 - Workshop on Goal 4: Housing Options for Our Diverse Population
    - April 16, 2019 - Workshop on Goal 5: A Balanced Transportation Network

In addition to providing in-person Deep Dive Workshops, each meeting was broadcasted using Facebook live. Following the workshops, videos were posted online with the meeting materials and a digital comment form for people to provide additional input.

Additional Outreach on Planning for Growth

These outreach efforts were supplemented with the Rural Economic Development Forum held at the Woodville Community Center on April 18, 2019 and the *How Do We Grow From Here?* event with Leon County and the Village Square on May 6, 2019.

While these various public engagement efforts were underway, staff provided a status update and the review of Sector Plans to the Board and City Commission at a joint workshop on February 26, 2019. At this workshop, several citizens spoke and provided comments expressing a desire to hire a consultant to continue the efforts lead by staff up to that point. Citizens cited a desire for even more data and analysis to be conducted and the desire for a neutral, third party to be involved as reasons for hiring the consultant.

Summary of Public Engagement on Draft Objectives

A summary of input received on the draft Land Use and Mobility Objectives was developed and can be used for future efforts on updating the Comprehensive Plan.

Draft Land Use and Mobility Element

Section 163.3177, Florida Statutes states that, "[t]he sections of the comprehensive plan containing the principles and strategies, generally provided as goals, objectives, and policies, shall describe how the local government's programs, activities, and land development regulations will be initiated, modified, or continued to implement the comprehensive plan in a consistent manner." Based on feedback from the Land Use Element Update Focus Group, the previously mentioned outreach culminated in draft goals, objectives, and policies that were then restructured to be presented as principles, strategies, and standards for Land Use and Mobility. Should the Commissions direct staff to proceed with selecting a consultant for updates to the

Comprehensive Plan, staff will provide the principles, strategies, and standards for Land Use and Mobility to the consultant to use as an informational resource.

Review of Sector Plans

The current Land Use Element includes several objectives and policies that reference sector plans. As part of the analysis for developing draft Objectives, staff conducted a review of the existing Sector Plans (South Monroe; Lake Bradford; Capital Cascades; Oak Ridge; and West Pensacola) and related Neighborhood Plans. This review shows the majority of the strategies included in these Sector Plans were accomplished, are programmed and scheduled for implementation, or are no longer relevant due to changing conditions and community priorities. In short, much of the policy work recommended by the Sector Plans is complete and focus can now shift to finer grained infrastructure planning. Therefore, staff recommended objectives and policies related to Sector Plans be revised with a focus on current needs and priorities, and any potential new sector planning efforts be discussed at future meetings as needed.

The Board and City Commission accepted the review of Sector Plans and related Neighborhood Plans at a joint meeting on February 26, 2019 (see Figure 1: Sector Plan Boundaries Map, below).

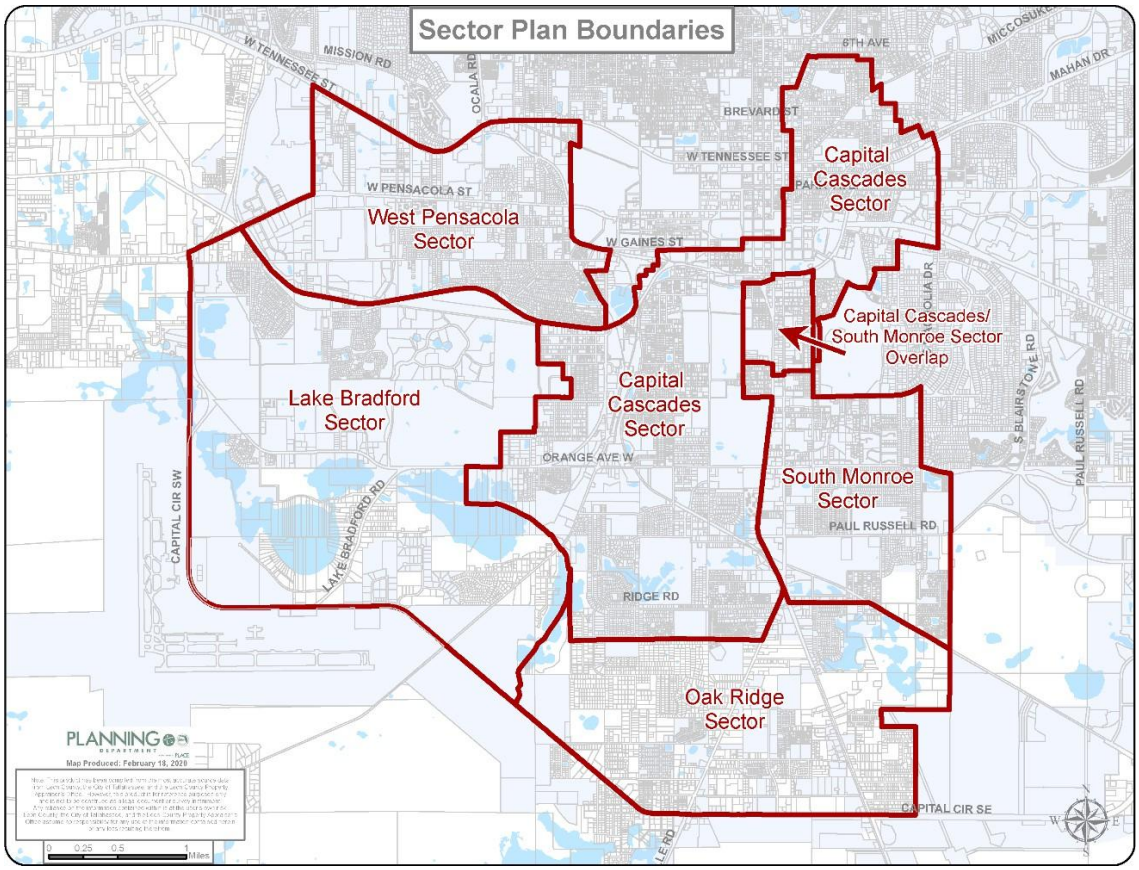


Figure 1: Sector Plan Boundaries Map

Consultant Services for the Land Use and Mobility Elements

On February 26, 2019, staff provided a status update to the Board and City Commission at a Joint County-City Workshop on the Land Use and Mobility Elements of the Tallahassee-Leon County Comprehensive Plan. At this workshop, the Board and City Commission both directed staff to bring back options for areas where a consultant would be of benefit in completing the Land Use and Mobility Element Update.

Based on staff providing this information, the County and City allocated a combined $300,000 for consulting services in support of the update to the Land Use and Mobility Elements of the Tallahassee-Leon County 2030 Comprehensive Plan in their respective FY 2020 budgets. At the direction of the Board and City Commission, a Request for Proposals was released on August 26, 2019, and the solicitation was closed on October 9, 2019. Staff assembled a selection committee that included County and City staff as well as members of the public.

Prior to the selection committee receiving, reviewing, and ranking the proposals, the Board and City Commission met at a joint workshop to discuss the fundamentals of the Comprehensive Plan. At this October 15, 2019, joint workshop, the Board and City Commission directed staff to cancel the Request for Proposals and evaluate how the scope could be expanded to include all Comprehensive Plan Elements.

Expansion of Scope to Entire Comprehensive Plan

On November 12, 2019, the Board ratified its actions from the October 15th Joint Workshop including its direction to expand the scope of the project to include all Elements of the Tallahassee-Leon County Comprehensive Plan, and to bring the associated costs back to the Board and City Commission. The Comprehensive Plan Elements are:

- Land Use
- Mobility
- Utilities
- Conservation
- Parks and Recreation
- Housing
- Historic Preservation
- Intergovernmental Coordination
- Capital Improvements
- Economic Development
- Public School Facilities
- Property Rights

Section 163.3177, Florida Statutes, outlines the required and optional elements of comprehensive plans. In addition to statutory requirements, members of the public have

requested additional considerations to ensure the public engagement process is inclusive, that the plan supports urban infill while protecting in-town neighborhoods, and that the plan includes metrics.

Direction to Re-release RFP for Land Use and Mobility Elements

As requested by both the Board of County Commissioners and the Tallahassee City Commission at the October 15, 2019, Joint County-City Informational Workshop on the Comprehensive Plan, staff provided additional information on a full rewrite of the Tallahassee-Leon County Comprehensive Plan at a Joint Workshop on March 23, 2021. This information was originally scheduled to be provided to the Board of County Commissioners and the Tallahassee City Commission in Spring 2020; however, additional time was needed to understand the budgetary impacts of COVID-19.

Based on the information provided, the Board and City Commission directed staff to issue a revised RFPs for the Land Use and Mobility Elements to include:

a) Review for consistency of proposed changes with the entire Comprehensive Plan with an option for expansion to other Elements if needed, and

b) Any other targeted clean-up amendments necessary to comply with the upcoming Evaluation and Appraisal Review (EAR) process; and

c) Direct staff to work with the FSU Dept. of Urban and Regional Planning, and the FAMU School of Architecture, to develop a plan on how students will be involved in the Land Use & Mobility Elements consultant's scope of work.

This direction was ratified at the April 13, 2021, Joint Meeting of the Board and City Commission.

An RFP was initially released on July 27, 2021, for Comprehensive Planning Services to develop Land Use and Mobility Elements. On November 9, 2021, the Evaluation Committee met and ranked the submissions based on experience, ability, past performance, and technical proposals. Following the shortlisting of vendors and their presentations, the City received complaints from vendors about the solicitation process. The City Attorney's Office reviewed the concerns raised by vendors and advised staff to reject all bids and re-release the RFP.

The RFP was re-released (RFP-008-22-CC) on June 10, 2022. Two respondents submitted proposals by the deadline and met all requirements. Based on the direction provided by the Board and City Commission to involve planning students in the project, both respondents included a detailed plan for engaging with students enrolled at FSU and FAMU. In addition, the Evaluation Committee included representatives from Southside neighborhoods, the Alliance of Tallahassee Neighborhoods, and the Greater Tallahassee Chamber of Commerce. The Evaluation Committee's scoring meeting was held on July 19, 2022.

Consultant Data Collection (Spring/Summer 2023)

The consultant team began their efforts with data collection. This included a review of available GIS data and a driving tour across the County.

FSU Urban Planning Studio

In conjunction with the TLCPD, the consultant committed to conducting a multi-day planning studio with FSU and FAMU students to further facilitate the development of the plan update. The focus is to demonstrate ideas for creating place and social capital with the intent to make improvements, build civic pride and unity, and engage neighborhood residents through certain "hands on" events. The nature of the events could be community activation events such as a park cleanup. The planning for the design studios activation events are underway but not yet scheduled.

Ambassador Program (Fall 2023)

The Ambassador Program was established to engage local community members to serve as ambassadors to communicate with their respective organizations (community organizations, neighborhood associations, or similar larger networks) throughout the planning process. The intent of the ambassador program was to expand community awareness of the plan and engagement opportunities and encourage participation in the process.

Nine ambassadors signed up for the program including meetings for introduction and information on the initial community engagement activities. Ambassadors continue to participate in status/stakeholder meetings, community engagement events, and on-going public input; and are regularly updated.

Technical Advisory Committee (2023 to 2025)

The Technical Advisory Committee is composed of key City, County and joint department staff. The TAC provides oversight of the planning process and implementation. Members of the TAC include Planning, County Public Works, County Development Services and Environmental Management, County Public Works, County Housing and Human Services, County Resource Stewardship, City Underground Utilities and Public Infrastructure, City Parks Recreation and Neighborhood Affairs, City Housing and Community Resilience, City Growth Management, and City and County Administration. Joint or regional entities include Blueprint, Office of Economic Vitality, and Capital Regional Transportation Planning Agency. The Technical Advisory Committee (TAC) has met four times over the course of the update. The initial meetings in September and December of 2023 were to identify strengths and opportunities. Some of the strengths included the natural and conservation features including recreation opportunities and tree cover; the educated workforce in the context high tech employers (like the mag lab) and universities; and positive impression by residents of services and support offered, in terms of facilities and services, to residents. The biggest strengths and weaknesses included diversity of housing, encroaching student housing, challenges with integrating state roadways, and making connections for bicycle and pedestrian facilities. A third meeting in January 2024 focused on areas that could be strengthened, transformed, enhanced or preserved, and key takeaways were the need to streamline plan, including categories like Suburban and moving items to the land development code where they are more suited. One example given was the land development matrix and the conservation details.

Moving into plan formation, the TAC met in late February 2025 and made comments on the proposed Goals and Objectives and reviewed draft land use scenarios. The TAC identified key interest issues including making sure major corridors are addressed, identifying Woodville services, and addressing non-conforming uses including those along N. Monroe Street.

Roundtable Discussion and Discovery Sessions (September 2023)
Generally, roundtable discussions occurred with the Discovery portion of the project. Meetings were held with key stakeholders representing environmental advocates, neighborhood advocates, developers, the business community, and the southside.

- September 26, 2023: Halff held a discovery session with neighborhood interest groups including the Alliance of Tallahassee Neighborhoods.
- September 29, 2023 – Halff held a discovery discussion with business/developer interest groups.

An informational presentation was provided at both meetings and also shared at public "Discovery" meetings.

Educational Roadshow (September 18-20, 2023)
The educational roadshow was an opportunity for the community to learn about the Comprehensive Plan and provide input on key topics that influence the future of the city and county. This was completed via four in-person meeting events:

- September 18, 2023 at 6:00pm – Lake Jackson Community Center
- September 19, 2023 at 12:00pm – Jack McLean Community Center
- September 19, 2023 at 6:00pm – Lincoln Center
- September 20, 2023 at 6:00pm – Leroy Collins Leon County Public Library

Vision Survey (Open through October 2023 - November 27, 2023
The vision survey asked high-level visioning questions to help determine what is important to the community and what the core values of the community are. This survey helped define the community vision and values for the Vision Plan.

Exploration Tour Survey (September 2023 - January 2024)
Six areas of the community that reflect different development patterns, characteristics, and urban design were selected for this task:

- Bannerman Crossing
- Downtown
- Frenchtown
- Midtown
- Southwood
- Woodville

The exploration tour asked questions about each area related to design, placemaking, the availability of and quality of public places, walkability, and perceptions of the area.

Community Building Blocks Survey (December 2023 - February 2024)
To gain consensus on the overarching community values, a short presentation was available along with a survey to gain participants' input on the future direction of the community.

Strengthen, Transform, Enhance, and Preserve (STEP) Framework (January 29 and 30, 2024)
The multi-day in-person STEP framework offered four opportunities for the community to provide insight into how the community should grow. This workshop included mapping exercises and interactive exercises. Meetings were held at 12:30 and 5:30 p.m. each day:

- January 29, 2024 at 12:30pm – Smith Williams Services Center, 2295 Pasco St.
- January 29, 2024 at 5:30pm – LeRoy Collins Main Library, 200 W. Park
- January 30, 2024 at 12:30pm – Jack McLean Community Centre, 700 Paul Russell Rd.
- January 30, 2024 at 5:30pm – Frenchtown Renaissance Center, 435 N. Macomb St.

Vision Plan Roadmap
Based on the input from the public, a Vision Plan Roadmap was developed. As a result of extensive review of existing plans and feedback from the community, six overarching community themes were identified to provide a foundation for the plan update. These themes were translated into Community Value Statements and shared with community engagement participants. The community provided input on the value statements and helped prioritize key outcomes. These statements subsequently informed the draft Land Use and Mobility Element Goals, Objectives, and Policies of the Comprehensive Plan. The Vision Plan Roadmap includes the following *Community Value Statements*:

Environmental Stewardship – Tallahassee and Leon County will be stewards of the built and natural environments. There will be equitable access to clean water, clean air, and healthy blueways and green spaces. Natural habitats will be preserved and maintained to ensure long-term viability and admiration in our urban and rural spaces.

Conscientious Growth – Tallahassee and Leon County will grow conscientiously, balancing the needs of growth and conservation to allow for purposeful and responsible development. Distinguishing between the rural and urban areas will provide for a clearer path for diverse lifestyle choices; the ability to guide development in areas where commercial and residential expansion should occur while deterring sprawl; and the promotion of fiscal and economic resilience.

Community Connectivity – Tallahassee and Leon County will be a well-connected community that provides affordable, equitable, accessible, and context-sensitive mobility options. The network of roadways, trails, sidewalks, bicycle facilities, and transit services will provide complete and safe connections throughout the community, and these networks will be established where appropriate and as necessary to support this connected community goal.

Diversity – Tallahassee and Leon County will promote and preserve prosperity for all the various communities which form the foundation of our diverse community. Historical decision-making has left

some communities adversely affected and disadvantaged. Forward-thinking policies and investments will ensure the restoration and longevity of these thriving, cultural communities.

Community Focus – Tallahassee and Leon County will be a community focused on neighborhoods, activity centers, and nodes that will be designed and built to achieve accessibility, safety, sustainability, and healthy environments. Residents from varying stages of life and income levels will have a variety of housing and community options that meet their needs.

Prosperity – Tallahassee and Leon County will be prosperous communities promoting economic growth, innovation, and development by continuing to attract domestic and international businesses. The sound presence of government facilities and higher education will continue to support a strong, local economy that provides a job base for residents at all levels.

Code Studio Engagement (December 2024)

As part of update, the consultant was tasked with assessing current regulatory conditions for development review and approval. The task included examining the stages of the development approval process with local staff, including permitting and zoning approvals and enforcement. Code Studio company working through the primary consultant set up virtual sessions with staff, residents, and the development community to identify current efficiencies and challenges with development.

A summary of the virtual sessions identified key concerns and suggestions including the usefulness of preliminary reviews of projects but other regulations that are inflexible leading to review and approval delays. Site requirements for stormwater and multiple reviews were identified as challenges. Some comments on tree preservation include the need for more variance options. Those representing development interests commented on review times and processes, including clarity of review.

Public Survey on Goals and Objectives (January/February 2024)

In January and February, Planning published draft Goals and Objectives for public comment. Participants provided written comments on each goal and objective to confirm its use in further plan development.

Local Planning Agency Workshop on Land Use and Mobility Goals and Objectives (February 4, 2025)

The Local Planning Agency held a workshop to discuss the proposed Goals and Objectives of the comprehensive plan update.

The workshop was held Tuesday, February 4, 2025 at 6:00 PM at the Renaissance Center 2nd Floor conference room.

Planning staff provided background, status updates, the Vision Plan, and Land Use and Mobility Draft Goals and Objectives. The LPA discussed and inquired about involving faith-based organizations in community engagement and about “missing middle” housing as options. Staff described housing types and indicated that policies will address housing diversity. A discussion

about single-family neighborhoods noted opportunities for infill and housing types. Comments from two public speakers included attending to conservation including blue ways, development design, infill development and more time for reviewing draft policies. The LPA chair commented regarding neighborhood character preservation to explore incorporation of provisions into the Comprehensive plan that prevent incompatible use encroachment into neighborhoods. The LPA asked that the following topics be addressed:

- Incorporation of Neighborhood First Plans
- Promotion of Housing Diversity

Staff have responded by including policies for both protection of neighborhood character preservation and maintaining low-density residential land use on the Future Land Use Map. Staff is coordinating on the Neighborhood First Plans to determine if there are provisions that are appropriate for the incorporation into the comprehensive plan. The plan also includes Goal 4, on Housing Diversity, and the associated objectives and policies to promote the provision of different housing types, including "missing middle" housing, denser housing types, and infill development. Staff identified the next planned workshop to advance the effort of plan development, including the Future Land Use Map and land use categories for March 11th.

Joint Workshop on Land Use and Mobility Goals and Objectives (February 25, 2025)
The Joint Workshop with the City and County Commissions was held Tuesday, February 25, 2025, at 2:00 pm in County Commission Chambers, 5th Floor of the Leon County Courthouse. The purpose of the workshop was to present information and get confirmation on the proposed Goals and Objectives before further plan development.

At the February 25, 2025 Joint Workshop with the City and County Commissions, the Commissioners requested that the following be addressed in the draft Land Use and Mobility Element:

- Including policies and subsequent updates to Land Development Code regulations that incentivize redevelopment along major roads and gateway corridors by allowing increased densities and intensities along with urban design standards.

- Addressing existing legally non-conforming uses, specifically in the Lake Protection land use, in ways that both improve water quality and achieve high quality development.

- Coordinating and incorporating the efforts of the Woodville Sense of Place Plan with updates to the Comprehensive Plan and subsequent updates to the Land Development Code.

- Evaluating densities allowed in the Rural land use category and identifying areas on the southside of unincorporated Leon County that should have higher allowable densities and intensities.

- Eliminating parking minimums from the Comprehensive Plan and land development regulations.

These components were addressed and included in the subsequent development of policies.

Committees and Stakeholders Meeting (February 26, 2025)
On February 26th, Planning staff and consultants held a session with select committee representatives including the Advisory Committee for Quality Growth, the Water Resources Committee, the Canopy Roads Citizens Committee, and Bicycle Working Group, as well as representatives from the resident groups including the Alliance of Tallahassee Neighborhoods and development interest groups to review the proposed Goals and Objectives, Future Land Use Plan and growth scenarios.

Community Engagement Meeting (March 3, 2025)
A community engagement meeting was held on March 3, 2025, from 5:30-7:00 PM at the Renaissance Center in the 2nd Floor conference room.

Planning staff and the consultant provided a status update and received comments. Comments included the need for additional mapping tools to see the differences in uses, an update to the definitions in the glossary, and more information about what the MMTD implementation experience has taught us and any measures of its effectiveness. Several comments were made about bicycle and pedestrian facilities to ensure connections.

Local Planning Agency Workshop on Future Land Use Map and Land Use Categories (March 11, 2025)

On March 11th, Planning staff held a public workshop to provide information and to take input on the proposed Future Land Use Plan and the land use categories.

After receiving a presentation from Planning staff, the LPA received public comment including requests for additional time review materials and comments ranging from additional conservation and canopy roads to establishing planning "districts" as well as providing additional data. Representatives from the Mid-Town Stakeholders group, FSU, Levy Park, Old Town, Tall Timbers, Alliance of Tallahassee Neighborhoods, 1000 Friends of Florida, Advisory Council on the South City Foundation, and Ft. Braden were in attendance. The LPA requested that the following topics be addressed at the next meeting:

- Neighborhood Compatibility Standards for Residential Preservation
- Information that describes what the changes are to the map including the magnitude of any changes

To address compatibility in low-density areas, provisions in the Sub-Urban Residential Preservation land use category include neighborhood compatibility standards that address buffering, screening, design standards, and/or the provision of areas with lower density or intensity uses between the Suburban Residential Preservation areas and the areas with new or expanding non-residential uses or high-density residential uses.

Public Survey on Goals, Objectives, and Policies (March 14, 2025)
Following the Local Planning Agency Workshop, draft Land Use Goals, Objectives, and Policies were posted online with a form to provide input and feedback. The draft Land Use Goals, Objectives, and Policies were posted in six sets corresponding to proposed goals facilitating easier review and commenting.

Future Land Use Map Web Application (March 17, 2025)
To address identification of changes, staff developed an interactive map, Draft Future Land Use, to compare the currently adopted Future Land Use Map to the proposed Future Land Use Map. This web application enabled people to look up properties, see what the current designation of the property and what that means, and compare that to the proposed designation and densities and intensities.

Local Planning Agency Public Hearing (April 1, 2025)
The LPA held a public hearing on April 1, 2025, to consider the proposed amendments to the Land Use and Mobility Elements of the Tallahassee-Leon County Comprehensive Plan. The public hearing followed three workshops with the Local Planning Agency held on January 7, 2025, February 4, 2025, and March 11, 2025, to review the process and the key components of the update.

Staff provided a presentation highlighting policies addressing natural resources protection, neighborhood character preservation, densities and intensities, the future land use map, the urban services area, and transportation policies for connectivity and safety. The LPA received comments from nine public speakers.

After discussion, the LPA voted unanimously to:

- Transmit the proposed Land Use and Mobility Element to the Board of County Commissioners and City Commission;
- Request the City Commission consider rescheduling the transmittal hearing to May 14th, (which the City has agreed to do); and
- Incorporate edits to the Urban Residential Preservation, Sub-Urban Residential Preservation, and the Lake Protection land use categories to address concerns with densities and commercial uses. Attachment #1 includes these requested changes.

Coordination Meeting with College and Universities (April 3, 2025)
Planning staff invited liaisons and counterparts staff from Florida A&M University, Florida State University, and Tallahassee State College to a coordination meeting on April 3, 2025. Florida State University and Tallahassee State College representatives attended the meeting. This follows FSU staff attendance at the February 4, 2025 LPA Workshop, the February 25, 2025 Joint Workshop with the City and County Commissions, the March 11, 2025 LPA Workshop, and the April 1, 2025 LPA Workshop as well as FSU staff involvement in the Ambassador Program for the LME Update. At the April 3, 2025, coordination meeting, FSU expressed concerns about

drainage and flooding as well as parking. These issues are addressed in the City of Tallahassee Land Development Code regulations and details of stormwater facility design and specifications are not appropriate to address in the Comprehensive Plan. Florida State University staff also requested to be informed of development adjacent to campus. This is already an existing protocol in place to inform Florida State University staff of adjacent developments as outlined in the executed development agreement and adopted campus master plan. To reflect this, proposed Policy 2.8.12 (Urban General FLUC) has been updated with the following change: *Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements*.

Planning Department staff followed up with the Director of Facilities Planning and Construction and the Dean of the School of Architecture + Engineering Technology at Florida A&M University following the meeting, no additional comments are requested to be addressed.

Leon County Board of County Commissioners Transmittal Hearing (May 13, 2025)
The Board held their Transmittal Hearing on May 13, 2025, and voted to transmit the proposed Land Use and Mobility Element with additions to urban forestry policies and to buffering in the Sub-Urban Residential Preservation land use category. Consistent with the Board's action, the draft Land Use and Mobility Element will be submitted to the State and review agencies (Florida Commerce, Florida Department of Transportation, Florida Department of Environmental Protection, Florida Department of State, Florida Fish and Wildlife Conservation Commission, Florida Department of Agriculture, Florida Department of Education, Apalachee Regional Planning Council, and Northwest Florida Water Management District) for a 30-day review. The Board also directed staff to hold another public engagement opportunity between the Transmittal Hearing and the Adoption Hearing. This meeting was held on June 3, 2025, as described above.

City of Tallahassee Commission Transmittal Hearing (May 14, 2025)
At their May 14, 2025, meeting, the City Commission continued their Transmittal Hearing to their June 11, 2025, meeting and directed staff to engage various neighborhoods based on the comments made by the public during the meeting.

Neighborhood Engagement (May 15, 2025 – June 11, 2025)
Planning department staff followed up with neighborhood representatives that spoke at the May 14th City Commission meeting and set up meetings to engage the neighborhoods on proposed policies and address specific concerns. Staff met with residents of Buena Vista, Parkside/Park Terrace, Woodland Drive, Myers Park, Providence, Los Robles, Betton Hills, and Old Town. Staff had phone calls with residents of Woodgate and Frenchtown. Staff called and left a message for Levy Park, but did not get a response.

Community Meeting (June 3, 2025)
Planning Department Staff collaborated with the Alliance of Tallahassee Neighborhoods and the Los Robles Neighborhood on a community wide meeting. The Alliance of Tallahassee Neighborhoods and the Los Robles Neighborhood hosted the meeting on June 3, 2025 at 6:oo p.m. at the Woman's Club of Tallahassee. Planning staff provided a presentation on proposed

updates to the Land Use and Mobility Element of the Comprehensive Plan and answered questions from attendees.

City of Tallahassee Commission Transmittal Hearing (June 11, 2025)
At their June 11, 2025, Transmittal Hearing, the City Commission did not adopt the proposed Land Use and Mobility Element and directed staff to bring back an agenda item with information about additional public engagement and a project schedule with public hearings scheduled for a later date.

Leon County Adoption Hearing (July 8, 2025)
At their July 8, 2025 Adoption Hearing, the Leon County Board of County Commissioners discussed the proposed Land Use and Mobility Element update and unanimously voted to delay adoption for the purposes of additional engagement. Staff was directed to conduct additional public engagement and bring a status update back by December 2025. Additional public engagement sessions are scheduled to occur in late September and early October.

City Commission Meeting (August 20, 2025)
The Commission discussed a recent meeting with neighborhood representatives that included a proposal to retain the current Residential Preservation land use category with language to address non-conforming uses. Neighborhood representatives support the proposal. The City Commission voted to direct staff to bring back the Land Use and Mobility Elements Update for transmittal at the September 17, 2025 City Commission meeting, with the proposed Sub-Urban Residential Preservation and Urban Residential Preservation land use categories removed and replaced with the existing Residential Preservation land use category, with language to address non-conforming uses. Staff was requested to make the proposed changes available to the public via its website www.compplantlc.com.

The proposed Land Use and Mobility Element was posted for public viewing and comment on August 29th. Public comment was received through September 10, 2025.

City of Tallahassee Commission Transmittal Hearing (September 17, 2025)
At its September 17, 2025 meeting, the City Commission voted to transmit the proposed LME and Glossary revisions to the State Land Planning Agency as presented at the Transmittal Public Hearing. The significant revision from the draft submitted by the County included the removal of the Sub-Urban and Urban Residential Preservation land use categories, and the removal of the proposed Lake Protection Node and expansion of the LPA W of Meridian Road in the County.

Consistent with the Commission's action, the draft Land Use and Mobility Element will be submitted to the State and review agencies (Florida Commerce, Florida Department of Transportation, Florida Department of Environmental Protection, Florida Department of State, Florida Fish and Wildlife Conservation Commission, Florida Department of Agriculture, Florida Department of Education, Apalachee Regional Planning Council, and Northwest Florida Water Management District) for a 30-day review.

Leon County Community Engagement (September 25 – October 21, 2025)
Following the July 8, 2025 meeting, staff scheduled community open houses across the County, developed materials for the public engagement, and began promoting the engagement through coordination with Leon County Community and Media Relations (CMR) staff. Information was shared via County social media platforms and press releases, fliers were put up at community centers where the open houses would be held, staff attended activity group meetings at community centers to inform citizens of the upcoming meetings, and staff gave interviews with local media outlets who covered the engagement efforts with reporting in several mediums. The schedule of community open houses in unincorporated Leon County included meetings at:

- Lake Jackson Community Center on Thursday, September 25, 2025
- Miccosukee Community Center on Monday, September 29, 2025
- Chaires Community Center on Tuesday, September 30, 2025
- Fort Braden Community Center on Wednesday, October 1, 2025
- Bradfordville Community Center on Wednesday, October 8, 2025
- Woodville Community Center on Wednesday, October 15, 2025, and Tuesday, October 21, 2025

Community engagement sessions on the updated element of the Plan at the Woodville Community Center were included in the larger engagement on the Woodville Sense of Place Plan because of the relevance and relationship between the Comprehensive Plan and the Sense of Place Plan.

As a result of the outreach and in the context of specific issues with the proposed Lake Jackson Urban Services Area (USA) expansion and potential land use changes, proposed revisions include: 1. Address the Lake Jackson USA and land uses near Bannerman Road, 2. Include minor clarification changes to language, and 3. Respond to the latest state agency comments.

Leon County Community Engagement Status Update (November 18, 2025)
At their November 18, 2025 meeting, the Board of County Commissioners received a status update on community engagement, which included the community engagement sessions described above in September and October 2025. This update was in response to prior direction from the Board to conduct public engagement sessions and provide a summary report.

Public Comment

Alliance of Tallahassee Neighborhoods

March 10, 2025

The Alliance of Tallahassee Neighborhoods (ATN) submits the following comments to the Tallahassee- Leon County Local Planning Agency for inclusion as a record of the Local Planning Agency Workshop on the Draft Future Land Use Map and Land Use Categories meeting on March 11, 2025.

All Pertinent Materials Have Not Been Provided for Agency and Public Review
The Planning Department has not yet provided the data and analysis used to develop the new categories and map. The Department has not yet provided Policies for the new Plan elements. The policies provide specificity regarding how the Goals and Objectives will be implemented.

The Current Time Frame Does Not Allow for Review, Analysis and Comment by the Public and Subsequent City Revisions
Robust public engagement that includes a diverse group of stakeholders is an important element to any successful comprehensive planning process. The current timeline for drafting, reviewing, and implementing the proposed Comprehensive Plan update does not provide adequate time or opportunities for a robust public engagement process. For example, the policies that will be instrumental in implementing the Plan were not available to the public until just before the March 11th LPA public workshop.

The City and County Commissions are scheduled to transmit the Plan to the state in less than one month from now. This timeline does not allow for widespread engagement among stakeholder groups and the public, consideration of public input, plan adjustment (as needed) based on engagement, and deliberate consideration by our City and County Commissions.

Required Data and Analysis Have Not Been Provided
The State law that governs amendments to a local Comprehensive Plan requires that the amendments be based on relevant data and analysis. The types of information that should be collected and analyzed include an assessment of changed demographic, economic, and environmental conditions in the community and how well key policies have worked.

For example, ATN has expressed concerns about the implementation of policies related to the Multi Modal Transportation District. The intent of this district was to promote transit, cycling, and walking in central areas of Tallahassee, including intown neighborhoods. It is ATN’s observation that the district has enabled intense development affecting intown neighborhoods without achieving the stated intent and should be eliminated. (Note: the Multi Modal Transportation District is established in the Mobility Element. Since the intent of this update is to increase the integration of land use and mobility, the impact of the District should be analyzed as part of the update to the Future Land Use Element.)

In addition to an assessment of the Multi Modal Transportation District, ATN requests that the following information be provided, with ample opportunity for review:

- An analysis of changes to land use since the last Plan update to identify any meaningful trends.
- Acreage and population estimates for each proposed Future Land Use Category to determine how these categories will affect future growth patterns and their impact on infrastructure.
- A population accommodation analysis to determine how future population growth will be accommodated. This would include an analysis of the capacity of the Urban Service Area.
- An assessment of progress made towards increasing walking, use of transit, and bicycling as means of transportation and the role of land use on that progress.

The New Categories and Map Double Density and Allow Commercial in What Is Now Areas of Residential Neighborhood Preservation

The draft proposes creating new Categories that reflect an area's character (primarily rural, suburban, or urban). Intown neighborhoods fall within the urban character area. There are several urban future land use categories. Of particular concern to ATN is the proposed elimination of the Residential Preservation Future Land Use Category and its replacement with an Urban Preservation Future Land Use Category.

ATN has repeatedly been told that preservation of existing intown neighborhoods is a primary concern in this process. The City and County often promote how valuable neighborhoods are to our character. However, there is no mention of neighborhood preservation and in fact the density of neighborhoods would more than double and commercial intrusion would be allowed. Neither ATN nor any of our neighborhoods has received any briefing on the proposed changes. We first learned of these changes when the agenda materials were released. While there have been many meetings and opportunities for public comment, these are only meaningful if the public has information to review and comment on.

ATN's concerns are as follows:

- The intent language of the proposed district addresses preserving existing walkable development patterns. It makes no reference to the land use pattern. The current land use category specifically addresses the protection of existing neighborhood areas. This change can be interpreted to mean that as long as roadways and sidewalks remain, the houses along the neighborhood streets can be replaced with higher density development. Such a change should not be made without a clear policy discussion.
- Consistent with this interpretation, the maximum density is increased by 100% (6 units per acre to 12 units per acre). The proposed category does not include any policy direction about the application of lower density zoning districts neighborhoods currently designated Residential Preservation.
- Under the new language, commercial development would be allowed in the midst of areas currently zoned as Residential Preservation, whereas it is now prohibited. There is no maximum intensity (square footage) for non-residential uses and what they could be is not clearly defined. The proposed district allows for **"**Neighborhood scale accessory non-residential uses... such as retail, offices, and community services.**"** The terms neighborhood scale and accessory uses are not defined, nor are any noise, light, or traffic/parking policy restrictions included.

Good morning,

Regarding the proposed land use changes. In Myers Park, we do not need to double the density. With several duplexes, a triplex and apartments on my little street already, there is too much traffic and the street is full of parked cars. People are constantly moving in and out and several are AirBnB's. Myers Park is an historic neighborhood but this city wants to mow it all down and fill it up with apartments. I'm sick of it. You're going to destroy what little is left of our beautiful historic neighborhoods. There are other areas more appropriate than this. Do better City Commissioners!!!

Thank you,
Ann Mazzanovich

Neighborhoods which are currently zoned “Residential Preservation” should not be changed to a zone which allows for commercial use.

One need look no further than downtown to see that allowing commercial into a residential setting can very easily eliminate all community. Please prevent Beard Street or Hillcrest from turning into Gadsden or Park.

Our city has SCADS of un-used commercial space, much of which sits empty and is an eyesore. There is no need to threaten some of the most established and beautiful neighborhoods to make way for commercial acreage. Accept no part of this proposed plan.

Thank you,
Beth Moran

Good afternoon,

I am a homeowner in Tallahassee. I have worked extremely hard to raise the value of my property. If rezoning to allow the planned changes succeeds, then all of the time, money, and perseverance I have expended to improve my property will have been for naught, as the changes will most assuredly lower the value of my property.

The current issue of changes to Residential Preservation (rather, the abolishment of it) should not be permitted. The profiteering of businesses over the stability of the residents in our community defies the very essence of a "residential community."

I am writing to submit my statement as one opposing the proposed changes. The economic state of the average person in our country is in dire straits, and we cannot survive much more of the burdens placed upon our stability imposed by powers that be which are motivated purely by THEIR ability to profit at our expense. As well, none of these changes seem to apply to wealthier communities which highlights a huge disparity between the "have" and "have nots" (and ultimately puts the "have nots" even farther down on the ladder to success). Our families and neighbors deserve as much consideration as everyone living in posh neighborhoods. Our roads need to be safe for children to walk and play without the onset of heavier traffic to new businesses. Our peace is not expendable and should not be sacrificed for some others' financial benefit. Our homes and property are just as important to us as those to residents of Southwood, Killearn and Chaires! I am an elementary school teacher, so I do not make as much money as someone able to afford to live in these and other such places in Tallahassee, but my commitment to our community and hopes for its betterment (vs. destruction) is immeasurable and a major source of purpose in my life. The families I serve do not deserve to suddenly find themselves living in a business area when they have struggled to provide a family-oriented community for their children for as long as they have. I, and all of us, I believe, strive to make sure we have and can leave a worthwhile homestead for posterity's sake, and creating a business model community will abolish the efforts and dreams we seek and work so hard to achieve. I ask you to share this and to uphold the sanctity of our lives and property by not allowing this proposal to succeed.

Sincerely, and with utmost need,
Brenna Alonzo

Subject:	TALLAHASSEE AND LEON COUNTY FRIENDS! ACTION NEEDED ON PROPOSED COMP PLAN UPDATES
Date:	Monday, March 10, 2025 5:59:50 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Ms. Calhoun,

It troubles me to have to write at the 11th hour regarding the Plan update. I'd been in touch with Susan Poplin about this a couple of times over the past year, so I've not been entirely out of the loop. I appreciate the effort by 1000 Friends (and others) who've been tracking the decidedly poor approach taken by the Planning Department and its consultants since this project started.

There was initial (lightweight) outreach by the consultants and then little visible follow up, as far as I am aware – despite assurances that the grand design of this update had significant community outreach built in.

As a past Supervisor/Manager within the Planning Department, the approach taken to date would not have passed muster by staff, the director, the planning commission or the elected officials.

1000 Friends' alert raises many of the same concerns I'd raised with the department: insufficient time for informed and concerned citizens to reviews and comment and an (apparent) absence of the basis for any proposed changes (i.e., data and analysis).

As past Chief of State Planning for DCA and the administrator for the Comp Plan EAR (update) process for both DCA and for the Planning Department, I'd suggest that despite changes in state law that the basic analytical requirements of Chapter 163 remain in place. If a local government is doing an amendment or Plan update, the basis for doing so must still be outlined with sufficient detail to justify the change.

The State may or may not bother to spend much time in its review of any submittal by the Department on behalf of the City and County, but local citizens do want to fully understand what is afoot, and the persistent lack of communication with the parties that earnestly provided input early in the process (and who clearly care to some degree about Plan content) suggest strongly to me that proposed changes are not ready for prime time. Transparency should matter.

I urge the department (and the City and the County) to take a breath, take stock of what you have (and obviously don't have) as far as information and input supporting your effort, and to then calendar hearings appropriately with adequate lead time and time for staff to digest the outcomes.

My three cents (inflation!)

Subject: TALLAHASSEE AND LEON COUNTY FRIENDS! ACTION NEEDED ON PROPOSED COMP PLAN UPDATES

Dear Craig,

The City and County have released the **first draft of their proposed updates to the Future Land Use Map and Land Use Categories** in the Tallahassee-Leon County Comprehensive Plan. We understand this document is up for adoption on April 8, less than a month from now.

This speeding train makes sweeping changes to our community's Future Land Use Map and Land Use Categories with significant ramifications for us all.

With the document just released, we have not yet had time for an extensive review, nor have the required data and analysis and related comprehensive plan policies been released to the public.

We ask you to **PLEASE TAKE ACTION NOW!**

Urge the City of Tallahassee and Leon County to release the required data and analysis and related policies and slow down the review process to allow more time for meaningful citizen input into our community's long-range plan!

- **SUBMIT ONLINE COMMENTS TODAY, MONDAY, MARCH 10 by**

9:00 p.m. to sherri.calhoun@talgov.com

- **CONTACT THE CITY AND COUNTY COMMISSIONERS** (contact information below)
- **ATTEND AND SPEAK OUT** at the Local Planning Agency (LPA) Public Hearing at **6:00 p.m. on TUESDAY, MARCH 11**
  Frenchtown Renaissance Center, 2nd Floor Conference Room
  435 N. Macomb Street

A community's Comprehensive Plan is the legal document that determines where and how our community will develop over the next 20 years. This update has been in the works for several years so there is no reason why adoption should be rushed without a chance for meaningful input.

Further, state law requires that plan amendments be based on data and analysis which, to our knowledge, has not yet been released. It also requires consistency between the goals, objectives and policies in the plan, but no policies have yet been released. So there is insufficient data and information available for citizens to undertake an informed evaluation.

We believe ample opportunity should be allowed for the residents of Tallahassee and Leon County to carefully review the required data and analysis and provide input on this critical plan that will shape the future of the community. Once this input is received, it will take time to make meaningful changes to the plan to address community concerns.

At 1000 Friends, our mission statement notes: "Above all, we strive to give citizens a meaningful role in shaping the futures of their communities and state." We will be sharing additional information on the process as it becomes available and thank you for your engagement.

Dear Susan,

I just learned of the Proposed Future Land Use Map changes to be discussed today at the Local Planning Agency Workshop and would like to stay informed/engaged in the public process. As you are already familiar, the Leon Soil and Water Conservation District works with the communities in the District to help improve and ensure soil and water resources are conserved. With that in mind, changes to the FLUM have the potential to impact our soil and water resources within Leon County. Please include me on any opportunities for engagement.

Thank you!

Since you're probably receiving plenty of comments to the contrary, i just wanted to say that my wife and i live in a house we own in Levy Park and support higher density development and mixed use (as proposed in the FLUM) to create more vibrant neighborhoods and help to reduce the amount of undeveloped land on the outskirts of town that's lost to suburban sprawl.

Thanks,

Dear Sherri Calhoun,

I own a home in Levy Park and am writing in opposition to the plan to double the density of Levy Park and allow commercial use in the neighborhood. I purchased the property there specifically because I liked the current atmosphere. I do not want it to change.

Thank you for the opportunity to share my opinion.

Subject: Proposed Changes to Future Land Use Categories
Date: Tuesday, March 11, 2025 5:43:56 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

I am writing to express my concern about changes to future land use categories. It appears that some of the essential information about policies for implementing the Plan were not available to the public until
just before the March 11th public workshop.

I am particularly concerned about the proposal to allow businesses within neighborhoods without much more information and discussion. The description "neighborhood scale accessory non-residential uses... such as retail, offices, and community services" is too broad. I also don't see anything noise, light, or traffic/parking included.

Please provide opportunity for the public to learn more essential details and comment on these before submitting the plan to the State.

Thank you for your consideration,
Marney Richards

Subject: Proposed Updates to Future Land Use Map and Land Use Categories - why the rush?

I am a resident of the Woodland Drives neighborhood. The proposed Future Land Use Map would change the classification of my neighborhood. It's my understanding that such plan amendments must be based on data and analysis, but no data & analyses have been released.

Why is there a rush? I believe that residents should be given ample opportunity to carefully review the required data and analysis and provide input on this critical plan that will shape the future of the community. Once this input is received, it will take time to make meaningful changes to the plan to address community concerns.

Accordingly, I urge you to release the required data and analysis and related policies and slow down the review process to allow more time for meaningful citizen input into our community's long-range plan. Failure to do so will only increase citizen dissatisfaction and distrust of our local government.

Subject: Comp Plan revisions

Dear Commissioners:

Last week, I attended the public meeting with Comp Plan with staff and consultants at the Renaissance Center and while I sincerely believe that they are all trying to do a good job, they are not being given enough time and neither is the public to comment.

By last week, the consultants still hadn't completed writing their policies. They weren't up online until a few days ago. I know that I haven't had a chance to thoroughly read through them and formulate a thoughtful and thorough response. Other folks at the meeting said the same thing. We need more time!

For months, we have had only the goals online which are broad non-specific objectives. But the actual policies (the fleshed-out details, the meat on the bones, so to speak) have been missing. They just became available a few days ago and yet the time period for public comment is tonight at 9pm! I'm not ready and neither are the many people who have been following this.

Worse still, the consultants themselves do not have enough time to read all the public comments that they will get and incorporate the comments that have merit before their final product is due.

If this is worth doing, it is worth doing right. Otherwise, we are just wasting the public's money and our staff and consultants' time, and we are letting a golden opportunity go to waste.

Therefore, I am asking you to please slow this train down and give the public more than a

week to review these policies and to comment. And PLEASE give the consultants more time to assess public comments and to assimilate them into their final product.

Thank you.

Sincerely,
Randie Denker

Subject: My comments on Comp Plan revisions:
Date: Monday, March 10, 2025 8:45:49 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Because of the incredibly short turnaround time and the fact that some data is still unavailable online, I do not pretend that my comments are complete or thorough, but that said, this is what I was able to get through in the short time provided:

GOAL 1
Objective 1.2- This section says that conservation areas should be preserved, but it does not say how. It also does not abolish the City's frequent use of eminent domain or simply abandoning conservation easements when it suits their purposes. This has happened numerous times where CEs were created and then abandoned or a road was run through them. This language does nothing to correct this chronic problem. We need stronger language that states unequivocally that CEs will be respected and that local government will not initiate any actions to abrogate them and will defend them against State or Federal intrusions.

Objective 1.4- Although this sounds good, without any metrics to achieve these goals, this language requires nothing and means nothing. Our City scientists have reported continuing losses of urban canopy over the last 20 years. We need to reverse this trend. To do this, we need measurable goals. I would suggest that local government be required to do a canopy survey every year to determine tree coverage and then have a requirement to add a 1% increase in canopy coverage each year. This kind of quantifiable metric will accomplish something specific and measurable, whereas the current language allows the continuation of the destruction we have witnessed. I would also ask for a ban on clear-cutting and wholesale tree-topping, which weakens our trees. We need a formula for the allowable tree destruction on a developable lot, such as 50%. We need to have more flexible parking requirements, so that businesses that don't need a lot of parking, can do less paving and save more trees. If we have any hope of reaching decarbonization by 2050, we need to aggressively preserve our remaining forests and aggressively plant new trees. We need to protect large trees and rare trees and to abolish our current system that allows any tree to be destroyed in exchange for monetary payments and/or planting stick trees in different locations, which trees may also be cut in a few years.

Objective 1.5. This objective would be fine if it had some requirements and if it defined the word not "feasible" to mean only those situations where using green infrastructure is physically impossible.

Objectives 1.6 and 1.7 are so vague as to be meaningless and they require nothing.

GOAL 2:

*All of these objectives are vague and have no metrics by which success can be measured.

*MMTDs should be eliminated altogether. Their use was supposed to create safer and more walkable/bikable urban areas. They have been a failure. Instead, they have used (in my legal opinion) illegal deviations to create situations where zoning category requirements have been violated without any concomitant benefit to walkability, bikability, nor urban landscaping. MMTDs and deviations should be eliminated.

Objective 2.6: Midtown should be acknowledged as a unique sector with recognized boundaries delineated in the Comp Plan. The Midtown Master Plan should be defined as to its parameters and given a date certain for completion) by no later than the end of 2026. I would recommend that the Master Plan parameters should include at a mininum: road design, parking solutions, sidewalk and lighting plans, signage, landscaping requirements, architectural design requirements, public space creation, interconnectivity, safety, walkability and bikability, and a usage plan for the former Police Station property.

GOAL 3
Objective 3.1- How can residential character be protected when these revisions propose getting rid of residential preservation? This also flies in the face of contractual commitments made to certain residential communities that there would be no commercial intrusion into their neighborhoods, or that multi-family would be banned to preserve the character of the community (e.g. Lafayette Park.)

Objective 3.5: This safety language is so vague as to be meaningless. Instead, we need a commitment to Strong Town/Vision Zero streets, sidewalks, and bike lanes. We also need a commitment to implement these types of designs in specific areas of the Urban Core and a commitment to meet deadlines for when this will happen. Without a commitment to a specific plan, we have no reason to expect anything different from what we currently have. For example, the plan for wider, walkable, and safer sidewalks just got shot down this very week in Midtown in favor of more car traffic. How would this new Goal 3 change that decision?

GOAL 4
There is nothing here that talks about improvement to existing housing stock. The City needs to be committing to improving existing housing stock, making it more energy efficient, and putting solar panels on as many roofs as possible so that people struggling to make ends meet can have decreased utility bills and concomitantly get us closer to our goal of decarbonization by 2025.

Objective 4.4- This onjective regarding land division by heirs has no details. This has been one of the most abused laws. To avoid future abuse, we need to spell out exactly when and how this can be used. And, as with any variance, it needs to meet the legal requirements of variances, including a legal showing of hardship that meets the Florida Supreme Court definition of a legal hardship (i.e. not an inconvenience shared in common by all similar homeowners, not something created by the homeowner himself, etc.)

GOAL 5:
This entire section is just vague and creates no metrics to measure success.

GOAL 6:
At the risk of repetition, this section contains no specific goals, measurable metrics nor deadlines for accomplishing any of these goals.

Objective 6.4 through 6.6 purport to create safer streets and more pedestrian and biking opportunities within the City, but these objectives create no obligations to actually do anything. They say nothing about retrofitting currently unsafe streets, about converting many of the one-way streets that run through residential neighborhoods to two-way streets (acknowledged by traffic engineers to slow traffic and make streets safer), about adding mandatory traffic calming devices, about using proven construction designs to slow down traffic in areas where it is currently dangerous. For example, the current City traffic code does not allow speed bumps nor raised intersections on arterial roads, even though traffic engineers admit that these would reduce speed to their posted limits as cars travel through residential neighborhoods. As a result, we have had pedestrian deaths, frequent accidents, property damage, wasted police time responding to accidents, (all of which cost money, time, damage, bodily injury and other losses.) Sadly, I do not see anything specific here that addresses what is a serious problem in our community. There are no requirements to any specific things or changes. Once again, there are no metrics to judge success and once again, no deadlines to complete any needed improvements.

Objective 6.7 talks about promoting alternate transportation options, but it doesn't mention any options and it doesn't require anything. It also discusses managing parking demands, but again offers no options and requires nothing. We know what works (and what doesn't) because we have many examples of what other cities are doing that have been successful. Why aren't we mapping out a transportation future based on what works and save lives and creates a more walkable and bikable city?

GENERAL OVERALL OBSERVATIONS:

There is nothing here that mentions climate change and our need to respond to it by managing our land use and transportation decisions. Not one word is said about the greatest existential threat facing our community and our planet. I find this deeply disturbing and irresponsible. We set a goal of 2050, which is already probably too far into the future. Are we going to take serious action to tackle this challenge or are we, as a community, just going to punt the need to act down the road and let the next generation deal with it? It seems like the latter. And if so, shame on us!

There is still no requirement that growth should pay for itself. Therefore, residents will continue to subsidize development, which falls disproportionately on City residents.

There is nothing addressing the need for the City to bury its utilities as a way to create more climate resilience. This is a significant omission.

MAPS, DATA, and ZONING CATEGORIES

* The data included with the Comp Plan shows a projected increase of only 37,000 people in Tallahassee/Leon County over the next 25 years. What I didn't see and would like to see is this: Is our current Urban Services Area large enough to accommodate this growth? (I believe it is.) If so, then we should cap the USA at its current size UNLESS and UNTIL there is a demonstrated need to expand its current size. This goes for further annexation of County land into the City, which accelerates sprawl. Annexation boundaries should be capped at their current size (or downsized) so that taxpayers are not forced to pay for expensive extensions of urban services to areas far from the City core.

* Mobility Audit Report- I could not find this document online. Hard to comment on something that isn't there.

* Community Audit Report: I could not download this document and assume that it is not yet available. Again, hard to comment on non-existent data.

* Economics of Community Design: It says that 46% of our budget goes for "safety." I do not know what that category comprises. I assume that it includes police and fire department. Question: Does it include the price of the new police station, including debt service and cost overruns? This document also talks about our reliance on federal funds for roads and maintenance, but says nothing about what we are going to do if the federal government stops providing those funds, which looks likely. There is also nothing that talks about the need to stop using asphalt to build new roads and maintain old roads if we want to decrabonize our community.

*Map Scenario 1 (Estimated Growth) and Map Scenario 2 (Future Expansion) are still missing- so I can't comment on them.

*Future Land Use Map (FLUM)- Looks like the City is depending on our national forests to provide a lot of environmental benefits. We may have to rethink that in light of Trump's announcement that he wants national forests to be aggressively logged. We have no control over federal land, so we shouldn't be basing any calculations on its projected use.

*Adopted Future Land Use Categories:
2.2.2 states in part: "...To protect Rural areas from premature development, facilitate infill and redevelopment inside the Urban Service Area, and in recognition of the significant area already mapped as Urban Fringe, no additional lands designated Rural or Urban Fringe as of August 26, 2006 shall be converted to a more dense or intense land use category unless adjoining lands are also within the designated Urban Service Area boundary..."

This section creates a giant loophole that needs to be closed because the local government only has to vote to expand the USA boundary to change the rural or urban fringe zoning. This is precisely why the Comp Plan should include a ban on further annexations and further expansion of the USA unless it can be shown that there is not enough existing land within the USA boundary to accomplish the proposed growth. Otherwise, there will continue to more

expansion of the USA needlessly and more loss of rural and urban fringe land.

* Proposed Future Land Use Categories:
The proposed zoning category called Urban Residential Preservation does not actually seem to preserve the residential nature of this zoning category. It states in pertinent part:

"Allowed land uses include residential and neighborhood-scale accessory non-residential uses. non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, and community services. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or drive-through facilities, are not permitted in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic."

This would allow commercial intrusions into urban residential neighborhoods that would completely change their residential character, If the land planning goal here is to have more people move to and live in the urban core to prevent sprawl, then we need to find ways to make our urban neighborhoods attractive places to live and preserve their unique characters. These neighborhoods are close enough to urban amenities to walk and bike to and therefore, they do not need commercial construction within the neighborhoods themselves. For example, residents of Lafayette Park, my neighborhood, can walk to Downtown and Midtown to access urban services. Many years ago, alarmed by the destruction of the neighborhood's character, residents petitioned the City Commission to create residential protection against multi-family homes and apartments. The City promised the residents that our neighborhood would be protected. This feels like a betrayal of that promise. Not only would this allow multi-family and apartments, but also commercial development. This will hurt the desirability of our neighborhood, bring in more renters and transients, and depress property values. All of this will decrease our quality of life and discourage young people from wanting to raise families in our neighborhood, at a time when young people are wanting to live downtown in greater numbers than previous generations. This is not going to be received well by our neighborhood. We expect promises made to be promises kept. And I suspect that other well-established neighborhoods will share our feelings.

Dear Decision Makers,

As a resident of Betton Hills, I appreciate our challenge to deal with our increasing population and all the infrastructure problems that have been created since I moved to this beautiful city decades ago. I relocated to Tallahassee with my family because I appreciated the governance of this place and the care and protection of the quality of life we had here. It seems to me government was different in those days and there was a careful and thoughtful process before sweeping changes were implemented that would most likely cause changes far into the future, changes we're already seeing as local development radically alters our environment..

I urge you to proceed with a more ordered and thoughtful process that includes more data and analysis, more time and opportunity for public comment, and more consideration of how today"s
decisions will affect the quality of life for future generations.

Sincerely,

Sara McGinnes

Good morning,

Regarding the proposed land use changes. In Myers Park, we do not need to double the density. With several duplexes, a triplex and apartments on my little street already, there is too much traffic and the street is full of parked cars. People are constantly moving in and out and several are AirBnB's. Myers Park is an historic neighborhood but this city wants to mow it all down and fill it up with apartments. I'm sick of it. You're going to destroy what little is left of our beautiful historic neighborhoods. There are other areas more appropriate than this. Do better City Commissioners!!!

Thank you,
Ann Mazzanovich

Neighborhoods which are currently zoned “Residential Preservation” should not be changed to a zone which allows for commercial use.

One need look no further than downtown to see that allowing commercial into a residential setting can very easily eliminate all community. Please prevent Beard Street or Hillcrest from turning into Gadsden or Park.

Our city has SCADS of un-used commercial space, much of which sits empty and is an eyesore. There is no need to threaten some of the most established and beautiful neighborhoods to make way for commercial acreage. Accept no part of this proposed plan.

Subject: Resist Residential Preservation Change
Date: Tuesday, March 11, 2025 12:31:24 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Good afternoon,

I am a homeowner in Tallahassee. I have worked extremely hard to raise the value of my property. If rezoning to allow the planned changes succeeds, then all of the time, money, and perseverance I have expended to improve my property will have been for naught, as the changes will most assuredly lower the value of my property.

The current issue of changes to Residential Preservation (rather, the abolishment of it) should not be permitted. The profiteering of businesses over the stability of the residents in our community defies the very essence of a "residential community."

I am writing to submit my statement as one opposing the proposed changes. The economic state of the average person in our country is in dire straits, and we cannot survive much more of the burdens placed upon our stability imposed by powers that be which are motivated purely by THEIR ability to profit at our expense. As well, none of these changes seem to apply to wealthier communities which highlights a huge disparity between the "have" and "have nots" (and ultimately puts the "have nots" even farther down on the ladder to success). Our families and neighbors deserve as much consideration as everyone living in posh neighborhoods. Our roads need to be safe for children to walk and play without the onset of heavier traffic to new businesses. Our peace is not expendable and should not be sacrificed for some others' financial benefit. Our homes and property are just as important to us as those to residents of Southwood, Killearn and Chaires! I am an elementary school teacher, so I do not make as much money as someone able to afford to live in these and other such places in Tallahassee, but my commitment to our community and hopes for its betterment (vs. destruction) is immeasurable and a major source of purpose in my life. The families I serve do not deserve to suddenly find themselves living in a business area when they have struggled to provide a family-oriented community for their children for as long as they have. I, and all of us, I believe, strive to make sure we have and can leave a worthwhile homestead for posterity's sake, and creating a business model community will abolish the efforts and dreams we seek and work so hard to achieve. I ask you to share this and to uphold the sanctity of our lives and property by not allowing this proposal to succeed.

Sincerely, and with utmost need,
Brenna Alonzo

Subject:	TALLAHASSEE AND LEON COUNTY FRIENDS! ACTION NEEDED ON PROPOSED COMP PLAN UPDATES
Date:	Monday, March 10, 2025 5:59:50 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Ms. Calhoun,

It troubles me to have to write at the 11th hour regarding the Plan update. I'd been in touch with Susan Poplin about this a couple of times over the past year, so I've not been entirely out of the loop. I appreciate the effort by 1000 Friends (and others) who've been tracking the decidedly poor approach taken by the Planning Department and its consultants since this project started.

There was initial (lightweight) outreach by the consultants and then little visible follow up, as far as I am aware – despite assurances that the grand design of this update had significant community outreach built in.

As a past Supervisor/Manager within the Planning Department, the approach taken to date would not have passed muster by staff, the director, the planning commission or the elected officials.

1000 Friends' alert raises many of the same concerns I'd raised with the department: insufficient time for informed and concerned citizens to reviews and comment and an (apparent) absence of the basis for any proposed changes (i.e., data and analysis).

As past Chief of State Planning for DCA and the administrator for the Comp Plan EAR (update) process for both DCA and for the Planning Department, I'd suggest that despite changes in state law that the basic analytical requirements of Chapter 163 remain in place. If a local government is doing an amendment or Plan update, the basis for doing so must still be outlined with sufficient detail to justify the change.

The State may or may not bother to spend much time in its review of any submittal by the Department on behalf of the City and County, but local citizens do want to fully understand what is afoot, and the persistent lack of communication with the parties that earnestly provided input early in the process (and who clearly care to some degree about Plan content) suggest strongly to me that proposed changes are not ready for prime time. Transparency should matter.

I urge the department (and the City and the County) to take a breath, take stock of what you have (and obviously don't have) as far as information and input supporting your effort, and to then calendar hearings appropriately with adequate lead time and time for staff to digest the outcomes.

My three cents (inflation!)

Subject: TALLAHASSEE AND LEON COUNTY FRIENDS! ACTION NEEDED ON PROPOSED COMP PLAN UPDATES

Dear Craig,

The City and County have released the **first draft of their proposed updates to the Future Land Use Map and Land Use Categories** in the Tallahassee-Leon County Comprehensive Plan. We understand this document is up for adoption on April 8, less than a month from now.

This speeding train makes sweeping changes to our community's Future Land Use Map and Land Use Categories with significant ramifications for us all.

With the document just released, we have not yet had time for an extensive review, nor have the required data and analysis and related comprehensive plan policies been released to the public.

We ask you to **PLEASE TAKE ACTION NOW!**

Urge the City of Tallahassee and Leon County to release the required data and analysis and related policies and slow down the review process to allow more time for meaningful citizen input into our community's long-range plan!

- **SUBMIT ONLINE COMMENTS TODAY, MONDAY, MARCH 10 by**

9:00 p.m. to sherri.calhoun@talgov.com

- **CONTACT THE CITY AND COUNTY COMMISSIONERS** (contact information below)
- **ATTEND AND SPEAK OUT** at the Local Planning Agency (LPA) Public Hearing at **6:00 p.m. on TUESDAY, MARCH 11**
  Frenchtown Renaissance Center, 2nd Floor Conference Room
  435 N. Macomb Street

A community's Comprehensive Plan is the legal document that determines where and how our community will develop over the next 20 years. This update has been in the works for several years so there is no reason why adoption should be rushed without a chance for meaningful input.

Further, state law requires that plan amendments be based on data and analysis which, to our knowledge, has not yet been released. It also requires consistency between the goals, objectives and policies in the plan, but no policies have yet been released. So there is insufficient data and information available for citizens to undertake an informed evaluation.

We believe ample opportunity should be allowed for the residents of Tallahassee and Leon County to carefully review the required data and analysis and provide input on this critical plan that will shape the future of the community. Once this input is received, it will take time to make meaningful changes to the plan to address community concerns.

At 1000 Friends, our mission statement notes: "Above all, we strive to give citizens a meaningful role in shaping the futures of their communities and state." We will be sharing additional information on the process as it becomes available and thank you for your engagement.

Dear Susan,

I just learned of the Proposed Future Land Use Map changes to be discussed today at the Local Planning Agency Workshop and would like to stay informed/engaged in the public process. As you are already familiar, the Leon Soil and Water Conservation District works with the communities in the District to help improve and ensure soil and water resources are conserved. With that in mind, changes to the FLUM have the potential to impact our soil and water resources within Leon County. Please include me on any opportunities for engagement.

Thank you!

Since you're probably receiving plenty of comments to the contrary, i just wanted to say that my wife and i live in a house we own in Levy Park and support higher density development and mixed use (as proposed in the FLUM) to create more vibrant neighborhoods and help to reduce the amount of undeveloped land on the outskirts of town that's lost to suburban sprawl.

Thanks,
Frank Price

Dear Sherri Calhoun,

I own a home in Levy Park and am writing in opposition to the plan to double the density of Levy Park and allow commercial use in the neighborhood. I purchased the property there specifically because I liked the current atmosphere. I do not want it to change.

Thank you for the opportunity to share my opinion.

Subject: Proposed Changes to Future Land Use Categories
Date: Tuesday, March 11, 2025 5:43:56 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

I am writing to express my concern about changes to future land use categories. It appears that some of the essential information about policies for implementing the Plan were not available to the public until
just before the March 11th public workshop.

I am particularly concerned about the proposal to allow businesses within neighborhoods without much more information and discussion. The description "neighborhood scale accessory non-residential uses... such as retail, offices, and community services" is too broad. I also don't see anything noise, light, or traffic/parking included.

Please provide opportunity for the public to learn more essential details and comment on these before submitting the plan to the State.

Thank you for your consideration,
Marney Richards

Subject: Proposed Updates to Future Land Use Map and Land Use Categories - why the rush?

I am a resident of the Woodland Drives neighborhood. The proposed Future Land Use Map would change the classification of my neighborhood. It's my understanding that such plan amendments must be based on data and analysis, but no data & analyses have been released.

Why is there a rush? I believe that residents should be given ample opportunity to carefully review the required data and analysis and provide input on this critical plan that will shape the future of the community. Once this input is received, it will take time to make meaningful changes to the plan to address community concerns.

Accordingly, I urge you to release the required data and analysis and related policies and slow down the review process to allow more time for meaningful citizen input into our community's long-range plan. Failure to do so will only increase citizen dissatisfaction and distrust of our local government.

Subject: Comp Plan revisions

Dear Commissioners:

Last week, I attended the public meeting with Comp Plan with staff and consultants at the Renaissance Center and while I sincerely believe that they are all trying to do a good job, they are not being given enough time and neither is the public to comment.

By last week, the consultants still hadn't completed writing their policies. They weren't up online until a few days ago. I know that I haven't had a chance to thoroughly read through them and formulate a thoughtful and thorough response. Other folks at the meeting said the same thing. We need more time!

For months, we have had only the goals online which are broad non-specific objectives. But the actual policies (the fleshed-out details, the meat on the bones, so to speak) have been missing. They just became available a few days ago and yet the time period for public comment is tonight at 9pm! I'm not ready and neither are the many people who have been following this.

Worse still, the consultants themselves do not have enough time to read all the public comments that they will get and incorporate the comments that have merit before their final product is due.

If this is worth doing, it is worth doing right. Otherwise, we are just wasting the public's money and our staff and consultants' time, and we are letting a golden opportunity go to waste.

Therefore, I am asking you to please slow this train down and give the public more than a

week to review these policies and to comment. And PLEASE give the consultants more time to assess public comments and to assimilate them into their final product.

Thank you.

Sincerely,
Randie Denker

Subject: My comments on Comp Plan revisions:
Date: Monday, March 10, 2025 8:45:49 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Because of the incredibly short turnaround time and the fact that some data is still unavailable online, I do not pretend that my comments are complete or thorough, but that said, this is what I was able to get through in the short time provided:

GOAL 1
Objective 1.2- This section says that conservation areas should be preserved, but it does not say how. It also does not abolish the City's frequent use of eminent domain or simply abandoning conservation easements when it suits their purposes. This has happened numerous times where CEs were created and then abandoned or a road was run through them. This language does nothing to correct this chronic problem. We need stronger language that states unequivocally that CEs will be respected and that local government will not initiate any actions to abrogate them and will defend them against State or Federal intrusions.

Objective 1.4- Although this sounds good, without any metrics to achieve these goals, this language requires nothing and means nothing. Our City scientists have reported continuing losses of urban canopy over the last 20 years. We need to reverse this trend. To do this, we need measurable goals. I would suggest that local government be required to do a canopy survey every year to determine tree coverage and then have a requirement to add a 1% increase in canopy coverage each year. This kind of quantifiable metric will accomplish something specific and measurable, whereas the current language allows the continuation of the destruction we have witnessed. I would also ask for a ban on clear-cutting and wholesale tree-topping, which weakens our trees. We need a formula for the allowable tree destruction on a developable lot, such as 50%. We need to have more flexible parking requirements, so that businesses that don't need a lot of parking, can do less paving and save more trees. If we have any hope of reaching decarbonization by 2050, we need to aggressively preserve our remaining forests and aggressively plant new trees. We need to protect large trees and rare trees and to abolish our current system that allows any tree to be destroyed in exchange for monetary payments and/or planting stick trees in different locations, which trees may also be cut in a few years.

Objective 1.5. This objective would be fine if it had some requirements and if it defined the word not "feasible" to mean only those situations where using green infrastructure is physically impossible.

Objectives 1.6 and 1.7 are so vague as to be meaningless and they require nothing.

GOAL 2:

*All of these objectives are vague and have no metrics by which success can be measured.

*MMTDs should be eliminated altogether. Their use was supposed to create safer and more walkable/bikable urban areas. They have been a failure. Instead, they have used (in my legal opinion) illegal deviations to create situations where zoning category requirements have been violated without any concomitant benefit to walkability, bikability, nor urban landscaping. MMTDs and deviations should be eliminated.

Objective 2.6: Midtown should be acknowledged as a unique sector with recognized boundaries delineated in the Comp Plan. The Midtown Master Plan should be defined as to its parameters and given a date certain for completion) by no later than the end of 2026. I would recommend that the Master Plan parameters should include at a mininum: road design, parking solutions, sidewalk and lighting plans, signage, landscaping requirements, architectural design requirements, public space creation, interconnectivity, safety, walkability and bikability, and a usage plan for the former Police Station property.

GOAL 3
Objective 3.1- How can residential character be protected when these revisions propose getting rid of residential preservation? This also flies in the face of contractual commitments made to certain residential communities that there would be no commercial intrusion into their neighborhoods, or that multi-family would be banned to preserve the character of the community (e.g. Lafayette Park.)

Objective 3.5: This safety language is so vague as to be meaningless. Instead, we need a commitment to Strong Town/Vision Zero streets, sidewalks, and bike lanes. We also need a commitment to implement these types of designs in specific areas of the Urban Core and a commitment to meet deadlines for when this will happen. Without a commitment to a specific plan, we have no reason to expect anything different from what we currently have. For example, the plan for wider, walkable, and safer sidewalks just got shot down this very week in Midtown in favor of more car traffic. How would this new Goal 3 change that decision?

GOAL 4
There is nothing here that talks about improvement to existing housing stock. The City needs to be committing to improving existing housing stock, making it more energy efficient, and putting solar panels on as many roofs as possible so that people struggling to make ends meet can have decreased utility bills and concomitantly get us closer to our goal of decarbonization by 2025.

Objective 4.4- This onjective regarding land division by heirs has no details. This has been one of the most abused laws. To avoid future abuse, we need to spell out exactly when and how this can be used. And, as with any variance, it needs to meet the legal requirements of variances, including a legal showing of hardship that meets the Florida Supreme Court definition of a legal hardship (i.e. not an inconvenience shared in common by all similar homeowners, not something created by the homeowner himself, etc.)

GOAL 5:
This entire section is just vague and creates no metrics to measure success.

GOAL 6:
At the risk of repetition, this section contains no specific goals, measurable metrics nor deadlines for accomplishing any of these goals.

Objective 6.4 through 6.6 purport to create safer streets and more pedestrian and biking opportunities within the City, but these objectives create no obligations to actually do anything. They say nothing about retrofitting currently unsafe streets, about converting many of the one-way streets that run through residential neighborhoods to two-way streets (acknowledged by traffic engineers to slow traffic and make streets safer), about adding mandatory traffic calming devices, about using proven construction designs to slow down traffic in areas where it is currently dangerous. For example, the current City traffic code does not allow speed bumps nor raised intersections on arterial roads, even though traffic engineers admit that these would reduce speed to their posted limits as cars travel through residential neighborhoods. As a result, we have had pedestrian deaths, frequent accidents, property damage, wasted police time responding to accidents, (all of which cost money, time, damage, bodily injury and other losses.) Sadly, I do not see anything specific here that addresses what is a serious problem in our community. There are no requirements to any specific things or changes. Once again, there are no metrics to judge success and once again, no deadlines to complete any needed improvements.

Objective 6.7 talks about promoting alternate transportation options, but it doesn't mention any options and it doesn't require anything. It also discusses managing parking demands, but again offers no options and requires nothing. We know what works (and what doesn't) because we have many examples of what other cities are doing that have been successful. Why aren't we mapping out a transportation future based on what works and save lives and creates a more walkable and bikable city?

GENERAL OVERALL OBSERVATIONS:

There is nothing here that mentions climate change and our need to respond to it by managing our land use and transportation decisions. Not one word is said about the greatest existential threat facing our community and our planet. I find this deeply disturbing and irresponsible. We set a goal of 2050, which is already probably too far into the future. Are we going to take serious action to tackle this challenge or are we, as a community, just going to punt the need to act down the road and let the next generation deal with it? It seems like the latter. And if so, shame on us!

There is still no requirement that growth should pay for itself. Therefore, residents will continue to subsidize development, which falls disproportionately on City residents.

There is nothing addressing the need for the City to bury its utilities as a way to create more climate resilience. This is a significant omission.

MAPS, DATA, and ZONING CATEGORIES

* The data included with the Comp Plan shows a projected increase of only 37,000 people in Tallahassee/Leon County over the next 25 years. What I didn't see and would like to see is this: Is our current Urban Services Area large enough to accommodate this growth? (I believe it is.) If so, then we should cap the USA at its current size UNLESS and UNTIL there is a demonstrated need to expand its current size. This goes for further annexation of County land into the City, which accelerates sprawl. Annexation boundaries should be capped at their current size (or downsized) so that taxpayers are not forced to pay for expensive extensions of urban services to areas far from the City core.

* Mobility Audit Report- I could not find this document online. Hard to comment on something that isn't there.

* Community Audit Report: I could not download this document and assume that it is not yet available. Again, hard to comment on non-existent data.

* Economics of Community Design: It says that 46% of our budget goes for "safety." I do not know what that category comprises. I assume that it includes police and fire department. Question: Does it include the price of the new police station, including debt service and cost overruns? This document also talks about our reliance on federal funds for roads and maintenance, but says nothing about what we are going to do if the federal government stops providing those funds, which looks likely. There is also nothing that talks about the need to stop using asphalt to build new roads and maintain old roads if we want to decrabonize our community.

*Map Scenario 1 (Estimated Growth) and Map Scenario 2 (Future Expansion) are still missing- so I can't comment on them.

*Future Land Use Map (FLUM)- Looks like the City is depending on our national forests to provide a lot of environmental benefits. We may have to rethink that in light of Trump's announcement that he wants national forests to be aggressively logged. We have no control over federal land, so we shouldn't be basing any calculations on its projected use.

*Adopted Future Land Use Categories:
2.2.2 states in part: "...To protect Rural areas from premature development, facilitate infill and redevelopment inside the Urban Service Area, and in recognition of the significant area already mapped as Urban Fringe, no additional lands designated Rural or Urban Fringe as of August 26, 2006 shall be converted to a more dense or intense land use category unless adjoining lands are also within the designated Urban Service Area boundary..."

This section creates a giant loophole that needs to be closed because the local government only has to vote to expand the USA boundary to change the rural or urban fringe zoning. This is precisely why the Comp Plan should include a ban on further annexations and further expansion of the USA unless it can be shown that there is not enough existing land within the USA boundary to accomplish the proposed growth. Otherwise, there will continue to more

expansion of the USA needlessly and more loss of rural and urban fringe land.

* Proposed Future Land Use Categories:
The proposed zoning category called Urban Residential Preservation does not actually seem to preserve the residential nature of this zoning category. It states in pertinent part:

"Allowed land uses include residential and neighborhood-scale accessory non-residential uses. non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, and community services. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or drive-through facilities, are not permitted in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic."

This would allow commercial intrusions into urban residential neighborhoods that would completely change their residential character, If the land planning goal here is to have more people move to and live in the urban core to prevent sprawl, then we need to find ways to make our urban neighborhoods attractive places to live and preserve their unique characters. These neighborhoods are close enough to urban amenities to walk and bike to and therefore, they do not need commercial construction within the neighborhoods themselves. For example, residents of Lafayette Park, my neighborhood, can walk to Downtown and Midtown to access urban services. Many years ago, alarmed by the destruction of the neighborhood's character, residents petitioned the City Commission to create residential protection against multi-family homes and apartments. The City promised the residents that our neighborhood would be protected. This feels like a betrayal of that promise. Not only would this allow multi-family and apartments, but also commercial development. This will hurt the desirability of our neighborhood, bring in more renters and transients, and depress property values. All of this will decrease our quality of life and discourage young people from wanting to raise families in our neighborhood, at a time when young people are wanting to live downtown in greater numbers than previous generations. This is not going to be received well by our neighborhood. We expect promises made to be promises kept. And I suspect that other well-established neighborhoods will share our feelings.

Subject: Leon County resident-time to review COMPREHENSIVE PLAN
Date: Monday, March 10, 2025 2:47:28 PM

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

A community's Comprehensive Plan is the legal document that determines where and how our community will develop over the next 20 years. This update has been in the works for several years so there is no reason why adoption should be rushed without a chance for meaningful input.

Further, state law requires that plan amendments be based on data and analysis which, to our knowledge, has not yet been released. It also requires consistency between the goals, objectives and policies in the plan, but no policies have yet been released. So there is insufficient data and information available for citizens to undertake an informed evaluation.

Ample opportunity should be allowed for the residents of Tallahassee and Leon County to carefully review the required data and analysis and provide input on this critical plan that will shape the future of the community. Once this input is received, it will take time to make meaningful changes to the plan to address community concerns.

Thank you!

I urge the City of Tallahassee and Leon County to NOT adopt the proposed Future Land Use Map and Land Use Categories as proposed for the April 8 meeting. The growth in Tallahassee is becoming unsustainable from an ecological perspective, and the mature tree cover has been reduced by over 50% in the last 12 years.

Please do the right thing and release the required data and analysis and related policies and SLOW DOWN this review process to allow more time for meaningful citizen input into our community's long-range plan!

Sincerely,
-Tarez Graban

March 24, 2025

Dear Ms. Poplin and Planners,

On behalf of Capital City Cyclists, I am providing the following comments on the Tallahassee-Leon County Comprehensive Plan Draft Land Use and Mobility Element Goals, Objectives, and Policies. In this letter our comments are limited to draft Goal 6. Our members are recreational cyclists and commuters working together to promote safe cycling through group rides and teaching bicycle skills

Generally, the draft policies reflect guidelines our members support to reduce the risk of pedestrian and bicycle injuries and deaths from crashes with motor vehicles. The policies recognize that street designs are inherently unsafe and that drivers will make mistakes leading to crashes. Therefore, to reduce risks to the most vulnerable road users, bicycle and pedestrian facilities should be added wherever there is not just use and risk but also areas that would be used but are avoided because potential users sense risks.

Safe streets, sidewalks, and shared use trails allow people to walk and bicycle for health, fitness, and recreation. Safe streets and bicycle and pedestrian facilities also allow people to make fewer car trips for work and errands.

This Land Use and Mobility Element will make the region healthier, safer, and less congested. We hope our recommendations are accepted.

Sincerely,

Marcia Meale, President
Capital City Cyclists
marcia.s.meale@gmail.com

Capital City Cyclists Comments on Land Use and Mobility Element

1. We concur with Goal 6 and urge that the terms “sidewalks, bicycle lanes, shared use paths, and trails” be used consistently throughout the element.
2. Include the terms “bicycle lanes and shared use paths” Policy 6.1.4
3. We strongly endorse Policy 6.2.1
4. Include the terms “bicycle lanes and shared use paths” related to future right of way needs in Policy 6.2.2
5. Delete the term “without negatively impacting either development” in Policy 6.2.5 as shown below: Interconnectivity for Development: Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system. ~~without negatively impacting either development.~~
6. We strongly endorse Policy 6.3.1 including reference to the requirement to “incorporate design characteristics that reflect Safe Systems approaches which recognize that transportation systems users inherently make mistakes, and ensures that the transportation system will be
7. In Policy 6.3.5 Lane Repurposing add the words “and implement” after the word evaluate.

