Notwithstanding any other provision of this Master Plan, at the election of the PUD applicant, PUD Concept Plans in Phase 1 and Phase 2 may offset open space and urban forest mitigation requirements through an optional alternative development program that preserves additional open space area within the Residential Reserve District (Phase 3). The intent of this Alternative Development Program is to incentivize preservation of a large area of open space in the northeast area of the Welaunee Arch that may be designated as a wildlife habitat area. Participation in this alternative development program is optional and must be agreed to by the PUD Concept Plan applicant and the owner of the property that would be used for the offset. Participation in this alternative development program is subject to all of the following provisions:

(1) Open Space Requirement Offset. PUD Concept Plans in any District of Phase 1 or Phase 2 may offset the open space requirements for that District by preserving lands in the Residential Reserve District (Phase 3) as open space.
   a. The offset shall be calculated on a per acre basis with a 15% bonus, resulting in an exchange of a 1.15-acre reduction in the open space requirement of the receiving District for each 1-acre of preserved open space in the Residential Reserve District. This exchange shall reduce the overall open space requirement for the Welaunee Arch by the net bonus amount (0.15 acres for each 1 acre preserved).
   b. The reserve area requirements for cluster residential zones in Phase 2 shall be offset concurrently with the open space requirements for any PUD Concept Plan including a cluster subdivision.
   c. Under the Alternative Development Program, preservation or conservation areas in the Residential Reserve District may count towards the open space requirements in the Conservation Design District. Conservation and Preservation

areas in the Residential Reserve District shall be integrated with the Welaunee Habitat Park.

d. If this Alternative Development Program is exercised, total Open Space in Phase 1 shall not be less than 15%, the total Open Space in Phase 2 shall not be less than 25%, and the overall total Open Space in the Arch at buildout shall not be less than 37%.

e. The open space offset shall not apply within the area 1,000 feet from the Buckhead Neighborhood as identified in Policy 1.2.15.

(2) Urban Forest Mitigation Offset. PUD Concept Plans in Phase 1 and Phase 2 may offset required urban forest mitigation requirements in any District by preserving lands in the Residential Reserve District (Phase 3) as open space.

a. The urban forest mitigation requirement offset through this program is exchanged based on the urban forest mitigation value of the land being established as Open Space in the Residential Reserve District. The mitigation value of the preserved open space shall be calculated with an additional 10% mitigation credits which may offset urban forest impacts in Phase 1 and Phase 2.

(3) All lands located in the Residential Reserve District, designated as Phase 3 on the Land Use Districts Map (Figure 13-5), are eligible for preservation under this alternative development program. Priority for preservation under this program shall be in the following order: 1) lands in the Residential Reserve District (Phase 3) that do not meet the definition of a preservation area or conservation area 2) any designated conservation and preservation areas in Residential Reserve District (Phase 3) as generally depicted on the Preliminary Environmental Features Map or as determined through a subsequent natural feature inventory. Priority shall be given to property along the eastern boundary of the Residential Reserve District with subsequent lands preserved under this alternative development program being contiguous with this area.

(4) Protection of the open space area in the Residential Reserve District (Phase 3), including any preservation or conservation areas, shall be provided by conservation easements, covenants, or other measures consistent with City Growth Management Department's adopted regulations. The lands preserved as open space under this alternative development plan shall be subject to the criteria of Policy 1.2.38 regarding Conservation and Preservation Areas. Any conservation easements established under this alternative development program shall be issued to the City of Tallahassee as the sole grantee and beneficiary. While open space area in the Residential Reserve District remains in private ownership, any conservation easements, covenants, or other measures shall allow for continued use of the preserved open space for silviculture operations of planted pine stands which adhere to Florida Division of Forestry Best Management Practices. Lands preserved under this development program for urban forest mitigation offsets may not be utilized for silviculture operations.

(5) Welaunee Habitat Park. Notwithstanding the phasing requirements in Policy 1.2.5, at such time when all lands in in the Residential Reserve District have been preserved as open space under this alternative development program, or at such time when the final PUD Concept Plan for the Welaunee Arch is approved, the preserved Open Space in the Residential Reserve District, including the Conservation and Preservation lands, shall be designated as a Habitat Park. The Habitat Park shall be subject to the requirements of Policies 13.2.37 and 13.2.38. Prior to establishment of the Habitat Park, the existing uses of the property shall be permitted. Any previously established conservation easements shall remain in effect on lands in the Habitat Park. Passive recreation improvements that are natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the Welaunee Habitat Park. Active Recreation uses are not permitted in the Welaunee Habitat Park.

(6) By adoption of a separate ordinance, the City may create and administer a Welaunee Habitat Park credit bank. The Welaunee Habitat Park credit bank would facilitate the purchase of lands in the Residential Reserve District (Phase 3) and the sale of open space and tree mitigation credits in accordance with this development program. The Welaunee Habitat Park credit bank may be established independent of and prior to the creation of the Welaunee Habitat Park. If the City creates a Welaunee Habitat Park credit bank, consideration may be given to utilizing the credit bank to offset open space requirements and urban forest mitigation requirements associated with the development of properties located in other growth priority areas inside the Urban Services Area.

(7) If stormwater facilities are contained within the Residential Reserve District, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within preserved open space and conservation or preservation areas.

(8) Any lands in the Residential Reserve District not preserved as open space in accordance with this alternative development plan may be included in a PUD Concept Plan and development under the Residential Reserve District development guidelines in Policy 1.2.4(4). Development of the Residential Reserve District on remaining lands shall be clustered in the portion of the site that will result in the least environmental impact. Lands preserved as open space offset under this Alternative Development Program shall not count towards the 60% reserve area requirements for development of any remaining developable land in the Residential Reserve District.

	Acres[1]	DUs/ GSF	Acres[1]	DUs/ GSF	Acres[1]	DUs/GSF
Residential[2]	170	1,291 DUs	207	816 DUs	377	2,107 DUs
Town and Neighborhood Centers[3]	21	190,608 GSF	9	51,744 GSF	30	242,352 GSF
Employment Centers[4]	50	495,616 GSF	40	405,504 GSF	90	901,120 GSF
Educational/Institutional[5]	24				24	
Primary Open Space and Recreation	200		60		260	
Miccosukee Road Greenway[6]	189				189	
Other[7]	61		61		122	
TOTALS	715	1,291 DUs 686,224 GSF	377	816 DUs 457,248 GSF	1,092	2,107 DUs 1,143,472 GSF

Notes:

1. Acreage totals are based on conceptual planning and are only approximate. Acreage totals may change based on final development review.

2. Residential land use includes above-street units in town and neighborhood centers. No acreage has been allocated to these units because they will be located above nonresidential uses.

3. Retail uses shall comprise between 50% and 70% of total Phase 1 development in town and neighborhood centers with office uses to comprise between 30% and 50%. At buildout, the mix of uses in town and neighborhood centers shall be approximately 67% retail and 33% office.

4. Office and light industrial uses shall comprise between 75% and 95% of total Phase 1 development in employment centers with retail uses to comprise between 5% and 25%. At buildout, the mix of uses in employment centers shall be approximately 90% office and light industrial with approximately 10% retail.

5. Total includes 24-acre site for Leon County School Board for a 500-pupil elementary school with stormwater management facilities in off-site regional systems. Institutional uses in town, neighborhood and employment centers are included in square footage totals for those areas.

6. Although under State ownership, the Miccosukee Canopy Road Greenway shall be considered within the Welaunee Critical Planning Area for planning purposes.

7. Total includes stormwater management facilities, road rights-of-way and other community infrastructure.

8. These figures may be modified pro rata to represent buildout if Heel is developed under Policy 1.9. (REV. EFF. 7/20/05)

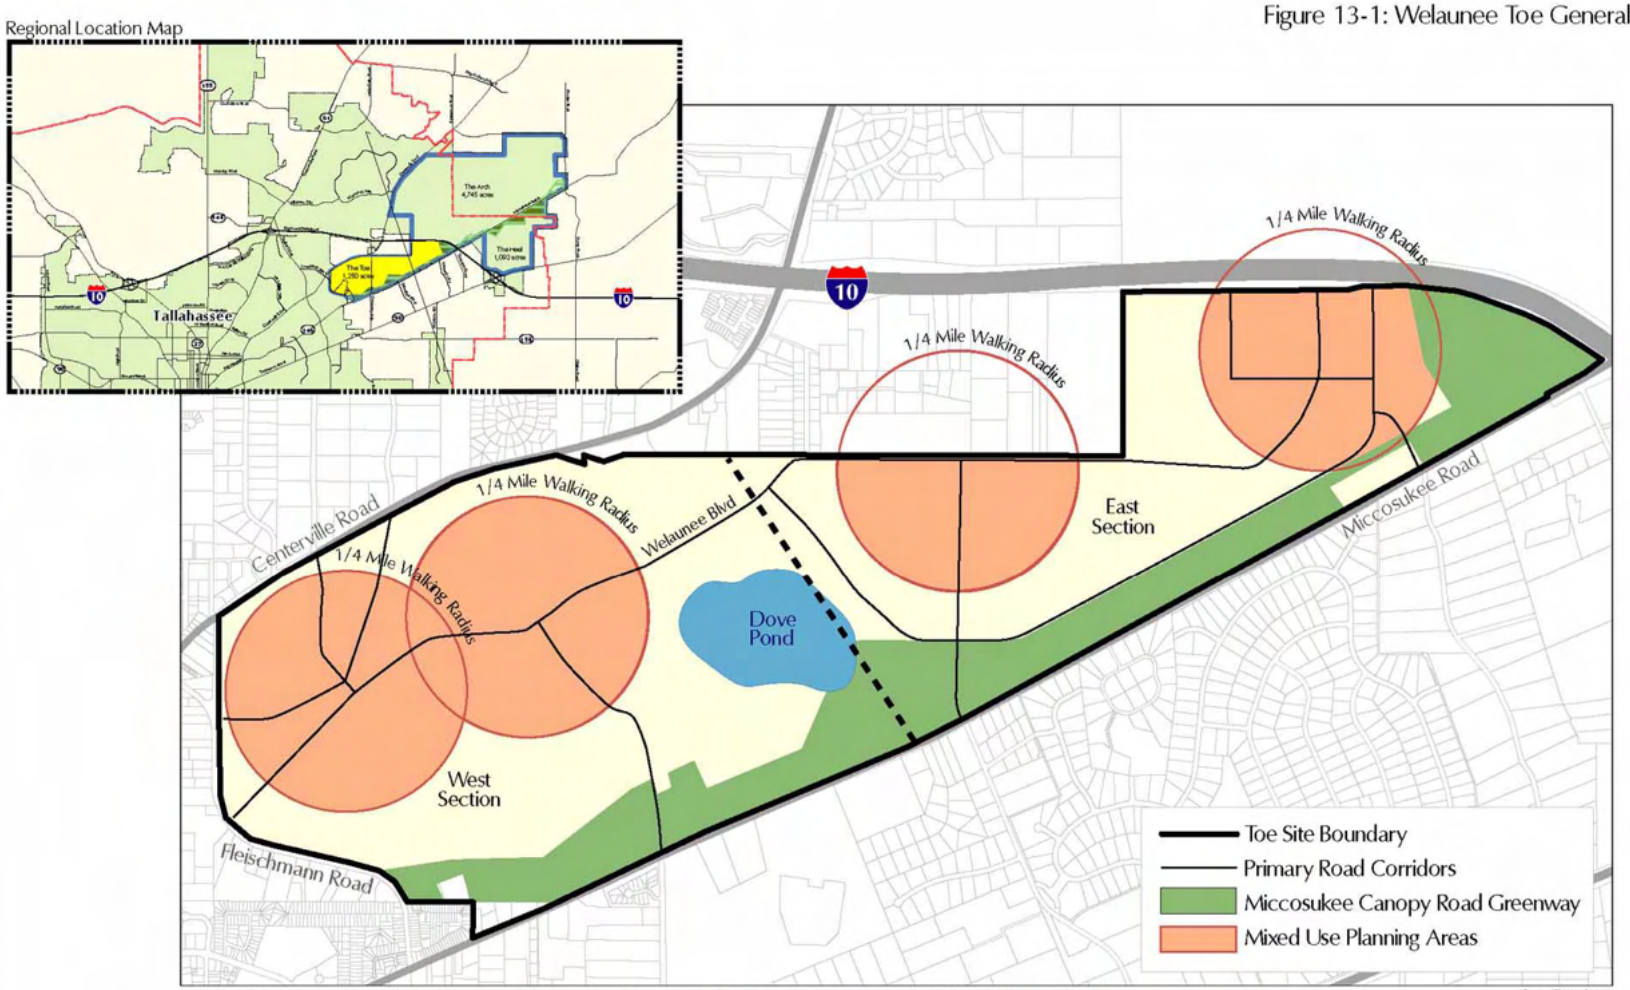

TABLE 13-2. WELAUNEE (HEEL) PHASING SCHEDULE BY LAND USE

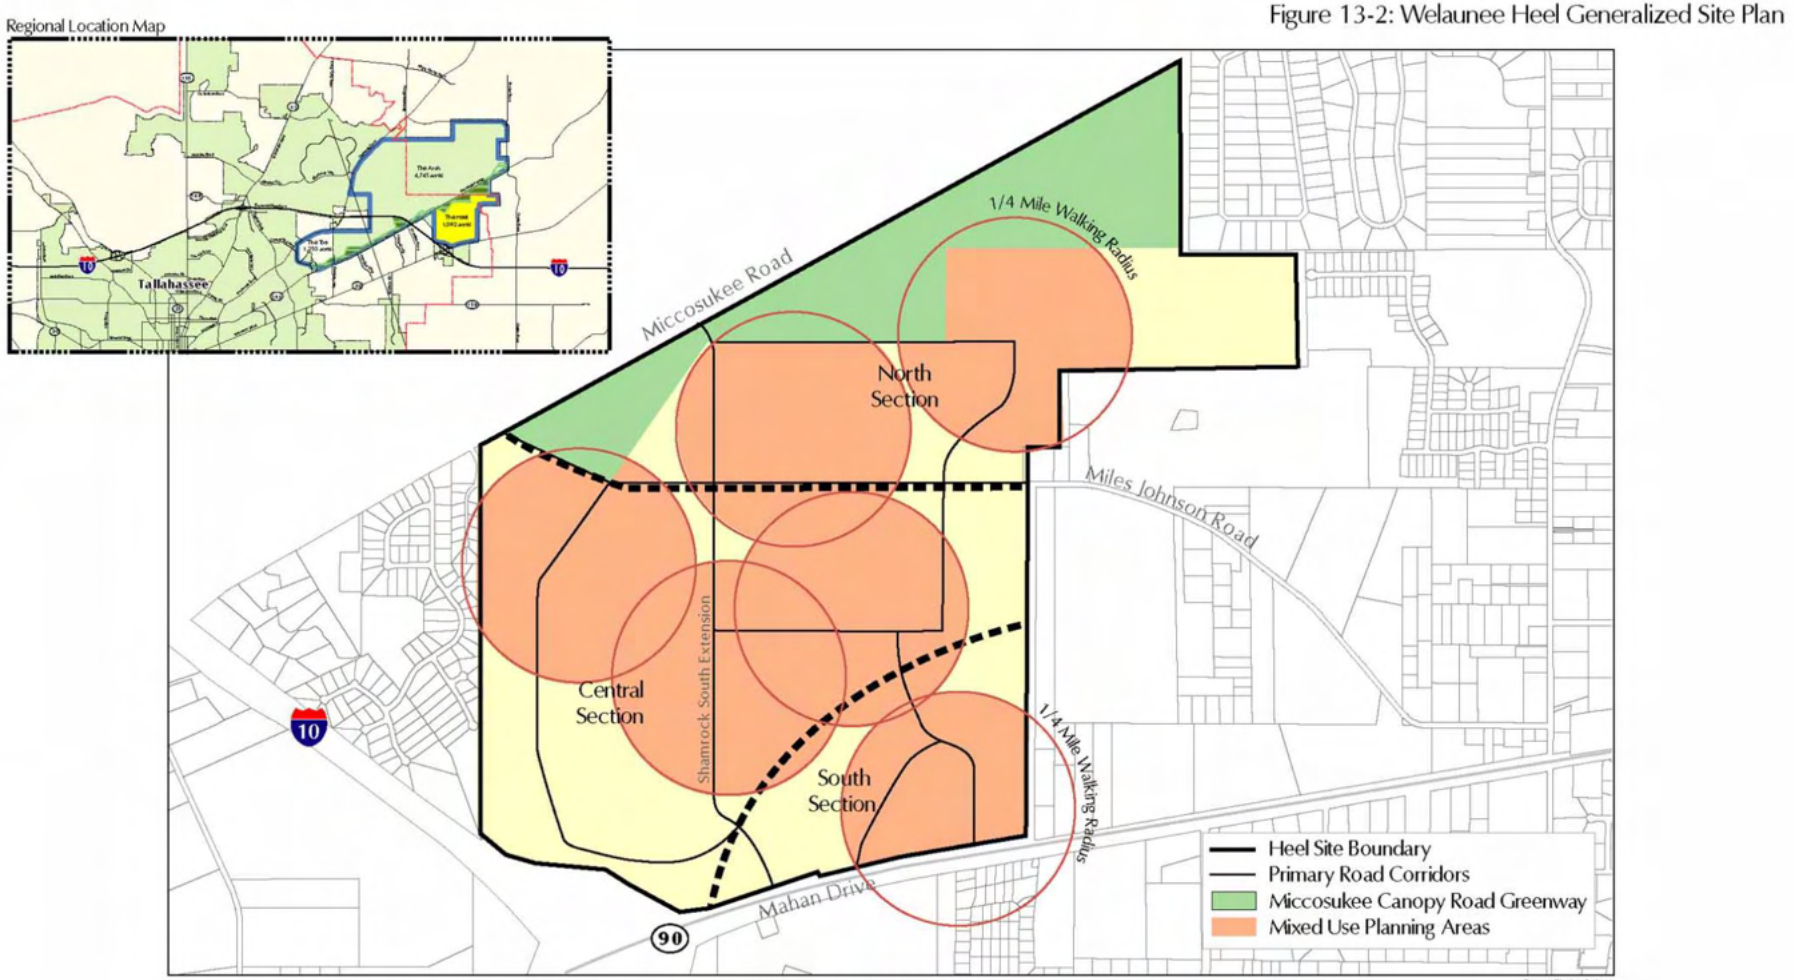
The density and intensity of development projected on Welaunee (Heel) is shown below:

LAND USE	PHASE I (2002-2010)	PHASE II (2011-2020)	BUILDOUT

Map 4: Welaunee Toe Generalized Site Plan

Figure 13-1: Welaunee Toe Generalized Site Plan



Notes:
1. A road connection to Centerville Road is authorized at either of the points identified, but not both, to be determined in the PUD Concept Plan.
2. Except for existing roads and road easements, the location of primary road corridors is approximiate and subject to final delineation in PUD Concept Plans.
3. Mixed Use Planning Areas may include town center, neighborhood center, employment center, residential, and school and community use categories. The location and number of Mixed Use Planning Areas is approximate and subject to final delineation in PUD Concept Plans based upon site-specific studies, on-site and off-site impacts, economic feasibility and other factors. In all cases, the arrangement of land uses in the Toe shall be consistent with the locational criteria in Policy LU 13.1.3(2).

(Rev. Eff. 8/27/17)

(EFF. 12/10/02)

The Future Land Use Element is required to meet the statutory requirements of Chapter 163, F.S. This document identifies where the requirements are met with the proposed update amendments.