8. We strongly endorse Policy 6.3.6 – One-Way Pair Conversions, which will make roads safer for all users.
9. In Policy 6.4.3 add the words "parks and recreation facilities" to the list of places where enhancements will be prioritized.
10. In Policy 6.4.4 – Bicycle and Pedestrian Master Plan add the words "and upgrading safety features" as shown in the underlined addition below. In coordination with the Capital Region Transportation Planning Agency, the Planning Department shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify network need gaps.
11. We endorse Policy 6.4.13 – Pavement Markings and Signage.
12. In Policy 6.4.17 use separate bullets to call out miles of shared use trails and miles of separated bicycle lanes. Remove the parenthesis in the bike lanes bullet.
13. Add text to the as underlined below: The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and evaluate progress and make recommendations annually.
14. Replace draft text in Policy 6.5.1 with text underlined below: – Build Bike Facilities Concurrent with Maintenance: Bicycle facilities shall be added or updated during all City Public Infrastructure or County Public Works roadway resurfacing, restoration, and rehabilitation projects involving arterial or collector roads where such facilities currently do not exist or, if existing, do not meet current bicycle facility selection and design standards. Elimination of bike lanes shall require that the roadway retain or improve bicycle quality of service.
15. Replace draft text in Policy 6.5.2 with text underlined below: Bicycle Facility Selection and Design Standards: All bicycle facilities to be added or updated pursuant to Policy 6.5.1 shall be selected and designed in accordance with the then current version of Chapter 223 of the FDOT Design Manual.

MEMORANDUM

TO: Members of the Tallahassee-Leon County Local Planning Agency

FROM: Vivian Young, AICP, Special Projects Director

DATE: March 28, 2025

RE: Comments for April 1, 2025, LPA Transmitting Public Hearing on Draft Update

Thank you for the opportunity to provide input on the draft update to the Land Use and Mobility Element of the Tallahassee-Leon County Comprehensive Plan.

As you are aware, a community's comprehensive plan is the legal document that codifies community vision on where and how our community will develop over a specified timeframe. We would like to start by saying that we strongly support the overarching goal of keeping urban lands urban and rural lands rural. If carefully crafted, this can be a strong foundation for protecting sensitive natural lands, limiting sprawl, creating more vibrant urban areas, and limiting the cost to taxpayers for costly infrastructure expansion into rural areas.

We wish to make several recommendations regarding the update. As an aside, our recommendations below were based on the documents released in mid-March. Considerable additional documents and policy changes were released with the March 26 LPA agenda. Due to time constraints, we have only undertaken a cursory review of these additional documents which include a plethora of information.

1. **Timeline – We continue to believe that the comprehensive planning update process is rushed and urge you to recommend that the City and County pause the process, address identified community concerns, conduct one or two citizen workshops to discuss the updates with the public, and postpone the transmittal process until at least the fall to allow time for a more robust review by all involved.**

   While we understand that the comprehensive plan update process has been under way since 2015 with reports, surveys, and public meetings subsequently undertaken, it was not until January 2025 that the roll out of goals and objectives began, followed by a draft and very general Future

Land Use Map (FLUM), and finally policies and a detailed FLUM in mid-March. Hundreds of pages of new information were released with the March 26 LPA agenda, including new provisions in the previously released updated goals, objectives, and policies, a 90-page addendum of additional policies that are up for adoption, a 155-page document outlining changes, and more, This chronology is shown in **Attachment 2** of the agenda packet.

The result is that citizens and members of the LPA have only been able to review all the documents in their entirety since March 26, less than a week before the April 1 LPA Transmittal Hearing.

Why the rush? This process began almost a decade ago, and while a number of public meetings were held to gather public input at the front end, only minimum legal requirements are now being met to review the proposed updates, even as new information continues to be released. We urge the LPA and the Tallahassee and Leon County Commissions to meet not just the minimum statutory requirements but also the intent of robust citizen participation in the planning process.

1. **Comparison Review – On March 26, the 155-page Future Land Use Crosswalk was released which identifies the differences between current goals, objectives and policies, and those proposed. With a week until the meeting, there is insufficient time to review all of the changes to gain a clear understanding of the implications. This provides further justification for the need to pause the process.**

   As but one example, with regard to expansion of the currently adopted Urban Services Area (USA), the existing plan Objective 1.1 [L] notes:

   > *"The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development."*

There are several objectives and policies related to the USA in the proposed plan, but none seem to address that the USA is intended to accommodate 90% of new residential dwelling units within the County. This appears to be a substantive change that merits informed evaluation by members of the community. We expect there are numerous other examples.

The following recommendations relate to statutory requirements related to the comprehensive plan update process:

2. **Measurable Objectives – 163.3164 (36), F.S. related to the Community Planning Act includes this definition: "Objective' means a specific, measurable, intermediate end that is achievable and marks progress toward a goal." There are numerous objectives in the update that are neither specific nor measurable and need refinement.**

   The need for measurability is further reinforced in the Tallahassee-Leon County Planning Department report [2016], ***Vibrant Tomorrow: State of the Land Use Element***, which is included under the data and analysis drop down on the update webpage. On page 9, it discusses the lack of measurable objectives in the current plan, and includes the following example:

   Current Plan, Immeasurable: *Land Use Element Objective 3.2 – Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planning integration into the existing transportation network.*

   Vibrant Tomorrow goes on to note: "The above objective is vague regarding how the provision of convenient, aesthetically pleasing and compatible location of office uses should be achieved, resulting in an immeasurable objective. No specific area of Tallahassee or Leon County is referenced, nor is "convenient" defined. **Overall, the above objective does not provide any direction or measurable provisions to achieve its purpose or mark progress towards a goal."** [emphasis added]

Proposed Update, Immeasurable:

Below are a series of a few examples of immeasurable objectives in the proposed plan. In most cases, these are worded in the form of goals and not objectives, all include general adjectives and are not specific, and none are measurable.

Objective 1.2 *– Preservation of Natural Areas: Preserve natural areas, including conservation areas, environmentally sensitive features, and water resources. Prioritize and maximize the protection of these areas when making decisions regarding land use, transportation, and infrastructure extension.*

Objective 2.1 *– Growth and Population Accommodation. Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.*

Objective 3.1 *– Residential Character: Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.*

Objective 4.1 *– Missing Middle Housing: Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhood commercial uses, and public transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and a growing demand for walkability.*

Objective 5.1 *– Economic Health: Initiate community planning, urban development, and redevelopment strategies that prepare business, production facilities, trades, and related activities that provide the livelihoods of the population to withstand positive and negative changes in the economy and continue providing jobs and incomes to support the community.*

Objective 6.1 – Land Use and Transportation Coordination for Livability: Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

3. **Data and Analysis – 163.3177(1)(f), F.S. requires that all elements of the comprehensive plan and plan amendments "shall be based upon relevant and appropriate data and an analysis by the local government…. To be based on data means to react to it in an appropriate way and to the extent necessary indicated by the data available on that particular subject at the time of adoption of the plan or plan amendment at issue." This information appears to be missing on key topics.**

The data and analysis drop down menu includes hundreds of pages of information but there does not appear to be accompanying analysis of what information within each of those studies informed the creation of the update.

- As one example, in a March 19 interview with Matt Hoffman of WCTV, staff indicated that the community requires 23,000 new housing units by 2050. As of March 26, while the data includes the required population projections by BEBR, there does not seem to be detailed population accommodation projections identify the basis for 23,000 units and whether and how the plan meets this need. This could be supported by the following data: How many units are currently available in the USA area and the non-USA area?
- How many units are currently approved but not yet completed, (for example, in Welaunee), and how are these included in the calculations?
- How many units would be available in each area if current zoning reached build out, and what year is build-out anticipated based on BEBR projections?
- How many units will be available in each area with just the updates to the FLUM?
- How many units will be available if the new FLUM is adopted, and zoning is updated to be consistent with the FLUM?

In a related area, the 2023 Live Local Act made considerable mandatory changes to allowable heights, densities, and more in all communities in the state. Tallahassee

has prepared the **Live Local Height Tool** to analyze the impacts of this act on development patterns in the City. However, it is our understanding that this data was not used in the preparation of the FLUM because it was not required. It would be helpful to incorporate this data.

4. **Internal Consistency – 163.3177(2), F.S. notes: "Coordination of the several elements of the local comprehensive plan shall be a major objective of the planning process. The several elements of the comprehensive plan shall be consistent."** Among other things, this means that the goals, objectives, and policies included in this element must be consistent with provisions in the other adopted elements. This also relates to the issue of timeline, as careful review of consistency between the elements is not feasible with such a short timeframe.

The final series of recommendations relate to keeping urban areas urban, as identified as the overarching goal of the plan:

5. **Keeping Urban Areas Urban – Again, 1000 Friends strongly supports this concept. But we feel that further steps could be undertaken as part of the update.**

   Planning Period – It is within the authority of the city and county to have the plan address the 2050 planning horizon but include provisions to address development demand over a ten-year time frame instead of by 2050. This allows "phasing" development allowances as conditions change over the coming decades. While the planning horizon of 2050 is reasonable, we urge you to shorten the development capacity timeframe to 10 years to allow for needed development but provide the opportunity to refine the plan for future changing conditions.

   Authority to have two timeframes is included in 163.3177(5)(a), F.S., which states: "Each local government comprehensive plan must include at least two planning periods, one covering at least the first 10-year period occurring after the plan's adoption and one covering at least a 20-year period. Additional planning periods for specific components, elements, land use amendments, or projects shall be permissible and accepted as part of the planning process."

The authority to address development capacity over a shorter time frame is included in 163.3177(1)(f)3, F.S. which further states: "The plan must be based on at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period...."

Concentration of Urban Development – While directing development to within the USA is appropriate, a more refined approach is needed to determine where in the USA more intensive development is most appropriate.

The broadbrush approach taken would set the stage for the upzoning of large areas within the USA, without consideration of other planning factors. For example, Objective 2.6 – Recognizable Places, calls for redevelopment with higher density and intensity land uses along several corridors, and Policies 4.2.2 and 4.2.3 on Transit Oriented Development (TOD) outline density incentives to promote walkability and transit. Instead of intensifying allowable future land uses in large areas, it would make more sense to identify appropriate corridors for greater density, craft desired incentives, and update the FLUM to support intensified development in those areas while leaving other areas for less intensive development. This also is a more fiscally responsible approach and will not require even greater economic incentives to compensate for areas that may have been inappropriately densified in this update.

Making Urban Areas More Livable – Vibrant urban areas are walkable and bikeable, support transit, and include a mixture of residences, offices, and commercial uses in close proximity. Having separated pockets of more urbanized development can be counterproductive.

A concern with the approach of having large areas approved for more intensive development is that instead of creating concentrated and cohesive urban area(s), it will create scattered pockets of denser development that may not support TOD or greater urban design goals.

Density Increases – We understand and support the need for increased density in urban areas based on need and the appropriateness of location. However, in the interest of transparency, we believe there should be clearer messaging on this issue as this document is intended to reflect the community vision.

> In response to citizen concerns about density increases, the routine response (as seen in Attachment 7, Public Comment) is that this update focuses on changes to future land use, and does not involve zoning changes that would be needed to increase density. While this is technically correct, it appears disingenuous.
>
> What is not mentioned is that if the FLUM and policies are updated, it establishes the legal foundation needed to make zoning changes to reflect the "community vision" that increased density is appropriate in certain areas. For example, as shown in the LPA Attachment 6, Land Use Comparison, the proposed Urban Residential Preservation category doubles allowable density from "6 units per acre" to "12 units per acre 5,000 sq ft per acre."

Based on these comments, we urge you to slow the process down to address technical issues, reexamine the urban policies, and provide more opportunity for citizen input through workshops and other means.

With thanks,

Vivian Young, AICP
Special Projects Director

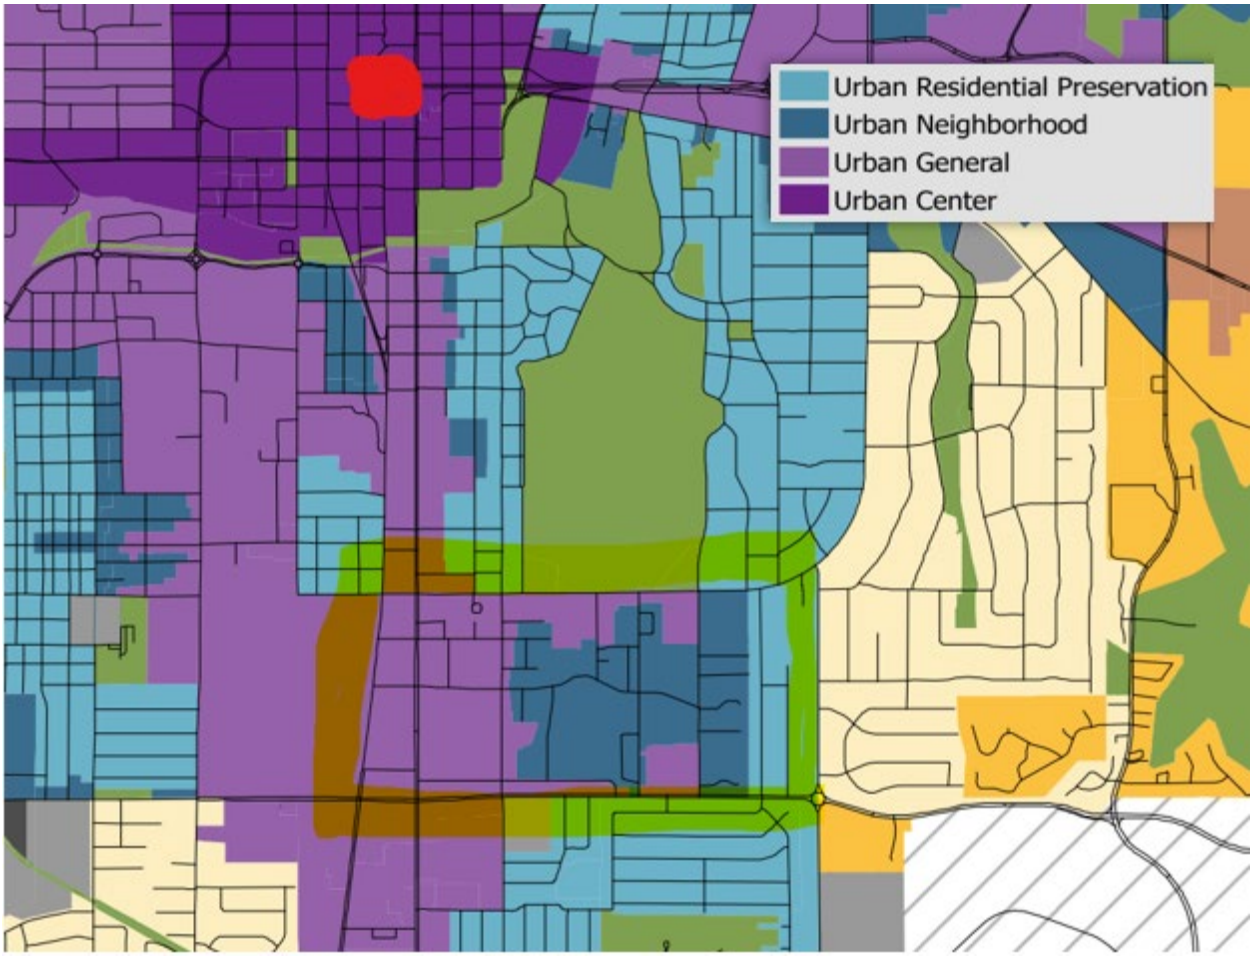
Comp Plan Update - Land Use Map and Land Use Categories

I would like to draw your attention to the ongoing **Comprehensive Plan Update, Land Use Map and Land Use Categories**. A presentation was made and public comment taken on it at the Local Planning Agency (LPA) Workshop last night, March 11, 2025. My concerns for South City are as follows:

1. The **density and intensity of proposed land uses**, primarily Urban General and Urban Neighborhood ranging from **26 to 50 dwelling units (DUs) per acre**:
    a. ***Far exceed the current residential density**** of about 15 DU/acre multifamily units, 4 DU/acre single family or an overall average of 9 DU/acre.*
    b. How this high density and intensity of proposed land uses is congruent or reconciled with existing ***poor drainage and flooding issues is unclear***.**
    c. Why the Urban General land use of ***50 DU/acre is the predominant proposed land use along Magnolia Drive***, a *two-lane road*, currently under construction improvements (but not widening) *after years of planning and development*.
    d. This density and intensity presents a ***risk/danger of South City*** becoming a ***hyper-focused 'hotbed' of low-income housing – completely antithetical to the Purpose Built Model***.
2. Design and development standards are proposed in several urban land use categories but it is not clear who or how these will be developed, if there are any constraints in state statute or rule, how they would be operationalized and enforced, and what kind of processes and participation of residents might be allowed.

I did make some (but not all) of these comments during the public comment period last night. An excerpt of map and links provided below.

If there has been any direct engagement or consultation with the South City NA, South City Foundation, Tallahassee Housing Authority, and/or neighborhoods that would be directly impacted, e.g., Woodland Drives and Myers Park, I am not aware of it.



By copy of this mail, may I kindly ask staff to respond, and perhaps facilitate one or more meetings to discuss.

With thanks and best regards,

Beth C. Hollister

Via Email to: Susan.Poplin@talgov.com

March 24, 2025

Dear Ms. Poplin and Planners,

On behalf of Capital City Cyclists, I am providing the following comments on the Tallahassee-Leon County Comprehensive Plan Draft Land Use and Mobility Element Goals, Objectives, and Policies. In this letter our comments are limited to draft Goal 6. Our members are recreational cyclists and commuters working together to promote safe cycling through group rides and teaching bicycle skills

Generally, the draft policies reflect guidelines our members support to reduce the risk of pedestrian and bicycle injuries and deaths from crashes with motor vehicles. The policies recognize that street designs are

inherently unsafe and that drivers will make mistakes leading to crashes. Therefore, to reduce risks to the most vulnerable road users, bicycle and pedestrian facilities should be added wherever there is not just use and risk but also areas that would be used but are avoided because potential users sense risks.

Safe streets, sidewalks, and shared use trails allow people to walk and bicycle for health, fitness, and recreation. Safe streets and bicycle and pedestrian facilities also allow people to make fewer car trips for work and errands.

This Land Use and Mobility Element will make the region healthier, safer, and less congested. We hope our recommendations are accepted.

Sincerely,

Marcia Meale, President
Capital City Cyclists
marcia.s.meale@gmail.com

Capital City Cyclists Comments on Land Use and Mobility Element

1. We concur with Goal 6 and urge that the terms “sidewalks, bicycle lanes, shared use paths, and trails” be used consistently throughout the element.
2. Include the terms “bicycle lanes and shared use paths” Policy 6.1.4
3. We strongly endorse Policy 6.2.1
4. Include the terms “bicycle lanes and shared use paths” related to future right of way needs in Policy 6.2.2
5. Delete the term “without negatively impacting either development” in Policy 6.2.5 as shown below: Interconnectivity for Development: Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system. ~~without negatively impacting either development.~~
6. We strongly endorse Policy 6.3.1 including reference to the requirement to “incorporate design characteristics that reflect Safe Systems approaches which recognize that transportation systems users inherently make mistakes, and ensures that the transportation system will be
7. In Policy 6.3.5 Lane Repurposing add the words “and implement” after the word evaluate.
8. We strongly endorse Policy 6.3.6 – One-Way Pair Conversions, which will make roads safer for all users.
9. In Policy 6.4.3 add the words “parks and recreation facilities” to the list of places where enhancements will be prioritized.
10. In Policy 6.4.4 – Bicycle and Pedestrian Master Plan add the words “and upgrading safety features” as shown in the underlined addition below. In coordination with the Capital Region Transportation Planning Agency, the Planning Department shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity <u>and safety feature upgrades</u>, and pursue implementation funding. The bicycle and pedestrian master plan shall identify network need gaps.
11. We endorse Policy 6.4.13 – Pavement Markings and Signage.

    In Policy 6.4.17 use separate bullets to call out miles of shared use trails and miles of separated bicycle

12. lanes. Remove the parenthesis in the bike lanes bullet.

13. Add text to the as underlined below: The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and evaluate progress and make recommendations annually.

14. Replace draft text in Policy 6.5.1 with text underlined below: – Build Bike Facilities Concurrent with Maintenance: Bicycle facilities shall be added or updated during all City Public Infrastructure or County Public Works roadway resurfacing, restoration, and rehabilitation projects involving arterial or collector roads where such facilities currently do not exist or, if existing, do not meet current bicycle facility selection and design standards. Elimination of bike lanes shall require that the roadway retain or improve bicycle quality of service.

15. Replace draft text in Policy 6.5.2 with text underlined below: Bicycle Facility Selection and Design Standards: All bicycle facilities to be added or updated pursuant to Policy 6.5.1 shall be selected and designed in accordance with the then current version of Chapter 223 of the FDOT Design Manual.

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

I am writing to express my concern about changes to future land use categories. It appears that some of the essential information about policies for implementing the Plan were not available to the public until just before the March 11th public workshop.

I am particularly concerned about the proposal to allow businesses within neighborhoods without much more information and discussion. The description "neighborhood scale accessory non-residential uses... such as retail, offices, and community services" is too broad. I also don't see anything noise, light, or traffic/parking included.

Please provide opportunity for the public to learn more essential details and comment on these before submitting the plan to the State.

Thank you for the opportunity to speak last night. Of course, in 3 minutes, one cannot get into too much detail, so I would like to add a few more comments to what I said last night.

As I stated last night, I am very much in favor of more urban infill because it prevents sprawl, makes mass transit more doable and reduces costs to provide urban services, inter alia. You don't have to sell me on urban infill and denser downtowns. I'm already there with you.

However, as I also said last night: one size doesn't fit all. There are places within the Urban Core that are, in my opinion, inappropriate. For example, more density creates more stormwater runoff and in a neighborhood that already has flooding issues, it might not be wise to scale up density.

Another reason is that there are certain historic neighborhoods like Los Robles and Lafayette Park, for example, where putting in apartments and commercial development would destroy the historic character of the neighborhood. I don't want to live next to a 7-11 and I doubt that any of my neighbors do either.

In looking over what Haaf has proposed, my feeling is that they have painted with too broad a brush. There are areas of the Urban Core where more density would be great and other areas where it would not be great and would destroy the ambiance of what now exists. So, I would not want them to open the door to such wide-spread densities, apartment complexes and commercial development everywhere that they have currently designated as Urban Residential Preservation. I feel that the designation "Urban Residential Preservation" itself is misleading, as it might lead many homeowners to believe that their neighborhoods are being "preserved" and could not have commercial development. However, if this new zoning category is adopted over such a wide swath of downtown and midtown residential neighborhoods, that would no longer be true.

What I would like to see is a more nuanced analysis of the Urban Core. I would ask the consultants to go back and designate only those areas where denser development would **actually** be more appropriate under this new zoning category. We all want to enhance our Urban Core, but destroying our best assets is not the way to do it. We want a scalpel approach here, not a sledgehammer. I think everyone can agree that we want to encourage more residential density Downtown and in the areas near the university, but not at the cost of destroying our charming and historic neighborhoods to the east.

I would also note that the new Urban Residential Preservation designation (below) does not have any height limitations nor size restrictions, so a residential homeowner could end up with a 10 story apartment building or office building next to his historic home. If a homeowner has solar panels, (which I do) that would destroy their ability to produce clean energy and would engender lawsuits.

Although, the language in the new Urban Residential Preservation FLU category says that these commercial uses would be "scaled" to the neighborhood, there is no limitation on size, height, amount of paved area, size of parking lot, and so forth. The vague language about "scaling" to the neighborhood becomes someone else's judgment call, not the affected

homeowner's. One person's "scaled" could very well be another person's nuisance.

The commercial uses allowed include any "retail, office or community service", except for drive-throughs and gas stations. Given that those are the only two exceptions, what we are left with as allowable commercial uses is pretty much anything: Under the proposed wording, we could have such development as auto repair shops, banks, Dollar Stores, convenience stores, salvage businesses, junkyards, gun shops, and commercial dog kennels. I would not want to live next to any of these and I doubt that most homeowners would, especially if they thought that they were buying into a neighborhood such a Lafayette Park, which has historically been protected as a single-family neighborhood with one ADU in the back.

I also wanted a chance last night to discuss the need to carve out Midtown from the rest of the Comp Plan FLUM. Midtown is currently the subject of a Master Plan that, while still in progress, has made a number of decisions about the future development of this special area. As Chairman Jake Varn said last night, this Comp Plan proposal is working at cross-purposes with the work of the Midtown Stakeholders' Committee. I think that the consultants need to meet with the Midtown Stakeholders Committee immediately and carve out a special development area for Midtown which is based upon the parameters that have been unanimously adopted by both the neighborhood and business representatives on the Committee. Adopting these new land use categories sabotages the work that this City-appointed Committee is doing. The two groups need to work together in tandem. Instead, it appears that a situation is being created here where one group can cancel out the work of the other.

I have submitted other written comments, which I hope will be carefully considered, so I won't repeat any of those here. But I wanted to clarify my comments from last night and also add my concerns about Midtown.

Thank you for your time and attention.
Sincerely,
Randie Denker, esq.

Urban Residential Preservation Land Use Category
The intent of the Urban Residential Preservation category is to preserve existing historic walkable neighborhood development patterns. The Urban Residential Preservation category is intended to provide low to medium density residential uses with allowances for neighborhood-scale accessory commercial uses within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. A low-speed street network that supports walkable connections to neighborhood parks, schools, and other amenities. Pedestrian safety and comfort shall be prioritized over vehicle speed. Allowed land uses include residential and neighborhood-scale accessory non-residential uses. non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, and community services. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or drive-through facilities, are not permitted in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic.
A maximum gross density of 12 dwelling units per acre is allowed. Low-density residential includes single-family detached, single-family attached, duplexes, triplexes, and quadplexes. The following special conditions shall apply to the Urban Residential Preservation Land Use Category:
1. Design and development standards for the Urban Residential Preservation area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and a continuous walkable street network throughout the district. These design standards shall integrate all building types into the character of the

neighborhood.

2. Standards addressing adjacency to protected residential areas including buffers, setbacks, stepbacks, and landscaping shall be included be included in the City of Tallahassee land development regulations to ensure compatibility between residential and non-residential uses within the Urban Residential Preservation land use.

Dear Decision Makers,

As a resident of Betton Hills, I appreciate our challenge to deal with our increasing population and all the infrastructure problems that have been created since I moved to this beautiful city decades ago. I relocated to Tallahassee with my family because I appreciated the governance of this place and the care and protection of the quality of life we had here. It seems to me government was different in those days and there was a careful and thoughtful process before sweeping changes were implemented that would most likely cause changes far into the future, changes we're already seeing as local development radically alters our environment..

I urge you to proceed with a more ordered and thoughtful process that includes more data and analysis, more time and opportunity for public comment, and more consideration of how today"s
decisions will affect the quality of life for future generations.

Sincerely,

Sara McGinnes

Citizen Comments Submission from Talgov.com for Tallahassee-Leon Local Planning Agency

Name: Vivian Young
Address: 308 North Monroe Street
City: Tallahassee
State: Florida
Zip: 32301
Email Address: vyoung@1000fof.org
Comments: (Note -- document links and highlighted text did not come transfer) MEMORANDUM TO: Members of the Tallahassee-Leon County Local Planning Agency FROM: Vivian Young, AICP, Special Projects Director DATE: March 28, 2025 RE: Comments for April 1, 2025, LPA Transmitting Public Hearing on Draft Update Thank you

for the opportunity to provide input on the draft update to the Land Use and Mobility Element of the Tallahassee-Leon County Comprehensive Plan. As you are aware, a community's comprehensive plan is the legal document that codifies community vision on where and how our community will develop over a specified timeframe. We would like to start by saying that we strongly support the overarching goal of keeping urban lands urban and rural lands rural. If carefully crafted, this can be a strong foundation for protecting sensitive natural lands, limiting sprawl, creating more vibrant urban areas, and limiting the cost to taxpayers for costly infrastructure expansion into rural areas. We wish to make several recommendations regarding the update. As an aside, our recommendations below were based on the documents released in mid-March. Considerable additional documents and policy changes were released with the March 26 LPA agenda. Due to time constraints, we have only undertaken a cursory review of these documents which include a plethora of information. 1. Timeline – We continue to believe that the comprehensive planning update process is rushed and urge you to recommend that the City and County pause the process, address identified community concerns, conduct one or two citizen workshops to discuss the updates with the public, and postpone the transmittal process until at least the fall to allow time for a more robust review by all involved. While we understand that the comprehensive plan update process has been under way since 2015 with reports, surveys, and public meetings subsequently undertaken, it was not until January 2025 that the roll out of goals and objectives began, followed by a draft and very general Future Land Use Map (FLUM), and finally policies and a detailed FLUM in mid-March. Hundreds of pages of new information were released with the March 26 LPA agenda, including new provisions in the previously released updated goals, objectives, and policies, a 90-page addendum of additional policies that are up for adoption, a 155-page document outlining changes, and more, This chronology is shown in Attachment 2 of the agenda packet. The result is that citizens and members of the LPA have only been able to review all the documents in their entirety since March 26, less than a week before the April 1 LPA Transmittal Hearing. Why the rush? This process began almost a decade ago, and while a number of public meetings were held to gather public input at the front end, only minimum legal requirements are now being met to review the proposed updates, even as new information continues to be released. We urge the LPA and the Tallahassee and Leon County Commissions to meet not just the minimum statutory requirements but also the intent of robust citizen participation in the planning process. 2. Comparison Review – On March 26, the 155-page Future Land Use Crosswalk was released which identifies the differences between current goals, objectives and policies, and those proposed. With a week until the meeting, there is insufficient time to review all of the changes to gain a clear understanding of the implications. This provides further justification for the need to pause the process. As but one example, with regard to expansion of the currently adopted Urban Services Area (USA), the existing plan Objective 1.1 [L] notes: "The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development." There are several objectives and policies related to the USA in the proposed plan, but none seem to address that the USA is intended to accommodate 90% of new residential dwelling units within the County. This appears to be a substantive change that merits informed evaluation by members of the community. We expect there are numerous other examples. The following recommendations relate to statutory requirements related to the comprehensive plan update process: 3. Measurable Objectives – 163.3164 (36), F.S. related to the Community Planning Act includes this definition: "Objective' means a specific, measurable, intermediate end that is achievable and marks progress toward a goal." There are numerous objectives in the update that are

neither specific nor measurable and need refinement. The need for measurability is further reinforced in the Tallahassee-Leon County Planning Department report [2016], Vibrant Tomorrow: State of the Land Use Element, which is included under the data and analysis drop down on the update webpage. On page 9, it discusses the lack of measurable objectives in the current plan, and includes the following example: Current Plan, Immeasurable: Land Use Element Objective 3.2 – Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planning integration into the existing transportation network. Vibrant Tomorrow goes on to note: "The above objective is vague regarding how the provision of convenient, aesthetically pleasing and compatible location of office uses should be achieved, resulting in an immeasurable objective. No specific area of Tallahassee or Leon County is referenced, nor is "convenient" defined. Overall, the above objective does not provide any direction or measurable provisions to achieve its purpose or mark progress towards a goal." [emphasis added] Proposed Update, Immeasurable: Below are a series of a few examples of immeasurable objectives in the proposed plan. In most cases, these are worded in the form of goals and not objectives, all include general adjectives and are not specific, and none are measurable. Objective 1.2 – Preservation of Natural Areas: Preserve natural areas, including conservation areas, environmentally sensitive features, and water resources. Prioritize and maximize the protection of these areas when making decisions regarding land use, transportation, and infrastructure extension. Objective 2.1 – Growth and Population Accommodation. Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population. Objective 3.1 – Residential Character: Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods. Objective 4.1 – Missing Middle Housing: Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhood commercial uses, and public transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and a growing demand for walkability. Objective 5.1 – Economic Health: Initiate community planning, urban development, and redevelopment strategies that prepare business, production facilities, trades, and related activities that provide the livelihoods of the population to withstand positive and negative changes in the economy and continue providing jobs and incomes to support the community. Objective 6.1 – Land Use and Transportation Coordination for Livability: Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility. 4. Data and Analysis – 163.3177(1)(f), F.S. requires that all elements of the comprehensive plan and plan amendments "shall be based upon relevant and appropriate data and an analysis by the local government…. To be based on data means to react to it in an appropriate way and to the extent necessary indicated by the data available on that particular subject at the time of adoption of the plan or plan amendment at issue." This information appears to be missing on key topics. The data and analysis drop down menu at https://www.compplantlc.com/pages/dataandanalysis, includes hundreds of pages of information but there does not appear to be accompanying analysis of what information within each of those studies informed the creation of the update. • As one example, in a March 19 interview with Matt Hoffman of WCTV, staff indicated that the community requires 23,000

new housing units by 2050. As of March 26, while the data includes the required population projections by BEBR, there does not seem to be detailed population accommodation projections identify the basis for 23,000 units and whether and how the plan meets this need. This could be supported by the following data: How many units are currently available in the USA area and the non-USA area? • How many units are currently approved but not yet completed, (for example, in Welaunee), and how are these included in the calculations? • How many units would be available in each area if current zoning reached build out, and what year is build-out anticipated based on BEBR projections? • How many units will be available in each area with just the updates to the FLUM? • How many units will be available if the new FLUM is adopted, and zoning is updated to be consistent with the FLUM? In a related area, the 2023 Live Local Act made considerable mandatory changes to allowable heights, densities, and more in all communities in the state. Tallahassee has prepared the Live Local Height Tool to analyze the impacts of this act on development patterns in the City. However, it is our understanding that this data was not used in the preparation of the FLUM because it was not required. It would be helpful to incorporate this data. 5. Internal Consistency – 163.3177(2), F.S. notes: "Coordination of the several elements of the local comprehensive plan shall be a major objective of the planning process. The several elements of the comprehensive plan shall be consistent." Among other things, this means that the goals, objectives, and policies included in this element must be consistent with provisions in the other adopted elements. This also relates to the issue of timeline, as careful review of consistency between the elements is not feasible with such a short timeframe. The final series of recommendations relate to keeping urban areas urban, as identified as the overarching goal of the plan: 6. Keeping Urban Areas Urban – Again, 1000 Friends strongly supports this concept. But we feel that further steps could be undertaken as part of the update. Planning Period – It is within the authority of the city and county to have the plan address the 2050 planning horizon but include provisions to address development demand over a ten-year time frame instead of by 2050. This allows "phasing" development allowances as conditions change over the coming decades. While the planning horizon of 2050 is reasonable, we urge you to shorten the development capacity timeframe to 10 years to allow for needed development but provide the opportunity to refine the plan for future changing conditions. Authority to have two timeframes is included in 163.3177(5)(a), F.S., which states: "Each local government comprehensive plan must include at least two planning periods, one covering at least the first 10-year period occurring after the plan's adoption and one covering at least a 20-year period. Additional planning periods for specific components, elements, land use amendments, or projects shall be permissible and accepted as part of the planning process." The authority to address development capacity over a shorter time frame is included in 163.3177(1)(f)3, F.S. which further states: "The plan must be based on at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period…." Concentration of Urban Development – While directing development to within the USA is appropriate, a more refined approach is needed to determine where in the USA more intensive development is most appropriate. The broadbrush approach taken would set the stage for the upzoning of large areas within the USA, without consideration of other planning factors. For example, Objective 2.6 – Recognizable Places, calls for redevelopment with higher density and intensity land uses along several corridors, and Policies 4.2.2 and 4.2.3 on Transit Oriented Development (TOD) outline density incentives to promote walkability and transit. Instead of intensifying allowable future land uses in large areas, it would make more sense to identify appropriate corridors for greater density, craft desired incentives, and update the FLUM to support intensified development in those areas while leaving other areas for less intensive development. This also is a more fiscally responsible approach and will not require

even greater economic incentives to compensate for areas that may have been inappropriately densified in this update. Making Urban Areas More Livable – Vibrant urban areas are walkable and bikeable, support transit, and include a mixture of residences, offices, and commercial uses in close proximity. Having separated pockets of more urbanized development can be counterproductive. A concern with the approach of having large areas approved for more intensive development is that instead of creating concentrated and cohesive urban area(s), it will create scattered pockets of denser development that may not support TOD or greater urban design goals. Density Increases – We understand and support the need for increased density in urban areas based on need and the appropriateness of location. However, in the interest of transparency, we believe there should be clearer messaging on this issue as this document is intended to reflect the community vision. In response to citizen concerns about density increases, the routine response (as seen in Attachment 7, Public Comment) is that this update focuses on changes to future land use, and does not involve zoning changes that would be needed to increase density. While this is technically correct, it appears disingenuous. What is not mentioned is that if the FLUM and policies are updated, it establishes the legal foundation needed to make zoning changes to reflect the "community vision" that increased density is appropriate in certain areas. For example, as shown in the LPA Attachment 6, Land Use Comparison, the proposed Urban Residential Preservation category doubles allowable density from "6 units per acre" to "12 units per acre 5,000 sq ft per acre." Based on these comments, we urge you to slow the process down to address technical issues, reexamine the urban policies, and provide more opportunity for citizen input through workshops and other means. With thanks, Vivian Young, AICP Special Projects Director

WOODLAND DRIVES
NEIGHBORHOOD ASSOCIATION, INC.

Comprehensive Plan Update to the Future Land Use and Mobility Elements Public Comment – Unanimously Adopted by the Woodland Drives Neighborhood Association (WDNA) BOD 27 March 2025.

Woodland Drives is adversely impacted, and is requesting that the proposed future land use designation change from Residential Preservation to Urban Residential Preservation, along with associated increases in maximum density, allowed residential types, and non-residential uses, be denied and not included in the amendments adopted to the Future Land Use and Mobility Elements of the Comprehensive Plan.

We are **opposed** to the proposed changes to the future land use designation that adversely impact Woodland Drives for, including but not limited to, the following reasons:

A. Insufficient time for neighborhood review of voluminous and complex documents provided in support of the proposed changes,
B. Insufficient time for neighborhood residents to adequately assess and comment on the impacts of the proposed changes,
C. Incompatible with the character of our historic in-town neighborhood,
D. Incompatible with the desires of Woodland Drives residents for our historic in-town neighborhood,
E. Lack of sidewalks, and roadway capacity to accommodate the increased density and allowed uses, and
F. Increased traffic, and decreased safety for our residents and pets to walk and play safely in our neighborhood.

WDNA Requests Denial. Specifically we are opposed to the following specific proposed changes:

	Existing Residential Preservation	**Proposed Urban Residential Preservation**
Intent	**Protect** existing stable and viable residential areas **from incompatible land use intensity and density intrusions**	**Preserve** existing historic walkable neighborhood **development patterns.** Intended to provide low to medium density residential uses **with allowances for neighborhood scale accessory commercial uses**
Maximum Density	**6 units per acres**	**12 units per acres**
Allowed Residential Types	Single family, townhouses, and cluster housing	Single family detached, single family attached, duplexes, triplexes, and quadraplexes
Non-Residential Uses	**No**	"Neighborhood scale accessory non-residential uses… such as retail, offices, and community services."

In summary, these amendments proposing to change the future land use designation of Woodland Drives and other in-town neighborhoods will degrade the quality of our neighborhood and the preferences of our residents, by increasing density, increasing traffic and noise, allowing for incompatible commercial uses, and decreasing the safety and quality of life for our residents.

On Behalf of the Woodland Drives Neighborhood Association Board of Directors,
Sincerely,

G. Youchock

Greg Youchock, President

Hello,

I am a Tallahassee resident and I am in favor of the proposed amendments to the Tallahassee-Leon County Comprehensive Plan. The proposed amendments streamline our Comprehensive Plan and appropriately defer detailed regulations to the land development code. Our Comprehensive Plan should not be so inflexible as to prohibit smart, innovative development that is consistent with and achieves our overall community goals. The proposed amendments guide future growth and development in a consistent and predictable manner without being overly and unnecessarily restrictive or burdensome.

Please feel free to contact me with any questions.

Good Afternoon,

I am a Tallahassee resident and a small business owner. Please adopt the proposed amendments to the Tallahassee-Leon County Comprehensive Plan. These amendments are the product of years of public outreach and stakeholder engagement. They promote vital and sustainable growth for future generations of our community.

Thank you very much for your time.

Best,
Jeri

Susan and Artie,

Hope you are doing well. As a resident that lives in Leon County I wanted to let you all know that I am in favor of the proposed amendments to the Tallahassee-Leon County Comprehensive Plan. These amendments modernize and clarify the plan, ensuring it remains a useful tool for guiding growth while allowing the land development code to address site-specific details. The proposed changes provide the flexibility needed to support innovative, responsible development that aligns with our long-term goals as a community.

To Whom it May Concern,

I am a Leon County resident, and I am in favor of the proposed amendments to the Tallahassee-Leon County Comprehensive Plan. The proposed amendments serve to modify the Comp Plan in a manner that addresses our community needs and desires while effectively guiding growth for our future. It has been far too long since we've updated these elements of the Comprehensive Plan and, after tremendous public outreach over many years, we shouldn't delay this any further.

I'm a Leon County resident and I'm in favor of the proposed changes to the Comprehensive Plan. They give us a smarter way to grow—focusing on areas that already have infrastructure and services, and letting the city adapt more easily as things change. This is the kind of forward-thinking we need to be successful.

Thanks

Subject: Comp Plan update proposed amendment comment

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Hi Susan,

I hope you and your family are doing well and that the Planning Department is treating you well!

I see that the comp plan update is well underway. I apologize for not having been engaged to this point. But I just took a super quick look at the proposal — specifically the proposed FLUM — and I picked up quickly on one issue I find problematic in terms of strategy, specifically, the proposed location of the various future land use categories (FLUCs) on the FLUM.

The problem occurs when FLUCs intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, and even typical current local land use practice, principal uses face one another — *look out* at one another — across streets…and this visual perception is one important way most people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along the rear lot line or separated through categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

I realize this a bit of challenge because most of these newly proposed boundaries are in the same location as the boundaries between FLUCs on the FLUM presently in effect. And you can blame me a bit for that, by the way. But I try to learn as I progress in the profession and wanted to offer this for the good of the community.

Please let me know if you have any questions.

Be well,

Adam Antony Biblo

Subject: Some comments on newly updated Comp Plan revisions

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Susan:

I have taken a look at the latest revisions to the Comp Plan. It would have been a lot less complicated if there had been some kind of document showing the changes from the last proposal to the current one, so that it would have been easy to tell what has changed since the last iteration. I am not sure that I have still seen everything, as you told me that there are still items being posted. So, I may be submitting some comments later.

I really like some of this new language, especially in Goal 6. There is some language in there that will be a huge boon to my urban neighborhood where speeding has been a very big problem.

There are some other sections which are also good, but there are many sections which are too vague and I would still like to see more specificity, more inclusion of metrics and more deadlines for accomplishment.

Here are my comments:

1.1.3- This section talks about creating special districts, but it does not specify any areas for inclusion. I would propose designating Midtown as a special district. Right now, most or all of Midtown's commercial area has been re-mapped as Urban General on the FLUM. This would allow 50 units per acre and up to 60,000 sq. ft. This new land use category would completely destroy the ability of the Midtown Stakeholders Committee to create a Master Plan for Midtown because, if this land use category is adopted, all of the important decisions about size, use, density, height, and design have already been made in this category, precluding the whole justification for a Master Plan. This land use change would render the Midtown Stakeholders Committee essentially powerless and obsolete. Therefore, I would urge that the status quo be preserved in Midtown (as unanimously recommended by the City-appointed Committee members) to allow the Committee to complete its work on a Master Plan. Once the Master Plan is completed, Midtown should be carved out as a special district based upon the future recommendations of the Master Plan, at which time, a new zoning category can be created for Midtown that will implement the Master Plan recommendations.

1.2.6- I like this idea of conservation features outweighing transportation needs, but I would strengthen this language because we have a persistent problem in Leon County/Tallahassee whereby conservation easements are often destroyed for road and other infrastructure projects. In fact, a 50-acre conservation easement at the corner of Roberts and Centerville Road is being condemned for a 4-lane highway, as I write this. I would recommend that this language be added to the Comp Plan: **"When the City or County creates a conservation easement, it shall relinquish all powers of eminent domain, so that the conservation easement will remain in perpetuity."**

1.4 et seq. concerning the preservation of trees is still extremely weak and does not require anything specific of either the City nor the County. There are no quantitative goals for preservation nor replanting. This section has some good language but the problem is that it refers to "protected trees" and currently there are none. If we want to actually protect trees, then we have to specifically commit to policies that genuinely protect trees. If the proposed language were to be adopted in the Comp Plan, it would not require the City/County to adopt any new actual tree protection ordinances. I don't see that this language requires them to. The current City tree ordinance allows any tree of any species, age or size, to be cut in exchange for paying money into a fund or planting stick trees elsewhere. Unless the Comp Plan language fundamentally changes anything about the existing Pay-to-Cut scheme that we currently have. Under this proposed language, we will continue to lose our urban canopy, which decline has been calculated by the City's periodic forestry surveys. I also see nothing about climate change, climate resiliency, or the need to achieve carbon neutrality here, and very little in the new revisions altogether, which is a disappointment. I had hoped to see more about the need to achieve carbon neutrality and a specific blueprint with timelines for achievement. The most cost-effective way to decarbonize is to plant tens of thousands of trees every year. The Comp Plan needs to create specific goals for planting and replacing and preserving trees, through the use of various carrots and sticks. I could even envision incentives such as paying developers not to destroy forests, the way that the Department of Agriculture pays farmers to keep land fallow, when necessary. I would like to see a clearly written commitment to aggressive tree-planting with quantifiable metrics and goals.

1.5 et seq. Once again, some great ideas here, but no specifics. If the goal is to have tree-shaded parking lots, then state a percentage for that goal. Otherwise, how do we know if we are succeeding? I'd also add that when a parking lot is being redeveloped or repaved, the Comp Plan should require retrofitting to meet the new standards. I would however, create an exception for parking lots that are covered by solar panels that cars park under. This seems like a good ecological trade-off.

1.6 et seq. Once again, too much vague language and not enough metrics. Here are some specific ideas:
a) A ban on extending natural gas hook-ups to all new construction.
b) Requirement that all new construction have solar panels (or, at a minimum solar hot water heating.)
c) Require double-pane windows on all new construction.
d) A commitment to replacing natural gas stoves with induction stoves, with incentives by the City.
e) A City-wide mandatory compost collection system, such as San Francisco has.
f) Participation in coops to lower cost of solar panels through bulk purchases.
g) Ad valorem tax relief for buildings that are LEEDS certified or can otherwise demonstrate carbon-neutrality.
h) City incentive program to encourage more solar panel usage.

1.6.3- This section contains one of the few mentions of climate change and the need for more climate resiliency. But the list of things we can do is not particularly visionary nor creative: How about adding:
a) A commitment to planting tens of thousands of trees,

b) Instead of just suggesting stormwater conveyances with higher capacity, require stormwater facilities that mimic natural wetlands and provide a community visual and recreatonal amenity;
c) Instead of saying “support local agriculture”, how about a program that actually helps homeowners and local businesses transform their yards (and maybe even roofs) so that instead of lawns, they are growing vegetables and fruits or butterfly gardens?
d) Instead of saying something nebulous like “reducing pollutant emissions”- how about adopting actual mandates like those I mentioned in 1.6 (supra.)?

1.6.6- I like the language about burying utilities. I would like to see a commitment to bury all overhead utilities by a date certain.

1.1.10- This approach (which the City calls “deviations") has already proven disastrous in Collegetown, where every single building in a several block area has been built in violation of the zoning code requirements by getting “deviations” from the zoning code. Development there ended up being too high, too dense, and with not enough landscaping because of deviations. Pedestrian and biking enhancement never happened, and today, we have a "canyon effect” and an area where biking and walking are neither safe nor appealing. We need to do away with deviations altogether. In my legal opinion, as a land use lawyer, they are not even legal, although no one has tested them in court thus far. This current Comp Plan proposal does nothing to require improved pedestrian nor biking experiences. You are calling it “multi-modal transportation” but once again, it is all about cars. There is no concomitant benefit to residents as a trade-off for hgher densities. Until that is clearly written into the code, then there is no point in giving out more density bonuses.

2.2.1- This section says that the Urban Services Area (USA) shall be 50% larger than needed at all times. Question: Isn’t it already much larger than 50% with the recent addition of Welaunee Plantation? If so, shouldn’t the USA boundary be retracted? How was this 50% number arrived at? It seems much larger than needed. Since growth in Leon County is only increasing at .06% per year, shouldn’t the size of the USA be linked to the annual growth rate? Or perhaps at the 10-year projected growth rate? This over-sizing of the USA encourages urban sprawl. A smaller USA would ensure more compact urban growth. Therefore, I would once again recommend a ban on all new annexations into the City and into the USA **unless and until** it can be shown that there is not enough developable land within the current USA boundary. This proposed formula needs to be pegged to actual growth rates and actual need for developable land. Otherwise, we will continue to see more expensive urban sprawl and less efficient urban infill. This 50% larger-than-needed number does not seem to have been linked to growth rate or need.

2.4- This section, pertaining to preservation of rural lands, is pretty much canceled out by 2.2.1, supra, with its generous expansionist plans for the USA boundary.

2.6.7- This section pertains to the Bradfordville Area. This section needs to include a reference to the development and stormwater standards that are required by the legal settlement agreement signed by the County and various Plaintiffs in the Bradfordville lawsuit.

2.8.2- This pertains to the need to reserve some open space in mixed-use land use categories. However, I would eliminate the language about stormwater counting as “open space.” A polluted stormwater holding pond with green scum on top and a chain link fence around it should not qualify as “open space.” Stormwater ponds are already required by local law and a developer should not get credit for doing what he or she is already required to do and which provides zero “open space” benefit to the residents. Change this language to require **usable** open space. If someone can't sit on a bench and enjoy a little bit of nature, what is this providing?

2.8.7- This section pertains to lake protection and creates low density development. However, it creates exceptions for development when central sewer is available. Sewage is only one of MANY concerns, and this section completely ignores the other reasons why dense development on lakes eventually degrades water quality. E.g: The cutting of trees. The planting of lawns. The fertilizing of lawns. The building of docks. The keeping of boats. Boat maintenance. Destruction of lake littoral zones. Loss of natural areas adjacent to lakes. More impervious surface. Oils and greases from motorized vehicles, etc. This is just a very partial list of the many factors that contribute to degradation of water quality in lakes. This proposed section seems to imply that if there is central sewer, then density on a lake doesn’t matter, and that is not consistent with the science. Please take out these density bonuses!! Keep the low densities. And please add additional requirements for development near lakes that require retention of at least a 100' littoral zone, except for one 15-foot cut to the lake for individual usage. Also, please add these additional protections: No use of fertilizer. No impervious surface within 100 feet of a lake. The Number #1 reason why lakes become hyper-eutrophic is soil erosion during construction. We need more barrier protections during construction. The hay bales and siltation curtains currently required are not cutting it during heavy storm events. I would also add that the County and City should levy heavy fines for violations too! This entire 1.8.7 (Lake Protection section) is a disaster and I think it needs to be rewritten. Commercial development does not belong in Lake Protection. Period. This section will spell the death knell for whatever healthy lakes remain in Leon County, which aren’t many. We need to be protecting the littoral zones of our lakes and replanting them where they have already been destroyed (which is most of them.) Any purported lake protection plan that does not have some kind of provision for littoral zone protection (and reestablishment), is doomed to failure in its mission.

2.8.11- This new land use category "Urban Residential Preservation" is a misnomer, as it would no longer be residential and it is doing nothing to preserve residential. This land use category has been plastered all over the downtown neighborhoods without any regard to whether the individual neighborhoods have a historic character that could be destroyed, whether they have flooding problems that would make denser development unwise, or whether the people living there are in need of more commercial services. For example, I live only a few blocks from both Midtown and Downtown. I can walk to commercial. It doesn’t have to come to me. There is so much wrong here, I hardly know where to begin:
a) Instead of a nuanced analysis of where denser urban development is actually appropriate, this is a One-Size-Fits-All land use approach that would treat every urban neighborhood the same, regardless of its unique topographical or historic characteristics or existing proximity to commercial amenities. It is being marketed as urban infill, which we definitely need, but we don’t need it at the expense of destroying the things that are best about some of our historic urban neighborhoods.
b) This proposed new land use category has no restrictions on what office or commercial could be built except to ban gas stations and drive-throughs. That still allows pretty much everything else from junkyards to convenience stores, dog boarding facilities, auto repair shops, used car lots, night clubs, gun shops, salvage yards, or discos. The land use category says that commercial will be scaled to the neighborhood, but that means that some unelected and unaccountable person in permitting gets to make the call. This Comp Plan language will not protect us, as one person’s “appropriate use” is another person’s "nuisance."
c) There are no height restrictions, so any office or commercial structure could be any height. If someone has solar panels (which I do) they could be rendered useless.
d) There is no restriction on the amount of impervious surface or how additional stormwater would be handled. No one wants a fetid stormwater pond next to their home, breeding mosquitoes.
e) There is nothing that addresses parking.
f) The allowable density would double. I would like to point out that because ADUs do not count towards density, we ALREADY have 12 units

per acre in my neighborhood, (if you count the ADUs.) However, under this new land use category, you could have 24 units! And then that number could increase to 30 units, if the developer gets a 20% bonus for being 1/4 mile from a bus stop! These are radical changes that will destroy our historic neighborhoods.
g) There is no guarantee that these increased densities will actually lower the price of homes or increase available and affordable rental housing. This analysis was performed by Lafayette Park Board member, Ellery Sedgwick. He wrote: "*If you look at the number of residential units per capita, they have held basically steady (actually slightly increased) since the housing bust of 2008 and units per capita are higher than at basically any point in the 20th century (and built space in terms of residential square footage almost double, and commercially developed space much higher). Yet the Case-Shiller is at an all time high and housing cost as a percentage of GDP keeps ticking upward. So more built space or even more units plainly, quantifiably doesn't equate to lower housing costs. On a neighborhood scale, increasing allowable density probably actually increases prices in the short to mid-term (and quite possibly in the long term as well). In a world of higher allowable density, those fixer uppers that allow a toehold to folks starting out at some point become developer tear-downs. It's exponentially harder for them to competition with developers looking to build four units. And the more density is allowed, the higher that pressure is. Look at the corner of Ingleside and Mitchell. It used to have a modest house of probably 1,200-1,500 sf that had been allowed to get a bit shabby. It was sold in 2016 for $130,000. It was torn down, the parcel subdivided, two new houses were built, each with 3,500 sf of built space (not all of that heated and cooled), each of which sold for $489,000 in 2017. So unit density increased by 100%, but housing cost increased 754%. (I was floored to see that one of those resold in 2024 for $820,000, bringing that total to 1007% over 8 years). It is just not a simple two-dimensional supply/demand issue - see, e.g. institutional investment moving into the SFR market, speculation, increase in short-term rentals, a couple decades of very loose monetary policy, increased mobility, increased wealth disparity, increased rates of multiple home ownership, increase in insurance costs, rise in construction costs unrelated to zoning, increasing tendencies to see even owner-occupied homes as an investment rather than a end in itself, etc…*"
h) Six units per acre under the current land use designation allows for significant (at least 33% more) additional density in Lafayette Park. A similar analysis should be done for other urban neighborhoods to determine the need to change the current land use category.
i) The term "gross density" is not defined and could be used to allow individual lots to be developed in excess of the stated maximum, as long as the area overall remains below. The term also typically includes undevelopable land such streets and parks, in the density calculation. Current provisions do not contain the term.
j) My neighborhood, Lafayette Park, organized many years ago to get the City Commission to stop multi-family housing in our neighborhood because a boom in such building was destroying the aesthetics and ambience of our neighborhood. This radical change would reverse the promises made to our neighborhood by the City.

2.8.15- This provides calls for Special Districts that are special planned areas. Midtown should be named here. So should Northwood Mall. Probably others. Let's identify these special areas and include them in the Comp Plan.

2.8.19- This section should be omitted altogether. This is a recipe for urban sprawl. Particularly part 12 that talks about expanding the Urban Services Area yet again. I'm all for Master Planning, but this is just a giveaway to developers. And what about adding some language about such growth paying for itself? Why must the taxpayers always subsidize all this sprawl?

3.1.1 is great but unfortunately, it is completely at odds with 2.8.11. It's schizophrenic to say that you want to preserve residential neighborhoods and then place all of the well-established urban neighborhoods under a new land use category that will allow commercial and office construction, and destroy the aesthetics of the residential area. You can't have it both ways.

3.5.1- This is generally good but it needs more specifics. We need something in this section that requires one-way roads in residential neighborhoods to be converted back to two-way roads and that allows the City to use whatever traffic calming infrastructure it needs to enforce the posted speed limits. Currently, we have the equivalent of speedways through residential urban neighborhoods with the not unexpected accidents, injuries, and deaths. Instead of utilizing police time to catch speeders with radar guns, we need to be requiring road infrastructure that will limit speed through proper design. The biggest reasons for dangerous speeds in residential neighborhoods are one-way roads and lack of structural calming design. Please add those two things to this section! We need these changes! I would note that later in the proposed revisions, Policy 6.3.6 does a good job of talking about the need to do these things, but I would urge you to put something in this section, as well. I would also urge changing the word "prioritizing" in 6.3.6 to create a date certain by which the City must begin re-design and re-construction to implement these recommended changes. Perhaps within the next 3 years would be reasonable? (By the way, I am really pleased to see these changes recommended in 6.3.6!!!!)

3.6.7- There is no public need to vest previously approved development, especially if that development is not in the public interest and/or that development occurred a long time ago under less stringent rules. Please eliminate this policy. It can only cause mischief. We don't want to be burdened by bad decisions made a long time ago.

4.2.3- This section gives developers a 20% density bonus if they are within 1/4 mile of a transit stop. My neighborhood, Lafayette Park, is within 1/4 mile of many bus stops on Miccosukee Road. I suspect that most urban neighborhoods are, as well. If the new Urban Residential Preservation land use category is adopted, it would allow 12 units per acre. But since ADUs don't count, that would actually be 24 units per acre. We are already de facto at 12 units per acre if ADUs are counted. This change would allow even more density (20% or approximately 29 or 30 units per acre, depending on how you calculate it.) There is no data to suggest that people would leave their cars at home and take a bus, just because they live 1/4 mile away from a bus stop. However, it is not unreasonable to assume that increasing densities through such bonuses will create more traffic in the urban neighborhoods, which makes them more dangerous and less pleasant to walk in.

4.2.6- This section allows 20% density bonuses if you're near a bike trail. This really makes no sense to me. If you want to encourage more people to use bikes, then it is counter-productive to create more car traffic in that neighborhood, thus discouraging more bike usage.

4.4.1- This section pertains to Family Heir Subdivisions: This will lead to more and more subdivisions until a rural piece of property resembles an urban property. My main problem with it is that it allows continuous endless subdivision ad infinitum. My second problem with it is that after 2 years, the heirs can sell to a developer, who is unrelated to the family and whose only reason for purchase is to take advantage of the density bonus. I would recommend taking this out. If it has to stay, then there should only be ONE allowable subdivision for all time, not endless subdivisions. There should also be a penalty paid if the heir sells or rents to a non-heir.

6.3.6- One-Way Pair conversions. Bravo! We REALLY need this in our urban neighborhoods!!
6.4- I generally really like this section, but would make the burial of underground utilities mandatory and create timelines for implementation.
6.8 and 6.9- I really like these sections.

I may have some additional comments after I finish reviewing all of the backup data and the items still not posted, but this is what I have for now.

In conclusion, I want to make a general statement about the new FLU categories and map. The public presentations I have seen have implied that the new Land Use proposals are good because they reduce the number of land use categories. I fail to understand how fewer land use categories add actual value to our land planning toolbox. It seems to me that it creates a One-Size-Fits-All stencil and actually gives our planning staff less flexibility. Instead of having more nuanced categories that are individually customized to the specific needs of each specific area, we now would have this broad swath that covers large areas of the map without regard to the individual needs of each particular community. Some of the areas that are lumped together under this giant new umbrella called Urban Residential Preservation are very dissimilar and, in my opinion, should not be lumped together. For example, Frenchtown, with its large amount of student housing and existing commercial district has been placed under the same Urban Residential Preservation category as Old Town, which is currently 100% residential. The South City neighborhood, which backs up to the North Florida Fairgrounds is also lumped into this Urban Residential Preservation category and could not be more different from Meyers Park, which backs up to Meyers Park and a country club. Frenchtown and South City already have a degree of dense urbanization and commercial development while Meyers Park and Old Town do not. My own neighborhood, Lafayette Park is still very much a single-family residential neighborhood, although many people (including myself) run a business from their own home. We have very little in common with the Holton Street neighborhood, which has a high number of rentals, but is is also lumped under this new Urban Residential Preservation land use category. So, at the risk of repetition, I would ask for a more nuanced set of land use categories that actually represent what exists on the ground, what the needs of the neighborhood are, what the neighborhood topography and drainage can bear, and finally what the neighborhoods themselves want for their future growth.

Thank you for reading through all of this. I really appreciate the work that you all have put into this revision and I hope that my comments may be useful in directing further refinement of the final language of the new Comp Plan.

Sincerely,
Randie Denker

Hi Susan, I believe you may hear from the South City NA with a request to obtain more information and answer questions about proposed and existing land uses in South City.

Hi Artie, I really appreciate the response and information. Apparently, the current zoning and existing FLUM allow for very high density and intensity. I gather this was established long before South City was selected as a Purpose Built Community (PBC). I believe that my comments, reiterated below, stand.

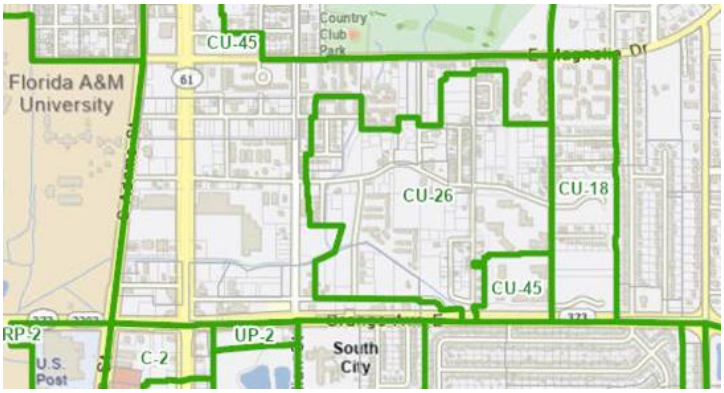
All things considered, may I kindly request that TLCPD **draw a white box over South City* and label it "Special PBC Planning Area"** if feasible - this will allow time for more thoughtful planning with all South City stakeholders but not slow down the current comp plan update efforts. As for *"taking under the Bert Harris Act"* perhaps we could look at that and discuss in more detail. Do you have a reference F.S.? Any exceptions? Not sure who or why that existing high density was originally proposed but for many reasons - it's just plain wrong. There may be some good rationale along Orange Avenue, but not Magnolia.

Thank you for considering this request. BTW, I found the constraints on design standards here **163.3202, F.S. Land development regulations.**—: http://www.leg.state.fl.us/Statutes/index.cfm?App_mode=Display_Statute&URL=0100-0199/0163/Sections/0163.3202.html#:~:text=Once%20the%20state%20land%20planning,of%20the%20regulations%20from%20the

R/Beth

(1) There is a very real risk of South City becoming a concentrated "hotbed" of low-income housing - which is not only antithetical to the PBC Model but also contrary to common sense and good urban planning, i.e., we need to *"spread the love around"* and intersperse affordable housing in all/many sectors of town and in particular near employment opportunities and daily goods and services (not just by a transit hub). And again, South City already has close to 1,200 low income housing units, and, at present there is really little to no middle-high income homes to balance out the Mixed Income PBC equation. Further, not sure how viable/solvent the THA might be with all that competition in close proximity, also, there would be very real direct impacts to adjacent neighborhoods.

(2) How this high density/intensity is reconciled with decades of poor drainage and flooding issues and FEMA FIRM flood maps is unclear. Again, I haven't seen or heard of any real substantial solutions that would eliminate Flood Zones, of course, this triggers the need for flood insurance in home mortgages. IMHO the city/county cannot claim to be real serious about southside improvements / vitalization until or unless this is addressed. BTW, most homes in this area were built in the 1950s (prior to SWM regulations ... on uphill northern/NE properties ... :-)).



(3) Magnolia Drive - a two-lane road - is presently under construction. It is not being widened. Also, I had a look at the public ROW and it is - first of all - variable/inconsistent, and, it appears to vary from about 70-100'. Not exactly positioned for a future four-lane thoroughfare (and with MMTD infrastructure).

*Boundaries are Magnolia (N), Jim Lee (E), Orange (S), and Adams (W).

Beth,

I looked at the properties you mentioned in South City. They are currently zoned CU-45 (a mixed-use zoning district allowing up to 45 units per acre) and CU-26 (a mixed-use zoning district allowing up to 45 units per acre). The proposed Future Land Use Map follows this existing zoning with General Urban (mixed use up to 50 units per acre) corresponding to the current CU-45 zoning and General Urban Neighborhood (mixed use up to 26 units per acre) corresponding to the current CU-26 zoning. We are essentially just reflecting what the current zoning is.

We have not down zoned any properties since that could potentially be considered a taking under the Bert Harris Act.

Please let me know if I am missing something, but it seems like what we are proposing aligns with the existing entitlements for the area.

Kind regards,

Artie

Hello Commissioner Richardson and Rahkiah Brown –

I would like to draw your attention to the ongoing **Comprehensive Plan Update, Land Use Map and Land Use Categories**. A presentation was made and public comment taken on it at the Local Planning Agency (LPA) Workshop last night, March 11, 2025. My concerns for South City are as follows:

1. The **density and intensity of proposed land uses**, primarily Urban General and Urban Neighborhood ranging from **26 to 50 dwelling units (DUs) per acre**:

   a. ***Far exceed the current residential density**** of about 15 DU/acre multifamily units, 4 DU/acre single family or an overall average of 9 DU/acre.*

   b. How this high density and intensity of proposed land uses is congruent or reconciled with existing ***poor drainage and flooding issues is unclear***.**

   c. Why the Urban General land use of ***50 DU/acre is the predominant proposed land use along Magnolia Drive***, a *two-lane road*, currently under construction improvements (but not widening) *after years of planning and development*.

   d. This density and intensity presents a ***risk/danger of South City*** becoming a ***hyper-focused 'hotbed' of low-income housing – completely antithetical to the Purpose Built Model***.

2. Design and development standards are proposed in several urban land use categories but it is not clear who or how these will be developed, if there are any constraints in state statute or rule, how they would be operationalized and enforced, and what kind of processes and participation of residents might be allowed.

I did make some (but not all) of these comments during the public comment period last night. An excerpt of map and links provided below.

If there has been any direct engagement or consultation with the South City NA, South City Foundation, Tallahassee Housing Authority, and/or neighborhoods that would be directly impacted, e.g., Woodland Drives and Myers Park, I am not aware of it.

By copy of this mail, may I kindly ask staff to respond, and perhaps facilitate one or more meetings to discuss.

With thanks and best regards,

Susan,

I was just reading the Community Conditions report. I noticed that on page 4, "Easements," there are several TT conservation easements not included on the map. A couple of these are significant in size. Also, Cherokee, a nearly 5,000-acre purchase conservation easement that TT helped facilitate with the state, is also not shown. Once a year or so, Steve Hodges would request updated easement shapefiles. Would you like me to have someone send these to you?

Also, should these be included on an updated map in the Community Conditions Report?

Last question, Tall Timbers' 4,000-acre Leon County property is not protected via a CE but is protected by a Trust. Wondering if that should be shown on that map?

Eric,

I will make a more formal response to COT, yet at first glance - I show no regard for our urban and surrounding green spaces, forests, and the wildlife habitat that is trying so desperately to sustain itself within our city and county limits. I may have missed it, yet I see no reference in any of these documents that shows a concerted effort for the protection of our wildlife (and the green spaces, lands they inhabit).

As I keep saying to our Commissioners (both City and County) - if I wanted to live in Miami, I would live there.

I and many others do not want Tallahassee to become just another area full of concrete (just so those in leadership can say we are "growing"), one that does not respect the once abundant lands, trees, and wildlife that now are being so callously and rapidly depleted.

I know you are the messenger, and I appreciate you sharing this with us, yet it truly is sickening to watch.

I keep hearing "you can't stop development" - yet my thought is, why not? Why can't we focus our efforts and take care of what we already have? Continually "sprawling" out is no answer to the issues we currently have. It just isn't.

Respectfully,

Ann Rowe

Susan , I recognize that . But, I am convinced there have never been adequate protections. The LAVA map was not used to rethink Land Uses on the Southside- rarely used to inform zoning and development issues.

> I understand the need further increased residential density in existing neighbors, but likely some of that need will be met by the Accessory structure changes allowing garage apartments and granny flats to be added to Residential Protection neighborhoods. But doubling density and adding commercial - which in your current way of government thinking is not the neighborhood little fresh foodmarket we always envisioned and one or two additional tiny housing units — is overkill. . We will get instead viable houses torn down, double quadraplexes built and convenience stores. Totally inconsistent with existing neighborhood character.
>
> You cannot state that you are protecting our natural assets and preserving a clean water supply then turn around and allow so many intense commercial and light Industrial land uses on the Southside where we have high or extremely high aquifer vulnerability. Consult the LAVA map (Leon Aquifer Vulnerability Assessment) for which the City and County paid a great deal of money which appears to be routinely ignored now. This isn't even effective lip service. This is dishonesty. These uses include auto repair, salvage yards and gas stations. Oil, gas and grease generators.
> I spend a lot of my time trying to get Code Enforcement, Growth Management, Environmental Enforcement and Planning staff to take action on illegal junk yards which are located all over the Southside- with very little success. Often I have to quote the adopted rules and regs to the staff and inspectors because they are not properly trained in them. Now you will be allowing even more problems to arise.

TO: Members of the Tallahassee-Leon County Local Planning Agency

FROM: Vivian Young, AICP, Special Projects Director

DATE: March 28, 2025

RE: Comments for April 1, 2025, LPA Transmitting Public Hearing on Draft Update

Thank you for the opportunity to provide input on the draft update to the Land Use and Mobility Element of the Tallahassee-Leon County Comprehensive Plan.

As you are aware, a community's comprehensive plan is the legal document that codifies community vision on where and how our community will develop over a specified timeframe. We would like to start by saying that we strongly support the overarching goal of keeping urban lands urban and rural lands rural. If carefully crafted, this can be a strong foundation for protecting sensitive natural lands, limiting sprawl, creating more vibrant urban areas, and limiting the cost to taxpayers for costly infrastructure expansion into rural areas.

We wish to make several recommendations regarding the update. As an aside, our recommendations below were based on the documents released in mid-March. Considerable additional documents and policy changes were released with the March 26 LPA agenda. Due to time constraints, we have only undertaken a cursory review of these additional documents which include a plethora of information.

- **Timeline – We continue to believe that the comprehensive planning update process is rushed and urge you to recommend that the City and County pause the process, address identified community concerns, conduct one or two citizen workshops to discuss the updates with the public, and postpone the transmittal process until at least the fall to allow time for a more robust review by all involved.**

  While we understand that the comprehensive plan update process has been under way since 2015 with reports, surveys, and public meetings subsequently undertaken, it was not until January 2025 that the roll out of goals and objectives began, followed by a draft and very general Future

Land Use Map (FLUM), and finally policies and a detailed FLUM in mid-March. Hundreds of pages of new information were released with the March 26 LPA agenda, including new provisions in the previously released updated goals, objectives, and policies, a 90-page addendum of additional policies that are up for adoption, a 155-page document outlining changes, and more, This chronology is shown in **Attachment 2** of the agenda packet.

The result is that citizens and members of the LPA have only been able to review all the documents in their entirety since March 26, less than a week before the April 1 LPA Transmittal Hearing.

Why the rush? This process began almost a decade ago, and while a number of public meetings were held to gather public input at the front end, only minimum legal requirements are now being met to review the proposed updates, even as new information continues to be released. We urge the LPA and the Tallahassee and Leon County Commissions to meet not just the minimum statutory requirements but also the intent of robust citizen participation in the planning process.

1. **Comparison Review – On March 26, the 155-page Future Land Use Crosswalk was released which identifies the differences between current goals, objectives and policies, and those proposed. With a week until the meeting, there is insufficient time to review all of the changes to gain a clear understanding of the implications. This provides further justification for the need to pause the process.**

As but one example, with regard to expansion of the currently adopted Urban Services Area (USA), the existing plan Objective 1.1 [L] notes:

> *"The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development."*

There are several objectives and policies related to the USA in the proposed plan, but none seem to address that the USA is intended to accommodate 90% of new residential dwelling units within the County. This appears to be a substantive change that merits informed evaluation by members of the community. We expect there are numerous other examples.

The following recommendations relate to statutory requirements related to the comprehensive plan update process:

2. **Measurable Objectives – 163.3164 (36), F.S. related to the Community Planning Act includes this definition: "Objective' means a specific, measurable, intermediate end that is achievable and marks progress toward a goal." There are numerous objectives in the update that are neither specific nor measurable and need refinement.**

   The need for measurability is further reinforced in the Tallahassee-Leon County Planning Department report [2016], ***Vibrant Tomorrow: State of the Land Use Element***, which is included under the data and analysis drop down on the update webpage. On page 9, it discusses the lack of measurable objectives in the current plan, and includes the following example:

   Current Plan, Immeasurable: *Land Use Element Objective 3.2 – Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planning integration into the existing transportation network.*

   Vibrant Tomorrow goes on to note: "The above objective is vague regarding how the provision of convenient, aesthetically pleasing and compatible location of office uses should be achieved, resulting in an immeasurable objective. No specific area of Tallahassee or Leon County is referenced, nor is "convenient" defined. **Overall, the above objective does not provide any direction or measurable provisions to achieve its purpose or mark progress towards a goal."** [emphasis added]

Proposed Update, Immeasurable:

Below are a series of a few examples of immeasurable objectives in the proposed plan. In most cases, these are worded in the form of goals and not objectives, all include general adjectives and are not specific, and none are measurable.

Objective 1.2 *– Preservation of Natural Areas: Preserve natural areas, including conservation areas, environmentally sensitive features, and water resources. Prioritize and maximize the protection of these areas when making decisions regarding land use, transportation, and infrastructure extension.*

Objective 2.1 *– Growth and Population Accommodation. Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.*

Objective 3.1 *– Residential Character: Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.*

Objective 4.1 *– Missing Middle Housing: Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhood commercial uses, and public transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and a growing demand for walkability.*

Objective 5.1 *– Economic Health: Initiate community planning, urban development, and redevelopment strategies that prepare business, production facilities, trades, and related activities that provide the livelihoods of the population to withstand positive and negative changes in the economy and continue providing jobs and incomes to support the community.*

Objective 6.1 – Land Use and Transportation Coordination for Livability: Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

3. **Data and Analysis – 163.3177(1)(f), F.S. requires that all elements of the comprehensive plan and plan amendments "shall be based upon relevant and appropriate data and an analysis by the local government.... To be based on data means to react to it in an appropriate way and to the extent necessary indicated by the data available on that particular subject at the time of adoption of the plan or plan amendment at issue." This information appears to be missing on key topics.**

The **data and analysis drop down menu** includes hundreds of pages of information but there does not appear to be accompanying analysis of what information within each of those studies informed the creation of the update.

- As one example, in a March 19 interview with Matt Hoffman of WCTV, staff indicated that the community requires 23,000 new housing units by 2050. As of March 26, while the data includes the required population projections by BEBR, there does not seem to be detailed population accommodation projections identify the basis for 23,000 units and whether and how the plan meets this need. This could be supported by the following data: How many units are currently available in the USA area and the non-USA area?
- How many units are currently approved but not yet completed, (for example, in Welaunee), and how are these included in the calculations?
- How many units would be available in each area if current zoning reached build out, and what year is build-out anticipated based on BEBR projections?
- How many units will be available in each area with just the updates to the FLUM?
- How many units will be available if the new FLUM is adopted, and zoning is updated to be consistent with the FLUM?

In a related area, the 2023 Live Local Act made considerable mandatory changes to allowable heights, densities, and more in all communities in the state. Tallahassee

has prepared the **Live Local Height Tool** to analyze the impacts of this act on development patterns in the City. However, it is our understanding that this data was not used in the preparation of the FLUM because it was not required. It would be helpful to incorporate this data.

4. **Internal Consistency – 163.3177(2), F.S. notes: "Coordination of the several elements of the local comprehensive plan shall be a major objective of the planning process. The several elements of the comprehensive plan shall be consistent."** Among other things, this means that the goals, objectives, and policies included in this element must be consistent with provisions in the other adopted elements. This also relates to the issue of timeline, as careful review of consistency between the elements is not feasible with such a short timeframe.

The final series of recommendations relate to keeping urban areas urban, as identified as the overarching goal of the plan:

5. **Keeping Urban Areas Urban – Again, 1000 Friends strongly supports this concept. But we feel that further steps could be undertaken as part of the update.**

   Planning Period – It is within the authority of the city and county to have the plan address the 2050 planning horizon but include provisions to address development demand over a ten-year time frame instead of by 2050. This allows "phasing" development allowances as conditions change over the coming decades. While the planning horizon of 2050 is reasonable, we urge you to shorten the development capacity timeframe to 10 years to allow for needed development but provide the opportunity to refine the plan for future changing conditions.

   Authority to have two timeframes is included in 163.3177(5)(a), F.S., which states: "Each local government comprehensive plan must include at least two planning periods, one covering at least the first 10-year period occurring after the plan's adoption and one covering at least a 20-year period. Additional planning periods for specific components, elements, land use amendments, or projects shall be permissible and accepted as part of the planning process."

The authority to address development capacity over a shorter time frame is included in **163.3177(1)(f)3, F.S.** which further states: "The plan must be based on at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period...."

Concentration of Urban Development – While directing development to within the USA is appropriate, a more refined approach is needed to determine where in the USA more intensive development is most appropriate.

The broadbrush approach taken would set the stage for the upzoning of large areas within the USA, without consideration of other planning factors. For example, Objective 2.6 – Recognizable Places, calls for redevelopment with higher density and intensity land uses along several corridors, and Policies 4.2.2 and 4.2.3 on Transit Oriented Development (TOD) outline density incentives to promote walkability and transit. Instead of intensifying allowable future land uses in large areas, it would make more sense to identify appropriate corridors for greater density, craft desired incentives, and update the FLUM to support intensified development in those areas while leaving other areas for less intensive development. This also is a more fiscally responsible approach and will not require even greater economic incentives to compensate for areas that may have been inappropriately densified in this update.

Making Urban Areas More Livable – Vibrant urban areas are walkable and bikeable, support transit, and include a mixture of residences, offices, and commercial uses in close proximity. Having separated pockets of more urbanized development can be counterproductive.

A concern with the approach of having large areas approved for more intensive development is that instead of creating concentrated and cohesive urban area(s), it will create scattered pockets of denser development that may not support TOD or greater urban design goals.

Density Increases – We understand and support the need for increased density in urban areas based on need and the appropriateness of location. However, in the interest of transparency, we believe there should be clearer messaging on this issue as this document is intended to reflect the community vision.

In response to citizen concerns about density increases, the routine response (as seen in Attachment 7, Public Comment) is that this update focuses on changes to future land use, and does not involve zoning changes that would be needed to increase density. While this is technically correct, it appears disingenuous.

What is not mentioned is that if the FLUM and policies are updated, it establishes the legal foundation needed to make zoning changes to reflect the "community vision" that increased density is appropriate in certain areas. For example, as shown in the LPA Attachment 6, Land Use Comparison, the proposed Urban Residential Preservation category doubles allowable density from "6 units per acre" to "12 units per acre 5,000 sq ft per acre."

Based on these comments, we urge you to slow the process down to address technical issues, reexamine the urban policies, and provide more opportunity for citizen input through workshops and other means.

With thanks,

Vivian Young

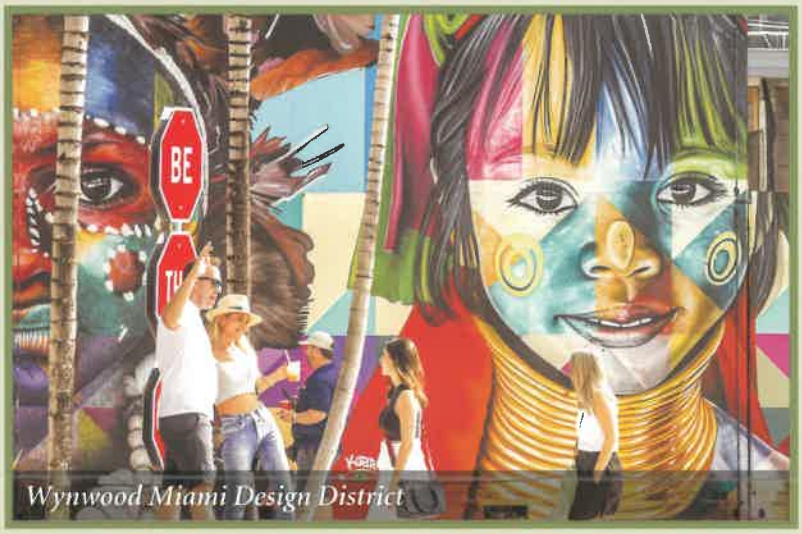
2023-2024 ANNUAL REPORT

1000 FRIENDS of FLORIDA



Coastal South Florida Aerial

FROM THE PRESIDENT

Over our history, 1000 Friends of Florida has issued a series of landmark reports projecting how our state's relentless population growth, and how it is absorbed, would affect our environment, economy and quality of life. In the past year, we burnished that legacy with the release of *Agriculture 2040/2070*, focusing on the impacts of future development on agricultural lands.

Agriculture in Florida isn't just a $100 billion-plus industry supporting more than 1.2 million jobs. It also provides valuable ecosystem services, like protecting water supply and quality, mitigating flooding, enhancing climate resilience, sequestering carbon, harboring wildlife, promoting outdoor recreation, and more.

If Florida continues to follow its current development pattern as it takes in millions of additional residents between now and 2070, it will lose 2.2 million acres of agricultural land — 120 acres every day, according to *Agriculture 2040/2070*, which we produced in partnership with researchers at the University of Florida. But if development is 20% more compact, and priority natural lands are preserved, 850,000 fewer acres of agricultural land will be lost.

Wynwood Miami Design District

In addition to our report, we shared these findings with nearly 700 attendees in a webinar, as well as through extensive enhancements to our website, media outreach and presentations to interested groups across Florida. We met with agricultural leaders to discuss strategies to conserve farmland and maintain its environmental benefits. We plan to continue this important work in the year ahead.

Also this past year, our activities included a workshop on how best to prepare for growth by 2040 in Escambia and Santa Rosa counties. While we have conducted similar events in eight other counties in recent years, this was the first in which we also projected the impacts of development on water quality. With our University of Florida partners, we found that more compact development and environmental land conservation would reduce nutrient pollution in area waterways by 75% — a result that could strengthen the case for better planning in counties throughout the state.

In another highlight from the past year, we led a successful campaign with local planning and conservation advocates to reverse preliminary approval by the Palm Beach County Commission of a luxury subdivision on 600 acres of conservation land in the county's Agricultural Reserve. The precedent from this victory provides hope for other threatened conservation lands in the Ag Reserve and across Florida.

These and the wide array of additional activities and accomplishments for 1000 Friends summarized in this report would not have been possible without the generous support of our donors. We need that support to continue to succeed. We can't waste any time resting on our laurels. Together, we have a state to save.

Paul Owens
President

1000 FRIENDS of FLORIDA

2023-2024 MAJOR ACCOMPLISHMENTS

Ocean Drive Art Deco

SAVING SPECIAL PLACES

- **Leading on land conservation** — Worked with allies to obtain $250 million in 2024-2025 state budget to protect high-priority natural and agricultural land, including portions of Florida Wildlife Corridor, from development. Helped enact additional $100 million annual commitments for land conservation and public land management from Seminole gambling compact revenues.
- **Enhancing Florida agriculture** — Released GIS-based analysis, *Agriculture 2040/2070*, advocating planning to reduce potential loss of agricultural land in Florida to development; shared findings through report, website, webinar, virtual and in-person presentations and media outreach. Met with statewide agricultural leaders to identify and promote common goals.
- **Investing in water quality** — With allies, obtained $1.5 billion in state budget for water quality programs and projects, including $740 million for Everglades restoration, $75 million for Indian River Lagoon and $55 million for natural springs. Helped secure additional commitment of $79 million annually for water quality improvement grants from Seminole gambling compact revenues.
- **Strengthening water protections** — With allies, passed legislation to improve stormwater regulations, and defeat bills to eliminate local wetland protections and open portion of Estero Bay Aquatic Preserve to development. Helped end moratorium on local fertilizer regulations. Co-chaired statewide group of advocates promoting water quality improvements. Presented webinar on water quality threats from land application of sewage sludge. Testified before regulators for stronger protections for natural springs.
- **Combining forces** — Participated in weekly meetings with representatives of more than 20 conservation allies to coordinate strategy on common goals. Worked with organizations representing county and city leaders, major employers, universities and more.
- **Conserving land in Seminole County** — With allies, helped earn final, unanimous County Commission approval to create permanent local land conservation program, based on principle that protecting high-priority natural land from development is a fundamental obligation of local government.
- **Restoring the Everglades** — As longtime member of Everglades Coalition, alliance of 57 local, state, and national conservation and environmental groups, continued to promote full restoration of Greater Everglades Ecosystem.
- **Reuniting the Rivers** — Maintained leadership in coalition seeking restoration of the Ocklawaha River through legislative initiatives and local grassroots efforts as co-chair of its science committee.
- **Preserving Florida's forests** — Worked with coalition to strengthen protections for forests and enhance water quality.

BUILDING BETTER COMMUNITIES

- **Defending planning at the Capitol** – Rallied opposition through testimony, email alerts and newspaper op-eds to legislation that would weaken community planning. Led successful campaigns against bills to weaken limits in state law on sprawling development, block citizen challenges to environmental permits and increase pressure on local governments to greenlight coastal construction.
- **Safeguarding communities** — With allies, garnered $145 million for Resilient Florida community grants in state budget, and additional $100 million annual commitment for resilience grants from Seminole gambling compact revenues. Helped pass law requiring owners to disclose previous insurance or government payouts for flooding when selling property. Shared results of our report, *Florida's Rising Seas: Mapping Florida's Future*, in presentations to audiences throughout state.
- **Upholding Florida's history** — With allies, protected historic communities — including St. Augustine, Palm Beach and Key West — from new law threatening historic buildings in coastal communities with demolition. Helped obtain $8.45 million in historic preservation grants.
- **Advocating for affordable housing** — As a member of the Sadowski Coalition, successfully appealed for robust state funding for workforce housing, with Legislature dedicating $548 million in 2024 session.
- **Promoting fiscally responsible growth** — Commissioned research paper, and shared results in webinar, showing compact urban development generates higher local tax revenue than sprawl, while costing less to provide with public services.
- **Encouraging bay-friendly development** — In future growth and development report and presentation for Escambia and Santa Rosa counties, showed how compact development and conservation land protection could reduce harmful nutrient pollution in Pensacola and Perdido Bays, benefiting region's environment and economy. Convened advisory group of leaders and planners from region to recommend policies to promote more environmentally and fiscally sustainable development.
- **Winning in Palm Beach County** — Led successful effort with local organizations and concerned citizens to reverse County Commission's preliminary approval of luxury housing development proposed for 600 acres of conservation land within the county's Agricultural Reserve, through meetings with commissioners, a press conference, email alerts, comment letters and public testimony.
- **Standing up for Martin County** — Advised citizens proposing locally funded land conservation program, and rallied support for successful campaign to place program on November 2024 ballot for voter approval. Continued to serve on advisory board of the Guardians of Martin County. Monitored ongoing review of county's comprehensive plan.
- **Enhancing Orange County rural protections** — Provided expert advice to citizens seeking greater development protections for rural areas in Orange County; endorsed proposed charter amendment in letter to county commissioners and rallied support among Central Florida members.
- **Holding the line in Miami-Dade County** — As fiscal sponsor and steering committee member in coalition dedicated to smart growth and environmental protection in Florida's largest county, helped organize opposition to proposals for development beyond Miami-Dade's urban development boundary.
- **Promoting conservation in Lake County** — Rallied support through testimony and email alerts for successful effort to place local land conservation program in Lake County on November 2024 ballot.
- **Defending Marion County agriculture** — With comment letter and testimony, joined successful opponents of proposal to weaken development protections in Farmland Preservation Area.
- **Envisioning Lake Wales' future** — Maintained support for community effort to develop long-range plan for environmentally and fiscally sustainable development in historic Polk County city. Wrote newspaper op-ed and testified in support of completed plan before city commissioners, who unanimously endorsed it.

CONNECTING PEOPLE WITH PLANNING

- **Tracking legislation** – Monitored dozens of bills on planning and other topics, posting and updating details on website; alerted more than 20,000 followers to actions and opportunities for impact in regular emails and social media posts. Presented legislative briefings to allied and citizens' groups during and after session.
- **Educating citizens and professionals** — Attracted more than 7,900 attendees to free 2023-2024 Dr. John M. DeGrove webinars and online seminar, offering range of professional credits at no charge. Updated and expanded website with webinar and seminar recordings and presentations, and additional information on planning and conservation topics.
- **Promoting conservation planning** — Presented four-part online seminar on planning to protect Florida Wildlife Corridor. Met with stakeholders in statewide conference and in regular online meetings to develop and execute strategies to protect Corridor. Posted webpages featuring maps on conservation, agriculture, impacts of development, future land uses and more for Florida's 67 counties.
- **Reaching out** — Provided technical assistance and advice on community planning issues to concerned Floridians in communities throughout the state; addressed citizens' and students' groups; shared information at community events throughout Florida; interviewed by print and broadcast reporters on multiple occasions on legislative, planning and conservation issues; connected regularly with thousands through email alerts, social media posts.
- **Opening opportunities** — Provided internships with stipends for undergraduate and graduate students to conduct projects and author position papers on planning and conservation topics.

Florida's Future Leaders

The C. Allen Watts Young Leaders Program allows for paid internship opportunities to further the mission of our organization. Mr. C. Allen Watts was a founding member of 1000 Friends of Florida and member of the Board of Directors from 1994 to 2013. A longtime chair of the legal advocacy committee, Allen played an instrumental role in 1000 Friends' many landmark legal challenges to uphold the state's growth management system. He was a highly respected government and land-use attorney who took a special interest in mentoring new lawyers, inspiring his family to launch this program in 2022 in his honor. This program is funded by 1000 Friends Board member Mark Watts, his sister, Kristi Putnam, and C. Allen Watts' widow, Margaret Morris, in memory of their father and husband.

We are proud of our 2023-2024 student interns and thank them for their hard work this year!

Subject: ATN Revisions to Comp Plan Update

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

Hello Susan,
The Alliance of Tallahassee Neighborhoods (ATN) is in the process of reviewing the comp plan updates. While there are certainly objective and policies that we support throughout the updates, in this email I'm sending you our suggested revisions and additions for five topic areas:

1. Urban Residential Preservation,
2. Sub Urban Residential Preservation,
3. Recognizable Places, and two related to mobility:
4. Road Projects Environmental and Neighborhood Protection and
5. Transit – Increasing StarMetro Ridership.

These are in separate files in the attachments. I'm sending them as pdf files. If you'd rather have them in MSWord, please let me know.

Our intention, of course, is that these revisions and additions be integrated into the draft updates prior to transmittal to the State. We are readily available to talk with you or other planning staff about the revisions should that be helpful.

On a related note, we strongly support extending the timeframe for the review of the GOPs by neighborhoods and other entities, ideally by 2-3 months.

We appreciate your availability to date to meet with us or respond by email to our questions. That's been very helpful to our review. We look forward to hearing from you on our proposed revisions and how they can be incorporated into the draft presented to the commissioners prior to the transmittal hearing.

Sincerely,

Mike Brezin, ATN Comp Plan Lead

Alliance of Tallahassee Neighborhoods

April 7, 2025

Dear Mayor, Chair of the Leon County Commission, and Commissioners:

ATN has supported and participated in the Comp Plan update throughout the update process. Based on these actions, we are asking your support on two items: more time for community and staff review of the Plan and data, some of which has just been released last week; and help getting our recommendations clarifying neighborhood protections adopted.

1. **More time for community and staff review**. The proposed Comp Plan is not exactly a snap to read- it's long and complicated! Our neighbors are trying to participate in this important effort, but, for a lay audience it takes time to read, digest, and discuss the specific, extensive, and complex Plan contents. Our neighborhoods are asking for adequate time for engagement, as did the speakers at the recent LPA Workshop. Staff also need time to respond to public input and revise and clarify the Plan where appropriate.

   While the updating process has been going on for a while, the release of the Plan and related information is very recent. The contract with Halff Associates allocated 6 months for the steps of review and transmittal. We've not been given nearly that amount of time and not all the materials were posted online for public review until as late as last week! As much as we all want the Plan updates DONE, there is no legally required hard and fast deadline. Please give us 2-3 months to clarify the Plan's specifications and develop broader neighborhood support. We will be living with this document for a very long time.

2. **Assistance with adopting our recommendations for clarifying neighborhood protections**. As neighborhood leaders, we've discussed the Plan among ourselves and with city staff. The current draft Plan is too vague to protect both neighborhoods that do and do not want non-residential development. To provide initial feedback, we've made focused recommendations (detailed in attachments to this email) in these Plan topics:
   1. Urban Residential Preservation,
   2. Sub Urban Residential Preservation,
   3. Recognizable Places
   4. Road Projects Environmental and Neighborhood Protection
   5. The Multi-Modal Transportation District
   6. Transit – Increasing Star Metro Ridership.

   Midtown- Please do not put an Urban General overlay on Midtown, which would nullify the upcoming Midtown Master Plan which the City Commission recently voted be developed.

   We seek your help in getting our recommendations incorporated into the Plan prior to Transmittal. These recommendations are attached to this email for your review and they have been provided to staff.

Sincerely,
Kathy McGuire, Chair
Alliance of Tallahassee Neighborhoods

Multimodal Transportation District

Current policies implementing the Multimodal Transportation District (District) have been in effect since 2011. The District was established to meet State statutory requirements for creating a transportation concurrency exemption area. The current Plan contains measurable standards and targets for mixed land use and enhanced mobility in the District.

There are neighborhoods within and adjacent to the District that are affected by its implementation (see map). These neighborhoods will benefit from improved transit and walkability. However, numerous developments within the District have been granted exceptions to the land development standards, particularly along State roads. The impact of these exceptions on the goals of the District has not been evaluated. Additionally, improvements to the transit system called for in the current Plan have not been met.[1]

ATN recommends that an evaluation of the implementation of the District, using the measures contained in the current plan, be provided to the public and the Commissions prior to the adoption of this objective and policies.

Objective 2.7 – Multimodal Transportation District (MMTD):
Facilitate the safe and comfortable use of multiple modes of transportation and urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

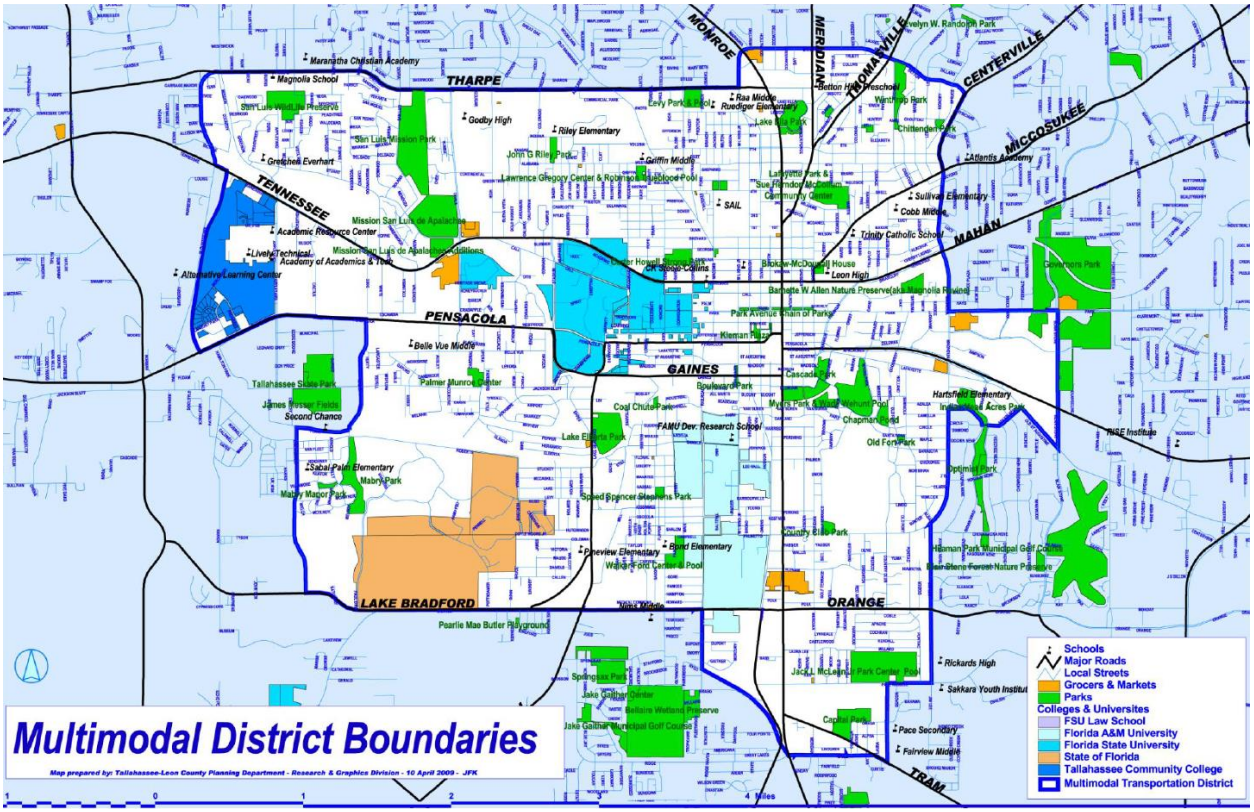
Policy 2.7.1 – MMTD Implementation:
The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County departments through the Multimodal Transportation District Management Plan and corresponding MMTD Code.

Policy 2.7.2 – Land Use Within the MMTD:
The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:
Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities

[1] Referring to the District, Mobility Policy 1.1.13.1 states: *Priority should be given to funding of improvements that increase the availability, speed, frequency, duration and reliability of transit serving these areas*.

Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD:
Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:



- Building placement.
- Block size standards shall encourage small blocks and an interconnected street network.
- Sidewalks with widths based on context.
- Facade transparency.
- Parking location.

Policy 2.7.4: Minimum Parking Requirements:
Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

Policy 2.7.5 – Transit in the MMTD:
The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside the areas; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation:
Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

Map of Proposed Multimodal District

ATN Suggested Changes to Objective 2.6: Recognizable Places

Plan Goal 2: Distinct Urban and Rural Places

ATN Introduction

The places listed in Objective 2.6 are opportunities for redevelopment and infill in areas that can promote walkability and transit. Most of the plans for these areas were prepared in the early 2000s. A number of recommendations in the plans have been implemented.

The proposed Objective promotes redevelopment primarily through density incentives (See the proposed language for redevelopment of the South Monroe corridor, the North Monroe Corridor, and West Pensacola Street. This strategy allows development at a greater density than typically allowed if the development includes design features that will support a more walkable environment. However, lessons learned from Gaines Street revitalization show that more strategies are needed to ensure continued success. These include:

- FDOT District 3 compliance with Complete Street program.
- Coordinated public/private partnerships to provide areawide stormwater and parking facilities, thereby allowing more intensive use of property.
- Amelioration of brownfield sites, if needed.

ATN supports policies to promote redevelopment. We recommend changes to the draft language to:

1. focus government resources on strategies that have been shown to have a positive effect on redevelopment;
2. add specificity to tasks and due dates to make them measurable
3. boost community involvement in place development and redevelopment.

Note: Blue underlined text indicates suggested changes to the draft Objective 2.6 Recognizable Places text. ~~Blue strikethrough text~~ indicates deletions.

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces:

The local governments shall provide for land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

Policy 2.6.2 –

Policy 2.6.2.a. South Monroe Corridor:

~~Prioritize infrastructure improvement and redevelopment/infill development incentives for the South Monroe corridor connecting Downtown to the Southside Investment Area, to ensure a vibrant connection between the central urban core to a historically under-resourced area.~~ By 2026 the City of Tallahassee shall complete a plan of action for providing the necessary stormwater and parking improvements needed to implement the South Monroe Corridor plan. Public and private interests in the corridor shall participate in the preparation of the action plan.

Policy 2.6.~~3~~ 2.b – North Monroe Corridor: (This plan was not found on the Planning Department website so no amendments are proposed).

Encourage the redevelopment of the North Monroe Corridor by providing higher density and intensity land uses between Tharpe Street and Interstate-10 and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall include design standards to promote walkability and require enhanced landscaping along the corridor. The land development regulations shall also provide provisions for nonconforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.2.c – West Pensacola Street Corridor (no date):

By 2026, the Planning Department shall report on the status of implementation of the recommendations of the West Pensacola Street area plan and an action plan for further implementation and propose modifications. This report shall be prepared in cooperation with residents and private interests in the area. ~~Encourage the redevelopment of the West Pensacola Corridor by providing higher density and intensity land uses between Capital Circle and Stadium Drive. Land development regulations shall include design standards to promote walkability and require enhanced landscaping along the corridor and shall identify alternative design standards that apply when achieving the Multimodal Transportation District standards is not possible.~~

Policy 2.6.2.d– Woodville Sense of Place:

Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.2.e – Future Downtown Development:

The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

ATN Suggested Changes to Draft Sub Urban Residential Preservation Land Use Category

Introduction

Planning Staff has stated that sub urban residential neighborhoods should retain their established neighborhood character while allowing for a land use category-wide increase in housing density. The following changes to the proposed Sub Urban Residential Preservation Future Land Use Category are intended to achieve this goal. That is, to ensure that new development and redevelopment is compatible with neighborhood character, infrastructure needed to mitigate impacts will be provided, and to address safety concerns that may deter pedestrian activity.

Note: Blue underlined text indicates suggested changes to the draft Sub Urban Residential Preservation Land Use category definition text. ~~Blue strikethrough text~~ indicates deletions.

Policy 2.8.8 – Sub-Urban Residential Preservation Future Land Use Category:

The intent of Sub Urban Residential Preservation category is to preserve these historic and/or established neighborhoods and their development patterns. Neighborhoods are characterized by a walkable street network; consistent building heights and setbacks; consistent lot coverage; and a mature tree canopy.

The ~~intent of the~~ Sub-Urban Residential Preservation land use category ~~is to~~ allows for low to medium density ~~neighborhood-scale~~ residential uses and neighborhood supportive facilities in a manner consistent with existing development patterns and neighborhood character. ~~development in a manner that is sensitive to the character of existing residential areas. Principal uses within the district shall include residential development and N~~neighborhood supportive facilities consist of~~such as~~ community services, recreational amenities, and light infrastructure.

The Sub-Urban Residential Preservation category shall allow for residential uses at a maximum density of eight dwelling units per acre. Allowed residential housing ~~building~~ types are single-family detached houses, single-family attached, and duplexes.

Pedestrian safety and comfort shall be prioritized over vehicle speed. Auto-oriented uses such as gas stations or drive-thrus are not permitted in order to protect neighborhoods from any negative impacts associated with increased traffic and the pedestrian-oriented neighborhood character.

Community service facilities are limited to a maximum of ~~5~~3,000 square feet of building area, or a sewage flow estimated not to exceed 900 gallons per day, where central sanitary sewer is not available. Non-residential uses are not permitted.

The following special conditions shall apply to the **Sub-Urban Residential Preservation Future Land Use category and shall be included in the City Land Development Regulations:**

1. ~~1.~~ The Sub-Urban Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet the majority of these criteria:

    i. Existing land use within the area is predominantly residential
    ii. Majority of traffic is local in nature
        a. Predominance of residential uses front on local street

b. Relatively safe internal pedestrian mobility

iii. Densities within the area generally of eight units per acre or less

iv. Existing residential type and density exhibits relatively homogeneous patterns

v. Assessment of stability of the residential area, including but not limited to:

a. Degree of home ownership

b. Existence of neighborhood organizations

Zoning districts within the Sub Urban Residential Preservation Category allowing densities over 6 units per acre shall be applied only after City Commission approval of a neighborhood plan which includes, at a minimum but not limited to, the following elements:

a. Identification of desirable neighborhood characteristics to be retained (e.g., building scale and placement, lot size, mature trees, and parks and other common open spaces).
b. Demonstration of ability to accommodate increased parking and stormwater runoff without negatively affected neighborhood character, or a funded plan to address these needs.
c. Improvements needed to achieve a higher degree of safety (e.g., streetlights, traffic calming) and the funding source for such improvements.
d. Design standards to ensure that the neighborhood character is preserved.

2. Uses and development plans may be denied or permitted at lower densities and intensities than the maximums specified in the Comprehensive Plan to achieve consistency with the intent of this district to preserve neighborhood character.

3. ~~2.~~ Development requirements shall be identified in the land development code to provide effective visual and sound buffering (either through vegetative buffering or other design techniques) for community facilities, including ancillary facilities to religious facilities, where they adjoin residential areas in the Suburban Residential land use. Cemeteries or religious facilities used solely for religious functions shall be exempted from these requirements.

(Note – It is not clear where this policy is intended to apply, or what deficiencies exist in current ordinance. The public needs clarification on these items.)

Policy 2.6.2.f – Bradfordville Study Area:

The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000. It is included in the Addendum to this element and remains part of the Comprehensive Plan. ~~and~~ It is depicted on the following map. Development in the Bradfordville Study Area shall continue to be subject to the ~~development standards for the area included in the land development regulations and as specified in the land use category(ies) in Objective 2.8.~~requirements of the Bradfordville Area Plan and the requirements of the settlement agreement between Leon County and Centerville Rural Community Association, Inc. et al, Leon County circuit court (1998.)

ATN Suggested Changes to Goal 6: A Balanced Transportation Network

Focus: Transit -- Increasing Metro Ridership

Comprehensive Plan policies regarding transit address coverage of service, improving sidewalk connection between neighborhoods, business, and transit stops, and adding amenities to transit stops. There are no policies addressing a major disincentive to using transit: **the lengthy time transit riders must wait for a bus. Most routes are served every 45 to 60 minutes**.

The current Comprehensive Plan contains specific policies to address funding. Although they have not been implemented, they should be retained, as frequency of service is at least as important as the provision of sidewalks and benches to boost ridership.

The current draft contains the following text:

Objective 6.8 – Transportation Demand Management:
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.2 – Increase Transit Ridership:
StarMetro shall identify and implement strategies for increasing transit ridership, including, but not limited to advertising campaigns, easily accessible and accurate rider information, provision of park and ride locations, bus stop improvements, shorter headways, and route revision and expansion through the planning timeframe. Specific strategies should be reviewed and adopted on a 5-year interval including annual ridership reporting and goals, evaluation of gaps in mode shift, and incorporation of emerging technologies

Add the following objective (with an updated target date) and policies:

Objective 2.4: [M] (EFF. 12/15/11) FUNDING OF TRANSIT
By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.
Policy 2.4.1: [M] (EFF. 12/15/11)
Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.
Policy 2.4.2: [M] (EFF. 12/15/11)
Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program.

ATN Suggested Changes to Goal 6: A Balanced Transportation Network

Focus: Road Projects and Environmental and Neighborhood Protection

Introduction

There have been successful collaborations between public works departments and neighborhoods for roadway improvements. Two examples are Lafayette Street and Betton Road. The current Plan's Mobility Objective 3.1. and its policies recognize the need to mitigate impacts of road projects on the environment and neighborhoods.

Objective 1.3 (below) and its related policies should be retained and inserted prior to Objective 6.1 Land Use and Transportation Coordination for Livability.

Suggested Addition

Objective 1.3: [M] (EFF. 12/15/11) – Environmental and Neighborhood Protection

Evaluate and minimize impacts of transportation projects on the natural environment and neighborhood integrity by using transportation demand reduction strategies to maximize existing roadway capacity, reduce the need for new roadway construction or expansion, reduce peak time traffic, reduce vehicle miles traveled, and reduce greenhouse gas emissions and other environmentally damaging pollutants in corridors, greenways, and aquifers when planning new or expanding existing transportation facilities

Policy 1.3.1: [M] (EFF. 12/15/11)

Evaluate the natural features of Leon County, as delineated in the future land use and conservation elements, to avoid fragmenting and degrading regionally significant natural resources, wildlife corridors, greenways, and aquifers when planning new or expanding existing transportation facilities.

Policy 1.3.2: [M] (EFF. 12/15/11)

Reduce demand for more and wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling and walking.

Policy 1.3.3: [M] (EFF. 12/15/11)

Coordinate with Commuter Services of North Florida and state agencies regarding transportation demand reduction strategies such as staggered work hours for major employers, ridesharing, and parking fees.

Policy 1.3.4: [M] (EFF. 12/15/11)

Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.3.5: [M] (EFF. 12/15/11)

Require an analysis that measures environmental and neighborhood impact prior to funding any new roadway alignments, construction, or changes to the traffic circulation system. The level and type of review may vary with the anticipated impact, and shall include community involvement.

Policy 1.3.6: [M] (EFF. 12/15/11)

Require tree plantings, where practical, for both new and old roads to increase screening, beauty, runoff control and reduction of summer heat. Existing trees shall be protected during transportation system development and maintenance.

Policy 1.3.7: [M] (EFF. 12/15/11)

Aesthetically enhance and provide added environmental protection to existing and new transportation corridors by the following methods which include but are not limited to:

a) Incorporating for new, or increasing for existing corridors, the number of green spaces/open spaces and pedestrian oriented areas.

b) Recognizing plantations as a significant part of the natural landscape when roads are being designed in areas of the County where they are present.

c) Encouraging the use of native vegetation and natural systems such as swales to control runoff.

d) Maintaining natural ground cover, canopy and understory where new roads are built.

e) Design public infrastructure improvements to minimize development impacts to protect designated canopy roads consistent with the Conservation Element.

f) Applying access management strategies that enhance the character of transportation corridors and gateways to the community by promoting shared access and consolidated signage and preserving green space for landscaping.

ATN Suggested Changes to Draft Sub Urban Residential Preservation Land Use Category

Introduction

Planning Staff has stated that sub urban residential neighborhoods should retain their established neighborhood character while allowing for a land use category-wide increase in housing density. The following changes to the proposed Sub Urban Residential Preservation Future Land Use Category are intended to achieve this goal. That is, to ensure that new development and redevelopment is compatible with neighborhood character, infrastructure needed to mitigate impacts will be provided, and to address safety concerns that may deter pedestrian activity.

Note: Blue underlined text indicates suggested changes to the draft Sub Urban Residential Preservation Land Use category definition text. ~~Blue strikethrough text~~ indicates deletions.

Policy 2.8.8 – Sub-Urban Residential Preservation Future Land Use Category:

The intent of Sub Urban Residential Preservation category is to preserve these historic and/or established neighborhoods and their development patterns. Neighborhoods are characterized by a walkable street network; consistent building heights and setbacks; consistent lot coverage; and a mature tree canopy.

The ~~intent of the~~ Sub-Urban Residential Preservation land use category ~~is to~~ allows for low to medium density ~~neighborhood-scale~~ residential uses and neighborhood supportive facilities in a manner consistent with existing development patterns and neighborhood character. ~~development in a manner that is sensitive to the character of existing residential areas. Principal uses within the district shall include residential development and N~~neighborhood supportive facilities consist of~~such as~~ community services, recreational amenities, and light infrastructure.

The Sub-Urban Residential Preservation category shall allow for residential uses at a maximum density of eight dwelling units per acre. Allowed residential housing ~~building~~ types are single-family detached houses, single-family attached, and duplexes.

Pedestrian safety and comfort shall be prioritized over vehicle speed. Auto-oriented uses such as gas stations or drive-thrus are not permitted in order to protect neighborhoods from any negative impacts associated with increased traffic and the pedestrian-oriented neighborhood character.

Community service facilities are limited to a maximum of ~~5~~3,000 square feet of building area, or a sewage flow estimated not to exceed 900 gallons per day, where central sanitary sewer is not available. Non-residential uses are not permitted.

The following special conditions shall apply to the **Sub-Urban Residential Preservation Future Land Use category and shall be included in the City Land Development Regulations:**

1. ~~1.~~ The Sub-Urban Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet the majority of these criteria:

    i. Existing land use within the area is predominantly residential
    ii. Majority of traffic is local in nature
        a. Predominance of residential uses front on local street

b. Relatively safe internal pedestrian mobility

iii. Densities within the area generally of eight units per acre or less

iv. Existing residential type and density exhibits relatively homogeneous patterns

v. Assessment of stability of the residential area, including but not limited to:

a. Degree of home ownership

b. Existence of neighborhood organizations

Zoning districts within the Sub Urban Residential Preservation Category allowing densities over 6 units per acre shall be applied only after City Commission approval of a neighborhood plan which includes, at a minimum but not limited to, the following elements:

a. Identification of desirable neighborhood characteristics to be retained (e.g., building scale and placement, lot size, mature trees, and parks and other common open spaces).

Community service facilities are limited to a maximum of ~~5~~3,000 square feet of building area, or a sewage flow estimated not to exceed 900 gallons per day, where central sanitary sewer is not available. Non-residential uses are not permitted.

The following special conditions shall apply to the **Sub-Urban Residential Preservation Future Land Use category and shall be included in the City Land Development Regulations:**

1. ~~1.~~ The Sub-Urban Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet the majority of these criteria:

    i. Existing land use within the area is predominantly residential
    ii. Majority of traffic is local in nature
        a. Predominance of residential uses front on local street

b. Relatively safe internal pedestrian mobility

iii. Densities within the area generally of eight units per acre or less

iv. Existing residential type and density exhibits relatively homogeneous patterns

v. Assessment of stability of the residential area, including but not limited to:

a. Degree of home ownership

b. Existence of neighborhood organizations

Zoning districts within the Sub Urban Residential Preservation Category allowing densities over 6 units per acre shall be applied only after City Commission approval of a neighborhood plan which includes, at a minimum but not limited to, the following elements:

a. Identification of desirable neighborhood characteristics to be retained (e.g., building scale and placement, lot size, mature trees, and parks and other common open spaces).
b. Demonstration of ability to accommodate increased parking and stormwater runoff without negatively affected neighborhood character, or a funded plan to address these needs.
c. Improvements needed to achieve a higher degree of safety (e.g., streetlights, traffic calming) and the funding source for such improvements.
d. Design standards to ensure that the neighborhood character is preserved.

2. Uses and development plans may be denied or permitted at lower densities and intensities than the maximums specified in the Comprehensive Plan to achieve consistency with the intent of this district to preserve neighborhood character.

3. ~~2.~~ Development requirements shall be identified in the land development code to provide effective visual and sound buffering (either through vegetative buffering or other design techniques) for community facilities, including ancillary facilities to religious facilities, where they adjoin residential areas in the Suburban Residential land use. Cemeteries or religious facilities used solely for religious functions shall be exempted from these requirements.

ATN Suggested Changes to Goal 6: A Balanced Transportation Network

Focus: Transit -- Increasing Metro Ridership

Comprehensive Plan policies regarding transit address coverage of service, improving sidewalk connection between neighborhoods, business, and transit stops, and adding amenities to transit stops. There are no policies addressing a major disincentive to using transit: **the lengthy time transit riders must wait for a bus. Most routes are served every 45 to 60 minutes**.

The current Comprehensive Plan contains specific policies to address funding. Although they have not been implemented, they should be retained, as frequency of service is at least as important as the provision of sidewalks and benches to boost ridership.

The current draft contains the following text:

Objective 6.8 – Transportation Demand Management:
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.2 – Increase Transit Ridership:
StarMetro shall identify and implement strategies for increasing transit ridership, including, but not limited to advertising campaigns, easily accessible and accurate rider information, provision of park and ride locations, bus stop improvements, shorter headways, and route revision and expansion through the planning timeframe. Specific strategies should be reviewed and adopted on a 5-year interval including annual ridership reporting and goals, evaluation of gaps in mode shift, and incorporation of emerging technologies

Add the following objective (with an updated target date) and policies:

Objective 2.4: [M] (EFF. 12/15/11) FUNDING OF TRANSIT
By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.
Policy 2.4.1: [M] (EFF. 12/15/11)
Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.
Policy 2.4.2: [M] (EFF. 12/15/11)
Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program.

ATN Suggested Changes to the Urban Residential Preservation Land Use Category

ATN Introduction:

Planning staff has stated that some urban neighborhoods would like to encourage higher density development and allow some non-residential uses while retaining neighborhood character. The following changes to the proposed Urban Residential Preservation Future Land Use Category are intended to achieve this goal. The revised language is intended to ensure that new development and redevelopment is compatible with neighborhood character, infrastructure needed to mitigate impacts will be provided, and to address safety concerns that may deter pedestrian activity.

Note: Purple underlined text indicates suggested changes to the draft Sub Urban Residential Preservation Land Use category definition text. ~~Purple strikethrough text~~ indicates deletions.

Policy 2.8.11 – Urban Residential Preservation Future Land Use Category:

The ~~intent of the~~ Urban Residential Preservation category applies to neighborhoods close to the city center that were generally developed prior to the 1960s. The intent of the Category is to preserve these existing historic walkable neighborhoods and their development patterns. Neighborhoods are characterized by a walkable street network; consistent building heights and setbacks; consistent lot coverage; and a mature tree canopy.

The Urban Residential Preservation category is intended to provide low to medium density residential uses with allowances for neighborhood-scale ~~accessory~~ commercial uses in a manner consistent with the existing development patterns and neighborhood character. ~~within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. A low-speed street network that supports walkable connections to neighborhood parks, schools, and other amenities.~~

~~-~~Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses ~~include~~ are residential and neighborhood serving nonresidential such as professional and personal services and community services. ~~uses. Neighborhood-scale accessory non-residential uses may be allowed based on the implementing zoning districts. Zoning districts that allow non-residential development shall include development standards to ensure the non-residential uses are scaled to serve the surrounding neighborhood, such as limited retail, offices, and community services, and that the uses do not cause excessive traffic, noise, light, odor, or dust impacts.~~ Auto-oriented uses, such as gas stations or drive-through facilities, are not permitted in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic.

Comments

What isn't Included in the Text Amendment but should be:

1) **At the beginning of the element, the articulation of a**n overarching strategy(-ies) of how the community should grow; i.e.: how sparse and rural the outlying areas should be; how dense and urban the inner portions of the City should be; whether the community will develop dense urban nodes (*walk-ups* and *Transit Oriented Development*); the degree to which existing neighborhoods may change, such as provide for greater density, inclusion of compatible non-residential uses; to what extent the density transition from rural to most urban will be based on the new urbanists' *Transect* concept (and what this is) and companion implementing context zones; the extent that design attributes and infrastructure design may used, in addition to density and intensity, and use type, to influence the location and character of future land use and development; whether regulation of design attributes and other approaches, such as mitigation of potential adverse sound, lighting, hazardous vehicular traffic flow, will be used to promote land use compatibility, particularly where different uses are intended to mix/colocate; and, how fine a grain of mixture of uses is intended in categories that will provide for mixed use.

   This kind of discussion can be very useful for providing the basis for the ensuing goals, objectives, and policies, as well as informing the reader of the overall intent of the various strategies represented in the element.

2) Contemplate whether large facilities that support AI and other intensive electrical energy uses require specific treatment within this element, and if so, provide appropriate guiding strategies.

3) Where the Planning Department (or other department) is specifically referenced in policies, as in being tasked to do something, it may be more appropriate to simply refer to the applicable local government (or both) given the potential for staffing resources to change over the timeframe of the plan.

4) Several of the policies relating to the particular future land use categories specify the detailed types of building types allowable, such as, *duplexes, triplexes, quadruplexes, live-work units*. This is detailed implementation content typically relegated to land development regulations and zoning. The listing of specific building types in the policies describing a future land use category could be construed to preclude those building types not listed, from the zoning district(s) that ultimately implement the future land use category. Likewise, the listing of specific building types in the policy describing the category could be construed to require all of the zoning districts that implement a particular category to allow all of the building types listed. This may or may not be problematic. But if it is problematic, it will also require a comprehensive plan amendment as a precursor to any land development regulation (e.g., zoning) amendment that would change what building types are allowed in a particular zoning district.

Policies 1.1.3 and 1.1.4. Both policies specify the required timing for updating maps to be "updated with current data during the Evaluation and Appraisal Review process." This terminology implies that the applicable maps could not be amended at an earlier point in time, if necessary, based on new information coming to light. Suggestion: revise these policies to state that the maps are to be updated no less frequently than during the Evaluation and Appraisal Review process. Note that the Evaluation and Appraisal Review of comprehensive plans is required to occur on a seven-year recurring schedule.

Objective 1.2. Suggestion: "infrastructure extension" should be revised to "infrastructure location and expansion" to be more encompassing.

Objective 1.2. This objective does not mention or hint at acquisition of natural areas (although this is explicitly stated in Policy 1.2.1) as a tactic. Suggestion: Revise the Objective as appropriate to include *acquisition*.

Policy 1.2.1. This policy guides the City and County to acquire sensitive areas. Does this provide for less-than fee simple acquisition (e.g., acquisition of easements) as well as fee simple acquisition? If so, good. If not, revise the policy as appropriate.

Policy 1.2.2. This policy specifies that Planning Department staff shall conduct an environmental analysis of proposed comprehensive plan amendments. The concept is good, but should the policy be revised to enable other City and Count staff to be utilized in such analysis? Potentially the Planning Department may not have sufficient or appropriate resources to accomplish this requirement.

Policy 1.2.4. This policy refers to *context-based* beautification, etc. Suggestion: Provide additional information on the *context* basis; i.e., is this referring to a context-based land usage/development concept, such as utilized by the Congress for New Urbanism, or Florida D.O.T., for example?

Policy 1.3.1. This policy requires the updating of the Greenways and Trails Master Plan every 10 years. Suggestion: revise this policy to provide for updating no less frequently than every 10 years.

Policy 1.3.2. The policy does not provide guidance on who is intended to develop and maintain urban recreation spaces.

Objective 1.5. This Objective calls for the implementation of strategies that "reduce and treat stormwater…" It is not clear what *reducing stormwater* means? [Stormwater is water produced during rain events]. Maybe some word or words are missing unless the drafters have, at their disposal, a method of reducing the volume of rain in our community.]

Policy 1.5.2. This policy provides that "Local governments shall incentivize the use of green infrastructure stormwater management systems… by providing a reduction in minimum green space requirements or other incentives." As drafted, this policy could be misconstrued to enables the provision of less green area to treat/manage stormwater. Suggestion: redraft for greater clarity to ensure that reductions in minimum green space requirements would result *in exchange for* provision of green infrastructure.

Policy 1.6.1. This policy includes the following: "These *regulations* shall be implemented as prescribed in the *regulations*…" Suggestion: Revise for directness and grammatical correctness.

Policy 1.6.2. This policy requires zoning and development standards, within the Urban Services Area, to promote the location of homes, jobs [and other destinations] within 20 minutes walking distance of each other. 1) Why not consider, instead, a minute standard? Within urban design and pedestrian mobility practice, this timeframe has gained more acceptance as a design standard. 2) Maybe the standard (20 minutes, 15 minutes, whatever) should be referenced as a maximum timeframe.

Policy 1.6.3. In this policy, consider replacing "higher" capacity with "greater" capacity.

Policy 1.6.5. In this policy, consider adding the term "runoff" after the word "stormwater" to provide greater clarity. Consider replacing "quantity" with "volume."

Policy 1.7.1. This policy specifies coordination with key regional partners on the protection of natural resources that extend beyond jurisdictional boundaries. The policy specifically mentions some agencies but does not mention any of the adjacent local governments (both within the State of Florida and the State of Georgia) nor does it mention the Apalachee Regional Commission or the Southwest Georgia Regional Commission. Recommendation: These are significant omissions; revise the policy to include these governments/agencies.

- **Policy 2.2.1.** This policy provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe.

  This standard appears to be significantly greater than needed to promote an efficient development pattern, particularly an urban development pattern. It would consume more forested land and agricultural land and require longer and require more costly infrastructure extensions than would be required by the respective population with even a modest urban development pattern (i.e., at a moderate development density/intensity). It is recognized that the location of the USA boundary on the map included in the draft amendment is approximately the same location as the USA boundary that has been in effect for several years. Recommendation: Revise this policy to reduce the percentage of surplus vacant and developable land necessary to accommodate population over time, so that a 50% surplus is not continually provided for over time, but reduced, to reflect urban intensities and densities with this portion of the USA; failure to do so could result in less-than urban development patterns sprawling within the USA.

Policy 2.2.5. This policy includes the following: "Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by….the ability to implement *conditions* or mitigation for the proposed development." The term *conditions*, as used here, likely refers to *conditions of approval* attached to a development order issued by the City or County for a particular development; this is not clear and may be too specific or technical for use in a comprehensive plan policy. Suggestion: the term *mitigation*, as provided, may be sufficient, or perhaps could be expanded to, the *mitigation of potential impacts*.

Policy 2.2.6. This policy provides for exceptions to the Urban Services Area concept to provide for higher density within areas near the Woodville Rural Community [future land use map category] when central sewer service is available and development connects to sewer. 1) Is it necessary to also set a maximum development density/intensity limit for this development within this policy? Or is this policy the basis for another policy that provides such limit? 2) This policy is imprecise with regard to location of its application. As written, it would allow the extension of higher density development in any area designated Rural or Rural Residential on the future land use map, so long as it is connected to sewer and subjectively located within the area described in the policy. Recommendation: review this policy and if appropriate, specify geographic limits to this exception to apply.

Policy 2.2.7. This policy requires consistency with the priority of urban services, the Future Land Use Map, and the Urban Services Area in conjunction with "the *widening* of existing streets and roads." Widening streets and roadways is not necessarily the same as adding additional lanes; and either approach, while traditionally responses to increased growth and travel demand, are not always consistent with other community objectives, such as protecting natural resources, protecting residential use from adverse impacts, creating human-scale environments that facilitate pedestrian activity. Suggestion: Instead of implying that streets and roads must always be widened to accommodate projected growth and demand, use alternative terminology such as *modifying*, *improving*, or *reconstructing*, which encompasses *widening* but is not limited to *widening*.

Policy 2.2.8. This policy promotes brownfield reclamation, building reuse, and adaptive reuse of structures, enabling these activities through provision of incentives in the land development regulations. The policy outlines the content of the land development regulations incentives; it does not include any provisions for mitigation of environmental or environmental health issues associated with the applicable brownfield sites. The policy also provides for "density and intensity bonuses of up to 25% modified development review thresholds." It is not clear if this intended to refer to maximum limits otherwise set out for the applicable future land use category in the comprehensive plan or zoning district (land development regulation) limitations or other. Suggestions: 1) Revise the policy to provide for or recognize that mitigation of adverse environmental conditions are prerequisite to any redevelopment of brownfield sites; 2) clarify the reference basis for density/intensity bonuses.

Policy 2.2.9. It is not clear how this policy does anything other than what is provided for in Policy 2.2.8., except to add the term "Greyfield." Suggestion: If appropriate, merge these policies together.

Policy 2.2.10. This policy specifies the protection of identified future rights-of-way from building encroachment; it does not specify what the appropriate setbacks would be, but includes a table specifying significant rights-of-way widths for the types of transportation facilities listed. A word of caution: The City of Tallahassee had, at one point, a similar approach wherein the implementing land development regulations (with their basis also established in the comprehensive plan) required a "special roadway setback," to protect identified corridors from development encroachment, and thus to make it easier and less expensive for the City acquire needed right-of-way for roadway construction. This regulation was challenged, as applied, as a taking, with no legitimate public health, safety, or welfare basis. [The City was able to prevail as its implementing regulations provided affected property owners with alternative design "exceptions" that made it possible, the plaintiff's instance, to

realize their development interests within the remaining, reduced buildable area resulting from the implementation of the setback]. The City thereafter also amended their regulations to minimize potential that they be used as a workaround to acquire right-of-way without appropriate compensation.

- **Policy 2.4.1.** This policy establishes the basis for a Transfer of Development Rights (TDR) program. It limits where development rights may be transferred, to areas designated Rural Residential or Rural Community on the Future Land Use Map. A TDR program can be a very helpful tool to help minimize sprawl and direct growth to the most appropriate areas of the community, areas where supporting infrastructure and facilities are already present or planned to be available soon, and areas targeted for redevelopment, and further economic development. By precluding areas within the USA from receiving transferred development rights, this policy becomes, at best, a marginally useful tool. Recommendation: 1) Revise the policy to provide for transfer of rights to within the USA, and in particular, areas targeted for greater densities and intensities. 2) Revise the policy to allow transfers of density out of the Lake Protection future land use category, as a tool to facilitate environmental protection of resources within the category. Suggestion: Add the word "program" in between "Rights" and "may" in the first sentence of the policy.

Policy 2.4.2. This policy would require expansions of the USA to be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area. This is appropriate. But the policy fails to provide any criteria or guidance for decision-makers to use to determine whether, and to what extent, and expansion of the USA is warranted; i.e., it seems of value, but insufficient, to simply require the undertaking of these analyses but to potentially place no particular regard to their findings.

Policy 2.5.1. This policy sets out some strategies for retrofitting/reconstructing suburban areas. The proposed strategies are consistent with current best practices in urban design. Some of the terminology used in the policy might, however, be improved. Some of the terminology would be well understood by urban designers and most planners but may be less well understood by the general public and policy-makers. Examples of terminology that might benefit from revision include:

- *Complete streets* (this term has not yet be explained at this point in the proposed comprehensive plan)
- *Continuous streetscapes with liner buildings close to the street*
- *Appropriate design elements*
- *Residential building types*

In regard to the strategy of *block size reductions* — small blocks are an integral attribute of walkable and human-scale development, but while many (most?) of the blocks in the community are currently larger or significantly larger than ideal in these regards, not all are, and at some point, if block size reduction does occur, it will no longer need to continue on over time. Suggestion: Consider some other wording, perhaps providing guidance as to what appropriate block size should be, instead of compelling the action to continue reduce the size of blocks.

Also, in the first sentence, consider using "adopt" or "enact" as opposed to "develop…land development regulations."

Policy 2.6.1. This policy sets out street beautification strategies. Suggestions: Revise the policy: 1) "The local governments shall provide for land use regulations…" should be replaced by terminology like "The City and County shall adopt land development regulations…" 2) The policy refers to "…a given context." The significance of this wording might be missed as the concept of context-based land usage/development concept, such as utilized by the Congress for New Urbanism, or the Florida D.O.T., based upon the new urbanists' *Transect*, has not been explained yet at this point in the proposed comprehensive plan.

Objective 2.7. Suggestion: Revise "Facilitate the safe and comfortable use of multiple modes of transportation *and* urban design standards to…" " Facilitate the safe and comfortable use of multiple modes of transportation *through the use of* urban design standards to…"

Policy 2.7.5. The meaning of the first usage of the term "areas" in this policy is not clear. Could it be replaced with a more precise term; e.g., "the MMTD?"

Objective 2.8 The sentence, "The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County." omits [non-transportation] *public facilities* and *infrastructure*. Recommendation: revise this sentence as follows: "The context areas shall be used as the basis for planning and design of land uses, transportation facilities, infrastructure, and public facilities in the City of Tallahassee and Leon County."

Future Land Use Map, Page 16. Revise to include the title, Future Land Use Map (or other as appropriate and include referenced timeframe that the map represents.

- **Policy 2.8.2.** This policy includes the statement, "To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required…" It's not clear whether or how requiring a minimum threshold of open space area will ensure a mixture of uses in the the mixed-use land use categories.

Policy 2.8.3. The first paragraph of this policy implies but does not explicitly state that state and national forests, wildlife management areas, and other managed natural areas will be comprise the lands to be included in the Natural Areas Future Land Use Category. As drafted, the policy implies non-managed areas would not be appropriately included in this category. Suggestion: Revise the policy for precision and clarity with regard to what lands are intended to be designated within the category.

Policy 2.8.5. - Part 4. For clarity consider adding the term *use* after *single-family residential* in the sentence "Existing lots of record shall be considered vested for the purposes of single-family residential regardless of lot size or density provided all other development standards can be met."

Policy 2.8.7. - Part 5. It is unclear what this sentence means: "To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites." Does this mean redevelopment sites may include a greater proportion of impervious surface than would otherwise be required for new development, or?

Policy 2.8.7. - Part 8. This part allows planned development special district areas of over 100 acres within the Lake Protection Category to develop in accordance with the allowable densities and intensities of the Suburban Mixed Use land use category; i.e., up to a maximum of 45 dwelling units per acre and 25,000 square feet per acre. This seems more intensive than presently allowed. Are these intensity limits appropriate?

Policy 2.8.8. - Part 1. This part of this policy describing the Sub-Urban Residential Preservation Future Land Use Category sets out as criteria for inclusion in the category, "Assessment of stability of the residential area, including but not limited to: a. Degree of home ownership b. Existence of neighborhood organizations." While tenure and participation in neighborhood organizations are traditional measures of neighborhood stability/transition and cohesiveness, they can also be used to simply enable development interests to reclassify (i.e., change the future land use map) to rezone and redevelop lower-income areas, where homeownership rates may be lower than the community as a whole and there is less participation in neighborhood organizations. This results in displacing existing residents and potentially increasing their housing cost burdens with higher rents.

Policy 2.8.8. - Part 3. This part of this policy exempts cemeteries and religious facilities used solely for religious use, from having to provide effective visual and sound buffering (either through vegetative buffering or other design techniques), where they adjoin low density residential areas. It is recognized that is a continuation of the current practice of exempting these uses from these requirements. While well-intentioned and workable for smaller scale cemeteries and religious facilities, at larger scale and with more frequent usage, these uses can still present incompatible land use conflicts with adjacent/nearby low density residential land use. Accordingly, they should not be carte blanche exempted from sound and visual buffering requirements when adjacent to low density residential use; instead, they should be subject to such requirements and be allowed to demonstrate their compatibility at time of application.

Policy 2.8.9. The word "quadraplexes" should be revised to "quadruplexes."

The third paragraph of the policy specifies that land development regulations shall include development standards to maintain *low traffic volumes*, vehicular speeds, and parking for nonresidential uses. It is not clear what would be considered *low traffic* volumes, but while considering this directive, recognize that the category allows for residential land use at a density up 20 dwelling units per acre, and unless the development regulations can mandate the close location of district residents' places of work (so that they don't require vehicular travel for commutes) this may make the directive difficult to achieve.

Sub-part 1. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Sub-Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category.

Policy 2.8.10. In the second paragraph, there is a reference to the *Sub-Urban Mixed-Use Commercial Future Land Use Category* as the *Sub-Urban Mixed Land Use Category*. Recommendation: Revise the text to provide consistent terminology.

Policy 2.8.11. This policy begins by stating: "The intent of the Urban Residential Preservation category is to preserve existing historic walkable neighborhood development patterns." While walkable development patterns are arguably integral to thriving neighborhoods, and a appropriate attribute of land use within this category, the retention of such patterns likely only deserve secondary emphasis, with the preservation of the *actual neighborhoods* and their residential use the primary.

The word *quadplexes* in the third paragraph of this policy should be revised to *quadruplexes*.

Policy 2.8.12. This policy (first paragraph) includes the phrase "a street network that generally connects to residential neighborhoods *immediately* along corridors or behind the uses fronting major collectors or arterial roadways." Suggestion: Delete the word *immediately* from this phrase; it does not seem to add anything and may add ambiguity.

The fourth paragraph of this policy directs the reduction of vehicular traffic volumes. It is not clear how volume reduction might be accomplished. See related comment here on **Policy 2.8.9.**

Sub-part 2. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category. See related comment here on **Policy 2.8.9.**

Policy 2.8.14. This policy includes the phrase: "The *land use* is characterized by *close-proximity buildings* featuring retail on the ground floor and residential units above…" Suggestion: Modify the phrase to read: "The *land use category* is characterized by *buildings in close-proximity to one another,* featuring retail on the ground floor and residential units above…"

This policy includes the term, *consistent street trees*. This term is vague. Suggestion: Revise the wording to provide greater clarity.

- **Sub-part 1.** of the policy requires the land development regulations that implement the Urban Center future land use category to establish design guidelines. This part then subsequently provides that any development with a density greater 10 dwelling unit per acre will be deemed consistent with standards. Accordingly, whatever design standards may be provided, simply building to densities greater than 10 dwelling units per acre will

alleviate any necessity to attempt to meet those standards. If this is not the intention, it is recommended that this part be revised as appropriate.

- **Sub-part 2.** This portion of the policy sets out criteria for expansion of the Urban Center future land use category. Proposed criterion a.iii. is, *Served by available infrastructure*. It's not clear that that is the intended or appropriate wording, as theoretically, almost all lands are served by whatever infrastructure exists. Perhaps the intent relates more to being served by infrastructure that is adequate to support the level of intensity allowed in the Urban Center future land use category? Recommendation: Reword to provide clarity and appropriate direction.

Policy 2.8.16. This policy addressing the Manufacturing and Mining Special District, includes the following direction: "The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services for uses that are dependent upon *central infrastructure services*." Suggestion: Ensure that the term *central infrastructure services* is defined within the comprehensive plan.

Sub-part 1. This part include the following phrase: "The City and Leon County Land Development Code shall *development* minimum mitigation standards." Suggestion: Revise this phrase to read: "The City and Leon County Land Development Code shall *provide* minimum mitigation standards."

Policy 2.8.17. Relating to the Institutional Special District uses the term *Principle uses*. This term should be revised to *Principal uses*.

Policy 2.8.19. Sub-part 2. This part related to required master plans for development within the Planned Development Special District. This part sets out requirements are extremely specific, in comparison to the typical strategic provisions found in comprehensive plans. Is this content more appropriate in the land development regulations?

Some of the specific requirements falling under the header in this section could be reworded for better grammatical agreement, for example:

> *2. Master Plans shall identify the following:…h. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility…*

Sub-part 3. This part states: "If a Master Plan exceeds the allowable uses, densities and/or intensities of the Planned Development District, a comprehensive plan amendment shall be required to obtain the proposed use, density and/or intensity." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 4. This part states: "No comprehensive plan amendment shall be required if the Master Plan is consistent with the allowable uses, densities and intensities provided in this policy." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 6. This part states: "Master Plans shall be consistent with the provisions of the Comprehensive Plan." This part is likely unnecessary given the requirement all development in all locations shall be consistent with the comprehensive plan, as currently in effect, except for development vested under previous editions of the comprehensive plan. Recommendation: delete, or revise as appropriate, if vesting is an issue.

Sub-part 8. This part states: "Easements, right-of-way and other improvements located throughout the Planned Development District boundary *may be required* to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan." This part is unnecessary given that it is permissive, and not obligatory, using the term *may be required*.

Sub-parts 9. & 10. Sub-part 10. includes the following provision: "If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage." Does this provision also relate to the public acquisitions referred to in Sub-part 9? If so, it is recommended that these parts be revised to ensure clarity.

The proposed FLUM: The proposed FLUM depicts areas within the City and County where FLUCs intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, and even typical current local land use practice, principal uses face one another — *look out* at one another — across streets…and this visual perception is one important way most people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along the rear lot line or separated through categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

I realize this a bit of challenge because most of these newly proposed boundaries are in the same location as the boundaries between FLUCs on the FLUM presently in effect.

Permitted non-residential uses are limited to a maximum of ~~5,000~~2,500 square feet per ~~acre~~site. ~~Implementing zoning districts may provide additional design standards or restrictions on use and intensities.~~

A maximum gross residential density of 12 dwelling units per acre is allowed. ~~Low-density residential~~ Permitted housing types include~~s~~ single-family detached, single-family attached, duplexes, triplexes, and quadplexes. ~~Implementing zoning districts may provide additional design standards or restrictions on densities.~~

The following special conditions shall apply to the Urban Residential Preservation Land Use Category:

1. Zoning districts within the Urban Residential Preservation Category allowing densities over 6 units per acre and/or allowing non-residential uses shall be applied only after City Commission approval of a neighborhood plan which is developed with neighborhood participation. The plan shall include, at a minimum, the following elements:
    a. A land use map that includes a depiction of areas where non-residential uses are prohibited, if any.
    b. Identification of desirable neighborhood characteristics to be retained (e.g., building scale and placement, lot size, mature trees,and parks and other common open spaces).
    c. Demonstration of ability to accommodate increased parking and stormwater runoff without negatively affecting neighborhood character, or a funded plan to address these needs.
    d. Improvements needed to achieve a higher degree of safety (e.g., streetlights, traffic calming) and the funding source for such improvements.
    e. Design standards to ensure that the neighborhood character is preserved.
2. Uses and development plans may be denied or permitted at lower densities and intensities than the maximums specified in the Comprehensive Plan to achieve consistency with the intent of this Category to preserve neighborhood character.

~~1. Design and development standards for the Urban Residential Preservation area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and a continuous walkable street network throughout the district. These design standards shall integrate all building types into the character of the neighborhood.~~

~~1. Standards addressing adjacency to protected residential areas including buffers, setbacks, stepbacks, and landscaping shall be included be included in the City of Tallahassee land development regulations to ensure compatibility between residential and non-residential uses within the Urban Residential Preservation land use.~~

~~1. Land development regulations shall address compatibility between areas designated Urban Residential Preservation and areas with new or expanding non-residential uses or high-density residential uses through the provision of neighborhood compatibility standards that address buffering, screening, design standards, and/or the provision of areas with lower density or intensity uses between the Urban Residential Preservation areas and the areas with new or expanding non-residential uses or high-density residential uses.~~

Comments

What Isn't Included: At the beginning of the element, the articulation of an overarching strategy(-ies) of how the community should grow; i.e.: how sparse and rural the outlying areas should be; how dense and urban the inner portions of the City should be; whether the community will develop dense urban nodes (*walk-ups* and *Transit Oriented Development*); the degree to which existing neighborhoods may change, such as provide for greater density, inclusion of compatible non-residential uses; to what extent the density transition from rural to most urban will be based on the new urbanists' *Transect* concept (and what this is) and companion implementing context zones; the extent that design attributes and infrastructure design may used, in addition to density and intensity, and use type, to influence the location and character of future land use and development; whether regulation of design attributes and other approaches, such as mitigation of potential adverse sound, lighting, hazardous vehicular traffic flow, will be used to promote land use compatibility, particularly where different uses are intended to mix/colocate; and, how fine a grain of mixture of uses is intended in categories that will provide for mixed use.

This kind of discussion can be very useful for providing the basis for the ensuing goals, objectives, and policies, as well as informing the reader of the overall intent of the various strategies represented in the element.

Contemplate whether large facilities that support AI and other intensive electrical energy uses require specific treatment within this element, and if so, provide appropriate guiding strategies.

Where the Planning Department (or other department) is specifically referenced in policies, as in being tasked to do something, it may be more appropriate to simply refer to the applicable local government (or both) given the potential for staffing resources to change over the timeframe of the plan.

Several of the policies relating to the particular future land use categories specify the detailed types of building types allowable, such as, *duplexes, triplexes, quadruplexes, live-work units*. This is detailed implementation content typically relegated to land development regulations and zoning. The listing of specific building types in the policies describing a future land use category could be construed to preclude those building types not listed, from the zoning district(s) that ultimately implement the future land use category. Likewise, the listing of specific building types in the policy describing the category could be construed to require all of the zoning districts that implement a particular category to allow all of the building types listed. This may or may not be problematic. But if it is problematic, it will also require a comprehensive plan amendment as a precursor to any land development regulation (e.g., zoning) amendment that would change what building types are allowed in a particular zoning district.

Some of the terminology used in the draft amendment may not be clear to lay readers. It would be most helpful to include a companion glossary within the amendment, wherein this terminology is defined.

Will this element provide a density bonus for provision of affordable housing? Inclusionary housing?

___

Policies 1.1.3 and 1.1.4. Both policies specify the required timing for updating maps to be "updated with current data during the Evaluation and Appraisal Review process." This terminology implies that the applicable maps could not be amended at an earlier point in time, if necessary, based on new information coming to light. Suggestion: revise these policies to state that the maps are to be updated no less frequently than during the Evaluation and Appraisal Review process. Note that the Evaluation and Appraisal Review of comprehensive plans is required to occur on a seven-year recurring schedule.

Objective 1.2. Suggestion: "infrastructure extension" should be revised to "infrastructure location and expansion" to be more encompassing.

Objective 1.2. This objective does not mention or hint at acquisition of natural areas (although this is explicitly stated in Policy 1.2.1) as a tactic. Suggestion: Revise the Objective as appropriate to include *acquisition*.

Policy 1.2.1. This policy guides the City and County to acquire sensitive areas. Does this provide for less-than fee simple acquisition (e.g., acquisition of easements) as well as fee simple acquisition? If so, good. If not, revise the policy as appropriate.

Policy 1.2.2. This policy specifies that Planning Department staff shall conduct an environmental analysis of proposed comprehensive plan amendments. The concept is good, but should the policy be revised to enable other City and Count staff to be utilized in such analysis? Potentially the Planning Department may not have sufficient or appropriate resources to accomplish this requirement.

Policy 1.2.4. This policy refers to *context-based* beautification, etc. Suggestion: Provide additional information on the *context* basis; i.e., is this referring to a context-based land usage/ development concept, such as utilized by the Congress for New Urbanism, or Florida D.O.T., for example?

Policy 1.3.1. This policy requires the updating of the Greenways and Trails Master Plan every 10 years. Suggestion: revise this policy to provide for updating no less frequently than every 10 years.

Policy 1.3.2. The policy does not provide guidance on who is intended to develop and maintain urban recreation spaces.

Objective 1.5. This Objective calls for the implementation of strategies that "reduce and treat stormwater…" It is not clear what *reducing stormwater* means? [Stormwater is water produced during rain events]. Maybe some word or words are missing unless the drafters have, at their disposal, a method of reducing the volume of rain in our community.]

Policy 1.5.2. This policy provides that "Local governments shall incentivize the use of green infrastructure stormwater management systems… by providing a reduction in minimum green space requirements or other incentives." As drafted, this policy could be misconstrued to enables the provision of less green area to treat/manage stormwater. Suggestion: redraft for greater clarity to ensure that reductions in minimum green space requirements would result *in exchange for* provision of green infrastructure.

Policy 1.6.1. This policy includes the following: "These *regulations* shall be implemented as prescribed in the *regulations*…" Suggestion: Revise for directness and grammatical correctness.

Policy 1.6.2. This policy requires zoning and development standards, within the Urban Services Area, to promote the location of homes, jobs [and other destinations] within 20 minutes walking distance of each other. 1) Why not consider, instead, a minute standard? Within urban design and pedestrian mobility practice, this timeframe has gained more acceptance as a design standard. 2) Maybe the standard (20 minutes, 15 minutes, whatever) should be referenced as a maximum timeframe.

Policy 1.6.3. In this policy, consider replacing "higher" capacity with "greater" capacity.

Policy 1.6.5. In this policy, consider adding the term "runoff" after the word "stormwater" to provide greater clarity. Consider replacing "quantity" with "volume."

Policy 1.7.1. This policy specifies coordination with key regional partners on the protection of natural resources that extend beyond jurisdictional boundaries. The policy specifically mentions some agencies but does not mention any of the adjacent local governments (both within the State of Florida and the State of Georgia) nor does it mention the Apalachee Regional Commission or the Southwest Georgia Regional Commission. Recommendation: These are significant omissions; revise the policy to include these governments/agencies.

- **Policy 2.2.1.** This policy provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe.

  This standard appears to be significantly greater than needed to promote an efficient development pattern, particularly an urban development pattern. It would consume more forested land and agricultural land and require longer and require more costly infrastructure extensions than would be required by the respective population with even a modest urban development pattern (i.e., at a moderate development density/intensity). It is recognized that the location of the USA boundary on the map included in the draft amendment is approximately the same location as the USA boundary that has been in effect for several years. Recommendation: Revise this policy to reduce the percentage of surplus vacant and developable land necessary to accommodate population over time, so that a 50% surplus is not continually provided for over time, but reduced, to reflect urban intensities and densities with this portion of the USA; failure to do so could result in less-than urban development patterns sprawling within the USA.

Policy 2.2.5. This policy includes the following: "Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by….the ability to implement *conditions* or mitigation for the proposed development." The term *conditions*, as used here, likely refers to *conditions of approval* attached to a development order issued by the City or County for a particular development; this is not clear and may be too specific or technical for use in a comprehensive plan policy. Suggestion: the term *mitigation*, as provided, may be sufficient, or perhaps could be expanded to, the *mitigation of potential impacts*.

Policy 2.2.6. This policy provides for exceptions to the Urban Services Area concept to provide for higher density within areas near the Woodville Rural Community [future land use map category] when central sewer service is available and development connects to sewer. 1) Is it necessary to also set a maximum development density/intensity limit for this development within this policy? Or is this policy the basis for another policy that provides such limit? 2) This policy is imprecise with regard to location of its application. As written, it would allow the extension of higher density development in any area designated Rural or Rural

Residential on the future land use map, so long as it is connected to sewer and subjectively located within the area described in the policy. Recommendation: review this policy and if appropriate, specify geographic limits to this exception to apply.

Policy 2.2.7. This policy requires consistency with the priority of urban services, the Future Land Use Map, and the Urban Services Area in conjunction with "the *widening* of existing streets and roads." Widening streets and roadways is not necessarily the same as adding additional lanes; and either approach, while traditionally responses to increased growth and travel demand, are not always consistent with other community objectives, such as protecting natural resources, protecting residential use from adverse impacts, creating human-scale environments that facilitate pedestrian activity. Suggestion: Instead of implying that streets and roads must always be widened to accommodate projected growth and demand, use alternative terminology such as *modifying*, *improving*, or *reconstructing*, which encompasses *widening* but is not limited to *widening*.

Policy 2.2.8. This policy promotes brownfield reclamation, building reuse, and adaptive reuse of structures, enabling these activities through provision of incentives in the land development regulations. The policy outlines the content of the land development regulations incentives; it does not include any provisions for mitigation of environmental or environmental health issues associated with the applicable brownfield sites. The policy also provides for "density and intensity bonuses of up to 25% modified development review thresholds." It is not clear if this intended to refer to maximum limits otherwise set out for the applicable future land use category in the comprehensive plan or zoning district (land development regulation) limitations or other. Suggestions: 1) Revise the policy to provide for or recognize that mitigation of adverse environmental conditions are prerequisite to any redevelopment of brownfield sites; 2) clarify the reference basis for density/intensity bonuses.

Policy 2.2.9. It is not clear how this policy does anything other than what is provided for in Policy 2.2.8., except to add the term "Greyfield." Suggestion: If appropriate, merge these policies together.

Policy 2.2.10. This policy specifies the protection of identified future rights-of-way from building encroachment; it does not specify what the appropriate setbacks would be, but includes a table specifying significant rights-of-way widths for the types of transportation facilities listed. A word of caution: The City of Tallahassee had, at one point, a similar approach wherein the implementing land development regulations (with their basis also established in the comprehensive plan) required a "special roadway setback," to protect identified corridors from development encroachment, and thus to make it easier and less expensive for the City acquire needed right-of-way for roadway construction. This regulation was challenged, as applied, as a taking, with no legitimate public health, safety, or welfare basis. [The City was able to prevail as its implementing regulations provided affected property owners with alternative design "exceptions" that made it possible, the plaintiff's instance, to realize their development interests within the remaining, reduced buildable area resulting from the implementation of the setback]. The City thereafter also amended their regulations to minimize potential that they be used as a workaround to acquire right-of-way without appropriate compensation.

- **Policy 2.4.1.** This policy establishes the basis for a Transfer of Development Rights (TDR) program. It limits where development rights may be transferred, to areas designated Rural Residential or Rural Community on the Future Land Use Map. A TDR program can be a very helpful tool to help minimize sprawl and direct growth to the most appropriate areas of the community, areas where supporting infrastructure and facilities are already present or planned to be available soon, and areas targeted for redevelopment, and further economic development. By precluding areas within the USA from receiving transferred development rights, this policy becomes, at best, a marginally useful tool. Recommendation: 1) Revise the policy to provide for transfer of rights to within the USA, and in particular, areas targeted for greater densities and intensities. 2) Revise the policy to allow transfers of density out of the Lake Protection future land use category, as a tool to facilitate environmental protection of resources within the category. Suggestion: Add the word "program" in between "Rights" and "may" in the first sentence of the policy.

Policy 2.4.2. This policy would require expansions of the USA to be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area. This is appropriate. But the policy fails to provide any criteria or guidance for decision-makers to use to determine whether, and to what extent, and expansion of the USA is warranted; i.e., it seems of value, but insufficient, to simply require the undertaking of these analyses but to potentially place no particular regard to their findings.

Policy 2.5.1. This policy sets out some strategies for retrofitting/reconstructing suburban areas. The proposed strategies are consistent with current best practices in urban design. Some of the terminology used in the policy might, however, be improved. Some of the terminology would be well understood by urban designers and most planners but may be less well understood by the general public and policy-makers. Examples of terminology that might benefit from revision include:

- *Complete streets* (this term has not yet be explained at this point in the proposed comprehensive plan)
- *Continuous streetscapes with liner buildings close to the street*
- *Appropriate design elements*
- *Residential building types*

In regard to the strategy of *block size reductions* — small blocks are an integral attribute of walkable and human-scale development, but while many (most?) of the blocks in the community are currently larger or significantly larger than ideal in these regards, not all are, and at some point, if block size reduction does occur, it will no longer need to continue on over time. Suggestion: Consider some other wording, perhaps providing guidance as to what appropriate block size should be, instead of compelling the action to continue reduce the size of blocks.

Also, in the first sentence, consider using "adopt" or "enact" as opposed to "develop…land development regulations."

Policy 2.6.1. This policy sets out street beautification strategies. Suggestions: Revise the policy: 1) "The local governments shall provide for land use regulations…" should be replaced by terminology like "The City and County shall adopt land development regulations…" 2) The policy refers to "…a given context." The significance of this wording might be missed as the concept of context-based land usage/development concept, such as utilized by the Congress

for New Urbanism, or the Florida D.O.T., based upon the new urbanists' *Transect*, has not been explained yet at this point in the proposed comprehensive plan.

Objective 2.7. Suggestion: Revise "Facilitate the safe and comfortable use of multiple modes of transportation *and* urban design standards to…" "Facilitate the safe and comfortable use of multiple modes of transportation *through the use of* urban design standards to…"

Policy 2.7.5. The meaning of the first usage of the term "areas" in this policy is not clear. Could it be replaced with a more precise term; e.g., "the MMTD?"

Objective 2.8 The sentence, "The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County." omits [non-transportation] *public facilities* and *infrastructure*. Recommendation: revise this sentence as follows: "The context areas shall be used as the basis for planning and design of land uses, transportation facilities, infrastructure, and public facilities in the City of Tallahassee and Leon County."

Future Land Use Map, Page 16. Revise to include the title, Future Land Use Map (or other as appropriate and include referenced timeframe that the map represents.

- **Policy 2.8.2.** This policy includes the statement, "To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required…" It's not clear whether or how requiring a minimum threshold of open space area will ensure a mixture of uses in the the mixed-use land use categories.

Policy 2.8.3. The first paragraph of this policy implies but does not explicitly state that state and national forests, wildlife management areas, and other managed natural areas will be comprise the lands to be included in the Natural Areas Future Land Use Category. As drafted, the policy implies non-managed areas would not be appropriately included in this category. Suggestion: Revise the policy for precision and clarity with regard to what lands are intended to be designated within the category.

Policy 2.8.5. - Part 4. For clarity consider adding the term *use* after *single-family residential* in the sentence "Existing lots of record shall be considered vested for the purposes of single-family residential regardless of lot size or density provided all other development standards can be met."

Policy 2.8.7. - Part 5. It is unclear what this sentence means: "To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites." Does this mean redevelopment sites may include a greater proportion of impervious surface than would otherwise be required for new development, or?

Policy 2.8.7. - Part 8. This part allows planned development special district areas of over 100 acres within the Lake Protection Category to develop in accordance with the allowable densities and intensities of the Suburban Mixed Use land use category; i.e., up to a maximum of 45 dwelling units per acre and 25,000 square feet per acre. This seems more intensive than presently allowed. Are these intensity limits appropriate?

Policy 2.8.8. - Part 1. This part of this policy describing the Sub-Urban Residential Preservation Future Land Use Category sets out as criteria for inclusion in the category, "Assessment of stability of the residential area, including but not limited to: a. Degree of home ownership b. Existence of neighborhood organizations." While tenure and participation in neighborhood organizations are traditional measures of neighborhood stability/transition and cohesiveness, they can also be used to simply enable development interests to reclassify (i.e., change the future land use map) to rezone and redevelop lower-income areas, where homeownership rates may be lower than the community as a whole and there is less participation in neighborhood organizations. This results in displacing existing residents and potentially increasing their housing cost burdens with higher rents.

Policy 2.8.8. - Part 3. This part of this policy exempts cemeteries and religious facilities used solely for religious use, from having to provide effective visual and sound buffering (either through vegetative buffering or other design techniques), where they adjoin low density residential areas. It is recognized that is a continuation of the current practice of exempting these uses from these requirements. While well-intentioned and workable for smaller scale cemeteries and religious facilities, at larger scale and with more frequent usage, these uses can still present incompatible land use conflicts with adjacent/nearby low density residential land use. Accordingly, they should not be carte blanche exempted from sound and visual buffering requirements when adjacent to low density residential use; instead, they should be subject to such requirements and be allowed to demonstrate their compatibility at time of application.

Policy 2.8.9. The word "quadraplexes" should be revised to "quadruplexes."

The third paragraph of the policy specifies that land development regulations shall include development standards to maintain *low traffic volumes*, vehicular speeds, and parking for nonresidential uses. It is not clear what would be considered *low traffic* volumes, but while considering this directive, recognize that the category allows for residential land use at a density up 20 dwelling units per acre, and unless the development regulations can mandate the close location of district residents' places of work (so that they don't require vehicular travel for commutes) this may make the directive difficult to achieve.

Sub-part 1. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Sub-Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category.

Policy 2.8.10. In the second paragraph, there is a reference to the *Sub-Urban Mixed-Use Commercial Future Land Use Category* as the *Sub-Urban Mixed Land Use Category*. Recommendation: Revise the text to provide consistent terminology.

Policy 2.8.11. This policy begins by stating: "The intent of the Urban Residential Preservation category is to preserve existing historic walkable neighborhood development patterns." While walkable development patterns are arguably integral to thriving neighborhoods, and a appropriate attribute of land use within this category, the retention of such patterns likely only deserve secondary emphasis, with the preservation of the *actual neighborhoods* and their residential use the primary.

The word *quadplexes* in the third paragraph of this policy should be revised to *quadruplexes*.

Policy 2.8.12. This policy (first paragraph) includes the phrase "a street network that generally connects to residential neighborhoods *immediately* along corridors or behind the uses fronting major collectors or arterial roadways." Suggestion: Delete the word *immediately* from this phrase; it does not seem to add anything and may add ambiguity.

The fourth paragraph of this policy directs the reduction of vehicular traffic volumes. It is not clear how volume reduction might be accomplished. See related comment here on **Policy 2.8.9.**

Sub-part 2. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category. See related comment here on **Policy 2.8.9.**

Policy 2.8.14. This policy includes the phrase: "The *land use* is characterized by *close-proximity buildings* featuring retail on the ground floor and residential units above…" Suggestion: Modify the phrase to read: "The *land use category* is characterized by *buildings in close-proximity to one another,* featuring retail on the ground floor and residential units above…"

This policy includes the term, *consistent street trees*. This term is vague. Suggestion: Revise the wording to provide greater clarity.