Future Land Use Element Statutory Requirements Checklist

Chapter 163.3177(6)(a), F.S.

Tallahassee-Leon County Planning Department

Land Use Element Minimum Statutory Criteria
Chapter 163.3177(6)(a)

Future Land Use Categories			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Uses	Each future land use category must be defined in terms of uses. 163.3177(6)(a)1, F.S.	Policies under Objective 2.8	✓
Standards	Residential densities and Non-residential intensities. 163.3177(6)(a)1, F.S.	Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map	✓
Map	Shown on a land use map or map series. Proposed distribution, location, and extent of various categories of land use. 163.3177(6)(a)1, F.S.	Future Land Use Map Policy 2.8.1 and Context Area Densities, Intensities, and Mix of Uses Policy 2.8.2; Objective 3.4 – Equitable Distribution of Land Uses	✓
Supplement	Supplemented by goals, policies, and measurable objectives. 163.3177(6)(a)1 and (6)(a)10, F.S.	Policies under Objective 2.8	✓

Future Land Use Element Criteria			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Compatibility with airports	Achieve the compatibility of lands adjacent to an airport as defined in s. 330.35 (public airports) and consistent with s. 333.02 (airport hazards). 163.3177(6)(a)3.b, F.S.	Policy 6.11.1 – Adjacent Land Use Compatibility; Policy 6.11.3 – Compatibility of Land Use, Policy 6.11.4 – Compatibility for Noise and Safety, and Policy 6.11.5 – Advanced Air Mobility; Policy 5.3.2 – Coordinate Land Uses	✓

Future Land Use Element Criteria			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Proximity of schools	Encourage the location of schools proximate to urban residential areas to the extent possible. 163.3177(6)(a)3.c and (6)(a)7, F.S.	Public Facilities Objective 2.3 and associated policies including 2.3.3 – School Siting Review & Criteria Future; Policy 2.8.1 including Future Land Use Map; Policy 2.8.2 – Context Area with school location language	✓
Coordination with topography and soil	General Suitability for uses assigned: Coordinate future land uses with the topography and soil conditions, and the availability of facilities and services. 163.3177(6)(a)3.e, F.S.	Objective 3.1 – Residential Character; Policy 1.2.2 – Environmental Analysis	✓
Protection of resources	Ensure the protection of *natural* and *historic* resources. 163.3177(6)(a)3.f, F.S.	Policy 1.1.1 – Geographic Data; Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties; Policy 1.2.2 – Environmental Analysis	✓
Compatibility of adjacent land uses	Provide for the compatibility of adjacent land uses. 163.3177(6)(a)3.g, F.S.	Policy 3.6.3 – Site Requirements; Policy 3.6.6 – Non-Conforming Uses; Policy 4.2.1 – Coordinate Transit with Land Use; Policy 5.3.2 – Tallahassee International Airport: Coordinate land uses adjacent to the Tallahassee International Airport	✓
Mixed-use development guidelines	Provide guidelines for the implementation of mixed-use development including the types of uses allowed the percentage distribution among the mix of uses, or other standards, and the density and intensity of each use. 163.3177(6)(a)3.h, F.S.	Policy 2.8.2 – Context Area Densities, Intensities, and Mix of Uses; Language for percentage distribution of mix of uses	✓

Future Land Use Element Criteria			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Discouragement of Urban Sprawl	The future land use element and any amendment to the future land use element shall discourage the proliferation of urban sprawl. 163.3177(6)(a)9, F.S.	Objective 2.5 – Reconnecting Urban Sprawl Policy 2.5.1 – Suburban retrofit Objective 2.6 – Recognizable Places Objective 2.8 – Community Context Policy 2.4.2 – Criteria for Urban Service Area Expansion Objective 2.2 – Efficient Growth and Policy 2.2.1 – Urban Services Area (USA)	✓

Future Land Use Map			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Depict Historic District Boundaries and designated properties	The land use maps or map series shall generally identify and depict historic district boundaries and shall designate historically significant properties meriting protection. 163.3177(6)(a)10.b, F.S.	Policy 1.1.1 – Geographic Data; Policy 1.1.3 – Historic District Land Use and Mobility Element Addendum Maps	✓

Future Land Use Map			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Future Land Use Map or Map Series as part of Future Land Use Element	The future land use element shall include a future land use map or map series. a. The proposed distribution, extent, and location of the following uses shall be shown on the future land use map or map series: (I) Residential. (II) Commercial. (III) Industrial. (IV) Agricultural. (V) Recreational. (VI) Conservation. (VII) Educational. (VIII) Public. b. The following areas shall also be shown on the future land use map or map series, if applicable: (I) Historic district boundaries and designated historically significant properties. (II) Transportation concurrency management area boundaries or transportation concurrency exception area boundaries. (III) Multimodal transportation district boundaries. (IV) Mixed-use categories. 163.3177(6)(a)10.a and b, F.S.	Future Land Use Map: **Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map:** Distribution, extent, and location of land uses **Residential:** **Policy 2.8.5 –** Rural Residential **Policy 2.8.6 –** Rural Community **Policy 2.8.7 –** Lake Protection **Policy 2.8.10 –** Residential Preservation **Industrial:** **Policy 2.8.15 –** Manufacturing and Mining Special District **Agricultural:** **Policy 2.8.4 –** Rural **Mixed Use Categories:** **Policy 2.8.8 –** Sub-Urban Neighborhood **Policy 2.8.9 –** Sub-Urban Mixed-Use Commercial **Policy 2.8.11 –** Urban Neighborhood **Policy 2.8.12 –** Urban General **Policy 2.8.13 –** Urban Center **Policy 2.8.18 –** Planned Development Special District	✓

Future Land Use Map			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Future Land Use Map or Map Series as part of Future Land Use Element	c. The following natural resources or conditions shall be shown on the future land use map or map series, if applicable: (I) Existing and planned public potable waterwells, cones of influence, and wellhead protection areas. (II) Beaches and shores, including estuarine systems. (III) Rivers, bays, lakes, floodplains, and harbors. (IV) Wetlands. (V) Minerals and soils. (VI) Coastal high hazard areas. 163.3177(6)(a)10.c, F.S.	Natural Resources: **Policy 1.1.1 and Map Series** Recreational: **Policy 2.8.17 –** Parks and Civic Spaces Conservation: **Policy 2.8.3 –** Natural Areas Educational: **Policy 2.8.16 –** Institutional Public: **Policy 2.8.16 –** Institutional Historic: **Policy 1.1.3 and Map Series** MMTD: **MMTD Map in Map Series**	✓
Public Schools as allowable uses	Must identify land use categories where public schools are allowable; and include sufficient land proximate to residential development to meet projected needs for schools; and contiguous lands to existing school sites within categories. Coordination: Coordinate with public school boards. 163.3177(6)(a)7, F.S.	Policy 2.8.2 – Context Area Densities, Intensities, and Mix of Uses: Table Note *Public Schools are an allowable use in all future land use categories with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.	✓

The Mobility Element is required to meet the statutory requirements of Chapter 163, F.S. This document identifies where the requirements are met with the proposed update amendments.

Transportation Element Statutory Requirements Checklist

Chapter 163.3177(6)(b), F.S.

Tallahassee-Leon County Planning Department

Transportation Element Requirements
Chapter 163.3177(6)(b), F.S.

Transportation Element Components			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Traffic Circulation	Types, locations, and extent of existing and proposed major thoroughfares and transportation routes, including bicycle and pedestrian ways. 163.3177(6)(b)1, F.S.	Map Series and TLCGIS layers for roadway jurisdiction, functional classification, sidewalk facilities, pedestrian ways, bike Tallahassee, greenways master plan, and Blueprint projects. Independent maintenance of Greenways Master Plan and Capital Regional Transportation Planning Agency (CRTPA) sites with maps and data including LRTP and Cost Feasible plans/maps.	✓
Transportation Corridors	Defined in s. 334.03, may be designated in the transportation element pursuant to s. 337.273. 163.3177(6)(b)1, F.S.	Policy 1.2.4 – Transportation Corridor Environmental Features; Policy 2.2.10 – Corridor Preservation: Policy 2.8.11 – Urban Neighborhood; Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors Map; Policy 6.2.4 – Corridor Management and Preservation	✓
Map or Map Series	Showing the general location of the existing and proposed transportation system features. 163.3177(6)(b)1, F.S.	Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors Map and Map Series	✓
Coordination	With the future land use map or map series. 163.3177(6)(b)1, F.S.	Map Series: Traffic Circulation and Thoroughfare Maps	✓

Transportation Element Components			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Level of Service	The existing transportation system levels of service and system needs and the availability of transportation facilities and services. 163.3177(6)(b)1.d, F.S.	Policy 2.2.10 – Corridor Preservation and 6.3.7	✓
Maintaining the Mobility System	How the local government will correct existing facility deficiencies, meet the identified needs of the projected transportation system, and advance the purpose of this paragraph and the other elements of the comprehensive plan. 163.3177(6)(b)1.e, F.S.	Policy 2.2.2 – Improvement of Capital Infrastructure; Policy 2.2.1 – Urban Services Area (USA); Policy 2.2.4 – Urban Services Outside of the Urban Services Area; Policy 2.2.10 – Corridor improvement of transportation facilities; Policy 2.6.2 – Gateway corridors; Policy 6.1.2 – Context-Based On-Site Facilities; Policy 6.3.8 – Level of Service (LOS); Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance; Policy 6.6.2 – Crosswalks; Policy 6.10.4 – Pedestrian Infrastructure Connectivity; Policy 6.13.2 – Consistency with Regional Transportation Plans	✓

Metropolitan Planning Organization			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Includes Alternative modes of travel	Public transportation, pedestrian, and bicycle travel. 163.3177(6)(b)2.a, F.S.	Policy 6.10.8 – Transit Alternative and Expansion Studies; Objective 2.7 – Multimodal Transportation District (MMTD)	✓

Metropolitan Planning Organization			**Met?**
Requirement	***Criteria***	***Proposed Item(s)***	
Aviation, rail, seaport facilities	Access to those facilities, intermodal terminals. 163.3177(6)(b)2.b, F.S.	Objective 5.2 – Airport Access; Objective 6.12 – Rail; 6.12.1 – Rail Crossings	✓
Evacuation capability	Evacuate the coastal population before a natural disaster. 163.3177(6)(b)2.c, F.S.	N/A	
Airports and aviation development	Projected development, land use compatibility around airports. 163.3177(6)(b)2.d, F.S.	Policy 6.11.1 – Adjacent Land Use Compatibility; Policy 6.11.2 – Airport Master Plan; Policy 6.11.3 – Compatibility of Land Use; Policy 6.11.4 – Compatibility for Noise and Safety; Policy 6.11.5 – Advanced Air Mobility; Policy 4.2.1 – Coordinate Transit with Land Use	✓
Land use and transportation management	Promote public transportation systems in designated corridors.163.3177(6)(b)2.e, F.S.	Policy 6.10.9 – Transit Corridors; Policy 2.2.10 – Corridor Preservation	✓

Transportation Components Based on Community Character			**Met?**
Requirement	*Criteria*	*Proposed Item(s)*	
Municipalities > 50,000	Mass-transit provisions, methods for moving people, rights-of-way, terminals, related facilities. 163.3177(6)(b)3, F.S.	Policy 1.6.2 – Multimodal Connectivity; Objective 2.5 – Reconnecting Urban Sprawl; Objective 2.7 – Multimodal Transportation District; Policy 2.7.1 – MMTD Implementation; Policy 2.7.2 – Land Use Within the MMTD; Policy 2.7.5 – Transit in the MMTD; Policy 3.7.3 – Design Criteria for Mobility Hubs; Objective 4.2 – Mobility-Based Housing Incentives; Objective 6.10 and policies.	✓

Counties > 75,000	Mass-transit provisions, methods for moving people, rights-of-way, terminals, related facilities. 163.3177(6)(b)3, F.S.	Policy 2.7.5 – Transit in the MMTD	✓
Efficient public transit services	Based on major trip generators and attractors, safe and convenient terminals, land uses, special needs of transportation disadvantaged. 163.3177(6)(b)3.a, F.S.	Policy 6.9.1 – Human Services Transportation; Policy 6.9.2 – Transport to Destinations; Policy 6.9.3 – Affordable and Cost-Effective Service; Policy 6.9.4 – Transportation Disadvantaged Needs Assessment	✓
Plans for port, aviation, and related facilities	Coordinated with general circulation and the other parts of the transportation element. 163.3177(6)(b)3.b, F.S.	Policy 6.11.3 – Compatibility of Land Use; Policy 5.2.1 – Airport Master Plan; Policy 5.3.2 – Tallahassee International Airport; Policy 5.3.3 – Transportation Access	✓
Plans for recreational traffic circulation	Including bicycle facilities, exercise trails, riding facilities, safety of movement of all types of recreational traffic. 163.3177(6)(b)3.c, F.S.	Map Series and TLCGIS layers for roadway jurisdiction, functional classification, sidewalk facilities, pedestrian ways, bike Tallahassee, greenways master plan, and Blueprint projects. Independent maintenance of Greenways Master Plan and Capital Regional Transportation Planning Agency (CRTPA) sites with maps and data including LRTP and Cost Feasible plans/maps. Objective 1.3 – Access to Parks and Recreation and associated policies; Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards and 4.2.6 – Density Bonus; Policy 6.8.5 – Parking Reduction for Certain Development Types TrOD.	✓

Airport Master Plan (Optional)			**Met?**
Requirement	*Criteria*	*Proposed Item(s)*	
Incorporation of Airport Master Plan	At the option of a local government, an airport master plan, may be incorporated into the local government comprehensive plan by the local government having jurisdiction under this act for the area in which the airport or projected airport development is located by the adoption of a comprehensive plan amendment. 163.3177(6)(b)4, F.S.	Policy 5.2.1 – Airport Master Plan; Policy 6.11.2 – Airport Master Plan	✓

163.3177 Required and optional elements of comprehensive plan; studies and surveys.

(6) In addition to the requirements of subsections (1)-(5), the comprehensive plan shall include the following elements:

(a) A future land use plan element designating proposed future general distribution, location, and extent of the uses of land for residential uses, commercial uses, industry, agriculture, recreation, conservation, education, public facilities, and other categories of the public and private uses of land. The approximate acreage and the general range of density or intensity of use shall be provided for the gross land area included in each existing land use category. The element shall establish the long-term end toward which land use programs and activities are ultimately directed.

1. Each future land use category must be defined in terms of uses included, and must include standards to be followed in the control and distribution of population densities and building and structure intensities. The proposed distribution, location, and extent of the various categories of land use shall be shown on a land use map or map series which shall be supplemented by goals, policies, and measurable objectives.

2. The future land use plan and plan amendments shall be based upon surveys, studies, and data regarding the area, as applicable, including:

a. The amount of land required to accommodate anticipated growth.

b. The projected permanent and seasonal population of the area.

c. The character of undeveloped land.

d. The availability of water supplies, public facilities, and services.

e. The need for redevelopment, including the renewal of blighted areas and the elimination of nonconforming uses which are inconsistent with the character of the community.

f. The compatibility of uses on lands adjacent to or closely proximate to military installations.

g. The compatibility of uses on lands adjacent to an airport as defined in s. 330.35 and consistent with s. 333.02.

h. The discouragement of urban sprawl.

i. The need for job creation, capital investment, and economic development that will strengthen and diversify the community's economy.

j. The need to modify land uses and development patterns within antiquated subdivisions.

3. The future land use plan element shall include criteria to be used to:

a. Achieve the compatibility of lands adjacent or closely proximate to military installations, considering factors identified in s. 163.3175(5).

b. Achieve the compatibility of lands adjacent to an airport as defined in s. 330.35 and consistent with s. 333.02.

c. Encourage preservation of recreational and commercial working waterfronts for water-dependent uses in coastal communities.

d. Encourage the location of schools proximate to urban residential areas to the extent possible.

e. Coordinate future land uses with the topography and soil conditions, and the availability of facilities and services.

f. Ensure the protection of natural and historic resources.

g. Provide for the compatibility of adjacent land uses.

h. Provide guidelines for the implementation of mixed-use development including the types of uses allowed, the percentage distribution among the mix of uses, or other standards, and the density and intensity of each use.

4. The amount of land designated for future planned uses shall provide a balance of uses that foster vibrant, viable communities and economic development opportunities and address outdated development patterns, such as antiquated subdivisions. The amount of land designated for future land uses should allow the operation of real estate markets to provide adequate choices for permanent and seasonal residents and business and may not be limited solely by the projected population. The element shall accommodate at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period unless otherwise limited under s. 380.05, including related rules of the Administration Commission.

5. The future land use plan of a county may designate areas for possible future municipal incorporation.

6. The land use maps or map series shall generally identify and depict historic district boundaries and shall designate historically significant properties meriting protection.

7. The future land use element must clearly identify the land use categories in which public schools are an allowable use. When delineating the land use categories in which public schools are an allowable use, a local government shall include in the categories sufficient land proximate to residential development to meet the projected needs for schools in coordination with public school boards and may establish differing criteria for schools of different type or size. Each local government shall include lands contiguous to existing school sites, to the maximum extent possible, within the land use categories in which public schools are an allowable use.

8. Future land use map amendments shall be based upon the following analyses:

a. An analysis of the availability of facilities and services.

b. An analysis of the suitability of the plan amendment for its proposed use considering the character of the undeveloped land, soils, topography, natural resources, and historic resources on site.

c. An analysis of the minimum amount of land needed to achieve the goals and requirements of this section.

9. The future land use element and any amendment to the future land use element shall discourage the proliferation of urban sprawl.

a. The primary indicators that a plan or plan amendment does not discourage the proliferation of urban sprawl are listed below. The evaluation of the presence of these indicators shall consist of an analysis of the plan or plan amendment within the context of features and characteristics unique to each locality in order to determine whether the plan or plan amendment:

(I) Promotes, allows, or designates for development substantial areas of the jurisdiction to develop as low-intensity, low-density, or single-use development or uses.

(II) Promotes, allows, or designates significant amounts of urban development to occur in rural areas at substantial distances from existing urban areas while not using undeveloped lands that are available and suitable for development.

(III) Promotes, allows, or designates urban development in radial, strip, isolated, or ribbon patterns generally emanating from existing urban developments.

(IV) Fails to adequately protect and conserve natural resources, such as wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems, and other significant natural systems.

(V) Fails to adequately protect adjacent agricultural areas and activities, including silviculture, active agricultural and silvicultural activities, passive agricultural activities, and dormant, unique, and prime farmlands and soils.

(VI) Fails to maximize use of existing public facilities and services.

(VII) Fails to maximize use of future public facilities and services.

(VIII) Allows for land use patterns or timing which disproportionately increase the cost in time, money, and energy of providing and maintaining facilities and services, including roads, potable water, sanitary sewer, stormwater management, law enforcement, education, health care, fire and emergency response, and general government.

(IX) Fails to provide a clear separation between rural and urban uses.

(X) Discourages or inhibits infill development or the redevelopment of existing neighborhoods and communities.

(XI) Fails to encourage a functional mix of uses.

(XII) Results in poor accessibility among linked or related land uses.

(XIII) Results in the loss of significant amounts of functional open space.

b. The future land use element or plan amendment shall be determined to discourage the proliferation of urban sprawl if it incorporates a development pattern or urban form that achieves four or more of the following:

(I) Directs or locates economic growth and associated land development to geographic areas of the community in a manner that does not have an adverse impact on and protects natural resources and ecosystems.

(II) Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

(III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

(IV) Promotes conservation of water and energy.