- **Sub-part 1.** of the policy requires the land development regulations that implement the Urban Center future land use category to establish design guidelines. This part then subsequently provides that any development with a density greater 10 dwelling unit per acre will be deemed consistent with standards. Accordingly, whatever design standards may be provided, simply building to densities greater than 10 dwelling units per acre will alleviate any necessity to attempt to meet those standards. If this is not the intention, it is recommended that this part be revised as appropriate.

- **Sub-part 2.** This portion of the policy sets out criteria for expansion of the Urban Center future land use category. Proposed criterion a.iii. is, *Served by available infrastructure*. It's not clear that that is the intended or appropriate wording, as theoretically, almost all lands are served by whatever infrastructure exists. Perhaps the intent relates more to being served by infrastructure that is adequate to support the level of intensity allowed in the Urban Center future land use category? Recommendation: Reword to provide clarity and appropriate direction.

Policy 2.8.16. This policy addressing the Manufacturing and Mining Special District, includes the following direction: "The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services for uses that are dependent upon *central infrastructure services*." Suggestion: Ensure that the term *central infrastructure services* is defined within the comprehensive plan.

Sub-part 1. This part include the following phrase: "The City and Leon County Land Development Code shall *development* minimum mitigation standards." Suggestion: Revise this phrase to read: "The City and Leon County Land Development Code shall *provide* minimum mitigation standards."

Policy 2.8.17. Relating to the Institutional Special District uses the term *Principle uses*. This term should be revised to *Principal uses*.

Policy 2.8.19. Sub-part 2. This part related to required master plans for development within the Planned Development Special District. This part sets out requirements are extremely specific, in comparison to the typical strategic provisions found in comprehensive plans. Is this content more appropriate in the land development regulations?

Some of the specific requirements falling under the header in this section could be reworded for better grammatical agreement, for example:

> *2. Master Plans shall identify the following:…h. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility…*

Sub-part 3. This part states: "If a Master Plan exceeds the allowable uses, densities and/or intensities of the Planned Development District, a comprehensive plan amendment shall be required to obtain the proposed use, density and/or intensity." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 4. This part states: "No comprehensive plan amendment shall be required if the Master Plan is consistent with the allowable uses, densities and intensities provided in this policy." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 6. This part states: "Master Plans shall be consistent with the provisions of the Comprehensive Plan." This part is likely unnecessary given the requirement all development in all locations shall be consistent with the comprehensive plan, as currently in effect, except for development vested under previous editions of the comprehensive plan. Recommendation: delete, or revise as appropriate, if vesting is an issue.

Sub-part 8. This part states: "Easements, right-of-way and other improvements located throughout the Planned Development District boundary *may be required* to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan." This part is unnecessary given that it is permissive, and not obligatory, using the term *may be required*.

Sub-parts 9. & 10. Sub-part 10. includes the following provision: "If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage." Does this provision also relate to the public acquisitions referred to in Sub-part 9? If so, it is recommended that these parts be revised to ensure clarity.

Policy 3.1.1. This policy refers to *context-based requirements*. This likely refers to *context zones* based on the new urbanists's *transect*, but this is not self-explanatory. Recommendation: Revise for clarity. See comment here on Policy 1.2.4.

Policy 3.1.3. This policy states that the land development regulations shall support neighborhood scale grocery uses within and adjacent to residential areas. Is this consistent with the preclusion of non-residential uses within the Sub-Urban Residential Preservation land use category? If not, make appropriate revisions to either Policy 2.8.8. [RE the Sub-Urban Residential Preservation land use category], this policy, or both.

Objective 3.2. This Objective establishes the Southside Action Plan strategy. Much of this Objective relates to appropriate process and is somewhat unclear in regard to what the Southside Action Plan is or should be. Suggestion: Revise the Objective, so that the substantive information provided at the end of the current version, relating to "…guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens." appears toward the beginning of the Objective.

Policy 3.2.2. This policy includes the terms *shared public spaces* and *shared spaces*. It is not clear what the term *shared public spaces* means (land areas under multiple public agency ownership/management?). It is not clear whether *shared space*s means the same thing as *shared public spaces*. Suggestion: Revise this policy as appropriate.

Policy 3.3.1. This policy relating to access management includes the phrase, "taking into account impacts to all *modes* and users." While staff and practitioners likely understand the term *modes* as used here, the policy could be enhanced for clarity by adding the term *of transportation* after the word *users* (i.e., "taking into account impacts to all *modes and users of transportation*.").

- **Policy 3.3.2.** This policy is unclear. It appears to prevent vehicular access in roadway intersections and highway interchanges. This can not be the intended meaning. The likely intention is to restrict vehicular access *connections (e.g., driveways)* near street and roadway intersections and highway interchanges. Recommendation: Revise this policy; consider some wording like this: "Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations."

Policy 3.3.3. This policy refers to *unified access* [*plans*]. Typically, in practice, the term *unified access* relates to providing access to more than one destination (for example, two or more businesses) through a single driveway connection. Is this policy, as drafted, sufficiently clear to convey this meaning? Revise if appropriate.

Policy 3.3.4. This policy sets out the basis for access management improvements. It is not clear if the policy provides the basis for roadway modifications, or installation/modification of signals and signage. If it is appropriate to explicitly reference these kinds of modifications, revise the policy accordingly.

Policy 3.3.6. This policy states: "Utilize *context sensitive roadway design* and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods." The use of the term *context sensitive roadway design* appears to be an implicit reference to FDOT Complete Streets strategy and its use of *context sensitive* design, based on the new urbanists' transect. Suggestion: if additional clarity is provided through more explicit reference to FDOT Complete Streets strategy, revise the policy accordingly. See comment here on Policy 1.2.4.

Policy 3.3.7. This two-sentence policy relating to access management for properties considered to be "consolidated." Suggestion: The clarity of this policy can be enhanced by reversing the order of the two sentences.

Objective. 3.4. This Objective sets out the strategy of sharing the benefits and burdens of public sector projects across the community equitably. Subsequent implementing **Policy 3.4.2.** directs the City and County to [strive] to distribute major infrastructure projects and other

public investments geographically across the community with regard to the needs of different areas. There is no implementing policy, however, specifically relating to ensuring that no particular portion of the community is or becomes overburdened with the adverse impacts of/ burdens resulting from the provision infrastructure and public facilities. Would the inclusion of such an implementing policy be helpful? If so, revise the amendment to add such policy.

The word *strive* is misspelled in Policy 3.4.2.

- **Policy 3.5.1.** This policy does not address the strategy of designing and siting infrastructure for purposes of facilitating greater community resiliency and hazard mitigation. Recommendation: Include other policy(-ies) in the amendment that would facilitate the greater resiliency and mitigation of hazards in regard to the siting and design of infrastructure and public facilities or revise this policy as appropriate.

  This policy refers to the application of *context-based desig*n. See comment on the use of this term in Policy 1.2.4. This policy refers to *design speed*. This is an appropriate consideration in street design; it is not clear that general public understands this term, however. Suggestion: Revise the policy as appropriate and/or define the term *design speed* within a companion glossary.

Policy 3.6.1. Consider revising "Proposed amendments to the City of Tallahassee *or* Leon County Land Development Regulations…" to "Proposed amendments to the City of Tallahassee *and* Leon County Land Development Regulations…"

- **Policy 3.6.2.** This policy relating to zoning districts that implement the various future land use categories provided in the Land Use and Mobility Element. The second sentence in the policy states: "Each *land use category* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable."

  The term *land use category*, as used here, is likely an error. It is more likely that the intention of policy is to state: ""Each *zoning district* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable." This conclusion is based on the overall intent of the policy being providing direction for how *zoning districts* should implement the future land use categories, and that detailed land development regulatory information is typically and more appropriately set out in the zoning district regulations.

- **Policy 3.6.3.** This policy enumerates a variety of specific subjects relating to site development that implementing land development regulations must address. The policy does not explicitly require the mitigation of the typical compatibility issues of visual impact/ aesthetics, lighting and, noise. Successfully addressing these impacts can significantly further compatibility between uses. Recommendation: Perhaps the omission in policy reflects this content being included in other policies included in the amendment. If not, revise policy to expand inclusion of these and other "public nuisance" issues that are often the byproducts of development.

Policy 3.6.4. This policy includes the following statement "Incentives for greater density and intensity up to 25% will be permitted for developments along arterials for developments that incorporate urban design standards resulting in more attractive developments." Based on the preceding sentence in the policy ("allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category"), the 25% standard is 25% greater than the limit otherwise applicable. If this not correct, revise the policy as appropriate.

Please ensure the within the implementing land development regulations, the scope of this incentive is roughly proportional to the what is provided by the developer. For example a 50-acre development site that has 100 feet of frontage along an arterial street, and that provides some shrubbery along this frontage, probably should not be entitled to a 25% increase in permissible density/intensity for the remainder of the site, that may extend several hundred feet from the arterial. This issue is most appropriately fleshed out in the land development regulations but perhaps it might be appropriate to provide some related direction in the land use and mobility element.

If the land use and mobility element will retain the provision for a 25% density bonus provided in exchange for affordable or inclusionary housing as has been provided in the comprehensive plan, how will that bonus incentive work in conjunction with this bonus incentive? Could a developer obtain both bonus incentives?

Suggestion: The provision of this density/intensity bonus may only be appropriate inside the USA. If appropriate, revise the policy accordingly.

Policy 3.6.8. This policy addresses redevelopment of former landfill sites. It includes the following sentence: "Regulations may require the necessary documentation of the subsurface geology, with any application for development within a mapped landfill site at the discretion of the City or County and the Leon County Department of Health." 1) Given the significant potential for environmental health hazard posed through such redevelopment, it is recommended that this policy be revised to mandate documentation of the subsurface geology, as a requirement of development application and approval (revise "may" to "shall"). 2) As drafted, this sentence is confusing — suggestion: delete the comma between the word *geology* and the word *with*, unless that changes the intended meaning.

The proposed FLUM: The proposed FLUM depicts areas within the City and County where FLUCs intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, and even typical current local land use practice, principal uses face one another — *look out* at one another — across streets…and this visual perception is one important way most people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along the rear lot line or separated through categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

I realize this a bit of challenge because most of these newly proposed boundaries are in the same location as the boundaries between FLUCs on the FLUM presently in effect.

Comments

This review is based upon the draft of the proposed Land Use and Mobility Element, dated March 24, 2025, provided on the Tallahassee-Leon County website.

What Isn't Included: At the beginning of the element, the articulation of an overarching strategy(-ies) of how the community should grow; i.e.: how sparse and rural the outlying areas should be; how dense and urban the inner portions of the City should be; whether the community will develop dense urban nodes (*walk-ups* and *Transit Oriented Development*); the degree to which existing neighborhoods may change, such as provide for greater density, inclusion of compatible non-residential uses; to what extent the density transition from rural to most urban will be based on the new urbanists' *Transect* concept (and what this is) and companion implementing context zones; the extent that design attributes and infrastructure design may used, in addition to density and intensity, and use type, to influence the location and character of future land use and development; whether regulation of design attributes and other approaches, such as mitigation of potential adverse sound, lighting, hazardous vehicular traffic flow, will be used to promote land use compatibility, particularly where different uses are intended to mix/colocate; and, how fine a grain of mixture of uses is intended in categories that will provide for mixed use.

This kind of discussion can be very useful for providing the basis for the ensuing goals, objectives, and policies, as well as informing the reader of the overall intent of the various strategies represented in the element.

Contemplate whether large facilities that support AI and other intensive electrical energy uses require specific treatment within this element, and if so, provide appropriate guiding strategies.

Where the Planning Department (or other department) is specifically referenced in policies, as in being tasked to do something, it may be more appropriate to simply refer to the applicable local government (or both) given the potential for staffing resources to change over the timeframe of the plan.

Several of the policies relating to the particular future land use categories specify the detailed types of building types allowable, such as, *duplexes, triplexes, quadruplexes, live-work units*. This is detailed implementation content typically relegated to land development regulations and zoning. The listing of specific building types in the policies describing a future land use category could be construed to preclude those building types not listed, from the zoning district(s) that ultimately implement the future land use category. Likewise, the listing of specific building types in the policy describing the category could be construed to require all of the zoning districts that implement a particular category to allow all of the building types listed. This may or may not be problematic. But if it is problematic, it will also require a comprehensive plan amendment as a precursor to any land development regulation (e.g., zoning) amendment that would change what building types are allowed in a particular zoning district.

Some of the terminology used in the draft amendment may not be clear to lay readers. It would be most helpful to include a companion glossary within the amendment, wherein this terminology is defined.

As drafted, some of the various density bonus incentives provided are drafted to enable density/intensity to be increased to levels above the otherwise applicable *future land use category* maximum limits. [In other instances, the policies omit whether the bonus would allow

an increase above the future land use category limit or zoning district limit.] Should the incentives instead allow for increases above otherwise applicable *zoning district* limits? In some instances, implementing zoning districts set out maximum density limits less than the future land use category they implement.

___

Policies 1.1.3 and 1.1.4. Both policies specify the required timing for updating maps to be "updated with current data during the Evaluation and Appraisal Review process." This terminology implies that the applicable maps could not be amended at an earlier point in time, if necessary, based on new information coming to light. Suggestion: revise these policies to state that the maps are to be updated no less frequently than during the Evaluation and Appraisal Review process. Note that the Evaluation and Appraisal Review of comprehensive plans is required to occur on a seven-year recurring schedule.

Objective 1.2. Suggestion: "infrastructure extension" should be revised to "infrastructure location and expansion" to be more encompassing.

Objective 1.2. This objective does not mention or hint at acquisition of natural areas (although this is explicitly stated in Policy 1.2.1) as a tactic. Suggestion: Revise the Objective as appropriate to include *acquisition*.

Policy 1.2.1. This policy guides the City and County to acquire sensitive areas. Does this provide for less-than fee simple acquisition (e.g., acquisition of easements) as well as fee simple acquisition? If so, good. If not, revise the policy as appropriate.

Policy 1.2.2. This policy specifies that Planning Department staff shall conduct an environmental analysis of proposed comprehensive plan amendments. The concept is good, but should the policy be revised to enable other City and Count staff to be utilized in such analysis? Potentially the Planning Department may not have sufficient or appropriate resources to accomplish this requirement.

Policy 1.2.4. This policy refers to *context-based* beautification, etc. Suggestion: Provide additional information on the *context* basis; i.e., is this referring to a context-based land usage/ development concept, such as utilized by the Congress for New Urbanism, or Florida D.O.T., for example?

Policy 1.3.1. This policy requires the updating of the Greenways and Trails Master Plan every 10 years. Suggestion: revise this policy to provide for updating no less frequently than every 10 years.

Policy 1.3.2. The policy does not provide guidance on who is intended to develop and maintain urban recreation spaces.

Objective 1.5. This Objective calls for the implementation of strategies that "reduce and treat stormwater…" It is not clear what *reducing stormwater* means? [Stormwater is water produced during rain events]. Maybe some word or words are missing unless the drafters have, at their disposal, a method of reducing the volume of rain in our community.]

Policy 1.5.2. This policy provides that "Local governments shall incentivize the use of green infrastructure stormwater management systems… by providing a reduction in minimum green space requirements or other incentives." As drafted, this policy could be misconstrued to enables the provision of less green area to treat/manage stormwater. Suggestion: redraft for greater clarity to ensure that reductions in minimum green space requirements would result *in exchange for* provision of green infrastructure.

Policy 1.6.1. This policy includes the following: "These *regulations* shall be implemented as prescribed in the *regulations*…" Suggestion: Revise for directness and grammatical correctness.

Policy 1.6.2. This policy requires zoning and development standards, within the Urban Services Area, to promote the location of homes, jobs [and other destinations] within 20 minutes walking distance of each other. 1) Why not consider, instead, a minute standard? Within urban design and pedestrian mobility practice, this timeframe has gained more acceptance as a design standard. 2) Maybe the standard (20 minutes, 15 minutes, whatever) should be referenced as a maximum timeframe.

Policy 1.6.3. In this policy, consider replacing "higher" capacity with "greater" capacity.

Policy 1.6.5. In this policy, consider adding the term "runoff" after the word "stormwater" to provide greater clarity. Consider replacing "quantity" with "volume."

Policy 1.7.1. This policy specifies coordination with key regional partners on the protection of natural resources that extend beyond jurisdictional boundaries. The policy specifically mentions some agencies but does not mention any of the adjacent local governments (both within the State of Florida and the State of Georgia) nor does it mention the Apalachee Regional Commission or the Southwest Georgia Regional Commission. Recommendation: These are significant omissions; revise the policy to include these governments/agencies.

- **Policy 2.2.1.** This policy provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe.

  This standard appears to be significantly greater than needed to promote an efficient development pattern, particularly an urban development pattern. It would consume more forested land and agricultural land and require longer and require more costly infrastructure extensions than would be required by the respective population with even a modest urban development pattern (i.e., at a moderate development density/intensity). It is recognized that the location of the USA boundary on the map included in the draft amendment is approximately the same location as the USA boundary that has been in effect for several years. Recommendation: Revise this policy to reduce the percentage of surplus vacant and developable land necessary to accommodate population over time, so that a 50% surplus is not continually provided for over time, but reduced, to reflect urban intensities and densities with this portion of the USA; failure to do so could result in less-than urban development patterns sprawling within the USA.

Policy 2.2.5. This policy includes the following: "Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by….the ability to implement *conditions* or mitigation for the proposed development." The term *conditions*, as used here, likely refers to *conditions of approval* attached to a development order issued by the City or County for a particular development; this is not clear and may be too specific or technical for use in a comprehensive plan policy. Suggestion: the term *mitigation*, as

provided, may be sufficient, or perhaps could be expanded to, the *mitigation of potential impacts*.

Policy 2.2.6. This policy provides for exceptions to the Urban Services Area concept to provide for higher density within areas near the Woodville Rural Community [future land use map category] when central sewer service is available and development connects to sewer. 1) Is it necessary to also set a maximum development density/intensity limit for this development within this policy? Or is this policy the basis for another policy that provides such limit? 2) This policy is imprecise with regard to location of its application. As written, it would allow the extension of higher density development in any area designated Rural or Rural Residential on the future land use map, so long as it is connected to sewer and subjectively located within the area described in the policy. Recommendation: review this policy and if appropriate, specify geographic limits to this exception to apply.

Policy 2.2.7. This policy requires consistency with the priority of urban services, the Future Land Use Map, and the Urban Services Area in conjunction with "the *widening* of existing streets and roads." Widening streets and roadways is not necessarily the same as adding additional lanes; and either approach, while traditionally responses to increased growth and travel demand, are not always consistent with other community objectives, such as protecting natural resources, protecting residential use from adverse impacts, creating human-scale environments that facilitate pedestrian activity. Suggestion: Instead of implying that streets and roads must always be widened to accommodate projected growth and demand, use alternative terminology such as *modifying*, *improving*, or *reconstructing*, which encompasses *widening* but is not limited to *widening*.

Policy 2.2.8. This policy promotes brownfield reclamation, building reuse, and adaptive reuse of structures, enabling these activities through provision of incentives in the land development regulations. The policy outlines the content of the land development regulations incentives; it does not include any provisions for mitigation of environmental or environmental health issues associated with the applicable brownfield sites. The policy also provides for "density and intensity bonuses of up to 25% modified development review thresholds." It is not clear if this intended to refer to maximum limits otherwise set out for the applicable future land use category in the comprehensive plan or zoning district (land development regulation) limitations or other. Suggestions: 1) Revise the policy to provide for or recognize that mitigation of adverse environmental conditions are prerequisite to any redevelopment of brownfield sites; 2) clarify the reference basis for density/intensity bonuses.

Policy 2.2.9. It is not clear how this policy does anything other than what is provided for in Policy 2.2.8., except to add the term "Greyfield." Suggestion: If appropriate, merge these policies together.

Policy 2.2.10. This policy specifies the protection of identified future rights-of-way from building encroachment; it does not specify what the appropriate setbacks would be, but includes a table specifying significant rights-of-way widths for the types of transportation facilities listed. A word of caution: The City of Tallahassee had, at one point, a similar approach wherein the implementing land development regulations (with their basis also established in the comprehensive plan) required a "special roadway setback," to protect identified corridors from development encroachment, and thus to make it easier and less expensive for the City acquire needed right-of-way for roadway construction. This regulation was challenged, as applied, as a taking, with no legitimate public health, safety, or welfare basis. [The City was able to prevail as its implementing regulations provided affected property owners with alternative design "exceptions" that made it possible, the plaintiff's instance, to realize their development interests within the remaining, reduced buildable area resulting from

the implementation of the setback]. The City thereafter also amended their regulations to minimize potential that they be used as a workaround to acquire right-of-way without appropriate compensation.

- **Policy 2.4.1.** This policy establishes the basis for a Transfer of Development Rights (TDR) program. It limits where development rights may be transferred, to areas designated Rural Residential or Rural Community on the Future Land Use Map. A TDR program can be a very helpful tool to help minimize sprawl and direct growth to the most appropriate areas of the community, areas where supporting infrastructure and facilities are already present or planned to be available soon, and areas targeted for redevelopment, and further economic development. By precluding areas within the USA from receiving transferred development rights, this policy becomes, at best, a marginally useful tool. Recommendation: 1) Revise the policy to provide for transfer of rights to within the USA, and in particular, areas targeted for greater densities and intensities. 2) Revise the policy to allow transfers of density out of the Lake Protection future land use category, as a tool to facilitate environmental protection of resources within the category. Suggestion: Add the word "program" in between "Rights" and "may" in the first sentence of the policy.

Policy 2.4.2. This policy would require expansions of the USA to be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area. This is appropriate. But the policy fails to provide any criteria or guidance for decision-makers to use to determine whether, and to what extent, and expansion of the USA is warranted; i.e., it seems of value, but insufficient, to simply require the undertaking of these analyses but to potentially place no particular regard to their findings.

Policy 2.5.1. This policy sets out some strategies for retrofitting/reconstructing suburban areas. The proposed strategies are consistent with current best practices in urban design. Some of the terminology used in the policy might, however, be improved. Some of the terminology would be well understood by urban designers and most planners but may be less well understood by the general public and policy-makers. Examples of terminology that might benefit from revision include:

- *Complete streets* (this term has not yet be explained at this point in the proposed comprehensive plan)
- *Continuous streetscapes with liner buildings close to the street*
- *Appropriate design elements*
- *Residential building types*

In regard to the strategy of *block size reductions* — small blocks are an integral attribute of walkable and human-scale development, but while many (most?) of the blocks in the community are currently larger or significantly larger than ideal in these regards, not all are, and at some point, if block size reduction does occur, it will no longer need to continue on over time. Suggestion: Consider some other wording, perhaps providing guidance as to what

appropriate block size should be, instead of compelling the action to continue reduce the size of blocks.

Also, in the first sentence, consider using "adopt" or "enact" as opposed to "develop…land development regulations."

Policy 2.6.1. This policy sets out street beautification strategies. Suggestions: Revise the policy: 1) "The local governments shall provide for land use regulations…" should be replaced by terminology like "The City and County shall adopt land development regulations…" 2) The policy refers to "…a given context." The significance of this wording might be missed as the concept of context-based land usage/development concept, such as utilized by the Congress for New Urbanism, or the Florida D.O.T., based upon the new urbanists' *Transect*, has not been explained yet at this point in the proposed comprehensive plan.

Objective 2.7. Suggestion: Revise "Facilitate the safe and comfortable use of multiple modes of transportation *and* urban design standards to…" "Facilitate the safe and comfortable use of multiple modes of transportation *through the use of* urban design standards to…"

Policy 2.7.5. The meaning of the first usage of the term "areas" in this policy is not clear. Could it be replaced with a more precise term; e.g., "the MMTD?"

Objective 2.8 The sentence, "The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County." omits [non-transportation] *public facilities* and *infrastructure*. Recommendation: revise this sentence as follows: "The context areas shall be used as the basis for planning and design of land uses, transportation facilities, infrastructure, and public facilities in the City of Tallahassee and Leon County."

Future Land Use Map, Page 16. Revise to include the title, Future Land Use Map (or other as appropriate and include referenced timeframe that the map represents.

- **Policy 2.8.2.** This policy includes the statement, "To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required…" It's not clear whether or how requiring a minimum threshold of open space area will ensure a mixture of uses in the the mixed-use land use categories.

Policy 2.8.3. The first paragraph of this policy implies but does not explicitly state that state and national forests, wildlife management areas, and other managed natural areas will be comprise the lands to be included in the Natural Areas Future Land Use Category. As drafted, the policy implies non-managed areas would not be appropriately included in this category. Suggestion: Revise the policy for precision and clarity with regard to what lands are intended to be designated within the category.

Policy 2.8.5. - Part 4. For clarity consider adding the term *use* after *single-family residential* in the sentence "Existing lots of record shall be considered vested for the purposes of single-family residential regardless of lot size or density provided all other development standards can be met."

Policy 2.8.7. - Part 5. It is unclear what this sentence means: "To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites." Does this mean

redevelopment sites may include a greater proportion of impervious surface than would otherwise be required for new development, or?

Policy 2.8.7. - Part 8. This part allows planned development special district areas of over 100 acres within the Lake Protection Category to develop in accordance with the allowable densities and intensities of the Suburban Mixed Use land use category; i.e., up to a maximum of 45 dwelling units per acre and 25,000 square feet per acre. This seems more intensive than presently allowed. Are these intensity limits appropriate?

Policy 2.8.8. - Part 1. This part of this policy describing the Sub-Urban Residential Preservation Future Land Use Category sets out as criteria for inclusion in the category, "Assessment of stability of the residential area, including but not limited to: a. Degree of home ownership b. Existence of neighborhood organizations." While tenure and participation in neighborhood organizations are traditional measures of neighborhood stability/transition and cohesiveness, they can also be used to simply enable development interests to reclassify (i.e., change the future land use map) to rezone and redevelop lower-income areas, where homeownership rates may be lower than the community as a whole and there is less participation in neighborhood organizations. This results in displacing existing residents and potentially increasing their housing cost burdens with higher rents.

Policy 2.8.8. - Part 3. This part of this policy exempts cemeteries and religious facilities used solely for religious use, from having to provide effective visual and sound buffering (either through vegetative buffering or other design techniques), where they adjoin low density residential areas. It is recognized that is a continuation of the current practice of exempting these uses from these requirements. While well-intentioned and workable for smaller scale cemeteries and religious facilities, at larger scale and with more frequent usage, these uses can still present incompatible land use conflicts with adjacent/nearby low density residential land use. Accordingly, they should not be carte blanche exempted from sound and visual buffering requirements when adjacent to low density residential use; instead, they should be subject to such requirements and be allowed to demonstrate their compatibility at time of application.

Policy 2.8.9. The word "quadraplexes" should be revised to "quadruplexes."

The third paragraph of the policy specifies that land development regulations shall include development standards to maintain *low traffic volumes*, vehicular speeds, and parking for nonresidential uses. It is not clear what would be considered *low traffic* volumes, but while considering this directive, recognize that the category allows for residential land use at a density up 20 dwelling units per acre, and unless the development regulations can mandate the close location of district residents' places of work (so that they don't require vehicular travel for commutes) this may make the directive difficult to achieve.

Sub-part 1. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Sub-Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category.

Policy 2.8.10. In the second paragraph, there is a reference to the *Sub-Urban Mixed-Use Commercial Future Land Use Category* as the *Sub-Urban Mixed Land Use Category*. Recommendation: Revise the text to provide consistent terminology.

Policy 2.8.11. This policy begins by stating: "The intent of the Urban Residential Preservation category is to preserve existing historic walkable neighborhood development patterns." While walkable development patterns are arguably integral to thriving neighborhoods, and a appropriate attribute of land use within this category, the retention of such patterns likely only deserve secondary emphasis, with the preservation of the *actual neighborhoods* and their residential use the primary.

The word *quadplexes* in the third paragraph of this policy should be revised to *quadruplexes*.

Policy 2.8.12. This policy (first paragraph) includes the phrase "a street network that generally connects to residential neighborhoods *immediately* along corridors or behind the uses fronting major collectors or arterial roadways." Suggestion: Delete the word *immediately* from this phrase; it does not seem to add anything and may add ambiguity.

The fourth paragraph of this policy directs the reduction of vehicular traffic volumes. It is not clear how volume reduction might be accomplished. See related comment here on **Policy 2.8.9.**

Sub-part 2. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category. See related comment here on **Policy 2.8.9.**

Policy 2.8.14. This policy includes the phrase: "The *land use* is characterized by *close-proximity buildings* featuring retail on the ground floor and residential units above…" Suggestion: Modify the phrase to read: "The *land use category* is characterized by *buildings in close-proximity to one another,* featuring retail on the ground floor and residential units above…"

This policy includes the term, *consistent street trees*. This term is vague. Suggestion: Revise the wording to provide greater clarity.

- **Sub-part 1.** of the policy requires the land development regulations that implement the Urban Center future land use category to establish design guidelines. This part then subsequently provides that any development with a density greater 10 dwelling unit per acre will be deemed consistent with standards. Accordingly, whatever design standards may be provided, simply building to densities greater than 10 dwelling units per acre will alleviate any necessity to attempt to meet those standards. If this is not the intention, it is recommended that this part be revised as appropriate.

- **Sub-part 2.** This portion of the policy sets out criteria for expansion of the Urban Center future land use category. Proposed criterion a.iii. is, *Served by available infrastructure*. It's not clear that that is the intended or appropriate wording, as theoretically, almost all lands are served by whatever infrastructure exists. Perhaps the intent relates more to being served by infrastructure that is adequate to support the level of intensity allowed in the Urban Center future land use category? Recommendation: Reword to provide clarity and appropriate direction.

Policy 2.8.16. This policy addressing the Manufacturing and Mining Special District, includes the following direction: "The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services for uses that are dependent upon *central infrastructure services*." Suggestion: Ensure that the term *central infrastructure services* is defined within the comprehensive plan.

Sub-part 1. This part include the following phrase: "The City and Leon County Land Development Code shall *development* minimum mitigation standards." Suggestion: Revise this phrase to read: "The City and Leon County Land Development Code shall *provide* minimum mitigation standards."

Policy 2.8.17. Relating to the Institutional Special District uses the term *Principle uses*. This term should be revised to *Principal uses*.

Policy 2.8.19. Sub-part 2. This part related to required master plans for development within the Planned Development Special District. This part sets out requirements are extremely specific, in comparison to the typical strategic provisions found in comprehensive plans. Is this content more appropriate in the land development regulations?

Some of the specific requirements falling under the header in this section could be reworded for better grammatical agreement, for example:

> *2. Master Plans shall identify the following:…h. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility…*

Sub-part 3. This part states: "If a Master Plan exceeds the allowable uses, densities and/or intensities of the Planned Development District, a comprehensive plan amendment shall be required to obtain the proposed use, density and/or intensity." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 4. This part states: "No comprehensive plan amendment shall be required if the Master Plan is consistent with the allowable uses, densities and intensities provided in this policy." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 6. This part states: "Master Plans shall be consistent with the provisions of the Comprehensive Plan." This part is likely unnecessary given the requirement all development in all locations shall be consistent with the comprehensive plan, as currently in effect, except for development vested under previous editions of the comprehensive plan. Recommendation: delete, or revise as appropriate, if vesting is an issue.

Sub-part 8. This part states: "Easements, right-of-way and other improvements located throughout the Planned Development District boundary *may be required* to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan." This part is unnecessary given that it is permissive, and not obligatory, using the term *may be required*.

Sub-parts 9. & 10. Sub-part 10. includes the following provision: "If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage." Does this

provision also relate to the public acquisitions referred to in Sub-part 9? If so, it is recommended that these parts be revised to ensure clarity.

Policy 3.1.1. This policy refers to *context-based requirements*. This likely refers to *context zones* based on the new urbanists's *transect*, but this is not self-explanatory. Recommendation: Revise for clarity. See comment here on Policy 1.2.4.

Policy 3.1.3. This policy states that the land development regulations shall support neighborhood scale grocery uses within and adjacent to residential areas. Is this consistent with the preclusion of non-residential uses within the Sub-Urban Residential Preservation land use category? If not, make appropriate revisions to either Policy 2.8.8. [RE the Sub-Urban Residential Preservation land use category], this policy, or both.
Objective 3.2. This Objective establishes the Southside Action Plan strategy. Much of this Objective relates to appropriate process and is somewhat unclear in regard to what the Southside Action Plan is or should be. Suggestion: Revise the Objective, so that the substantive information provided at the end of the current version, relating to "…guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens." appears toward the beginning of the Objective.

Policy 3.2.2. This policy includes the terms *shared public spaces* and *shared spaces*. It is not clear what the term *shared public spaces* means (land areas under multiple public agency ownership/management?). It is not clear whether *shared space*s means the same thing as *shared public spaces*. Suggestion: Revise this policy as appropriate.

Policy 3.3.1. This policy relating to access management includes the phrase, "taking into account impacts to all *modes* and users." While staff and practitioners likely understand the term *modes* as used here, the policy could be enhanced for clarity by adding the term *of transportation* after the word *users* (i.e., "taking into account impacts to all *modes and users of transportation*.").

- **Policy 3.3.2.** This policy is unclear. It appears to prevent vehicular access in roadway intersections and highway interchanges. This can not be the intended meaning. The likely intention is to restrict vehicular access *connections (e.g., driveways)* near street and roadway intersections and highway interchanges. Recommendation: Revise this policy; consider some wording like this: "Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations."

Policy 3.3.3. This policy refers to *unified access* [*plans*]. Typically, in practice, the term *unified access* relates to providing access to more than one destination (for example, two or more businesses) through a single driveway connection. Is this policy, as drafted, sufficiently clear to convey this meaning? Revise if appropriate.

Policy 3.3.4. This policy sets out the basis for access management improvements. It is not clear if the policy provides the basis for roadway modifications, or installation/modification of signals and signage. If it is appropriate to explicitly reference these kinds of modifications, revise the policy accordingly.

Policy 3.3.6. This policy states: "Utilize *context sensitive roadway design* and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods." The use of

the term *context sensitive roadway design* appears to be an implicit reference to FDOT Complete Streets strategy and its use of *context sensitive* design, based on the new urbanists' transect. Suggestion: if additional clarity is provided through more explicit reference to FDOT Complete Streets strategy, revise the policy accordingly. See comment here on Policy 1.2.4.

Policy 3.3.7. This two-sentence policy relating to access management for properties considered to be "consolidated." Suggestion: The clarity of this policy can be enhanced by reversing the order of the two sentences.

Objective. 3.4. This Objective sets out the strategy of sharing the benefits and burdens of public sector projects across the community equitably. Subsequent implementing **Policy 3.4.2.** directs the City and County to [strive] to distribute major infrastructure projects and other public investments geographically across the community with regard to the needs of different areas. There is no implementing policy, however, specifically relating to ensuring that no particular portion of the community is or becomes overburdened with the adverse impacts of/ burdens resulting from the provision infrastructure and public facilities. Would the inclusion of such an implementing policy be helpful? If so, revise the amendment to add such policy.

The word *strive* is misspelled in Policy 3.4.2.

- **Policy 3.5.1.** This policy does not address the strategy of designing and siting infrastructure for purposes of facilitating greater community resiliency and hazard mitigation. Recommendation: Include other policy(-ies) in the amendment that would facilitate the greater resiliency and mitigation of hazards in regard to the siting and design of infrastructure and public facilities or revise this policy as appropriate.

  This policy refers to the application of *context-based desig*n. See comment on the use of this term in Policy 1.2.4. This policy refers to *design speed*. This is an appropriate consideration in street design; it is not clear that general public understands this term, however. Suggestion: Revise the policy as appropriate and/or define the term *design speed* within a companion glossary.

Policy 3.6.1. Consider revising "Proposed amendments to the City of Tallahassee *or* Leon County Land Development Regulations…" to "Proposed amendments to the City of Tallahassee *and* Leon County Land Development Regulations…"

- **Policy 3.6.2.** This policy relating to zoning districts that implement the various future land use categories provided in the Land Use and Mobility Element. The second sentence in the policy states: "Each *land use category* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable."

  The term *land use category*, as used here, is likely an error. It is more likely that the intention of policy is to state: ""Each *zoning district* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable." This conclusion is based on the overall intent of the policy being providing direction for how *zoning districts* should implement the future land use categories, and that detailed land development regulatory information is typically and more appropriately set out in the zoning district regulations.

- **Policy 3.6.3.** This policy enumerates a variety of specific subjects relating to site development that implementing land development regulations must address. The policy

does not explicitly require the mitigation of the typical compatibility issues of visual impact/ aesthetics, lighting and, noise. Successfully addressing these impacts can significantly further compatibility between uses. Recommendation: Perhaps the omission in policy reflects this content being included in other policies included in the amendment. If not, revise policy to expand inclusion of these and other "public nuisance" issues that are often the byproducts of development.

Policy 3.6.4. This policy includes the following statement "Incentives for greater density and intensity up to 25% will be permitted for developments along arterials for developments that incorporate urban design standards resulting in more attractive developments." Based on the preceding sentence in the policy ("allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category"), the 25% standard is 25% greater than the limit otherwise applicable. If this not correct, revise the policy as appropriate.

Please ensure the within the implementing land development regulations, the scope of this incentive is roughly proportional to the what is provided by the developer. For example a 50-acre development site that has 100 feet of frontage along an arterial street, and that provides some shrubbery along this frontage, probably should not be entitled to a 25% increase in permissible density/intensity for the remainder of the site, that may extend several hundred feet from the arterial. This issue is most appropriately fleshed out in the land development regulations but perhaps it might be appropriate to provide some related direction in the land use and mobility element.

If the land use and mobility element will retain the provision for a 25% density bonus provided in exchange for affordable or inclusionary housing as has been provided in the comprehensive plan, how will that bonus incentive work in conjunction with this bonus incentive? Could a developer obtain both bonus incentives?

Suggestion: The provision of this density/intensity bonus may only be appropriate inside the USA. If appropriate, revise the policy accordingly.

Policy 3.6.8. This policy addresses redevelopment of former landfill sites. It includes the following sentence: "Regulations may require the necessary documentation of the subsurface geology, with any application for development within a mapped landfill site at the discretion of the City or County and the Leon County Department of Health." 1) Given the significant potential for environmental health hazard posed through such redevelopment, it is recommended that this policy be revised to mandate documentation of the subsurface geology, as a requirement of development application and approval (revise "may" to "shall"). 2) As drafted, this sentence is confusing — suggestion: delete the comma between the word *geology* and the word *with*, unless that changes the intended meaning.

Policy 3.7.1. This policy sets out overall strategy for urban design in the community. The first sentence of this two sentence policy appears to be generally applicable to urban areas within the community; the second sentence is explicitly applicable to areas outside of urban areas. Suggestion: If it is more appropriate, revise the policy so that it explicitly pertains to urban areas; or, conversely, to address the entirety of the City and County, if it is intended to generally apply to all areas.

Policy 3.7.3. This policy sets out design criteria for *Mobility Hubs*. Will *Mobility Hubs* be designated on the future land use map or other map adopted in the comprehensive plan or on the official zoning map of the applicable jurisdiction? How will this concept be used? Suggestion: provide more guidance and overarching strategy for the *Mobility Hub* concept.

Policy 4.1.1. This policy seeks to encourage the development accessory dwelling units in *most zoning districts*. Is the intention to literally allow accessory dwelling units in *most zoning districts*, or instead, to encourage these units in *most residential zoning districts*? Suggestion: Revise this policy accordingly, if appropriate.

- **Policy 4.1.4**. This policy relates to *pattern books*, an urban design tool that is used to provide information regarding the appropriate character and architectural attributes of the built environment in a specific neighborhood or area.

  The policy states that "Pattern books may be developed to identify a specific range of housing types allowed for different land use categories. This strategy is inconsistent with the traditional use of pattern books. " 1) Pattern books are typically more narrowly tailored to fit a specific neighborhood or development, not an entire land use category, or even zoning district. It is difficult to envision the built environment in an entire future land use category based on a singular pattern book. 2) Pattern books usually address such urban design elements as *architectural style*, including architectural details, the orientation of structures on lots and their relationship to the street, and other specific details relating to urban form. Recommendation: This policy should be accordingly, to more accurately reflect the typical content and usage of Pattern Books in the urban design of a community.

  Suggestion: 1) add an "s" at the end of "Book" in the policy title to reflect the plural usage ("Pattern Books").

Objective 4.2 and Subsequent Implementing Policies. This Objective and implementing policies relate to facilitating transit-oriented development (TOD) near *mobility hubs* and around *transit centers*. Will *mobility hubs* and *transit centers* be designated on adopted maps? Recommendation: Revise the comprehensive plan as appropriate. See also comment here on **Policy 3.7.3**, relating to the term *Mobility Hub*.

Policy 4.2.2. This policy enumerates guidance for content of implementing land development regulations relating to TOD. Some of the guidance provided is somewhat vague and/or may be at the level of specificity more appropriate to land development regulations. For example: "Create public plaza directly fronting one or more sides of the center building where feasible" Suggestion: Revise if appropriate.

Policy 4.2.4. This policy specifically tasks the *Planning Department* with the evaluation of potential trail-oriented development. Suggestion: Revise to more generally refer to "staff" or "local government" to recognize that local government assets, resource availability, etc., change over time and other departments or agencies may need to perform this task in the future.

Policy 4.2.5. This policy refers to a *Mobility Hub*. See comment here on **Policy 3.7.3.**, relating to the term *Mobility Hub*.

- **Policy 4.3.1.** This policy specifies the density bonus incentive for inclusionary housing as "up to 30%, corresponding to mandatory and/or voluntary provisions of inclusionary

housing." Recommendation: Revise the policy to clarify that the incentive is for up to 30% *greater density than otherwise provided by the applicable zoning district.*

It is not clear what is meant by the phrase "corresponding to mandatory and/or voluntary provisions of inclusionary housing." Is this a recognition that incentive bonus is different, depending on whether the inclusionary housing is provided voluntarily or through mandatory requirement? Suggestion: Revise as appropriate to enhance clarity.

Policy 4.4.1. [Remarkably, this policy is no longer Policy number 2.1.9.] This dinosaur is not extinct!

Goal 5 and Subsequent Objectives and Implementing Policies. This strategy "cluster" does not include any policy provisions for coordinating the provision of adequate and appropriate infrastructure (other than transportation infrastructure) necessary to support the targeted economic development (or targeted areas for economic development).

Objective 5.1. This Objective includes the phrase: "…to withstand positive and negative changes in the economy and to continue providing jobs and incomes to support the community." Suggestion: To enhance clarity, revise this phrase to state: "…to take advantage of positive positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community."

Policy 5.1.2. This policy specifies the content to be included in the Economic Development Element. It seems unusual to use to use a policy in the Land Use and Mobility Element to describe or prescribe the appropriate content of another element of the comprehensive plan.

Policy 5.5.1. This policy states: "The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions *to leveraging opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion and to attract new businesses.*" Suggestion: As drafted, the second half of this policy (in *italics* here) seems to be missing some wording and might benefit from revision to enhance clarity.

Policy 6.1.2. This policy relates to *context*-based transportation facilities. As noted elsewhere in these comments, the *context* concept requires explanation. It appears to be explained in greater detail in Objective 6.3. and Policy 6.3.1. Recommendation: Provide some explanatory information earlier in the element to enable greater understanding of this term/concept, and cross-reference Objective 6.3. and Policy 6.3.1. when using the term in other objectives and policies. See also comment here regarding Policy 1.2.4.

Policy 6.1.4. This policy relating to street design retrofitting for greater livability includes the following phrase: "…including but not limited lane width adjustments…". Suggestions: Revise the policy to add the word "to" in between the words "limited" and "lane." The policy does not include potential street lighting or stormwater management retrofits. If appropriate, revise the policy to include these retrofits.

Objective 6.2. This Objective states: "Improve the *balance*, connectivity, and capacity of the multimodal transportation network." It is not apparent what the word "balance" means in this context. Perhaps it has something to do with balancing *mode split*, which is the proportion trips distributed among each of the different modes of travel, or balancing public expenditure among the different modes of travel? Recommendation: Revise this objective for clarity.

Policy 6.2.5. This policy addresses interconnectivity within development. It is not apparent that this policy or any other policy in the proposed Land Use and Mobility Element promotes retrofitting existing development to enhance interconnectivity. Recommendation: Consider revising the element to include such strategy.

The policy includes the following phrase: "…require these interconnections between adjacent, incompatible developments *if it* has the potential to reduce the vehicular traffic on the external street system." Suggestion: Revise this phrase to state: "…require these interconnections between adjacent, incompatible developments *when such connection* has the potential to reduce the vehicular traffic on the external street system."

Policy 6.3.1. This policy refers to *Safe Systems*. What is the meaning of this term? What agency is responsible for administering *Safe Systems*? For example, is this a FHWA program that focuses on the design of transportation infrastructure? Recommendation: Revise this policy to provide more information about what *Safe Systems* are.

Policy 6.3.3. This policy establishes the requirement to maintain a Context Classification map. Is this map intended to be adopted as part of the comprehensive plan? Or adopted by ordinance but not in the comprehensive plan? Recommendation: Provide additional information on how/where this map will be documented/adopted.

Policy 6.3.5. This policy addresses modification to street design, specifically, *lane repurposing.* The policy refers to *road diets*. The meaning of this term may require further explanation; revise accordingly. The second sentence includes the phrase: "Reducing, narrowing, or repurposing automobile lanes to support multimodal or *other non-automobile-oriented goals, objectives, or policies*…" Suggestion: Revise this phrase; consider: "Reducing, narrowing, or repurposing automobile lanes to support multimodal or *travel by modes other than by automobile*…"

Policy 6.3.7. This policy, related to management of speed on streets, uses the term *accidents*. In the transportation planning practice, the term *crashes* is used. Suggestion, consider revising the policy to replace the term *accidents* with the term *crashes*.

Policy 6.3.8. This policy prescribes the peak hour level of service (LOS) standards for streets and roadways in the community. Recommendations: 1) Revise the policy to clarify that the LOS provided is for the PM peak hour, unless the peak hour (e.g., AM, mid-day, PM) is to be determined for the applicable facility at time of analysis. 2) Revise the policy to clarify that the LOS standards provided are for automobile travel (i.e., not transit service, bicycle mobility, pedestrian mobility, etc.).

Policy 6.3.9. This policy is named "Area Wide Level of Service (LOS)." This is an inaccurate description of the policy. The policy actually addresses the Multimodal Transportation District areawide level of service. It does not set a LOS for the entirety of the community. Recommendation: Revise the title of this policy accordingly.

The proposed FLUM: The proposed FLUM depicts areas within the City and County where FLUCs intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, and even typical current local land use practice, principal uses face one another — *look out* at one another — across streets…and this visual perception is one important way most people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along the rear lot line or separated through categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

I realize this a bit of challenge because most of these newly proposed boundaries are in the same location as the boundaries between FLUCs on the FLUM presently in effect.

Comments

This review is based upon the draft of the proposed Land Use and Mobility Element, dated March 24, 2025, provided on the Tallahassee-Leon County website.

What Isn't Included: At the beginning of the element, the articulation of an overarching strategy(-ies) of how the community should grow; i.e.: how sparse and rural the outlying areas should be; how dense and urban the inner portions of the City should be; whether the community will develop dense urban nodes (*walk-ups* and *Transit Oriented Development*); the degree to which existing neighborhoods may change, such as provide for greater density, inclusion of compatible non-residential uses; to what extent the density transition from rural to most urban will be based on the new urbanists' *Transect* concept (and what this is) and companion implementing context zones; the extent that design attributes and infrastructure design may used, in addition to density and intensity, and use type, to influence the location and character of future land use and development; whether regulation of design attributes and other approaches, such as mitigation of potential adverse sound, lighting, hazardous vehicular traffic flow, will be used to promote land use compatibility, particularly where different uses are intended to mix/colocate; and, how fine a grain of mixture of uses is intended in categories that will provide for mixed use.

This kind of discussion can be very useful for providing the basis for the ensuing goals, objectives, and policies, as well as informing the reader of the overall intent of the various strategies represented in the element.

Contemplate whether large facilities that support AI and other intensive electrical energy uses require specific treatment within this element, and if so, provide appropriate guiding strategies.

Where the Planning Department (or other department) is specifically referenced in policies, as in being tasked to do something, it may be more appropriate to simply refer to the applicable local government (or both) given the potential for staffing resources to change over the timeframe of the plan.

Several of the policies relating to the particular future land use categories specify the detailed types of building types allowable, such as, *duplexes, triplexes, quadruplexes, live-work units*. This is detailed implementation content typically relegated to land development regulations and zoning. The listing of specific building types in the policies describing a future land use category could be construed to preclude those building types not listed, from the zoning district(s) that ultimately implement the future land use category. Likewise, the listing of specific building types in the policy describing the category could be construed to require all of the zoning districts that implement a particular category to allow all of the building types listed. This may or may not be problematic. But if it is problematic, it will also require a comprehensive plan amendment as a precursor to any land development regulation (e.g., zoning) amendment that would change what building types are allowed in a particular zoning district.

Some of the terminology used in the draft amendment may not be clear to lay readers. It would be most helpful to include a companion glossary within the amendment, wherein this terminology is defined.

As drafted, some of the various density bonus incentives provided are drafted to enable density/intensity to be increased to levels above the otherwise applicable *future land use category* maximum limits. [In other instances, the policies omit whether the bonus would allow

an increase above the future land use category limit or zoning district limit.] Should the incentives instead allow for increases above otherwise applicable *zoning district* limits? In some instances, implementing zoning districts set out maximum density limits less than the future land use category they implement.

The strategy relating to transit service in the community, set out in Objective 6.10., and subsequent implementing policies, does not include any reference to coordination with neighboring jurisdictions (e.g., Wakulla County, City of Thomasville, etc.) for long-distance commuter transit opportunities. It may be appropriate to recognize the potential for such services and coordinate with the applicable local governments.

Policies 1.1.3 and 1.1.4. Both policies specify the required timing for updating maps to be "updated with current data during the Evaluation and Appraisal Review process." This terminology implies that the applicable maps could not be amended at an earlier point in time, if necessary, based on new information coming to light. Suggestion: revise these policies to state that the maps are to be updated no less frequently than during the Evaluation and Appraisal Review process. Note that the Evaluation and Appraisal Review of comprehensive plans is required to occur on a seven-year recurring schedule.

Objective 1.2. Suggestion: "infrastructure extension" should be revised to "infrastructure location and expansion" to be more encompassing.

Objective 1.2. This objective does not mention or hint at acquisition of natural areas (although this is explicitly stated in Policy 1.2.1) as a tactic. Suggestion: Revise the Objective as appropriate to include *acquisition*.

Policy 1.2.1. This policy guides the City and County to acquire sensitive areas. Does this provide for less-than fee simple acquisition (e.g., acquisition of easements) as well as fee simple acquisition? If so, good. If not, revise the policy as appropriate.

Policy 1.2.2. This policy specifies that Planning Department staff shall conduct an environmental analysis of proposed comprehensive plan amendments. The concept is good, but should the policy be revised to enable other City and Count staff to be utilized in such analysis? Potentially the Planning Department may not have sufficient or appropriate resources to accomplish this requirement.

Policy 1.2.4. This policy refers to *context-based* beautification, etc. Suggestion: Provide additional information on the *context* basis; i.e., is this referring to a context-based land usage/ development concept, such as utilized by the Congress for New Urbanism, or Florida D.O.T., for example?

Policy 1.3.1. This policy requires the updating of the Greenways and Trails Master Plan every 10 years. Suggestion: revise this policy to provide for updating no less frequently than every 10 years.

Policy 1.3.2. The policy does not provide guidance on who is intended to develop and maintain urban recreation spaces.

Objective 1.5. This Objective calls for the implementation of strategies that "reduce and treat stormwater…" It is not clear what *reducing stormwater* means? [Stormwater is water produced during rain events]. Maybe some word or words are missing unless the drafters have, at their disposal, a method of reducing the volume of rain in our community.]

Policy 1.5.2. This policy provides that "Local governments shall incentivize the use of green infrastructure stormwater management systems… by providing a reduction in minimum green space requirements or other incentives." As drafted, this policy could be misconstrued to enables the provision of less green area to treat/manage stormwater. Suggestion: redraft for greater clarity to ensure that reductions in minimum green space requirements would result *in exchange for* provision of green infrastructure.

Policy 1.6.1. This policy includes the following: "These *regulations* shall be implemented as prescribed in the *regulations*…" Suggestion: Revise for directness and grammatical correctness.
Policy 1.6.2. This policy requires zoning and development standards, within the Urban Services Area, to promote the location of homes, jobs [and other destinations] within 20 minutes walking distance of each other. 1) Why not consider, instead, a minute standard? Within urban design and pedestrian mobility practice, this timeframe has gained more acceptance as a design standard. 2) Maybe the standard (20 minutes, 15 minutes, whatever) should be referenced as a maximum timeframe.

Policy 1.6.3. In this policy, consider replacing "higher" capacity with "greater" capacity.

Policy 1.6.5. In this policy, consider adding the term "runoff" after the word "stormwater" to provide greater clarity. Consider replacing "quantity" with "volume."

Policy 1.7.1. This policy specifies coordination with key regional partners on the protection of natural resources that extend beyond jurisdictional boundaries. The policy specifically mentions some agencies but does not mention any of the adjacent local governments (both within the State of Florida and the State of Georgia) nor does it mention the Apalachee Regional Commission or the Southwest Georgia Regional Commission. Recommendation: These are significant omissions; revise the policy to include these governments/agencies.

- **Policy 2.2.1.** This policy provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe.

  This standard appears to be significantly greater than needed to promote an efficient development pattern, particularly an urban development pattern. It would consume more forested land and agricultural land and require longer and require more costly infrastructure extensions than would be required by the respective population with even a modest urban development pattern (i.e., at a moderate development density/intensity). It is recognized that the location of the USA boundary on the map included in the draft amendment is approximately the same location as the USA boundary that has been in effect for several years. Recommendation: Revise this policy to reduce the percentage of surplus vacant and developable land necessary to accommodate population over time, so that a 50% surplus is not continually provided for over time, but reduced, to reflect urban intensities and densities with this portion of the USA; failure to do so could result in less-than urban development patterns sprawling within the USA.

Policy 2.2.5. This policy includes the following: "Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by….the ability to implement *conditions* or mitigation for the proposed development." The term *conditions*, as used here, likely refers to *conditions of approval* attached to a development order issued by the City or County for a particular development; this is not clear and may be too specific or technical for use in a comprehensive plan policy. Suggestion: the term *mitigation*, as provided, may be sufficient, or perhaps could be expanded to, the *mitigation of potential impacts*.

Policy 2.2.6. This policy provides for exceptions to the Urban Services Area concept to provide for higher density within areas near the Woodville Rural Community [future land use map category] when central sewer service is available and development connects to sewer. 1) Is it necessary to also set a maximum development density/intensity limit for this development within this policy? Or is this policy the basis for another policy that provides such limit? 2) This policy is imprecise with regard to location of its application. As written, it would allow the extension of higher density development in any area designated Rural or Rural Residential on the future land use map, so long as it is connected to sewer and subjectively located within the area described in the policy. Recommendation: review this policy and if appropriate, specify geographic limits to this exception to apply.

Policy 2.2.7. This policy requires consistency with the priority of urban services, the Future Land Use Map, and the Urban Services Area in conjunction with "the *widening* of existing streets and roads." Widening streets and roadways is not necessarily the same as adding additional lanes; and either approach, while traditionally responses to increased growth and travel demand, are not always consistent with other community objectives, such as protecting natural resources, protecting residential use from adverse impacts, creating human-scale environments that facilitate pedestrian activity. Suggestion: Instead of implying that streets and roads must always be widened to accommodate projected growth and demand, use alternative terminology such as *modifying*, *improving*, or *reconstructing*, which encompasses *widening* but is not limited to *widening*.

Policy 2.2.8. This policy promotes brownfield reclamation, building reuse, and adaptive reuse of structures, enabling these activities through provision of incentives in the land development regulations. The policy outlines the content of the land development regulations incentives; it does not include any provisions for mitigation of environmental or environmental health issues associated with the applicable brownfield sites. The policy also provides for "density and intensity bonuses of up to 25% modified development review thresholds." It is not clear if this intended to refer to maximum limits otherwise set out for the applicable future land use category in the comprehensive plan or zoning district (land development regulation) limitations or other. Suggestions: 1) Revise the policy to provide for or recognize that mitigation of adverse environmental conditions are prerequisite to any redevelopment of brownfield sites; 2) clarify the reference basis for density/intensity bonuses.

Policy 2.2.9. It is not clear how this policy does anything other than what is provided for in Policy 2.2.8., except to add the term "Greyfield." Suggestion: If appropriate, merge these policies together.

Policy 2.2.10. This policy specifies the protection of identified future rights-of-way from building encroachment; it does not specify what the appropriate setbacks would be, but includes a table specifying significant rights-of-way widths for the types of transportation facilities listed. A word of caution: The City of Tallahassee had, at one point, a similar approach wherein the implementing land development regulations (with their basis also

established in the comprehensive plan) required a “special roadway setback,” to protect identified corridors from development encroachment, and thus to make it easier and less expensive for the City acquire needed right-of-way for roadway construction. This regulation was challenged, as applied, as a taking, with no legitimate public health, safety, or welfare basis. [The City was able to prevail as its implementing regulations provided affected property owners with alternative design “exceptions” that made it possible, the plaintiff’s instance, to realize their development interests within the remaining, reduced buildable area resulting from the implementation of the setback]. The City thereafter also amended their regulations to minimize potential that they be used as a workaround to acquire right-of-way without appropriate compensation.

- **Policy 2.4.1.** This policy establishes the basis for a Transfer of Development Rights (TDR) program. It limits where development rights may be transferred, to areas designated Rural Residential or Rural Community on the Future Land Use Map. A TDR program can be a very helpful tool to help minimize sprawl and direct growth to the most appropriate areas of the community, areas where supporting infrastructure and facilities are already present or planned to be available soon, and areas targeted for redevelopment, and further economic development. By precluding areas within the USA from receiving transferred development rights, this policy becomes, at best, a marginally useful tool. Recommendation: 1) Revise the policy to provide for transfer of rights to within the USA, and in particular, areas targeted for greater densities and intensities. 2) Revise the policy to allow transfers of density out of the Lake Protection future land use category, as a tool to facilitate environmental protection of resources within the category. Suggestion: Add the word “program” in between “Rights” and “may” in the first sentence of the policy.

Policy 2.4.2. This policy would require expansions of the USA to be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area. This is appropriate. But the policy fails to provide any criteria or guidance for decision-makers to use to determine whether, and to what extent, and expansion of the USA is warranted; i.e., it seems of value, but insufficient, to simply require the undertaking of these analyses but to potentially place no particular regard to their findings.

Policy 2.5.1. This policy sets out some strategies for retrofitting/reconstructing suburban areas. The proposed strategies are consistent with current best practices in urban design. Some of the terminology used in the policy might, however, be improved. Some of the terminology would be well understood by urban designers and most planners but may be less well understood by the general public and policy-makers. Examples of terminology that might benefit from revision include:

- *Complete streets* (this term has not yet be explained at this point in the proposed comprehensive plan)
- *Continuous streetscapes with liner buildings close to the street*
- *Appropriate design elements*
- *Residential building types*

In regard to the strategy of *block size reductions* — small blocks are an integral attribute of walkable and human-scale development, but while many (most?) of the blocks in the community are currently larger or significantly larger than ideal in these regards, not all are, and at some point, if block size reduction does occur, it will no longer need to continue on over time. Suggestion: Consider some other wording, perhaps providing guidance as to what appropriate block size should be, instead of compelling the action to continue reduce the size of blocks.

Also, in the first sentence, consider using "adopt" or "enact" as opposed to "develop…land development regulations."

Policy 2.6.1. This policy sets out street beautification strategies. Suggestions: Revise the policy: 1) "The local governments shall provide for land use regulations…" should be replaced by terminology like "The City and County shall adopt land development regulations…" 2) The policy refers to "…a given context." The significance of this wording might be missed as the concept of context-based land usage/development concept, such as utilized by the Congress for New Urbanism, or the Florida D.O.T., based upon the new urbanists' *Transect*, has not been explained yet at this point in the proposed comprehensive plan.

Objective 2.7. Suggestion: Revise "Facilitate the safe and comfortable use of multiple modes of transportation *and* urban design standards to…" "Facilitate the safe and comfortable use of multiple modes of transportation *through the use of* urban design standards to…"

Policy 2.7.5. The meaning of the first usage of the term "areas" in this policy is not clear. Could it be replaced with a more precise term; e.g., "the MMTD?"

Objective 2.8 The sentence, "The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County." omits [non-transportation] *public facilities* and *infrastructure*. Recommendation: revise this sentence as follows: "The context areas shall be used as the basis for planning and design of land uses, transportation facilities, infrastructure, and public facilities in the City of Tallahassee and Leon County."

Future Land Use Map, Page 16. Revise to include the title, Future Land Use Map (or other as appropriate and include referenced timeframe that the map represents.

- **Policy 2.8.2.** This policy includes the statement, "To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required…" It's not clear whether or how requiring a minimum threshold of open space area will ensure a mixture of uses in the the mixed-use land use categories.

Policy 2.8.3. The first paragraph of this policy implies but does not explicitly state that state and national forests, wildlife management areas, and other managed natural areas will be comprise the lands to be included in the Natural Areas Future Land Use Category. As drafted, the policy implies non-managed areas would not be appropriately included in this category. Suggestion: Revise the policy for precision and clarity with regard to what lands are intended to be designated within the category.

Policy 2.8.5. - Part 4. For clarity consider adding the term *use* after *single-family residential* in the sentence "Existing lots of record shall be considered vested for the purposes of single-family residential regardless of lot size or density provided all other development standards can be met."

Policy 2.8.7. - Part 5. It is unclear what this sentence means: "To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites." Does this mean redevelopment sites may include a greater proportion of impervious surface than would otherwise be required for new development, or?

Policy 2.8.7. - Part 8. This part allows planned development special district areas of over 100 acres within the Lake Protection Category to develop in accordance with the allowable densities and intensities of the Suburban Mixed Use land use category; i.e., up to a maximum of 45 dwelling units per acre and 25,000 square feet per acre. This seems more intensive than presently allowed. Are these intensity limits appropriate?

Policy 2.8.8. - Part 1. This part of this policy describing the Sub-Urban Residential Preservation Future Land Use Category sets out as criteria for inclusion in the category, "Assessment of stability of the residential area, including but not limited to: a. Degree of home ownership b. Existence of neighborhood organizations." While tenure and participation in neighborhood organizations are traditional measures of neighborhood stability/transition and cohesiveness, they can also be used to simply enable development interests to reclassify (i.e., change the future land use map) to rezone and redevelop lower-income areas, where homeownership rates may be lower than the community as a whole and there is less participation in neighborhood organizations. This results in displacing existing residents and potentially increasing their housing cost burdens with higher rents.

Policy 2.8.8. - Part 3. This part of this policy exempts cemeteries and religious facilities used solely for religious use, from having to provide effective visual and sound buffering (either through vegetative buffering or other design techniques), where they adjoin low density residential areas. It is recognized that is a continuation of the current practice of exempting these uses from these requirements. While well-intentioned and workable for smaller scale cemeteries and religious facilities, at larger scale and with more frequent usage, these uses can still present incompatible land use conflicts with adjacent/nearby low density residential land use. Accordingly, they should not be carte blanche exempted from sound and visual buffering requirements when adjacent to low density residential use; instead, they should be subject to such requirements and be allowed to demonstrate their compatibility at time of application.

Policy 2.8.9. The word "quadraplexes" should be revised to "quadruplexes."

The third paragraph of the policy specifies that land development regulations shall include development standards to maintain *low traffic volumes*, vehicular speeds, and parking for nonresidential uses. It is not clear what would be considered *low traffic* volumes, but while considering this directive, recognize that the category allows for residential land use at a density up 20 dwelling units per acre, and unless the development regulations can mandate the close location of district residents' places of work (so that they don't require vehicular travel for commutes) this may make the directive difficult to achieve.

Sub-part 1. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Sub-Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category.

Policy 2.8.10. In the second paragraph, there is a reference to the *Sub-Urban Mixed-Use Commercial Future Land Use Category* as the *Sub-Urban Mixed Land Use Category*. Recommendation: Revise the text to provide consistent terminology.

Policy 2.8.11. This policy begins by stating: "The intent of the Urban Residential Preservation category is to preserve existing historic walkable neighborhood development patterns." While walkable development patterns are arguably integral to thriving neighborhoods, and a appropriate attribute of land use within this category, the retention of such patterns likely only deserve secondary emphasis, with the preservation of the *actual neighborhoods* and their residential use the primary.

The word *quadplexes* in the third paragraph of this policy should be revised to *quadruplexes*.

Policy 2.8.12. This policy (first paragraph) includes the phrase "a street network that generally connects to residential neighborhoods *immediately* along corridors or behind the uses fronting major collectors or arterial roadways." Suggestion: Delete the word *immediately* from this phrase; it does not seem to add anything and may add ambiguity.

The fourth paragraph of this policy directs the reduction of vehicular traffic volumes. It is not clear how volume reduction might be accomplished. See related comment here on **Policy 2.8.9.**

Sub-part 2. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facility compatibility between residential and non-residential uses *within* the Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category. See related comment here on **Policy 2.8.9.**

Policy 2.8.14. This policy includes the phrase: "The *land use* is characterized by *close-proximity buildings* featuring retail on the ground floor and residential units above…" Suggestion: Modify the phrase to read: "The *land use category* is characterized by *buildings in close-proximity to one another,* featuring retail on the ground floor and residential units above…"

This policy includes the term, *consistent street trees*. This term is vague. Suggestion: Revise the wording to provide greater clarity.

- **Sub-part 1.** of the policy requires the land development regulations that implement the Urban Center future land use category to establish design guidelines. This part then subsequently provides that any development with a density greater 10 dwelling unit per acre will be deemed consistent with standards. Accordingly, whatever design standards may be provided, simply building to densities greater than 10 dwelling units per acre will alleviate any necessity to attempt to meet those standards. If this is not the intention, it is recommended that this part be revised as appropriate.

- **Sub-part 2.** This portion of the policy sets out criteria for expansion of the Urban Center future land use category. Proposed criterion a.iii. is, *Served by available infrastructure*. It's not clear that that is the intended or appropriate wording, as theoretically, almost all lands are served by whatever infrastructure exists. Perhaps the intent relates more to being served by infrastructure that is adequate to support the level of intensity allowed in the Urban Center future land use category? Recommendation: Reword to provide clarity and appropriate direction.

Policy 2.8.16. This policy addressing the Manufacturing and Mining Special District, includes the following direction: "The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services for uses that are dependent upon *central infrastructure services*." Suggestion: Ensure that the term *central infrastructure services* is defined within the comprehensive plan.

Sub-part 1. This part include the following phrase: "The City and Leon County Land Development Code shall *development* minimum mitigation standards." Suggestion: Revise this phrase to read: "The City and Leon County Land Development Code shall *provide* minimum mitigation standards."

Policy 2.8.17. Relating to the Institutional Special District uses the term *Principle uses*. This term should be revised to *Principal uses*.

Policy 2.8.19. Sub-part 2. This part related to required master plans for development within the Planned Development Special District. This part sets out requirements are extremely specific, in comparison to the typical strategic provisions found in comprehensive plans. Is this content more appropriate in the land development regulations?

Some of the specific requirements falling under the header in this section could be reworded for better grammatical agreement, for example:

> *2. Master Plans shall identify the following:…h. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility…*

Sub-part 3. This part states: "If a Master Plan exceeds the allowable uses, densities and/or intensities of the Planned Development District, a comprehensive plan amendment shall be required to obtain the proposed use, density and/or intensity." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 4. This part states: "No comprehensive plan amendment shall be required if the Master Plan is consistent with the allowable uses, densities and intensities provided in this policy." This part is unnecessary as this directive is applicable to *all* proposed development within the City and County, regardless of future lane use category classification and location.

Sub-part 6. This part states: "Master Plans shall be consistent with the provisions of the Comprehensive Plan." This part is likely unnecessary given the requirement all development in all locations shall be consistent with the comprehensive plan, as currently in effect, except for development vested under previous editions of the comprehensive plan. Recommendation: delete, or revise as appropriate, if vesting is an issue.

Sub-part 8. This part states: "Easements, right-of-way and other improvements located throughout the Planned Development District boundary *may be required* to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan." This part is unnecessary given that it is permissive, and not obligatory, using the term *may be required*.

Sub-parts 9. & 10. Sub-part 10. includes the following provision: "If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage." Does this

provision also relate to the public acquisitions referred to in Sub-part 9? If so, it is recommended that these parts be revised to ensure clarity.

Policy 3.1.1. This policy refers to *context-based requirements*. This likely refers to *context zones* based on the new urbanists's *transect*, but this is not self-explanatory. Recommendation: Revise for clarity. See comment here on Policy 1.2.4.

Policy 3.1.3. This policy states that the land development regulations shall support neighborhood scale grocery uses within and adjacent to residential areas. Is this consistent with the preclusion of non-residential uses within the Sub-Urban Residential Preservation land use category? If not, make appropriate revisions to either Policy 2.8.8. [RE the Sub-Urban Residential Preservation land use category], this policy, or both.
Objective 3.2. This Objective establishes the Southside Action Plan strategy. Much of this Objective relates to appropriate process and is somewhat unclear in regard to what the Southside Action Plan is or should be. Suggestion: Revise the Objective, so that the substantive information provided at the end of the current version, relating to "…guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens." appears toward the beginning of the Objective.

Policy 3.2.2. This policy includes the terms *shared public spaces* and *shared spaces*. It is not clear what the term *shared public spaces* means (land areas under multiple public agency ownership/management?). It is not clear whether *shared space*s means the same thing as *shared public spaces*. Suggestion: Revise this policy as appropriate.

Policy 3.3.1. This policy relating to access management includes the phrase, "taking into account impacts to all *modes* and users." While staff and practitioners likely understand the term *modes* as used here, the policy could be enhanced for clarity by adding the term *of transportation* after the word *users* (i.e., "taking into account impacts to all *modes and users of transportation*.").

- **Policy 3.3.2.** This policy is unclear. It appears to prevent vehicular access in roadway intersections and highway interchanges. This can not be the intended meaning. The likely intention is to restrict vehicular access *connections (e.g., driveways)* near street and roadway intersections and highway interchanges. Recommendation: Revise this policy; consider some wording like this: "Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations."

Policy 3.3.3. This policy refers to *unified access* [*plans*]. Typically, in practice, the term *unified access* relates to providing access to more than one destination (for example, two or more businesses) through a single driveway connection. Is this policy, as drafted, sufficiently clear to convey this meaning? Revise if appropriate.

Policy 3.3.4. This policy sets out the basis for access management improvements. It is not clear if the policy provides the basis for roadway modifications, or installation/modification of signals and signage. If it is appropriate to explicitly reference these kinds of modifications, revise the policy accordingly.

Policy 3.3.6. This policy states: "Utilize *context sensitive roadway design* and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods." The use of the term *context sensitive roadway design* appears to be an implicit reference to FDOT Complete Streets strategy and its use of *context sensitive* design, based on the new urbanists' transect. Suggestion: if additional clarity is provided through more explicit reference to FDOT Complete Streets strategy, revise the policy accordingly. See comment here on Policy 1.2.4.

Policy 3.3.7. This two-sentence policy relating to access management for properties considered to be "consolidated." Suggestion: The clarity of this policy can be enhanced by reversing the order of the two sentences.

Objective. 3.4. This Objective sets out the strategy of sharing the benefits and burdens of public sector projects across the community equitably. Subsequent implementing **Policy 3.4.2.** directs the City and County to [strive] to distribute major infrastructure projects and other public investments geographically across the community with regard to the needs of different areas. There is no implementing policy, however, specifically relating to ensuring that no particular portion of the community is or becomes overburdened with the adverse impacts of/ burdens resulting from the provision infrastructure and public facilities. Would the inclusion of such an implementing policy be helpful? If so, revise the amendment to add such policy.

The word *strive* is misspelled in Policy 3.4.2.

- **Policy 3.5.1.** This policy does not address the strategy of designing and siting infrastructure for purposes of facilitating greater community resiliency and hazard mitigation. Recommendation: Include other policy(-ies) in the amendment that would facilitate the greater resiliency and mitigation of hazards in regard to the siting and design of infrastructure and public facilities or revise this policy as appropriate.

  This policy refers to the application of *context-based desig*n. See comment on the use of this term in Policy 1.2.4. This policy refers to *design speed*. This is an appropriate consideration in street design; it is not clear that general public understands this term, however. Suggestion: Revise the policy as appropriate and/or define the term *design speed* within a companion glossary.

Policy 3.6.1. Consider revising "Proposed amendments to the City of Tallahassee *or* Leon County Land Development Regulations…" to "Proposed amendments to the City of Tallahassee *and* Leon County Land Development Regulations…"

- **Policy 3.6.2.** This policy relating to zoning districts that implement the various future land use categories provided in the Land Use and Mobility Element. The second sentence in the policy states: "Each *land use category* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable."

  The term *land use category*, as used here, is likely an error. It is more likely that the intention of policy is to state: ""Each *zoning district* shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable." This conclusion is based on the overall intent of the policy being providing direction for how *zoning districts* should implement the future land use categories, and that detailed land development regulatory information is typically and more appropriately set out in the zoning district regulations.

- **Policy 3.6.3.** This policy enumerates a variety of specific subjects relating to site development that implementing land development regulations must address. The policy does not explicitly require the mitigation of the typical compatibility issues of visual impact/ aesthetics, lighting and, noise. Successfully addressing these impacts can significantly further compatibility between uses. Recommendation: Perhaps the omission in policy reflects this content being included in other policies included in the amendment. If not, revise policy to expand inclusion of these and other "public nuisance" issues that are often the byproducts of development.

Policy 3.6.4. This policy includes the following statement "Incentives for greater density and intensity up to 25% will be permitted for developments along arterials for developments that incorporate urban design standards resulting in more attractive developments." Based on the preceding sentence in the policy ("allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category"), the 25% standard is 25% greater than the limit otherwise applicable. If this not correct, revise the policy as appropriate.

Please ensure the within the implementing land development regulations, the scope of this incentive is roughly proportional to the what is provided by the developer. For example a 50-acre development site that has 100 feet of frontage along an arterial street, and that provides some shrubbery along this frontage, probably should not be entitled to a 25% increase in permissible density/intensity for the remainder of the site, that may extend several hundred feet from the arterial. This issue is most appropriately fleshed out in the land development regulations but perhaps it might be appropriate to provide some related direction in the land use and mobility element.

If the land use and mobility element will retain the provision for a 25% density bonus provided in exchange for affordable or inclusionary housing as has been provided in the comprehensive plan, how will that bonus incentive work in conjunction with this bonus incentive? Could a developer obtain both bonus incentives?

Suggestion: The provision of this density/intensity bonus may only be appropriate inside the USA. If appropriate, revise the policy accordingly.

Policy 3.6.8. This policy addresses redevelopment of former landfill sites. It includes the following sentence: "Regulations may require the necessary documentation of the subsurface geology, with any application for development within a mapped landfill site at the discretion of the City or County and the Leon County Department of Health." 1) Given the significant potential for environmental health hazard posed through such redevelopment, it is recommended that this policy be revised to mandate documentation of the subsurface geology, as a requirement of development application and approval (revise "may" to "shall"). 2) As drafted, this sentence is confusing — suggestion: delete the comma between the word *geology* and the word *with*, unless that changes the intended meaning.

Policy 3.7.1. This policy sets out overall strategy for urban design in the community. The first sentence of this two sentence policy appears to be generally applicable to urban areas within the community; the second sentence is explicitly applicable to areas outside of urban areas. Suggestion: If it is more appropriate, revise the policy so that it explicitly pertains to urban areas; or, conversely, to address the entirety of the City and County, if it is intended to generally apply to all areas.

Policy 3.7.3. This policy sets out design criteria for *Mobility Hubs*. Will *Mobility Hubs* be designated on the future land use map or other map adopted in the comprehensive plan or on the official zoning map of the applicable jurisdiction? How will this concept be used? Suggestion: provide more guidance and overarching strategy for the *Mobility Hub* concept.

Policy 4.1.1. This policy seeks to encourage the development accessory dwelling units in *most zoning districts*. Is the intention to literally allow accessory dwelling units in *most zoning districts*, or instead, to encourage these units in *most residential zoning districts*? Suggestion: Revise this policy accordingly, if appropriate.

- **Policy 4.1.4**. This policy relates to *pattern books*, an urban design tool that is used to provide information regarding the appropriate character and architectural attributes of the built environment in a specific neighborhood or area.

  The policy states that "Pattern books may be developed to identify a specific range of housing types allowed for different land use categories. This strategy is inconsistent with the traditional use of pattern books. " 1) Pattern books are typically more narrowly tailored to fit a specific neighborhood or development, not an entire land use category, or even zoning district. It is difficult to envision the built environment in an entire future land use category based on a singular pattern book. 2) Pattern books usually address such urban design elements as *architectural style*, including architectural details, the orientation of structures on lots and their relationship to the street, and other specific details relating to urban form. Recommendation: This policy should be accordingly, to more accurately reflect the typical content and usage of Pattern Books in the urban design of a community.

  Suggestion: 1) add an "s" at the end of "Book" in the policy title to reflect the plural usage ("Pattern Books").

Objective 4.2 and Subsequent Implementing Policies. This Objective and implementing policies relate to facilitating transit-oriented development (TOD) near *mobility hubs* and around *transit centers*. Will *mobility hubs* and *transit centers* be designated on adopted maps? Recommendation: Revise the comprehensive plan as appropriate. See also comment here on **Policy 3.7.3**, relating to the term *Mobility Hub*.

Policy 4.2.2. This policy enumerates guidance for content of implementing land development regulations relating to TOD. Some of the guidance provided is somewhat vague and/or may be at the level of specificity more appropriate to land development regulations. For example: "Create public plaza directly fronting one or more sides of the center building where feasible" Suggestion: Revise if appropriate.

Policy 4.2.4. This policy specifically tasks the *Planning Department* with the evaluation of potential trail-oriented development. Suggestion: Revise to more generally refer to "staff" or "local government" to recognize that local government assets, resource availability, etc., change over time and other departments or agencies may need to perform this task in the future.

Policy 4.2.5. This policy refers to a *Mobility Hub*. See comment here on **Policy 3.7.3.**, relating to the term *Mobility Hub*.

- **Policy 4.3.1.** This policy specifies the density bonus incentive for inclusionary housing as "up to 30%, corresponding to mandatory and/or voluntary provisions of inclusionary housing." Recommendation: Revise the policy to clarify that the incentive is for up to 30% *greater density than otherwise provided by the applicable zoning district.*

  It is not clear what is meant by the phrase "corresponding to mandatory and/or voluntary provisions of inclusionary housing." Is this a recognition that incentive bonus is different, depending on whether the inclusionary housing is provided voluntarily or through mandatory requirement? Suggestion: Revise as appropriate to enhance clarity.

Policy 4.4.1. [Remarkably, this policy is no longer Policy number 2.1.9.] This dinosaur is not extinct!

Goal 5 and Subsequent Objectives and Implementing Policies. This strategy "cluster" does not include any policy provisions for coordinating the provision of adequate and appropriate infrastructure (other than transportation infrastructure) necessary to support the targeted economic development (or targeted areas for economic development).

Objective 5.1. This Objective includes the phrase: "…to withstand positive and negative changes in the economy and to continue providing jobs and incomes to support the community." Suggestion: To enhance clarity, revise this phrase to state: "…to take advantage of positive positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community."

Policy 5.1.2. This policy specifies the content to be included in the Economic Development Element. It seems unusual to use to use a policy in the Land Use and Mobility Element to describe or prescribe the appropriate content of another element of the comprehensive plan.

Policy 5.5.1. This policy states: "The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions *to leveraging opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion and to attract new businesses.*" Suggestion: As drafted, the second half of this policy (in *italics* here) seems to be missing some wording and might benefit from revision to enhance clarity.

Policy 6.1.2. This policy relates to *context*-based transportation facilities. As noted elsewhere in these comments, the *context* concept requires explanation. It appears to be explained in greater detail in Objective 6.3. and Policy 6.3.1. Recommendation: Provide some explanatory information earlier in the element to enable greater understanding of this term/concept, and cross-reference Objective 6.3. and Policy 6.3.1. when using the term in other objectives and policies. See also comment here regarding Policy 1.2.4.

Policy 6.1.4. This policy relating to street design retrofitting for greater livability includes the following phrase: "…including but not limited lane width adjustments…". Suggestions: Revise the policy to add the word "to" in between the words "limited" and "lane." The policy does not include potential street lighting or stormwater management retrofits. If appropriate, revise the policy to include these retrofits.

Objective 6.2. This Objective states: "Improve the *balance*, connectivity, and capacity of the multimodal transportation network." It is not apparent what the word "balance" means in this context. Perhaps it has something to do with balancing *mode split*, which is the proportion trips distributed among each of the different modes of travel, or balancing public expenditure among the different modes of travel? Recommendation: Revise this objective for clarity.

Policy 6.2.5. This policy addresses interconnectivity within development. It is not apparent that this policy or any other policy in the proposed Land Use and Mobility Element promotes retrofitting existing development to enhance interconnectivity. Recommendation: Consider revising the element to include such strategy.

The policy includes the following phrase: "…require these interconnections between adjacent, incompatible developments *if it* has the potential to reduce the vehicular traffic on the external street system." Suggestion: Revise this phrase to state: "…require these interconnections between adjacent, incompatible developments *when such connection* has the potential to reduce the vehicular traffic on the external street system."

Policy 6.3.1. This policy refers to *Safe Systems*. What is the meaning of this term? What agency is responsible for administering *Safe Systems*? For example, is this a FHWA program that focuses on the design of transportation infrastructure? Recommendation: Revise this policy to provide more information about what *Safe Systems* are.

Policy 6.3.3. This policy establishes the requirement to maintain a Context Classification map. Is this map intended to be adopted as part of the comprehensive plan? Or adopted by ordinance but not in the comprehensive plan? Recommendation: Provide additional information on how/where this map will be documented/adopted.

Policy 6.3.5. This policy addresses modification to street design, specifically, *lane repurposing.* The policy refers to *road diets*. The meaning of this term may require further explanation; revise accordingly. The second sentence includes the phrase: "Reducing, narrowing, or repurposing automobile lanes to support multimodal or *other non-automobile-oriented goals, objectives, or policies*…" Suggestion: Revise this phrase; consider: "Reducing, narrowing, or repurposing automobile lanes to support multimodal or *travel by modes other than by automobile*…"

Policy 6.3.7. This policy, related to management of speed on streets, uses the term *accidents*. In the transportation planning practice, the term *crashes* is used. Suggestion, consider revising the policy to replace the term *accidents* with the term *crashes*.

Policy 6.3.8. This policy prescribes the peak hour level of service (LOS) standards for streets and roadways in the community. Recommendations: 1) Revise the policy to clarify that the LOS provided is for the PM peak hour, unless the peak hour (e.g., AM, mid-day, PM) is to be determined for the applicable facility at time of analysis. 2) Revise the policy to clarify that the LOS standards provided are for automobile travel (i.e., not transit service, bicycle mobility, pedestrian mobility, etc.).

Policy 6.3.9. This policy is named "Area Wide Level of Service (LOS)." This is an inaccurate description of the policy. The policy actually addresses the Multimodal Transportation District areawide level of service. It does not set a LOS for the entirety of the community. Recommendation: Revise the title of this policy accordingly.

Objective 6.4. This Objective for *complete streets* states: "Design, construct, and operate streets and roads to provide safe, convenient, and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities." Suggestion: Revise the Objective, to make it easier to read as follows: "Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe, convenient, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities."

Policy 6.4.1. This policy sets out direction as to what infrastructure and design issues should be considered as part of projects modifying streets/roads. The policy does not include considering stormwater management/drainage, street lighting, relocation of other infrastructure (e.g., utilities, utility poles, etc.)., and the addition of lanes dedicated to transit use. Recommendation: Revise this policy to include these infrastructures/design attributes as well as any others as appropriate.

Policy 6.4.2. This policy directs the Planning Department shall share information regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction, with public works staff, policy makers, and the general public. Suggestion: Revise this policy to remove references to the various departments mentioned therein. Available staffing resources, and even department names, change over time; such changes can render this portion of the policy meaningless or un-implementable. [Note that the City of Tallahassee does not presently have a *public works department*, although that department is mentioned in the policy].

Policy 6.4.4. This policy includes the statement: "…the Planning Department shall maintain a bicycle and pedestrian master plan…" Is this master plan to be adopted? The presumption will be that it will not be included as a component of the comprehensive. Recommendation: Verify what the status of this master plan will be and revise this policy accordingly. Suggestion: Revise this policy to remove the reference to the Planning Department. Available staffing resources, and even department names, change over time.

Policy 6.4.6. This policy includes the statement: "City and County departments with interests in the public right-of-way shall identify funding sources…". Typically, this kind of directive relating to inter-office protocols and assignments is set out in local governments' internal administrative policies and directives, not in comprehensive plans and adopted regulations. Suggestion: Revise the amendment as appropriate.

Policy 6.4.7. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.4.8. This policy refers to the *maintenance of Traffic plan*. Suggestion: Consider revising the reference to the *Maintenance of Traffic Plan*.

Policy 6.4.12. This policy relates to design standards for complete streets. Suggestions: 1) As used in the policy, revise the term *Complete streets* to either *Complete Streets* or *complete streets*. 2) Consider revising the policy to add *FHWA* (the Federal Highway Administration); the *Florida DOT*; and, *The Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways* (the *Florida Greenbook*) among the sources of guidance on complete streets.

Policy 6.4.13. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.4.14. This policy relating to signage regulation refers to control of "…control sign and billboard placement and limit lighted and motion activated sign usage…" Presumably, this includes digital signage; if not, this policy should be revised accordingly.

This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.4.15. This policy refers to replacement of existing continuous two-way left turn lanes [also referred to as *open medians*, and in the vernacular, as "suicide lanes," and "twiddles"] with raised medians and exclusive turn lanes on multi-lane arterials. Does this direction preclude or disincentivize signalization (i.e., reconstructing with closed (raised) median, except with limited median opening(s) with signalization to control traffic flow) as an option? Should it? Recommendation: Analyze this policy on its potential to limit future median reconstruction and signalization and revise as appropriate.

Policy 6.4.17. This policy sets out criteria for measuring progress in the implementation of the Complete Streets strategy. Suggestion: Revise "Exceptions to this policy granted" to "Number of exceptions to this policy granted" — consistent with other terminology used in the policy.

This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.5.2. This policy includes the statement: "Throughout the planning timeframe, City Public Infrastructure and County Public Works shall maintain a bicycle facility selection guide for locally maintained roadways that incorporates the latest FDOT, FHWA, NACTO, AASHTO, and other best practices." It appears that some wording is missing after in this policy. Suggestion: Revise the policy as appropriate; consider: "Throughout the planning timeframe, the City and County shall maintain a bicycle facility selection guide for locally maintained roadways that incorporates the latest design guidance, standards, and recommendations from FDOT, FHWA, NACTO, AASHTO, and other best practices."

This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Objective 6.6. This Objective relating to Pedestrian Facilities, includes the statement: "Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District *with the most urbanized and densely populated areas of the community*." It is not clear what this statement means. Perhaps it is a typo? Would revision to "Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District *within* the most urbanized and densely populated areas of the community" make this policy clearer? Suggestion: Revise as appropriate.

Policy 6.6.3. This policy providing direction on pedestrian infrastructure in new development includes the following statement: "Land development regulations may include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way *and identify when the alternative scenarios may apply*." The last phrase "…*and identify when the alternative scenarios may apply*" doesn't seem to fit with the rest of the statement. Suggestion: Revise the policy as appropriate.

Policy 6.7.1. Suggestion revise the policy to delete "and" from the phrase "Supply *and* infrastructure…" in the second sentence.

Policy 6.8.3. This policy provides direction on enhancement of bicycle and pedestrian Infrastructure. This policy seems very similar to other strategy set out in the draft Land Use and Mobility Element. Is it redundant or can it be included/combined with other draft policies? Suggestion: Revise if appropriate.

This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.8.4. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.8.8. This policy includes the phrase: "Criteria shall be with regard to size of the use, provide design standards, location on site, and may coincide with porte cocheres or valet operations that meet the design requirements." It appears that one or more words are omitted from this policy and it's not clear that the term *coincide* is appropriate here. Suggestion: Review and revise the policy if appropriate.

Policy 6.8.11. This policy relating to transportation demand reduction is drafted to pertain only to the City of Tallahassee. Would it also be appropriate to include Leon County? Recommendation: Evaluate potential for applicability to Leon County; revise the policy if appropriate to include Leon County.

The policy explicitly refers to the City of Tallahassee Office of Sustainability. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.9.4. This policy provides direction for a transportation disadvantaged needs assessment. This policy uses the term *unmet needs*. This term is technically incorrect. A *need* is an *unmet demand*; all *needs* are "unmet." Suggestion: Revise this policy as appropriate. Consider deleting the term *unmet*.

- **Policy 6.10.2.** This policy relating to transit LOS (level of service), includes the criterion of 80% of the population of the USA having a transit route along an arterial or collector roadway within approximately ½ mile. Recommendations: Consider revising this policy to: 1) Provide a shorter distance standard, particularly because the standard proposed is not specified as *walkable distance*; it does not recognize potential impediments in walkable accessibility to the transit route; and, this is a significant distance for persons with mobility challenges to travel (unless they are driven by car). 2) To revise *transit route* to *transit stop.* Accessibility to a *transit route* but not a *transit stop* is not meaningful in terms of actually providing transit service access.

Policy 6.10.4. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Policy 6.10.8. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

Objective 6.11. This Objective relates to the provision of aviation facilities. It mentions meeting the demand for military (aviation) services. Suggestion: Verify that military aviation services are intended to be accommodated locally. Revise this policy if appropriate.

Policy 6.11.2. This policy sets out direction for an airport master plan. Is this master plan to be adopted? The presumption will be that it will not be included as a component of the comprehensive. Recommendation: Verify what the status of this master plan will be and revise this policy accordingly.

Policy 6.11.3. This policy sets out direction to specifically-named City and County government departments. Suggestion: Revise the policy so that it does not name and provide direction to specific departments. See other related comments on specifying the name of particular departments assigned responsibility in comprehensive plan policies.

The proposed FLUM: The proposed FLUM depicts areas within the City and County where FLUCs intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, and even typical current local land use practice, principal uses face one another — *look out* at one another — across streets…and this visual perception is one important way most people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along the rear lot line or separated through categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

I realize this a bit of challenge because most of these newly proposed boundaries are in the same location as the boundaries between FLUCs on the FLUM presently in effect.

Subject: Proposed 2025 Comprehensive Plan effects on Woodland Drives

Subject: City of Tallahassee/Leon County Proposed 2025 Comprehensive Plan

Dear Commissioners,

I offer the following comments on the proposed Comprehensive Plan and especially its effects on the Woodland Drives neighborhood. Thank you for making a public response possible and your attention to this matter.

The Proposed changes

It is understood that the Comp Plan's stated goal for Woodland Drives is to preserve existing historic walkable neighborhood development patterns while allowing low to medium density residential with allowances for neighborhood scale accessories such as duplexes, triplexes, and quadraplexes and non-residential retail, offices, and community services and that the zoning district would be renamed Urban Residential Preservation allowing 12 units per acre with or even greater densities in certain circumstances.

Woodland Drives Neighborhood

The Woodland Drives neighborhood is residential in a park-like setting, made up of a mix of single and multifamily family homes linked with narrow two-lane streets and walkways. The current zoning ordinance designates it "Residential Preservation (RP-1) allowing 3.6 dwelling units per acre, preserving single-family residential character, protecting from incompatible land uses". Portions of the neighborhood fall within the Myers Park Historic District with other portions soon becoming eligible to join.

Impacts on our property

The proposals would allow significant changes, mostly nuisances, to occur near our properties. Neighboring property could be redeveloped with triple or greater residences on the same parcel. Traffic from each residence could add 5, 10 or more daily trips totaling 15 to 30 or more additional trips per day past your house, just from our neighbor's property. The additional rainwater runoff from the drives, parking spaces and rooftops would flow past our house. At some point, utility services would require additional capacity, with portions of the associated costs likely distributed to all of us. Our neighbors' office or retail use would have similar but much greater demands and impacts.

The comprehensive plan versus the zoning code

The comprehensive plan is intended to outline the long-term vision for land use and development within the jurisdiction, serving as a roadmap for local officials, developers, and residents alike, providing guidance and direction for growth and preservation. The City of Tallahassee states that the Comprehensive Plan is focused on planning for new population growth over the next 20 years considering greater densities via infill and growth at the City's edges on vacant land. Alternatively, the zoning code focuses on current needs, with standards for allowable uses, density, heights, setbacks, parking, landscaping and other issues. The zoning code is a legal ordinance of development requirements whereas the comprehensive plan is a long-range master plan. The development goals established in a comprehensive plan cannot be attained without a zoning ordinance. Approval of new development would require either ignoring the zoning ordinance criteria found in RP-1, granting a variance, or replacing the ordinance. The proposed changes are vague on how this would play out.

Development pressures applied to the Woodland Drives neighborhood

With no assurances that the protections granted by our RP-1 zoning ordinance will be adhered to, it appears that each development proposal that creates a conflict between the comp plan and the RP-1 ordinance would have to be defended by our neighborhood. There have been community discussions to prepare neighborhood plans but even so, they would not have the teeth that an ordinance provides and forever put the burden of protection on the neighborhood.

What did the proposed changes not get right

The vision that there is a need to plan for a future increased population is spot on, however, the comprehensive plan's broad-brush approach of allowing dramatic density increases and mixing incompatible uses throughout is harmful to the low-density residential neighborhoods' quality of life and should be restricted to the more urban portions of the city. The comprehensive plan should be refined to categorize the neighborhoods better with respect to the preservation of their attributes. Conflicts between the comprehensive plan and the zoning ordinance should be eliminated to preclude the need to ignore the law (ordinances) by granting variances.

I trust that your deliberations on the next steps will include consideration of these comments and urge you to send the proposed plan back to Staff for further refinement.

Sincerely,

Steven E. Pophal

Subject: My thoughts on the final draft revisions of the Comp Plan

---

Dear Commissioners and Mayor:

Unfortunately, I will not be able to attend the Comp Plan hearings this coming week because I am out of the country. However, I have been closely following the various revisions and updates of the proposed new Land Use and Mobility element of the Comp Plan. I would like you to consider my enclosed comments and urge you to send the proposed plan back to the Planning Staff for additional refinement.

1) The new land use category that is being called Urban Residential Preservation should be remanded back to the planning staff for the development of more nuanced land use categories that take into account 4 things: *a) The historic character of each affected neighborhood and how a change in land use densities and uses would impact it, b) The topography of each affected neighborhood and what it can physically bear in terms of stormwater, traffic, and other physical concerns c) Whether the neighborhood already has close-by access to commercial enterprises and therefore doesn't need commercial uses inside the neighborhood itself; and d) The consensus opinion of the majority of residents of the neighborhood.*

Neighborhood input has been sorely lacking in creating these new land use categories because of the compressed time frames and all the constant changes. These proposed revisions were not available online until very recently, and have been updated and changed right up until this week! Thus, many neighborhood residents still do not exactly know what is planned for their neighborhood.

I would also urge you to include a definition (either in the body of the policies or in the glossary) to define the term "units per acre." The new land use categories use the term "units per acre" in describing allowable new densities. However, there is no definition anywhere of the term "units per acre." I urge you to adopt the following definition for "units per acre:" *A 'unit per acre' shall be any structure intended for habitation or which is greater than 800 sq ft."* This language would include ADUs and things like an 8-car garage, but not a garden shed or a normal detached garage.

At the current time, ADUs are excluded from the density calculation even though many of them are more than 800 sq. ft, and have their own address, utilities, mailbox, and driveways. If this definition is not adopted, then the 12 units per acre being proposed for the new Urban Residential Preservation land use category is ACTUALLY 24 units per acre.

If the Commissions do decide to adopt the new Urban Residential Preservation category, then I would ask you adopt the Alliance of Tallahassee Neighborhoods (ATN) proposals to protect the neighborhoods from unwanted intrusions that will radically change the neighborhood character.

2) The second item that needs to be addressed is the future of Midtown and Northwood Mall. The proposed Comp Plan revisions contemplate the creation of "special districts" being carved out for individual planning. However, no such districts are specified in the new plan. Therefore, I would ask that the Northwood Mall and Midtown be included as special districts. This would allow for master-planning, as is already envisioned by the City Commission, which has already hired master planners to work on a holistic plan for the Northwood Mall and which has also appointed members of the business community

and the neighborhoods to a special board called the Midtown Stakeholders Committee to create parameters for a Midtown Master Plan. If master-planning is to be successful at these two sites, it is critical that the status quo be preserved until such time as the master plans can be completed. If the current land use designation is adopted, it will make the Midtown Stakeholders Committee obsolete because the proposed new category (Urban General) makes all the decisions about size, use, density, height, and design, which leaves nothing left for the Committee to do.

3) I strongly urge the Commissioners not to adopt the so-called “lake protection” land use category, which should be called a lake-destruction category. The allowable densities (1 dwelling unit per 2 acres) are fine. However, it is unlikely that these allowable densities will be adhered to because the new language creates so many exceptions for development when central sewer is available. Ecologically speaking, sewage is only one of MANY lake pollution concerns. This policy completely ignores the many other reasons why dense development on lakes eventually degrades water quality. A very partial list of the reasons why lakes become hyper-eutrophic (highly polluted with nitrogen) includes: cutting of trees, planting of lawns, fertilizer usage, erection of docks, boat maintenance, destruction of the littoral zone (natural vegetation surrounding the lake), increased impervious surface, oils and greases from motorized vehicles, and loss of natural areas to absorb polluted runoff before it can reach the lake. This proposed policy seems to imply that if central sewer is available, then density on a lake doesn’t matter. This is simply not good science. While septic tanks are harmful to lake quality, they are only part of the problem.

Therefore, I would urge you to remove these density bonuses and keep the lower densities. Also, if we are serious about protecting our lakes, please add additional requirements for development near lakes that require retention of at least a 100' littoral zone, except for one 15-foot cut to the lake for access. Also, please add these additional protections: No use of fertilizer on lakeside lots. No impervious surface within 100 feet of a lake. The number #1 reason why lakes quickly go hyper-eutrophic is soil erosion during construction. We need better barrier protections during construction. The hay bales and siltation curtains currently required are not protecting our lakes during heavy storm events. I would also add that the County and City should levy heavy fines for violations! This entire 1.8.7 (Lake Protection section) is a disaster and I think it needs to be rewritten. Commercial development does not belong in Lake Protection. Period. This section will spell the death knell for whatever healthy lakes remain in Leon County, which aren’t many. We need to be protecting the littoral zones of our lakes and replanting them where they have already been destroyed (which is most of them.) Any purported lake protection plan that does not have some kind of provision for littoral zone protection (and reestablishment), is doomed to failure in its mission.

4) Finally, I would urge you to change the wording of the Policy 2.2.1 which states that the Urban Service Area (USA) shall be 50% larger than needed for the “long-term planning horizon” but it does not state an actual number, such as 10, 20, or 25 years. The current language implies that the USA shall always be 50% larger than needed at any given time, as opposed to over-sizing it for a long-term period and then waiting until there is additional land needed. While I understand the need to plan for future development, the size of the USA should be pegged to annual anticipated growth, not to an arbitrary number, and it should include an actual time frame instead of vague language.

With the recent addition of Welaunee Plantation to the USA, it appears that the USA boundary is already much larger than 50%. This begs the legal question that if this policy is adopted in its present form, it might be possible for someone to sue the City to force it to retract the USA line in order to comply with the legal 50% requirement in 2.2.1.

At the current time, growth in Leon County is increasing slowly. The County's largest annual population increase since 2010 was 1.9% between 2011 and 2012, but population actually declined between 2012 and 2013 when it dropped .6%. Population also declined again in 2023. If you average out all growth since 2010, Leon County has only grown at a rate of 0.6% per year. (Numbers taken from federal government data)

If the Comp Plan intends to plan for needed urban expansion over the next 10, 20 or 25 years, then the size of the USA should not be 50% larger because this equation is much larger than actual growth. It also it anticipates that ALL new growth will be outside the current USA boundary and it assumes that there will be zero urban infill. By over-sizing the USA boundary by 50%, this policy is encouraging urban sprawl instead of urban infill, which also works against the whole reason that is being given for changing the urban land use categories to encourage denser downtown infill. This creates dueling propositions: one policy encourages denser urban infill and the other encourages more sprawl and an ever-expanding USA boundary. It's like putting a humidifier and a de-humidifier in the same room and letting them duke it out.

If the population growth projections include students, then the USA does not need to be 50% bigger because university housing is only happening in and around FSU and FAMU, not outside the USA boundary. A smaller USA boundary would ensure more compact urban growth and harmonize with the rationale for creating denser urban land use categories.

Therefore, I would recommend changing this policy to peg the USA boundary expansion to actual anticipated growth needs for 10, 20 or 25-year periods, and not allowing further USA expansions until such time as there is a demonstrable need for more land conversion. I would also recommend a ban on new City and USA annexations **unless and until** it can be shown that there is not enough developable land within the current USA boundary. The proposed formula needs to be pegged to actual growth rates and the actual need for developable land. Otherwise, we will continue to see more expensive urban sprawl and less efficient urban infill.

Thank you for considering my comments, and I remain available to discuss them with you at any time, by phone or by email.

Subject: Comprehensive Plan

I urge the Commissioners to recognize the presence and extent of our natural features and direct development away from these areas and to areas with supporting infrastructure. This policy should not be deferred to or implemented by the planning and/or permitting process that defers to mitigation rather than avoidace of effects. Instead the Plan should clearly state that impacts to natural areas will be avoided by setbacks and protected by perpetual conservatiom easements with no exceptions.

Kind regards,

John Outland

Subject: PLEASE PROTECT LOS ROBLES —OPPOSE URBAN RESIDENTIAL LAND USE REDESIGNATION.

May 9, 2025

Dear Commissioner Maddox,

I am a resident of the Los Robles neighborhood, a unique 37-acre historic neighborhood that has been listed on the National Register for Historic Places since 2014. I am writing to you to register my opposition to a proposed amendment to the Comprehensive Plan, specifically the proposed change in Land Use designating Los Robles to be included in Urban Residential Preservation.

If approved in the amended Comprehensive Plan, the Urban Residential Preservation category would increase density from 6 to 12 units per acre and allow offices and commercial uses in our neighborhood's residential streets. Commercial intrusion threatens not only our architectural character but also our residential way of life, walkable streets, limited parking and pedestrian safety. Commercial businesses are prohibited in Los Robles under its current Residential Preservation land use designation.

A better fit for our neighborhood would be Suburban Residential Preservation. This category allows up to 8 units per acre and safeguards civic spaces, like the existing Woman's Club and Los Robles Park, from incompatible commercial uses.

I respectfully urge you to reject the Urban Residential Preservation designation for Los Robles and support applying the more appropriate Suburban Residential Preservation category. This designation more accurately reflects our neighborhood scale, historic character and longstanding residential use.

Thank you for your time, your service and your consideration of this request.

Sincerely,
Christine Franzetti
1635 Fernando Drive, Tallahassee

Subject: Comments on Proposed Comprehensive Plan Amendment Scheduled for Public Hearing in May, 2025

Greetings Chair Welch, Mayor Dailey, City of Tallahassee City Commissioners, Leon County Board of County Commissioners, and staff:

On April 24th I sent you an e-mail including my attached comments on the proposed comprehensive plan amendment, proposing a new Land Use & Mobility Element and revised Future Land Use Map, to be considered at public hearing by the Board of County Commissioners on May 13, and at public hearing by the City Commission on May 14, for transmittal to the State of Florida.

Subsequent to me providing those comments, the Planning Department revised the amendment that you will be considering at public hearing. So I have revised my comments accordingly. I note that your staff addressed many of the issues I noted in my initial comments, but there remain some significant issues. I do not believe that the amendment, as drafted, is ready for transmittal. So I am recommending that additional changes be made to revise the amendment before its potential transmittal.

I am attaching a cover letter explaining my review and comments as well as a separate attachment including detailed comments.

Please feel free to contact me if you require any additional information or want to discuss this matter further.

Thank you so much for your time and dedication to our community!

Adam Antony Biblo

Tallahassee, FL

Friday, May 9, 2025

Members of the Leon County Board of County Commissioners
Members of the City of Tallahassee City Commission

Dear Elected Officials,

I have read the proposed amendment to the Tallahassee-Leon County Comprehensive Plan scheduled to be considered at public hearing for transmittal to the State of Florida. The hearings are scheduled on May 13, for Leon County, and May 14, for the City of Tallahassee. The amendment proposes to revise the Comprehensive Plan to delete the Future Land Use Element and Transportation Element and replace them with a new Land Use and Mobility Element, and to revise the associated Future Land Use Map. I am enclosing my comments in response to this amendment for you and your staff's considerations.

Previously, in a letter to you dated April 24, 2025, I provided my comments in response to the text and maps of the proposed Land Use and Mobility Element, dated March 24, 2025, provided on the Tallahassee-Leon County website. Thereafter, I was surprised to find out that the amendment was being further revised. So I have re-reviewed the proposed revised amendment, dated April 21, 2025, and offer my comments in response to the updated version.

The proposed amendment makes several significant changes to comprehensive plan, including incorporating new strategies, such as, the use of *context-sensitive design* based on a land use density and intensity gradient, where lower intensity is intended for outlying rural areas and urban-type development is sought for the City center, and, promotion of community design that facilitates pedestrian and bicycle mobility, with less emphasis on travel by car than the present comprehensive plan does.

At the same time, the proposed land use and mobility element retains several significant strategies, policy directions and, implementation tools found in the present version of the comprehensive plan, including: the use of the urban services area; strategies to minimize sprawl; and, recognizing the importance of protecting residential land use from adverse impacts.

I largely agree with the direction taken by the proposed land use and mobility element, but I do not believe that the amendment is ready to be transmitted to the State of Florida for their review. I say this based upon some of the significant issues I have raised in my comments. I would recommend instead that you direct your staff to make further changes to the amendment, based on the input you are receiving for these transmittal public hearings.

I have offered many comments in response to my review, and while the litany of comments I have provided is lengthy, the vast majority of these comments are what might be referred to as "housekeeping" and "clean-up" and are not especially related to substantive direction. There are, however, in my opinion, some more significant substantive issues with the proposed amendment.

My comments are organized in three sections: Section 1) Significant Substantive Issues; Section 2) General or Over-Arching Comments; Section 3) The Proposed Future Land Use Map; and, Section 4) Sequential Comments.

Typically, like most reviewers, I conducted my review based upon what was proposed, and not as much what wasn't included. But through the effort of spending significant time on this review, I was able to also think of some, but likely not all, issues of significant substantive strategies that were not included in the proposed amendment (and in my opinion should be). These comments are included in Section 1).

Section 2) focuses on the formatting of the amendment as well as what I would deem *recurring issues* — issues found consistently throughout the amendment. Although many of the issues listed in this section are not significantly substantively, some are — in some instances, the choice to include a comment in Section 1) or 2) was subjective. Section 3) provides two comments on the proposed Future Land Use Map included in the proposed amendment.

Like most reviewers, I conducted my review by reading the amendment from the beginning to the end, and thus Section 4) provides comments based upon what I was reading in sequence, from Goal 1 to the last proposed policy. Not all users of the comprehensive plan will be reading it in sequence, so please consider that when you review my comments — issues that I point out with the beginning portions of the draft amendment may be resolved later in the document.

Section 4) generally contains the comments that are more "clean-up" than "substantive." But the section does also include some important substantive comments; these are marked with a ❍ bullet in the left margin. For many of the comments, I also offer a suggestion or recommendation for resolving the issue I have identified; a recommendation reflects a more significant issue or response than a suggestion.

I am offering these comments because I believe I very much owe it to our community to provide my insights. My background in this subject area is extensive; my familiarity with our community is extensive; and, most importantly, I want to see our community continue to thrive and grow responsibly. As to my background, I was one of the original drafters of the State of Florida's 9J-5 Rule, its former rule specifying the content of comprehensive plans. I was responsible for much of the content required in local government comprehensive plan conservation and future land use elements and drafted the state's model future land use element. I subsequently served our community in the Tallahassee-Leon County Planning Department for 17 1/2 years, in which time I was responsible for, among other things, introducing the concepts of the urban services area and preservation and conservation features; developing the first land development regulations for public facilities and infrastructure; and, developing the City's inclusionary housing strategy and ordinance. During my tenure with the Planning Department, I served in numerous capacities, including as the long-range infrastructure planner, special projects planner, housing planner, and also as the Land Use Administrator. I continued to serve our community as the Development Service Director at the Leon County Department of Growth and Environmental Management, where I was responsible for the major revision of the Land Development Code and oversaw the division responsible for all site planning and development review. After leaving Leon County, I returned to the State of Florida, serving in the Department of Community Affairs, which later became the Department of Economic Opportunity. In that department, I was the Regional Planning Administrator responsible for the team that reviewed of all local government comprehensive plan amendments submitted to the state from the area extending from Brevard County to Orange County to Miami-Dade County. While at DEO, I managed the state's local manufacturing development approval program and wrote the guidebook Designing Communities For Pedestrian Mobility. I currently practice urban planning and urban design with a focus on creating more walkable communities. I am a consultant for the Southwest Georgia Regional Commission and also assist neighborhoods with street design and traffic calming issues.

I hope my comments are helpful. If I can shed further light on any aspect of my comments or if you have any questions, please feel free to contact me via e-mail @ thisbib@comcast.net. Additionally, I may be available for phone call or in-person meeting, depending on scheduling. Thank you for taking the time to look at this response.

Adam Antony Biblo
Tallahassee, FL

Enclosure: Comments on Proposed Land Use and Mobility Element Amendment

Section 1) Significant Substantive Issues:

The Omission of an Overarching Strategy Narrative: The element does not provide an overarching strategy(-ies) of how the community should grow. This kind of narrative does not need to be an adopted goal, objective, policy, or strategy. Providing this kind of narrative at the beginning of the element can be very helpful to the articulate to the reader, in general terms, the community's strategy as to how it should grow and help explain and tie together the various goals, objectives and policies that follow. Such narrative could include: how sparse and rural the outlying areas should be; how dense and urban the inner portions of the City should be; whether the community will develop dense urban nodes (*walk-ups* and *Transit Oriented Development*); whether and where growth should occur, and how rapidly it should occur; the degree to which the plan's provisions will facilitate neighborhood change and whether they will provide for greater density and the inclusion of compatible non-residential uses.

The narrative could also establish additional concepts that are reflected throughout the proposed element, such as: to what extent the density transition from rural to most urban will be based on the urban planning/urban design *Transect* concept and companion implementing context zones (and of course, to describe what this means); the extent that policy direction related to development design attributes and infrastructure design may used, in addition to limitations on density and intensity, and use type, to influence the location and character of future land use and development; whether regulation of design attributes and other approaches, such as mitigation of potential adverse impacts (nuisances) such as sound, lighting, hazardous vehicular traffic flow, will be used to promote land use compatibility, particularly where policy direction intends different types of land uses to mix or colocate; and, how fine a grain of mixture of uses is intended in those future land use categories that will provide for mixed use.

The Binding Long-Term Commitment to Include Excessive Land Within the Urban Services Area. Proposed Policy 2.2.1. provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe. This surplus of excess capacity is unnecessary, especially the commitment to maintain this surplus into the future.

While, this excessive capacity may be supported according to some land use demand projection methodologies, it promotes low and very low density development patterns, i.e., providing for the continued inefficient low density sprawling of our community at the expense of urban infill. It is recognized that the present size of the USA may be, in part, reflective of such methodologies, but the community has a choice to grow differently going forward — the continuing expansion of USA, over time, a product of keeping this 50% standard as a *constant*, will result in the vast majority of the community's growth taking the form of large-lot, low density residential subdivisions on the fringes of the USA.

Alternative approaches could include simply recognizing that the present size of the USA is reflective of providing 50% more vacant and developable land than necessary to accommodate the current population without committing to maintaining this standard over the planning timeframe, or by explicitly decreasing this standard over time. Additional discussion is provided in Section 4) under Policy 2.2.1.

The Omission of a Street/Roadway Functional Classification Map. The proposed element includes several references to streets and roadways referred to by "functional classification," such as an *arterial*, *collector*, or *local* street. The proposed text includes at least 11 policies referring to arterial streets, for example. The text includes a proposed policy establishing adopted levels of service for the various streets and roadways within Tallahassee and Leon County and another policy specifying right-of-way widths for various streets and roadways, based upon their functional classification. Yet the proposed element and map series do not include a functional classification map, whereupon the functional classification of all of the City's and County's roads are designated. Proposed Policy 2.2.10. refers to the *Corridor Preservation Map* and the *Long-Range Transportation Plan*, inferring that these documents provide information on the designation of roads and streets by functional classification. The policy does not specify the location of the Corridor Preservation Map; it is not included within the map series included with this amendment.

The Omission of a Context Classification Map. The proposed element includes at least 46 references to *context*, often with *context* being the independent variable upon which some other design characteristic or land use variable is based. So inclusion of such a map underpins much of the strategy proposed in this draft element. One policy specifically addresses the provision of a map that provides context classification information: Policy 6.3.3 – Context Classification Map: A Context Classification map shall be maintained through the planning timeframe that recognizes roadway functional classification in addition to land use context. The Context Classification map shall be updated concurrently with amendments to the Functional Classification map and the Future Land Use map. Yet the proposed element and map series do not include a context classification map.

The Omission of Recognizing Potential Future Demand for Very Large Structures and Land Uses With Significant Energy Demand: The element does not provide guidance relating to large facilities that support AI (Artificial Intelligence) and other intensive electrical energy uses and large, multi-acre warehousing buildings. The element should recognize potential demand for these types of uses to be located within the community in the future and establish appropriate strategies.

The Coordination of Commuter Transit Service with Neighboring Jurisdictions. The strategy relating to transit service in the community, set out in Objective 6.10., and subsequent implementing policies, does not include any reference to coordination with neighboring jurisdictions (e.g., Wakulla County, City of Thomasville, etc.) for long-distance commuter transit opportunities now or in the future. It may be appropriate to recognize the potential for such services and coordinate with the applicable local governments.

The Limitation of Development Impacts to Natural Areas. Objective 1.2. and Subsequent implementing policies - *Preservation of Natural Areas* direct the identification and acquisition of important natural resource areas, but do not explicitly provide direction to protect these resources through limiting land development impacts, including limiting the density and intensity of development, within and adjacent to resource areas identified on development sites.

The Protection of Significant Cultural Resources: The draft Land Use and Mobility Element acknowledges the need to identify cultural resources, but only directs the *protection* of these resources with regard to new or existing transportation facility improvements (which it does in policy 1.2.3.).

Section 2) General or Over-Arching Comments:

References to Explicit Departments. Where the *Planning Department* (or other department) is explicitly referenced in policies, as in being tasked to do something, it may be more appropriate to simply refer to the applicable local government (or both local governments), given the potential for staffing resources and department responsibilities change over the timeframe of the plan.

Content and Terminology More Appropriate for Land Development Regulations. Several of the policies relating to the particular future land use categories specify the detailed types of building types allowable, such as, *duplexes, triplexes, quadruplexes, live-work units*. This is detailed implementation content typically relegated to land development regulations and (including, zoning regulations).

The listing of specific building types in the policies describing a future land use category could be construed to preclude those building types not listed, from the zoning district(s) that ultimately implement the future land use category. Likewise, the listing of specific building types in the policy describing the category could be construed to require *all of the zoning districts* that implement a particular category to allow *all* of the building types listed. This may or may not be problematic. But if it is problematic, it will also require a comprehensive plan amendment as a precursor to any land development regulation (e.g., zoning) amendment that would change what building types are allowed in a particular zoning district.

Scope and Applicability of Density Bonus Incentives. As drafted, some of the various density bonus incentives provided are drafted to enable density/intensity to be increased to levels greater than the otherwise applicable *future land use category* maximum limits. In other instances, the policies do not state whether the bonus would allow an increase in excess of what otherwise would be the *future land use category* limit or *zoning district* limit. In some instances, implementing zoning districts set out maximum density limits less than the future land use category they implement. Should the incentives instead allow for increases above otherwise applicable *zoning district* limits?

Section 3) The Proposed Future Land Use Map:

Boundaries Between Future Land Use Categories. The proposed Future Land Use Map depicts areas within the City and County where future land use categories intended to allow significantly different intensities of use or character of development are located across a street or road from one another. This is a classic error in urban design and land use compatibility: in good urban design, principal uses face one another — *look out* at one another — across streets…and this visual perception is one of the most important ways people gauge and experience compatibility.

Ideally, interfaces or boundaries between categories and districts of significantly different character and/or intensity should be located along shared rear lot lines or separated by categories or districts of transitional intensity or large areas of open space. Boundaries along rear property lines offer the additional benefit of enabling the provision of buffering to mitigate visual perception of differing land use and intensity.

It is recognized that there may be limited potential to address this issues, as most of the newly proposed future land use category boundaries are in the same location as the boundaries between categories on the Future Land Use Map presently in effect.

4) Sequential Comments:

Policy 1.2.1. This policy guides the City and County to acquire sensitive areas. Does this include for less-than fee simple acquisition (e.g., acquisition of easements) as well as fee simple acquisition? If so, good. If not, revise the policy as appropriate.

Policy 1.2.2. This policy specifies that Planning Department staff shall conduct an environmental analysis of proposed comprehensive plan amendments. The concept is good, but should the policy be revised to enable other City and County staff to be utilized in such analysis? Potentially the Planning Department may not have sufficient or appropriate resources to accomplish this requirement.

Policy 1.3.2. The policy does not provide guidance on who is intended to develop and maintain urban recreation spaces.

Policy 1.6.2. This policy requires zoning and development standards, within the Urban Services Area, to promote the location of homes, jobs [and other destinations] within 20 minutes walking distance of each other. 1) Why not consider, instead, a 15-minute standard? Within urban design and pedestrian mobility practice, this timeframe has gained more acceptance as a design standard. 2) Maybe the standard (20 minutes, 15 minutes, whatever) should be referenced as a *maximum* timeframe.

Policy 1.7.1. This policy specifies coordination with key regional partners on the protection of natural resources that extend beyond jurisdictional boundaries. The policy specifically mentions some agencies but does not mention any of the adjacent local governments (both within the State of Florida and the State of Georgia) nor does it mention the Apalachee Regional Planning Council or the Southwest Georgia Regional Commission. Recommendation: These are significant omissions; revise the policy to include these governments/agencies.

- **Policy 2.2.1.** This policy provides that the Urban Services Area (USA) will be large enough to include 50% more vacant and developable land than necessary to accommodate projected population growth during the planning timeframe.

  This standard appears to be significantly greater than needed to promote an efficient development pattern, particularly an *urban* development pattern. It would consume more forested land and agricultural land and require longer and require more costly infrastructure extensions than would be required by the respective population with even a modest urban development pattern (i.e., at a moderate development density/intensity). It is recognized that the location of the USA boundary on the map included in the draft amendment is approximately the same location as the USA boundary that has been in effect for several years. Recommendation: Revise this policy to reduce the percentage of surplus vacant and developable land necessary to accommodate population over time, so that a 50% surplus is not continually provided for over time, but reduced, to reflect urban intensities and densities with this portion of the USA; failure to do so could result in less-than urban development patterns sprawling within the USA.

Policy 2.2.6. This policy provides for exceptions to the Urban Services Area concept to provide for higher density within areas near the Woodville Rural Community [future land use map category] when central sewer service is available and development connects to sewer. 1) Is it necessary to also set a maximum development density/intensity limit for this development within this policy? Or is this policy the basis for another policy that provides such limit? 2) This policy is imprecise with regard to location of its application. As written, it would allow the extension of higher density development in any area designated Rural or Rural Residential on the future land use map, so long as it is connected to sewer and subjectively

located within the area described in the policy. Recommendation: review this policy and if appropriate, specify geographic limits where this exception is intended to apply; or, provide a map designating the applicable location.

Policy 2.2.7. This policy requires consistency with the priority of urban services, the Future Land Use Map, and the Urban Services Area in conjunction with "the *widening* of existing streets and roads." Widening streets and roadways is not necessarily the same as adding additional lanes; and either approach, while traditionally responses to increased growth and travel demand, are not always consistent with other community objectives, such as protecting natural resources, protecting residential use from adverse impacts, and creating human-scale environments that facilitate pedestrian activity. Suggestion: Instead of implying that streets and roads must always be widened to accommodate projected growth and demand, use alternative terminology such as *modifying*, *improving*, or *reconstructing*, which encompasses *widening* but is not limited to *widening*.

Policy 2.2.8. This policy promotes brownfield reclamation, building reuse, and adaptive reuse of structures, enabling these activities through provision of incentives in the land development regulations. The policy outlines the content of the land development regulations incentives; it does not include any provisions for mitigation of environmental or environmental health issues associated with the applicable brownfield sites. The policy also provides for "density and intensity bonuses of up to 25% modified development review thresholds." It is not clear if this intended to refer to maximum limits otherwise set out for the applicable future land use category in the comprehensive plan or zoning district (land development regulation) limitations, or other. Suggestions: 1) Revise the policy to provide for or recognize that mitigation of adverse environmental conditions are prerequisite to any redevelopment of brownfield sites; 2) clarify the reference basis for density/intensity bonuses.

Policy 2.2.9. It is not clear how this policy does anything other than what is provided for in Policy 2.2.8., except to add the term "Greyfield." Suggestion: If appropriate, merge these policies together.

- **Policy 2.2.10.** This policy specifies the protection of identified future rights-of-way from building encroachment; it does not specify what the appropriate setbacks would be, but includes a table specifying significant rights-of-way widths for the types of transportation facilities listed.

  A word of caution: The City of Tallahassee had, at one point, a similar approach wherein the implementing land development regulations (with their basis also established in the comprehensive plan) required a "special roadway setback," to protect identified corridors from development encroachment, and thus to make it easier and less expensive for the City acquire needed right-of-way for roadway construction. This regulation was challenged, as applied, as a taking, with no legitimate public health, safety, or welfare basis. [The City was able to prevail as its implementing regulations provided affected property owners with alternative design "exceptions" that made it possible, in the plaintiff's instance, to realize their development interests within the remaining, reduced, buildable area resulting from the implementation of the setback]. The City thereafter also amended their regulations to minimize potential that they be used as a workaround to acquire right-of-way without appropriate compensation.

- **Policy 2.4.1.** This policy establishes the basis for a Transfer of Development Rights (TDR) program. It limits the locations of where development rights may be transferred to areas designated Rural Residential or Rural Community on the Future Land Use Map. A TDR program can be a very helpful tool to help minimize sprawl and direct growth to the most appropriate areas of the community, areas where supporting infrastructure and facilities are

already present or planned to be available soon, and areas targeted for redevelopment, and further economic development. By precluding areas within the USA from receiving transferred development rights, this policy becomes, at best, a marginally useful tool. Recommendation: 1) Revise the policy to provide for transfer of rights to within the USA, and in particular, areas targeted for greater densities and intensities. 2) Revise the policy to allow transfers of density out of the Lake Protection future land use category, as a tool to facilitate environmental protection of resources within the category.

Policy 2.4.2. This policy would require expansions of the USA to be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area. This is appropriate. But the policy fails to provide any criteria or guidance for decision-makers to use to determine whether, and to what extent, an expansion of the USA is warranted. While the intentions of the policy are good, as drafted, it is insufficient, simply requiring analyses but placing no particular regard as to their findings.

Policy 2.5.1. This policy sets out some strategies for retrofitting/reconstructing suburban areas. The proposed strategies are consistent with current best practices in urban design. Some of the terminology used in the policy might, however, be improved. Some of the terminology would be well understood by urban designers and most planners but may be less well understood by the general public and policy-makers. Examples of terminology that might benefit from revision include:

- *Complete streets* (this term has not yet be explained at this point in the proposed comprehensive plan)
- *Continuous streetscapes with liner buildings close to the street*
- *Appropriate design elements*
- *Residential building types*

In regard to the strategy of *block size reductions* — small blocks are an integral attribute of walkable and human-scale development, but while many (most?) of the blocks in the community are currently larger or significantly larger than ideal in these regards, not all are, and at some point, if block size reduction does occur, it will no longer need to *continue* over time. Suggestion: Consider some other wording, perhaps providing guidance as to what appropriate block size should be, instead of compelling the action to continually reduce the size of blocks.

Also, in the first sentence, consider using “adopt” or “enact” as opposed to “develop…land development regulations.”

Policy 2.6.1. This policy sets out street beautification strategies. Suggestions: Revise the policy: 1) “The local governments shall provide for land use regulations…” should be replaced by terminology like “The City and County shall adopt land development regulations…” 2) The policy refers to “…a given context.” The significance of this wording might be missed as the concept of context-based land usage/development concept, such as utilized by the Congress for New Urbanism, or the Florida D.O.T., based upon the new urbanists’ *Transect*, has not been explained yet at this point in the proposed comprehensive plan.

Policy 2.6.2. Gateway Corridors. This policy enumerates several streets that are considered “Gateway Corridors.” It does not, however, include the specific termini or street segments of these designated corridors that the policy addresses. Recommendation: Revise the amendment to include a map illustrating the precise location of these corridors.

Policy 2.7.5. The meaning of the first usage of the term “areas” in this policy is not clear. Could it be replaced with a more precise term; e.g., “the MMTD?”

Future Land Use Map, Page 16. Revise to include the title, *Future Land Use Map* (or other as appropriate) and include referenced timeframe that the map represents.

- **Policy 2.8.2.** This policy includes the statement, "To *ensure a mixture of uses in mixed-use land use categories*, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required…" It's not clear whether or how requiring a minimum threshold of open space area will ensure a mixture of uses in the the mixed-use land use categories.

Policy 2.8.3. The first paragraph of this policy implies but does not explicitly state that state and national forests, wildlife management areas, and other managed natural areas will be comprise the lands to be included in the Natural Areas Future Land Use Category. As drafted, the policy implies non-managed areas would not be appropriately included in this category. Suggestion: Revise the policy for precision and clarity with regard to what lands are intended to be designated within the category.

Policy 2.8.7. - Part 5. It is unclear what this sentence means: "To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites." Does this mean redevelopment sites may include a greater proportion of impervious surface than would otherwise be required for new development, or?

- **Policy 2.8.8. - Part 1.** This part of this policy describing the Sub-Urban Residential Preservation Future Land Use Category sets out as criteria for inclusion in the category, "Assessment of stability of the residential area, including but not limited to: a. Degree of home ownership b. Existence of neighborhood organizations." While tenure and participation in neighborhood organizations are traditional measures of neighborhood stability/transition and cohesiveness, they can also be used to simply enable development interests to reclassify (i.e., change the future land use map) to rezone and redevelop lower-income areas, where homeownership rates may be lower than the community as a whole and there is less participation in neighborhood organizations. This results in displacing existing residents and potentially increasing their housing cost burdens with higher rents.

Policy 2.8.8. - Part 2. This part of this policy requires zoning districts within the Sub-Urban Residential Preservation Category allowing densities over six units per acre to implement a Commission-approved neighborhood plan. Would this apply to the provision of inclusionary housing that is developed at densities exceeding six dwelling units per acre (even if the applicable zoning district establishes a maximum nominal density of six dwelling units per acre)?

Policy 2.8.8. - Part 5. This part of this policy exempts cemeteries and religious facilities, used solely for religious use, from having to provide effective visual and sound buffering (either through vegetative buffering or other design techniques) where they adjoin low density residential areas. It is recognized that is a continuation of the current practice of exempting these uses from such requirements. While well-intentioned and workable for smaller scale cemeteries and religious facilities, at larger scale and with more frequent usage, these uses can still present incompatible land use conflicts with adjacent/nearby low density residential land use. Accordingly, they should not be carte blanche exempted from sound and visual buffering requirements when adjacent to low density residential use; instead, they should be subject to such standards and be required to demonstrate compatibility through the development application review process.

Policy 2.8.9. The third paragraph of the policy specifies that land development regulations shall include development standards to maintain *low traffic volumes*, vehicular speeds, and parking for nonresidential uses. It is not clear what would be considered *low traffic* volumes, but while considering this directive, recognize that the category allows for residential land use at a density up 20 dwelling units per acre, and unless the development regulations can mandate the district residents' places of work be nearby (so that they don't require vehicular travel for their commutes) this directive may be difficult to achieve.

Policy 2.8.9. Sub-part 1. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facilitate compatibility between residential and non-residential uses *within* the Sub-Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category.

Policy 2.8.12. The fourth paragraph of this policy directs the reduction of vehicular traffic volumes. It is not clear how volume reduction might be accomplished. See related comment here on **Policy 2.8.9.**

Policy 2.8.12. Sub-part 2. of the policy requires the land development regulations to include urban design, buffering, and screening standards to facilitate compatibility between residential and non-residential uses *within* the Urban Neighborhood land use category. Suggestion: Revise the wording to also recognize the need to utilize such techniques for uses outside but adjoining the category. See related comment here on **Policy 2.8.9.**

Policy 2.8.14. This policy includes the phrase: "The *land use* is characterized…" Suggestion: Modify the phrase to read: "The *land use* <u>*category*</u> is characterized…"

This policy includes the term, *consistent street trees*. This term is vague. Suggestion: Revise the wording to provide greater clarity.

Policy 2.8.19. Sub-part 2. This part is related to required master plans for development within the Planned Development Special District future land use category. This part sets out requirements that are extremely specific, in comparison to the typical strategic provisions found in comprehensive plans. Is this content more appropriate in the land development regulations?

The meaning of the term, *capacity maintenance*, used in Sub-part 2.h., is unclear. The term likely refers to roadway capacity maintenance (i.e., maintaining adopted LOS for affected roadways) but could just as easily be a reference to other infrastructure capacity, e.g., stormwater management, potable water, etc. Recommendation: Revise portion of the policy further to clarify the intent.

Sub-part 5. This part states: "Easements, right-of-way and other improvements located throughout the Planned Development District boundary *may be required* to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan." This part is unnecessary given that it is permissive, and not obligatory, using the term *may be required*.

Sub-parts 5., 6. & 7. Sub-part 7 includes the following provision: "If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all *remaining acreage*." Does this provision also relate to the public acquisitions referred to in Sub-part 6 and dedicated areas

referred to in Sub-Part 5? In essence, these areas would also be *remaining acreage*. If so, it is recommended that these parts be revised to ensure clarity.

Policy 3.1.3. This policy states that the land development regulations shall support neighborhood scale grocery uses within and adjacent to residential areas. Is this consistent with the preclusion of non-residential uses within the Sub-Urban Residential Preservation land use category? If not, make appropriate revisions to either Policy 2.8.8. [RE the Sub-Urban Residential Preservation land use category], this policy, or both.

Objective 3.2. This Objective establishes the Southside Action Plan strategy. Much of this Objective relates to appropriate process and is somewhat unclear in regard to what the Southside Action Plan is or should be. Suggestion: Revise the Objective, so that the substantive information provided at the end of the proposed version, relating to "…guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens." appears toward the beginning of the Objective.

Policy 3.2.2. This policy includes the terms *shared public spaces* and *shared spaces*. It is not clear what the term *shared public spaces* means (land areas under multiple public agency ownership/management?). It is not clear whether *shared space*s means the same thing as *shared public spaces*. Suggestion: Revise this policy as appropriate.

Policy 3.3.3. This policy refers to *unified access* [*plans*]. Typically, in practice, the term *unified access* relates to providing access to more than one destination (for example, two or more businesses) through a single driveway connection. Is this policy, as drafted, sufficiently clear to convey this meaning? Revise if appropriate.

Policy 3.3.4. This policy sets out the basis for access management improvements. It is not clear if the policy provides the basis for roadway modifications, or installation/modification of signals and signage. If it is appropriate to explicitly reference these kinds of modifications, revise the policy accordingly.

Objective. 3.4. This Objective sets out the strategy of sharing the benefits and burdens of public sector projects across the community equitably. Subsequent implementing **Policy 3.4.2.** directs the City and County to [strive] to distribute major infrastructure projects and other public investments geographically across the community with regard to the needs of different areas. There is no implementing policy, however, specifically relating to ensuring that no particular portion of the community is or becomes overburdened with the adverse impacts of/ burdens resulting from the provision infrastructure and public facilities. Would the inclusion of such an implementing policy be helpful? If so, revise the amendment to add such policy.

- **Policy 3.5.1.** This policy does not address the strategy of designing and siting infrastructure for purposes of facilitating greater community resiliency and hazard mitigation. Recommendation: Include other policy(-ies) in the amendment that would facilitate the greater resiliency and mitigation of hazards in regard to the siting and design of infrastructure and public facilities or revise this policy as appropriate.

  This policy refers to *design speed*. This is an appropriate consideration in street design; it is not clear that general public understands this term, however. Suggestion: Revise the policy as appropriate and/or define the term *design speed* within a companion glossary.

Policy 3.6.4. This policy includes the following statement: "Incentives for greater density and intensity up to 25% will be permitted for developments along arterials for developments that incorporate urban design standards resulting in more attractive developments." Based on the preceding sentence in the policy ("allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category"), the 25% standard is *25% greater than the limit otherwise applicable*. If this not correct, revise the policy as appropriate.

Please ensure that within the implementing land development regulations, the scope of this incentive is roughly proportional to the what the developer provides. For example a 50-acre development site that has 100 feet of frontage along an arterial street, and that provides some shrubbery along this frontage, probably should not be entitled to a 25% increase in permissible density/intensity for the remainder of the site, a site that may extend several hundred feet from the arterial. This issue is most appropriately fleshed out in the land development regulations but perhaps it might be appropriate to provide some related direction in the land use and mobility element.

If the land use and mobility element will retain the provision for a 25% density bonus provided in exchange for affordable or inclusionary housing as has been provided in the comprehensive plan, how will that bonus incentive work in conjunction with this bonus incentive? Could a developer obtain both bonus incentives?

Policy 3.6.7. This policy includes the following phrase: "…until the expiration of the approved development…". Recommendation: Consider revising for precision to state: "…until the expiration of the ~~approved~~ development *order for that development*…"

Policy 3.7.3. This policy sets out design criteria for *Mobility Hubs*. Will *Mobility Hubs* be designated on the future land use map or other map adopted in the comprehensive plan or on the official zoning map of the applicable jurisdiction? How will this concept be used? Suggestion: provide more guidance and overarching strategy for the *Mobility Hub* concept.

- **Policy 4.1.4**. This policy relates to *pattern books*, an urban design tool used to provide information regarding the appropriate character and architectural attributes of the built environment in a specific neighborhood or area.

  The policy states that "Pattern books may be developed to identify a specific range of housing types allowed for different land use categories." This strategy is inconsistent with the traditional use of pattern books. 1) Pattern books are typically more narrowly tailored to fit a *specific neighborhood* or development, *not an entire land use category*, or even zoning district. It is difficult to envision the built environment in an entire future land use category based on a singular pattern book. 2) Pattern books usually address such urban design elements as *architectural style*, including architectural details, the orientation of structures on lots and their relationship to the street, and other specific details relating to urban form. Recommendation: This policy should be revised accordingly, to more accurately reflect the typical content and usage of Pattern Books in the urban design of a community.

Objective 4.2 and Subsequent Implementing Policies. This Objective and implementing policies relate to facilitating transit-oriented development (TOD) near *mobility hubs* and around *transit centers*. Will *mobility hubs* and *transit centers* be designated on adopted maps? Recommendation: Revise the comprehensive plan as appropriate. See also comment here on **Policy 3.7.3**, relating to the term *Mobility Hub*.

Policy 4.2.2. This policy enumerates guidance for content of implementing land development regulations relating to TOD. Some of the guidance provided is somewhat vague and/or may be at the level of specificity more appropriate to land development regulations. For example: "Create public plaza directly fronting one or more sides of the center building where feasible" Suggestion: Revise if appropriate.

Policy 4.2.4. This policy specifically tasks the *Planning Department* with the evaluation of potential trail-oriented development. Suggestion: Revise to more generally refer to "staff" or "local government" to recognize that local government assets, resource availability, etc., change over time and other departments or agencies may need to perform this task in the future.

Policy 4.2.5. This policy refers to a *Mobility Hub*. See comment here on **Policy 3.7.3.**, relating to the term *Mobility Hub*.

Policy 4.4.1. [Remarkably, this policy is no longer Policy number 2.1.9.] This dinosaur is not extinct!

Goal 5 and Subsequent Objectives and Implementing Policies. This strategy "cluster" does not include any policy provisions for coordinating the provision of adequate and appropriate infrastructure (other than transportation infrastructure) necessary to support the targeted economic development (or targeted areas for economic development).

Policy 6.1.4. This policy relating to street design includes the following scrivener's error: "… but not *to* limited lane width …". Suggestion: Correct the policy so that this phrase reads: "but not limited *to* lane width."

Policy 6.2.5. This policy addresses interconnectivity within development. It is not apparent that this policy or any other policy in the proposed Land Use and Mobility Element promotes retrofitting existing development to enhance interconnectivity. Recommendation: Consider revising the element to include such strategy.

Policy 6.3.1. This policy refers to *Safe Systems*. What is the meaning of this term? What agency is responsible for administering *Safe Systems*? For example, is this a FHWA program that focuses on the design of transportation infrastructure? Recommendation: Revise this policy to provide more information about what *Safe Systems* are.

- **Policy 6.3.3.** This policy establishes the requirement to maintain a *Context Classification Map*. Is this map intended to be adopted as part of the comprehensive plan? Or adopted by ordinance but not in the comprehensive plan? Recommendation: Provide additional information on how/where this map will be documented/adopted.

Policy 6.3.8. This policy prescribes the peak hour level of service (LOS) standards for streets and roadways in the community. Recommendations: 1) Revise the policy to clarify that the LOS provided is for the PM peak hour, unless the peak hour (e.g., AM, mid-day, PM) is intended to be determined for each applicable facility at time of analysis. 2) Revise the policy to clarify that the LOS standards provided are for automobile travel (i.e., not transit service, bicycle mobility, pedestrian mobility, etc.).

Policy 6.4.4. This policy refers to maintaining a bicycle and pedestrian master plan. Is this master plan to be adopted? The presumption will be that it will not be included as a component of the comprehensive plan. Recommendation: Verify what the status of this master plan will be and revise this policy accordingly.

Policy 6.4.6. This policy includes the statement: "City and County departments with interests in the public right-of-way shall identify funding sources…". Typically, this kind of directive relating to inter-office protocols and assignments is set out in local governments' internal administrative policies and directives, not in comprehensive plans and adopted regulations. Suggestion: Revise the amendment as appropriate.

Policy 6.4.14. This policy refers to replacement of existing continuous two-way left turn lanes [also referred to as *open medians*, and in the vernacular, as "suicide lanes," and "twiddles"] with raised medians and exclusive turn lanes on multi-lane arterials. Does this direction preclude or disincentivize signalization (i.e., reconstructing with closed (raised) median, except with limited median opening(s) with signalization to control traffic flow) as an option? Should it? Recommendation: Analyze this policy on its potential to limit future median reconstruction and signalization and revise as appropriate.

Policy 6.7.2. This policy relating to Mobility Hub location coordination has been revised from the previous draft to delete the direction: "Mobility hubs shall benefit low-income, minority, disabled and senior residents." Although the deleted wording was imperfect, it did represent an important objective of providing access to residents that dependent on modes of travel other than by driving their own car. Suggestion: Revise this policy to re-incorporate appropriate direction, such as: "The design and location of mobility hubs shall be take into account the need to serve low-income, minority, mobility-challenged, and senior residents within our community."

Policy 6.8.2. This policy provides direction on enhancement of bicycle and pedestrian Infrastructure. This policy seems very similar to other strategy set out in the draft Land Use and Mobility Element. Is it redundant or can it be included/combined with other draft policies? Suggestion: Revise if appropriate.

Policy 6.8.7. This policy relating to drop-off & pick-up zones concludes with the phrase: "Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements. " This phrase has been revised from the previous draft version but remains confusing. Suggestion: Review and revise the policy if appropriate.

Objective 6.11. This Objective relates to the provision of aviation facilities. It mentions meeting the demand for military (aviation) services. Suggestion: Verify that military aviation services are intended to be accommodated locally. Revise this policy if appropriate.

Policy 6.11.2. This policy sets out direction for an airport master plan. Is this master plan to be adopted? The presumption will be that it will not be included as a component of the comprehensive plan. Recommendation: Verify what the status of this master plan will be and revise this policy accordingly.

Subject: Comprehensive plan - residential land use

Dear Commissioners,

I am writing to support the suggestions of the Alliance of Tallahassee Neighborhoods regarding land use in the comprehensive plan. Neighborhood involvement in the process is key.
In particular, prior to rezoning, the City Commission should be required to adopt a neighborhood design plan prepared with the neighborhood involvement, directing the Planning Department to hold community meetings to review the new maps and policies and to report back on the comments prior to the adoption of the new plan.

I also support the ATN's request that a master plan be prepared for the Northwood Mall property, and that the Midtown Master Plan be included in the comprehensive plan.

I do not necessarily oppose re-zoning, but feel strongly that these processes must be done with plenty of community involvement and careful planning. Tallahassee has suffered from a lot of poorly planned development in the past, and also benefited greatly from more recent community-based planning efforts. Please take the time to make sure the community is involved and make sure it will continue to be involved rather than turning decisions over to developers.

Thanks for your consideration,

Nora Underwood

Subject: Comp plan changes- higher density/commercial

Commission,

I want to voice my opposition to these changes. The proposed new 3x more density, quadraplexes, commercial infill in my designated historic neighborhood- Woodland Drives is a wrong headed and will over time erode the quality of this unique area. We are already beset with encroaching urban pressures of a negative quality- noise, traffic issues, rubbish etc. These proposed changes allowing for more density, commercial uses and the resulting diminishment of our zoning protections will be much regreted by those who care about and live here.

Please do not approve these changes for Woodland Drives.

Thank you

Subject: Urban residential preservstion

I am writing to you all in opposition to the new land use for the UrbanResidential Preservstion. I do not want you to include Lafayette park in that Preservation. It is a terrible idea to change our land use designation to allow commercial offices and apartments and multiplexes. The new land use category would also double our allowable densities. A terrible idea. There are areas downtown that would benefit from this.

I find this happens all over, you get people to make decisions that affect others but not the people who make these decisions,, only the people that either live or work where these decisions are made. You should all be ashamed of yourself

Hopefully you will do the right thing and not include Lafayette Park in thid decision.

Thank you.

J, Fleitman

Subject: Agenda Item 13 Transmittal Public Hearing Update to the Comprehensive Plan Update to the Future Land Use and Mobility Elements Comment

---

Dear Commissioners

Woodland Drives Neighborhood Association is requesting the the proposed future land use designation update that changes Woodland Drives from Residential Preservation to Urban Residential Preservation be excluded from any adopted amendments to the Land Use Element of the Comp Plan.

WDNA Requests Denial of the Provisions. Specifically, we are opposed to the following proposed changes:

	Existing Residential Preservation (RP-1)	**Proposed Urban Residential Preservation**
Intent	**"Preserving** single-family residential character, protecting from incompatible land uses, and prohibiting densities in excess of 3.6 dwelling units per acre."	**Preserve** existing historic walkable neighborhood **development patterns.** Intended to provide low to medium density residential uses **with allowances for neighborhood scale accessory commercial uses**
Maximum Density	**3.6 dwelling units per acre**	**12 units per acres**
Allowed Residential Types	Single family, townhouses, and cluster housing	Single family detached, single family attached, **duplexes, triplexes, and quadraplexes**
Non-Residential Uses	**None**	**"Neighborhood scale accessory non-residential uses… such as retail, offices, and community services."**

Attached please find a letter explaining our concerns. Thank you.

Regards,
Jeff Blair

WOODLAND DRIVES
NEIGHBORHOOD ASSOCIATION, INC.

May 13, 2025 County Commission Meeting – Agenda Item 13 Transmittal Public Hearing
Update to the Comprehensive Plan Update to the Future Land Use and Mobility Elements Comment
Comment Unanimously Adopted by the Woodland Drives Neighborhood Association BOD May 2025

Woodland Drives is directly and adversely impacted, and is requesting that the proposed future land use designation that changes Woodland Drives from Residential Preservation to Urban Residential Preservation, along with associated increases in maximum density, allowed residential types, and certain non-residential uses, be denied and not included in any amendments adopted to the Future Land Use and Mobility Elements of the Comprehensive Plan.

We are **opposed** to the proposed changes to the future land use designation that adversely impact Woodland Drives for, including but not limited to, the following reasons:

A. Insufficient time for neighborhood assessment of voluminous and complex documents provided in support of the proposed changes, and insufficient time allowed for us to provide input and participate in meaningful citizen engagement opportunities;
B. Incompatible with the character and desires of Woodland Drives residents for our historic in-town neighborhood;
C. Lack of sidewalks, and roadway capacity to accommodate the increased density and allowed residential types, as well as non-residential uses including retail and offices; and
D. Increased traffic and noise, and decreased safety for our residents and pets to walk and play safely in our neighborhood.

WDNA Requests Denial of the Provisions. Specifically, we are opposed to the following proposed changes:

	Existing Residential Preservation (RP-1)	**Proposed Urban Residential Preservation**
Intent	**"Preserving** single-family residential character, protecting from incompatible land uses, and prohibiting densities in excess of 3.6 dwelling units per acre."	**Preserve** existing historic walkable neighborhood **development patterns.** Intended to provide low to medium density residential uses **with allowances for neighborhood scale accessory commercial uses**
Maximum Density	**3.6 dwelling units per acre**	**12 units per acres**
Allowed Residential Types	Single family, townhouses, and cluster housing	Single family detached, single family attached, **duplexes, triplexes, and quadraplexes**
Non-Residential Uses	**None**	**"Neighborhood scale accessory non-residential uses… such as retail, offices, and community services."**

In summary, these amendments proposing to change the future land use designation of Woodland Drives, and other in-town neighborhoods, will degrade the quality of our neighborhood(s) and the preferences of our residents, by increasing density, increasing traffic and noise, allowing for incompatible commercial uses, and decreasing the safety and quality of life for our residents.

On Behalf of the Woodland Drives Neighborhood Association Board of Directors,
Sincerely,

G. Youchock

Greg Youchock, President

Subject: Re: Meeting

Nick,

As you know, Tall Timbers is a biological research station founded in Leon County almost 70 years ago to study the science of prescribed fire – including the benefits of prescribed fire for plants and wildlife as well as wildfire mitigation. Tall Timbers is also a Land Trust with over 161,000 acres of land permanently protected in North Florida and South Georgia.

On behalf of Tall Timbers, I would like to share our appreciation of the hard work that Planning Department staff have invested in the Future Land Use and Mobility element update. Throughout this process, Tall Timbers staff have worked closely with the Planning Department on issues involving our working forestlands, conservation lands, and rural areas.

Importantly, as a result of the Department's analysis, it is clear that **no** significant changes are needed to the Urban Service Area (USA) and **no change** is needed to the current 1 dwelling unit/10 acre Rural residential density to accommodate our community's projected growth over the next 20 years. (We do understand the need for minor modifications to the Urban Service Area and for slightly higher residential density associated with the extension of sewer to Woodville). As we have seen over the life of our community's Comprehensive Plan, maintaining the existing USA and Rural residential density are two of the most effective tools to protect rural working lands, preserve our natural resources, and efficiently use taxpayer dollars by discouraging growth in rural areas.

While there are many changes for you to contemplate as you review the updated Plan, please continue to support maintaining the USA and our 1 dwelling unit/10 acre Rural residential density as discussed above.

Thank you,

Neil

Betton Hills Neighborhood Association P.O Box 15162, Tallahassee, FL 32317 | bettonhills.org

June 10, 2025

Dear City of Tallahassee Commissioners:

The Betton Hills Neighborhood Association (BHNA) Board of Directors, on behalf of our over 2,000 residents, thanks the City Commission, and particularly the Planning staff, for their engagement on the Comprehensive Plan amendments to guide our city's responsible growth and vitality through 2050.

BHNA recognizes the challenges of fostering responsible development without stifling economic growth. We believe the City can meet those challenges while **also** honoring and preserving the very real, historic contributions that established neighborhoods like Betton render to the City's vitality and its unique profile among Florida's best places to call home.

Based on recent conversations between BHNA and the City's Planning Department (Artie White, Susan Poplin, and Tyler Moldanado), as well as representations made at the June 3, 2025 community forum at the Los Robles Woman's Club, BHNA does **not** object to its inclusion in the proposed Sub-Urban *Residential Preservation* Land Use Category (emphasis added). This is because we have been informed that the current RP-1 zoning district contained within the Land Development Code (section 10-170) will be retained and applied to Betton Hills (as will the RP-2 zoning district, which will be retained and applied to the west side of Mitchell Avenue). This is what "residential preservation" is about.

Since its founding in 1973, BHNA has sought to protect this historically stable, viable, and desirable neighborhood from incompatible land uses and density intrusions. The resulting preservation of **single-family homes**, and **low housing density**, are the foundation of our established neighborhood character. We believe that continued preservation of these neighborhood attributes also contribute to the City's diverse landscape, economic vitality, and quality of life. How so? Here are just a few examples:

- True to its name, Betton Hills has many hills. Our single-family home sites, situated on-handsome lots with mature trees and landscaping, are natural stormwater absorbers of Tallahassee's frequent rainfall. This helps mitigate the adverse environmental effects that overdevelopment and/or higher densities can cause in such hilly terrain.

Betton Hills Neighborhood Association P.O Box 15162, Tallahassee, FL 32317 | bettonhills.org

· The large canopy trees commonly found on Betton's home sites provide a range of ecological services not only to our residents, but to the City at large. Together, these trees and home sites provide habitat for wildlife, carbon storage, air purification, shade, and help absorb rainwater and lessen urban runoff. Overdevelopment and/or higher densities threaten these treasured, ecological service providers.

· Betton's single-family home sites need only narrow streets. Even without sidewalks, these walkable neighborhood streets support pedestrian safety due to minimal cut-through traffic and reduced in-neighborhood traffic (due to lower housing density). These walkable neighborhood streets promote fellowship among not only Betton residents, but also with those from adjacent neighborhoods who commonly seek out the safety and beauty of our walkable neighborhood streets and parks. Overdevelopment and/or higher densities tend to undermine all of this.

Betton Hills residents make friends with their neighbors. They enjoy socializing together. They watch out for each other. They support their neighborhood association and its events. We believe this neighborliness is a natural outgrowth of our established **single-family home and low housing density** DNA. This neighborliness doesn't stop at the Betton Hills boundaries. Betton Hills residents have always been active in supporting Tallahassee's diversity of neighborhoods, its local businesses, its natural environment, and its responsible governance. It's part of the Betton Hills neighborhood character to give back to the City for its support for the preservation of our single-family neighborhood. You can be sure that we plan to keep on doing that.

We thank the Commissioners, and City planners, for listening to us and working with us to preserve and honor what's most valuable in Tallahassee for the long haul.

Best regards,

James Ward – President, Betton Hills Neighborhood Association

Subject: 2025 TLC FLUE Amendments Comments

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

It needs work. Please vote "no" to allow the problems with this current amendment to be addressed responsibly. Even if you don't read my comments below, please know that the amendment will cause problems (litigation) rather than solve them because it is full of inconsistencies, omissions, and things that just don't make sense.

Comments on the 2025 Amendments to the TLC Comp Plan FLUE:

The goals, objectives, and policies are internally inconsistent, creating legal risk for Tallahassee and Leon County. The proposed language lacks important definitions and direction, perpetuates past problems instead of preventing them from reoccurring, like the multi-bay super car wash proposed on Crump Road (now clearly allows), school siting based on cheap land rather than growth objectives (no criteria or intent stated), and the lawsuit on the County waste recycling center and regional park that the local governments narrowly won in the past).

With a wholesale "fix" that this is touted to be, why does it seem to not only perpetuate, but exacerbate these past land use disputes? The amendment, as explained by the groups such as Grow Tallahassee and The Chamber, wraps itself in a cloak of "good planning" approaches and new urbanism, and in reading the new goals and objectives, one might think that to be true. This amendment, however, falls short in the policies. The new policies are streamlined; so streamlined, in fact, that important provisions from the current Plan that help address compatibility between different uses, preserve important open space and landscape features in our urban area, protect conservation and preservation areas, and even provide that clear separation between urban and rural uses as stated in one of the goals.

In amendment cycles of the past, the Commissions would parse every new word to ensure that we

were choosing the right language to guide future growth. The inconsistencies and apparent omissions of actual standards in this amendment, however, make it clear that the development of policy language was rushed, without even an analysis to assess if the policies are likely to achieve the stated goals and objectives. **The City Commission should vote not to forward the amendment to the State of Florida, and instead, continue to work with the public to address the problems, inconsistencies, and omissions.**

The following comments are focused on densities, intensities, location of development, and how different land use activities are intended to work together. They are grouped into three main topic areas: Growth Patterns; Reflecting our neighborhood and environmental values; and having a transparent process.

I. **Growth Patterns**

In trying to reduce sprawl and make our city more urban the current Comprehensive Plan has failed. We have known that for 25 years (when staff applied the policies to a map, whereby the large extent of yellow low density areas made our community look like Big Bird on a map). The proposed amendment attempts to fix these failures not by addressing the large, undeveloped areas that continue to develop in low density residential and strip commercial sprawl, but by forcing density and nonresidential activities into existing developed neighborhoods. This "evolving residential neighborhood strategy" is being pushed despite the fact that most of the public comments during the entire reassessment process have been concerned about protecting these areas. The development community contends that if we just get more people living close together on the outskirts of the downtown, our urban commercial will have the population base it needs to thrive. This is a failed strategy. We had a successful downtown 40 years ago, with far less population near our urban core than we have now, and yet, the commercial activities today find it difficult to survive. Adding quadruplexes and daycare centers to urban core neighborhoods will not fix this problem.

What would help achieve more efficient growth patterns:

A. Adding residential units in the actual downtown, requiring downtown office buildings to have a commercial component, prohibiting non compete clauses in commercial real estate transactions (privately prohibiting a future similar activity, which then results in vacant buildings for years like the old Walmart on Apalachee Parkway and the old vet clinic on Thomasville and 9th Avenue), and limiting the size and location of suburban commercial are a few things that could help to some degree.

B. If the Urban Service Area is to be oversized for the projected need by 50% (Policy 2.2.1), and **if** the undeveloped areas over 2 acres in size were to take on urban densities, then there would be no need for existing neighborhoods to have to take on the character-changing burden of absorbing higher densities and intensities. Unfortunately, we continue a failed approach of oversizing the Urban Services Area and not having required (and enforced) minimum densities for vacant parcels greater than 2 acres. **Alternate urbanization policy for consideration that leaves neighborhoods alone:** *All parcels greater than 2 acres in size inside the urban service*

area shall be developed at a net density of at least 6 units per acre, outside environmentally constrained areas.

C. Having policies that effectively address the impacts between uses is also important, but seems to have been forgotten in this Comprehensive Plan rewrite. Many of the compatibility policies in the new amendment are simply gone, despite most of our land use disputes and lawsuits in the past being about impacts and compatibility (Tai Chi on Thomasville Road, Welaunee Circle K, Chaires Regional Park, Waste Transfer/Recycling Facility, etc.).

D. **Most of the policies allowing office, and sometimes commercial use include an intensity standard that serves no purpose and gives false assurances.** In Suburban Neighborhood, for example, Policy 2.8.9 provides the intensity standard for commercial and office activities as 20,000 sf/acre (In the Urban Neighborhood category, it bumps up to 30,000 sf/acre, per Policy 2.8.12). Is that an appropriate standard for areas along Gadsden Street North, or Meridian Road? What does it compare to? The following are examples of these intensities for you to think about in terms of them having anything remotely similar to what on thinks of for a "neighborhood":

- Lotto Building: 146,040 sf on 6.75 acres = 21,636 sf/acre
- Florida 1st District Court of Appeals in Southwood: 97,373 sf/17.26 ac = 5,642 sf/ac
- Leon County Tax Collectors at Metropolitan Blvd: 57,756/3.03 ac= 19,061 sf/ac
- Leon County Civic Center: 434,739sf/19.07ac = 22,797 sf/ac

Just where did staff come up with these standards, and did they ever do a comparison to analyze what is appropriate for urban neighborhoods? To be fair, the Plan has used a sf/ac intensity standard for many years, even though it never made sense, but it was coupled with max site areas, max bldg sf, stronger buffering, open space, and compatibility requirements that this amendment lacks (see existing Policy 3.1.1 as one example). **If we are going to make big changes, how about adopting intensity standards that actually make sense for the associated categories?**

E. Policy 2.2.5 concerning location of densities and intensities should be revised to replace "and/or" with "and", since densities **and** intensities should be based on **all** these things (infrastructure capacity, LOS, conditions of approval, and impacts).

F. Policy 2.2.8, concerning redevelopment, states that these redevelopment strategies will "prevent the premature conversion of rural land…" when, in fact, this is not true. While it may reduce pressure to convert rural land, to actually prevent that, we would actually need further policies to effectively prevent that. Absent those policies, replacing the word, "prevent" with "reduce demand for" would be more honest.

G. Policy 2.8.5 – Rural Residential Future Land Use Category: states, "The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area". **This Rural Residential policy, however, would also allow large commercial shopping centers**

that have nothing to do with that stated intent. An example of 100,000 sf shopping center in the Rural Residential FLUC that would be allowable on a single site quadrant such as Roberts Road and Centerville or Crump Road and Miccosukee Road would be:

- 50,000 square foot sf Publix, **and**
- 14,000 sf CVS, **and**
- 15,000 sf Mattress Store, **and**
- 20,000 sf Mexican restaurant

The policy does not even provide an intensity for an arterial roadway (such as Centerville) and a minor collector (such as Old Magnolia Road), though an intensity for a local roadway is provided, which is 10,000 sf (the size of many older CVS stores).

These intensities are clearly the opposite of "a clear separation of urban and rural uses" as called for in Objective 2.2. The allowable intensities should be revised to reflect the intent of the Rural Residential Land Use Category, and list allowable intensities for all locations.

II. Policies to Reflect Stated Values of Protecting Neighborhoods and Environment

There is a disconnect between the drafters of this amendment and the true values held by those of us who have resided in Tallahassee/Leon County for many years. Objective 2.6 is "To foster and protect distinct, attractive places that are important to the community…" The only supporting policy to this objective, however, discusses the protection of road corridors, Woodville, Bradfordville, and downtown. What about our neighborhoods? Does staff not understand that our neighborhoods are each distinct, and that we want to foster and protect them from intrusive, incompatible uses, densities and intensities too? To not include a policy for neighborhoods and a policy for the environment to support this objective about what we value in Tallahassee/Leon County shows that the writers were not listening to what is stated as the two most fundamental things in our existing plan, as well as all the public outreach sessions that have been held over the past few years leading up to this point.