(V) Preserves agricultural areas and activities, including silviculture, and dormant, unique, and prime farmlands and soils.

(VI) Preserves open space and natural lands and provides for public open space and recreation needs.

(VII) Creates a balance of land uses based upon demands of the residential population for the nonresidential needs of an area.

(VIII) Provides uses, densities, and intensities of use and urban form that would remediate an existing or planned development pattern in the vicinity that constitutes sprawl or if it provides for an innovative development pattern such as transit-oriented developments or new towns as defined in s. 163.3164.

10. The future land use element shall include a future land use map or map series.

a. The proposed distribution, extent, and location of the following uses shall be shown on the future land use map or map series:

(I) Residential.

(II) Commercial.

(III) Industrial.

(IV) Agricultural.

(V) Recreational.

(VI) Conservation.

(VII) Educational.

(VIII) Public.

b. The following areas shall also be shown on the future land use map or map series, if applicable:

(I) Historic district boundaries and designated historically significant properties.

(II) Transportation concurrency management area boundaries or transportation concurrency exception area boundaries.

(III) Multimodal transportation district boundaries.

(IV) Mixed-use categories.

c. The following natural resources or conditions shall be shown on the future land use map or map series, if applicable:

(I) Existing and planned public potable waterwells, cones of influence, and wellhead protection areas.

(II) Beaches and shores, including estuarine systems.

(III) Rivers, bays, lakes, floodplains, and harbors.

(IV) Wetlands.

(V) Minerals and soils.

(VI) Coastal high hazard areas.

(b) A transportation element addressing mobility issues in relationship to the size and character of the local government. The purpose of the transportation element shall be to plan for a multimodal transportation system that places emphasis on public transportation systems, where feasible. The element shall provide for a safe, convenient multimodal transportation system, coordinated with the future land use map or map series and designed to support all elements of the comprehensive plan. A local government that has all or part of its jurisdiction included within the metropolitan planning area of a metropolitan planning organization (M.P.O.) pursuant to s. 339.175 shall prepare and adopt a transportation element consistent with this subsection. Local governments that are not located within the metropolitan planning area of an M.P.O. shall address traffic circulation, mass transit, and ports, and aviation and related facilities consistent with this subsection, except that local governments with a population of 50,000 or less shall only be required to address transportation circulation. The element shall be coordinated with the plans and programs of any applicable metropolitan planning organization, transportation authority, Florida Transportation Plan, and Department of Transportation adopted work program.

1. Each local government's transportation element shall address traffic circulation, including the types, locations, and extent of existing and proposed major thoroughfares and transportation routes, including bicycle and pedestrian ways. Transportation corridors, as defined in s. 334.03, may be designated in the transportation element pursuant to s. 337.273. If the transportation corridors are designated, the local government may adopt a transportation corridor management ordinance. The element shall include a map or map series showing the general location of the existing and proposed transportation system features and shall be coordinated with the future land use map or map series. The element shall reflect the data, analysis, and associated principles and strategies relating to:

a. The existing transportation system levels of service and system needs and the availability of transportation facilities and services.

b. The growth trends and travel patterns and interactions between land use and transportation.

c. Existing and projected intermodal deficiencies and needs.

d. The projected transportation system levels of service and system needs based upon the future land use map and the projected integrated transportation system.

e. How the local government will correct existing facility deficiencies, meet the identified needs of the projected transportation system, and advance the purpose of this paragraph and the other elements of the comprehensive plan.

2. Local governments within a metropolitan planning area designated as an M.P.O. pursuant to s. 339.175 shall also address:

a. All alternative modes of travel, such as public transportation, pedestrian, and bicycle travel.

b. Aviation, rail, seaport facilities, access to those facilities, and intermodal terminals.

c. The capability to evacuate the coastal population before an impending natural disaster.

d. Airports, projected airport and aviation development, and land use compatibility around airports, which includes areas defined in ss. 333.01 and 333.02.

e. An identification of land use densities, building intensities, and transportation management programs to promote public transportation systems in designated public transportation corridors so as to encourage population densities sufficient to support such systems.

3. Municipalities having populations greater than 50,000, and counties having populations greater than 75,000, shall include mass-transit provisions showing proposed methods for the moving of people, rights-of-way, terminals, and related facilities and shall address:

a. The provision of efficient public transit services based upon existing and proposed major trip generators and attractors, safe and convenient public transit terminals, land uses, and accommodation of the special needs of the transportation disadvantaged.

b. Plans for port, aviation, and related facilities coordinated with the general circulation and transportation element.

c. Plans for the circulation of recreational traffic, including bicycle facilities, exercise trails, riding facilities, and such other matters as may be related to the improvement and safety of movement of all types of recreational traffic.

4. At the option of a local government, an airport master plan, and any subsequent amendments to the airport master plan, prepared by a licensed publicly owned and operated airport under s. 333.06 may be incorporated into the local government comprehensive plan by the local government having jurisdiction under this act for the area in which the airport or projected airport development is located by the adoption of a comprehensive plan amendment. In the amendment to the local comprehensive plan that integrates the airport master plan, the comprehensive plan amendment shall address land use compatibility consistent with chapter 333 regarding airport zoning; the provision of regional transportation facilities for the efficient use and operation of the transportation system and airport; consistency with the local government transportation circulation element and applicable M.P.O. long-range transportation plans; the execution of any necessary interlocal agreements for the purposes of the provision of public facilities and services to maintain the adopted level-of-service standards for facilities subject to concurrency; and may address airport-related or aviation-related development. Development

or expansion of an airport consistent with the adopted airport master plan that has been incorporated into the local comprehensive plan in compliance with this part, and airport-related or aviation-related development that has been addressed in the comprehensive plan amendment that incorporates the airport master plan, do not constitute a development of regional impact. Notwithstanding any other general law, an airport that has received a development-of-regional-impact development order pursuant to s. 380.06, but which is no longer required to undergo development-of-regional-impact review pursuant to this subsection, may rescind its development-of-regional-impact order upon written notification to the applicable local government. Upon receipt by the local government, the development-of-regional-impact development order shall be deemed rescinded.

Where is it now

FUTURE LAND USE CROSSWALK?

TALLAHASSEE LEON COUNTY
VISION 2050
A FOCUSED FUTURE

Where is it Now Future Land Use Crosswalk?

Current Goals, Objectives and Policies

Goal 1: [L] (EFF. 7/16/90)

The Comprehensive Plan shall protect and enhance the quality of life in this community by providing economically sound educational, employment, cultural, recreational, commercial, industrial and professional opportunities to its citizens while channeling inevitable growth into locations and activities that protect the natural and aesthetic environments and residential neighborhoods.

Proposed Goals, Objectives and Policies

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choices while reducing sprawl
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities
- Pedestrian and bicycle facilities
- Healthy food options
- Health services
- Community services, including schools, community centers, and libraries

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries
- Reducing barriers to starting and growing businesses
- Increasing access to job opportunities and training

Ensuring adequate and suitable lands are designated for commercial and industrial uses.

GROWTH MANAGEMENT/URBAN SERVICES AREA

Objective 1.1: [L] (EFF.7/16/90; REV. EFF. 7/26/06; REV. EFF. 12/24/10)

Direct development to those areas which have in place, or have agreements to provide, the land and water resources, fiscal abilities, and the service capacity to accommodate growth in an environmentally acceptable manner. This shall be accomplished in part through the establishment and maintenance of an Urban Service Area (USA) concept. This Urban Service Area (USA) concept is based upon a desire to have Tallahassee and Leon County grow in a responsible manner, with infrastructure provided economically and efficiently, and surrounding forest and agricultural

Objective 2.2 – Efficient Growth:

To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forests and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Objective 2.1 – Growth and Population Accommodation:

Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves

lands protected from unwarranted and premature conversion to urban land use. An urban service strategy provides for well-managed, orderly growth, which preserves natural resources and promotes fiscal responsibility. The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development.	natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.
Policy 1.1.1: [L] (REV. EFF. 7/20/05) In order to discourage urban sprawl, new development shall be concentrated in the urban service area plus in the Woodville Rural Community future land use category and the rural communities of Capitola, Chaires, Ft. Braden, and Miccosukee, as designated on the future land use map.	**Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses:** The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. *[Existing Policy Update]*
Policy 1.1.2: [L] (REV. EFF. 12/10/91) Improvement of capital infrastructure shall be provided within the designated urban service area and shall be phased over the life of the plan.	**Policy 2.2.1 – Urban Services Area (USA):** *[Existing Policy Update]* **Policy 2.2.2 – Improvement of Capital Infrastructure:** Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule. *[Existing Policy]* **Policy 2.2.3 – Planning for Urban Services:** Local government infrastructure master plans, and updates to master plans, shall account for the

	Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services. *[Existing Policy Update]*
Policy 1.1.3: [L] (REV. EFF. 12/10/91; REV. EFF. 7/26/06) Capital infrastructure designed to support urban density outside the Urban Service Area shall be prohibited except as described below. Capital infrastructure which is designed or intended to provide services to the population of the Urban Service Area may be located outside the Urban Service Area. This policy includes but is not limited to landfill, spray irrigation facilities, and inter-county transportation roadways. Capital improvement projects or expenditures designed to support urban density outside of the Urban Service Area will not occur outside the designated Urban Service Area unless a demonstrated hardship can be shown to occur for existing development or residents as of February 1, 1990. A demonstrated hardship refers to: • Replacement of existing facilities due to deterioration or destruction from natural disaster. • A public health and/or safety problem if no improvements are made (example - contaminated water wells). • Potential of severe environmental degradation if no improvements are made (example - failing septic tanks). The capacity of these facilities shall be limited to that necessary to serve development existing on or prior to February 1, 1990.	**Policy 2.2.4 – Exceptions to the Priority of Urban Services:** Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process. Emergency repairs and improvements necessary to maintain the public health, safety, and well-being shall be allowed without inclusion in the capital improvement planning process. *[Existing Policy]* **Policy 2.2.5 – Densities and Intensities:** The Future Land Use Map is intended to reflect densities and intensities supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions or mitigation for the proposed development. *[New, preserves original intent]* **Policy 2.4.2 – Criteria for Urban Service Area Expansion** To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant and developable land currently within the Urban Services Area. *[New, preserves original intent]*
Policy 1.1.4: [L] (REV. EFF. 7/20/05) Central water and sewer may be provided in areas designated as Rural Community, Woodville Rural	**Policy 2.2.3 – Planning for Urban Services:** Local government infrastructure master plans, and updates to master plans, shall account for the

Community, and enclaves within the Woodville Rural Community designated for Residential Preservation on the future land use map.	Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services. *[Existing Policy Update]*
Policy 1.1.5: [L] (EFF. 7/16/90; REV. EFF. 7/26/06) Future Land Use Map densities and intensities are intended to reflect the availability of capital infrastructure. Capital infrastructure, which supports higher land use densities and intensities, consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.	**Policy 2.2.5 – Densities and Intensities:** The Future Land Use Map is intended to reflect densities and intensities supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development. *[New, preserves original intent]*
Policy 1.1.6: [L] (EFF. 7/16/90) Areas within the urban service area will receive urban level capital facilities and services according to the schedule established in the Capital Improvements Element.	**Policy 2.2.2 – Improvement of Capital Infrastructure:** Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule. *[Existing Policy Update]* **Policy 2.2.3 – Planning for Urban Services:** Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services. *[Existing Policy Update]*
Policy 1.1.7: [L] (EFF. 7/16/90) Higher density and mixed use development and its ancillary activities shall be channeled into locations which have proper access to the existing transportation system; minimal environmental constraints; sufficient stormwater treatment capacity; compatible existing land use and readily available sewer and water infrastructure**.**	**Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses:** The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context

Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%.

[Existing Policy Update]

Policy 3.6.3 – Site Requirements:
Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise Mitigation

[New, preserves original intent]

Policy 3.6.4 – Density and Intensity Incentives:
Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category. Incentives for greater density and intensity up to 25% will be permitted for developments along arterial Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

[New, preserves original intent]

Policy 1.1.8: [L] (EFF. 7/26/06; REV. EFF. 12/24/10)

The size of the USA is related to the projected fiscal capacity of the local government to provide urban infrastructure. An assessment of changing conditions over the 20-year period of the plan is built in through the required seven year Evaluation and Appraisal Report (EAR) and the annual capital improvements process. The integrity of the USA concept is maintained by strict adherence to the premise of not funding or scheduling major capital improvement projects outside the USA, Rural Communities or the Woodville Rural Community in conjunction with a policy of discouraging premature use and underutilization of land designated for urban development. Additionally, the size of the USA should be limited to reflect the ability of the public to provide infrastructure, limitations of environmental constraints and existing development and to provide for a phasing mechanism to the Plan Horizon.

The area within the USA is sized to accommodate approximately 50% more vacant land than is necessary to accommodate the population growth expected within the USA from 1993 to the Plan Horizon. It is expected that a USA sized 50% larger than our vacant land needs will provide sufficient constraint for growth management policies to be effective, while not over constraining the supply of vacant land.

Policy 2.2.1 – Urban Services Area (USA):

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

[Existing Policy Update]

Policy 1.1.9: [L] (EFF. 7/26/06)

In order to achieve efficient and effective use of infrastructure and land, residential density within the USA shall average no less than 2 dwelling units per gross acre. Some future land use categories may establish higher minimum densities and minimum intensity requirements for nonresidential development. Attainment of minimum densities and intensities will be measured and reported annually and be evaluated at a minimum during subsequent Evaluation and Appraisal Reports and adjustments to the Comprehensive Plan necessary to achieve this measure will be recommended as warranted in the future.

Policy 2.2.1 – Urban Services Area (USA):

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

	The densities shall be addressed within the Urban Services Area by maintaining land use categories that include Sub-Urban and Urban. The Evaluation and Appraisal Report shall be conducted every 7 years to assess population and densities. *[New, preserves original intent]*
Policy 1.1.10: [L] (EFF.7/16/90; RENUMBERED EFF. 7/26/06; FORMERLY POLICY 1.1.8.) Compliance with the Conservation Element shall be met prior to consideration of requirements in the Land Use Element.	**Policy 1.2.6 – Conservation Element:** Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent. *[Existing Policy Update]*
Policy 1.1.11: [L] (REV. EFF. 3/14/07; REV. EFF. 1/7/10) The growth management strategy of the Tallahassee-Leon County Comprehensive Plan is designed to be implemented by a series of instruments which include Urban Service Area, Land Use Map, Future ROW Needs Map, Commercial Site locations, Land Use categories summary, Planned Development, MU Development patterns, and Goals, Objectives, and Policies.	**No specific policy. The Plan includes:** 1. Urban Services Area Policy: Policy 2.2.1. 2. Corridor Preservation: Policy 2.2.10 3. Future Land Use Map: Policy 2.8.1 4. Commercial Site Locations: Addressed in individual land use categories with specifics to be in the land development codes: a. General: 2.8.1 and 2.8.2 b. Parks: 2.8.17 c. Rural Residential: 2.8.5 d. Rural Community: 2.8.6 e. Lake Protection: 2.8.7 f. Residential Preservation: 2.8.8 g. Sub-Urban Neighborhood: 2.8.9 h. Sub-Urban Mixed-Use: 2.8.10 i. Urban Neighborhood: 2.8.11 j. Urban General: 2.8.12 k. Urban Center: 2.8.13 l. Mobility Hubs: 3.7.3 5. Land Use Categories: Under Objective 2.8 6. Planned Development: Policy 2.8.18 7. Mixed use Development Patterns: Policy 2.8.2 and handled in land use categories 8. Goals, Objectives, and Policies: Are foundation of the element. *[Existing Policy Update]*
Policy 1.1.12: [L] (EFF. 8/9/12) The parcel shown on the map below at the intersection of I-10 and US Highway 90 is within the designated Urban Service Area (USA), as	Chapter 380, F.S., was revised in 2013 and 2021, and this provision in the comprehensive plan is no longer needed.

defined in Section 163.3164(50), Florida Statutes, having public services and facilities, including, but not limited to, central water and sewer capacity and roads. As a parcel within a designated statutory USA, proposed development within the parcel is exempt from the development-of-regional impact process pursuant to Section 380.06(29)(c)3, Florida Statutes.	
DEVELOPMENT IN RELATION TO ENVIRONMENTAL CONSTRAINTS **Objective 1.2: [L] (EFF. 7/16/90; REV. EFF. 4/10/09)** Coordinate the location of land uses with local soil conditions, topography, and aquifer vulnerability as well as available services.	**Objective 1.6 – Community Resilience:** Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.
Policy 1.2.1: [L] Leon County only (EFF. 7/16/90) Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use. **Policy 1.2.1: [L] City of Tallahassee only (REV. EFF. 7/1/04)** Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Such off-site mitigation plans shall recognize the contribution of preserved significant grades to community character, ameliorating the impacts of stormwater, and providing conditions for native plant communities.	**Policy 1.2.2 – Environmental Analysis:** Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health. *[New, preserves original intent]*
Policy 1.2.2: [L] Leon County only (REV. EFF. 9/19/91) The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize	**Policy 1.2.2 – Environmental Analysis:** Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community

site designs that fit the topography, not changing the topography to fit the design. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of -way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.

Policy 1.2.2: [L] City of Tallahassee only (REV. EFF. 7/1/04)

The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize site designs that fit the topography, not changing the topography to fit the design, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of -way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.

character and identify the potential impacts to environmental and human health.

[New, preserves original intent]

Policy 1.2.3: [L] (REV. EFF. 12/7/99)

(a) The local governments shall maintain a map indicating the locations of all known operating and abandoned land fill sites. As the location of additional abandoned land fill sites become known, this map shall be revised accordingly.

(b) By 2001, local government will include requirements in their land development regulations that the development of any property within a mapped landfill site shall be required to submit information relating to the subsurface geology of the property necessary to assure that future development of the site will not adversely impact the health, safety or welfare of the public.

(c) By 2001, local governments will include requirements in their land development regulations that regulate the location of stormwater

Policy 3.6.8 – Landfill Redevelopment:

Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

[Existing Policy Update]

facilities or conveyance systems within any abandoned landfills.	
Policy 1.2.4: [L] (EFF. 4/10/09) By 2010, local government shall adopt in the Land Development Regulations a mapped Primary Spring Protection Zone for Wakulla Springs based on the Leon County Aquifer Vulnerability Assessment. Accompanying land development regulations for the Primary Spring Protection Zone shall be developed as indicated in Policy 4.2.5 of the Conservation Element to aid in the protection of Wakulla Springs. These efforts shall be coordinated with Wakulla County.	**Policy 1.1.1 - Geographic Data. and Policy 2.8.6 Rural Community Land Use Category** Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements. The primary springs protection zone is mapped and land development regulations have been developed. The Future Land Use and Mobility Element Map Series includes the Primary Springs Protection Zone (PSPZ). *[New, preserves original intent]*
LEVEL OF SERVICE (REGULATIONS) **Objective 1.3: [L] (EFF. 7/16/90)** Achieve and maintain the adopted level of service standards set forth within the Tallahassee-Leon County Comprehensive Plan.	**Objective 6.3 – Context Based Mobility:** Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be in the future based on land use and zoning. [LOS] **Objective 2.7 – Multi-Modal Transportation District (MMTD):** Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.
Policy 1.3.1: [L] (EFF. 7/16/90) Before a development order or permit is issued, local government shall ensure that the adopted level of service standards for the affected public facilities will be maintained in accordance with the Concurrency Management System.	No similar provision proposed because concurrency exists with LOS measure in the Utilities Element and in the Capital Improvements Element. **Policy 1.3.3:** [CI] (REV. EFF. 8/17/92; REV. EFF. 12/29/05) The City Commission of Tallahassee and the Board of County Commissioners of Leon County find that the impacts of development on public facilities within Tallahassee and Leon County occur at the same time as development authorized by a final development order.

	[Existing] **Policy 1.6.3**: [CI] Concurrency Implementation and Monitoring System *[Existing]*
Policy 1.3.2: [L] (REV. EFF. 12/16/94) Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the degree of compliance with the goals, objectives and policies of the Comprehensive Plan and the land use development matrix, which is intended to be a pictorial representation of existing policies in the plan, as implemented by the land development regulations. Overall densities and intensities should be consistent with capital facilities and services being available at the adopted level.	**Policy 3.6.1 – Criteria for Amendments to Land Development Regulations**: Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan. Overall densities and intensities are found in the land use categories. The land development matrix is found in both the City and County land development code. *[Existing Policy Update]*
Policy 1.3.3: [L] (REV. EFF. 12/10/91) **Environmental and development ordinances shall include the following:** (a) Explicit and strict protection of environmentally sensitive areas, thus minimizing future costs to taxpayers by prohibiting unsound uses; and (b) Availability and use of the conservation and preservation overlays as detailed in the Conservation Element prior to the issuance of development orders. (c) Apportioning development costs so that those fees collected from the existing population be applied to elimination of current "deficits" in levels of service, while those fees collected in new developments are applied to maintain levels of service established by the entire community. Maintenance and enhancements to the adopted levels of service shall be the responsibility of both. This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer. (d) Policies and procedures in the land development regulations shall ensure that the range of development types by percentage distribution are monitored and maintained.	This is addressed in proposed policies but primarily accomplished through the Conservation Element policies and Capital Improvements Element. (a) Protection of environmental areas Policies 1.1.1; and Policies 1.2.1 through 1.2.6; Natural Area Land Use Category 2.8.3 *[Existing Policy Update]* (b) Development cost to maintain LOS. Existing concurrency system. Policy 1.3.3: [CI] (REV. EFF. 8/17/92; REV. EFF. 12/29/05) The City Commission of Tallahassee and the Board of County Commissioners of Leon County find that the impacts of development on public facilities within Tallahassee and Leon County occur at the same time as development authorized by a final development order. Policy 1.6.3: [CI] Concurrency Implementation and Monitoring System. *[Existing]* (c) Land uses maintain percentage distribution of land uses in the land development regulations. Percentage distributions are maintained in Policy 2.8.2. *[Existing Policy Update]*

This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer.	
Policy 1.3.4: Reserved.	N/A
LAND DEVELOPMENT REGULATIONS **Objective 1.4: [L] (REV. EFF. 7/20/05)** Maintain a set of specific and detailed Land Development Regulations, which implement and are consistent with the goals, objectives and policies of the Tallahassee-Leon County Comprehensive Plan.	**Objective 3.6 – Land Development Regulations:** Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan. **Ancillary:** **Objective 1.6 – Community Resilience:** Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community. **Objective 2.5 – Reconnecting Urban Sprawl:** Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles travelled, and improving mobility, especially for people walking, riding bicycles, and using transit. **Objective 2.7 – Multimodal Transportation District (MMTD):** Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.
Policy 1.4.1: [L] (REV. EFF. 12/10/91) Density and intensity incentives shall be established within the required land development regulations to encourage growth in areas which minimize and mitigate development's negative impact on the natural and aesthetic environment.	**Established for each land use category policy under Objective 2.8 for densities and intensities.** *[Existing Policy Update]*

Policy 1.4.2: [L] (REV. EFF. 12/16/94; REV. EFF. 1/7/10)

The Comprehensive Plan shall establish guidelines for the application of traditional zoning districts in order to implement a future land use regulatory system that is more predictable than area-wide application of mixed use performance zoning. These traditional zoning districts shall specify a range of allowable land use within each district. In certain land use designations, mixed use performance zoning will be retained to integrate land uses which may be otherwise incompatible**.**

Policy 3.6.2 – Implementing Zoning Districts:

Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

[Existing Policy Update]

Policy 3.6.5 – Planned Unit Developments:

The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

[Existing Policy Update]

Policy 1.6.2 – Multimodal Connectivity:

Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit networks and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

[New, preserves original intent]

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses:

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use

	land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. *[New, preserves original intent]* **Policy 3.6.4 – Density and Intensity Incentives:** Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category. Incentives for greater density and intensity up to 25% will be permitted for developments along arterial Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments. *[New, preserves original intent]*
Policy 1.4.3: [L] (DEL. EFF. 7/25/03) Reserved **Policy 1.4.4: [L] (DEL. EFF. 7/20/05)** Reserved	**Not Applicable**
Policy 1.4.5: [L] (REV. EFF. 3/14/07) The Tallahassee-Leon County Comprehensive Plan, its future land use map and future land use categories as defined within the Plan, the land use summary charts which are intended to be a pictorial representation of existing policies in the comprehensive plan, and land development regulations adopted by local government as provided in the Plan shall in combination provide a unified system for the regulation of land use. Land use regulations shall be consistent with the intended functions, land uses and intensity of the land use category designated on the future land use map.	**Policy 3.6.4 – Density and Intensity Incentives:** Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the Future Land Use Category. Incentives for greater density and intensity up to 25% will be permitted for developments along arterial Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments. *[New, preserves original intent]*

	Objective 2.8 – Community Context: Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County. **Policies 2.8.1 and 2.8.2 for the Future Land Use Map.** *[New, preserves original intent]*
Policy 1.4.6: [L] (EFF. 7/16/90; REV. EFF. 4/10/09) By 2014, land development regulations will include standards for the regulation of future land use categories, subdivision, signage, and areas subject to seasonal or periodic flooding and areas of known hazards. Regulations concerning areas subject to seasonal or periodic flooding shall be consistent with all applicable state and federal regulations.	**Proposed policies maintain land development regulation provisions.** **Policy 3.6.3 – Site Requirements:** Land development regulations shall include requirements for: • Context-based stormwater management • Open space • Setbacks • Buffers • Screening • On-site traffic circulation • Roadway access • Land uses • Subdivision of land • Signage • Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations • Areas known to be vulnerable to natural or human-caused hazards • Lighting • Noise Mitigation *[Existing Policy Update]*

Policy 1.4.7: [L] (EFF. 7/16/90) The adopted land development regulations shall include requirements for stormwater management, open space, and convenient on-site traffic flow (including need).	**Policy 3.6.3 – Site Requirements:** Land development regulations shall include requirements for: • Context-based stormwater management • Open space • Setbacks • Buffers • Screening • On-site traffic circulation • Roadway access • Land uses • Subdivision of land • Signage • Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations • Areas known to be vulnerable to natural or human-caused hazards • Lighting • Noise Mitigation *[Existing Policy Update]*
Policy 1.4.8: [L] (EFF. 7/16/90) The land use development matrix shall be adopted as part of the comprehensive plan and shall in conjunction with the future land use map and the goals, objectives and policies contained within the individual elements be used in evaluating future land use decisions.	**Policy 3.6.1 – Criteria for Amendments to Land Development Regulations:** Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan. *[Existing Policy Update]* The land development matrix is being removed from the Comprehensive Plan. Overall densities and intensities are found in the land use categories. The land development matrix is found in both the City and County land development code.
Policy 1.4.9: [L] (EFF. 7/16/90) Changes in classification of highways and streets that affect the allowable uses of property as set forth in the land development matrix and the comprehensive plan shall be considered plan amendments and shall be required to follow the plan amendment process.	**Policy 6.3.3 – Context Classification Map:** A Context Classification map shall be maintained through the planning timeframe that recognizes roadway functional classification in addition to land use context. The Context Classification map shall be updated concurrently with amendments to the Functional Classification map and the Future Land

	Use map. *The land development matrix is being removed from the Comprehensive Plan. *[Existing Policy Update]*
Policy 1.4.10: [L] (REV. EFF. 12/16/94) The land development regulations shall provide for zoning districts which shall indicate which land uses are allowed, prohibited, or conditional-with-specified constraints consistent with the criteria set forth in the narrative intent of the future land use categories, the land use development matrix which is intended to be a pictorial representation of existing policies in the Comprehensive Plan, and the Goals, Objectives, and Policies of the Comprehensive Plan.	**Policy 3.6.2 – Implementing Zoning Districts:** Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each land use category zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable. *[Existing Policy Update]* **Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses:** The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. *[Existing Policy Update]*
Policy 1.4.11: [L] (EFF. 9/19/91) The land development regulations shall include standards and criteria such as minimum open space requirements (between 25% and 10% depending on the land use and existing vegetation), internal circulation and minimum setbacks and buffers for uncomplimentary land uses. These buffer requirements will contain buffer widths between land uses, required number of trees and shrubs per linear foot of buffer, opacity of the buffer, etc. Additional buffering requirements may be related to Planned Unit Developments (PUDs).	**Policy 3.6.2 – Implementing Zoning Districts:** Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each land use category zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable. *[Existing Policy Update]*

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses:

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%.

[Existing Policy Update]

Policy 3.6.3 – Site Requirements:

Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise Mitigation

[Existing Policy Update]

Policy 1.4.12: [L] (EFF. 9/19/91)

(a) The intent of Site Plan and PUD planning and design requirements shall be to encourage and require the development of urban living and work spaces that minimize impacts to the natural

Policy 3.6.5 – Planned Unit Developments:

The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development

environment. Environmental impacts shall be minimized through the development and redevelopment of compact and efficient urban land use patterns that closely integrate living and work spaces while maintaining compatibility through specified performance design criteria. Neighborhood and inter-site compatibility shall be implemented through site planning and design criteria that require objectionable impacts of particular land use activities to be internally located within site or building designs, rather than relying exclusively on standard landscape and setback buffering methods to reduce perimeter oriented objectionable impacts.

(b) Objectionable impacts of service and delivery areas, refuse and recycling collection areas, as well as the outdoor storage and work areas generally associated with commercial and residential buildings shall be planned to minimize off-site impacts.

(c) Site Plan and PUD requirements shall minimize impacts to the natural environment resulting from urban sprawl by not only identifying and protecting environmentally sensitive lands, but just as importantly by limiting urban sprawl into less environmentally sensitive lands through the implementation of compact and efficient urban development and redevelopment.

proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

[Existing Policy Update]

Policy 1.6.2 – Multimodal Connectivity:

Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit networks and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

[Existing Policy Update]

Policy 3.6.3 – Site Requirements

[Existing Policy Update]

Policy 1.4.13: [M] (EFF. 12/15/11)

As Capital Circle is converted to a high capacity, multi-lane arterial, future access-points shall be limited so that the improved roadway will function more efficiently and safely for its intended purpose. In order to protect traffic capacity of the improved roadway and to assure public safety, the following policies will apply:

1. No new parcel shall be platted nor created through subdivision that results in a parcel with sole access to Capital Circle. Consolidation of two or more parcels that currently have access to Capital Circle into a parcel with a single access to Capital Circle shall be permitted;

2. New development abutting Capital Circle shall contribute to the development of a supporting system of local or collector roads, service roads, and/or shared access systems (e.g. joint use

Policy 2.2.10 – Corridor Preservation:

Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 3343.03(29)—and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

[New, preserves original intent]

driveways), as an alternative to individual driveway access. 3. Where individual driveways must be provided to preserve reasonable access to a development site, applicants shall enter an agreement to cooperate in any future project to consolidate access points or to share access with abutting properties as opportunities arise.	
Policy 1.4.14: [L] (EFF. 8/17/92) Compile a list and waive access standards for non-residential minor collector and local streets based on the following criteria: a) It is part of a platted non-residential subdivision. b) It is part of an approved PUD. c) It has over 66% of its developed frontage in non-residential land uses and essentially functions as an access road for these developments. The designation of these streets is a recognition of existing development patterns and is intended to permit future development compatible with existing land uses and consistent with road capacity and design. These streets will be reviewed by the respective elected Commission on a case-by-case basis and may be designated as non-residential streets. A segment of a road, meeting the above criteria, may be designated a non-residential if it will not result in non-residential traffic impacting residential areas on other segments of the road or in the adjacent area. (A segment is the road length between two intersecting roads).	**Policy 6.2.3 – Build and Enhance the Network:** Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments. *[Existing Policy Update]*
Policy 1.4.15: [L] (EFF. 8/17/92; REV. EFF. 5/31/18) Waive access standards for heavy industrial land uses within the Heavy Industrial Future Land Use category and Industry and Mining Future Land Use category. This will be done in conjunction with adopting a policy which waives local and minor collector access standards for all planned industrial and commercial development.	**Policy 2.8.15 – Manufacturing and Mining Special District:** Advanced manufacturing, and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community. 4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.

	[New, preserves original intent]
Policy 1.4.16: [L] (EFF. 8/17/92) Unless otherwise specifically stated, all timelines stated in the Comprehensive Plan are intended to mean by December 31 of the stated year.	**Not specifically addressed.** **Policy 2.1.1 – Comprehensive Planning Periods:** The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections. *[Existing Policy Update]*
Policy 1.4.17: [L] (City of Tallahassee only) (EFF. 8/17/92; REV. EFF. 6/6/08) New minor office uses may be permitted access to a local residential street in the Central Urban and University Transition land use categories within the city limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential land use in the vicinity.	Not specifically included as a separate policy. Addressed in land use categories and in the land development code. **Policy 2.8.12 – Urban General Future Land Use Category**: The intent of the Urban General Land Use is to provide a mixture of uses including variety of residential land uses, employment (includes light manufacturing), office and commercial activities. 3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district. *[Existing]*
Policy 1.4.18: [L] (City of Tallahassee only) (REV. EFF. 3/14/07; REV. EFF. 6/6/08) New minor commercial uses shall not be permitted access to a local residential street within the city limits of Tallahassee. This limitation shall not apply to the Bradfordville Mixed Use, Suburban, Planned Development, Central Urban, University Transition, and Village Mixed Use Categories which establish street access standards by Land Development Regulations.	Specific access is in the land development code.
Policy 1.4.19: [L] (EFF. 1/19/02) New commercial, office and residential land uses within the Gaines Street Corridor Study Area may	Specific access is in the land development code.

be permitted access to any street classification or designation. Access limitations may be further restricted based on the Gaines Street Revitalization plan	
Policy 1.4.20: [L] (REV. EFF. 7/25/03) Community services which are religious facilities to be used solely for religious functions, volunteer fire stations in the Rural or Agriculture/Silviculture/Conservation future land use categories, and community services that are operated by public agencies and are located outside of the Urban Service Area may be permitted access onto a local street only after a higher level of review as specified in the Land Development Regulations. Land development regulations shall require site design criteria addressing impacts which include, but are not limited to: peak use traffic, noise, building orientation and setbacks or any other potential negative impacts affecting adjacent residential uses or the residential character of the surrounding area. Religious facilities that have day care, recreation facilities, schools, or other similar ancillary activities shall not be permitted to access a local street.	Specific access is in the land development code.
Policy 1.4.21: [L] (EFF. 7/1/94; REV. EFF. 7/20/05) The land development regulations shall provide for minor and major office uses, minor commercial uses, and low and medium density residential uses with access to minor collector streets and, in specific instances, to local streets, as well as the relaxation of parking, landscape, and buffering standards to encourage a wider variety of uses and greater range of economic development opportunities in the Central Urban future land use category, without creating conditions leading to the conversion of midtown residential enclaves, which although not meeting all of the criteria for inclusion in and protection by the Residential Preservation future land use category, remain viable for residential use and provide important housing opportunities in close proximity to the downtown area, the universities, and employment centers.	Specific access is in the land development code.
Policy 1.4.22: [L] (EFF. 7/1/04)	Specific access is in the land development code.

Waive all street access, intersection and adjoining use restrictions for allowed uses internal to the Activity Center future land use category. The exception to this policy is that access shall be prohibited to any local street within a recorded or unrecorded residentially platted subdivision. It is not the intent of this policy to waive landscaping or buffer requirements.	
Policy 1.4.23: [L] (EFF. 7/1/04) By 2005, the Tallahassee-Leon County Comprehensive Plan and the implementing City and County land development regulations shall include provisions relating to regional recreational facilities. These regulations shall establish a definition of regional recreational facilities and shall specify the Future Land Use Map categories and zoning districts that regional recreational facilities are allowable with and shall require a greater level of review and additional site design criteria to address the off-site impacts of regional recreation uses. Impacts addressed shall include, but be not limited to: peak use traffic, hours of operation, lighting, noise, building orientation, buffers and setbacks, or any other potential negative impacts of such uses affecting adjacent or nearby residential uses or residential character of the nearby area.	The land development codes include provisions for recreational facilities.
NON-CONFORMING USES AND NONCOMPLYING CHARACTERISTICS **Objective 1.5: [L] (EFF. 7/16/90)** Provide a procedure within the land development regulations which will substantially mitigate or lead to the eventual elimination of nonconforming land uses created by the adoption of this plan.	**Objective 3.6 – Land Development Regulations:** Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan. **Policy 3.6.6 – Non-Conforming Uses:** The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate non-conforming land uses or deem an existing use to be conforming. *[Existing]*
Policy 1.5.1: [L] (REV. EFF. 6/28/95) Existing land uses which are nonconforming to the Comprehensive Plan may be reviewed by the local government at the request of the owner in order to	**Policy 3.6.6 – Non-Conforming Uses:** The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate non-conforming land uses or deem an existing use to be

determine the degree on nonconformity. The review may result in:	conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on: • The impact of the non-conformity to conforming land uses adjacent to the non-conformity. • A determination that the non-conformity is not detrimental to public health, safety, and welfare. • The ability to prevent or substantially mitigate impacts of the non-conformity. The development regulations shall distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses in nonresidential designations which may continue, but not be expanded. *[New, preserves original intent]*
Policy 1.5.2: [L] (EFF. 6/28/95) A legally established single family residential use shall be considered a conforming use of land in all Comprehensive Plan land use designations. However, this conforming status shall not be interpreted to preclude the use of property adjoining a low density use for an otherwise permitted non-residential use if the low density residential use accesses an arterial or major collector roadway.	**Policy 4.1.2 – Missing Middle Housing as Conforming Uses:** Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations. *[New, preserves original intent]*
Policy 1.5.3: [L] (DEL. EFF. 8/1/07) Reserved	**N/A**
Policy 1.5.4: [L] (EFF. 6/28/95) The local government shall implement development regulations which distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses in nonresidential designations which may continue, but not be expanded.	**Policy 3.6.6 – Non-Conforming Uses:** The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate non-conforming land uses or deem an existing use to be conforming. • The impact of the non-conformity to conforming land uses adjacent to the non-conformity. • A determination that the non-conformity is not detrimental to public health, safety, and welfare. • The ability to prevent or substantially mitigate impacts of the non-conformity. The development regulations shall distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses

	in nonresidential designations which may continue, but not be expanded. *[Existing]*
Policy 1.5.5: [L] (EFF. 6/28/95) The local government shall implement development regulations which distinguish between nonconforming use of property and noncomplying physical characteristics or features of the use. This procedure shall allow for the continued conforming use of the noncomplying physical features, and shall require correction of non-structural, noncomplying physical features prior to any conforming expansion of use**.**	**Policy 3.6.6 – Non-Conforming Uses:** The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on: • The impact of the non-conformity to conforming land uses adjacent to the non-conformity. • A determination that the non-conformity is not detrimental to public health, safety, and welfare. • The ability to prevent or substantially mitigate impacts of the non-conformity. The development regulations shall distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses in nonresidential designations which may continue, but not be expanded. *[Existing]*
Objective 1.6: [L] (EFF. 6/28/95; DEL. EFF. 1/7/10) **Reserved**	N/A
BRADFORDVILLE MIXED USE DEVELOPMENT PATTERNS (applies to Bradfordville Study Area Only) **Objective 1.7: [L] (REV. EFF. 3/14/07)** The Comprehensive Plan provides an overall vision for the community. The arrangement of land uses is a major factor in achieving this vision. Within the Bradfordville Mixed Use Future Land Use Category, land uses may be further separated to achieve efficient and environmentally sound development patterns and to promote the Plan's overall vision. This objective and its policies describe the development patterns associated with the Bradfordville Mixed Use Future Land Use Category. The following statements of intent express, in part, the overall vision of the community as established	**Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community. **Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land

in the Comprehensive Plan. These statements of intent explain the basis for the development patterns described in the following policies and shall be achieved through the zoning process and other Land Development Regulations as appropriate. Application of these development patterns in combination with each other is expected to achieve these intents. Individual development patterns may only partially achieve the following purposes:

a) Provide opportunity for residential, shopping, employment, education and recreation use within walking distance of each other;

b) Promote higher density housing and concentrations of nonresidential activity in close proximity to each other;

c) Provide for a range of housing opportunities which does not isolate families or individuals based upon age, income or race;

d) Ensure that mapping of zoning districts is consistent the long term protection of environmental features;

e) Ensure that mapping of zoning districts will be appropriate to location, access and surrounding land use;

f) Ensure that mapping of zoning districts is consistent with the phasing and availability of infrastructure;

g) Encourage a mix of complimentary land uses and concentrations of mixed use development in appropriate locations;

Regulations shall establish access criteria for community facilities to assure their appropriate location.