How to fix this disconnect of policies and our value of neighborhoods and the environment:

A. Expand the policies under Objective 2.6 to address how we value our neighborhoods with protective strategies to address impacts from development and non compatible activities.
    - Policy 2.8.12 for Urban Residential, states, "Community services,

      office, and commercial development in scale with surrounding residential areas are

      Appropriate". **This is a big departure from the current Plan** which prevented homes on Gadsden Street from converting to offices, since, in terms of cost, an office will "outbid" a residential activity every time. The current plan placed a high value of keeping residential units in the urban core, since there was (and still is) a real risk of losing residential units to office conversions. If this policy change is adopted, there will likely be a large-scale conversion of these urban core homes to offices, further eroding that

24-hour downtown we have been trying to support. Additionally, one has to wonder if a car wash like the one at Kerry Forest would be allowed as a minor commercial activity in scale with surrounding residential area. The square footage of the structure is likely about the same (4,820 sf on one acre is very low compared to our adopted intensities!), but it is difficult to imagine that level of noise in an urban residential area. It seems the new amendment would allow it.

B. Expand the policies under Objective 2.6 to address how we value our natural environment with protective strategies to address impacts from development and non compatible activities.
    - New Policy 2.5.1 for Suburban retrofit, calls for reconstructing degraded wetlands and watercourses to either “natural” functionality or repurpose them to complimentary functionality with additional community-use features. The last part to "repurpose" these degraded wetlands and watercourses is overly broad, given that every watercourse and wetland in Leon County could be considered degraded to some degree. This seems inconsistent with the community's stated values to protect the environment, and more recent requests in the public comments to be more resilient. What is the background/purpose of this policy? We wouldn't (at least I wouldn't) want to have jet ski races on Lake Heritage simply because the water quality is currently degraded from urban runoff. Would you? **Please delete this policy that is destructive to our wetlands and watercourses!**
    - Policy 2.8.2 calls for a minimum 5% open space, which may include landscaping and stormwater facilities. To be clear, this is a very low standard compared to our current Comprehensive Plan, which in Policy 1.4.11, requires 10-25%, with additional potential buffering for PUDs. Why the change? It might make sense in the most dense/ intense downtown areas, but in other areas, our community values shaded parking and protection, permeable areas to allow water filtration, and a place to take the dog out to do whatever it is dogs do do.

III. A Process that starts well should end well, with transparency throughout

This Comprehensive Plan update has been several years in the making. The Planning Department did outreach to find out what the community values and made them feel part of the process. Somewhere towards the end of this process, however, when it came to writing policies, the public was not as engaged in the process, and it seems staff has not done a thorough assessment of the new policies to ensure that they will accomplish the intent of the goals and objectives.

A. It is readily apparent that staff has not, as required by Policy 1.2.2, conducted an environmental analysis of the proposed amendment, including those features that contribute

to the human well-being and community character. If that had been fully completed, it is likely that these omissions would have been realized and addressed by now. Please start with an environmental analysis of Policy 1.2.2 and an residential impact analysis of the 20,000 and 30,000 sf/ac nonresidential intensity standards allowed in the Suburban "Neighborhood" and Urban "Neighborhood" categories. For reference, the Civic Center is 22,797 sf/ac.

B. The public input process should be reflected in densities and intensities that are easily discerned, without having to research roadway functional classification maps that are used for location criteria, but which have been deleted with this amendment. These can be found in an app at the bottom of the City's webpage under https://www.talgov.com/gis/roads/?page=roads#zoom_to_selection=true, but one must dig to find it.

C. The current plan has a matrix that includes the densities, intensities, and some location criteria for each land use. The amendment does not have this, making it difficult to assess what is allowed where. In fact, it seems some land use categories have no definition for what it even includes, and some categories seem to be missing altogether.

    - Objective 2.3, for example, addresses "public infrastructure" with supporting policies for "public facilities, including community services, light infrastructure, and post-high school educational uses". Policy 2.3.1 allows these public facilities in all land use categories. The current Comprehensive Plan also includes heavy infrastructure as a public facility activity, and the matrix provides where such activities may take place. The amendment does not have this matrix, and it is unclear as to whether heavy infrastructure (like the solid waste transfer/recycling facility or sewer plant) is also allowed in all land use categories (such as residential and preservation). Intensities and locational criteria, unlike the current Plan, are not provided in the amendment, setting the stage for major public controversy in the future. A better breakdown of public infrastructure, public facilities, community services, and what used to be know as "government operational" should be clearly classified in the Plan, with appropriate intensities and location requirements identified to avoid misunderstandings and litigation, as we have had in the past on this issue.

To have such serious omissions makes it difficult to correct later, and will certainly lead to unnecessary misunderstandings, disappointments, and costly litigation. Sometimes it is worse for the public when the stated intent is very high reaching if the "how to" in the policies is omitted. This is because it gives the public false expectations, leading to disappointment and then future distrust. Our Comprehensive Plan should be more than lofty words, but also a directive on how to achieve the hopes we have for our community.

Betton Hills Neighborhood Association P.O Box 15162, Tallahassee, FL 32317 | bettonhills.org

June 10, 2025

Dear City of Tallahassee Commissioners:

The Betton Hills Neighborhood Association (BHNA) Board of Directors, on behalf of our over 2,000 residents, thanks the City Commission, and particularly the Planning staff, for their engagement on the Comprehensive Plan amendments to guide our city's responsible growth and vitality through 2050.

BHNA recognizes the challenges of fostering responsible development without stifling economic growth. We believe the City can meet those challenges while **also** honoring and preserving the very real, historic contributions that established neighborhoods like Betton render to the City's vitality and its unique profile among Florida's best places to call home.

Based on recent conversations between BHNA and the City's Planning Department (Artie White, Susan Poplin, and Tyler Moldanado), as well as representations made at the June 3, 2025 community forum at the Los Robles Woman's Club, BHNA does **not** object to its inclusion in the proposed Sub-Urban *Residential Preservation* Land Use Category (emphasis added). This is because we have been informed that the current RP-1 zoning district contained within the Land Development Code (section 10-170) will be retained and applied to Betton Hills (as will the RP-2 zoning district, which will be retained and applied to the west side of Mitchell Avenue). This is what "residential preservation" is about.

Since its founding in 1973, BHNA has sought to protect this historically stable, viable, and desirable neighborhood from incompatible land uses and density intrusions. The resulting preservation of **single-family homes**, and **low housing density**, are the foundation of our established neighborhood character. We believe that continued preservation of these neighborhood attributes also contribute to the City's diverse landscape, economic vitality, and quality of life. How so? Here are just a few examples:

- True to its name, Betton Hills has many hills. Our single-family home sites, situated on-handsome lots with mature trees and landscaping, are natural stormwater absorbers of Tallahassee's frequent rainfall. This helps mitigate the adverse environmental effects that overdevelopment and/or higher densities can cause in such hilly terrain.

Betton Hills Neighborhood Association P.O Box 15162, Tallahassee, FL 32317 | bettonhills.org

· The large canopy trees commonly found on Betton's home sites provide a range of ecological services not only to our residents, but to the City at large. Together, these trees and home sites provide habitat for wildlife, carbon storage, air purification, shade, and help absorb rainwater and lessen urban runoff. Overdevelopment and/or higher densities threaten these treasured, ecological service providers.

· Betton's single-family home sites need only narrow streets. Even without sidewalks, these walkable neighborhood streets support pedestrian safety due to minimal cut-through traffic and reduced in-neighborhood traffic (due to lower housing density). These walkable neighborhood streets promote fellowship among not only Betton residents, but also with those from adjacent neighborhoods who commonly seek out the safety and beauty of our walkable neighborhood streets and parks. Overdevelopment and/or higher densities tend to undermine all of this.

Betton Hills residents make friends with their neighbors. They enjoy socializing together. They watch out for each other. They support their neighborhood association and its events. We believe this neighborliness is a natural outgrowth of our established **single-family home and low housing density** DNA. This neighborliness doesn't stop at the Betton Hills boundaries. Betton Hills residents have always been active in supporting Tallahassee's diversity of neighborhoods, its local businesses, its natural environment, and its responsible governance. It's part of the Betton Hills neighborhood character to give back to the City for its support for the preservation of our single-family neighborhood. You can be sure that we plan to keep on doing that.

We thank the Commissioners, and City planners, for listening to us and working with us to preserve and honor what's most valuable in Tallahassee for the long haul.

Best regards,

James Ward – President, Betton Hills Neighborhood Association

Good morning Commissioner Welch:

On behalf of **Buckhead Homeowners Association of Tallahassee, Inc.,** please see attached correspondence concerning proposed amendments to the 2025 Comprehensive Plan for Leon County.

We would like this to be placed in the record for the upcoming Leon County Adopting Hearing scheduled for July 8, 2025.

Thank you

Ms. Poplin,

As residents of Lafayette Park, we strongly oppose the proposed Future Land Use revision that would change the designation of our historic neighborhood—and others like it—from **Residential Preservation** to **Urban Residential Preservation,** which could significantly alter the character and livability of some of Tallahassee's long-established neighborhoods. This change will also **worsen existing challenges** related to **parking, speeding, and cut-through traffic.** These are not hypothetical concerns—they are already present and would only intensify under the proposed changes.

During the June 3rd public meeting Mr. White stated that the affected areas "already have (…) eight, 10, even 12 units per acre," and that the proposed reclassification is merely an acknowledgment of existing development patterns.

However, this framing overlooks a critical reality: the area proposed for re-designation encompasses a **broad and diverse section of Midtown**, which includes both high-density housing and long-established, low-density single-family neighborhoods. The higher- density pockets inflate the **average** across the entire area, these averages do not reflect the actual makeup or character of many individual neighborhoods within it.

This broad-brush approach **ignores the distinct identity and residential stability** of these older neighborhoods, and it opens the door to development that is incompatible with their long-established character. This proposed reclassification fails to recognize what makes each part of Midtown unique. We urge the city planners to **take a more nuanced approach**—one that protects the historic areas and ensures they are not subsumed by policies aimed at addressing development pressures elsewhere.

Tallahassee does not have a strong track record when it comes to protecting historic homes, especially in areas where it is profitable for development, and the recent Canopy/Circle K controversy demonstrates how quickly developers will put profit over neighborhood integrity. It is difficult to separate these proposed changes from that pattern, particularly when it is championed by individuals with clear development interests, including CRA leadership and groups represented by pro-growth PACs.

We urge you to **reconsider the proposed reclassification** and keep the **Residential Preservation** designation for these core neighborhoods. Their character and history

deserve thoughtful planning, not statistical generalizations.

Thank you for your time and attention,

Sarah Kathryn McRae and Austin Wright

Bob, So glad to get your e-mail and that you are following the on-going comprehensive plan update. I've shared with Adam but will share with you, the resource sites for the update that include websites, www.compplantlc.com and https://www.talgov.com/place/pln-cp, and the County agenda for draft transmittal is currently posted. My understanding is that the intent is to replace the Future Land Use and Mobility Elements with a consolidated Land Use and Mobility Element (LME), and to update the Glossary to add a few terms. A crosswalk is available to assist in identifying how the current comprehensive plan Land Use and Mobility Elements relate to the proposed LME. I'm going to add your e-mail to the distribution list for status updates. Let me know if there are other questions. Thx.

Susan,

I have been reviewing the draft amendments. I don't see any reference to the current comp plan text or any strikethrough and underline to indicate changes. Are the proposed amendments intended to completely replace the existing text? Will the existing text be deleted when the proposed amendments are adopted? Please clarify.

Thanks,
Bob Apgar

I have heard that a group of residents met with Artie While who agreed to a number of changes. It would be helpful to know what these changes are. Hopefully they are more neighborhood friendly and reduce the densities recently shown in the Plan in NP. Transitions and comparability seem to have disappeared from the language of our current planners. I would like to see those principles returned and given some significance.

EXTERNAL EMAIL
Please report any suspicious attachments, links, or requests for sensitive information.

In follow up to Commissioner Minor's great meeting last night May 7, here is some food for thought:

Land Use Follows Infrastructure - "Form Follows Function" (Louis Sullivan, Frank Lloyd Wright).*

In other words, the density and intensity of land uses should only be applied where infrastructure is both sufficient and context appropriate to support those uses or functions - if not existing today, planned with practical feasibility and budgeted for with certainty. Examples:

- South City is a Big Mistake
- Speed humps in Woodland Drives do not make it healthy and vibrant with complete streets (again, no sidewalks and pavement is wide enough for three lanes of traffic - which of course encourages speed)
- Flooding and FEMA FIRM Flood Zones (inhibiting southside investments) - please get serious about resolving this and eliminating blockages to truly revitalizing the southside (*no, I do not believe that hundreds of homes were build in the 1950s in areas subject to flooding (these used to be middle class predominately white neighborhoods allegedly) and yes, I do believe that tons of eroded sediment flowed downstream from the north and northeast 1950-1960-1970-1980 before stormwater management rules and regs kicked in*). A historical analysis would be interesting!

**An object (land use) looks the way it does (its' density and intensity) because of the task it is designed to perform: Healthy Neighborhoods and Vibrant Places.*

Kind regards,
Beth C. Hollister

Great. Similarly, last sentence, replace are with is: Policy 6.10.4 - Employment and Activity Center Service:
Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Reviewing the revisions and providing new/revised feedback. Hope to finish by tomorrow if not today. But something quick that hopefully you can note in the hearing records and fix as a simple error:

Policy 6.1.4. This policy relating to street design includes the following scrivener's error: "…but not to limited lane width …". Suggestion: Correct the policy so that this phrase reads: "but not limited to lane width."

Hello Commissioners,

My name is Kirsten Olsen, at 1225 Talbot Avenue, 32308, in Greater Brandt Hills.

I'd like to thank your staff for working so hard on this large project. It is probably time for an update since the last major Comprehensive Plan update was in 1990. In some of those standards, it mentions zoning for video rental stores, which always makes me chuckle, since Blockbuster and similar stores are no longer around.

Times have changed, but in my family's opinion, Tallahassee still will be most successful with strong neighborhoods of full-time, local residents, especially near downtown and inside Capital Circle.

How does the proposed doubling of density benefit the existing neighborhoods? I question the premise that these changes are needed, and I also question why such change is needed now.

There is a lot of undeveloped land in Leon County, and a lot of properties that need redeveloping. In addition, these neighborhoods inside Capital Circle are already enduring an onslaught of new gas stations and similar commercial intrusions.

I propose:

- **Keeping density the same as in the earlier Comp Plan, which is working well.**
- **Keeping the Residential Preservation 1 and 2 designations, with some updating**
- **Limiting commercial to where it already exists.**
- **Helping neighborhoods maintain integrity by not nibbling away at the edges with upzoning.**
- **If new housing types are allowed, having them visually mimic a single-family home.**
- **Soliciting more neighborhood input on the Draft Comp Plan and clarifying concepts.**

Let's look at my neighborhood, Greater Brandt Hills (with adjoining neighborhoods like Capital Hills, Brookwood, Inglewood and Betton):

My neighborhood would change from Residential Preservation 1 to Suburban Residential Preservation. I would like to know why the change is needed.

I think is a poor choice to double the number of units allowed per acre from 3.6 to 8 in this category. My neighborhood and those nearby are already high density, with houses on small lots and several diverse housing types in the area.

The more than 100 percent increase in density that is proposed will have several likely negative impacts:

- It could result in new housing looming over other homes.
- It could further crowd existing older, narrower roads, especially if more people are parking on the street.
- Dense construction will reduce tree cover and green space, which is what makes Tallahassee lovely and cool.
- It likely will discourage families from living in town, since they will want at least a little green space for their little ones or pets.

Let's look at nearby neighborhoods like Old Town, Lafayette Park, Los Robles, Calhoun Historic District, etc.:

These areas are proposed to change from Residential Preservation 2 to Urban Residential Preservation.

The new category doubles density from 6 to 12 units per acre and adds several incompatible housing types.

It would shoehorn in commercial at what it calls "Neighborhood scale" – though that is unclear to me what that means. There are already plenty of commercial businesses nearby and many houses that have been converted into businesses.

I think these close-in neighborhoods add an essential element of charm and style to Tallahassee. I think disturbing the historic integrity of these areas will degrade the beauty and desirability of Tallahassee. Not everyone wants to live outside Capital Circle and not everyone wants to live inside Capital Circle. The idea of doubling down of areas already developed does not seem as prudent as encouraging development to areas that are not yet developed or need redeveloping.

For instance, Beard Street is an outstanding Halloween destination because of its unique, charming, neighborly aura. Many newly built neighborhoods around the country are spending millions trying to create that same charm.

In summary: I know it is tempting to insert additional development in these neighborhood areas, but let's not destroy what is working so well for Tallahassee and its residents.

Thank you for considering my comments.

Comments on June 11, 2025, Draft Land Use & Mobility Element, as Revised
A. A. Biblo, June 4, 2025

1) Pages 18 & 19. Terminology related to non-residential development size and intensity limits for the Rural Residential Future Land Use Category, Policy 2.8.5. Are the terms in the table in this policy, e.g., *total location*, *single site*, *quadrant*, defined somewhere?

2) Page 23. Limitations on density above six dwelling units per in the Sub-Urban Residential Preservation Future Land Use Category, Policy 2.8.8. As drafted, this proposed category would not allow implementation of density bonuses that enable development greater than 6 dwelling units per acre, including the bonus available in exchange for the provision of inclusionary housing. Barring the implementation of the density bonus for inclusionary housing creates a direct internal consistency issue with the other comprehensive plan policy provisions explicitly providing that bonus, including the proposed policy 4.3.1. in this draft amendment. It is also not good public policy direction as it takes away a potential tool to provide quality affordable housing opportunities within the urban area that have slightly greater densities than otherwise achievable (i.e., the inclusionary housing density bonus would allow densities up to 7.8 dwelling units per acre, compared to the limit otherwise in effect, 6 dwelling units per acre).

3) Page 23. "Special Conditions" allowing density above six dwelling units per in the Sub-Urban Residential Preservation Future Land Use Category, Policy 2.8.8., Part 2. This text sets out three criteria or conditions under which residential densities in this future land use category may be greater than 6 dwelling units per acre. As drafted in this revision, this part omits a conjunction (e.g., *and,* or *or*) for these three criteria/conditions, making it unclear whether all three or any of the three must be attained to facilitate densities greater than 6 dwelling units per acre. This ambiguity will likely lead to proponents of the greater density asserting that only one of the criteria/conditions must be obtained and opponents that all three must be obtained.

4) References to *Functional Classification*. Policies 2.8.8. and 2.8.11., have been revised so that maximum densities allowable depend on the functional classification of streets/roadways that they are adjacent to, *as approved by the Federal Highway Administration*. There are no policies or other provisions within the proposed Land Use and Mobility Element, however, that explain where someone can find any map or any other guidance from the Federal Highway Administration designating the functional classification of streets and roads in the City of Tallahassee or Leon County. I don't believe such a map exists. Therefore, determination of appropriate density limits based upon street/roadway frontage will not be possible, or best, subjective and arbitrary, given the lack of the referenced basis.

There is a *Roadway Functional Classification* map posted on the Tallahassee-Leon County GIS website (https://geodata-tlcgis.opendata.arcgis.com/maps/tlcgis::roadway-functional-classification/explore?location=30.443581,-84.266533,10.87). No guidance is provided in the proposed Land Use and Mobility Element as to whether this map will have any official status related to the references to *functional classification* in the proposed Element; the Federal Highway Administration is not the source of this map. There is also a Roadway Functional Classification map series in the current version of the Tallahassee-Leon County Comprehensive Plan; this proposed amendment will delete this map series.

Please repo1i any suspicious attachments, links, or requests for sensitive info1mation.

I appreciate yam detailed response.
I reco$_{g\,n}$ ize there is ah-eady considerable prope1iy in the area that is specified as M1. I think those need to be changed and I object to adding additional prope1iies to that desi$_{g\,n}$ ation. I served on the City Commission for 2l years and voted in evely amendment cycle- including the years when it was originally adopted. I negotiated its acceptance by the a state. I served as the City rep on the ARPC for most of those years and on the FLC committees dealing with planning, infrastmcture and environmental - several times as Chair of those committees.
So I am fully aware of the processes you reference. That experience is the reason I am objecting. I know what happens after these downgrades.
A response that merely says "we heard you Ms. Lightsey now go away" is not sufficient. I want to see way fewer M&M designations down here.

The cunent City Commission does not pay attention and grants all zoning and development Proposals. I can label you just another apologist for the cunent system.
Be a professional independent planner. .. think about the future down here. Nothing positive will be possible if you adopt the recommended Map changes. More ugliness, more outside storage, more intense uses that do not encourage upscale housing and the amenities it would support.
At least your response means you have read the Plan.
Debbie Lightsey

Sent from my iPhone

On Jul 25, 2025, at 5:16 PM, Alfano, Michael wrote:

Hello Ms. Lightsey,

We've met before, but you may not remember me, my name is Mike Alfano; I've recently been promoted to the role of Planning Director. Your email was forwarded to me and I'm happy to follow up with a response.

First, regarding your concerns about the Manufacturing and Mining Future Land Use Category. I appreciate your concerns about what may appear to be adding new lands that would allow industrial uses in these areas, however, the areas in the Southside that were designated Manufacturing and Mining in the proposed Future Land Use Map are predominantly areas that are currently zoned M-1 (Light Industrial), or I (Industrial), where a variety of manufacturing and mining uses are currently allowed (with some additional lands zoned Airport Vicinity, Government Operations or Planned Unit Development). As such, these uses are currently allowed there today.

Moreover, the proposed Manufacturing and Mining FLUC includes a special condition that includes requirements to prevent or mitigate impacts from noise, vibrations, smoke, dust and particulate matter, odor, and lighting as well as requiring additional land development regulations to protect adjacent non-industry and non-mining properties and to require compatible vehicular access. Some uses, not previously addressed, such as hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidization and similar activities are prohibited in this category.

While some of these areas are currently designated Suburban (and I believe this is the source of your concern), in order for development in these areas to provide the grocery stores, medical and dental offices, and restaurants that you highlight (all great ideas), they would first need to be rezoned to a district that allows those uses. That process would be largely the same as what they would need to do in the future, should they ever be designated as Manufacturing and Mining. The small-scale amendment process that we undertake follows the same timeline as a rezoning, so any landowners

wishing to change their land use from Manufacturing and Mining (should the proposed Comp. Plan Update be adopted in the future) to a more commercially-oriented category, would be able to do so in relatively short order, and also be able to rezone the property concurrently.

We sincerely appreciate your advocacy and desire for quality redevelopment on the Southside and share that passion. The Southside Action Plan (formerly the Southern Strategy Area) adopted into the current Comprehensive Plan (Goal 11) outlines and provides a framework of action for the Southside. It focuses on Beautification, Investment, and Engaged and Activated Citizens. Policies in this chapter require the focus on prioritizing investment that enhances existing public spaces, supporting citizen and business investment on private property, directing collaborative efforts of the public and private sectors towards increasing homeownership, diverse development and redevelopment and initiating projects that spur further investment opportunities. Earlier this year, we provided information to the BOCC on the over $1.13 billion dollars being invested into the Southside Action Plan area by the City, County, Blueprint, State, and private sectors. Perhaps most importantly, Policy 11.2.2 dictates that investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations. The proposed Land Use and Mobility Update carries forward these requirements.

Further, the proposed Comp. Plan Update prioritizes the importance of protecting the Environment. Goal 1: A Healthy Environment provides that our community will identify natural resources that contribute to a healthy environment and human well-being and prioritize the preservation of these natural areas when making land use and transportation decisions. The proposed update also emphasizes the Primary Springs Protection Zone in policies and in the associated map series. This is consistent with many local actions taken since the adoption of the original Comprehensive Plan, such as:

- Adoption and implementation of stricter stormwater standards (including design for facilities within karst areas)
- The retrofit and improvement of the Thomas P. Smith Water Reclamation facility to treat to Advanced Wastewater Treatment standards

- The deactivation of the City's spray field on Tram Road
- Land Development Codes that include Low Impact Development standards
- Implementation of the Master Sewer Plan
- The Southside Triangle Project
- The County's Septic-to-Sewer and Septic Upgrade Incentive Programs

Our team looks forward to the continued opportunities to engage with you, and the rest of the community, on the proposed Comp. Plan changes. Please let us know if you'd like to schedule a time to come in and meet with the project team to discuss these, or any other concerns, you may have.

All the best,
Mike

I would like to hear the justification for changing the Land Use on a vast number of properties in Southern and Southwestern Tallahassee to Mining and Manufacturing. I am tired of lip service to Southside Revitalization only to see this big step backwards.
I will quote you the description this Land Use Category:

Manufacturing and Mining - <u>Heavy Industrial land uses</u> that do not, typically, have a defined density or intensity and may have the potential to create significant offsite impacts to surrounding areas have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic , vibrations that are not regulated by federal or state laws shall be regulated by the City or County.
This fails to mention environmental degradation and lowering of adjacent property values.

The extra year you have allocated to reviewing these proposed changes will allow each of you time to read what you propose doing to an area that already lacks the amenities others in the community enjoy - grocery stores, medical and dental offices, restaurants, attractive landscaping, sidewalks and neighborhood scale commercial (we do not count gas stations and convenience stores of which we have too many). Much of this area contains environmentally sensitive features including lakes, swamps, wetlands, sinkholes and vulnerable aquifer recharge designations. Almost all of it is in the Wakulla Springs Basin. The people in charge of your planning department and each of you will be held responsible.

Do something positive for the Southside. Give us a chance to thrive! We already have too much blight, too much poor code enforcement, too many junkyards and locally undesirable land uses. The Map for the South and Southwest already contains too much intense commercial and heavy industrial. These new proposals are an insult. Time to step and show that your statements about community equity are more than just empty promises.

I would like a personal response which was routine when I was serving in office, but which now rarely happens.

Debbie Lightsey

Betton Hills Neighborhood Association P.O Box 15162. Tallahassee, Fl. 323171 bettonhills.org

June 10, 2025

Dear City of Tallahassee Commissioners:

The Betton Hills Neighborhood Association (BHNA) Board of Directors, on behalf of our over 2,000 residents, thanks the City Commission, and particularly the Planning staff, for their engagement on the Comprehensive Plan amendments to guide our city's responsible growth and vitality through 2050.

BHNA recognizes the challenges of fostering responsible development without stifling economic growth. We believe the City can meet those challenges while honoring and preserving the very real, historic contributions that established neighborhoods like Betton render to the City's vitality and its unique profile among Florida's best places to call home.

Based on recent conversations between BHNA and the City's Planning Department (Artie White, Susan Poplin, and Tyler Maldanado), as well as representations made at the June 3, 2025 community forum at the Los Robles Woman's Club, BHNA does **not** object to its inclusion in the proposed Sub-Urban *Residential Preservation* Land Use Category (emphasis added). This is because we have been informed that the current RP-1 zoning district contained within the Land Development Code (section 10-170) will be retained and applied to Betton Hills (as will the RP-2 zoning district, which will be retained and applied to the west side of Mitchell Avenue). This is what "residential preservation" is about.

Since its founding in 1973, BHNA has sought to protect this historically stable, viable, and desirable neighborhood from incompatible land uses and density intrusions. The resulting preservation of **single-family homes,** and **low housing density,** are the foundation of our established neighborhood character. We believe that continued preservation of these neighborhood attributes also contribute to the City's diverse landscape, economic vitality, and quality of life. How so? Here are just a few examples:

- True to its name, Betton Hills has many hills. Our single-family home sites, situated on-handsome lots with mature trees and landscaping, are natural stormwater absorbers of Tallahassee's frequent rainfall. This helps mitigate the adverse environmental effects that overdevelopment and/or higher densities can cause in such hilly terrain.

Betton Hills Neighborhood Association P.O Box 15162, Tallahassee, FL 32317 I bettonhills.org

- The large canopy trees commonly found on Betton's home sites provide a range of ecological services not only to our residents, but to the City at large. Together, these trees and home sites provide habitat for wildlife, carbon storage, air purification, shade, and help absorb rainwater and lessen urban runoff. Overdevelopment and/or higher densities threaten these treasured, ecological service providers.

- Betton's single-family home sites need only narrow streets. Even without sidewalks, these walkable neighborhood streets support pedestrian safety due to minimal cut-through traffic and reduced in-neighborhood traffic (due to lower housing density). These walkable neighborhood streets promote fellowship among not only Betton residents, but also with those from adjacent neighborhoods who commonly seek out the safety and beauty of our walkable neighborhood streets and parks. Overdevelopment and/or higher densities tend to undermine all of this.

Betton Hills residents make friends with their neighbors. They enjoy socializing together. They watch out for each other. They support their neighborhood association and its events. We believe this neighborliness is a natural outgrowth of our established **single-family home and low housing density** DNA. This neighborliness doesn't stop at the Betton Hills boundaries. Betton Hills residents have always been active in supporting Tallahassee's diversity of neighborhoods, its local businesses, its natural environment, and its responsible governance. It's part of the Betton Hills neighborhood character to give back to the City for its support for the preservation of our single-family neighborhood. You can be sure that we plan to keep on doing that.

We thank the Commissioners, and City planners, for listening to us and working with us to preserve and honor what's most valuable in Tallahassee for the long haul.

Best regards,

James Ward - President, Betton Hills Neighborhood Association

Subject: Public Comment - Comp Plan Update
Date: Thursday, August 14, 2025 4:44:25 PM

Subject: RE: Land Use in Woodland Drives

Bruce, Developments are required to address parking during the development review process and proposed changes to the plan do not alter that requirement. To my knowledge, there are not several acres in Woodland Drives that would meet the criteria for the densities above 6 dwelling units per acre. Anything above 6 would be limited to frontages that are along arterials and collectors, of which there are 2, Magnolia and E. Lafayette St. Limited areas along those facilities might be eligible but then would need to demonstrate that they are appropriate for a zoning change to allow it, and not be illegal spot zoning, etc. Thx.

Subject: Re: Land Use in Woodland Drives

I have one important question: Will any new development be required to have adequate off-street parking? If several acres are in Woodland Drives allowed to have 12 residences per acre and these residents all park on the street then the neighborhood will become gridlocked during any times of high traffic.

Bruce Gibson

> Subject: Land Use in Woodland Drives
>
> Bruce, Your e-mail was forwarded to the Planning Department and I thank you for reaching out about the comprehensive plan update. The Woodland Drives area is in a land use category called Residential Preservation which is reserved for lower-density residential uses and community facilities. The proposed land use is Urban Residential Preservation that is also intended to preserve residential uses. At one point there was contemplation of allowing small, neighborhood-scale commercial that would serve existing or newer neighborhoods, but that has been taken out based on input from several neighborhoods. The draft plan is available on-line www.compplantlc.com which has both policies and map links as well as mapping tools that allow comparisons. Please pass on any additional questions you might have to staff. Thx.
>
> SUBJECT: Comprehensive plan for Woodland Drives

NAME: Bruce Wood Gibson

What are these proposed changes to the comprehensive plan? I've received information that it will allow commercial development. What kind of commercial development? What kind of mixed-use buildings? Currently every street in the neighborhood is restricted to one lane by having a single vehicle park by the side of the road; the neighborhood can't handle lots of vehicles parking on the street and can't handle high volume traffic. If mixed use means retail outlets then a lot of voters will be outraged when convenience stores selling beer and liquor open nearby.

Via Electronic Mail Delivery to WelchB@leoncountyfl.gov

Chairman Brian Welch
Leon County Courthouse
300 South Adams St
Tallahassee, FL

Dear Chairman Welch:

I am writing on behalf of the Buckhead Homeowners Association of Tallahassee, Inc. (hereafter referred to as "Buckhead"). I would first like to thank you very much for taking time recently to speak with one of our HOA members about our concerns regarding proposed amendments to the 2025 Comprehensive Plan. Your feedback helped us better understand what is and is not being proposed for change.

By way of background, Buckhead is located north of Interstate 10, east of Centerville Road, and directly adjacent to the property that will be designated the "Northeast Gateway District" in the Welaunee Arch property. Development of Buckhead began in 1993. Buckhead is now a fully developed, low-density residential subdivision consisting of 170 single family homes.

Buckhead representatives monitored the Leon County Commission public hearing on May 13, 2025 and reviewed the proposed Land Use and Mobility Element amendments and related documents presented to the County Commission. We noted that policies 1.2.14 and 1.2.15 and other relevant policies are included in a document entitled "Welaunee Critical Area Plan" in attachment 5 of the County Commission agenda entitled "Master Plans." However, we found no written explanation of whether the Welaunee Critical Area Plan will remain in effect. This issue was not addressed by Mr. Artie White in his presentation during this hearing.

That said, we have since confirmed with Mr. White that *"the Welaunee Critical Area Plan will remain in effect and any PUDs will be required to be consistent with the Welaunee Critical Area Plan compability policies set out above. No changes to goals, objectives, or policies in the Welaunee Critical Area Plan are proposed, therefore, the policies adopted to address compatibility between Buckhead and future development in the Welaunee Arch remain in effect".* (Artie White email dated 5/27/2025)

Obviously, we were glad to confirm this and we are appreciative of Mr. White's swift and complete response to our inquiry. Buckhead believes that the specific compatibility measures set out in policy 1.2.15 as well as the general compatibility requirement of policy 1.2.14 are critical to protect the quality of life and property values of Buckhead homeowners. We wanted to reiterate our position in this regard, and trust that the County Commission will ensure that these policies remain in full force and effect in the comprehensive plan.

Because of its proximity to the Welaunee Arch property Buckhead is especially concerned that development near Buckhead in the Welaunee Arch must be compatible with the existing, low-density residential development in Buckhead. Buckhead was an active participant in the comprehensive plan

amendments that adopted the Welaunee Arch Master Plan in 2020-21. In that proceeding the County Commission recognized the validity of Buckhead's concerns and adopted policies to ensure that development near Buckhead would be compatible with Buckhead's low-density development pattern.

These include a general compatibility requirement in Policy 1.2.14, stated as follows:

> "Development in the Welaunee Arch shall be compatible with adjoining land uses through measures including but not limited to density and height limitations, setbacks, and vegetative and open space buffers."

The County Commission also adopted specific requirements in policy 1.2.15 for buffers, setbacks, open space greenways and density and development limits as follows:

(1) a requirement for a residential zone between the Buckhead subdivision and the mixed-use zones to the east, with residential densities no greater than 6 dwelling units per acre;
(2) a requirement for a minimum 1,000 foot buffer between the Buckhead subdivision and the planned Activity Center, east of the residential zone;
(3) a requirement for an open space/greenway no less than 250 feet wide along the border with the Buckhead neighborhood to serve as a buffer between the existing Buckhead Neighborhood and new development in the Welaunee Arch.

These policies remain in effect in the current comprehensive plan. Based on our observation of development in the Welaunee property south of Interstate 10, we are even more convinced that the 1,000 foot buffer and density and intensity limits and other measures described above are absolutely necessary to protect the quality of life we enjoy in Buckhead and the property values we have created. The massive clearing and destruction of trees and vegetation on the properties developed south of I-10 has made way for "cookie cutter" high-density development that would not be compatible with Buckhead.

Again, thank you for your time, feedback and continued stewardship of growth management land use policies that are aimed at maintaining property values and a quality of life that residents of our neighborhood, and others like it, have worked hard to create and preserve.

Sincerely,

Shirley F. Kerns, President

Buckhead Homeowners Association of Tallahassee, Inc.

Comments on TLC FLUE 6/4/2025 amendment

The goals, objectives, and policies are internally inconsistent, creating legal risk for Tallahassee and Leon County. The proposed language lacks important definitions and direction, perpetuates past problems instead of preventing them from reoccurring, like the multi-bay super car wash proposed on Crump Road (now clearly allows), school siting based on cheap land rather than growth objectives (no criteria or intent stated), and the lawsuit on the County waste recycling center and regional park that the local governments narrowly won in the past).

With a wholesale "fix" that this is touted to be, why does it seem to not only perpetuate, but exacerbate these past land use disputes? The amendment, as explained by the groups such as Grow Tallahassee and The Chamber, wraps itself in a cloak of "good planning" approaches and new urbanism, and in reading the new goals and objectives, one might think that to be true. This amendment, however, falls short in the policies. The new policies are streamlined; so streamlined, in fact, that important provisions from the current Plan that help address compatibility between different uses, preserve important open space and landscape features in our urban area, protect conservation and preservation areas, and even provide that clear separation between urban and rural uses as stated in one of the goals.

In amendment cycles of the past, the Commissions would parse every new word to ensure that we were choosing the right language to guide future growth. The inconsistencies and apparent omissions of actual standards in this amendment, however, make it clear that the development of policy language was rushed, without even an analysis to assess if the policies are likely to achieve the stated goals and objectives. **The City Commission should vote not to forward the amendment to the State of Florida, and instead, continue to work with the public to address the problems, inconsistencies, and omissions.**

The following comments are focused on densities, intensities, location of development, and how different land use activities are intended to work together. They are grouped into three main topic areas: Growth Patterns; Reflecting our neighborhood and environmental values; and having a transparent process.

I. **Growth Patterns**

In trying to reduce sprawl and make our city more urban the current Comprehensive Plan has failed. We have known that for 25 years. The proposed amendment attempts to fix these failures not by addressing the large, undeveloped areas that continue to develop in low density residential and strip commercial sprawl, but by forcing density and nonresidential activities into existing developed neighborhoods. This "evolving residential neighborhood strategy" is being pushed despite the fact that most of the public comments during the entire reassessment process have been concerned about protecting these areas. The development community contends that if we just get more people living close together in the on the outskirts of the downtown, our urban commercial will have the population base it needs to thrive. This is a failed strategy. We had a successful downtown 40 years ago, with far less population near our urban core than we have now, and yet, the commercial activities today find it difficult to survive. Adding quadruplexes and daycare centers to urban core neighborhoods will not fix this problem.

What would help achieve more efficient growth patterns:

A. Adding residential units in the actual downtown, requiring downtown office buildings to have a commercial component, prohibiting non compete clauses in commercial real estate transactions (privately prohibiting a future similar activity, which then results in vacant buildings for years like the old Walmart on Apalachee Parkway and the old vet clinic on Thomasville and 9th Avenue), and limiting the size and location of suburban commercial are a few things that could help to some degree.

B. If the Urban Service Area is to be oversized for the projected need by 50% (Policy 2.2.1), and **if** the undeveloped areas over 2 acres in size were to take on urban densities, then there would be no need for existing neighborhoods to have to take on the character-changing burden of absorbing higher densities and intensities. Unfortunately, we continue a failed approach of oversizing the Urban Services Area and not having required (and enforced) minimum densities for vacant parcels greater than 2 acres. **Alternate urbanization policy for consideration that leaves neighborhoods alone:** *All parcels greater than 2 acres in size inside the urban service area shall be developed at a net density of at least 6 units per acre, outside environmentally constrained areas.*

C. Having policies that effectively address the impacts between uses is also important, but seems to have been forgotten in this Comprehensive Plan rewrite. Many of the compatibility policies in the new amendment are simply gone, despite most of our land use disputes and lawsuits in the past being about impacts and compatibility (Tai Chi on Thomasville Road, Welaunee Circle K, Chaires Regional Park, Waste Transfer/Recycling Facility, etc.).

D. **Most of the policies allowing office, and sometimes commercial use include an intensity standard that serves no purpose.** In Suburban Neighborhood, for example, Policy 2.8.9

provides the intensity standard for commercial and office activities as 20,000 sf/acre (In the Urban Neighborhood category, it bumps up to 30,000 sf/acre, per Policy 2.8.12). Is that an appropriate standard for areas along Gadsden Street North, or Meridian Road? What does it compare to? The following are examples of these intensities for you to think about in terms of them having anything remotely similar to what on thinks of for a "neighborhood":

- Lotto Building: 146,040 sf on 6.75 acres = 21,636 sf/acre
- Florida 1st District Court of Appeals in Southwood: 97,373 sf/17.26 ac = 5,642 sf/ac
- Leon County Tax Collectors at Metropolitan Blvd: 57,756/3.03 ac= 19,061 sf/ac
- Leon County Civic Center: 434,739sf/19.07ac = 22,797 sf/ac

Just where did staff come up with these standards, and did they ever do a comparison to analyze what is appropriate for urban neighborhoods? To be fair, the Plan has used a sf/ac intensity standard for many years, even though it never made sense, but it was coupled with max site areas, max bldg sf, stronger buffering, open space, and compatibility requirements that this amendment lacks (see existing Policy 3.1.1 as one example). **If we are going to make big changes, how about adopting intensity standards that actually make sense for the associated categories?**

E. Policy 2.2.5 concerning location of densities and intensities should be revised to replace "and/or" with "and", since densities **and** intensities should be based on **all** these things (infrastructure capacity, LOS, conditions of approval, and impacts).

F. Policy 2.2.8, concerning redevelopment, states that these redevelopment strategies will "prevent the premature conversion of rural land…" when, in fact, this is not true. While it may reduce pressure to convert rural land, to actually prevent that, we would actually need further policies to effectively prevent that. Absent those policies, replacing the word, "prevent" with "reduce demand for" would be more honest.

G. Policy 2.8.5 – Rural Residential Future Land Use Category: states, "The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area". **This Rural Residential policy, however, would also allow large commercial shopping centers that have nothing to do with that stated intent.** An example of 100,000 sf shopping center in the Rural Residential FLUC that would be allowable on a single site quadrant such as Roberts Road and Centerville or Crump Road and Miccosukee Road would be:

- 50,000 square foot sf Publix, **and**
- 14,000 sf CVS, **and**
- 15,000 sf Mattress Store, **and**
- 20,000 sf Mexican restaurant

The policy does not even state in intensity for an arterial roadway (such as Centerville) and a minor collector (such as Old Magnolia Road), though an intensity for a local roadway is

provided, which is 10,000 sf (the size of many older CVS stores).

These intensities are clearly the opposite of "a clear separation of urban and rural uses" as called for in Objective 2.2. The allowable intensities should be revised to reflect the intent of the Rural Residential Land Use Category, and list allowable intensities for all locations.

II. **Policies to Reflect Stated Values of Protecting Neighborhoods and Environment**

There is a disconnect between the drafters of this amendment and the true values held by those of us who have resided in Tallahassee/Leon County for many years. Objective 2.6 is "To foster and protect distinct, attractive places that are important to the community…" The only supporting policy to this objective, however, discusses the protection of road corridors, Woodville, Bradfordville, and downtown. What about our neighborhoods? Does staff not understand that our neighborhoods are each distinct, and that we want to foster and protect them from intrusive, incompatible uses, densities and intensities too? To not include a policy for neighborhoods and a policy for the environment to support this objective about what we value in Tallahassee/Leon County shows that the writers were not listening to what is stated as the two most fundamental things in our existing plan, as well as all the public outreach sessions that have been held over the past few years leading up to this point.

How to fix this disconnect of policies and our value of neighborhoods and the environment:

A. Expand the policies under Objective 2.6 to address how we value our neighborhoods with protective strategies to address impacts from development and incompatible activities.
   - Policy 2.8.12 for Urban Residential, states, "Community services,

     office, and commercial development in scale with surrounding residential areas are

     Appropriate". **This is a big departure from the current Plan** which prevented homes on Gadsden Street from converting to offices, since, in terms of cost, an office will "outbid" a residential activity every time. The current plan placed a high value on keeping residential units in the urban core, since there was (and still is) a real risk of losing residential units to office conversions. If this policy change is adopted, there will likely be a large-scale conversion of these urban core homes to offices, further eroding that 24-hour downtown we have been trying to support. Additionally, one has to wonder if a car wash like the one at Kerry Forest would be allowed as a minor commercial activity in scale with the surrounding residential area. The square footage of the structure is likely about the same (4,820 sf on one acre is very low compared to our adopted intensities!), but it is difficult to imagine that level of noise in an urban residential area. It seems the

new amendment would allow it.

B. Expand the policies under Objective 2.6 to address how we value our natural environment with protective strategies to address impacts from development and incompatible activities.
   - New Policy 2.5.1 for Suburban retrofit, calls for reconstructing degraded wetlands and watercourses to either “natural” functionality or repurpose them to complimentary functionality with additional community-use features. The last part to "repurpose" these degraded wetlands and watercourses is overly broad, given that every watercourse and wetland in Leon County could be considered degraded to some degree. This seems inconsistent with the community's stated values to protect the environment, and more recent requests in the public comments to be more resilient. What is the background/purpose of this policy? We wouldn't (at least I wouldn't) want to have jet ski races on Lake Heritage simply because the water quality is currently degraded from urban runoff. Would you? **Please delete this policy that is destructive to our wetlands and watercourses!**
   - Policy 2.8.2 calls for a minimum 5% open space, which may include landscaping and stormwater facilities. To be clear, this is a very low standard compared to our current Comprehensive Plan, which in Policy 1.4.11, requires 10-25%, with additional potential buffering for PUDs. Why the change? It might make sense in the most dense/ intense downtown areas, but in other areas, our community values shaded parking and protection, permeable areas to allow water filtration, and a place to take the dog out to do whatever it is dogs do.

BI. **A Process that starts well should end well, with transparency throughout**

This Comprehensive Plan update has been several years in the making. The Planning Department did outreach to find out what the community values and made them feel part of the process. Somewhere towards the end, however, when it came to writing policies, the public was not as engaged in the process, and it seems staff has not done a thorough assessment of the new policies to help ensure that they will accomplish the intent of the goals and objectives.

A. It is readily apparent that staff has not, as required by Policy 1.2.2, conducted an environmental analysis of the proposed amendment, including those features that contribute to the human well-being and community character. If that had been fully completed, it is likely that these omissions would have been realized and addressed by now. Please start with

an environmental analysis of Policy 1.2.2 and an residential impact analysis of the 20,000 and 30,000 sf/ac nonresidential intensity standards allowed in the Suburban "Neighborhood" and Urban "Neighborhood" categories. For reference, the Civic Center is 22,797 sf/ac.

B. The public input process should be reflected in densities and intensities that are easily discerned, without having to research roadway functional classification maps that are used for location criteria, but which have been deleted with this amendment. These can be found in an app at the bottom of the City's webpage under https://www.talgov.com/gis/roads/?page=roads#zoom_to_selection=true, but one must dig to find it.

C. The current plan has a matrix that includes the densities, intensities, and some location criteria for each land use. The amendment does not have this, making it difficult to assess what is allowed where. In fact, it seems some land use categories have no definition for what it even includes, and some categories seem to be missing altogether.

- Objective 2.3, for example, addresses "public infrastructure" with supporting policies for "public facilities, including community services, light infrastructure, and post-high school educational uses". Policy 2.3.1 allows these public facilities in all land use categories. The current Comprehensive Plan also includes heavy infrastructure as a public facility activity, and the matrix provides where such activities may take place. The amendment does not have this matrix, and it is unclear as to whether heavy infrastructure (like the solid waste transfer/recycling facility or sewer plant) is also allowed in all land use categories (such as residential and preservation). Intensities and locational criteria, unlike the current Plan, are not provided in the amendment, setting the stage for major public controversy in the future. A better breakdown of public infrastructure, public facilities, community services, and what used to be know as "government operational" should be clearly classified in the Plan, with appropriate intensities and location requirements identified to avoid misunderstandings and litigation, as we have had in the past on this issue.

To have such serious omissions makes it difficult to correct later, and will certainly lead to unnecessary misunderstandings, disappointments, and costly litigation. Sometimes it is worse for the public when the stated intent is very high reaching if the "how to" in the policies is omitted. This is because it gives the public false expectations, leading to disappointment and then future distrust. Our Comprehensive Plan should be more than lofty words, but also a directive on how to achieve the hopes we have for our community.

Subject: Public Comment - Comp Plan Update
Date: Thursday, August 14, 2025 4:11:52 PM

It needs work. Please vote "no" to allow the problems with this current amendment to be addressed responsibly. Even if you don't read my comments below, please know that the amendment will cause problems (litigation) rather than solve them because it is full of inconsistencies, omissions, and things that just don't make sense.

Comments on the 2025 Amendments to the TLC Comp Plan FLUE:

The goals, objectives, and policies are internally inconsistent, creating legal risk for Tallahassee and Leon County. The proposed language lacks important definitions and direction, perpetuates past problems instead of preventing them from reoccurring, like the multi-bay super car wash proposed on Crump Road (now clearly allows), school siting based on cheap land rather than growth objectives (no criteria or intent stated), and the lawsuit on the County waste recycling center and regional park that the local governments narrowly won in the past).

With a wholesale "fix" that this is touted to be, why does it seem to not only perpetuate, but exacerbate these past land use disputes? The amendment, as explained by the groups such as Grow Tallahassee and The Chamber, wraps itself in a cloak of "good planning" approaches and new urbanism, and in reading the new goals and objectives, one might think that to be true. This amendment, however, falls short in the policies. The new policies are streamlined; so streamlined, in fact, that important provisions from the current Plan that help address compatibility between different uses, preserve important open space and landscape features in our urban area, protect conservation and preservation areas, and even provide that clear separation between urban and rural uses as stated in one of the goals.

In amendment cycles of the past, the Commissions would parse every new word to ensure that we were choosing the right language to guide future growth. The inconsistencies and apparent omissions of actual standards in this amendment, however, make it clear that the development of policy language was rushed, without even an analysis to assess if the policies are likely to achieve the stated goals and objectives. **The City Commission should vote not to forward the amendment to the State of Florida, and instead, continue to work with the public to address the problems, inconsistencies, and omissions.**

The following comments are focused on densities, intensities, location of development, and how different land use activities are intended to work together. They are grouped into three main topic areas: Growth Patterns; Reflecting our neighborhood and environmental values; and having a transparent process.

1. Growth Patterns

In trying to reduce sprawl and make our city more urban the current Comprehensive Plan has failed. We have known that for 25 years (when staff applied the policies to a map, whereby the large extent of yellow low density areas made our community look like Big Bird on a map). The proposed amendment attempts to fix these failures not by addressing the large, undeveloped areas that continue to develop in low density residential and strip commercial sprawl, but by forcing density and nonresidential activities into existing developed neighborhoods. This "evolving residential neighborhood strategy" is being pushed despite the fact that most of the public comments during the entire reassessment process have been concerned about protecting these areas. The development community contends that if we just get more people living close together on the outskirts of the downtown, our urban commercial will have the population base it needs to thrive. This is a failed strategy. We had a successful downtown 40 years ago, with far less population near our urban core than we have now, and yet, the commercial activities today find it difficult to survive. Adding quadruplexes and daycare centers to urban core neighborhoods will not fix this problem.

What would help achieve more efficient growth patterns:

1. Adding residential units in the actual downtown, requiring downtown office buildings to have a commercial component, prohibiting non compete clauses in commercial real estate transactions (privately prohibiting a future similar activity, which then results in vacant buildings for years like the old Walmart on Apalachee Parkway and the old vet clinic on Thomasville and 9th Avenue), and limiting the size and location of suburban commercial are a few things that could help to some degree.
2. If the Urban Service Area is to be oversized for the projected need by 50% (Policy 2.2.1), and **if** the undeveloped areas over 2 acres in size were to take on urban densities, then there would be no need for existing neighborhoods to have to take on the character-changing burden of absorbing higher densities and intensities. Unfortunately, we continue a failed approach of oversizing the Urban Services Area and not having required (and enforced) minimum densities for vacant parcels greater than 2 acres. **Alternate urbanization policy for consideration that leaves neighborhoods alone:** *All parcels greater than 2 acres in size inside the urban service area shall be developed at a net density of at least 6 units per acre, outside environmentally constrained areas.*

3. Having policies that effectively address the impacts between uses is also important, but seems to have been forgotten in this Comprehensive Plan rewrite. Many of the compatibility policies in the new amendment are simply gone, despite most of our land use disputes and lawsuits in the past being about impacts and compatibility (Tai Chi on Thomasville Road, Welaunee Circle K, Chaires Regional Park, Waste Transfer/Recycling Facility, etc.).
4. **Most of the policies allowing office, and sometimes commercial use include an intensity standard that serves no purpose and gives false assurances.** In Suburban Neighborhood, for example, Policy 2.8.9 provides the intensity standard for commercial and office activities as 20,000 sf/acre (In the Urban Neighborhood category, it bumps up to 30,000 sf/acre, per Policy 2.8.12). Is that an appropriate standard for areas along Gadsden Street North, or Meridian Road? What does it compare to? The following are examples of these intensities for you to think about in terms of them having anything remotely similar to what on thinks of for a "neighborhood":
    - Lotto Building: 146,040 sf on 6.75 acres = 21,636 sf/acre
    - Florida 1st District Court of Appeals in Southwood: 97,373 sf/17.26 ac = 5,642 sf/ac
    - Leon County Tax Collectors at Metropolitan Blvd: 57,756/3.03 ac= 19,061 sf/ac
    - Leon County Civic Center: 434,739sf/19.07ac = 22,797 sf/ac

    Just where did staff come up with these standards, and did they ever do a comparison to analyze what is appropriate for urban neighborhoods? To be fair, the Plan has used a sf/ac intensity standard for many years, even though it never made sense, but it was coupled with max site areas, max bldg sf, stronger buffering, open space, and compatibility requirements that this amendment lacks (see existing Policy 3.1.1 as one example). **If we are going to make big changes, how about adopting intensity standards that actually make sense for the associated categories?**

1. Policy 2.2.5 concerning location of densities and intensities should be revised to replace "and/or" with "and", since densities **and** intensities should be based on **all** these things (infrastructure capacity, LOS, conditions of approval, and impacts).
2. Policy 2.2.8, concerning redevelopment, states that these redevelopment strategies will "prevent the premature conversion of rural land…" when, in fact, this is not true. While it may reduce pressure to convert rural land, to actually prevent that, we would actually need further policies to effectively prevent that. Absent those policies, replacing the word, "prevent" with "reduce demand for" would be more honest.
3. Policy 2.8.5 – Rural Residential Future Land Use Category: states, "The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area". **This Rural Residential policy, however, would also allow large commercial shopping centers that have nothing to do with that stated intent.** An example of 100,000 sf shopping center in the Rural Residential FLUC that would be allowable on a single site quadrant such as Roberts Road and Centerville or Crump Road and Miccosukee Road would be:

- 50,000 square foot sf Publix, **and**
- 14,000 sf CVS, **and**
- 15,000 sf Mattress Store, **and**
- 20,000 sf Mexican restaurant

The policy does not even provide an intensity for an arterial roadway (such as Centerville) and a minor collector (such as Old Magnolia Road), though an intensity for a local roadway is provided, which is 10,000 sf (the size of many older CVS stores).

These intensities are clearly the opposite of "a clear separation of urban and rural uses" as called for in Objective 2.2. The allowable intensities should be revised to reflect the intent of the Rural Residential Land Use Category, and list allowable intensities for all locations.

II. Policies to Reflect Stated Values of Protecting Neighborhoods and Environment

There is a disconnect between the drafters of this amendment and the true values held by those of us who have resided in Tallahassee/Leon County for many years. Objective 2.6 is "To foster and protect distinct, attractive places that are important to the community…" The only supporting policy to this objective, however, discusses the protection of road corridors, Woodville, Bradfordville, and downtown. What about our neighborhoods? Does staff not understand that our neighborhoods are each distinct, and that we want to foster and protect them from intrusive, incompatible uses, densities and intensities too? To not include a policy for neighborhoods and a policy for the environment to support this objective about what we value in Tallahassee/Leon County shows that the writers were not listening to what is stated as the two most fundamental things in our existing plan, as well as all the public outreach sessions that have been held over the past few years leading up to this point.

How to fix this disconnect of policies and our value of neighborhoods and the environment:

1. Expand the policies under Objective 2.6 to address how we value our neighborhoods with protective strategies to address impacts from development and non compatible activities.
    - Policy 2.8.12 for Urban Residential, states, "Community services,

      office, and commercial development in scale with surrounding residential areas are

      Appropriate". **This is a big departure from the current Plan** which prevented homes on Gadsden Street from converting to offices, since, in terms of cost, an office will "outbid" a residential activity every time. The current plan placed a high value of keeping residential units in the urban core, since there was (and still is) a real risk of losing residential units to office conversions. If this policy change is adopted, there will likely

be a large-scale conversion of these urban core homes to offices, further eroding that 24-hour downtown we have been trying to support. Additionally, one has to wonder if a car wash like the one at Kerry Forest would be allowed as a minor commercial activity in scale with surrounding residential area. The square footage of the structure is likely about the same (4,820 sf on one acre is very low compared to our adopted intensities!), but it is difficult to imagine that level of noise in an urban residential area. It seems the new amendment would allow it.

1. Expand the policies under Objective 2.6 to address how we value our natural environment with protective strategies to address impacts from development and non compatible activities.
    - New Policy 2.5.1 for Suburban retrofit, calls for reconstructing degraded wetlands and watercourses to either “natural” functionality or repurpose them to complimentary functionality with additional community-use features. The last part to "repurpose" these degraded wetlands and watercourses is overly broad, given that every watercourse and wetland in Leon County could be considered degraded to some degree. This seems inconsistent with the community's stated values to protect the environment, and more recent requests in the public comments to be more resilient. What is the background/purpose of this policy? We wouldn't (at least I wouldn't) want to have jet ski races on Lake Heritage simply because the water quality is currently degraded from urban runoff. Would you? **Please delete this policy that is destructive to our wetlands and watercourses!**
    - Policy 2.8.2 calls for a minimum 5% open space, which may include landscaping and stormwater facilities. To be clear, this is a very low standard compared to our current Comprehensive Plan, which in Policy 1.4.11, requires 10-25%, with additional potential buffering for PUDs. Why the change? It might make sense in the most dense/ intense downtown areas, but in other areas, our community values shaded parking and protection, permeable areas to allow water filtration, and a place to take the dog out to do whatever it is dogs do.

III. A Process that starts well should end well, with transparency throughout

This Comprehensive Plan update has been several years in the making. The Planning Department did outreach to find out what the community values and made them feel part of the process. Somewhere towards the end of this process, however, when it came to writing policies, the public was not as engaged in the process, and it seems staff has not done a thorough assessment of the new policies to ensure that they will accomplish the intent of the goals and objectives.

1. It is readily apparent that staff has not, as required by Policy 1.2.2, conducted an environmental analysis of the proposed amendment, including those features that contribute to the human well-being and community character. If that had been fully completed, it is likely that these omissions would have been realized and addressed by now. Please start with an environmental analysis of Policy 1.2.2 and an residential impact analysis of the 20,000 and 30,000 sf/ac nonresidential intensity standards allowed in the Suburban "Neighborhood" and Urban "Neighborhood" categories. For reference, the Civic Center is 22,797 sf/ac.
2. The public input process should be reflected in densities and intensities that are easily discerned, without having to research roadway functional classification maps that are used for location criteria, but which have been deleted with this amendment. These can be found in an app at the bottom of the City's webpage under https://www.talgov.com/gis/roads/?page=roads#zoom_to_selection=true, but one must dig to find it.
3. The current plan has a matrix that includes the densities, intensities, and some location criteria for each land use. The amendment does not have this, making it difficult to assess what is allowed where. In fact, it seems some land use categories have no definition for what it even includes, and some categories seem to be missing altogether.
    - Objective 2.3, for example, addresses "public infrastructure" with supporting policies for "public facilities, including community services, light infrastructure, and post-high school educational uses". Policy 2.3.1 allows these public facilities in all land use categories. The current Comprehensive Plan also includes heavy infrastructure as a public facility activity, and the matrix provides where such activities may take place. The amendment does not have this matrix, and it is unclear as to whether heavy infrastructure (like the solid waste transfer/recycling facility or sewer plant) is also allowed in all land use categories (such as residential and preservation). Intensities and locational criteria, unlike the current Plan, are not provided in the amendment, setting the stage for major public controversy in the future. A better breakdown of public infrastructure, public facilities, community services, and what used to be know as "government operational" should be clearly classified in the Plan, with appropriate intensities and location requirements identified to avoid misunderstandings and litigation, as we have had in the past on this issue.

To have such serious omissions makes it difficult to correct later, and will certainly lead to unnecessary misunderstandings, disappointments, and costly litigation. Sometimes it is worse for the public when the stated intent is very high reaching if the "how to" in the policies is omitted. This is because it gives the public false expectations, leading to disappointment and then future distrust. Our Comprehensive Plan should be more than lofty words, but also a directive on how to achieve the hopes we have for our community.

Fw: Comprehensive Plan - Proposed Future Land Use Map Changes

I appreciate your detailed response.
I recognize there is already considerable property in the area that is specified as M1. I think those need to be changed and I object to adding additional properties to that designation. I served on the City Commission for 21 years and voted in every amendment cycle- including the years when it was originally adopted. I negotiated its acceptance by the a state. I served as the City rep on the ARPC for most of those years and on the FLC committees dealing with planning, infrastructure and environmental - several times as Chair of those committees.
So I am fully aware of the processes you reference. That experience is the reason I am objecting. I know what happens after these downgrades.
A response that merely says “we heard you Ms. Lightsey now go away” is not sufficient.
I want to see way fewer M&M designations down here.

The current City Commission does not pay attention and grants all zoning and development Proposals. I can label you just another apologist for the current system.
Be a professional independent planner... think about the future down here. Nothing positive will be possible if you adopt the recommended Map changes. More ugliness, more outside storage, more intense uses that do not encourage upscale housing and the amenities it would support.
At least your response means you have read the Plan.
Debbie Lightsey

Sent from my iPhone

> Hello Ms. Lightsey,
>
> We’ve met before, but you may not remember me, my name is Mike Alfano; I’ve recently been promoted to the role of Planning Director. Your email was forwarded to me and I’m happy to follow up with a response.

First, regarding your concerns about the Manufacturing and Mining Future Land Use Category. I appreciate your concerns about what may appear to be adding new lands that would allow industrial uses in these areas, however, the areas in the Southside that were designated Manufacturing and Mining in the proposed Future Land Use Map are predominantly areas that are currently zoned M-1 (Light Industrial), or I (Industrial), where a variety of manufacturing and mining uses are currently allowed (with some additional lands zoned Airport Vicinity, Government Operations or Planned Unit Development). As such, these uses are currently allowed there today.

Moreover, the proposed Manufacturing and Mining FLUC includes a special condition that includes requirements to prevent or mitigate impacts from noise, vibrations, smoke, dust and particulate matter, odor, and lighting as well as requiring additional land development regulations to protect adjacent non-industry and non-mining properties and to require compatible vehicular access. Some uses, not previously addressed, such as hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidization and similar activities are prohibited in this category.

While some of these areas are currently designated Suburban (and I believe this is the source of your concern), in order for development in these areas to provide the grocery stores, medical and dental offices, and restaurants that you highlight (all great ideas), they would first need to be rezoned to a district that allows those uses. That process would be largely the same as what they would need to do in the future, should they ever be designated as Manufacturing and Mining. The small-scale amendment process that we undertake follows the same timeline as a rezoning, so any landowners wishing to change their land use from Manufacturing and Mining (should the proposed Comp. Plan Update be adopted in the future) to a more commercially-oriented category, would be able to do so in relatively short order, and also be able to rezone the property concurrently.

We sincerely appreciate your advocacy and desire for quality redevelopment on the Southside and share that passion. The Southside Action Plan (formerly the Southern Strategy Area) adopted into the current Comprehensive Plan (Goal 11) outlines and provides a framework of action for the Southside. It focuses on Beautification, Investment, and Engaged and Activated Citizens. Policies in this chapter require the focus on prioritizing investment that enhances existing public spaces, supporting

citizen and business investment on private property, directing collaborative efforts of the public and private sectors towards increasing homeownership, diverse development and redevelopment and initiating projects that spur further investment opportunities. Earlier this year, we provided information to the BOCC on the over $1.13 billion dollars being invested into the Southside Action Plan area by the City, County, Blueprint, State, and private sectors. Perhaps most importantly, Policy 11.2.2 dictates that investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations. The proposed Land Use and Mobility Update carries forward these requirements.

Further, the proposed Comp. Plan Update prioritizes the importance of protecting the Environment. Goal 1: A Healthy Environment provides that our community will identify natural resources that contribute to a healthy environment and human well-being and prioritize the preservation of these natural areas when making land use and transportation decisions. The proposed update also emphasizes the Primary Springs Protection Zone in policies and in the associated map series. This is consistent with many local actions taken since the adoption of the original Comprehensive Plan, such as:

- Adoption and implementation of stricter stormwater standards (including design for facilities within karst areas)
- The retrofit and improvement of the Thomas P. Smith Water Reclamation facility to treat to Advanced Wastewater Treatment standards
- The deactivation of the City's spray field on Tram Road
- Land Development Codes that include Low Impact Development standards
- Implementation of the Master Sewer Plan
- The Southside Triangle Project
- The County's Septic-to-Sewer and Septic Upgrade Incentive Programs

Our team looks forward to the continued opportunities to engage with you, and the rest of the community, on the proposed Comp. Plan changes. Please let us know if you'd like to schedule a time to come in and meet with the project team to discuss these, or any other concerns, you may have.

All the best,
Mike

Subject: Comprehensive Plan - Proposed Future Land Use Map Changes

I would like to hear the justification for changing the Land Use on a vast number of properties in Southern and Southwestern Tallahassee to Mining and Manufacturing. I am tired of lip service to Southside Revitalization only to see this big step backwards.
I will quote you the description this Land Use Category:

Manufacturing and Mining - <u>Heavy Industrial land uses</u> that do not, typically, have a defined density or intensity and may have the potential to create significant offsite impacts to surrounding areas have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic , vibrations that are not regulated by federal or state laws shall be regulated by the City or County.
This fails to mention environmental degradation and lowering of adjacent property values.

The extra year you have allocated to reviewing these proposed changes will allow each of you time to read what you propose doing to an area that already lacks the amenities others in the community enjoy - grocery stores, medical and dental offices, restaurants, attractive landscaping, sidewalks and neighborhood scale commercial (we do not count gas stations and convenience stores of which we have too many). Much of this area contains environmentally sensitive features including lakes, swamps, wetlands, sinkholes and vulnerable aquifer recharge designations. Almost all of it is in the Wakulla Springs Basin. The people in charge of your planning department and each of you will be held responsible.

Do something positive for the Southside. Give us a chance to thrive! We already have too much blight, too much poor code enforcement, too many junkyards and locally undesirable land uses. The Map for the South and Southwest already contains too much intense commercial and heavy industrial. These new proposals are an insult. Time to step and show that your statements about community equity are more than just empty promises.

I would like a personal response which was routine when I was serving in office, but which now rarely happens.

Date: Thursday, August 14, 2025 4:07:11 PM

Jim,

The version from last Thursday is the current version.

Zoning is inherently more detailed with regards to uses and development standards and often more restrictive than the land use categories with regards to both densities and allowed uses (by way of what the purpose of land use versus the purpose of zoning is and the roles they both serve). In fact, the currently proposed language "Zoning may be permitted at lower densities and intensities than the maximum specified in the Comprehensive Plan" is actually redundant because it really just states how everything already functions. That being said, we can certainly look at including the proposed language while we make any other edits directed by the City Commission during the Transmittal Hearing this Wednesday or in response to any comments we receive from the state and review agencies between the Transmittal Hearing and the Adoption Hearing. We will follow up and keep you aware of any edits or changes that are made between Transmittal and Adoption.

Thanks for reviewing and providing your input!

Kind regards,
Artie

Subject: Re: Follow-up question re Sub-Urban Residential Preservation Land Use category

P.S. -- Would you be so kind as to send me the latest draft of the SURP to me, if it's different from what we reviewed at our meeting last Thursday? I know it's been evolving over recent days. Thank you!

> Hi Susan (and Artie and Tyler),
>
> I promised Susan during a call this afternoon that I would send a follow-up e-mail to frame the question that I posed to

her more clearly than in the discussion that Susan and I had about it.

Here goes: At our meeting last Thursday, you folks said that Para. 3 of the Sub-Urban Residential Preservation Future Land Use Category ("SURP") reflects that the more restrictive density standard specified in RP-1 (3.6 DU/acre) would continue to apply to Betton Hills even if the SURP is adopted (we're cognizant that the west side of Mitchell Avenue is a different animal, being zoned RP-2).

What I'm wondering is why Para. 3 doesn't seem to evidence as clearly -- or, apparently, even at all -- that the more restrictive housing type specified in RP-1 (i.e., "single-family") would continue to apply to Betton Hills, even though the housing types permitted by the SURP appear to be broader. In particular, we have a concern that the identification of "duplexes" in the SURP is inconsistent both with the specification of "single-family" housing in RP-1 and the prevailing neighborhood character of Betton Hills. Again, we acknowledge that Mitchell Avenue is RP-2, not RP-1.

If I were to revise Para. 3 to illustrate, and address, my concern about the apparent friction between duplexes being referenced in the SURP v. single family housing under RP-1, it would read something like this:

3. Zoning may be permitted at lower densitive and intensities than the maximum specified in the Comprehensive Plan, and permissible housing types likewise may be more limited under zoning than the range of housing types specified in the Comprehensive Plan, to achieve consistency with the intent of the category to preserve neighborhood character.

Although I know you're quite busy, I'm hoping you can please consider the above and let me have your thoughts?

Thanks, as always, for your time and professionalism.

Best regards,

Jim Ward

Subject: RE: Comprehensive Plan Changes

Sarah, Thank you for your comments. We will keep them to inform efforts as the update moves forward. There will be additional opportunities to review and comment on the plan update and look forward to your continued participation.

Ms. Poplin,

As residents of Lafayette Park, we strongly oppose the proposed Future Land Use revision that would change the designation of our historic neighborhood—and others like it—from **Residential Preservation** to **Urban Residential Preservation,** which could significantly alter the character and livability of some of Tallahassee's long-established neighborhoods. This change will also **worsen existing challenges** related to **parking, speeding, and cut-through traffic.** These are not hypothetical concerns—they are already present and would only intensify under the proposed changes.

During the June 3rd public meeting Mr. White stated that the affected areas "already have (…) eight, 10, even 12 units per acre," and that the proposed reclassification is merely an acknowledgment of existing development patterns.

However, this framing overlooks a critical reality: the area proposed for re-designation encompasses a **broad and diverse section of Midtown**, which includes both high-density housing and long-established, low-density single-family neighborhoods. The higher- density pockets inflate the **average** across the entire area, these averages do not reflect the actual makeup or character of many individual neighborhoods within it.

This broad-brush approach **ignores the distinct identity and residential stability** of these older neighborhoods, and it opens the door to development that is incompatible with their long-established character. This proposed reclassification fails to recognize what makes each part of Midtown unique. We urge the city planners to **take a more nuanced approach**—one that protects the historic areas and ensures they are not subsumed by policies aimed at addressing development pressures elsewhere.

Tallahassee does not have a strong track record when it comes to protecting historic homes, especially in areas where it is profitable for development, and the recent Canopy/Circle K controversy demonstrates how quickly developers will put profit over neighborhood integrity. It is difficult to separate these proposed changes from that pattern, particularly when it is championed by individuals with clear development interests, including CRA leadership and groups represented by pro-growth PACs.

We urge you to **reconsider the proposed reclassification** and keep the **Residential Preservation** designation for these core neighborhoods. Their character and history deserve thoughtful planning, not statistical generalizations.

Thank you for your time and attention,

Sarah Kathryn McRae and Austin Wright

Subject: Proposed changes to the comprehensive plan that affect my Lafayette Park neighborhood

The City and County are growing Lafayette Park neighborhood is a remnant of an earlier time, a remnant worth keeping as a reminder of the City in a quieter time, and as what a neighborhood should be. LP is a remarkable place, primarily because the people who live there have cared for and taken care of LP. There are many who want to live in LP, and wait years for a chance to buy a home in the Park. People who buy homes in LP typically stay for decades. What the draft plan proposes will destroy LP as a wonderful place to live. For what reason? To give developers the opportunity to make money by tearing down what is here now, what has been so carefully taken case of for decades by those fortunate enough to find a home in the Park. There is no justification for the proposed changes It seems the City and County want to make Layette Park look like the unappealing construction of lot line to lot line glass and brick residences as the City has approved in the Pine Street Thomasville Road area. Monster townhomes with no personality at all for developers to make money. To do so, developers cut down many large ancient oak trees. The live oak on my property is over 400 years old. There are many other ancient oaks in LaFayette Park. All will be at risk if the proposed changes to the Comp Plan are made. The density changes cannot coexist with the Oaks. I ask again WHY? And I know because I have seen it first hand in surrounding neighborhoods torn apart by developers to make money. I ask that you not make any changes to the existing restrictions that have kept LP a remarkable place to live. If you disagree with me I think it would be appropriate for you to explain in detail the basis of the proposed changes, the justification of such changes, and why you think what is proposed to be done to LP should be done.

Subject: RE: Concern over Lake Jackson shoreline zoned for USA

Hi Lynne, Thank you for your question. Most of the Lake Jackson area is currently within the Urban Services Area (USA) and is designated with Lake Protection or Rural land use and zoning. Those designations are not changing. The area near Tower Road is adjusted because the current boundary cuts through parcels and separates the Tower Oaks subdivision currently in Urban Residential 2 land use from its owned common area to the north. The changes correct that and align the USA boundary with parcel boundaries to avoid future confusion. Thx.

Subject: Concern over Lake Jackson shoreline zoned for USA

Good morning,

Yesterday, I was able to locate a map online that shows color coded areas and explanations for the updates to Tallahassee's comprehensive plan. I was quite alarmed to see the majority of Lake Jackson's shoreline is slated to be included in the Urban Service Area targeted for greater expansion and more density despite the fact that it is also designated as a lake protection area.

Doing this seems to be in conflict. Am I misinterpreting the map and what this may allow? I'd welcome your insight.

Dear Susan,
If I walked by you and didn't acknowledge you at the city meeting, I apologize—I don't recognize people and it is something I struggle with.

I was not going to be able to attend the City Commission meeting because of an out of town trip, but my husband and I became very ill and had to cut our trip short, so I was able to make it to the meeting. I understand the transmittal was delayed and I am thankful. If I could be involved in improving the plan it would mean a great deal to me. I had not realized all the changes that had been made from the County Commission meeting to the City Commission meeting, but I believe improvements were made.

If I can be of any service to you and the staff, please contact me and let me know how I can help this process. My phone is 850-284-7424.

Thank you for your service to the community,
Nell Stranburg

Comments Regarding:
Tallahassee-Leon County Comprehensive Plan
Proposed Land Use and Mobility Element Goals, Objectives, and Policies
June 4, 2025

The following comments are incomplete. Nevertheless, they are being offered today, June 11, 2025, because the transmittal hearing is being conducted this evening.

There are many laudable provisions in the proposed plan amendment.
The proposed plan amendment reflects a great amount of work along with an effort to create a quality plan.
There are many aspects of the proposed amendment that deserve praise.
Nevertheless, these comments are critical of some of the proposed goals, objectives, and policies.
It is hoped that these comments may be used to improved upon the current proposal.
Further comments, including revisions to these comments, may be provided during the review process.

Unfortunately, some of these laudable provisions are weakened by vague and ambiguous language or simply by terminology that is not defined, objectives that are not measurable, and policies/actions that have no clear implementation steps or timetables. Some terms are important while some are unhelpful jargon. All terms required definition and measurability. For example:

- sustainable building practices, (potentially important)
- robust natural environment (unhelpful jargon),
- empowering self-sufficiency across the community (unhelpful jargon),
- livability (uncertain usefulness),
- walkability (potentially important),
- "Accommodate our population growth in a responsible manner" (Useless phrase)
    - (Objective 2.1) Other phrases in this Objective fail to provide clear direction.

The proposed amendment can be improved significantly by defining terms and making objectives and policies measurable.
The general comment is this: Read the proposed goals, objectives, and policies carefully. Ensure that everyone: commissioners, landowners, residents, and all affected parties will know what the words mean and WHAT THE PLAN IS.

Some specific comments:

1. Efficient Growth and Urban Service Area (USA) designation.
    a. Policy 2.2.1 states: "The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon

and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies."

b. There are many factors to consider in this calculation. Presumably, a calculation of the extent of the USA has been prepared and is included in the data and analysis supporting this proposed amendment. It will be reviewed later.
c. A critical factor in making this determination is the assumed density of new residential development and the amount of infill, redevelopment, and increased densification of existing areas that will occur over the next 25 years. These assumed densities should be incorporated into the projected size of the USA. The proposed amendment has several policies which seek to increase densities. These policies should be applied to calculating the size of the USA.
d. Another factor is the amount of development that is anticipated to occur outside of the USA. For the plan to succeed in achieving compact and sustainable development; low-density sprawl must be limited outside of the USA.

2. Terminology and phrases that are vague, ambiguous or otherwise undefined.

a. Unpolluted lakes, rivers, and soils:
    i. Goal 1, "unpolluted lakes, rivers, and soils." Since most of our water bodies and some of our soils have various degrees of "pollution" this goal is unattainable and the statement that the community will "maintain" such "unpolluted" resources is not accurate. <u>This is a laudable idea, but requires refinement.</u> At minimum, the term "unpolluted" requires clarification.
    ii. There are other terms like this. Read each term critically and ask what it means.
b. Natural Resources:
    i. The proposed amendment uses various terms such as 'natural resources' in a loose fashion, often overlapping with other terms. These types of terms require clear definition.
    ii. The term "natural resources" as used in the proposed amendment is not clearly defined nor clearly consistent the description of the term in the governing statute.
    iii. Goal 1 includes the terms "natural resources" and "natural areas" in the same sub-paragraph. This may lead to some confusion.
    iv. Goal 1 includes some terms that have frequent common usage. However, different persons may understand these words to mean different things. The plan is an ordinance and requires precisely defined terminology. So, for example, terms like "natural resources," "conservation areas," and "water resources" should be defined. These terms and others are not defined in the plan glossary.
    v. The term "natural resource" is used extensively in the Conservation Element, but it is not defined. The Conservation Element includes some statements that appear to distinguish "natural resources" from other features such as wildlife habitat and natural vegetative communities (see Conservation Goal 3.) Elsewhere, the Conservation Element seems to

consider “natural and native vegetation [and] surface water” as natural resources. This is confusing, especially the term “natural vegetation.”

vi. The word “natural” in the term “natural vegetation” seems to imply that we have unnatural vegetation. Maybe the intent was to say “native vegetation?” In any case, these terms are undefined and could lead to confusion in execution of the plan.

vii. The term “natural resource” is not directly defined by section 163.3177 F.S. which means that it is important for the local government comprehensive plan to define the term for its particular circumstances. However, the term is used in the statute and a certain understanding of the term is possible. For example, section 163.3177(10)c. indicates that the Future Land Use Map shall show the following natural resources or conditions: (I) Existing and planned public potable waterwells, cones of influence, and wellhead protection areas; (II) Beaches and shores, including estuarine systems; (III) Rivers, bays, lakes, floodplains, and harbors; (IV) Wetlands; (V) Minerals and soils: and (VI); and Coastal high hazard areas. Additionally, section 163.3177(6)(a)9.(IV) indicates that natural resources include “wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems and other significant natural system.”

viii. Objective 1.1 does not define “natural resources.” Policy 1.1.1 does provide an important list of features that should be identified. All of the features listed have importance to the comprehensive plan. However, it is not clear whether this list constitutes <u>all known</u> forms and instances of natural resources. Not all of the features listed in Objective 1.1 are “natural” in the common sense of the term.

ix. Some “natural resources” mentioned in the statute and which likely apply to Tallahassee do not appear to be addressed by the plan amendment or the existing Conservation Element. These include existing and planned public potable waterwells, cones of influence, and wellhead protection areas; minerals (which is not the same as known active and former mining sites); native vegetation (which may be partially addressed by the term “high quality successional and native forests (although the adjective “high” does not appear to be defined by the Glossary); environmentally sensitive areas (which may be partially addressed by other terms noting that the term “environmentally significant lands” which is in the Plan Glossary is not listed and also noting that Goal 1 uses the term “environmentally sensitive features” but it is not clear what a ‘feature’ is as distinguished from ‘area’ or ‘land’); and natural goundwater aquifer recharge areas (noting that the Glossary lists Groundwater Resource Protection [Areas] and the Conservation Element addresses Groundwater Protection (Conservation Objective 4.2) yet proposed Policy 1.1.1 does

not list this as something to be part of the geographic information system, i.e. map.)

x. Policy 1.1.1: Other comments: Some of the features require definition, for example "significant trees." The term "canopy road" is included in the existing glossary. However, the term "canopy road corridors" is not defined in the glossary. Canopy road corridor should be specifically defined, e.g. the amount, type, and extent (distance from paved road edge) of canopy road features. Please note that Policy 1.1.3 requires a "map and spatial data that identify and depict designated canopy roads." What about the corridors. Are 'corridors' to be mapped or not?

c. Natural Areas:

i. Goal 1 includes action steps (similar to policies.) The phrase "prioritize the preservation of natural areas…" is a laudable intent. But the phrase is concerning. Apparently, the goal is reached when the action of "prioritize" occurs. But does prioritize mean "preserve" or something less? Also, what is a "natural area?" Goal 1 states that "natural areas" include conservation areas, environmentally sensitive features and water resources. However, this is not presented as an 'inclusive' list. Further, "conservation areas" and "environmentally sensitive features" also require definition.

ii. "Conservation Areas" are defined more or less by Conservation Policy 1.3.1. It appears that this policy includes areas that would be understood as 'natural' but it also includes altered area. Are these 'altered' areas considered 'natural' areas even though they have been altered. Some clarification would be helpful.

iii. Objective 1.2 further modifies the undefined term "natural areas." In this case, "important" natural areas are to be preserved. The adjective 'important' does not provide clarity, but instead creates more uncertainty. What makes something 'important?' None of the terms (which is apparently not a complete list due to the use of the word "including") is defined. This includes "environmentally sensitive features" and "water resources." Again, a laudable intent that requires clarification to ensure the certain and predictable execution and achievement of the plan.

iv. Objective 1.2 addresses natural areas but not all of the natural resources previously listed or discussed above. It also repeats the direction to "prioritize the protection of these areas." But what does that mean in practice?

v. Policy 2.8.3 which addresses "natural areas" does NOT list the same features listed elsewhere, i.e. conservation areas, environmentally sensitive features and water resources. Instead, this policy states, "Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation." Is it the case that this policy is only describing

features associated with the "Natural Areas Future Land Use Category" and not all instances of "natural areas." Some clarification would be helpful.

d. Human Well-being and Community Character
    i. Objective 1.1 includes terms like "human well-being" and "community character." Terms and phrases like this are included elsewhere in the proposed amendment. No doubt, many persons would have some general understanding of these terms. However, an "Objective" requires measurability. Again, a laudable intent that lacks precision and thus is susceptible to multiple interpretations and likely disagreements in the future.