ACCESS - Areas zoned for the Medium Density Residential development pattern shall have access to an arterial or collector roadway.

uses and transportation facilities in the City of Tallahassee and Leon County.

Policies 1.7.1 to 1.7.9 [L]

Policy 2.6.6 – Bradfordville Study Area:

The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County Board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in the land

development regulations based on the Bradfordville Area Plan and as specified in the land use category(ies) in Objective 2.8.

[New, preserves original intent]

The uses are incorporated into Residential Preservation, Sub-Urban Neighborhood, Sub-Urban Mixed-Use, and Institutional. Policies 2.8.8, 2.8.9, 2.8.10, and 2.8.16.

[New, preserves original intent]

Goal 2: [L] (EFF. 7/16/90; REV. EFF. 7/26/06) Provide for a high quality of life by planning for population growth, public and private development and redevelopment and the proper distribution, location and extent of land uses by type, density and intensity consistent with adequate levels of services and efficient use of facilities and the protection of natural resources and residential neighborhoods

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the urban boundary.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.

	• Pedestrian and bicycle facilities. • Healthy food options. • Health services. • Community services, including schools, community centers, and libraries.
RESIDENTIAL LAND USE **Objective 2.1: [L]** (REV. EFF. 7/20/05) Enhance the livability of existing neighborhoods and in new neighborhoods provide for future mixed residential areas which will accommodate growth and provide a wide choice of housing types, densities and prices as well as commercial opportunities based on performance criteria. In furtherance of this, maintain a system of land development regulations and ordinances which will facilitate the implementation of the policies adopted in relation to residential land use. These shall include but not be limited to: 1) Setback requirements from natural waterbodies and wetlands 2) Buffering requirements 3) Open space requirements 4) Landscape requirements 5) Tree protection 6) Stormwater management requirements	**Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Policy 2.1.1: [L] (REV. EFF. 6/28/95; REV. EFF. 7/26/06; REV. EFF. 5/31/18) Protect existing residential areas from encroachment of incompatible uses that are destructive to the character and integrity of the residential environment. Comprehensive Plan provisions and Land Development Regulations to accomplish this shall include, but are not limited to:	**Policy 3.1.1 – Residential Character Criteria:** Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process. *[Existing Policy Update]*
Policy 2.1.2: [L] (EFF. 7/16/90) Prohibit residential development where physical constraints or hazards exist, or require the density and design to be adjusted accordingly. Such constraints or hazards include but are not limited to flood, storm or slope hazards and unstable soil or geologic conditions.	**Policy 3.6.3 – Site Requirements:** Land development regulations shall include requirements for: • Context-based stormwater management • Open space • Setbacks • Buffers • Screening • On-site traffic circulation

	• Roadway access • Land uses • Subdivision of land • Signage • Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations • Areas known to be vulnerable to natural or human-caused hazards • Lighting • Noise Mitigation *[Existing Policy Update]*
Policy 2.1.3: [L] (REV. EFF. 8/17/92) Require clustering of residential units on non-environmentally significant portions of parcels where conservation or preservation overlay districts exist elsewhere on the site. Net density on parcels where clustering is required on the developable portion of the parcel where the units are clustered shall not exceed double the allowable density for the land use category in which the parcel is located.	Clustering and Conservation Subdivisions are found in the future land use categories for Rural Residential Policy 2.8.5, Rural Community Policy 2.8.6., and Lake Protection Policy 2.8.7. *[New, preserves original intent]*
Policy 2.1.4: [L] (EFF. 7/16/90) Residential densities shall not be permitted that would exceed the ability of local government or other providers to provide capital facilities and services in a cost-effective manner.	**Policy 3.1.3 – Housing Diversity:** Maintain a viable mix of available residential densities to accommodate a variety of housing types. *[New, preserves original intent]*
Policy 2.1.5: [L] (City of Tallahassee) (EFF. 7/16/90) Residential developments shall be designed to include a system of internal and inter-neighborhood circulation which promotes pedestrian and bicycle mobility. Within the Urban Service Area, sidewalks shall be required to provide pedestrian mobility. **Policy 2.1.5: [L] (Leon County) (REV. EFF. 12/10/91)** Bicycle facilities within residential developments shall only be required along major collectors or other streets with a higher functional classification.	**Policy 3.3.6 – Neighborhood Through-Traffic:** Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies. *[New, preserves original intent]* **Policy 3.3.3 – Unified Access and Circulation Plans:** Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and

	from the proposed development, as well as access to surrounding developments. *[New, preserves original intent]*
Policy 2.1.6: [L] Criteria shall be established within local development regulations which require within residential developments the provision of non-residential land uses such as parks, school sites and potential walk-to minor commercial and office opportunities.	**Policy 1.3.2 – Urban Recreation Spaces:** Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks. *[New, preserves original intent]* **Policy 1.3.4 – Multimodal Access to Parks and Recreation:** All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway or trail interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits. *[Existing Policy Update]* **Policy 2.3.3 – School Siting Review & Criteria:** All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan. The siting of public and private schools should encourage development patterns that reduce trip length and the need for private automobile trips. *[New, preserves original intent]*
Policy 2.1.7: [L] (REV. EFF. 8/17/92) Criteria established within the subdivision ordinances shall set aside land for active and passive contiguous green space in order to provide for accessible recreation and/or open space areas for all neighborhoods.	**Policy 1.2.5 - Open Space Reserve Areas:** Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous reserve areas to the greatest extent possible to minimize habitat fragmentation. The siting of open space reserve areas shall occur in a manner that creates

	cohesive and connected open space across property boundaries to ensure interconnected greenspaces. *[Existing Policy Update]*
Policy 2.1.8 - Maintain a viable mix of available residential densities to accommodate a variety of housing types. Current residential densities are summarized.	**Policy 3.1.2 – Housing Diversity:** Maintain a viable mix of available residential densities to accommodate a variety of housing types. *[Existing]* **Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map:** Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future. *[New, preserves original intent]*
Policy 2.1.9: [L] (Leon County) - Family Heir Subdivision Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations. a) Family Heir Subdivisions The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan. **Policy 2.1.9: [L] (City of Tallahassee) -** Family Heir Subdivision Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created	**Policy 4.4.1 – Family Heir Subdivision Eligibility** The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years. *[Existing Policy Update]*

through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations. a) Family Heir Subdivisions The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan.	
Policy 2.1.10 - Reserved	**N/A**
Policy 2.1.11: [L] (EFF. 1/19/02; REV. EFF. 6/6/08) Criteria for approval of Central Urban development shall be established in the Land Development Regulations.	**Policy 2.8.12 – Urban General Future Land Use Category:** The intent of the Urban General Land Use is to provide a mixture of uses including variety of residential land uses, employment (includes light manufacturing), office and commercial activities. This category includes variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of a high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant nonresidential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged. 1. Design and development standards for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and a continuous walkable street network throughout the district. *[New, preserves original intent]*
2.1.12 - Reserved	**N/A**

Policy 2.1.13: [L] (EFF. 8/17/92)

Existing adjoining land uses are not to be a factor in determining the suitability for residential development which would allow high and medium density residential uses to be located anywhere in the University Transitional land use category.

Policy 2.8.12 – Urban General Future Land Use Category:

The intent of the Urban General Land Use is to provide a mixture of uses including variety of residential land uses, employment (includes light manufacturing), office and commercial activities. This category includes variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of a high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant nonresidential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged. Allowed land uses include residential, commercial, office, and community facilities.

A maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for nonresidential uses of 60,000 square feet per acre is allowed.

[New, preserves original intent]

Policy 2.1.14: [L] (EFF. 6/07/01; REV. EFF. 7/26/06)

The land development regulations may contain provisions that allow for densities greater than otherwise provided in the respective future land use classifications specified within the Land Use Element in exchange for the construction of affordable housing units. These density bonuses shall be limited to a density no greater than 25% higher than would otherwise be allowed.

Bonus options are available in certain categories and for certain development. Policy 2.8.7 – Lake Protection Future Land Use Category; and TOD, Policy 4.2.2 – Transit-Oriented Development (TOD) Policy and 4.2.5 – Trail-Oriented Development (TrOD) Design Standards.

[New, preserves original intent]

FUTURE LAND USE MAP CATEGORIES

Objective 2.2: [L] (REV. EFF. 7/26/06)

To coordinate future land uses with suitable topography and soil conditions, the protection of natural resources and with the availability of adequate infrastructure through the establishment of a Future Land Use Map depicting appropriate land

Objective 2.8 – Community Context:

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future

use categories. In order to fulfill this intent, the Land Use Plan establishes policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community.

The Tallahassee-Leon County Comprehensive Plan shall promote appropriate location of land uses and regulation of development

density and intensity based upon: (1) protection of conservation and preservation features; (2) compatibility with adjacent existing and future residential land uses; (3) access to transportation facilities in keeping with their intended function; and (4) the availability of infrastructure.

The Plan shall also establish policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community and are shown on the following maps:

NOTES APPLICABLE TO URBAN AREA FUTURE LAND USE MAP (REV. EFF. 3/14/07)

Parcels 21-26-35-C-0010, 21-26-35-C-0020, 21-26-35-C-130 may be developed as an independent living facility for the elderly only if a Planned Unit Development is approved which includes Parcels 21-26-51-000-0040, 21-26-51-000-0050, and 21-26-51-000-120. Development intensity on the vacant parcels is limited to 45 units and 34,000 square feet and building height is limited to three stories. If the Planned Unit Development is not completed or approved, the vacant parcels shall only be developed as low-density residential development allowed under the R-1 or R-2 zoning districts.

Parcel 11-08-20-630-0000 shall only be developed with general office that may include a lending institution with a drive-through facility on the first floor. The total amount of development is limited to 30,000 square feet. The architecture and site design must be consistent with the adjacent Thomasville Road/I-10 Planned Unit Development. Site plans must be submitted to the Live Oak Plantation and Piedmont Neighborhood Associations, the 1300 Live Oak Plantation Property Owners Association, as well

development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.

as the developers of the Thomasville Road/I-10 Planned Unit Development for comments prior to submitting the site plan to the City. The area designated University Transition with hatching is subject to Transportation Element Objective 2.2, which may limit density to less than the maximum permitted by the category. NOTES APPLICABLE TO LEON COUNTY FUTURE LAND USE MAP (REV. EFF. 6/19/07) The allowable density is limited to 200 single-family residential dwelling units on parcels 15-17-20-224-0000 and 15-20-20-034-0000 combined and no non-residential development is permitted on these parcels. Also, for these parcels at least 50% of the entire combined acreage must be placed in permanent open space. The permanent protection of this open space shall be further defined through the PUD process. (Parcels) 12-02-20-602-0000 and 12-11-20-202-0000 will be developed at a cumulative density no greater than 81 residential detached units.	
Policy 2.2.1: [L] RURAL/AGRICULTURE (REV. EFF. 8/17/92; REV. EFF. 7/26/06; REV. EFF. 12/24/10; REV. EFF. 7/6/15; REV. EFF. 1/19/20)	**Policy 2.8.4 – Rural Future Land Use Category** *[Existing with Variations]*

CONSERVATION SUBDIVISIONS

Objective 2.3: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 8/1/07)

Conservation Subdivision land development regulations in the County shall continue to provide design options and guidelines for the development of Conservation Subdivisions that advance environmental resource protection or restoration or promote infill and redevelopment. The City may adopt similar provisions.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl
- Foster economic development in urban areas and identified activity centers
- Promote efficient development patterns
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Objective 2.8 – Community Context:

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses and transportation facilities in the City of Tallahassee and Leon County.

Policy 2.3.1: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06)

To minimize the threat of premature conversion of rural land, including properties supporting bona fide agriculture and silviculture, the Conservation Subdivision option shall not be allowed within the

Policy 2.8.4 – Rural Future Land Use Category:

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to

Rural Future Land Use category, with the exception of those areas designated as Rural Residential within the Bradfordville Sector Plan.	protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area. Residential uses shall allow single family residential uses at a maximum density of one dwelling unit per ten acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural land use. *[New, preserves original intent]*
Policy 2.3.2: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 12/15/11) Within the land development regulations, local government shall define for various Future Land Use categories in which Conservation Subdivisions are allowed, any applicable density bonus incentives, and the minimum percentages of parent tract(s) to be protected as contiguous open space within Conservation Subdivisions. It shall be the intent to establish higher open space percentages for the less dense Future Land Use Map categories.	**Policy 2.8.5 – Rural Residential Future Land Use Category:** The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Boundary. Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use. Minor commercial activities and minor offices are permitted at a maximum intensity of 5,000 square feet per acre. Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed. The following special conditions shall apply to the Rural Residential Land Use category: 1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site.

	Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre. *[Existing Policy Update]*
Policy 2.3.3: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) To better judge the impacts of Conservation Subdivisions on the demands for services and the effects of coordinating protected open space, local government may phase the implementation of Conservation Subdivisions within Future Land Use Categories more dense than Urban Fringe via the adoption of land development regulation provisions, beginning with Urban Fringe Future Land Use category and those areas designated as Rural Residential within the Bradfordville Sector Plan.	**Policy 2.8.5 – Rural Residential Future Land Use Category:** The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Boundary. Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use. Minor commercial activities and minor offices are permitted at a maximum intensity of 5,000 square feet per acre. Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed. The following special conditions shall apply to the Rural Residential Land Use category: 1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.

	[Existing Policy Update]
Policy 2.3.4: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Conservation Subdivisions may be zoned as Planned Unit Developments (PUDs) or the land development regulations shall be otherwise crafted in order to provide the necessary flexibility with respect to setbacks, minimum lot sizes, street widths, and parking requirements etc. to increase the likelihood of employing this site design option and foster the long-term viability and usefulness of the open space subject to the required conservation easement.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing with Variations]*
Policy 2.3.5: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Preservation features defined in Policies 1.3.4 [C] and 1.3.5 [C] shall be incorporated into the open space of any Conservation Subdivision. Conservation features defined in Policy 1.3.1 [C], archaeological sites, bona fide agriculture and silviculture, viewsheds of canopy roads and of other open space shall be incorporated into the open space of a Conservation Subdivision to the greatest extent practicable.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing with Variations]*
Policy 2.3.6: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) In the implementation of Conservation Subdivisions, all critical on-site resources that are to be preserved shall be of adequate size and buffered to ensure protection of the resource.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Policy 2.3.7: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Where possible, local government shall require protected open space(s) within conservation subdivisions to be established adjacent or contiguous with existing or planned greenspace, whether public or private.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Policy 2.3.8: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) In the implementation of Conservation Subdivisions, local government shall require open space and related resources to be placed under a permanent easement that runs with the land. Said easement may be assigned to (1) local government or (2) a	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*

local or national land trust that is a 501(c)(3) organization for which conservation of resources is a principal goal and which can provide reasonable assurance it has financial and staff resources to monitor and manage the easement in accordance with the intent of the Objective 2.2 [L] and its supporting policies.	
Policy 2.3.9: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Local Government shall require all applications for Conservation Subdivisions to prepare a management plan for all protected open space and a dedicated source of revenues to ensure that all appropriate management activities are undertaken on a regular basis and that all terms of the conservation easement are monitored and enforced.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Policy 2.3.10: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Local and State Government shall be encouraged to enter into agreements with the managers of protected open space within Conservation Subdivisions where it would be mutually advantageous to consolidate management activities between the subdivision and any adjoining public lands.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Policy 2.3.11: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) It shall be the policy of the Property Appraiser's office to assess at the minimum rate or charge the applicable fee to all land preserved within a Conservation Subdivision, including property in bona fide agricultural and silvicultural use. However, the appraised value of associated developed land shall reflect any added value provided by proximity to protected open space.	**Policy 2.8.4 - Rural** **Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Policy 2.3.12: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06) Conservation Subdivisions shall be encouraged to include a range of housing types and sizes, and shall not be exempt from any adopted applicable affordable housing provisions.	**Policy 2.8.5 – Rural Residential Future Land Use Category** *[Existing Policy Update]*
Goal 3: [L] (EFF. 7/16/90; REV. EFF. 7/26/06)	**Goal 5 [LM] – A Robust Economy:**

Tallahassee-Leon County should continue to grow with an emphasis on selected growth that pays for itself through the provision of well-paid jobs and economic leverage factors which enhance the quality of life of the community.

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

COMMERCIAL LAND USE

Objective 3.1: [L] (REV. EFF. 7/20/05)

Provide for convenient, aesthetically pleasing and environmentally sound commercial opportunities which are easily accessible through planned integration into the existing transportation network. In furtherance of this objective, maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to commercial land use.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

	By maintaining a distinction between these areas, our community will: • Provide diverse lifestyle choice while reducing sprawl • Foster economic development in urban areas and identified activity centers • Promote efficient development patterns • Support revitalization and redevelopment efforts within the urban boundary • Reduce infrastructure costs • Protect agricultural and forest management uses • Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes
Policy 3.1.1: [L] (EFF. 7/16/90; REV. EFF. 7/26/06) Commercial development shall occur only in locations that are appropriate to its service and trade area and that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities. Commercial sites are determined through the use of site location standards contained within policy 3.1.2 below. The intensity of the commercial use is dependent upon the land use category which the potential site is in and the functional roadway classification of the immediate adjacent roads. Individual road classifications are depicted on the functional roadway classification map found within the Transportation Element.	**Commercial location standards are found in land use category policies:** Policy 2.8.17 – Parks and Civic Spaces Special District, Policy 2.8.5 – Rural Residential Future Land Use Category, Policy 2.8.6 – Rural Community Future Land Use Category, Policy 2.8.7 – Lake Protection Future Land Use Category, Policy 2.8.8 – Residential Preservation Future Land Use Category, Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category, Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category, Policy 2.8.11 – Urban Neighborhood Future Land Use Category, Policy 2.8.12 – Urban General Future Land Use Category, Policy 2.8.13 – Urban Center Future Land Use Category *[Existing with Variations]*
Policy 3.1.2: [L] (REV. EFF. 12/23/96; REV. EFF. 6/28/02; REV. EFF. 7/26/06) Allowed commercial development in the Mixed Use Category shall be determined in accordance with Objective 1.7 and the development pattern policies. Allowed commercial development in the Woodville Rural Community Category shall be determined in accordance with Objective 3.4 and subsequent implementing policies. In other Future Land Use Categories, development type and location standards for minor, neighborhood, community, regional, and highway commercial sites shall be as outlined below. These requirements are intended to group commercial land use toward intersections to provide access and prevent strip commercialization. Stringent access criteria which	**Land Use categories include commercial development as identified above. Land Development Regulations will continue to include details about intersection location.** *[Existing with Variations; Addressed in Land Development Code]*

may include increased design considerations or the construction of frontage or service roads for development approval may be applied for commercial sites not located according to the commercial site location standards.	
Policy 3.1.3: [L] (EFF. 7/16/90) Commercial development shall provide adequate and appropriate landscaping, open space and buffering and be architecturally designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas.	**Policy 3.6.3 – Site Requirements:** Land development regulations shall include requirements for: • Context-based stormwater management • Open space • Setbacks • Buffers • Screening • On-site traffic circulation • Roadway access • Land uses • Subdivision of land • Signage • Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations • Areas known to be vulnerable to natural or human-caused hazards • Lighting • Noise Mitigation *[Existing with Variations]* **Policy 2.8.8 – Residential Preservation** Future Land Use Category: addressing adjacency to protected residential areas including buffers, setbacks, stepbacks, and landscaping shall be included be included in the City of Tallahassee land development regulations to ensure compatibility between residential and non-residential uses within the Residential Preservation land use. *[Existing with Variations]*
Policy 3.1.4: [L] (REV. EFF. 7/1/94; REV. EFF. 12/24/10) Commercial development shall be designed to protect the design volume of the roads and streets which it impacts. Design requirements may include but not be limited to: 1) Shared access 2) Acceleration and deceleration lanes	**Policy 3.3.1 – Access Management Design:** The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into

3) Right in and right out limited access and, 4) Access via frontage and/or service roads	account impacts to all modes and users of transportation. *[Existing with Variations]* **Policy 3.3.2 – Intersection and Interchange Restrictions:** Restrict vehicular access in the areas of road intersections and highway interchanges immediately preceding the physical area in which they intersect. *[Existing with Variations]* **Policy 3.3.3 – Unified Access and Circulation Plans:** Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments. *[Existing with Variations]* **Policy 2.8.18 – Planned Development Special District** *[Existing with Variations]*
Policy 3.1.5: [L] (REV. EFF. 8/17/92) Commercial site location access standards may be waived except in low density residential areas if: a) Access to the proposed non-residential development from either an arterial or major collector shall be by way of a frontage road, rear service road or existing local road which serves as a frontage or service road, unless the site has existing commercial uses on both sides: and the proposed site has no more than 150 feet of frontage on the major collector or arterial; and, b) Parking for the proposed site is in the rear or screened from the road by existing or landscape vegetation if located in front of the commercial establishment or, c) The planned unit development process is utilized and the adjoining properties are commercially developed.	**Policy 3.3.1 – Access Management Design:** The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation. *[Existing Policy Update]* **Policy 3.3.2 – Intersection and Interchange Restrictions:** Restrict vehicular access in the areas of road intersections and highway interchanges immediately preceding the physical area in which they intersect. *[Existing Policy Update]*

Policy 3.3.3 – Unified Access and Circulation Plans:

Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

[Existing Policy Update]

Policy 2.7.3 – Land Development Regulations in the MMTD:

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

e. Parking location.

[Existing Policy Update]

Policy 6.8.4 – Shared Parking Criteria:

Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, and other criteria that ensures the effectiveness of shared parking arrangements.

[Existing Policy Update]

Policy 6.8.5 – Parking Reduction for Certain Development Types:

City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other

	development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift. *[Existing Policy Update]* **Policy 6.8.6 – Private Parking Lots:** City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections. *[Existing Policy Update]*
Policy 3.1.6: [L] (EFF. 9/19/91) Development along federal and state highways will be limited so as to control the adverse effects of strip commercial land uses. The commercial location standards of Land Use Policy 3.1.2. and the design options of Land Use Policy 3.1.4. shall specifically apply, along with other plan policies that have the effect of protecting the design capacity of federal and state highways.	**Policy 6.2.4 – Corridor Management and Preservation:** Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S. *[Existing with Variations]*
Objective 3.2: [L] (EFF. 6/28/95) Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planned integration into the existing transportation network.	**Objective 5.1 – Economic Health:** Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to withstand positive and negative changes in the economy and to continue providing jobs and incomes to support the community. **Policy 5.1.1 – Economic Development Strategic Plan:** The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the

	Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan. **Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community. **Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Policy 3.2.1: [L] (EFF. 6/28/95) Unless otherwise provided for by specific policies for the future land use categories in this Plan, site location standards for the location of minor and major office development shall be consistent with the following minimum criteria: Minor offices shall include converted residences at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum size shall be 2,500 square feet if located on a local street. Minor offices may access a local street in the unincorporated area. Within the City, minor offices may access a local street if it is a designated nonresidential street. Major offices shall include office buildings that exceed one or more of the minor office thresholds and unless specifically permitted by other Plan policies, shall be limited to having access to a major collector or arterial road.	**Specific site location standards are in the land development code.** Intensities are included in land use categories. Policy 2.8.4 – Rural Future Land Use Category, Policy 2.8.5 – Rural Residential Future Land Use Category, Policy 2.8.6 – Rural Community Future Land Use Category, Policy 2.8.7 – Lake Protection Future Land Use Category, Policy 2.8.8 – Residential Preservation Future Land Use Category, Policy 2.8.9 – Sub-Urban Neighborhood, Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category, Policy 2.8.11 – Urban Neighborhood Future Land Use Category, Policy 2.8.12 – Urban General Future Land Use Category, Policy 2.8.13 – Urban Center Future Land Use Category, Policy 3.7.3 – Design Criteria for Mobility Hubs. *[Existing Policy Update]*

BRADFORDVILLE MIXED USE AND SUBURBAN FUTURE LAND USE CATEGORY NONRESIDENTIAL DEVELOPMENT CATEGORY

Objective 3.3: [L]

(EFF. 12/23/96; REV. EFF. 3/14/07)

Commercial and nonresidential development in the Bradfordville Mixed Use and Suburban Future Land Use Categories will be located consistent with the intended functions of the categories. The negative effects of commercial and nonresidential development on adjacent development and on roadway capacity will be mitigated through site design and locational standards in the land development regulations. Comprehensive Plan goals and objectives regarding the promotion of transit, bicycling and walking, and the preservation of roadway capacity will be incorporated into the design of commercial and nonresidential development.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl
- Foster economic development in urban areas and identified activity centers
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Objective 2.8 – Community Context:

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.

Policy 3.3.1: [L] (EFF. 12/23/96; REV. EFF. 3/14/07) Zoning for commercial development in the Suburban and Bradfordville Mixed Use Future Land Use Category shall occur only in locations that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities.	**Zoning districts will continue to allow for commercial development in Sub-Urban Mixed-Use and Urban Mixed-Use areas.** *[Existing with Variations]*
Policy 3.3.2: [L] (EFF. 12/23/96) The zoning districts which allow commercial and nonresidential development shall require adequate and appropriate landscaping, open space and buffering and be designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas. In order to minimize the negative visual and off-site impacts of commercial development, the Land Development Regulations shall provide for development standards regulating commercial and nonresidential development as follows:	**Zoning Districts shall continue to maintain provisions for landscaping, open space, and buffering. The comprehensive plan proposes the following policy for safety.** **Policy 3.5.1 – Public Infrastructure Design:** Public infrastructure shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, complete streets, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure may include sidewalks, street trees, and on-street parking. *[Existing with Variations]*
Policy 3.3.3: [L] (EFF. 12/23/96) The Land Development Regulations shall regulate commercial development access to protect the safe and efficient operating characteristics of roads and streets. Commercial development shall meet access management criteria as set forth in the Land Development Regulations. In order to reduce the negative impact of commercial development to the volume of the road, the Land Development Regulations shall contain provisions which encourage the reduction in the number of commercial access points by requiring the sharing of access by two or more commercial developments for those uses that result in a large number of vehicular trips. Access management design requirements provided for in the Land Development Regulations may include but not be limited to:	**Commercial development access will continue to be maintained in the land development regulations. Comprehensive Plan policies for access include:** **Policy 3.3.1 – Access Management Design:** The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation. *[Existing with Variations]* **Policy 3.3.2 – Intersection and Interchange Restrictions:** Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads,

and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations.

[Existing with Variations]

Policy 3.3.3 – Unified Access and Circulation Plans:

Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

[Existing with Variations]

Policy 3.3.4 – Access Management Improvements:

Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that:

(A) Address the transition of vehicles from arterial roadways to internal circulation systems

(B) Prioritize the redesign of median openings that are inadequately designed.

(C) Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

[Existing with Variations]

Policy 3.3.5 – State Road Access Management:

The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

[Existing with Variations]

Policy 3.3.6 – Neighborhood Through-Traffic:

Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the

	effects of through-traffic on neighborhoods and supporting complete streets policies. *[Existing with Variations]* **Policy 3.3.7 – Consolidated Properties:** Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access. *[Existing with Variations]* **Policy 3.3.8 – Development Near Interchanges:** Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads. *[Existing with Variations]* **Policy 3.3.9 – Access Management Deviations:** Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical. *[Existing with Variations]*
COMMERCIAL (RETAIL, SERVICES, AND OFFICE) DEVELOPMENT IN THE WOODVILLE RURAL COMMUNITY FUTURE LAND USE CATEGORY **Objective 3.4: [L]** (EFF. 6/28/02) Commercial (retail, service, and office) development in the Woodville Rural Community Future Land Use Category will be consistent with the intended function of the Rural Community Future Land Use Category. The scale and intensity of commercial land use will reflect the location and size of the Rural Community in which it is situated;	**Goal 2 [LM] – Distinct Urban and Rural Areas:** Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas. By maintaining a distinction between these areas, our community will: • Provide diverse lifestyle choice while reducing sprawl.

commercial and other non-residential development will be located, oriented, and designed in a manner that promotes compatibility with adjacent land uses and facilitates safe and efficient access for both vehicular and pedestrian traffic; and utilizes access management to protect the safe and efficient operation of the public highway and street system. Non-residential land use intensity is limited to 10,000 square feet per acre, not to exceed a maximum of 50,000 square feet per building and 50,000 square feet per parcel, except that principle structures for warehousing, storage, and mini-warehousing principal uses may have a gross floor area of no greater than 20,000 square feet per acre.	• Foster economic development in urban areas and identified activity centers. • Promote efficient development patterns. • Support revitalization and redevelopment efforts within the urban boundary. • Reduce infrastructure costs. • Protect agricultural and forest management uses. • Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes. **Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Policy 3.4.1: [L] (EFF. 6/28/02) Objective 3.4 will be met through the enactment and implementation of land development regulations, including zoning district regulations, which address commercial development in the Woodville Rural Community Future Land Use Category.	**Land Development Regulations will continue to be maintained for Woodville Rural Community. Rural Community land use is maintained in the updated plan and includes Policies 2.8.7 – Rural Community Land Use Category; and Policy 2.4.1 – Transfer of Development Rights:** A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements. *[Existing Policy Update]*
Policy 3.4.2: [L] (EFF. 6/28/02) Zoning Districts allowing commercial development in the Woodville Rural Community Land Use	**Land Development Regulations will continue to be maintained for Woodville Rural Community. Rural Community land use is maintained in the updated plan and includes**

Category shall only be located where ensuing development can occur in a manner that would be compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities, in accordance with the following criteria:

a) Regulation of Impacts
b) Location of Commercial Zoning Districts
c) Access

Policies 2.8.7 – Rural Community Land Use Category; and Policy 2.4.1 – Transfer of Development Rights: A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

[Existing Policy Update]

INDUSTRIAL LAND USE

Objective 4.1: [L] (REV. EFF. 7/20/05)

Provide opportunities for the location of industrial land uses in accessible areas with applicable available infrastructure while promoting protection from encroaching non-compatible land uses. To accomplish this, local government will maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to industrial land use.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl
- Foster economic development in urban areas and identified activity centers
- Promote efficient development patterns
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts

	• Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries • Reducing barriers to starting and growing businesses • Increasing access to job opportunities and training • Ensuring adequate and suitable lands are designated for commercial and industrial uses **Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County. **Objective 5.3 – Freight and Cargo:** Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.
Policy 4.1.1: [L] (EFF. 7/16/90) Industrial land shall be located in areas appropriate to its special needs and constraints including but not limited to consideration of: topography; choice and flexibility in site selection; access by truck, air or rail; commuter access for home-to-work trips; utilities; air and water quality considerations; proximity to supportive and related land uses; and compatibility with neighboring uses.	**Industrial use location is generally identified through the future land use map. Comprehensive policies include:** **Policy 2.8.15 – Manufacturing and Mining Special District** **Policy 5.3.3 – Transportation Access:** Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal stations, or other freight transfer locations. **Policy 3.6.3 – Site Requirements** *[Existing Policy Update]*
Policy 4.1.2: [L] (EFF. 7/16/90)	**Comprehensive policies include:**

The timing and location of industrial development shall be permitted only with the availability and adequacy of existing or planned services and facilities.	**Policy 2.8.15 – Manufacturing and Mining Special District** **Policy 5.3.3 – Transportation Access:** Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal stations, or other freight transfer locations. **Policy 3.6.3 – Site Requirements** *[Existing Policy Update]*
Policy 4.1.3: [L] (REV. EFF. 12/23/96; REV. EFF. 3/14/07; REV. EFF. 5/31/18) Industrial development shall be located in such a manner as to prohibit industrial traffic through predominantly residential areas. Land Development Regulations shall address access standards for Industry and Mining uses to protect predominantly residential areas from traffic impacts traffic generated by industrial development.	**Comprehensive policies include:** **Policy 2.8.15 – Manufacturing and Mining Special District** **Policy 5.3.3 – Transportation Access:** Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal stations, or other freight transfer locations. **Policy 3.6.3 – Site Requirements** *[Existing Policy Update]*
Policy 4.1.4: [L] (EFF. 7/16/90; REV. EFF. 5/31/18) Environmental impacts, infrastructure availability, transportation and land use compatibility criteria, as pictorially depicted on the matrix, shall be major factors in reviewing and approving Industry and Mining Land Uses.	**Comprehensive policies include:** **Policy 2.8.15 – Manufacturing and Mining Special District** **Policy 5.3.3 – Transportation Access:** Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal stations, or other freight transfer locations. **Policy 3.6.3 – Site Requirements** *[Existing Policy Update]*
PUBLIC FACILITIES LAND USE **Objective 5.1: [L]** (EFF. 7/16/90) Coordinate the future plans of State government, School Board, the institutions of higher learning, and other applicable entities with this Comprehensive Plan.	**Goal 2 [LM] – Distinct Urban and Rural Areas:** Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas. By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl
- Foster economic development in urban areas and identified activity centers
- Promote efficient development patterns
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities
- Pedestrian and bicycle facilities
- Healthy food options
- Health services
- Community services, including schools, community centers, and libraries

Objective 2.3 – Public Infrastructure:

Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Objective 2.8 – Community Context:

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development

	patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Policy 5.1.1 - Reserved	**N/A**
Policy 5.1.2: [L] (DEL. EFF. 8/16/07) (REV. EFF. 7/20/05) All proposals to site public schools, including post-secondary schools, shall be reviewed for consistency with the entire Comprehensive Plan. Such reviews shall be made in conjunction with the School Board to promote to the greatest extent possible, opportunities for residential, shopping, employment, education and recreation within walking distance of each other, and to encourage development patterns which reduce trip length and/or the need for private automobile trips.	**Policy 2.3.3 – School Siting Review & Criteria:** All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan. *[Existing Policy Update]*
Objective 5.2: [L] (EFF. 7/16/90) By 1992, establish standards and regulations for the location of public facilities.	**Policy 2.3.1 - Public Facilities Siting:** Public facilities, including community services, light infrastructure, and post-secondary uses, that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government. *[Existing Policy Update]*
Policy 5.2.1: [L] (EFF. 7/16/90; REV. EFF. 4/10/09) Develop regulations that will apply to the siting of public facilities and buildings. By 2014, local government shall also develop regulations that ensure the siting of critical facilities from within hazard areas and include provisions for the mitigation of existing critical facilities located in hazard areas.	**Policy 2.3.1 - Public Facilities Siting:** Public facilities, including community services, light infrastructure, and post-secondary uses, that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

	[Existing Policy Update]
Policy 5.2.2: [L] (EFF. 12/7/99; REV. EFF. 5/31/18) Land development regulations shall establish the maximum allowable dimension of water distribution pipelines necessary to support urban intensity development. Water distribution pipelines that do not exceed this dimension shall be considered public facilities, necessary to support urban development, and allowed within all land use categories. New water distribution pipelines in excess of the established dimension limit for public facilities shall be considered as industrial uses and shall be required to be located within the Government Operational or Industry and Mining land use category.	**Policy 2.2.3 – Planning for Urban Services:** Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services. *[Existing Policy Update]* **Policy 2.2.2 – Improvement of Capital Infrastructure:** Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule. *[Existing Policy Update]* **Policy 2.2.1 – Urban Services Area (USA):** To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies**.** *[Existing Policy Update]*
Objective 5.3: [L] (REV. EFF. 7/20/05) All decisions regarding land requirements for future utility facilities shall be consistent with the goals, objectives, and policies of the plan so as to ensure the availability of suitable land for those facilities.	**Lands for facilities are included on the Future Land Use Map.** **Policy 2.3.1 - Public Facilities Siting:** Public facilities, including community services, light infrastructure, and post-high school educational uses, that provide for the operation of and provision of services on property owned or operated by local,

	state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government. *[Existing Policy Update]*
Policy 5.3.1: [L] (EFF. 7/16/90) Based on population projections, master plans for future utility facilities shall include an assessment of land needs for those facilities, and the Capital Improvements Element shall be amended, in conjunction with the annual budget processes of the City and the County, to include costs and sources of revenues for those facilities.	**Policy 2.2.5 – Densities and Intensities:** The Future Land Use Map is intended to reflect densities and intensities supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development. *[Existing Policy Update]*
Policy 5.3.2: [L] By 1991, land development regulations shall include regulatory standards for the provision of public facilities.	**Land Development Regulations shall continue to provide standards for the provision of public facilities. The updated plan includes Policies 2.2.1 to 2.2.4 – Urban Services Area, Policy 2.3.1 - Public Facilities Siting and Policy 2.3.2 Public Infrastructure Resilience.**
Policy 5.3.3: [L] (EFF. 8/17/92) All land uses permitted within the Educational Facilities, Recreation/Open Space, and Government Operational future land use categories shall, upon the transfer of land designated Institutional to an individual or private entity, require a future land use map amendment before any use other than existing, may occur.	**With proposed updates to the land use categories, this policy is no longer required.**

PLAN IMPLEMENTATION AND PROCEDURES **CRITICAL AREAS STUDY** **Goal 6: [L]** (EFF. 6/28/95) The City and County will identify existing undeveloped areas within the Urban Service Area that are expected to undergo rapid development on a large scale. Planning guidelines will be developed for these areas on a systematic basis, with the planning implementation mechanism being	**Goal 2 [LM] – Distinct Urban and Rural Areas:** Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas. By maintaining a distinction between these areas, our community will: • Provide diverse lifestyle choice while reducing sprawl

dependent upon the size of the undeveloped area. By planning for undeveloped areas in a comprehensive manner, a mixture of integrated uses may be provided that are predominantly self-supporting, rather than predominantly dependent on public funding for additional infrastructure, and place a greater emphasis on pedestrian mobility and transportation alternatives. Nothing in this section shall negate the requirement for developments of regional impact to comply with Chapter 380 F.S.