3. Policies that do more that simply identify natural resources:
    a. In attempting to determine the actual policies that are proposed to either protect, conserve, or preserve natural resources, the following weak policies were noted:
        i. Policy 1.2.2 addresses "environmental analysis" but such analysis is apparently limited to features "that contribute to human well-being and community character and identify the potential impacts to environmental and human health." This is certainly a mouthful and includes undefined terms, or essentially jargon. What is the purpose of all of these conditional phrases? How can the City consistently apply this policy? Most importantly, will natural resources be protected, conserved, and preserved? It is noted that in large measure, the degree to which the City protects, conserves, and preserves natural resources is a matter of local policy (unless there is overriding state or federal law.) The point here is that it is simply unclear as to what the Plan requires. Can commissioners, land owners, developers, and affected residents understand what this and other policies are actually doing. The Plan is unclear. (Note, maybe the Conservation Element has clearer policies? Does it?)

4. The section of the proposed amendment on housing seems to include a mix of policies which will likely fail to support the needed expansion of affordable housing. The term "missing middle housing" is defined, yet the policies do not utilize that definition directly to accomplish or at least encourage missing middle housing. There have been many proposals from the community to increase the availability of sufficient affordable housing. For example, the Capital Area Justice Ministry has made numerous proposals over a number of years. These efforts should be recognized in the data and analysis section because they help to define an existing problem and propose possible solutions. Yet, it appears that the proposed amendment is not pursuing these concrete options. Further, the production of more affordable housing can be pursued consistently with the goal to increase compact and more dense residential areas. Yet, the proposed amendment does not pursue this with much effort. Policy 2.2.8 uses the phrase "maintain affordable housing." This is incredibly weak. No other linkages between affordable housing and sustainable-compact development were noted. Affordable

housing needs to be increased. This is a clear and unambiguous need of the community and should be addressed in the comprehensive plan.

a. Goal 4 – "Our community will strive …" These is a weak statement. The word "strive" does not provide any sort of sufficient goal to achieve. The other sentences in this goal do not provide greater clarification, but actually appear to provide for potentially conflicting goals.
b. Objective 4.1 – The term "spectrum of affordability" is vague. What is the range of the "spectrum?" Diverse housing options will be allowed. Allowing something is important because impediments to housing affordability are many. Yet, it is a weak action nevertheless. It is not clear how this will "ensure" … "a solution to the mismatch between available housing stock, shifting demographics, and a growing demand for walkability." Moreover, because these words are so general, measuring whatever they means is not likely to occur.
c. Policy 4.1.3. Policies like this that state something "may be developed" are not a plan of action. Instead of a plan, the policy provides no actual directive.
d. Finally, the density bonuses are small. A better approach would be to incentivize developers to build affordable housing and greater densities. In other words, provide development (and redevelopment) incentives to build affordable housing beyond density bonuses. This is a matter of prioritizing affordable housing.

5. The removal of the adopted Southeast Sector Plan and Welaunee Critical Area Plan from the Comprehensive Plan is concerning. The statement that "a Planned Development Master Plan shall be adopted as an area plan that is consistent with, but independent of the Comprehensive Plan" may be insufficient. The question arises as to how will consistency be determined if the comprehensive plan in general does not address these areas? Further, consistency with the comprehensive plan is more than simply land use/development consistency. Large developments have many impacts and interactions with the surrounding areas. These impacts may be positive or negative, such as the provision or failure to provide for affordable housing. How are these impacts and interactions being addressed if these master plans are "independent" from the comprehensive plan?

Hey Scott, In answering for a possible meeting with the Growth Management staff to answer questions about current code requirements for ADUs, tiny homes, and infill units, etc., I've copied Dylan Haase, the Land Use Administrator in Growth Management, so that you can work directly with her and her team. Thx.

Great. Could you suggest some meeting dates and times?

Thanks

Scott

On Mon, Jun 30, 2025 at 4:59 PM Poplin,

> Scott, Got your e-mail. Maybe a good starting point would be to set something up with growth management to talk about how some of these are handled in the current landscape which allows accessory units, tiny homes, and in some cases subdivision for additional infill units. Many other items are also currently covered in the land development code including height of housing, buffers and landscaping. The framework of the plan could have some form-based concepts but that conversation probably needs to happen a little later in a different context when we get additional direction from the City and County on the update. Thx.
>
> In view in the fundamental Comp Plan Strategy for infill development, a key question will be the modifications of the site design stds to accommodate the various development densities. Here are a few of the specific questions on design stds that will help us understand what staff is contemplating;
>
> 1). In suggesting the ability to add mother-in-law, rental units or guest houses, will the std building setbacks be reduced to accommodate such housing? The rear and side setbacks will be the primary issue.
>
> 2) If someone develops an additional home on their property, would they be forced to only use that as a rental or could it be free title sold to a separate owner? That creates access issues that in essence would create lot split conditions which in turn raises the issue of lot frontage widths and the creation of flag lots or access easements. What will the staff

position be on lot splits, reduced setbacks, access easements and flag lots for these new units?

3) Will the zoning district minimum home sizes be reduced to accommodate these additional units added to a lot? Tiny homes are a significant trend nation wide. Will tiny homes be allowed?

4) Would a property owner be limited to only a single infill unit per lot? If the FLU density would permit more units, would staff consider more units within the density cap?

4) Would there be restrictions of creating 2 story units (within existing 1 story communities) on these infill development lots to minimize the building footprint ?

I am in the process of testing some infill development concepts and struggling with these basic design issues. It is important for staff to establish basic approaches to these issues and not simply defer to future updates to the LDC.

I'm sure there a variety of other site design issues but these seem to be the most critical.

Thanks

Scott

Subject: Public Comment - Comp Plan Update
Date: Thursday, August 14, 2025 4:45:30 PM

Thanks Susan,
My mistake.
Has this data been converted into potential units?

Subject: RE: Another question

Wendy, Our GIS person was able to look at this further - the 276 is not acreage, it is the number of **parcels** (91.8 acres) that are currently vacant single-family platted lots within major developments (not the total acreage of major developments). 276 is the number of **parcels** (91.8 acres) that are currently vacant single-family platted lots within major developments (not the total acreage of major developments). Additionally, there are 93 parcels, not platted, that total 8,618.7 acres inside all major developments (including English and Welaunee).

Regards,
Susan Poplin
I'll see what I can find out.

Hi Susan:
Just checking to see if you could address my question.
Thanks,
Wendy

Subject: RE: Another question

The sector plans show a total of about 10,600 units for English. Welanuee is 12,500 for the arch. The only number I could find for the Heel and Toe was a population figure of 10,550, which at 2.54 units/acre yields about 4100 units.
Looking at acreage inside major developments (276) that number seems low.
What am I missing?
Thanks,

Yes, Attachment 4 in the table includes Welaunee and English lands as they are within the Urban Services Area. Thx.

Hi again:
About the table in Attachment 4 of the previous agenda item (Vacant land). Does this table include Welaunee and English? Those projects seem to have a lot more units than are accounted for in the table.
Thanks for clarifying this for me.
Wendy

Review- Tallahassee and Leon County Land Use and Mobility Element

1. University Role Not Strong Enough

The document mentions universities only once (Policy 1.7.2) under environmental protection.

Recommendation: Strengthen intergovernmental coordination policies by explicitly requiring city/county to coordinate with FSU on land use, mobility, resilience, and growth strategies.

2. Mobility Coordination is One-Sided:

The plan emphasizes multimodal goals (MMTD, Policy 2.7.1) but doesn't require coordination with university transit/shuttle services (even though FSU buses connect thousands of daily trips).

Could we add a policy to integrate university transit/shuttles with StarMetro and regional mobility planning?

3. Objective 1.6- Community Resilience

Objective 1.6 (Pg 5) on resilience doesn't account for campus-scale infrastructure

Recommendation: Could include more language that also includes campus, expand policies to require coordination with university master plans for resilience, since universities are major critical facilities.

4. Open Space & Greenways

Policies on parks and greenways (1.3.1-1.3.4) don't acknowledge the role of campus open space and trails as part of the public network. FSU's trails, plazas, and greenspaces are widely used by the community.

Recommendation: Include campuses as part of the greenway and recreation planning network to avoid missed connectivity opportunities.

5. Equity Language is Broad, Not Actionable

The plan emphasizes "equitable access" but doesn't define how it applies to students (many of whom lack cars and depend on biking, walking, and transit).

Recommendation: Clarify equity goals to include safe, affordable mobility and housing options for large student populations, recognizing them as a vulnerable group in planning.

September 15, 2025

The Honorable Mayor John Dailey, Commissioner Jeremy Matlow,
Commissioner Jack Porter, Commissioner Curtis Richardson, and
Commissioner Dianne Williams-Cox
Tallahassee City Hall
300 South Adams Street
Tallahassee FL 32301

RE: September 17, 2025, Transmittal Hearing for Proposed Comprehensive Plan Amendments

Dear Mayor and Commissioners:

Thank you for the opportunity to provide input on the proposed September 17 transmittal of proposed amendments to the Tallahassee Comprehensive Plan. Based on a series of concerns outlined below, we urge you to **VOTE NO on proposed changes to the Urban Services Area (USA) boundary that would allow major development near Lake Jackson, and instead keep the current adopted boundary and related provisions intact**:

- **There is NO DEMONSTRATED NEED for this scale of development** either in the community or near Lake Jackson in particular.
- **These amendments would allow a massive 2,000-acre development in a predominantly rural area.** For comparison, Southwood is about 3,300 acres, and the Welaunee "Heel" is about 900 acres.
- **Such a significant development would severely impact the environmentally vulnerable Lake Jackson watershed.** For decades, the City and County have enacted numerous provisions to protect this region and its sensitive resources from inappropriate development. If the amendments are ultimately approved, this would be a significant setback. While other planning documents are referenced to promote protection, we do not believe they are sufficient to counter the impacts of large-scale development.
- **This large-scale development would have a significant impact on Meridian Road,** one of our community's finest designated Canopy Roads. This scale of development would necessitate road widenings, turn lanes, and other canopy breaks for new entrances and visibility. Again, decades of planning to protect this distinctive resource would be undone if these changes were ultimately approved.

- **Amending the USA for such a significant new development should not be rushed.** Instead of including this in a general comprehensive plan update, this action warrants informed public discussion in a separate forum focusing on the need, impacts, and appropriateness of such significant development.
- **There should be an analysis of the costs to taxpayers to support this new development.** Costs will likely include road and sewer improvements and ongoing maintenance, staffing for police and fire stations and libraries, and much more.
- **Please do not play "political hot potato" and approve the transmittal of this revised boundary and provisions because the County did.** In May, the County transmitted these amendments to the state because the City had approved them, which the City then rescinded. Please demonstrate leadership in protecting the rural character and vulnerable resources of this area.

For these reasons, we ask you to keep the existing USA boundaries and provisions as you did regarding controversial changes to Residential Preservation proposed earlier this year.

With appreciation for your consideration,

Vivian Young, AICP
Special Projects Director

and

Chadwick Leonard
Planning and Conservation Advocacy Coordinator

cc: Susan Poplin, MSP, AICP, Administrator of Comprehensive Planning

(i) The Comp Plan's introductory statement includes: **"Purpose of the comp plan is to preserve, protect and enhance the quality of life for all citizens…The natural environment is one of many criteria which form the community's perceived quality of life and is a major component in the quality of life equation. As such, it must be protected… Intent of this Plan is to include strong environmental objectives and policies. The residential environment is also one of many criteria for the community's perceived quality of life and must be protected. Unwise land use decisions and premature non-residential development in established residential areas can seriously alter the character of a neighborhood. Not only actual changes, but also the perception of a constant assault on a neighborhood undermines an otherwise desirable residential environment."** (Introduction, p. v)

Different parties can be impacted quite differently by development and altered land use. Developers often do not reside in the vicinity of impacted properties and may overlook interests of nearby residents and property owners. There have been numerous cases in Tallahassee and Leon County where residents of nearby or adjacent properties strongly opposed proposed developments due to anticipated adverse impacts to their residential quality-of-life. Yet, these developments were found to be consistent with the Comp Plan and approved accordingly. This includes approval of Canopy PUD as well as subsequent approval of a Circle K Gas Station in the immediate vicinity of Canopy residences.

Land use changes provide benefit to some while imposing costs on others, including (a) developers behind the changes motivated by and beneficiaries of financial gain and (b) nearby residents and property owners victimized by others' actions. Cost/benefit analyses need to consider all potential costs, long-term as well as short-term. Costs and benefits should be weighted according to, among other factors, impacts to quality-of-life, including proximity to potentially altered or disturbed sites.

I strongly recommend that applicants for rezoning or land use modifications potentially impacting residential areas be required to clearly demonstrate by applying the Comp Plan's quality-of-life equation that (1) their request will either not adversely impact the quality-of-life of those residential areas OR (2) that they will adequately compensate potentially impacted parties. This should incentivize applicants to consider the interests of potentially impacted parties and better serve the community.

(ii) City and County policies should be consistent. Inconsistencies should be amended to align with stronger environmental standards. When considering annexation of land from the County to the City, require the City to maintain or strengthen environmental standards implemented by the County, including tree ordinances.

(iii) Penalize repeat violators of environmental/land use, including Comp Plan, ordinances. Do not approve subsequent requests for development of undeveloped land. Limit subsequent request approvals to already developed land. This should incentivize developers to not commit any violations from the beginning.

(iv) When rezoning land near residentially-zoned areas, require consent of or compensation for impacted parties.

(v) Citizen Oversight Committee to closely monitor creation and especially implementation of a significantly revised and adopted Comp Plan, a committee chosen by and comprised of citizens concerned about the current Comp Plan, **not** a committee selected by elected officials (Comp Plan IA board members), staff, and/or others who've been implementing the current Comp Plan.

(vi) Expansion of Urban Services Area around portions of Lake Jackson. Proposed county takeover of Apalachicola National Forest.

(vii) Several developments, including along Thomasville Rd at Ox Bottom and Velda Dairy as well Canopy PUD, have been strongly opposed prior to approval and/or subsequent to development. These were thought by impacted parties to be inconsistent with the Comp Plan, unlike Staff, who found them to be consistent with the Comp Plan. What can this be attributed to: different interpretations of OR subsequent implementation of the Comp Plan? Consider, for example, approval of the aforementioned Circle K gas station in Canopy PUD, what the City in hindsight would like to prevent in the future.

(viii) How is Comp Plan consistency applied? Where does the burden of proof lie? Proof of consistency or of inconsistency? On parties imposing change and impacts on others' or on parties opposed to change or impacts?

(ix) What is ultimate purpose of the Comp Plan? What are its priorities? Growth and development vs. environmental preservation. Who are the instigators, authors, editors, etc.? Who's ultimately in charge?

(x) State vs. local jurisdiction: which supersedes the other? To what, if any, extent are local jurisdictions' hands tied and rights limited, particularly rights to implement environmental protection and/or restrict development?

snmardun@gmail.com

From John Outland

1. The Natural Features Map should be updated to include information on the impacts/loss of our natural features to development and associated infrastructure.

2. Blueprint and other public funding sources should not be used to provide infrastructure (roads, water, sewer, etc.,) to support urban sprawl that fragments natural areas and their biodiversity.

3. The Comprehensive Plan should be modified to require the evaluation of the full costs of sprawl development including the demand for energy, and other development-related services.

4. We should advocate for developing Preservation, Conservation, and Development maps as I am not overly optimistic about relying on the existing land acquisition programs, existing public ownerships, and cooperative agreements with landowners to achieve the needed balance.

From Wills Flowers

1. "If you bought a swamp, the law presumes it's because you wanted a swamp").
There should be some sort of general statement in the Comp Plan that exemptions and rezonings will be granted only under the specific conditions as outlined in the different sections, and petitioners must demonstrate a benefit the County as a whole. Decrease the wetland setback to 50 feet. Developers will not be entitled to rezoned areas and modifications of land use and conservation element simply for their own convenience.
Comp Plan section: Land Use; Goal 2 – rezoning mentions are in this section.

2. Limited clearcutting – large areas (>5 acres?) with permitted clearing must be cleared in stages to allow vegetation regrowth between cuts and to minimize area of bare land, which contributes to a "Tallahassee Heat Island".
Comp Plan sections: Land Use; Policy 13.2.5. Phasing (this is specific for the Heel? but should apply in general); Conservation Element; Goal e – Policy 3.3.1 and 3.3.3

3. Mitigation actions of destructive activity must take place within [5?–10?–1?] miles (or 2 precincts) of the site being mitigated. Currently sites are allowed to be degraded and the relevant mitigation is allowed to take place on the other end of the county. Off-site mitigation is mentioned in the Comp Plan Glossary but there is no indication of how close to the activity the mitigation has to be, or even if the mitigation has to have any relevance to the activity being mitigated.

4. This might not be directly relevant to the Comp Plan: it's more in line with the City policies, but it's very relevant to overall energy polices. Clean Energy justice — in supporting and/or implementing the City of Tallahassee's Clean Energy resolutions: all entities must do due diligence that none of their purchases support, however indirectly, corporations (particularly mining companies) involved in bullying local communities and weaker foreign countries through International Settlement of Investment Disputes (ICSID). No purchases will be made from any suppliers or parent companies having pending claims in this venue. Policy 13.2.31: Clean Energy.

Summary of Alliance of Tallahassee Neighborhood Comments on Proposed Changes to Residential Future Land Use Categories

ATN appreciates opportunity to review the proposed revisions to the Residential Preservation, Sub-Urban Neighborhood, and Urban Neighborhood future land use categories. Detailed comments and recommendations are attached.

ATN's concerns are with the Sub-Urban and Urban Neighborhood categories.

- Both categories allow neighborhoods designated Residential Preservation to be redesignated if there are existing legal non-conformities as to density and housing type. This is in direct conflict with the City Commission's direction. That direction was to allow non-conforming uses to rebuild, thereby retaining the current mix of housing types and residential density. The language regarding non-conforming uses in these categories should be removed.
- Both categories lack clear direction as to where they are to be applied. This will create conflict and uncertainty when map amendments are proposed. Specifically, it is not clear if the intent of these policies is to allow the conversion of Residential Preservation neighborhoods to Sub-Urban or Urban Neighborhood. If not, what direction or criteria in the proposed plan prevents that from occurring?

The answers to these questions, as well as questions about related policies (e.g., Suburban Retrofit), need to be provided to residents who will potentially be affected. Therefore, ATN recommends that adoption of the proposed plan amendments occur after the public has the opportunity to review and comment.

Comments on 11/04/2025 Draft Changes to Residential Future Land Use Categories

Policy 2.8.8: Residential Preservation – No comments

Policy 2.8.9: Sub-Urban Neighborhood (Sub-Urban Neighborhood)

1. Intent statement: The statement does not provide sufficient guidance for evaluating proposed map amendments.

   The policy reads: "*The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area.*"

   The allowed density of 20 units per acre is dramatically greater than the density of existing residential suburban neighborhoods, with the possible exception of apartment complexes. (Residential Preservation allows up to 6 units per acre.) Taken with Policy 2.5.1: Suburban Retrofit See Attachment 1), this category provides wide latitude for transforming suburban neighborhoods.

   Recommendation: If an objective of the Plan is to retrofit suburban areas, Policies 2.5.1 and 2.8.9 need to be redrafted to provide criteria that will be used to determine which areas will be subject to this policy

2. Commercial Uses: The new policy allows neighborhood commercial within neighborhoods designated Sub-Urban Neighborhood. It removes current restrictions on commercial uses on local streets and allows the amount of commercial currently permitted only on major roadways.

   Currently, Land Use Policy 1.4.18 prohibits new commercial uses from accessing a local residential street.[1] The proposed policy removes this restriction. The proposed policy lists "Neighborhood" commercial is a principal use in Sub-Urban Neighborhood.

   The Comprehensive Plan defines neighborhood commercial as follows***: "****Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods. Gross floor area—20,000 to 100,000*

[1] New minor commercial uses shall not be permitted access to a local residential street within the city limits of Tallahassee. This limitation shall not apply to the Bradfordville Mixed Use, Suburban, Planned Development, Central Urban, University Transition, and Village Mixed Use Categories which establish street access standards by Land Development Regulations.

square feet. Except at intersection of collectors where maximum allowable is 50,000 square feet. (underline added)

The proposed policy would allow up to 20,000 square feet anywhere within a neighborhood designated Sub-Urban Neighborhood. Proposed language to keep intensity "minimal" to reduce intrusive impacts does not provide sufficient guidance for land development regulations.

It is noted that the Comprehensive Plan defines Minor Commercial as follows: *"Provide for the sale of convenience goods and services to the immediate residential area. Gross floor area—less than 20,000 square feet except at a local street intersection where maximum allowable is 10,000 square feet."*

While not endorsing this policy, the question remains as to why Minor Commercial was not the principal commercial use.

Recommendation: If the intent to allow commercial on local streets is retained, the policy should be amended to refer to Minor Commercial and ensure that size of any non-residential uses within neighborhoods will be limited based on road classifications and other relevant existing conditions.

3. Using Sub-Urban Neighborhood to address non-conforming uses. The proposed policy would allow Residential Preservation neighborhoods to be redesignated to Sub-Urban Neighborhood if there are non-conforming uses and/or densities. This is inconsistent with Commission direction to keep Residential Preservation neighborhoods intact.

   The policy states: *"[Sub-Urban Neighborhood]... is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities."*

   In what future land use categories would this apply other than Residential Preservation? Planning Department analysis showed many long-established Residential Preservation neighborhoods already have a mix of densities and housing types. Policy 2.8.8. addresses non-conforming uses and/or densities in the Residential Preservation category with the intent of maintaining the current mix of densities and housing types. Policy 2.8.9 allows the wholesale change of Residential Preservation neighborhoods.

   Recommendation: Remove the phrase "unless to correct legal non-conforming uses and/or densities."

Policy 2.8.11: Urban Neighborhood (Urban Neighborhood)

1. Intent statement: The statement does not provide sufficient guidance for evaluating proposed map amendments.

   The policy reads: *"The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips."*

   The description of the category – characterized by small to medium blocks, on-street parking and narrow travel lanes – matches the description of Residential Preservation neighborhoods. However, this category allows up to 26 units per acre, compared to 6 units per acre for Residential Preservation.

   If this is intended to be a transitional category between more intensive corridor development and Residential Preservation Neighborhoods, that should be stated clearly. However, where Residential Preservation neighborhoods abut major roadways, there should not be a presumption that those areas are appropriate for redesignation to Urban Neighborhood.

   The current Neighborhood Boundary Future Land Use category appears to have a similar intent but provides much more clarity (See Attachment 2).

   Recommendation: Keep the Neighborhood Boundary Future Land Use Category. Alternatively, revise this policy to incorporate the clear intent language from the Neighborhood Boundary category.

2. Using Urban Neighborhood to address non-conforming uses. The proposed policy would allow Residential Preservation neighborhoods to be redesignated as Urban Neighborhood if there are non-conforming uses and/or densities. This is inconsistent with Commission direction to keep Residential Preservation neighborhoods intact.

   The policy states: *"[Urban Neighborhood]... is not intended to be applied within the interior of an existing established low-density neighborhood, Urban Neighborhood unless to correct, legal non-conforming uses and/or densities."*

   In what future land use categories would this apply other than Residential Preservation? Planning Department analysis showed many long-established Residential Preservation neighborhoods already have a mix of densities and housing types. Policy 2.8.8. addresses non-conforming uses and/or densities in the Residential Preservation

category with the intent of maintaining the current mix of densities and housing types. Policy 2.8.11 allows the wholesale change of Residential Preservation neighborhoods.

Recommendation: Remove the phrase “unless to correct legal non-conforming uses and/or densities.”

Attachment 1: Future Land Use Policy 2.2.21 – Neighborhood Boundary
(EFF. 7/25/03; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 11/26/20)

Intent: This future land use category is intended to create a transition area between residential development and more intensive development such as higher density multi-family and higher intensity non-residential development while still preserving roadway capacity through access management practices. Where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan, this future land use category may also be used to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses.

Allowable Uses: Low-density residential including duplexes, townhomes, triplexes, and quadplexes; and non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, bed and breakfast inns and community services. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or any other use having drive-through facilities, are not allowed in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic.

I*ntensity/Density*: Density and intensity standards for residential and non-residential development shall be established within the implementing zoning district's development standards. In no case shall the maximum density established exceed eighteen (18) dwelling units per acre. Non-residential structures are permitted up to a maximum of 20,000 square feet of gross building floor area per acre.

Design Standards: The land development regulations shall establish design standards to promote compatibility with adjacent residential development.

Location and Orientation: The location of this land use category shall either serve as a buffer between residential development and more intensive development or to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan. Those properties currently within the Lake Protection land use category may not be amended to the Neighborhood Boundary land use category.

Access Management: The land development regulations shall specify specific vehicular access management requirements that will serve to mitigate possible negative impacts to roadways associated with the implementation of this category.

Proposed Policy 2.5.1 – Suburban Retrofit

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way.
- Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

LEON COUNTY GOVERNMENT
People Focused. Performance Driven.

Business Impact Estimate

In accordance with Section 125.66(3)(a), Florida Statutes (F.S.), a Business Impact Estimate (BIE) is required to be: 1) prepared before enacting certain ordinances and 2) posted on Leon County's website no later than the date the notice of intent to consider the proposed ordinance is advertised (which, per Section 125.66(2)(a), F.S., is at least ten (10) days before the Public Hearing).

Proposed Ordinance's title in full:

AN ORDINANCE OF THE BOARD OF COUNTY COMMISSIONERS OF LEON COUNTY, FLORIDA, AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM, MOBILITY ELEMENT, AND GLOSSARY; PROVIDING FOR APPLICABILITY AND EFFECT; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; PROVIDING FOR A COPY TO BE ON FILE WITH THE TALLAHASSEE-LEON COUNTY PLANNING DEPARTMENT; AND PROVIDING FOR AN EFFECTIVE DATE.

Proposed Ordinance Public Hearing Date: December 9, 2025

Pursuant to Section 125.66(3)(c), F.S., the following types of ordinances are exempt from the BIE requirement. As such, if one or more boxes are checked below, Leon County, Florida, believes that a BIE is not required by state law for the proposed ordinance referenced above. Leon County, Florida, reserves the right to revise this BIE following an initial posting.

☐ The proposed ordinance is required for compliance with Federal or State law or regulation;

☐ The proposed ordinance relates to the issuance or refinancing of debt;

☐ The proposed ordinance relates to the adoption of budgets or budget amendments, including revenue sources necessary to fund the budget;

☐ The proposed ordinance is required to implement a contract or an agreement, including, but not limited to, any Federal, State, local, or private grant, or other financial assistance accepted by a county government;

☐ The proposed ordinance is an emergency ordinance;

☐ The proposed ordinance relates to procurement; or

☐ The proposed ordinance is enacted to implement the following:

a. Development orders and development permits, as those terms are defined in Section 163.3164, F.S., and development agreements, as authorized by the Florida Local Government Development Agreement Act under Sections 163.3220 – 163.3243, F.S.;

b. Comprehensive plan amendments and land development regulation amendments initiated by an application by a private party other than the County;
c. Sections 190.005 and 190.046, F.S., regarding community development districts;
d. Section 553.73, F.S., relating to the Florida Building Code; or
e. Section 633.202, F.S., relating to the *Florida Fire Prevention Code*.

In accordance with Florida law Leon County, Florida, hereby posts the following BIE information for this proposed Ordinance on its website for public viewing and consideration on this 25th day of November, 2025:

1. Summary of the proposed ordinance (must include statement of the public purpose, such as serving the public health, safety, morals, and welfare):

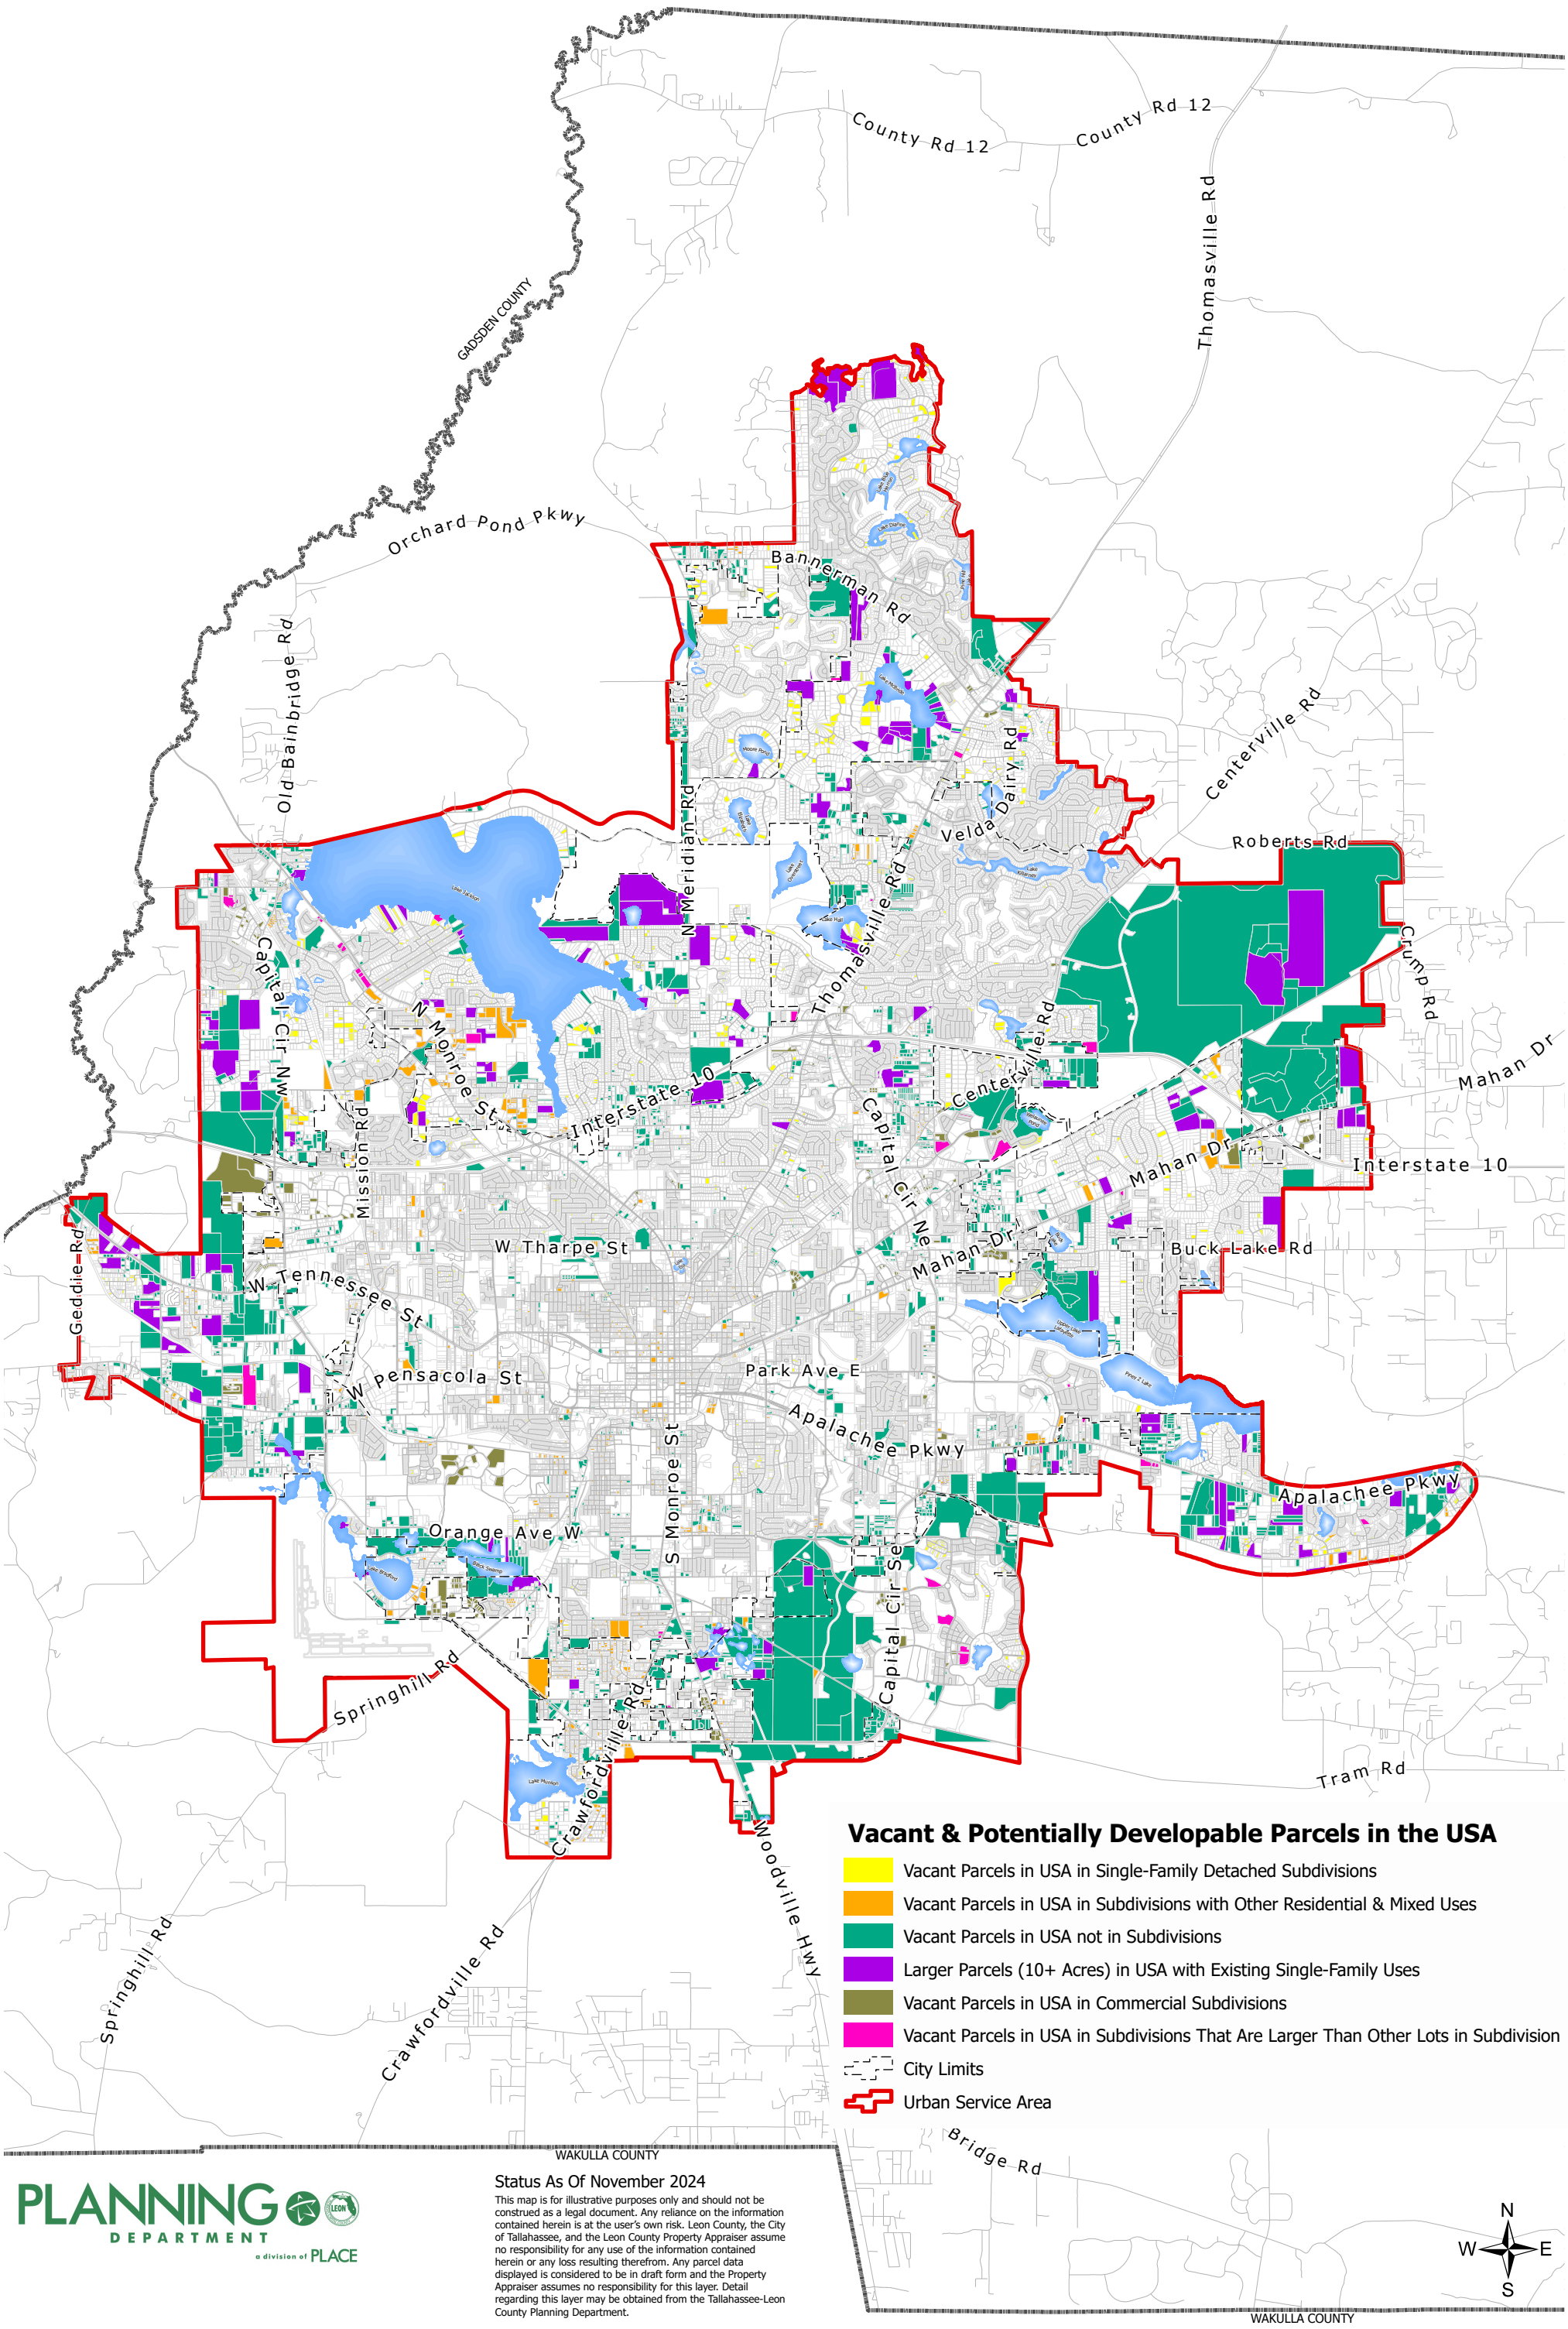
The proposed ordinance revises the joint 2030 Tallahassee-Leon County Comprehensive Plan. Proposed amendments are to the Tallahassee-Leon County 2030 Comprehensive Plan to consolidate the Future Land Use and Mobility Elements into the Land Use and Mobility Element including replacement of the: A. Land Use Element text and maps, including the Future Land Use Map and Addendum; and B. Mobility Element text and maps; and revisions to the plan's Glossary of terms. The amendments serve the public purpose by providing an update to the comprehensive plan to reflect community priorities and best practices that meet planning goals. Additionally, the amendments are intended to meet the statutory requirements of Chapter 163.3177, F.S., for the Future Land Use and Transportation Elements of the comprehensive plan.

2. Estimate of direct economic impact of the proposed ordinance on private, for-profit businesses in the county, including the following (if any):

a.) Estimate of direct compliance costs that businesses may reasonably incur if the ordinance is enacted: None.

b.) Any new charge or fee imposed by the proposed ordinance for which businesses will be financially responsible: None.

c.) Estimate of Leon County's regulatory costs, including estimated revenues from any new charges or fees to cover such costs: None.



3. Good faith estimate of the number of businesses likely to be impacted by the proposed Ordinance:

No existing businesses are impacted by the proposed amendments.

4. Additional information Leon County deems necessary (if any): None.

PLANNED DEVELOPMENT

Special District Plans

Southeast Sector Plan

SOUTHEAST SECTOR PLAN
Objective 1: [L] - Southeast Sector Plan

(EFF.5/20/96; REV. EFF. 8/25/08)

In keeping with the City's and County's commitment to promote the Southern Strategy, and to satisfy the Comprehensive Plan requirements for a comprehensive development plan for the Southwood property within the urban service area, the local governments hereby adopt the Southeast Sector Planned Development, known as the Southeast Sector Plan, that is consistent with Objective 6.1 [L] and its associated policies and with the Comprehensive Plan's Urban Service Area policies, that promotes innovative planning, promotes compact development strategies and protects the natural resources of the area. This plan shall contain design standards that promote compact commercial development, walk to shopping, higher density housing in close proximity to offices, commercial uses and employment centers. The same attention will be given to alternate modes of transportation and pedestrian mobility as is given to automobile transportation. Innovative ways may be developed to protect natural resources, the major focus being on the continued protection of conservation and preservation areas within the Southeast Sector Planning Area (Figure 10.A).

Policy 1.1: [L] - Southeast Sector Plan Overview (REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)

The Southeast Sector Plan is hereby developed for an area in southeast Tallahassee and Leon County (see the Southeast Sector Planning Area map, Figure 10.A). For the Southwood, Colin English Properties, and the former Southside DRI lands, the Southeast Sector Plan shall constitute the Planned Development Master Plan consistent with Objective 6.1 [L] and its associated policies.

The following densities, intensities and development standards are hereby established for the Southeast Sector Planning Area:

A. Percent Mix of Land Uses Required:

The following percent mixes of land uses shall be required for the Southeast Sector Planning Area. The percentages shall be applied separately to both Southwood and the Colin English properties. In addition, the percentages shall also be applied separately to the former Southside DRI properties outside of Southwood within the Southeast Sector Plan.

(1) 40-60% of the land area in residential development

(2) 10-30% of the land area in commercial, office and/or industrial development

(3) 10-15% of the land area in community facilities/services and utility easements and recreational facilities.

(4) 20-30% of the land in open space/greenways. Open space shall comprise a minimum of 22% of each of the Southwood PUD and Colin English properties.

B. Densities and Intensities:

(1) The maximum densities and intensities for development within the Southeast Sector Planning Area are established in Policy 10.1.2.

C. Phasing:

(1) The Southeast Sector Planning Area will be permitted to develop in phases.

(2) Southwood has an approved Development of Regional Impact DRI development order and Planned Unit Development PUD zoning. These approvals establish the development entitlements and master plan for the Project. For this reason, the Southwood entitlements and development phasing are not identified in Table A below. The

maximum and minimum densities and intensities for the Implementing Land Use Districts for Southwood are established in Policy 10.1.2.

(3) Additional development beyond Phase I of the English lands shall require a comprehensive plan amendment supported by adequate data and analysis if the Phase I lands (approximately 601 acres) have not been built consistent with the mix of uses established herein.

(4) No particular percent mix of uses within Phase I for the English properties will be required to meet or exceed the percent requirements for the total Southeast Sector Plan acreage and percentage of mix amounts.

TABLE A: ENGLISH PROPERTY DENSITIES, INTENSITIES AND PHASING (REV. EFF. 8/25/08; REV. EFF. 11/26/21)

	Maximum Residential Units	Minimum Residential Densities	Maximum Non-Residential	Hotel Hospital
Phase I				
Colin English Phase I (603 acres)	6,030	As required by Policy 10.1.2 [L]	3,606,000 GSF	
Phase II				
Colin English Phase II (458 acres)	4,580	As required by Policy 10.1.2 [L]	2,740,000 GSF	

Notes:
The Colin English Property densities and intensities are those found within the Suburban Land Use Category consistent with Objective 6.1 [L].

D. Land Use Location Criteria:

(1) Industrial development, if constructed, is to be located in the southwest quadrant of the Southeast Sector Planning Area, primarily utilizing Tram Road and Capital Circle. Industrial development is not required in this quadrant; therefore, the quadrant may have no industrial development at buildout.

(2) Office development, and commercial (retail/possible hotel) uses to be located primarily in the northwest quadrant of the Southeast Sector Planning Area (English property, primarily utilizing Blair Stone Road) and surrounding the Capital Circle Office Center.

(3) Medium Density Residential to be located primarily, but not solely limited to areas adjacent to the Capital Circle Office Center and interspersed with office development in the northwest quadrant. Priority shall be given to areas adjacent to the Capital Circle Office Center.

(4) Low Density Residential to develop primarily in the northeast quadrant of the Southeast Sector Planning Area (Old St. Augustine Road vicinity), and secondarily in the northwest and southeast quadrants (perhaps as golf course communities).

(5) Large Lot Single Family Residential development to develop primarily in, but not limited to, the southeast quadrant of the Southeast Sector Planning Area;

(6) Community Facilities and Services to be located within each quadrant of the Southeast Sector Planning Area;

E. Affordable Housing:

Development must comply with applicable affordable and inclusionary housing ordinances.

F. Additional Requirements:

(1) A school site parcel for an elementary school at thirty (30) acres shall be set aside on the English Property, based on a projected build-out population of approximately 30,000. One elementary school shall be located on the English property and the other two schools shall be located on the

Southwood property, provided that each of the public school sites on the Southwood property may be the location of a pre-kindergarten through grade 8 facility with the agreement of the Leon County School Board. The school site shall be located proximate to residential areas and shall be collocated with other compatible public facilities to the extent possible.

(2) In accordance with community wide requirements of the Comprehensive Plan, the Capital Improvements Element shall be amended to reflect the 5 year plan for the provision of urban services in accordance with this sector plan.

(3) Parcel # 31-03-20-602-000-0 and that portion of parcel # 31-11-20-001-000-0 which is directly south of parcel #602 shall be designated as low density residential and be limited to no more than three units per acre.

(4) No additional acreage within the Urban Service Area may be added to the Southeast Sector Planning Area except by a Comprehensive Plan Amendment. Any addition to the Southeast Sector Planning Area must be in conformance with the guidelines and standards of the Southeast Sector Plan Objective 10.1 and implementing policies 10.1.1 through 10.1.7.

Policy 1.2: [L] SESP Implementing Land Use Districts

(REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)

The Southeast Sector Planning Area shall be developed utilizing the following implementing PUD districts that allows a range of types of residential, commercial, office and industrial uses with varying densities and *intensities*:

(A) NEIGHBORHOOD VILLAGE CENTER - VC

Designed to serve as the center of the neighborhood, and discourage commercial strip development and sprawl along roadways.

- Each Village Center shall have a consistent design theme and complementary palate of materials.
- Village centers shall provide ample open space to allow for community gatherings or public events.
- Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

TNDs (Traditional Neighborhood Districts) and VCs (Village Center) implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial village center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan.

Development in the VCs may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or a VC in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the VC district.

Local government shall conduct an environmental assessment at the time of an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in a TND or VC district prior to designating the boundaries of conservation and preservation areas, if present, within a TND or VC to determine the extent and location of conservation and preservation features. TNDs and VCs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

Allowed Uses:

- Community facilities: Community Services and Light Infrastructure
- Office uses
- Commercial land uses
- Residential uses in conformance with the Medium Density standards
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8
- Assisted Living Facilities

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC
Maximum Floor Area Ratio:

1.0 for parcels larger than 20,000 sq. ft.
2.0 for parcels 20,000 sq. ft. or smaller

Minimum Floor Area Ratio:
0.5 F.A.R.

Clustering may be permitted provided maximum densities are not exceeded.

(B) TRADITIONAL NEIGHBORHOOD DISTRICT - TND

Location mix and configuration of land uses are designed to encourage alternatives to automobiles and provide more identifiable pedestrian-friendly neighborhoods. More restrictive planning and architectural standards will be applied in order to maintain traditional town form.

TNDs and VCs implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial Village Center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan. The specific development criteria and phasing for the TNDs and VCs shall be included in the LDRs and be determined by local government.

TNDs will locate close to Village Centers, parks and recreation, employment; allow for a variety of housing types which promote increased density; use energy-saving concepts in block and building designs; be located within close proximity to Village Centers, High Intensity Urban Centers and Mixed Use Office Parks; and be designed for bicycle and pedestrian accessibility.

Allowed Uses:

- Community facilities: light infrastructure.
- Restricted to mid-rise, multi-unit townhouses and row houses, attached residential units and single-unit townhouses and row houses.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.
- Accessory commercial use which is subordinate to the principal residential use.
- Specific densities and intensities, ratio of uses and implementation criteria shall be contained in the zoning code.

Residential Densities:

Minimum Density 4 DU/AC
Maximum Density 16 DU/AC

Clustering may be permitted provided maximum densities are not exceeded.

Development in the TNDs may obtain a waiver from the requirements in the EMO and EMA for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements, provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or VC in order to promote a compact pedestrian oriented arrangement of land uses except in situations where alternative sites for stormwater are available consistent with the intent of the TND district. Local government shall conduct at the time of an application for development or prior to rezoning, consistent with Conservation Policy 1.1.1 in a TND or VC district, an environmental assessment prior to designating the boundaries of conservation and preservation areas, if present, within a TND to determine the extent and location of conservation and preservation features. TNDs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

(C) MEDIUM DENSITY RESIDENTIAL - MDR

Provides moderate-density housing located within walking and biking distance of civic facilities, retail, schools and employment.

- Design of MDR shall use energy saving concepts and maximize roadway connections.
- Elementary schools shall be provided within close proximity and land will be reserved.
- All collectors and arterials shall have bike and pedestrian paths.
- It is the intent to have bike and pedestrian facilities as important as automobiles in regard to mobility when designing MDR areas.

Allowed Uses:

- Multi-family residential.
- Single-family attached and detached residential.
- Golf courses and recreation facilities.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.
- Community facilities: community services and light infrastructure.
- Community parks and recreation areas shall be located within close proximity to the residential uses.
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood and the design, parking, and signage should reflect this intent.
- Assisted Living Facilities

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 20 DU/AC

Clustering may be permitted provided the maximum density is not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(D) LOW DENSITY RESIDENTIAL - LDR

Provides for low-density residential units which are not necessarily convenient to shopping and employment areas. Density shall be between 2 to 8 units per acre.

Allowed Uses:

- Detached and attached single-family residential
- Parks, golf courses, recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.
- Community facilities: community services and light infrastructure
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood, and the design, parking and signage should reflect this intent.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 8 DU/AC

Clustering may be permitted provided the maximum densities are not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(E) LARGE LOT SINGLE FAMILY RESIDENTIAL - LSF

Provide single-family residential uses in keeping with the rural character of outlying areas. This category is most likely not located conveniently to shopping and employment. Minimum size of lots will be 1/3 acre; maximum size of lots shall be 5 acres.

Allowed Uses:

- Detached single-family residential
- Golf courses and recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1..8.
- Community facilities: community services and light infrastructure.

Residential Densities:
Minimum Density 1 DU/5 AC
Maximum Density 3 DU/AC
Clustering may be permitted provided maximum densities are not exceeded.

(F) MIXED USE OFFICE/COMMERCIAL - MUOC

Provides for higher-intensity commercial uses that are more intense than uses located in Village Centers. Intended as activity centers and shall include public plazas and other amenities.

- Uses and intensities shall be designed for maximum internal capture of shopping and business trips.
- Maximum pedestrian accessibility internal to the office/commercial centers.
- Centers shall be designed to blend with TND/MDR districts.
- Provide mass transit accessibility if transit is available, and
- May have regional stormwater facilities.

Allowed Uses:

- Community facilities: community services, light infrastructure and post-secondary educational facilities
- Community Commercial uses (100,000 to 200,000 square feet)
- Regional Commercial (200,000 to 1 million square feet)
- Office- Allows office uses 10,000 square feet or greater. The intent is to allow commercial and service-oriented uses as an accessory use within an office building.
- Medium Density Residential in association with nonresidential uses.
- Hotels
- Medical facilities and institutional uses, including assisted living facilities. Hospitals may be permitted if based on design criteria such as access and building scale in relation to

adjacent uses, as described in the LDRs.
- Golf Courses
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.

Maximum Floor Area Ratios:
2.0 F.A.R.

(G) MIXED USE INDUSTRIAL - MUI

Provides for the location of manufacturing, warehouses, distribution centers, and research and development uses, with some commercial uses allowed that are designed to accommodate the needs of the industrial park work force.

- Commercial uses shall be provided within walking distance of work place.
- Equal access for mass transit, automotive, bicycle and pedestrian modes of transportation shall be provided.

Allowed Uses:
- Community facilities
- Light and heavy industrial
- Research and development
- Showroom warehouses
- Office associated with industrial and distribution uses
- Retail designed to serve the work force of the industrial park
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.

Maximum Floor Area Ratios:
1.0 for nonresidential uses

(H) OFFICE/RESIDENTIAL

The Office/Residential district shall contain a variety of office and residential uses that range from duplexes to townhouses to multi-family. The residential uses will be integrated with the office development. The Office/Residential district shall be located in areas where there is access to collector and arterial roadways, and where the emerging development pattern is not predominantly low-density residential. In order to provide for a more pedestrian-friendly environment that efficiently utilizes land area and provides for interaction between the uses, large expanses of surface parking will be discouraged in favor of shared parking, mid-block parking, and parking garages. Provision will be made to serve this district with mass transit. Commercial uses may be permitted as ancillary uses to the office uses and located within office buildings.

Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.

Allowed Uses:
- Community facilities: community services, light infrastructure, and post-secondary
- Office uses- not to exceed 300,000 sq. ft.
- Commercial uses- not to exceed 10,000 sq. ft., contained within office building.
- Hotels- May be permitted based on design criteria such as access and scale of the building in relation to adjacent uses, as described in the LDRs.

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC

Floor Area Ratio (F.A.R.):
Maximum F.A.R. of .25 for parcels greater than 20,000 sq. ft.
Minimum F.A.R. of 1.0 for parcels smaller than 20,000 sq. ft.

(I) SOUTHWOOD TOWN CENTER - TC

Designed to serve as the pedestrian-oriented urban center of Southwood, containing a wide range of commercial, entertainment,

residential, office and community services at urban intensities.

Development in the TC district may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for the TC district shall be designed in accordance with applicable standards and shall be located outside of the TC district in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the TC district. Local government shall conduct an environmental assessment at the time of an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in the TC district prior to designation of the boundaries of conservation and preservation areas, if present, within the TC district, to determine the extent and location of conservation and preservation features. The TC district shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

Allowed Uses:

- Commercial, including retail, entertainment and hotel uses.
- Residential, including assisted living, at the full range of densities in LDR and MDR. Residential uses may be collocated with compatible nonresidential uses in the same buildings.
- Office.
- Institutional.
- Community Facilities, such as police/fire stations and churches.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.

Mixture of Uses:

Development within the TC district shall include a mixture of uses consistent with the following minimums:

- 60,000 square feet of commercial
- 200 residential units

Additional development may include any other uses permitted in the TC district, such as office, institutional/community facilities, medical and assisted living facilities. Maximum development shall be limited by the allowable densities and maximum Floor Area Ratios (FAR).

Residential Densities:

Minimum Density 2 DU/AC (no minimum density for residential uses second story and above for commercial or office uses)
Maximum Density 20 DU/AC

Specific densities and intensities, ratio of uses and implementation criteria, including standards to promote pedestrian-scale mixed-use development, will be included in the zoning code.

Maximum Floor Area Ratio:

2.0 F.A.R.

Minimum Floor Area Ratio:

0.25 F.A.R.

(J) MIXED USE EDUCATIONAL/INSTITUTIONAL - MUEI

Provides for educational, institutional and civic uses, and related activities including residential, which includes assisted living, office, sports and recreation, and related commercial uses, which include inns and hotels.

Allowed Uses:

- Schools, colleges and universities, museums, and civic facilities.
- Residential, including assisted living at the full range of densities in LDR and MDR.
- Sports and recreation facilities.
- Related supporting commercial facilities, including office, retail, inns and hotels.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 1.8.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 20 DU/AC

Maximum Floor Area Ratio:
1.0 F.A.R.

Minimum Floor Area Ratio:
0.25 F.A.R.

(K) HISTORIC HOUSE OVERLAY (HHO)

The existing main house on the Southwood property is a historical resource within the Southeast Sector Planning Area. In order to preserve the character of the house and its grounds while providing for its future use as a component of the development in the Southeast Sector Planning Area, the Southwood PUD shall establish an overlay zoning district on the house and surrounding grounds. The allowable uses within the overlay district shall be those uses allowed within the LSF district. The following additional uses shall also be allowed within the HHO district so long as the design is compatible with the surrounding LSF uses and the historic nature of the house:

- Bed and Breakfast Inn
- Restaurant
- Conference Center

Policy 1.3: [L]-Transportation (REV. EFF. 7/7/99; REV. EFF. 11/26/21)

Transportation guidelines for the Southeast Sector Plan shall be as follows:

Transportation systems shall be designed to promote alternatives to single-occupancy vehicle travel and to capture internal trips. Emphasis will be placed on designing commercial, office, employment and higher-density residential areas to be pedestrian and bicycle friendly. Emphasis will also be placed on alternative transportation modes.

(a) Right of way shall be planned and dedicated for the ultimate laneage needed based on total build-out of the plan.
(b) If mass transit is available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan, Mass transit routes shall be included along major roadways in coordination with Star Metro.
(c) All land development shall provide for bicycle and pedestrian modes of transport.
(d) Traffic-calming devices will be utilized along roadways in areas with high pedestrian activity.
(e) Access to canopy roads can only be permitted for uses other than medium or high density residential uses, commercial, office uses, and then only if there is no access to an alternative roadway and one cannot be secured. New access points must be configured to share access.
(f) Access management standards will be developed and implemented for all roadways.
(g) Use of roundabouts will be encouraged at intersections.
(h) A 100 foot tract on both sides of the centerline of Old St. Augustine Road shall be dedicated to the City of Tallahassee along the entire

length of the property in excess of 200 acres in common ownership adjoining Old St. Augustine Road between Capital Circle and the Urban Service Area boundary. For properties in common ownership in excess of 200 acres, access to Old St. Augustine Road within the Southeast Sector Study Area will be limited to the following: 1) the tract of land referred to in Section I of Policy 1.2; 2) a new north-south roadway up to 1/2 mile west of Southwood Plantation Road. This intersection with Old St. Augustine Road will be a four-way stop unless a more efficient design can be developed that provides the maximum protection for the canopy on Old St. Augustine Road; 3) Southwood Plantation Road.

(i) The recommendations that are produced by the Scenic Vista and Conservation Easement Acquisition Plan will be taken under advisement by the developer when designing development adjacent to Old St. Augustine Road.

(j) The Transportation Element will be amended to reflect the transportation network needed to serve development within the Southeast Sector Planning Area.

(k) Any alignment of a limited-access roadway/parkway shall be required to follow the Comprehensive Plan amendment process and be consistent with the Long Range Transportation Plan.

(l) In order to protect the traffic capacity of Capital Circle within the Southeast Sector Planning Area, the Capital Circle Access Points plan is established and shall be implemented by LDRs. Subdivisions adjoining Capital Circle shall not allow creation of parcels with sole access to Capital Circle (see Figure 10.B).

Add4: [L] - Open Space/Greenways

(REV. EFF. 7/7/99)

The Southeast Sector Plan shall contain a pooled open space/greenway concept that will contain the majority of the open space requirements within a connected corridor. The following guidelines will be used in mapping the open space/greenway corridor:

(a) All conservation and preservation areas within the Southeast Sector Planning Area shall be mapped and protected consistent with Conservation Objective 1.3 and its implementing policies. In addition, the mapping of the open space/greenway corridor shall consider the location of conservation and preservation areas, except significant grades. Interconnected areas that best protect the conservation and preservation features of the area and provide open space will be included in the open space/greenway corridor. Consistent with the supporting data and analysis, such corridors shall constitute at least twenty-two percent of the Southeast Sector Planning Area. The City and the County will make all efforts to connect open space and greenways outside the Southeast Sector Planning Area to the open space/greenway system within the Southeast Sector Planning Area.

(b) Conservation and preservation areas shall be protected as required by the Comprehensive Plan.

(c) The mapped open space/greenway area will be generally mapped for the sector plan. Field verification of

the exact delineation shall be conducted by a qualified biologist and approved by the Growth Management Department that has jurisdiction at the time development permits are sought.

(d) The following uses will be allowed and designated in the mapped open space/greenways areas:

(1) Passive recreation - Improvements that are natural resource-oriented, such as hiking and biking trails, boat landings and passive parks, may be constructed in passive recreation areas. Public access will be assured in designated passive recreation areas.

(2) Stormwater management facilities may be located in designated open space areas. This does not preclude the possible locating of stormwater facilities in preservation or conservation areas. Each facility and site must be evaluated individually in terms of impacts. The beneficial functioning of each preservation or conservation area is to be preserved. All stormwater facilities must meet the requirements of the EMA and EMO and must be consistent with the comprehensive plan.

(3) Wildlife management areas.

(4) Public roadways and utilities may cross through these areas if no alternative route can be secured.

(5) Golf courses (active recreation) are not permitted in conservation/preservation areas or in open space/greenways, but they may abut open space/greenways and conservation and preservation areas. Golf courses may cross these areas so long as the crossing does not adversely affect such areas and is consistent with the comprehensive plan.

All open space/greenway corridors shall have a management plan approved by the local government with jurisdiction that maintains these open space/greenway areas to protect the values for which these areas were designated. This may include but not be limited to: aesthetic open space, wildlife habitat, interconnection, preservation of floodplains and protection of conservation and preservation areas.

(e) Open space/greenway corridors may be privately owned or dedicated to the public by conveyance to a general or special purpose local governmental entity, or be designated as part of the statewide system of greenways and trails pursuant to State law. Privately owned, open space/greenway corridor areas shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development.

It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas with proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

Policy 1.5: [L] – Interrelationships

(REV. EFF. 7/7/99; REV. EFF. 8/25/08)

The interrelationship between the sector plan, the Comprehensive Plan, and the implementing PUDs is defined as follows:

- The Southeast Sector Plan shall focus on land use decisions that avoid the promotion of strip commercial development along arterial roadways. The implementing PUDs for this sector plan shall be designed to avoid strip commercialization of arterial roadways. The sector plan shall reflect land uses along arterials, which do not promote strip commercial development.
- An objective and policies setting the guidelines for the development of the Southeast Sector Planning Area shall be adopted into the Comprehensive Plan.
- Within the implementing PUDs the Southeast Sector Planning Area may contain architectural controls, densities, intensities and criteria specific to each implementing PUD district provided for in Policy 10.1.2 [L].
- Specific criteria related to development districts, transportation, access management, architectural controls and specific development standards will be contained within the applicable LDRs implementing PUDs.
- The mapped open space requirements will count as the open space required in the EMO/EMA. Any open space dedicated outside the mapped area must meet all EMO/EMA requirements. The 10% site design alternative of the EMO/EMA will not be allowed in the Southeast Sector Planning Area
- Parcels that contain significant grades may be developed as long as best management practices are used, such as off-grade construction, minimum-grade changes and structures designed to accommodate the slopes.
- All land uses that border the study area shall be consistent with the adjacency requirements in the Comprehensive Plan.
- Access to canopy roads can only be permitted for low-density or large-lot single-family residential uses and only if there is no access to an alternative roadway and one cannot be secured. Roadways within the Southeast Sector Plan will be designed so that access to canopy roads will not be necessary.
- With the approval of the regulating authority, individual small closed basins within the DRI boundary may be aggregated into larger closed basin perimeters. The closed basin requirements of the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) will apply within these larger closed basin areas, however, the Developer will have the flexibility to convey water between the smaller depressions within the boundary of the individual aggregated closed basin perimeters. Inter basin transfers out of any aggregated closed basin perimeter will not be allowed without a variance from the inter basin transfer restrictions in the EMO/EMA. Such a variance may be approved only if condition (c) of (3) of subsection 4.2.(3)(c) of the EMO/condition (c) of Article VII Section 10-188 of the EMA is met. If the receiving basin is itself a closed basin, pre/post volume control and all other closed basin requirements of the EMO/EMA will apply to the receiving basin.
- The applicant may request approval for a minor amount of development that may proceed prior to the issuance of the final development order. This development will consist of a sales office, limited commercial/office development and a limited number of model homes. This area will not exceed 25 acres (exclusive of

right of way) and will meet access, environmental and Comprehensive Plan policy requirements. The specific amount of development that can occur pursuant to this policy shall be identified in the DRI Development Order.

Policy 1.6: [L] – Implementation

(EFF. 5/20/96; REV. EFF. 8/25/08)

A framework for detailed implementation of the development standards and requirements will be contained in the implementing PUDs. They shall include but not be limited to:

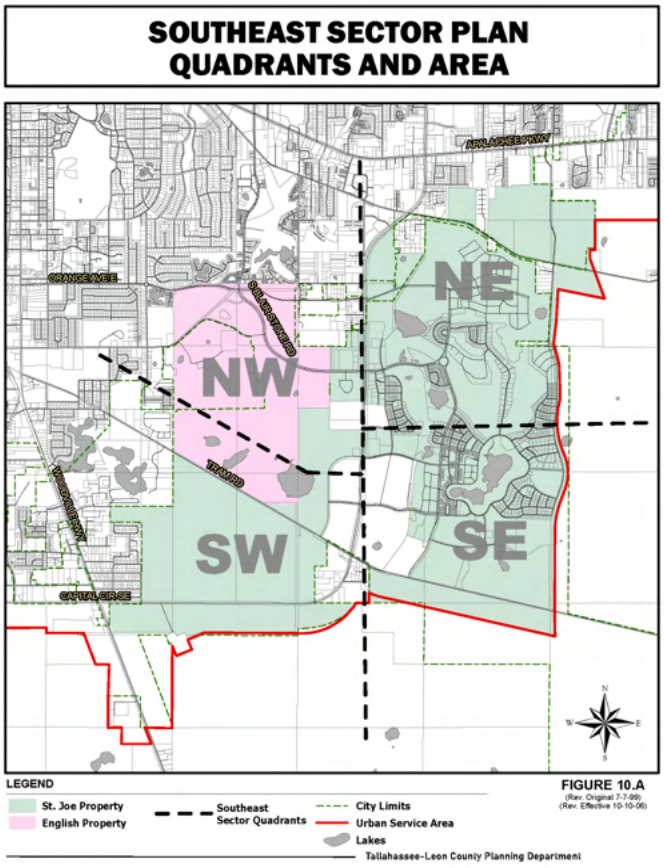
- Detailed definition of each district area in the zoning code. Also included will be design, development, transportation and density requirements for each district in sufficient detail to accomplish the intent of each district.
- Detailed criteria developed in order to adequately implement all the bicycle, pedestrian, access management and roadway design guidelines listed in the transportation guidelines policy (10.1.3).
- Access management criteria developed and implemented through the zoning code. It shall address access for all modes of transportation and shall include but not be limited to pedestrian, bicycle, mass transit, emergency vehicle, disabled, and car/van pooling.
- Unless otherwise specified in the Southeast Sector Plan amendment, the procedures and requirements in the Comprehensive Plan will be applicable to this area.

Policy 1.7: [L] - Specific Southeast Sector Land Development Regulations (EFF. 5/20/96)

The LDRs related to specific requirements will be amended to reflect any criteria or requirements related to environmental constraints specific to the Southeast Sector Plan guidelines, as adopted in the Comprehensive Plan.

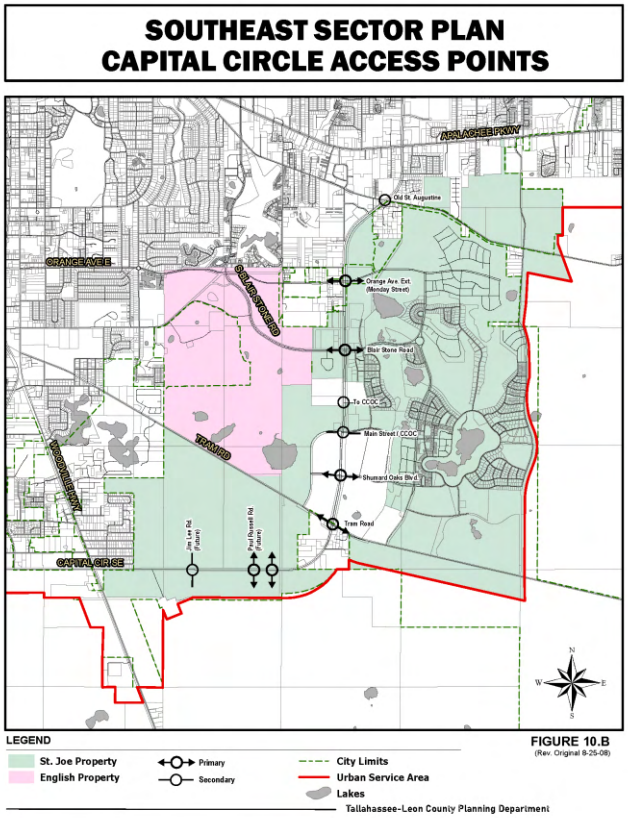
Policy 1.8: [L] - Agriculture and Silviculture Uses (REV. EFF. 7/7/99)

It is the intent of the requirements in this amendment to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.



(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Southeast Sector Planning Area.
(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Southeast Sector Planning Area, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the

site plan or subdivision plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the subdivision or site plan and to all land included in these parcels, such as land proposed to serve as buffer or open space.



(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Southeast Sector Planning Area in accordance with "1993 Silviculture Best Management Practices," Florida Department of Agriculture and Consumer Services, or its successor, and existing local government ordinances.

(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

Welaunee Critical Area Plan

WELAUNEE CRITICAL AREA PLAN

Goal 1: [L] (EFF. 12/10/02)

Guide planned development within the Welaunee Critical Planning Area through implementation of a critical area plan which includes a mixture of integrated land uses that are predominantly self-supporting rather than dependent upon public funding, places a greater emphasis on pedestrian mobility and transportation alternatives, provides new employment opportunities near major transportation arteries and protects natural systems in an urbanized setting.

Objective 1.1: Planned Development through 2020 (EFF. 12/10/02)

By 2020, the Welaunee Critical Planning Area may develop in the portions which are south of Interstate 10 ("Toe") and south of Miccosukee Road and north of U.S. 90 ("Heel") with a development pattern that includes predominantly walkable neighborhoods, mixed-use centers, a major employment center, diversity of housing choices, protection of conservation and preservation areas, and a transportation system which accommodates both vehicular and non-vehicular transportation.

Policy 1.1.1: Plan Overview for Toe and Heel

(EFF. 12/10/02; REV. EFF. 7/20/05; REV. EFF. 8/27/17)

The Toe and Heel shall develop as new mixed-use communities that provide employment opportunities, protect natural resources in an urbanized setting and emphasize pedestrian mobility and transportation alternatives. The intent of this policy is to locate employment and shopping in close proximity to residential land uses, provide activities that serve area residents as well as shoppers and employees from outside the area, offer housing to diverse socio-economic groups, establish recreation, educational, and cultural activities nearby, reduce automobile dependency of residents and employers, place public transportation facilities in population and employment centers, and protect natural systems within the context of a mixed-use built environment. The intent of this policy will be achieved through phased development consistent with these guidelines:

(1) A buildout population of approximately 5,950 for the Toe and 4,600 for the Heel.

(2) A buildout employment of approximately 1,240 jobs in the Toe and 3,560 jobs in the Heel.

(3) Development which reflects the following general allocation of land uses on an acreage basis:

(A) Residential uses on 35 percent to 45 percent of the Toe and 30 percent to 40 percent of the Heel.

(B) Retail and office uses on 3 percent to 8 percent of the Toe and retail, office and light industrial uses on 15 percent to 25 percent of the Heel.

(C) Primary open space and recreation uses (excluding the Miccosukee Canopy Road Greenway) on 15 percent to 25 percent of the Toe and 20 percent to 30 percent of the Heel.

(D) Community facilities and institutional, educational, civic and similar uses on 15 percent to 25 percent of the Toe and 10 percent to 20 percent of the Heel.

(4) The Toe and Heel may develop in phases consistent with necessary infrastructure and services and, for the Heel, consistent with the phasing schedules on Table 13-2, which is based on projections of

densities and intensities of use derived from the corresponding acreage. Sub phases or stages of each phase may be developed in separate PUDs. The Toe and the Heel may be developed concurrently. Table 13-2 is attached as part of this Objective.

(5) A comprehensive plan amendment shall be required in order to exceed the projected total number of residential units or the projected total nonresidential square footage for the Heel, as set forth in Table 13-2. Such an amendment shall be consistent with the requirements of Objective LU 6.2 and its supporting policies.

(6) Development will comply with any ordinances in effect at the time of development that address the need for affordable housing. In addition, development shall comply with any other applicable requirements at the time of development.

(7) Specific guidelines and requirements for land use categories, transportation, access management, and other specific design standards shall be included in one or more PUD Concept Plans applicable to the Toe or Heel, respectively. Each PUD Concept Plan shall be adopted by the local government with jurisdiction before any development may take place on the parcel or tract included in the PUD Concept Plan, except as otherwise allowed pursuant to Policy LU 6.2.4. Each PUD Concept Plan shall be consistent with development guidelines and general design standards herein.

(8) Land Use Goal 13, its supporting objectives, policies and data and analysis, and all activities undertaken leading to and including adoption, is not intended to be considered evidence of a unified plan of development for purposes of §380.0651(4), F.S.

(9) The Toe and Heel will be developed with the infrastructure required to serve permitted development, including but not limited to water, sewer, stormwater management and on-site and off-site transportation mitigation, consistent with this Comprehensive Plan and all applicable regulations.

(10) Development within the Toe and Heel shall be aggregated under the City's concurrency regulations, as currently interpreted and applied by the City; unless, at some time in the future, the concurrency regulations are revised so that aggregation is not required for such development.

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.l.9.

Policy 1.1.2: Primary Open Space Systems and Greenways (EFF. 12/10/02; REV. EFF. 7/20/05)

The primary open space systems for the Toe and Heel are defined as connected, continuous networks of open space. They constitute fundamental building blocks of these planned communities and are intended to serve multiple purposes in an urbanized setting, including but not limited to protection of conservation and preservation areas. Primary open space systems may include but are not limited to conservation and preservation areas, buffers for environmentally sensitive areas, pathways to facilitate pedestrian and bicycle mobility, aesthetic open space, passive recreation opportunities and community gathering places. Primary open space systems, together with

other green spaces set aside to meet the Urban Forest and landscape requirement shall also meet the requirements of the comprehensive plan, Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. The intent of this policy will be achieved through implementation of the following guidelines:

(1) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by policy LU 6.2.4, a Natural Features Inventory consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable, shall be submitted for the entire Toe or the entire Heel respectively.

(2) Credits for open space, wetland mitigation, slope mitigation, stormwater management or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Toe, or Heel, respectively.

(3) Areas with severe and significant slopes that are not located in the primary open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan, Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable.

(4) Wetlands, watercourses and water bodies, except Dove Pond, shall be protected by a 50-foot natural buffer from the jurisdictional wetland line where adjacent to developable land. If Dove Pond is not included as part of a regional stormwater management system to provide flood protection for downstream off-site properties as provided by Policy LU 13.1.5 and Policy LU 13.1.7, then Dove Pond shall be protected by a 50 foot natural buffer from jurisdictional wetlands where adjacent to developable land.

(5) The primary open space systems shall be open to the general public and be designed to provide connections with the Miccosukee Canopy Road Greenway at multiple locations, and to integrate internal recreational multi-use paths with the greenway's trails. Connections to future regional greenways shall be considered in the design of the primary open space systems.

(6) The primary open space systems shall be designed to provide additional buffering as established in PUD Concept Plans for designated canopy road protection zones, in addition to the required 100-foot setback, where feasible.

(7) The primary open space system in the Heel may include a portion of the existing Miles Johnson Road with the consent of the local government with jurisdiction and construction of new roads adjacent to and on each side of the Miles Johnson Road roadbed and canopy.

(8) Primary open space may be privately owned, or be dedicated to the public by conveyance to a general- or special-purpose local governmental entity; or be designated as part of the statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the conservation and preservation areas in accordance with local government regulations.

(9) The primary open space systems shall each have a management plan approved

by the local government with jurisdiction in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of the primary open space systems, including any preservation or conservation areas located within them, shall be provided by conservation easements and other measures consistent with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, except as otherwise provided by Policy LU 13.1.5 and Policy LU 13.1.7. Conservation easements within the City will be required consistent with City Growth Management Department's written policy. Conservation and preservation areas placed in conservation easements may be used toward satisfying the urban forest/ landscaping requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(10) Acreage in the primary open space systems shall be counted toward satisfying the open space requirement established in PUD Concept Plans as provided by Policy LU 13.1.7.

(11) The following guidelines shall apply to uses within the primary open space systems as established in PUD Concept Plans:

(A) Passive recreation improvements that are natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular and pedestrian access only, provided these activities are reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.

(B) Wildlife management areas may be included in the primary open space systems with protective measures addressed in the management plans, in accordance with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(C) Public roads and utilities may cross through the primary open space systems if no alternative route can be secured and impacts are minimized. Except for existing roads and specifically located existing road access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3, Toe Generalized Transportation Plan and Figure 13-4, Heel Generalized Transportation Plan, are approximate.

(D) Stormwater management facilities may be located in the primary open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code

or the Leon County EMA, whichever is applicable. Dove Pond may be utilized as part of a regional stormwater management system to provide flood protection for downstream off-site property owners in the Tri-Basin Study Area as provided the criteria in Policy LU 13.1.5 (4) and Policy LU 13.1.7 are met. Each other stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. If stormwater facilities are contained within the primary open space, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. Conservation and preservation areas are not to be used as conveyances for increased stormwater rates from development. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation and/or preservation areas.