- Foster economic development in urban areas and identified activity centers
- Promote efficient development patterns
- Support revitalization and redevelopment efforts within the urban boundary
- Reduce infrastructure costs
- Protect agricultural and forest management uses
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes

Objective 2.8 – Community Context: Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community.

Objective 2.6 – Recognizable Places: Foster and protect distinctive, attractive places that are recognizable and important to the community.

PLANNED DEVELOPMENT

Objective 6.1: [L] (REV. EFF. 12/23/96; REV. EFF. 11/26/21)

This Future Land Use Category is intended to identify large land holdings that will be developed for various mixes of land uses, resulting in different types of commercial and residential neighborhoods. This category is assigned to large, undeveloped tracts of land for which more detailed planning is required to establish the most appropriate mix and arrangement of uses in accordance with this objective and the related policies. Developments in this category are intended to have a mix of uses that results in greater internal capture of automotive trips and a net fiscal benefit for local governments.

The intensities of development in planned development categories mirror the intensities authorized in the Suburban Future Land Use Category until a Planned Development Master Plan is completed and an amendment reflecting the Planned Development Master Plan is adopted into the Comprehensive Plan.

The mix of uses shall be established at the time of development through the planned unit development processes in accordance with this objective and related policies. Each Planned Development shall include a mix of residential unit types and complementary non-residential uses that, at build-out of the project, result in an internal capture of at

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

1. Provide diverse lifestyle choice while reducing sprawl.
2. Foster economic development in urban areas and identified activity centers.
3. Promote efficient development patterns.
4. Support revitalization and redevelopment efforts within the urban boundary.
5. Reduce infrastructure costs.
6. Protect agricultural and forest management uses.
7. Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Objective 2.8 – Community Context: Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community.

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

least 20 percent of the trips generated by the development.	
Policies 6.1.1 to 6.1.9 with general parameters for planned development.	**Policy 2.8.18 – Planned Development Special District:** This Future Land Use Category is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, that are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the appropriate jurisdiction. *[Existing with Variations]*
FUTURE PLANNED DEVELOPMENT AREAS **Objective 6.2: [L] (EFF. 6/28/95; REV. EFF. 3/14/07)** As demands from a rapidly increasing population may require the expansion of the Urban Service Area in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.	**Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community. **Objective 2.2 – Efficient Growth:** To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forests and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas. **Objective 2.5 – Reconnecting Urban Sprawl:** Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles travelled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 6.2.1: [L] (EFF. 12/23/96; REV. EFF. 3/14/07) Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development Areas shall be designated such as part of the adopted Future Land Use Map and Zoning Map.

Policy 2.8.18 – Planned Development Special District:

This Future Land Use Category is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, that are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the appropriate jurisdiction. [*Existing Policy Update]*

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

1. Provide diverse lifestyle choice while reducing sprawl.
2. Foster economic development in urban areas and identified activity centers.
3. Promote efficient development patterns.
4. Support revitalization and redevelopment efforts within the urban boundary.
5. Reduce infrastructure costs.
6. Protect agricultural and forest management uses.

7. Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

DOWNTOWN OVERLAY DISTRICT (EFF. 7/1/94;

Objective 9.1: [L] REV. EFF. 1/7/10; REV. EFF. 7/6/15)

Promote revitalization, reinvestment and redevelopment characterized by site design which is pedestrian friendly and contains a mix of land uses which are designed to achieve compatibility.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

1. Provide diverse lifestyle choice while reducing sprawl.
2. Foster economic development in urban areas and identified activity centers.
3. Promote efficient development patterns.
4. Support revitalization and redevelopment efforts within the urban boundary.
5. Reduce infrastructure costs.
6. Protect agricultural and forest management uses.
7. Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Objective 2.7 – Multimodal Transportation District (MMTD):

Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 9.1.1: [L] (EFF. 7/1/94; REV. EFF. 1/7/10; RENUMBERED 7/6/15) Within those areas of the overlay that have a Residential Preservation land use designation, the Downtown Overlay designation is not intended to allow the development of nonresidential, or higher density than the Residential Preservation designation.

Policy 2.8.8 – Residential Preservation Future Land Use Category:
The Residential Preservation is characterized by existing homogeneous residential areas within the community which are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions. Future development primarily will consist of infill due to the built-out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterial and/or expressways should be planned to minimize impacts within this category. Single family, townhouse and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in special condition number 1 and other provisions in this policy, existing, legally established residential uses exceeding 6 units per acre shall be deemed conforming; and expansion of residential uses exceeding 6 units per acre, or other non-conforming uses are prohibited. Non-residential uses, other than community facilities and recreational facilities, are not permitted. Community facilities are limited to a maximum of 60% impervious surface area. Consistency with surrounding residential type and density shall be a major determinant in granting development approval.

Policy 9.1.2: [L] (REV. EFF. 1/7/10; RENUMBERED 7/6/15) Those parcels within the Downtown Overlay (except Gaines Street Corridor Study Area) are eligible to be added to the Central Core FLUM when:

- The proposed parcels are contiguous to existing Central Core FLUM area
- The proposed parcel has all the infrastructure available
- The proposed parcel has to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the current Central Core FLUM for the proposed development)

Policy 2.8.13 – Urban Center Future Land Use Category:

The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close- proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage with a building height maximum of 20 stories. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed- use, pedestrian, bike and transit- oriented development.
2. Future Expansion of the Urban Center land use shall be subject to the following requirements. The proposed parcels shall be:
    a. Within the existing Downtown Overlay; and Contiguous to the existing Urban Center FLUM area
    b. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.
    c. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 9.1.3: [L] The City shall establish special design standards in this overlay district in order to encourage more urban development. These regulations include but are not limited to:

- Pedestrian oriented design standards
- Reduced parking requirements
- Flexibility in landscape, and buffer standards

Policy 2.8.13 – Urban Center Future Land Use

• Increased sidewalk and streetscape requirements	
Policy 9.1.4: [L] (REV. EFF. 1/7/10; RENUMBERED 7/6/15) The City shall adopt Land Development Regulations to establish eligibility criteria (Such as minimum density) for developments in order to receive the incentives allowed under the Downtown Overlay goal.	**Policy 2.8.13 – Urban Center Future Land Use**
REDEVELOPMENT **Objective 9.2: [L] (FORMERLY OBJ. 1.6; REV. EFF. 1/7/10)** Provide a strategic framework to encourage redevelopment within the City of Tallahassee. The strategies should be implemented in such a manner as to convey an economic advantage for redevelopment without compromising the urban design and environmental quality of the community.	**Goal 2 [LM] – Distinct Urban and Rural Areas:** Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas. By maintaining a distinction between these areas, our community will: 1. Provide diverse lifestyle choice while reducing sprawl. 2. Foster economic development in urban areas and identified activity centers. 3. Promote efficient development patterns. 4. Support revitalization and redevelopment efforts within the urban boundary. 5. Reduce infrastructure costs. 6. Protect agricultural and forest management uses. 7. Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes. **Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community. **Objective 2.7 – Multimodal Transportation District (MMTD):** Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 9.2.1: [L] (EFF. 6/28/95; REV. EFF. 1/7/10) As part of the Redevelopment Strategy, the Gaines Street Corridor Study Area is designated as an Urban Infill and Redevelopment Area for the purpose of targeting economic development, housing, transportation, community revitalization and preservation, and land use incentives to encourage urban infill and redevelopment within the urban core of the community.	**Not specifically called out as a separate policy. Land Use Category designations for Gaines Street are Urban General and Urban Center**
DRI THRESHOLDS FOR A REGIONAL ACTIVITY CENTER **Objective 9.3: [L] (EFF. 1/7/10)** To encourage functional mixed use development, and to encourage revitalization and redevelopment, the Commissions may choose to designate specific land as a statutory "Regional Activity Center" (RAC), pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C., to allow development of the specified land at greater density and intensity without necessarily obligating the developer to proceed through the Development of Regional Impact (DRI) process.	Nothing specifically comparable
Policy 9.3.1: [L] (EFF. 1/7/10) After the City of Tallahassee or Leon County designates a statutory Regional Activity Center (RAC, pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C.), subsequent development approvals will include requirements for developers to provide necessary transportation system, drainage, protection of environmentally sensitive areas as defined in the Conservation Element, and utility infrastructure to support the RAC densities and intensities.	No specific policies
Policy 9.3.2: [L] (EFF. 8/9/12) It is the intent of the local government to designate Park Place as a Regional Activity Center pursuant to Objective 9.3 [L] to use the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code. Park Place meets the parameters for a Regional Activity Center as defined in Section 380.06(2)(e), Florida Statutes, and in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the following map. Multi-use land	No specific policies

uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan.

Map 6: Park Place Activity Center

SOUTHEAST SECTOR PLAN

Objective 10.1: [L] - Southeast Sector Plan (EFF.5/20/96; REV. EFF. 8/25/08)

In keeping with the City's and County's commitment to promote the Southern Strategy, and to satisfy the Comprehensive Plan requirements for a comprehensive development plan for the Southwood property within the urban service area, the local governments hereby adopt the Southeast Sector Planned Development, known as the Southeast Sector Plan, that is consistent with Objective 6.1 [L] and its associated policies and with the Comprehensive Plan's Urban Service Area policies, that promotes innovative planning, promotes compact development strategies and protects the natural resources of the area. This plan shall contain design standards that promote compact commercial development, walk to shopping, higher density housing in close proximity to offices, commercial uses and employment centers. The same attention will be given to alternate modes of transportation and pedestrian mobility as is given to automobile transportation. Innovative ways may be developed to protect natural resources, the major focus being on the continued protection of conservation and preservation areas within the Southeast Sector Planning Area (Figure 10.A).

Southeast Sector Plan: Master Plan to be maintained outside of comprehensive plan

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide diverse lifestyle choice while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the urban boundary.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Objective 2.8 – Community Context:

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation

	facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Southeast Sector Plan Policies 10.1.1 to 10.1.8	**Southeast Sector Plan: Master Plan to be maintained outside of comprehensive plan**
SOUTHSIDE ACTION PLAN **Goal 11: [L] – Southside Action Plan (EFF. 8/5/23)** A plan shall be developed and monitored to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this goal, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.	**Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:** Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context. These places will provide for: • Recreational opportunities. • Pedestrian and bicycle facilities. • Healthy food options. • Health services. • Community services, including schools, community centers, and libraries.
Objective 11.1 [L] – Beautification (EFF. 8/5/23) Beautify and enhance both public and private spaces across the Southside Action Plan area by improving maintenance and increasing investment.	**Objective 3.2 – Southside Action Plan:** Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens. **Policy 3.2.2 - Beautification:** Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces. *[Existing Policy]*

	Objective 2.6 – Recognizable Places: Foster and protect distinctive, attractive places that are recognizable and important to the community.
Policy 11.1.1: [L] (EFF. 8/5/23) Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.	**Policy 3.2.2 - Beautification:** Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces. *[Existing Policy]*
Objective 11.2: [L] Investment (EFF. 8/5/23) Direct collaborative efforts of both the public and private sectors towards an increase of homeownership, diverse development and redevelopment types, business variety, and infrastructure in the Southside Community.	**Objective 3.2 – Southside Action Plan:** Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term *public and private investment* with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens. **Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community.
Policy 11.2.2:	**Policy 3.2.3 - Investment:**

Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.	Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations. *[Existing Policy Update]*
Objective 11.3: [L] Engaged and Activated Citizens (EFF. 8/5/23) Foster community involvement and celebration of the Southside.	**Objective 3.2 – Southside Action Plan:** Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens. **Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community.
Policy 11.3.1: [L] (EFF. 8/5/23) Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.	**Policy 3.2.4 – Active and Engaged Citizens:** Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources. *[Existing Policy]*
Objective 11.4: [L] Southside Action Plan Evaluation and Update; Relation to Other Goals, Objectives & Policies (EFF. 8/5/23)	**Objective 3.2 – Southside Action Plan:** Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements

	that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens. **Objective 2.6 – Recognizable Places:** Foster and protect distinctive, attractive places that are recognizable and important to the community.
Policy 11.4.1: [L] The Tallahassee-Leon County Planning Department will monitor project implementation of the Southside Action Plan by reporting annually on Objective 11.1, 11.2, and 11.3; in coordination with the Leon County and the City of Tallahassee strategic plans.	**Policy 3.2.5 – Southside Action Plan Evaluation and Update:** The local governments will monitor project implementation of the Southside Action Plan by reporting annually on Southside Action Plan policies. *[Existing Policy Update]*

CENTRAL CORE AREA

Goal 12: [L] (DEL. EFF. 4/10/09)

Reserved

CENTRAL CORE AREA (DEL. EFF. 4/10/09)

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

1. Provide diverse lifestyle choice while reducing sprawl.
2. Foster economic development in urban areas and identified activity centers.
3. Promote efficient development patterns.
4. Support revitalization and redevelopment efforts within the urban boundary.
5. Reduce infrastructure costs.
6. Protect agricultural and forest management uses.
7. Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Policy 2.8.13 – Urban Center Land Use Category

Objective 2.6 – Recognizable Places:

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Objective 2.7 – Multimodal Transportation District (MMTD):

Facilitate the safe and comfortable use of multiple modes of transportation and through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

WELAUNEE CRITICAL AREA PLAN

Goal 13: [L] (EFF. 12/10/02)

Guide planned development within the Welaunee Critical Planning Area through implementation of

Welaunee Critical Area Plan: Master Plan to be maintained outside of comprehensive plan

Goal 2 [LM] – Distinct Urban and Rural Areas:

a critical area plan which includes a mixture of integrated land uses that are predominantly self-supporting rather than dependent upon public funding, places a greater emphasis on pedestrian mobility and transportation alternatives, provides new employment opportunities near major transportation arteries and protects natural systems in an urbanized setting.	Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas. By maintaining a distinction between these areas, our community will: • Provide diverse lifestyle choice while reducing sprawl • Foster economic development in urban areas and identified activity centers • Promote efficient development patterns • Support revitalization and redevelopment efforts within the urban boundary • Reduce infrastructure costs • Protect agricultural and forest management uses • Preserve natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes
Objective 13.1: Planned Development through 2020 (EFF. 12/10/02) By 2020, the Welaunee Critical Planning Area may develop in the portions which are south of Interstate 10 ("Toe") and south of Miccosukee Road and north of U.S. 90 ("Heel") with a development pattern that includes predominantly walkable neighborhoods, mixed-use centers, a major employment center, diversity of housing choices, protection of conservation and preservation areas, and a transportation system which accommodates both vehicular and non-vehicular transportation.	**Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Policies 13.1.1 to 13.1.9	**Welaunee Critical Area Plan Policies: Master Plan to be maintained outside of comprehensive plan**
Objective 13.2: Development Concept for the Welaunee Arch (EFF. 12/10/02; REV. EFF. 1/11/21) The intent of the Welaunee Arch Master Plan is to provide an area-wide plan for the portion of the Welaunee Critical Planning Area located north of Interstate-10 and west of Miccosukee Road (i.e. the	**Objective 2.8 – Community Context:** Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land

"Arch"). This master plan sets the standards and guidelines to coordinate one or more implementing development plans such that the development of the Arch results in a new, integrated community with a variety of land uses, diverse neighborhoods and mixed-use centers, a region-serving activity center, active and passive recreational options, and abundant open space. The development of the Arch consistent with this master plan shall be implemented in phases, connected by a multi-modal transportation system, served by regional, master planned stormwater facilities, and designed in ways that protect natural resources.	use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, and transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.
Welaunee Policies 13.2.1 to 13.2.33	**Welaunee Critical Area Plan Policies: Master Plan to be maintained outside of comprehensive plan**
Welaunee Map Sets	**Welaunee Critical Area Plan Policies: Master Plan to be maintained outside of comprehensive plan**
Drainage Basin Study Areas **Goal 14 [L] (Leon County only) (EFF. 12/15/03)** Leon County and the City of Tallahassee will work cooperatively to further identify and address the special characteristics and needs of sub-areas of the City and County. This goal shall be implemented through the following objective and policy:	**Goal 1 [LM] – A Healthy Environment:** Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community. To achieve this goal, our community will: • Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions. • Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens. • Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 14.1: [L] (Leon County only) (EFF. 12/15/03)

By 2004, the City and County shall commence a process to evaluate the environmental conditions and issues relating to major drainage basin study areas of the county including but not limited to the following basins: Fred George, Lake Iamonia, Lake Jackson, Lake Lafayette, Lake Miccosukee, Lake Munson, Ochlockonee, St. Marks, and Woodville Recharge, to be used as one basis for sector plans and other major planning decisions of the local government. This evaluation shall address matters such as protection of conservation and preservation areas (as defined within this Plan), flooding, water quality, aquifer protection, and other issues as identified by the local governments. This evaluation shall be conducted cooperatively by the City and County, irrespective of jurisdictional boundaries, and the evaluation shall be based on technical and scientific information.

Objective 1.1 – Identification of Natural Resources and Historic Features:

Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Objective 1.2 – Preservation of Natural Areas:

Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 14.1.1: [L] (Leon County only) (EFF. 12/15/03) Sector planning shall be implemented as determined appropriate by the City or County; however, sector planning involving a joint effort of both jurisdictions, shall be encouraged. These sector plans may address elements such as land use, transportation, housing, economic development, environmental protection, infrastructure phasing, development standards and any other matter as identified by the local government. These sector planning efforts shall take into consideration the data gathered through the implementation of Objective 14.1 and shall use this information as background environmental data necessary for the completion of sector planning efforts.

Policy 3.6.3 – Site Requirements:

Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise Mitigation

Policy 14.1.2: [L] (Leon County only) (EFF. 12/15/03) The data collected or gathered through the implementation of Objective 14.1 shall be used as a basis for determining whether or not future

Policy 1.5.1 – Community Wide Green Infrastructure:

The City and County shall incorporate the use of green infrastructure into their land development

amendment to the Comprehensive Plan or land development regulations is necessary. However, Goal 14 and its associated Objective 14.1 are not intended to replace existing Comprehensive Plan policies related to environmental protection or storm water management. Instead, this goal and its associated objective is intended to support and aid in the implementation of existing Comprehensive Plan policies and is to be considered additive in this regard.

regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide an opportunity for street-level stormwater management. The land development regulations shall specify the range of retrofits that qualify for these incentives.
- Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy within the City of Tallahassee through implementation of the Urban Forest Master Plan, or its successor.
- Implement land conservation programs.
- Support shared, off-site stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).

Policy 1.5.2 – Site Specific Green Infrastructure:

Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Where is it now MOBILITY CROSSWALK?

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

Where is it Now Mobility Crosswalk?