(E) Access facilities for canoes and other watercraft without internal combustion engines may be located in the primary open space system. Fueling facilities shall not be allowed. If access facilities are located in conservation or preservation areas these activities shall be reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.

(12) The cemetery in the Toe shall be protected as provided by state law. The churches owning the cemetery should fence the cemetery and prohibit disturbance.

Policy 1.1.3: Land Use (EFF. 12/10/02; REV. EFF. 7/20/05; REV. EFF. 8/27/17)

The Toe and Heel shall contain an integrated mixture of uses that allows a broad range of residential, commercial, office, employment, recreation and civic, institutional and community uses with varying densities and intensities of use. The intent of this policy is to create a community pattern of multiple neighborhoods that are compact and walkable, with a mixture of uses, diversity of housing types and prices, and interconnected fine-grained street systems. A mix of uses should be encouraged throughout each phase of development and at buildout. Neighborhood densities and development intensities generally should be arranged in a hierarchical continuum radiating from center to edge. Pedestrian accessibility should be given precedence over automobile convenience as established in PUD Concept Plans.

(1) Land uses in the Toe and Heel shall be assigned on the basis of the following categories as established in PUD Concept Plans:

(A) EMPLOYMENT CENTER

Employment centers shall be located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities. Employment centers are intended to

contain a mix of uses and not be a single-use environment. They shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. An employment center shall range in size between 15 acres and 150 acres. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed except when located above the ground floor in mixed-use office buildings.

Development intensities shall range from 8,000 square feet per acre to 15,000 square feet per acre. Ground-floor, pedestrian-friendly uses should be included to provide walk-to shopping opportunities. A minimum five percent on-site open space requirement shall be required for each preliminary plat in an employment center.

(B) TOWN CENTER

Town centers shall be planned as compact, efficient nodes. Traffic calming measures such as onstreet parking, buildings close to the road with parking in back, streetscape, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. A town center shall range in size between 10 to 30 acres and contain uses that serve surrounding neighborhoods as well as those traveling through the area. Uses shall be mixed horizontally and vertically to the maximum extent feasible. It is the design intent to plan for multiple storefronts and multiple retailers in town centers so all of the available retail space is not aggregated into one or two “big-box” stores. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, and civic, religious and institutional uses (including day care services for children and adults).

Development intensities in town centers shall range from 8,000 square feet per acre up to 20,000 square feet per acre. Residential densities shall be allowed up to 16 dwelling units per acre with no minimum density required. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Town centers shall be planned on a block system with a gridded road network and on-street parking.

Stormwater management facilities shall be located outside of town centers to promote a compact, pedestrian-oriented development pattern except where alternative sites for stormwater facilities are not reasonably available. Community open space in the form of public squares and greens shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat.

(C) NEIGHBORHOOD CENTER

Neighborhood centers shall allow small retail, specialty retail, office, restaurants, services, residential and other uses (including day care services for children and adults) that

support residential uses within a neighborhood. These centers are also intended to function as a neighborhood focal point and are envisioned to have churches, town squares, and other civic, religious, and institutional uses. The neighborhood centers shall range in size from 5 to 8 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape, and other such solutions, shall be utilized to create a pedestrian-friendly, walkable center.

Development intensities in the neighborhood center shall range from 4,000 square feet per acre to 12,500 square feet per acre. The maximum residential density in the neighborhood center shall be 16 units per acre. No minimum density shall be required. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens shall be planned as the focal point of a neighborhood center. No minimum on-site open space shall be required for each preliminary plat.

(D) MULTI-FAMILY RESIDENTIAL

Multi-family residential areas shall include residential units with a maximum density of 16 units per acre and a minimum density of 8 units per acre. Allowable uses include town homes, apartments, condominiums and other multi-family uses, single-family attached and detached residential units, office as a ground-floor use with residential uses above or in a live-work unit, civic, religious and institutional uses, infrastructure including stormwater management facilities, parks and recreation. A minimum 10 percent on-site open space shall be required on each preliminary plat.

(E) RESIDENTIAL HIGH DENSITY

Residential high-density areas should be within easy walking distance of town and neighborhood centers and/or arranged along either side of some of the internal roads. The maximum allowable density shall be 10 units per acre and the minimum density should be 4 units per acre. Allowable uses include residential, civic, religious and institutional uses, parks and recreation, and infrastructure including stormwater facilities. A minimum of 10 percent on-site open space shall be required on each preliminary plat.

(F) RESIDENTIAL MEDIUM DENSITY

Residential medium density areas shall include single-family residential uses up to a maximum density of 4 units per acre with a minimum density of 2 units per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. These areas shall have an interconnected local road system with a range of lot sizes. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(H) RESIDENTIAL LOW DENSITY

Residential low-density areas shall include single-family residential uses with a maximum density of 2.5 units per acre and a minimum of 1 unit per acre. Allowable uses include

residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(I) RESIDENTIAL ESTATE

Residential estate areas shall include single-family residential uses up to a density of up to 1 unit per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(J) SCHOOLS AND COMMUNITY USES

The school and community uses category is intended for public and private schools, as well as a broad range of community, civic, religious and institutional uses, including but not limited, to libraries, fire stations, police stations, civic educational centers, places of worship and supporting uses, community centers and clubhouses. School support facilities are also allowable, and include but are not limited to, play fields, gymnasiums, and other education-related uses. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(2) Land uses should develop on the Toe, shown in Figure 13-1, consistent with the following locational criteria as established in PUD Concept Plans:

(A) One or more town centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.

(B) One or more neighborhood centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.

(C) Town and neighborhood centers shall be located within a one-quarter mile walking radius from the majority of the denser residential areas.

(D) Town and neighborhood centers, higher-density residential areas and the primary open space system shall be located proximate to school and community uses when feasible.

(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space systems when feasible.

(F) Residential medium density areas generally shall be located within one-quarter mile walking distance from town and neighborhood centers.

(G) Residential low density and residential estate areas shall be located outside the one-quarter mile walking radius from town and neighborhood centers. Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either residential low density or residential estate.

(H) Institutional uses (including but not limited to an elementary school, senior citizens' activity center, assisted living facility, adult living facility, rehabilitation center, and adult care/memory unit) may be located in any land use district in the Toe.

(3) Unless developed pursuant to Policy LU 13.1.9, land uses should develop on the Heel, shown on Figure 13-2, consistent with the following locational criteria as established in PUD Concept Plans:

(A) Employment centers should be located as follows:

(i) An employment center should be proximate to the interchange of Interstate 10 and U.S. 90 and be compatible with nearby residential and mixed-use development. This employment center shall have direct access to an arterial, which will traverse the Heel.

(ii) An employment center should be located in the southern section of the Heel with direct access to U.S. 90. To minimize traffic loadings on U.S. 90, this employment center shall be connected to the Heel by internal roadways.

(B) No more than one town center may be located in the central section of the Heel proximate to residential areas. Employment centers should be located preferably within a one-quarter mile walking radius of the town center to provide restaurants, services, retail and other uses for employees.

(C) No more than two neighborhood centers may be located in the northern section of the Heel within a one-quarter mile walking radius of nearby residential development. No more than one neighborhood center may be located in the central section of the Heel.

(D) Town or neighborhood centers shall be located at the center of a one-quarter mile walking radius from the majority of the denser residential areas.

(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space system when feasible.

(F) Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either single-family residential low density or single-family residential estate.

(G) Residential estate areas should be located in the northeastern section of the Heel adjacent to existing estate-type rural residential areas on adjacent lands.

Policy 1.1.4: Transportation

(EFF.12/10/02; REV.EFF.7/20/05; REV. EFF. 8/27/17)

The transportation systems on the Toe and Heel, in addition to the arrangement of land uses, shall be designed to capture internal trips, promote alternatives to single-occupancy vehicle travel and support a mixed-use development pattern. The transportation network for the Toe and Heel shall support and enhance livable community concepts while meeting level of service standards. It is the intent of this policy to create communities and

supporting transportation systems that encourage walkability and pedestrian accessibility, provide a road network with connectivity on-site and to surrounding areas, relieve pressure on canopy roads, minimize environmental impacts and encourage transit and other modes of transportation. Except for existing roads and specifically located existing access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3 Toe Generalized

Transportation Plan and Figure 13-4 Heel Generalized Transportation Plan are approximate.

(1) These general transportation guidelines shall apply on the Toe and Heel as established in PUD Concept Plans and shown in Figure 13-3 and Figure 13-4, respectively:

(A) A fine-grained network of internal roads shall provide alternative travel routes and ensure that all roadways operate at acceptable levels of service at buildout.

(B) All land uses shall provide for alternative modes of transportation, with connections to the transit hub and bus shelters. The nature of and extent of any required accommodations shall vary based upon business size.

(C) Recreational and alternative transportation multi-use paths shall be planned internally for bicycle and pedestrian travel and shall be incorporated into the primary open space systems when feasible. The paths shall accommodate bicyclists, pedestrians and other forms of recreational use and connect to the Miccosukee Canopy Road Greenway at multiple locations consistent with the Miccosukee Canopy Road Greenway Management Plan.

(D) Multi-modal facilities (for motorists, cyclists, and pedestrians) shall be provided on all collector and arterial roads.

(E) Traffic-calming measures shall be utilized on local roads where significant pedestrian activity is expected.

(F) All access roads through a designated canopy road protection zone shall minimize disturbance to the canopy and understory in consultation with the City's Urban Forester. Utilities shall be collocated in these access roads when feasible.

(G) Transit shall be encouraged through planning and design by focusing density in areas where transit can serve the largest number of potential passengers. Bus shelters shall be provided by the developer at locations designated by Taltran.

(H) The road network in the Toe shall:

(i) Promote and enhance a livable community pattern, including mixed use and a pedestrian environment;

(ii) Protect the adjacent canopy roads by relieving traffic pressure on them;

(iii) Enhance the scale and pedestrian accessibility of town and neighborhood centers along Welaunee Boulevard, and

(iv) Provide for adequate road capacity to serve the development.

(I) Whenever possible, neighborhoods need to be interconnected and not solely dependent upon Welaunee Boulevard for ingress and egress. The street pattern should be planned to accommodate the highest frequency of street crossings in the town and neighborhood centers with decreasing frequency through residential areas and the least

number of crossings in low density or "country" areas.

(J) No residential driveways shall connect directly to Welaunee Boulevard or the Shamrock South extension on the Heel. Direct access to canopy roads shall not be permitted for any residential or non-residential uses. Roadways within the Toe and the Heel will be designed so road access through designated canopy road protection zones will not be necessary except as otherwise expressly allowed in Policy 1.4.

(2) The following transportation guidelines shall apply in the Toe as established in PUD Concept Plans and shown in Figure 13-3:

(A) A transit hub for the transfer of passengers between bus routes shall be provided in a town or neighborhood center. The transit hub shall include facilities to accommodate up to four buses on a site not to exceed two acres and which is adjacent to available parking that can accommodate park and ride vehicles.

(B) Road access to the Toe from Miccosukee Road shall occur only within the existing road access easements across the Miccosukee Canopy Road Greenway at Arendell Way and Edenfield Road. In addition, road access to the Toe from Miccosukee Road at Dempsey Mayo within the existing road access easement may be approved in a PUD Concept Plan if it is determined by the local government with jurisdiction, based on analysis, that such a connection would have a desirable impact on the Miccosukee Canopy Road. All impacts to the canopy road protection zone from such access roads shall be minimized.

(C) Road access to the Toe from Fleischmann Road shall be provided in accordance with City standards and subject to City approval.

(D) Road access to the Toe from Centerville Road shall be provided at one location.

(E) Welaunee Boulevard shall be designed consistent with a mixed-use development pattern and a pedestrian-friendly environment.

(i) It is the intent to promote the Welaunee Boulevard corridor as a "livable" roadway that supports and enhances a pedestrian-friendly environment. The character of this roadway, and the land uses along it, should be protected to ensure that strip development and auto-dependent land uses do not occur. Welaunee Boulevard should be designed to minimize changes to the natural contours of the landscape and vegetated areas along its length. Welaunee Boulevard should be designed so that the character of the roadway changes along its corridor.

(ii) In the "town" sections, Welaunee Boulevard should have a narrower right-of-way with roadway sections to be determined at the time of the PUD Concept Plans which may include on-street parking. Buildings should be placed close to the right-of-way with parking located behind. Pedestrians should have priority in the town

and neighborhood centers. The highest number of road connections from the adjacent street network should occur in the town sections. Higher density residential uses and non-residential uses should be planned in the town sections.

(iii) In the "country" sections, land uses along the roadway should be lower density residential or open space. In these country sections, the design of the road shall minimize environmental impacts by utilizing split profile sections and wide medians to respond to topography and preserve vegetation. Right-of-way width shall vary consistent with the character of the area it is traversing while meeting level of service demands. Right- -of-way in these areas shall accommodate medians with landscaping and may provide for an "eyebrow" road or, if necessary, accommodate a split-section profile for the purpose of minimizing environmental impacts.

(F) Welaunee Boulevard shall connect to an interchange with Interstate 10 subject to approval by Federal Highway Administration and Florida Department of Transportation. The interchange of Welaunee Boulevard and Interstate 10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange, which supports a gridded street system and city blocks on the south side of I-10. The gridded street system should serve to divert traffic onto a network of town center streets and should support a pedestrian environment. Until an interchange is approved and constructed, Welaunee Boulevard may pass over Interstate 10.

(G) Construction of Welaunee Boulevard shall be phased to accommodate transportation impacts from approved development of the Toe. The roadway phases shall be consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement) and shall be established in PUD Concept Plans in a manner that complies with the adequate public facilities requirements of this comprehensive plan and the land development code.

(3) The following transportation guidelines shall apply in the Heel as established in PUD Concept Plans and shown in Figure 13-4:

(A) Road access to the Heel from U.S. 90 shall occur in compliance with Florida Department of Transportation rules including the Shamrock South extension, which will traverse the Heel.

(B) Contingent upon approval by the Tallahassee-Leon County M.P.O., the Shamrock South extension between Miccosukee Road and U.S. 90 will be shown on the 2025 updated long-range transportation plan as a component of the cost-feasible plan, consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Service Agreement).

(C) Road access to the Heel from Miccosukee Road shall occur only at the existing Miles Johnson Road intersection and the Shamrock South extension, which will traverse the Heel, including the Miccosukee Canopy Road Greenway.

(D) Two roads may be constructed adjacent to the Miles Johnson Road roadbed and canopy if the local government with jurisdiction approves of incorporation of the existing Miles Johnson Road into the primary open space system.

(4) In PUD Concept Plans, the local government with jurisdiction shall require development on the Toe and Heel, respectively, to implement Transportation Demand Management (TDM) strategies, as appropriate, to reduce single-occupancy vehicle trips. Such strategies may include, but are not limited to, alternative work schedules, transportation allowances (carpool and vanpool programs), guaranteed ride home programs, telecommuting, transit supportive facilities (bus stops, shelters, etc.), and additional bicycle and pedestrian facilities and equipment.

Policy 1.1.5: Public Facilities

(EFF. 12/10/02; REV. EFF. 7/20/05)

Public facilities shall be provided to serve residential and non-residential uses on a phased basis consistent with the level-of-service and availability standards of this comprehensive plan. The intent of this policy is to provide infrastructure needed to serve development that is predominantly self-supporting rather than predominantly dependent upon public funding consistent with the Urban Services Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement). The intent of this policy will be achieved through implementation of the following guidelines:

(1) Potable water, sanitary sewer, electricity and natural gas service shall be provided to development on the Toe and Heel pursuant to the existing Urban Services-Development Agreement.

(2) All stormwater management facilities shall be designed to meet treatment standards for Outstanding Florida Waters (OFW) (i.e. the first .75 inches of rainfall) or the applicable local standard, whichever is greater. Maintenance responsibility for all stormwater management facilities shall be provided as established in the Stormwater Facilities Master Plan and the Urban Services Agreement. Facilities which are dedicated to the City must be constructed to City standards.

(3) Dove Pond may be incorporated into a regional stormwater management system and be utilized for the storage of treated stormwater to provide flood protection for downstream off-site property owners provided:

(A) It can be shown through the completion of an Environmental Impact Analysis (EIA) incorporated into a Stormwater Facilities Master Plan (SFMP) that, with any increase in flood volume or flood stage, the wetlands and associated conservation and preservation areas are minimally impacted.

(B) Such use may be undertaken only with the landowner's express approval.

(C) Public agencies shall pay a pro rata share of capital costs based on the off-site stormwater runoff to be stored in

Dove Pond during flood events, provided the landowner makes available the necessary land or rights of use at no cost to the public contemporaneous with issuance of a final local development order which establishes and allocates buildout stormwater capacity for the Toe.

(D) Local government funding shall not be utilized for the portion of any stormwater management facilities necessary to accommodate on-site development.

(E) Criteria in Policy 1.7 are also achieved.

(4) To provide flood protection for downstream off-site property owners in the Tri-Basin Study Area, inter-basin transfers of stormwater may be permitted between sub-basins of the Welaunee Closed Basin and from the Welaunee Closed Basin to the Lafayette Oaks and Pedrick Closed Basins through a public conveyance system. Such transfers may occur only from Dove Pond as provided by this policy and Policy LU 13.1.7 and shall be deemed consistent with Policy 1.1.5 [SM], Policy 2.2.5 [C] and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, when they comply with these criteria:

(A) Approval by the local government with jurisdiction of a regional stormwater management plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to water quality, quantity and rate of discharge due to inter-basin transfers to the receiving watershed.

(B) Approval of public funding, in an adopted local government budget, for off-site stormwater management facilities required by the regional plan.

(5) Facilities which discharge to or from an isolated or aggregated closed basin shall provide storage for the post-development increase in runoff volume for the 100-year, 24-hour critical storm.

(6) Facilities which discharge to Lake Lafayette shall provide both treatment and attenuation for storms consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(7) The landowner shall reserve for future dedication, to the City of Tallahassee, a site for fire protection and emergency services, not to exceed two acres.

(8) Unless developed pursuant to Policy LU 13.1.9, a 24-acre site for a 500-pupil elementary school for Leon County Schools shall be reserved for future dedication to the Leon County School Board in the Heel proximate to residential areas, a town or neighborhood center and the primary open space system, with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.

(9) Public facilities and improvements necessary to serve development on the Toe and Heel may be financed, planned, established, acquired, constructed, reconstructed, enlarged, extended, equipped, operated or maintained by one or more community development districts subject to the requirements of Chapter 190, Florida Statutes.

(10) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by Policy LU 6.2.4, a Stormwater Facilities Master Plan (SFMP) shall be prepared by the applicant and approved by the local government for the entire Toe and the entire Heel. The SFMP shall accommodate stormwater flows from full build out conditions from any upstream offsite property and the entire Toe or the entire Heel, as applicable. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance, establish infrastructure requirements necessary to manage stormwater in compliance with local, state and federal regulations, document the phasing, implementation and easement reservations necessary to serve full build-out and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land use, soils and topographic data, the conceptual land use plan, stage and water quality monitoring data and the applicable results and findings of the Natural Features Inventory and Environmental Impact Assessment. The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under full build-out conditions. Flood extents delineated by the SFMP shall allow identification of the 100-year flood exclusion area. No habitable structures shall be constructed within the post-development (full build-out) 100-year floodplain. The SFMP's scope of work shall be approved by local government prior to development of the SFMP.

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.1.9.

Policy 1.1.6: General Design Standards

(EFF. 12/10/02; REV. EFF. 7/20/05)

PUD Concept Plans shall incorporate design standards that will insure and guide mixed-use, integrated development that is pedestrian-friendly. In addition to the general design standards set forth in other policies, which support Land Use Objective 13.1, PUD Concept Plans shall be consistent with these general design standards:

(1) Sidewalks shall be provided throughout the Toe and Heel as follows:

(A) On both sides of Welaunee Boulevard. Sidewalks shall also be provided on both sides of collector roads and arterial roads in the Toe.

(B) On both sides of the Shamrock South extension which will traverse the Heel and on all other arterial and collector roadways in the Heel.

(C) On both sides of all streets in employment centers, town centers, and neighborhood centers.

(D) On one side in residential low-density and residential estate areas.

(E) On one side (fronting residences) of the two roads running parallel to Miles Johnson Road if it is closed to through traffic and incorporated into the primary open space system.

(F) Sidewalks shall be provided on both sides of streets in residential medium-density and residential high-density areas.

(2) On-street parking shall be accommodated where feasible in neighborhood and town centers and shall be credited toward parking requirements as specified in PUD Concept Plans.

(3) In town and neighborhood centers, parking shall be provided in the rear of buildings to the maximum extent feasible. Buildings shall be oriented to the street and designed with minimal setbacks from the road to promote a pedestrian-friendly environment. Criteria for a variance from build-to and setback lines may be established in PUD Concept Plans.

(4) PUD Concept Plans shall include integrated parking management strategies designed to achieve more efficient utilization of parking resources, mitigate peak travel demand and optimize the return on investments in public right-of-way. Integrated parking management strategies may include shared parking plans, short-term parking plans, parking areas "unbundled" from specific buildings, parking spillover prevention measures and time-limit strategies for on-street parking. Reductions from generally applicable parking space standards shall be granted in PUD Concept Plans when justified on the basis of integrated parking management strategies, the mixed-use character of various portions of the development or other professionally accepted methodology.

(5) Town centers shall be designed as a marketplace for a variety of retailers to ensure that not all retail space is aggregated into one or two single "big-box" retail buildings.

(6) Building heights in town centers and neighborhood centers shall not exceed 65 feet from grade. Building heights in other land use categories shall be established in PUD Concept Plans at heights compatible with development in mixed-use centers and other land uses.

(7) Property signage in non-residential areas shall be provided in a coordinated manner that is compatible with the architectural vernacular and scale of development. It shall be consistent with a master signage plan established in PUD Concept Plans.

(8) Landscaping in common areas, residential areas, along roadways and in town, neighborhood and employment centers shall utilize only drought-resistant native plant species in an approved plant list established in PUD Concept Plans.

(9) Landscaping in town centers, neighborhood centers, employment centers and residential areas located within a one-quarter mile walking distance of those centers shall include street trees identified in an approved plant list established in PUD Concept Plans.

(10) Stormwater management facilities shall be designed consistent with the "Stormwater and Erosion and Sediment Control Best Management Practices for Developing Areas" as described in Chapter 6 of the FDEP Florida Development Manual, Appendix F of the

Concurrency Manual and subject to local government approvals. During construction, sediment and erosion control shall be required as specified in Chapter 8 of the "Erosion and Sediment Control Handbook" (Goldman, Jackson, Bursztynsky).

(11) Constructed stormwater management facilities may be utilized to satisfy the open space requirements established in the PUD Concept Plans if the following general design standards are met:

(A) Stormwater management facilities shall be designed and constructed using predominantly non-angular, freeform, curvilinear contouring that visually integrates the facility into the overall landscape design.

(B) Retaining walls may be incorporated to maximize storage volume and to minimize excessive grade changes or tree removal, but may not exceed 50 percent of the limits of the facilities perimeter and may not exceed six feet in height. Terraced side slopes utilizing multiple retaining walls may be used when augmented with landscaping between retaining walls.

(C) Stabilized side slopes exceeding 4:1 slopes shall be planted with either artificial, erosion-resistant materials or with appropriate vegetative cover.

(D) Perimeter landscaping is a part of the design of the stormwater facility for dry retention/detention facilities as well as wet detention/treatment facilities.

(12) Integrated mixtures of land uses shall be located and designed to be consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement and natural access control.

Policy 1.1.7: Allowances

(EFF. 12/10/02; REV. EFF. 7/20/05)

Development shall be designed on the Toe and the Heel to be consistent with the thresholds for impacts established in the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. Notwithstanding any other provisions of this Comprehensive Plan, development of the Toe and Heel may be subject to the following provisions as established in PUD Concept Plans:

(1) To reduce downstream flooding of off-site property owners in the Tri-Basin Study Area, Dove Pond may be utilized for the storage of treated stormwater as provided by this policy and Policy LU 13.1.5. If after the completion of the Environmental Impact Analysis (EIA) and Stormwater Facilities Master Plan (SFMP) it can be shown that impact to the wetlands and associated conservation and preservation areas have been minimized and that the impact to conservation and preservation areas is determined to be greater than 5 percent as allowed in Comprehensive Plan Policy 1.3.11[C], the Public Linear Infrastructure Variance process may be utilized to authorize the public regional stormwater management facility subject to the following:

(A) Local government approval of a regional stormwater plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to wetlands, water quality, quantity and rate of discharge both on-site and off-site due to inter-basin transfers to the receiving watershed.

(B) Approval of public funding, in an adopted local government budget, for

off-site stormwater management facilities required by the regional plan.

(C) Impacts shall be permitted only when demonstrated to be the minimal impacts reasonably necessary to implement the regional plan.

(2) If Dove Pond is not utilized as a public regional stormwater management facility, then use of Dove Pond as a stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(3) To promote creation of the primary open space systems and their integration into the planned mixed-use communities with appropriate credit, the PUD Concept Plans shall establish an open space requirement which includes credit for the primary open space system, protected preservation and conservation areas, areas of constructed landscape and the minimum on-site landscaping required for individual sites set forth in Policy LU 13.1.2. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designed to meet or exceed, on a cumulative basis, the Landscape and Urban Forest requirements in Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. These landscape standards shall include, but not be limited to, standards for provision of street trees in town centers and along public roadways, canopy trees and landscaped islands within parking lots, and special consideration of patriarch tree preservation. These standards will be developed to reflect the intent that town and neighborhood centers will be developed in an urban character with minimized setbacks and an emphasis on dense, mixed-use development. Various land uses in the Toe and the Heel shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5, Environmental Management, Tallahassee and Development Code or the Leon County EMA, whichever is applicable.

Policy 1.1.8: Agricultural and Silvicultural Activities (EFF. 12/10/02; REV. EFF. 7/20/05)

It is the intent of this Policy to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to insure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Toe and the Heel up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Toe and Heel.

(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Toe and Heel, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or sub-division plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the site plan or subdivision and to all land included in these parcels, such as land proposed to serve as buffer or open space.

(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Toe and Heel in accordance with the "2000 Silviculture Best Management Practices" as may be amended from time to time, Florida Department of Agriculture and Consumer Services, and existing local government ordinances.

(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber-harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

Policy LU 13.1.9 Alternative Heel Program

(EFF. 7/20/05)

Notwithstanding any other provision of this comprehensive plan, at the election of the landowner or an authorized developer as much as 800 acres in the Heel as depicted on Figure 13-5 may be developed as a separate project, without regard to other development in the Welaunee Critical Planning Area, with a land use designation of "Residential Estate" and a zoning designation of "Residential Acre." Such development shall be reviewed by the City as a residential subdivision and shall be required to meet all normal and customary requirements for such a development under the City's land development regulations, including but not limited to the EMO. Any portion of the Heel developed under this alternative program shall be exempt from the Critical Area Plan except for the following provisions:

(1) LU 13.1.1(6)
(2) LU 13.1.1(8)
(3) LU 13.1.1(9)
(4) LU 13.1.2(1) as modified
(5) LU 13.1.3(1)(H)
(6) LU 13.1.4(1)(F)
(7) LU 13.1.4(1)(J)
(8) LU 13.1.4(3)(A)
(9) LU 13.1.4(3)(B)
(10) LU 13.1.4(3)(C)
(11) LU 13.1.4(3)(D)
(12) LU 13.1.5(1)
(13) LU 13.1.5(6)
(14) LU 13.1.5(10)
(15) LU 13.1.6(8)
(16) LU 13.1.6(10)
(17) LU 13.1.6(11)
(18) LU 13.1.8

Any portion of the Heel depicted in Figure 13-5 not developed under this alternative program shall be subject to the Critical Area Plan as it otherwise would apply. Uses and maximum densities and intensities of use for such portion shall be allocated pro rata based on the uses and maximum densities and intensities of use on Table 5-2 of the data and analysis report for the "Welaunee Critical Area Plan – Toe and Heel" (Jan. 17, 2002).

Objective 1.2: Development Concept for the Welaunee Arch (EFF. 12/10/02; REV. EFF. 1/11/21)

The intent of the Welaunee Arch Master Plan is to provide an area-wide plan for the portion of the Welaunee Critical Planning Area located north of Interstate-10 and west of Miccosukee Road (i.e. the "Arch"). This master plan sets the standards and guidelines to coordinate one or

more implementing development plans such that the development of the Arch results in a new, integrated community with a variety of land uses, diverse neighborhoods and mixed-use centers, a region-serving activity center, active and passive recreational options, and abundant open space. The development of the Arch consistent with this master plan shall be implemented in phases, connected by a multi-modal transportation system, served by regional, master planned stormwater facilities, and designed in ways that protect natural resources.

Policy 1.2.1: Concept. (EFF. 1/11/21)

This Welaunee Arch Master Plan satisfies the requirements of the Tallahassee-Leon County Comprehensive Plan for a planned development master plan in order to foster development on the Welaunee Arch with a region-serving, mixed-use activity center; residential areas with a strong sense of place and a range of diverse housing choices; transportation choices with linkage to commercial services and jobs; and planned recreation and open space.

Policy 1.2.2: Discourage Urban Sprawl. (EFF. 1/11/21)

The Welaunee Arch is located wholly within the Urban Services Area. Development within the Arch will discourage urban sprawl by, among other things, directing growth to a next-in-line area identified for future urban development since 1990; promoting walkable, connected neighborhoods that support a range of housing choices; implementing a multimodal transportation system that supports the internal capture of transportation trips; creating a balance of residential and nonresidential land uses through integrated, mixed-use centers and diverse housing types in close proximity to nonresidential uses; promoting the efficient and cost-effective provision or extension of public facilities and services; protecting and preserving natural resources; protecting environmentally sensitive lands; and providing public recreation and open space.

Implementation Policy 1.2.3: . (EFF. 1/11/21)

The Welaunee Arch Master Plan shall be implemented by one or more Planned Unit Development (PUD) Concept Plans, Regulating Plans with Form-based Codes, or other implementing plan as allowed by the Comprehensive Plan at the time of development. All such plans are referred to herein as Planned Development Concept Plans or PUD Concept Plans. Such PUD Concept Plans shall be consistent with this master plan and contain guidelines and requirements for land use categories, transportation facilities, access management, and other specific design standards. All PUD Concept Plans shall be consistent with the stormwater facility master plan and with transportation plans for the Phase of the Arch in which they are located, as developed and approved prior to or concurrent with the initial PUD Concept Plan for that Phase. The phasing of development in the Arch shall be consistent with necessary infrastructure and supporting services and the phasing requirements of Policy 13.2.5. Development Phases and PUD Concept Plans shall consider previously approved PUD Concept Plans within the Arch and anticipated development based on Figures 13-5 through 13-7 such that open space, stormwater, and transportation systems are planned and implemented consistent with the Policies in this Welaunee Arch Master Plan portion of the Welaunee Critical Area Plan.

A PUD Concept Plan may address only a portion of a Phase or may address more than one Phase. The minimum size for the initial PUD Concept Plan for any Phase of the Arch shall be 350 acres. Subsequent PUD Concept Plans shall be implemented consistent with this Master Plan

and the applicable implementing plan standards allowed by the Comprehensive Plan at the time of development.

LAND USE

Policy 1.2.4: Land Use Districts.

(EFF. 1/11/21)

The Master Plan forms the basis upon which organizing elements are oriented to convey the overall urban form. Lands within the Welaunee Arch shall be planned for the generalized land uses described in this Policy and Table 1. As depicted on Figure 13-5, the Welaunee Arch shall be designed with the following land use districts:

(1) **Northeast Gateway District –** The intent of the Northeast Gateway District is to provide an area that capitalizes on the location of a potential future interchange with Interstate-10 and Welaunee Boulevard by including well-designed, region-serving commercial and employment uses. The Northeast Gateway District as identified on Figure 13-5 shall be comprised of:

a. Activity Center. An activity center zone shall be a mixed-use zone including between 75 and 280 acres. The activity center zone shall be located east of the residential zone, as generally depicted on Figure 13-5, and no closer than 1,000 feet from the Buckhead subdivision. This zone shall contain a diverse mixture of region-serving commercial, office, hotel, and other non-residential uses with a trade area extending beyond the Welaunee Arch. This zone may also contain higher-density residential and public and civic uses that can contribute to the center's vitality and sustainability. Residential densities in this zone shall have a minimum of 10 dwelling units per acre and a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Non-residential intensities shall range from 4,000 square feet per acre to 30,000 square feet per acre. The mixture of uses shall be 10% to 55% residential and community services uses and 45% to 90% non-residential uses. The activity center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

b. **Employment Center.** An employment center zone shall be a mixed-use zone located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities and shall contain 75

to 280 acres. Employment centers are intended to contain a mix of uses and not be a single-use environment. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed in Employment Center zones except when located above the ground floor in mixed-use buildings. Development intensities of non-residential uses in the employment center zone shall range from 8,000 square feet per acre to 40,000 square feet per acre. This zone shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. The development of a PUD Concept Plan that includes this zone shall include coordination with Star Metro to include preliminary plans for transit connectivity between this zone and other mixed-use zones in the Arch. The employment center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

c. **Residential.** A residential zone shall be located between the Buckhead subdivision and the mixed-use zones as generally depicted on Figure 13-5. This residential zone shall include between 30 and 100 acres. Residential development density shall be no less than 2 dwelling units per acre and not exceed 6 dwelling units per acre. Accessory dwelling units shall not count towards the residential density in this zone.

d. **Open Space/Greenway.** The Open Space and Greenway area within the Northeast Gateway District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with the development standards of Policy 13.2.37. Specifically, an open space zone shall be located along the border with the established Buckhead Neighborhood serving as a buffer between the existing Buckhead Neighborhood and new development in the Arch. This zone shall be no less than 250 feet wide and will include the Welaunee Greenway and existing

utility easements. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(2) **West Arch District** – The intent of the West Arch District is to provide an area with a mixed-use center that serves residents of both Welaunee via Welaunee Boulevard and Killearn Neighborhoods via Shamrock South. It is the intent of this District to allow the highest density and intensity development within the mixed-use center, gradually transitioning to lower densities and intensities as distance from the mixed-use center increases. The West Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the West Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone.

b. Town Center. A town center zone shall be a mixed-use development planned as a compact, efficient node between 20 and 120 acres in size. A town center shall contain uses that serve surrounding neighborhoods as well as those traveling through the area. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, open space, and civic, religious and institutional uses (including day care services for children and adults). The Town Center shall include uses mixed horizontally and vertically. It is the design intent to plan for multiple storefronts and multiple retailers in the town center, so all of the available retail space is not aggregated into one or two "big-box" stores.

Development intensities in the town center shall range from 4,000 square feet per acre up to 30,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 50,000 gross square feet. Residential densities shall be no less than 8 dwelling units per acre up to a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. The mixture of uses shall be 10% to 55% residential and community services and 45% to 90% non-residential uses. Town centers shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back,

streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. Community open space in the form of public squares and greens or urban forest canopy areas shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

c. **Village Center.** A village center zone shall allow small retail, specialty retail, office, restaurants, services, open space, residential and other uses (including day care services for children and adults) that support residential uses within the District. This zone is also intended to function as a neighborhood focal point and is envisioned to have churches, town squares, and other civic, religious, and institutional uses. The village center zone shall range in size from 5 to 50 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape with street trees and landscaping, and other such solutions, shall be utilized to create a pedestrian-friendly, walkable center. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages.

The mixture of uses shall be 0% to 50% residential and community services and 50% to 100% non-residential uses. Development intensities in the village center zone shall range from 4,000 square feet per acre to 20,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 30,000 gross square feet. Residential development in the Village Center shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens or urban forest canopy areas shall be planned as the focal point of a village center. No minimum on-site open space shall be required for each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

d. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood

scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In the neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed 10,000 gross square feet.

e. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use zones that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods. Residential development shall be limited to a minimum of 2 dwelling units per acre with a maximum density of 10 dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway.

f. **Open Space/ Greenway.** The Open Space and Greenway area within the West Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(3) **North Arch District** – The intent of the North Arch District is to provide an area with a mixed-use center that serves residents of Welaunee, Killearn, and the residents along Roberts Road and Crump Road. The North Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the North Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone as defined in the West Arch District policy.

b. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this

neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall be not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. Residential development shall be a minimum of 2 dwelling units per acre and shall not exceed a density of 10 dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the North Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated Open Space.

Additionally, high quality native forests in the North Arch District shall be protected, preserved, and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

e. **Regional Park.** A regional park with active recreation may be located in the North Arch District. If a regional park is designated within this District, it shall be designed to include connectivity with the trail system around any high-quality successional forests/native forests as described in the open space zone for this District.

(4) **Conservation Design District** - The intent of the Conservation Design District is to provide an area that is primarily residential in nature with a small village center. The residential development is intended to be arranged as cluster subdivisions in order to maximize the efficiency of infrastructure

and to preserve environmental features and open spaces. The village center is intended to include non-residential uses in a location that minimizes the number of miles residents drive to meet their daily needs and promote the internal capture of vehicular trips. The Conservation Design District as identified on Figure 13-5 shall be comprised of:

a. **Clustered Residential.** The cluster residential zone shall be comprised of clustered development that sets aside a minimum of 50% open space as a reserve area, comprised of such things as special development zones, preservation and conservation features, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, and stormwater facilities designed as a community amenity. Adjacent open space as designated on Figure 13-5 and consistent with Policy 13.2.37 may be included in the Conservation Design District reserve area calculations for cluster development. The development area shall be the area not set aside as reserve area and shall comprise no more than 50% of the total conservation design district. Within this district, development area shall be located on the least environmentally sensitive areas; be contiguous to the greatest extent practicable; and allow maximum open space to be easily maintained in the reserve area. The development area shall be developed at a minimum of two dwelling units per acre and a maximum of 12 dwelling units per acre. Planned Unit Developments may provide for a density bonus up to 20 dwelling units per acre where more area is set aside than required or where greenways, trails, or other passive recreational opportunities are provided in the reserve area.

The conservation design district shall contain a mixture of housing types. Allowable housing types include single family detached homes, single family attached homes, duplexes, triplexes, fourplexes, courtyard buildings (a 1 to 3.5 story detached structure consisting of multiple side-by-side and/or stacked dwelling units oriented around a courtyard or series of courtyards), and cottage courts (a group 1 to 1.5-story detached structures arranged around a shared court visible from the street). The conservation design district shall not contain greater than 80% of any one housing type. Accessory dwelling units are allowable per City of Tallahassee land development code. Accessory dwelling units do not count towards the overall density and do not count as a different housing type for the purpose of requiring a mixture of housing types. Design standards for this District shall include Dark Sky principles to prevent and reduce light pollution.

The acreage of the reserve area shall be preserved as open space consistent with Policy 13.2.37, shall incorporate existing or planned public or private open space and greenspace to the greatest extent practicable, and

shall be of sufficient size and buffered to ensure the protection of all critical on-site resources that are to be preserved and to accommodate authorized uses which includes natural open space, passive recreation uses (e.g., greenways, picnic areas or open fields), stormwater facilities, or other environmental conservation purposes.

All preservation areas, special development zones, conservation areas, archaeological sites and view-shed areas within designated protection zones for canopy roads shall be incorporated into the reserve area to the greatest extent practicable.

Stormwater management facilities which are otherwise permissible are allowed in the reserve area provided that the facilities are located outside of preservation areas, canopy road zones, naturally forested areas, special development zones, and meet either of the applicable following two standards:

i. Stormwater management facilities shall have side slopes of flatter than 4:1, and/or
ii. Stormwater management facilities shall have appropriate tree and plant species that visually integrates the stormwater facility into the overall reserve area.

All such facilities shall be designed as community amenities, with trails, observation decks, or platforms where appropriate.

b. **Village Center.** The Conservation Design District shall include a Village Center Zone subject to the design standards for a Village Center zone in the West Arch District Policy.

c. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed10,000 gross square feet.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the Conservation Design District includes all open space and reserve area within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with

Policy 13.2.37 and shall be included in the reserve area calculations for cluster development. At a minimum 50% of this District shall be designated as Open Space.

High quality successional forests and native forests as defined in the Tallahassee-Leon County Comprehensive Plan Glossary in the Conservation Design District shall be protected and preserved and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

Core canopy or core forests, as defined in the City of Tallahassee's Urban Forest Master Plan, that is part of the fragmentation class of Core Canopy (>500 acres) and shown on the Preliminary Environmental Map (Figure 13-6), shall be protected, included in the open space area, and shall be connected to greenways and open space that function as wildlife corridors. These areas may be included in the reserve area calculations for cluster development. Potential locations of core forest areas that are part of the fragmentation class of Core Canopy (>500 acres) are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

(5) **Residential Reserve District** - The Residential Reserve District as identified on Figure 13-5 is intended to be residential in nature, arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. This District is also intended to maintain compatibility with established residential development along Roberts Road and Crump Road. The Residential Reserve District shall be subject to the Clustered Residential policy of the Conservation Design District with a maximum density of 6 dwelling units per acre and a minimum reserve area requirement of 60%. The Residential Reserve District shall include open space buffers of a minimum width of 250 feet to Roberts Road and Crump Road that may include the Welaunee Greenway system, open space, and reserve area from cluster subdivision development. The Residential Reserve District may alternatively be established as Open Space through an optional Alternative Development Program as established in Policy 13.2.44.

(6) **Open Space** – Open Space area shall be incorporated into each District. Districts shown in Figure 13-5 include the adjacent open space. The Primary

Open Space System shall be designed as a connected network of open space as generally depicted on Welaunee Arch Map, Figure 13-5, which shall include Conservation and Preservation areas as generally depicted on the Preliminary Environmental Features Map, Figure 13-6, aesthetic open space, Greenways, and the Perpetual Drainage Easement held by the City and County. A minimum of 20% of Phase 1, 50% of Phase 2, 60% of Phase 3, and 40% of the total gross area of the Arch shall be designated Open Space unless offset through the Alternative Development Program in Policy 13.2.44. Conservation and Preservation Areas as defined in Policy 1.3.1 and 1.3.4 of the Conservation Element account for approximately 19% of the overall gross area of the Welaunee Arch. The remainder of the designated open space, which will include approximately 21% of the overall gross area, shall consist of open space incorporated into the development plan for each District or part of the Primary Open Space System. The Open Space Area shall be subject to the design and development criteria in Policy 13.2.37. The Conservation and Preservation Areas shall be subject to the design and development criteria of Policy 13.2.38.

Policy 1.2.5: Phasing.

(EFF. 1/11/21)

Development of the Arch shall be implemented in phases consistent with this plan and necessary infrastructure (including water and sewer) and supporting services (including adequate schools, police and fire service). Phase 1 shall include the Gateway District, West Arch District, and the North Arch District. Phase 2 shall include the Conservation Design District. Phase 3 shall include the Residential Reserve District. A PUD Concept Plan may address only a portion of a phase or may address more than one phase. Phase 1 of the Welaunee Arch must include one Town Center Zone and one Village Center Zone, either of which can be located in the West Arch District or North Arch District.

Phase 2 shall not be developed until 1,500 dwelling units and 150,000 square feet of non-residential uses have been constructed in Phase 1.

Phase 3 shall not be developed until at least 70% of the gross acreage of Phase 2 is included in an adopted PUD Concept Plan. Sub phases or stages of each phase may be developed in separate PUD Concept Plans.

It is the intent that infrastructure improvements occur contemporaneous with development. This timing of infrastructure with development prevents stranded or early investment in infrastructure.

Table 1. Land Uses in the Welaunee Arch

District	Zone	Size	Nonresidential Intensity	Residential Density	Mixture
Northeast Gateway District (Phase 1)	Activity Center	75-280 acres	4,000–30,000 SF/acre	10-20 DU/acre	10-55% residential 45-90% nonresidential
	Employment Center	75-280 acres	8,000-40,000 SF/acre	n/a[1]	n/a[1]
	Residential	30-100 acres	n/a	2-6 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
West Arch District (Phase 1)	Town Center[2]	20-120 acres	4,000–30,000 SF/acre	8-20 DU/acre	10-55% residential 45-90% nonresidential
	Neighborhood	¼-½ mile from Town Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	n/a
	Open Space	Min. 20% of gross area in Phase 1			
North Arch District (Phase 1)	Village Center[2]	5-50 acres	4,000–20,000 SF/acre	4-14 DU/acre	0-50% residential 50-100% nonresidential
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Residential		n/a	2-10 DU/acre	
	Open Space	Min. 20% of gross area in Phase 1			
Conservation Design District (Phase 2)	Village Center	5-50 acres	4,000–20,000 SF/acre	4-14 DU/acre	
	Neighborhood	¼-½ mile from Village Center	Max 20,000 SF/acre	4-14 DU/acre	n/a
	Conservation Design Clustered Residential	Maximum 50% of Conservation Design District	n/a	2-12 DU/acre	
	Open Space	Min. 50% gross area as Reserve Area in			

		Phase 2.			
Residential Reserve (Phase 3)	Residential Reserve Clustered Residential	40% of Residential Reserve District	n/a	0-6 DU/acre	
	Open Space	60% gross area as Reserve Area in Phase 3.			
Open Space[3,4]	Open Space	Minimum of 20% of Phase 1; 50% of Phase 2; no less than 60% of Phase 3; and no less than 40% of total area in Welaunee Arch. Open Space includes Conservation and Preservation Areas, Reserve Area, and Primary Open Space Areas.			
	Conservation/ Preservation[5]	Approximately 900 acres (19% of the Arch)			
	Other Open Space	Approximately 1000 acres (21% of the Arch)			

1. Residential uses permitted only above ground floor in mixed-use buildings

2. Town Center Zone and Village Center Zone are permitted in West Arch District and North Arch District, provided one of each zone is located in Phase 1.

3. Open Space, including Conservation and Preservation Areas and Greenways shall be incorporated into all development Phases.

4. Open Space requirements apply unless offset through the Alternative Development Program in Policy 2.2.44.

5. Precise size and location of Conservation and Preservation Areas to be determined through a Natural Features Inventory.

Policy Development Totals.1.2.6: (Eff. 1/11/21)

Densities and intensities for development of the Arch shall be consistent with Policy 1.2.4 and other policies of this master plan. The maximum development for the Arch shall not exceed 12,500 residential units and 3,000,000 square feet of non-residential development.

Policy 1.2.7: Development Standards for Mixed-Use Zones. (Eff. 1/11/21)

The Activity Center, Employment Center, Town Center, and Village Centers (collectively "Mixed-Use Zones") shall be subject to the following development standards in addition to the requirements of Policy 1.2.4:

(1) PUD Concept Plans that include mixed-use zones shall include specific design standards, public facility standards, and building standards, such that the district develops as a compact, walkable urban district. At a minimum, the form-based code or design standards shall address relationship between building facades and the public realm, the form and mass of buildings in relation to one another, and the scale and types of streets and blocks. Design standards shall also minimize driveway cuts along sidewalks facilities by requiring alleys, shared access points, and/or structured parking facilities.

(2) Development in the Mixed-Use Zones may request a waiver from the requirements in the Environmental Management Ordinance for natural area, landscaping and buffers for the purpose of maximizing intensity and density within the mixed-use zone.
(3) Stormwater detention and treatment facilities for Mixed-Use Zones shall be designed in accordance with applicable standards and should be located outside of a Mixed-Use Zones in order to promote a compact pedestrian-oriented arrangement of land uses. Stormwater facilities may be located within mixed-use zones if alternative sites are not reasonably available outside of mixed-use zones or where stormwater facilities can be integrated with pedestrian friendly environments. PUD Concept Plans shall include design standards for stormwater facilities that are consistent with the intent of the zone.
(4) Building heights in mixed-use centers shall not exceed 65 feet from grade.

Policy Inclusionary housing. 1.2.8:

(EFF. 1/11/21)

Development within the Welaunee Arch shall comply with any ordinances in effect at the time of development that address the need for affordable or inclusionary housing. Each PUD Concept Plan shall include a Housing Plan designed to achieve compliance with the City's Inclusionary Housing Ordinance, or other affordable and inclusionary housing ordinances in effect, by buildout of the area governed by that Concept Plan.

Policy 1.2.9: Housing affordability. (EFF. 1/11/21)

In addition to complying with ordinances in effect at the time of development that address the need for affordable or inclusionary housing, a range of housing choices shall be provided to accommodate diverse income levels, age groups, people with a range of abilities, and housing needs. Granny flats, garage apartments, and other accessory dwelling units will not be included in unit or density calculations or transportation impact analyses. The range of housing options provided shall be based on the land use districts and zones within each District. No land use district or zone within a district that allows residential development shall limit housing types to only single-family detached homes.

In order to promote a range of housing types and choices, the City of Tallahassee shall incentivize the development of workforce housing within ¼-mile of mixed-use zones or transit hubs. The City shall also incentivize the provision of housing for low-income and very-low income families, seniors, and/or people with disabilities. Incentives shall be incorporated into PUD Concept Plans and may include increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures such as the incentives allowed in the City's Inclusionary Housing Ordinance.

Policy Community Facilities. 1.2.10:

(EFF. 1/11/21)

Community Services, Light Infrastructure, Community Parks, and Neighborhood Parks shall be allowed uses in any land use district or zone consistent with the intent of each district and zone.

Policy 1.2.11: Essential Services. (EFF. 1/11/21)

Mixed-use centers and residential neighborhoods shall be designed to facilitate essential services, such as fire, police, and emergency medical services consistent with generally accepted response times. PUD Concept Plans shall include the locations of essential services upon request by and through coordination and formal agreement with the City of Tallahassee and/or the Leon County School Board.

Policy 1.2.12: Landscaping. (EFF. 1/11/21)

All landscaped areas, except athletic playing fields and golf course fairways and greens, shall utilize drought-resistant native plant materials from the "Florida Friendly Landscaping™ Guide to Plant Selection and Landscape Design" or other regionally appropriate plant material guide approved by the City. Landscaping may not include invasive species listed by the Florida Exotic Pest Plan Council. Landscaping in mixed-use and neighborhood zones shall include shade trees planted as street trees. PUD concept plans may include incentives, such as reduced tree mitigation, for shade trees planted as street trees outside of mixed use and neighborhood zones.

Policy 1.2.13: Crime Prevention through Design. (EFF. 1/11/21)

Integrated mixtures of uses shall be located and designed consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement, and natural access control.

Policy 1.2.14: General Compatibility. (EFF. 1/11/21)

Development in the Welaunee Arch shall be compatible with adjoining land uses through measures including but not limited to density and height limitations, setbacks, and vegetative and open space buffers. Unless otherwise specified in this master plan, buffers are not required between or within land use districts in the Welaunee Arch.

Compatibility Policy 1.2.15: with Existing Residential Development. (EFF. 1/11/21)

To facilitate compatibility with the existing residential developments located east of Centerville Road and west of Miccosukee Road that are designated as Residential Preservation or Urban Residential-2 on the Future Land Use Map, land in the Welaunee Arch that is within 1,000 feet of such neighborhoods as measured from the boundary of the neighborhood shall be limited to open space, greenways, and residential uses with a maximum density of 6 dwelling units per acre comparable to the Residential Preservation Land Use Category. Mixed Use Land Use districts shall extend no closer than 1,000 feet from these existing residential developments. The location and size of each specific use category shall be depicted on a Planned Unit Development (PUD) Concept Plan.

Policy 1.2.16: Interim Uses. (EFF. 1/11/21)

Agricultural and silvicultural uses, whether existing or new, shall be an allowed interim use in any area of the Welaunee Arch on which development is planned to occur, up to and until the start of actual construction on the applicable land.

TRANSPORTATION

Policy 1.2.17: Transportation System. (EFF. 1/11/21)

The Welaunee Arch shall be served by a transportation system designed to optimize mobility. Major thoroughfares shall be generally located as depicted on Welaunee Arch Transportation Map, Figure 13-7, with the final location and design to be based upon site-specific environmental, engineering, and related considerations. Thoroughfares connecting through the Arch to areas beyond the Arch shall be arterials designed as boulevards for high vehicular capacity and moderate speeds not to exceed a design speed of 45 miles per hour with sidewalks on both sides of the roadway and bicycle facilities. Thoroughfares connecting mixed use areas within the Arch shall be collectors designed as avenues with high vehicular capacity and low to moderate speeds not to exceed a design speed of 30 miles per hour with sidewalks on both side of the roadway and bicycle facilities. On thoroughfares, a shared use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for the sidewalk on one side of the road and the bike lanes for that facility. Within mixed-use centers and neighborhoods, where feasible based on engineering design criteria and the protection of environmental features, a grid of interconnected streets will provide alternative travel paths. Energy efficiency shall be accomplished in areas that are intended for greater densities and intensities through support of frequent transit service and providing a safe, comfortable and attractive environment for pedestrians and cyclists. Transportation facility needs, including planned future corridors and projected deficiencies on existing facilities surrounding the Arch, resulting from projected development in the Arch as identified through traffic models completed as part of the I-10 Interchange PD&E and/or updates to MPO Long Range Transportation Plans shall be adopted into the applicable Mobility Element policies and/or figures and updates to the Capital Improvements Element when applicable.

Policy 13.2.18: Internal Trip Capture. (EFF. 1/11/21)

The transportation system, along with the mixture of uses, shall be designed to achieve an internal capture of at least 20% of the vehicular trips generated on-site at buildout. To achieve this minimum internal capture rate, mixed-use and neighborhood zones shall be developed with a mixture of uses and higher density residential development located adjacent to non-residential uses. Residential zones shall be connected to mixed use zones by a network of sidewalks, shared use paths, and bicycle facilities designed to provide safe, comfortable transportation options. Transit facilities shall be coordinated with Star Metro to ensure infrastructure that supports connectivity to various transit routes.

Policy 1.2.19: Northeast Gateway/ Welaunee Boulevard. (EFF. 1/11/21)

The Northeast Gateway, which is a major infrastructure project for the entire Welaunee Critical Planning Area, consists of region-serving roads to distribute traffic north, south, east and west from a potential I-10 interchange at Welaunee Boulevard, which was recommended in the Florida Department of Transportation (FDOT) Master Plan Update on February 28, 2013. North of I-10, the roadways that make up the Northeast Gateway include the extension of Welaunee Boulevard from south of I-10 north through the Arch, and the extension of Shamrock South from Centerville Road to U.S. 90 (Mahan Drive). Welaunee Boulevard and Shamrock South Extension are programmed to be constructed by the Blueprint Intergovernmental Agency consistent with the voter-approved Northeast Gateway project and

may be phased based upon trip demand. Within the Arch, both Welaunee Boulevard and Shamrock South Extension shall be designed to function as a complete street to promote mobility for multiple users—pedestrians, bicyclists, motorists, and transit riders of all ages. No residential driveways shall connect directly to Welaunee Boulevard or Shamrock South Extension.

Policy 1.2.20: I-10 Flyover or Interchange. (EFF. 1/11/21)

Welaunee Boulevard shall connect to a flyover across I-10 or a potential interchange, if approved by the Federal Highway Administration, in order to facilitate vehicular movement to Welaunee Boulevard south of I-10. Any flyover or potential interchange shall meet federal requirements to ensure the safe and efficient use of I-10.

Welaunee Boulevard shall connect to a potential interchange with Interstate-10, subject to approval by the Federal Highway Administration and the Florida Department of Transportation. The potential interchange of Welaunee Boulevard and Interstate-10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange that supports a gridded street network and city blocks on the north side of Interstate-10. The gridded street system shall serve to divert traffic onto a network of town center streets and shall support an environment that prioritizes pedestrian mobility. Welaunee Boulevard may pass over Interstate-10 unless and until such time that a potential interchange is approved and constructed.

Policy 1.2.21: Right-of-Way Reservation. (EFF. 1/11/21)

The landowner shall reserve for future conveyance the right-of-way for Welaunee Boulevard, the Shamrock South Extension, and the I-10 Flyover or Interchange as generally depicted on Welaunee Arch Transportation Map, Figure 13-7. The terms of such reservation shall be consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990, as restated and amended. Rights-of-way shall be restricted to transportation facilities and compatible infrastructure.

Policy 1.2.22: Complete Streets. (EFF. 1/11/21)

The transportation system shall be designed with complete streets in accordance with Objective 1.2 [M] and associated policies in the Mobility Element. A PUD Concept Plan shall provide in mixed-use centers for complete streets that include safe and convenient pedestrian facilities reasonably free from hazards and adequately separated from streets that carry high volumes of vehicular traffic and create a reasonable and direct route between destinations. Sidewalks shall be provided on both sides of local streets in mixed-use zones. Sidewalks shall be provided on at least one side of local streets in zones that allow only residential development.

Policy 1.2.23: Bicycle Facilities. (EFF. 1/11/21)

A PUD Concept Plan shall include a network of bicycle facilities, including on-street and off-street facilities, which should be coordinated with the open space areas of the Arch. The intent is to provide safe and convenient movement for bicycles reasonably free from hazard and providing a reasonable and direct route between destinations. Bicycle facilities shall be designed

where practical to connect to similar facilities in other PUD Concept Plans. Where feasible, a shared-use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for sidewalks and bike lanes. Protected bicycle lanes may be incorporated where feasible. Where bicycle, pedestrian, and/or shared use path facilities intersect the Welaunee Greenway, opportunities shall be provided to access the Greenway.

Policy 1.2.24: Parking in Mixed-Use Centers. (EFF. 1/11/21)

In mixed-use centers, vehicular parking shall be located on the street, in parking structures, or off-street at the street level. Off-street parking shall be provided in the rear of buildings where feasible based on engineering design standards and the protection of environmental features, or on the side of buildings and shall be limited in size and scale through such measures as shared parking, parking credits, and maximum parking limits. PUD Concept Plans may include incentives, such as reduced parking or setback requirements, for the use of building-mounted solar systems on parking structures.

Policy 1.2.25: Canopy Roads. (EFF. 1/11/21)

Direct access to Canopy Roads shall not be permitted for any residential or nonresidential uses except parks or open space. Road access to the Welaunee Arch shall be provided from Miccosukee Road at no more than three locations. Road access to the Arch shall be provided from Centerville Road in no more than two locations. Canopy Road Zones shall be provided along Miccosukee Road and Centerville Road in addition to the Welaunee Greenway. PUD Concept Plans may include incentives, such as reduced tree mitigation, in return for new roadways being designed and planted with shade trees consistent with the requirements for future canopy road designation.

Policy 1.2.26: Transit. (EFF. 1/11/21)

Mixed use centers are intended to be designed with transit as a component of the multimodal transportation system in the Welaunee Arch. As PUDs are developed, coordination with Star Metro shall occur to ensure the plan accommodates necessary infrastructure to support anticipated transit service. PUDs shall address connectivity between mixed use zones and the transit hub identified in Policy 1.4.

Policy 1.2.27: Electric, Connected and Automated Vehicles. (EFF. 1/11/21)

As PUDs are developed, coordination with the Planning Department and the City's Public Infrastructure departments shall occur to ensure the plan accommodates necessary infrastructure to support charging infrastructure for electric vehicles and infrastructure to support Connected and Automated Vehicles (CAV). PUDs may include incentives, such as reduced parking and setback requirements, for development that is electric vehicle capable or electric vehicle ready by providing for the future installation and use of Electric Vehicle Supply Equipment (EVSE) in accordance with the National Electrical Code. Incentives will be greater for electric vehicle-ready than for electric vehicle-capable developments.

Transportation Policy 1.2.28: Concurrency. (EFF. 1/11/21)

Prior to approval, PUD Concept Plans shall be required to demonstrate sufficient capacity of

concurrency facilities to meet the standards for level of service for the existing population, previously permitted development and for the proposed development plan in accordance with the City of Tallahassee Concurrency requirements. This demonstration shall include a transportation analysis for limited access, arterial, and collector roads, including the Northeast Gateway/Welaunee Boulevard, in accordance with the City Concurrency Management System Policy and Procedures Manual. If the City's transportation concurrency system is replaced with a Mobility Fee or another alternative mobility funding system, PUD Concept Plans shall comply with the mobility funding system in place at the time.

PUBLIC FACILITIES AND SERVICES

Policy 1.2.29: Adequate Public Facilities and Services. (EFF. 1/11/21)

The supply and delivery of safe and adequate public facilities shall accommodate existing and future development consistent with the Comprehensive Plan. Development in the Welaunee Arch shall be served by adequate public facilities and services as required by law and consistent with the Welaunee Urban Services-Development Agreement, as restated and amended. Public facilities and services may be phased and financed, constructed, owned, operated, or maintained by any entity allowed by law, including but not limited to independent or dependent special districts, property owner associations, homeowner associations, or any combination of such entities. Any such entity may finance public facilities through any means allowed by law.

Policy 1.2.30: Utilities. (EFF. 1/11/21)

Potable water, sanitary sewer, and electricity service shall be provided by the City pursuant to the Welaunee Urban Services-Development Agreement, as restated and amended. Private providers shall provide telecommunications services. The installation of utilities may be phased consistent with the level-of-service and availability standards of the Tallahassee-Leon County Comprehensive Plan. Utility infrastructure improvements shall occur consistent with the general timing of development, instead of the infrastructure being provided well before development occurs. This timing of infrastructure with development is intended to ensure that there is no stranded or early investment in infrastructure waiting for future development to occur.

Policy 1.2.31: Clean Energy. (EFF. 1/11/21)

PUD Concept Plans may incorporate strategies and standards that are consistent with the City of Tallahassee's Clean Energy Resolution or any clean energy plan adopted by the City subsequent to the resolution. PUD Concept Plans shall comply with applicable clean energy and renewable energy ordinances in effect at the time of development. PUDs may include additional incentives to encourage energy efficiency.

Policy 1.2.32: Energy Efficient Environmental Design. (EFF. 1/11/21)

Planned Unit Development Concept Plans may provide for incentives such as increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans

and site development plans, and similar measures in each District where developments incorporate Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar systems that generate threshold MW levels of electricity. Alternatively, PUD Concept Plans may provide for utility fee or other similar exaction offsets commensurate to estimated energy efficiency gains from incorporating Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar systems that generate threshold MW levels of electricity. This policy does not apply to the Residential Reserve Zone.

Policy 1.2.33: Stormwater Management. (EFF. 1/11/21)

Prior to approval of the first PUD Concept Plan, a Stormwater Facilities Master Plan (SFMP) shall be prepared for the entirety of the Welaunee Arch. The Stormwater Facilities Master Plan must be reviewed and approved by the City before PUD Concept Plans can be approved. For areas not included in a PUD, the stormwater plan may be conceptual and generalized based upon the projected development allowed by this master plan accounting for non-developable areas.

The SFMP shall take into consideration stormwater flows from full build out conditions from any upstream, off-site property. However, nothing herein shall relieve the upstream, off-site properties from complying with applicable environmental ordinances or standards. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance; establish infrastructure requirements necessary to manage stormwater in compliance with local, state, and federal regulations; document the phasing, implementation, and easement reservations necessary to serve projected full build out; and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land uses, soils and topographic data, and the conceptual land use plan (Figures13-5 through 13-7). The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under projected full build-out conditions. Flood extents delineated by the SFMP shall identify the 100-year flood exclusion area under the full build-out condition. No habitable structures shall be constructed within the post-development, full build-out 100-year floodplains or 100-year flood exclusion areas. The SFMP shall incorporate low-impact design best management practices to encourage the disconnection of impervious surfaces and increase the removal of nutrients from stormwater discharges. The SFMP shall also evaluate the existing nutrient pollutant loading to Class III surface water resources and ensure net improvement in the post development condition. The SFMP scope of work must be approved by the City prior to development of the SFMP.

The Stormwater Facilities Master Plan shall identify the feasibility and location of regional stormwater facilities and how they should be designed and constructed as amenities within parks or publicly accessible areas. Stormwater facilities shall be located outside wetlands and floodplains. Stormwater facilities may be located in Open Space that is not wetland or floodplain subject to design standards in a PUD Concept Plan and consistent with protection of conservation and preservation lands required

by the comprehensive plan and the Environmental Management Ordinance.

Policy 1.2.34. Wetlands and Floodplains. (EFF. 1/11/21)

Development shall minimize encroachment into wetland habitat areas by ensuring that public and private roads avoid crossing wetlands or require that such crossings are cited at the narrowest point of a wetland allowing for an efficient transportation design while maintaining the continuity of identified wildlife corridors. No net reduction in floodplain storage shall be permitted within the 100-year floodplain. Otherwise floodplains shall be managed consistent with the Comprehensive Plan Conservation Element.

Wetland acreage and function within the Welaunee Arch shall be protected through compliance with local, state, and federal environmental permitting requirements. For purposes of permanent protection of Conservation and Preservation lands designated on Figure 13-6 the delineation of wetlands shall be based upon the jurisdictional determination by the governing agency.

Wetlands depicted on Figure 13-6 utilized for mitigation within the Welaunee Arch shall be made subject to conservation easements consistent with the requirements of the authorizing regulatory agency. These easements will be defined in a manner that serves as permitted mitigation for wetland and other impacts or species relocation. To the extent authorized by federal, state, and local permitting agencies, Conservation and Preservation Lands association with the PUD Concept Plan under consideration may be utilized for achieving any mitigation requirements. The mitigation conservation easement area shall allow passive recreation facilities and shall be subject to a management plan.

Policy 1.2.35. Florida Springs and Aquifer Protection. (EFF. 1/11/21)

Wakulla Spring is an impaired first magnitude Outstanding Florida Springs. Planned development for the Welaunee Arch is within the springshed boundaries of the Upper Wakulla River and Wakulla Spring Basin Management Action Plan. Development activities associated with the project have the potential to impact water quality; therefore, PUD Concept Plans shall mitigate potential nutrient loadings by implementing measures such as proper treatment and disposal of wastewater, stormwater, and the implementation of adequate sediment and erosion control practices to mitigate any surface water impacts.

Policy 1.2.36: Schools. (EFF. 1/11/21)

Each PUD Concept Plan shall be analyzed for impacts on public schools based upon then-applicable pupil generation rates utilized by Leon County Schools. Schools shall be located in relation to neighborhoods in order to serve residents, provide a focal point for the neighborhoods, and be safely accessible by pedestrians and bicyclists. The co-location of schools, civic spaces, and active parks is encouraged. The City and County shall adhere to the Public School Concurrency and Facility Planning Interlocal Agreement, as required by Section 1013.33, F.S., which establishes procedures for, among other things, coordination and sharing of information; planning processes; school siting procedures; site design and development plan review; and school concurrency implementation. Prior to site plan approval of the 500th residential dwelling unit in Phase 1, a 10-acre site shall be

reserved for future dedication to the Leon County School Board proximate to residential areas, a Town or Village center and the primary open space system with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.

Policy 1.2.37: Fire and Emergency Services. (EFF. 1/11/21)

Upon request of the City, PUD Concept Plans shall include identified sites for fire and/or emergency services in coordination and formal agreement with the City.

RECREATION, OPEN SPACE and CONSERVATION

Policy 1.2.38: Primary Open Space System. (EFF. 1/11/21)

The intent of the Open Space and Conservation strategy is to identify, conserve, manage, restore, and protect significant natural resources during and after development of the Welaunee Arch in accordance with the Conservation Element of the Tallahassee-Leon County Comprehensive Plan and consistent with this Master Plan. No less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 1.2.44) of the gross area in the Welaunee Arch shall be designated Open Space which shall include the Primary Open Space System, Conservation and Preservation Areas, Greenways, and other designated open space in each development District.

Open Space shall comprise no less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 1.2.44) of the total gross area within the Welaunee Arch, or approximately 1,900 acres. Of the Open Space, approximately 900 acres (19% of the total gross area of the Welaunee Arch) are designated Conservation or Preservation Areas as defined in policies 1.3.1 and 1.3.4 of the Conservation Element. The precise size and location of Conservation and Preservation Areas shall be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes such Conservation and Preservation area. The remainder of the Open Space, approximately 1,000 acres (21% of the total gross area of the Welaunee Arch), shall be open space incorporated into the development plan for each District or part of the Primary Open Space System.

Open Space shall include Conservation Areas and Preservation Areas, Canopy Road Zones, Greenways, and aesthetic open space. Outside of these designated areas, the additional Open Space shall prioritize additional buffers around Conservation and Preservation Features, areas that provide continuous and contiguous connectivity of Open Space, additional buffers for Canopy Road Zones, additional areas around the Core canopy or core forests that are part of the fragmentation class of Core Canopy (>500 acres), additional areas that support the network of wildlife corridors, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, priority planting areas identified in the Urban Forest Master Plan, and stormwater facilities designed as a community amenity.

The Welaunee Arch shall contain a primary open space system concept that will contain the majority of the open space requirements within a connected corridor as depicted on Figure 13-5. This connected, continuous network of open space constitutes a fundamental building block of the Arch and is intended to serve multiple purposes including but not limited to protection of conservation and preservation areas. The Primary Open Space System shall include Conservation and Preservation areas. Primary Open Space may also include buffers for residential areas and canopy roads, greenways, environmentally sensitive areas, including wildlife corridors, aesthetic open space, active and passive recreation areas, and community gathering spaces. The Primary Open Space may be incorporated into any PUD Concept Plan to satisfy requirements of the Environmental Management Ordinance. Constructed stormwater facilities consistent with Policy 1.2.33 may be utilized to satisfy open space requirements in a PUD Concept Plan.

Primary open space systems, together with other open space and green spaces set aside to meet the urban forest and landscape requirements shall also meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 - Environmental Management, Tallahassee Land Development Code. The intent of this policy will be achieved through the following:

(1) Credits for open space requirements, wetland mitigation, slope mitigation, stormwater management and/or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Arch.

(2) Areas with severe and significant slopes that are not located in the open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code.

(3) The Open Space systems shall be open to the general public and be designed to include and provide connections with the Miccosukee Canopy Road Greenway and Welaunee Greenway at multiple locations and to integrate internal recreational multi-use paths with the greenways trails. Connections to future regional greenways shall be considered in the design of open space.

(4) The open space systems shall be designed to provide additional buffering for existing designated canopy road zones.

(5) Open space may be privately owned or dedicated to the public by conveyance to a general-purpose or special-purpose local government entity; or be designated a part of a statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the Conservation and Preservation areas in accordance with local government regulations.

(6) The open space systems shall be governed by one or more management plans approved by the City in order to protect the values for which they were designated. The management plans may

be adopted in phases so long as they are consistent with one another. Protection of Conservation and Preservation areas shall be provided by conservation easements and other measures consistent with Chapter 5 – Environmental Management, Tallahassee Land Development Code. Conservation and Preservation areas placed in conservation easements may be used towards satisfying the urban forest and landscaping requirements of Chapter 5 – Environmental Management, Tallahassee Land Development Code. A single management plan may be adopted for all open space and conservation and preservation area lands.

(7) Any Open Space area located within the geographic boundary of a PUD Concept Plan Shall be included in the lands to be designated as Open Space/Greenway as a result of approval of that PUD Concept Plan. If additional Open Space area are required to meet the minimum Open Space area for that Phase set forth in Addendum B Policy 1.2.4(6) then such additional land will be designated as such from the adjacent Primary Open Space system as shown in Figure 13-5. To the extent that a PUD Concept Plan provides Open Space acreage beyond the required minimum, subsequent PUD Concept Plans are entitled to a credit for the additional acreage provided in proceeding PUD Concept Plans.

(8) Acreage in the primary open space system shall be counted towards satisfying the open space requirements established in PUD Concept Plans.

(9) The following guidelines shall apply to uses within the open space system as established in PUD Concept Plans:

a. Passive recreation improvements that are natural resource-oriented, such as hiking, biking, and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular access only, provided these activities are located such that impacts to conservation and preservation areas are minimized and the overall purpose of the conservation easement is maintained.
b. Active Recreation uses may be constructed in the open space area within each development district and in the primary open space system outside of Conservation and Preservation areas.
c. Wildlife management areas may be included in the primary open space systems protective measures addressed in the management plans, including a wildlife habitat management plan, in accordance with Chapter 5 – Environmental Management, Tallahassee Land Development Code.
d. Public roads and utilities may cross through the open space systems and buffers if the impacts are minimized. The location of the roads shown on Figure 13-5 are approximate.
e. Stormwater Management facilities may be located in the open space systems subject to design criteria in the PUD

Concept Plans and consistent with protection of conservation and preservation features pursuant to Chapter 5 – Environmental Management, Tallahassee Land Development Code. Each stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. If stormwater facilities are contained in the open space system, the public and/or private entities responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facilities level of service. The SFMPs shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation or preservation areas.

(10) To promote creation of the open space systems and their integration into the planned mixed-use communities with appropriate credit, PUD Concept Plans shall establish an open space requirement that includes credit for the open space system, protected preservation and conservation areas, areas of constructed landscape, and the minimum onsite landscaping required for individual sites set forth in Addendum B Policy 1.2.12. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designated to meet or exceed, on a cumulative basis, the Landscape and Urban Forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code. These landscape standards shall include, but not be limited to, standards for provision of street trees in mixed use zones, along public roadways, shade trees and landscaped islands within parking lots, and patriarch tree preservation. These standards will be developed to reflect the intent that town and neighborhood centers will be developed in an urban context with minimal setbacks and an emphasis on dense, mixed use development. Various land uses in the Arch shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code.

(11) The portion of the Arch bordering Miccosukee Road shall be designated as Open Space and shall include the Canopy Road Zone for Miccosukee Road. An additional area with a minimum width of 75 feet along the length of the Canopy Road Zone shall be designated as open space. The Canopy Road Zone and contiguous Open Space area shall serve as a wildlife corridor that terminates in the core forest area that is part of the fragmentation class of Core Canopy (>500 acres) in the Conservation Design District as shown on the Preliminary Environmental Map (Figure 13-6). This area may serve as a greenway as long as the greenway does not preclude the ability of the area to serve as a wildlife corridor.

Conservation and Preservation Policy 1.2.39: Lands. (EFF. 1/11/21)

Lands identified for permanent preservation and conservation are shown generally on the Preliminary Environmental Map (Figure 13-6) as Designated Wetlands, 100-year Floodplains, and High-Quality Successional forests/Native Forest. These protected areas create a regionally significant environmental and open space framework that protects the natural flows of water and preserves wildlife habitat while allowing limited, low-impact human access to natural spaces, where appropriate.

These allocations are intended to protect significant environmental resources on the Welaunee Arch and account for approximately 900 acres or approximately 19% of the total gross area of the Welaunee Arch. The precise size and location of Conservation and Preservation Lands shall be determined through a Natural Features Inventory to be conducted prior to or concurrent with the initial PUD Concept Plan for each Phase of the Welaunee Arch in which the feature is located. Additional environmental resources will be designated as Open Space as addressed in this Master Plan.

Conservation and Preservation lands shall be subject to a management plan to be reviewed and approved concurrent with the PUD Concept Plan that includes the applicable Conservation and Preservation lands. Such management plan shall address wildlife preservation, maintenance of native species diversity, management of the natural environment, restoration of environmental resources where warranted, and responsibility for long term management. Such management plan shall include measures to protect the values for which such lands were designated, including wildlife habitat and corridors, and may include conservation easements and other measures consistent with the Environmental Management Ordinance. Conservation and Preservation lands may be utilized for public access, including trails, subject to the Environmental Management Ordinance. To the extent allowed by local, state, or federal law, Conservation or Preservation lands may be utilized to achieve mitigation required by permits. A single management plan may be adopted for all open space and conservation and preservation area lands.

Lands that are not otherwise identified as Conservation and Preservation Lands on Figure 13-6 and are identified as areas suitable for future development may contain areas of natural upland or wetland communities. These resources will be identified through the Natural Features Inventory process and protected as required by the Comprehensive Plan's Conservation Element and will be incorporated into the lands identified as Open Space and Greenways consistent with the overall conservation and development strategy for the Welaunee Arch planning area.

Conservation easements for Conservation and Preservation lands shall be effective before or concurrent with the effective dates of the PUD Concept Plan for which they are granted. Protection of the lands identified in the Preliminary Environmental Features Map shall be phased or staged in coordination with the PUD Concept Plans. The required preservation of both Conservation and Preservation Lands within the Welaunee Arch will occur in conjunction with the PUD Concept Plan approvals and will be in place in advance of actual physical development within the PUD for which the Conservation and Preservation Lands are being protected. All identified Conservation and Preservation Lands within the Preliminary Environmental Features Map shall be subject to permanent preservation no later than the date

of actual physical development commencing within the final PUD Concept Plan for the Welaunee Arch.

Policy Recreation Areas. 1.2.40: (EFF. 1/11/21)

A PUD Concept Plan shall provide for reasonable public access to parks, recreation areas, natural areas, and open space. A multi-use trail system will be included that will link these areas where feasible to residential neighborhoods, mixed-use centers, schools, civic spaces, employment, recreation and open space, parks, and the Welaunee Greenway and Miccosukee Canopy Road Greenway.

Policy 1.2.41. Historic and Cultural Resources. (EFF. 1/11/21)

Through the completion of Natural Features Inventories, Planned Unit Developments shall identify historic and cultural resources including archaeological sites, historic structures and districts, and historic cemeteries. PUDs shall include standards sensitive to locating, assessing, and avoiding

potential adverse impacts to these resources. At a minimum, these standards shall comply with applicable state and local regulations. Where feasible based on the geographic location of the resource and appropriate given the historic and cultural context of resource, informational and interpretive signage may be considered for these resources.

Policy 1.2.42: Natural Area Resident Notifications. (EFF. 1/11/21)

PUD Concept Plans will include notification requirements for informing residents, once development is completed, with information on how to avoid human-bear conflicts and notices of proximity to areas that are actively managed with prescribed fires.

Policy 1.2.43: Perpetual Drainage Easement. (EFF. 1/11/21)

The Perpetual Drainage Easement across the Welaunee Arch shall be subject to the Order Clarifying Definition of Perpetual Drainage Easement, entered by Leon County Circuit Court on March 13, 1997. Lands within the Perpetual Drainage Easement shall be considered Open Space and may be utilized for active and passive recreation facilities and activities, including but not limited to, walking and bicycle trails, and playgrounds associated with development of lands owned by the landowner within the altered or undisturbed floodplains so long as the function of the easement is not impaired.

Policy 1.2.44: Welaunee Greenway. (EFF. 1/11/21)

The Welaunee Greenway shall consist at a minimum of an 8.4-mile-long shared-use trail corridor along the northeast, north, and west perimeter of the Arch, and shall be developed consistent with adopted local government plans, including the Greenways Master Plan. As defined in the Tallahassee-Leon County Greenways Master Plan, "The Greenway will range from approximately 75' to 150' in width in much of the corridor with greater widths in select areas due to wetlands and stream flow ways. This corridor will be comprised of the existing edge canopy and understory and the Welaunee firebreak road which may provide a readymade trail alignment. The preserved canopy and understory along the other side of the firebreak road will be preserved to provide privacy from adjacent roadways and homes." The final design of the Welaunee Greenway shall be determined through the Blueprint Intergovernmental Agency's Northeast Gateway

project and may consider other, non-paved trail surface treatments consistent with the Greenways Master Plan. Trail crossings and trailheads may be located in the Canopy Road Zone and the design of such facilities shall strive to minimize impacts to the tree canopy. The Welaunee Greenway shall connect to the existing Miccosukee Canopy Road Greenway to create a 17-mile linear park loop and a pedestrian bridge across Interstate-10. Connections shall be provided to and from the Greenway from interior multi-use trails along roadways or from other open space areas. The Welaunee Greenway shall be subject to a management plan approved by the City that is consistent with the policies of this master plan. A single management plan may be adopted for all open space, conservation and preservation area lands, and the Welaunee Greenway. Public roadways and utilities may cross through the Welaunee Greenway at points specified as road crossings on the land use and transportation maps, or at additional points if necessary, provided the crossing includes restoration of the Greenway and open space area. PUD Concept Plans that include or are adjacent to the Welaunee Greenway or Miccosukee Canopy Road Greenway shall provide access to those facilities. Development of the Arch should be incentivized through the PUD process to provide pedestrian and bicycle connectivity to the Greenway, particularly where it interfaces with Open Space areas and associated trail systems.

Policy 1.2.45: Alternative Development Program. (EFF. 1/11/21)