Current Mobility Element Goals and Objectives	Proposed Land Use and Mobility Element Goal and Objectives
Goal 1: [M] (EFF. 12/15/11) MOTORIZED, BICYCLE, AND PEDESTRIAN CIRCULATION Establish and maintain a safe, convenient, energy efficient, and environmentally sound automobile, transit, bicycle and pedestrian transportation system, capable of moving people of all ages and abilities as well as goods.	**Goal 6 [LM] – A Balanced Transportation Network:** Our community will provide a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.
Objective 1.1: [M] (EFF. 12/15/11) LAND USE AND TRANSPORTATION COORDINATION Coordinate transportation and land use systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce vehicle miles traveled and greenhouse gases, and to enhance pedestrian and bicycle mobility and transit accessibility.	**Objective 6.1 – Land Use and Transportation Coordination for Livability:** Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility. *[Existing Policy Update]*
Policy 1.1.1: [M] (EFF. 12/15/11) Identification and programming of new road projects or substantial improvements to existing roads shall be consistent with the Future Land Use Element of the Comprehensive Plan and specifically the Urban Service Area strategy to promote urban infill and discourage urban sprawl.	**Policy 2.2.7 – Roadway Improvements:** The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area. *[Existing Policy Update]*
Policy 1.1.2: [M] (EFF. 12/15/11) Designate energy efficiency districts in areas that are intended for greater densities and intensities to support frequent transit service and where primary priority is to be placed on providing a safe, comfortable and attractive environment for pedestrians and cyclists. For each district:	**Policy 2.7.5 – Transit in the MMTD:** The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside the areas; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

1. evaluate and modify, if necessary, the zoning and land development regulations to ensure standards that will support compact, walkable, mixed-use development; and

2. adopt and maintain a connectivity plan identifying needed bicycle, pedestrian, roadway, and transit projects to increase connectivity and safety, minimize travel distances for pedestrians and cyclists, and provide connections to other parts of the City, County, and Capital Region;

3. Coordinate with the Capital Region Transportation Planning Agency to include the Mobility District Plan priorities in Long Range Transportation Plan updates.

Policy 2.7.5 – Transit in the MMTD:

The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside the areas; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 6.8.1 – Encourage Alternate Transportation Modes:

Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities including StarMetro and CRTPA.

Policy 6.10.1 - Transit Development Plan:

Through the planning timeframe, StarMetro and CRTPA shall identify transit improvement needs in the transit development plan and the capital improvements plan and prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 2.7.2 – Land Use Within the MMTD:

The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

- Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities
- Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 1.1.3: [M] (EFF. 12/15/11) Promote the Downtown as an 18-hour activity center by supporting development of housing, restaurants, and cultural activities to encourage use beyond working hours.	**Policy 6.3.4 – Downtown Traffic:** By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented. *[Existing Policy Update]*
Policy 1.1.4: [M] (EFF. 12/15/11) Promote neighborhood parks to reduce the need for long distance trips for recreation.	**Policy 1.3.4 – Multimodal Access to Parks and Recreation:** All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway or trail interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits. **Policy 1.6.2 – Multimodal Connectivity:** Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit networks and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.
Policy 1.1.5: [M] (EFF. 12/15/11) Maintain a Greenways Master Plan that integrates pedestrian and bicycle mobility into a linear park and open space system that connects local, regional, and state facilities, with specific emphasis on connections within Downtown and energy efficiency districts.	**Policy 1.3.1 – Greenways and Trails Master Plan:** The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated every 10 years to reflect completed projects, new additions and

	opportunities, and other changes to the greenway system. *[Existing Policy Update]* **Policy 6.4.3 – Bicycle and Pedestrian Network:** The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, and mixed-use areas with a retail and service focus.
Policy 1.1.6: [M] (EFF. 12/15/11) A functional transportation network shall be coordinated and maintained with the Florida State University, Florida A&M University, and Tallahassee Community College master plans to link those educational institutions and provide access to transit and surrounding supporting land uses.	**Policy 6.4.6 – Community Gateways:** Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations. **Policy 4.2.4 – Coordinate Trails with Land Use:** As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.
Policy 1.1.7: [M] (EFF. 12/15/11) The City of Tallahassee and Leon County shall adopt and maintain ordinances providing for safe and convenient on-site traffic flow, considering motorized and non-motorized vehicle parking.	**Policy 6.1.2 – Context-Based On-Site Facilities:** Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts on the multi-modal transportation network.

Policy 6.4.12 – Design Standards:

Land Development Codes that apply to all development policies and programs shall be revised by 2030 to reference the latest design guidance, standards, and recommendations in the implementation of Complete streets, including the most up to date guidance from:

- The Florida Design Manual
- National Association of City Transportation (NACTO)
- American Association of State Highway and Transportation Official (AASHTO)
- The Manual on Uniform Traffic Control Devices (MUTCD)

Policy 6.4.9 - Multi-Modal Safety and Access:

Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or constructed.
- A documented absence of current or future need.

Procedures and criteria for approving exceptions will be identified in the Land Development Code.

Additionally, new transportation facilities should follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and will utilize innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 1.1.8: [M] (EFF. 12/15/11)

Development projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Appropriate

Policy 6.1.2 – Context-Based On-Site Facilities (City of Tallahassee/Leon County):

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking,

improvements or enhancements to the multimodal network shall be required as a condition of development approval, such as, but not limited to, the following:

a) Full accommodations for pedestrian access and movement, including shaded sidewalks, benches and enhanced crossings;

b) Full accommodations for bicycles, including lockers, showers, and racks;

c) Direct connections to the regional bicycle/pedestrian network;

d) Installation of shared use paths in accordance with FDOT recognized standards;

e) Well-designed accommodations for transfer of passengers at designated transit facilities;

f) Preferential parking for rideshare participants;

g) Well-designed access for motor vehicle passenger drop-offs and pick-ups at designated transit facilities and at commercial and office development sites;

h) Full accommodation for the mobility impaired, including parking spaces, sidewalks and ramps for handicapped access;

i) Weather protection at transit stop.

cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts to the multi-modal transportation network. [Existing Policy Update]

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure:

City Public Infrastructure and County Public Works shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 3.6.3 – Site Requirements:

Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- On-site traffic circulation
- Roadway access
- Land uses
- Subdivision of land
- Signage

Policy 6.4.10 – Applicability:

All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies.

	Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations. Areas known to be vulnerable to natural or human-caused hazards. **Policy 3.7.3 – Design Criteria for Mobility Hubs:** New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs will be encouraged through incentives to increase access to community services and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations. **Policy 6.6.1 - Pedestrian Level of Service:** As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.
Policy 1.1.9: [M] (EFF. 12/15/11) Designation of Multimodal Transportation District (MMTD). In accordance with the provisions of Florida Statute 163.3180(15), the City of Tallahassee and Leon County hereby establish a Multimodal Transportation District, as shown in the Multimodal District Boundaries Map, for the purpose of promoting walking, bicycling and transit use in order to reduce dependence on the automobile. Those roadways and associated rights-of-way shown as boundaries for the MMTD shall be considered part of the MMTD.	**Policy 2.7.1 – MMTD Implementation:** The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County departments through the Multimodal Transportation District Management Plan and corresponding MMTD Code. *[Existing Policy Update]*
Policy 1.1.10: [M] (EFF. 12/15/11; REV. EFF. 7/19/13) MMTD Residential Density Bonus. In order to increase redevelopment and infill development, residential densities within the MMTD may be increased up to 35% above the maximum allowed in the Residential Densities Range Table. This bonus shall not apply	**Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus:** Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for

to lands designated Residential Preservation. Further bonuses may be applied to the Downtown. Eligibility criteria for these bonuses will be established within the land development regulations and shall include design standards facilitating pedestrian oriented site and building design with enhanced pedestrian access and amenities, urban scale development, innovative parking strategies, integrated mix of land uses, and other urban design features.	development located within ¼ mile of a transit stop. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category. **Objective 4.2 – Mobility-Based Housing Incentives:** Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs
Policy 1.1.11: [M] (EFF. 12/15/11) Land Use Within the MMTD. The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the district boundary(ies) and modify them as necessary to provide for appropriate densities, intensities and mixture of land uses to support 18-hour activity and multimodal transportation, based on the following targets: a) A center(s) consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to mass transit facilities; b) Ratio of uses: i. Residential = 20%-60% ii. Nonresidential (office, commercial, light industrial, etc.) = 30%-70% iii. Public spaces (open space, parks, recreational, squares, etc.) = 5%-15%; c) Specifically to facilitate walking and bicycling as an alternative to driving, areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses; d) In order to support redevelopment in the urban center of Tallahassee that could support ten minute transit headways and/or light rail, an areawide (excluding open space) residential density of at least 20 units per acre, recognizing that some areas, such as Central Core, may have densities in excess of 150 units per acre and others in	**Policy 2.7.2 – Land Use Within the MMTD:** The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets: • Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities • Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

established neighborhoods and areas designated Residential Preservation may have significantly less.

Policy 1.1.12: [M] (EFF. 12/15/11)

MMTD and Energy Efficiency District Urban Design and Land Development Regulations. Adopt and maintain land development regulations that ensure new construction and infill or redevelopment will contribute positively to the character and livability of the MMTD and energy efficiency districts, based on the following:

1. Buildings and blocks oriented to provide pedestrians and bicyclists easy access and a visually interesting environment;
2. Maximum block (length or perimeter);
3. Easy access to/from transit stops and surrounding land uses; Recognition of more intense densities and intensities around center(s);
4. Special design considerations to support compatibility between uses, particularly between residential and non-residential uses;
5. Creating active sidewalks with buildings opening onto streets;
6. Transparency (i.e., windows) and active uses at ground levels;
7. Parking generally located to the sides and rear, internal to blocks, and/or in structured of off-site facilities;
8. Maximum parking standards that discourage single-occupant vehicle commuting and reinforce non-auto modes, but not so limited as to adversely impact the viability and vitality of the MMTD;
9. The use of shared parking;
10. For multifamily developments, pricing of parking separately from the units;
11. Recognizing that parking demand may change over time as more multimodal infrastructure and mixed uses are developed, building parking facilities such that they may be readapted for more active uses in the future.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure:

City Public Infrastructure and County Public Works shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 3.6.3 – Site Requirements:

Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- On-site traffic circulation
- Roadway access
- Land uses
- Subdivision of land
- Signage

Policy 6.4.10 – Applicability:

All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies.

Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations.

Areas known to be vulnerable to natural or human-caused hazards.

Policy 3.7.3 – Design Criteria for Mobility Hubs:

New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing

transportation environment that promotes walking, cycling, and transit use. Mobility Hubs will be encouraged through incentives to increase access to community services and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Policy 6.6.1 - Pedestrian Level of Service:

As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 2.7.3 – Land Development Regulations in the MMTD:

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.
b. Block size standards shall encourage small blocks and an interconnected street network.
c. Sidewalks with widths based on context.
d. Facade transparency.
e. Parking location.

Policy 3.7.1 – Urban Design Principles:

General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a fine-grain mixture of land uses and housing types organized across a rural-to-urban transect framework. Outside of urban areas, design principles

	shall generally prioritize conservation and preservation of natural resources.
Policy 1.1.13: [M] (EFF. 12/15/11) Transit in the MMTD and Energy Efficiency Districts. The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside of these areas, transit stops and waiting areas shall be safe and comfortable, and intermodal connections shall be made where feasible. 1. Priority should be given to funding of improvements that increase the availability, speed, frequency, duration and reliability of transit serving these areas. 2. StarMetro shall coordinate with the Capital Region Transportation Planning Agency regarding the provision of transit centers, super stops, and other facilities for the transfer of passengers to and from these areas through potential regional connections. 3. Benches, signage, lights, and covered or enclosed waiting areas shall be used to create safe, comfortable transit stops. 4. Bicycle parking at transit stops and bicycle racks on buses shall be provided as a means to interface bicycle travel with public transit.	**Policy 1.6.2 – Multimodal Connectivity:** Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit networks and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties. **Policy 6.9.2: Transport to Destinations:** Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users. **Policy 6.4.11 – Equity:** The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.
Policy 1.1.14: [M] (EFF. 7/17/21) The City of Tallahassee and Leon County will support the implementation of the Capital Region Transportation Planning Agency's (CRTPA's) Tallahassee-Leon County Bicycle and Pedestrian Master Plan, adopted by the CRTPA in 2020, to the extent that it does not conflict with goals, objectives, and policies in this Comprehensive Plan.	**Policy 6.4.4 – Bicycle and Pedestrian Master Plan:** In coordination with the Capital Region Transportation Planning Agency, the Planning Department shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity, and pursue implementation funding. The bicycle and pedestrian master plan shall identify network need gaps. *[Existing Policy Update]* **Policy 6.10.1 - Transit Development Plan:** Through the planning timeframe, StarMetro and CRTPA shall identify transit improvement needs in the transit development plan and the capital improvements plan and prioritize funding for transit projects

	that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan. **Policy 6.13.3 - Consistency with Local Transportation Plans:** Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.
Objective 1.2: [M] (EFF. 12/15/11) COMPLETE STREETS The transportation system shall be designed and operated to provide safe, convenient and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.	**Objective 6.4 – Complete Streets:** Design, construct, and operate streets and roads to provide safe, convenient, and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities. *[Existing Policy]*
Policy 1.2.1: [M] (EFF. 12/15/11) Recognizing that urban, suburban, and rural areas have different needs, develop and maintain context sensitive design standards for transportation facilities to protect and enhance community character and enhance the safety and desirability of walking, cycling, and transit.	**Policy 6.1.1 – Mitigate Sprawl:** New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) that supports the Urban Boundary objective to promote urban infill and discourage urban sprawl. **Policy 2.7.3 – Land Development Regulations in the MMTD:** Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following: a. Building placement. b. Block size standards shall encourage small blocks and an interconnected street network. c. Sidewalks with widths based on context. d. Facade transparency. e. Parking location. Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map:

	Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future. Policy 3.5.1 – Public Infrastructure Design: Public infrastructure shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, complete streets, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure may include sidewalks, street trees, and on-street parking. **Policy 6.3.2 – Context Classification Application:** City and County roadway resurfacing and enhancement projects shall be developed in a manner that reflects the future vision and context of the area where the project is located by accounting for the Future Land Use map, zoning, and Context Classification.
Policy 1.2.2: [M] (EFF. 12/15/11) Safe and convenient facilities for pedestrians, cyclists and transit users shall be evaluated for all new road and road widening projects. Specifically, all road projects, including resurfacing projects, shall be evaluated for the addition of bicycle lanes or paved shoulders, and transit shelters where they did not previously exist.	**Policy 6.4.9 - Multi-Modal Safety and Access:** Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users *[Existing Policy]*, with the following exceptions: • For emergency repair and routine maintenance • In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or constructed. • A documented absence of current or future need • Procedures and criteria for approving exceptions will be identified in the Land Development Code
Policy 1.2.3: [M] (EFF. 12/15/11) Establish and maintain a safe and effective system of bicycle lanes, sidewalks, and shared-use paths in conjunction with existing and planned roadways and the Greenways Master Plan. Where design criteria allow and safe operation will occur, separate bicycle and	**Policy 6.4.3 – Bicycle and Pedestrian Network:** The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in

pedestrian traffic from vehicular traffic. Provide adequate and secure bicycle parking facilities at major destinations.	the vicinity of schools, community facilities, and mixed-use areas with a retail and service focus. *[Existing Policy]* **Policy 6.4.4 – Bicycle and Pedestrian Master Plan:** In coordination with the Capital Region Transportation Planning Agency, the Planning Department shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity, and pursue implementation funding. The bicycle and pedestrian master plan shall identify network need gaps.
Policy 1.2.4: [M] (EFF. 12/15/11) In coordination with the Capital Region Transportation Planning Agency, maintain a bicycle and pedestrian master plan and pursue implementation funding.	**Policy 6.4.4 – Bicycle and Pedestrian Master Plan:** In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks. *[Existing Policy Update]*
Policy 1.2.5: [M] (EFF. 12/15/11) Designate preferred entrance corridors into and connecting Tallahassee and Leon County, and adopt and maintain land development regulations to convert them into shaded pedestrian ways over time.	**Policy 6.4.6 – Community Gateways:** Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations. *[Existing Policy]*
Policy 1.2.6: [M] (EFF. 12/15/11) Require a scenic roadway assessment, environmental assessment, and landscape component in the planning and construction of new roads, and in the improvement of existing roads.	**Policy 6.4.7 – Scenic Roadway Assessments:** In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, City Public Infrastructure or County Public Works shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places. *[Existing Policy Update]*

Policy 1.2.7: [M] (EFF. 12/15/11) Require that all new or rebuilt multi-lane (four or six-lane) arterial and major collector streets be constructed with grassed and/or landscaped medians where sufficient right-of-way can be obtained, unless limited by environmental constraints.	**Policy 2.2.7 – Roadway Improvements:** The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area. **Policy 6.8.10 - Traffic Operations Management:** The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking. **Policy 3.3.8 – Development Near Interchanges:** Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.
Policy 1.2.8: [M] (EFF. 12/15/11) Provide a safe, accessible environment and support active living for students by: developing and maintaining programs to increase biking and walking to schools; prioritizing sidewalk and bicycle infrastructure within a two mile radius of primary schools; and continuing to identify, fund and build Safe Routes to Schools projects.	**Policy 6.4.5 – Safe Routes to Schools:** Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking and walking to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects. *[Existing Policy]*
Policy 1.2.9: [M] (EFF. 12/15/11) Special consideration shall be given to areas with concentrations of students, seniors, low-income families or others that are more dependent on modes other than the automobile to provide a safe, accessible environment.	**Policy 6.7.2: Mobility Hubs Location Coordination:** The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs, outreach regarding transportation options, and affordable pricing programs.

Policy 1.2.10: [M] (EFF. 12/15/11)

Educate the population on the health benefits of non-motorized modes of transportation. Increase safety to those who choose to walk or ride a bicycle by educating the public on existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.2 – Share Transportation Information:

The Planning Department shall share information with the public works staff, policy makers and general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction. *[Existing Policy]*

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces:

All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation:

All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway or trail interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Policy 1.2.11: [M] (EFF. 12/15/11)

Enforce vehicle, bicycle and pedestrian regulations concerning obedience of traffic control signals and devices, use of pedestrian crosswalks, walking along the roadway, etc. Provide proper pavement markings and signage to enhance recognition of bicycle lanes and pedestrian crossings.

Policy 6.8.8 - Intelligent Transportation Systems (ITS):

City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.4.17 – Measuring Progress:

The success of this Complete Streets Objective shall be measured by the Planning Department with assistance by both City Public Infrastructure and County Public Workshop on an annual basis, using but not limited to, the following performance measures:

- Total miles of new bike lanes (designated and shared use)

	• Total miles of neighborhood bikeways signed, marked, or constructed • Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.) • Number and type of crosswalk and intersection improvements and new installations • Number of new transit stops, routes, and weatherization of existing stops • Rates of crashes, injuries, and fatalities by mode, as available • Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices **Policy 6.6.2 - Crosswalks:** Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Context Classification.
Policy 1.2.12: [M] (EFF. 12/15/11) Adopt and maintain a City and County sign ordinance to control sign and billboard placement and limit lighted and motion activated sign usage.	**Policy 6.4.13 – Pavement Markings and Signage:** All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.
Policy 1.2.13: [M] (EFF. 12/15/11) Wherever feasible, bury utility lines. Priority should be given to areas where underground utilities can be incorporated into roadway construction and reconstruction projects.	Addressed in the land development codes.
Policy 1.2.14: [M] (EFF. 12/15/11) Coordinate the transportation systems in Tallahassee and Leon County with one another and with the programs of the Capital Region Transportation Planning Agency and the Florida Department of	**Goal 6 [LM] – A Balanced Transportation Network:** Our community will provide a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians,

Transportation to implement land use, transportation, and parking policies that promote transportation choice and to overcome identified deficiencies in the multimodal transportation network.

bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices
- Discourage the negative effects roadway widening can have on neighborhoods and community character
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users
- Maintain adopted quality of service measures
- Be coordinated between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT

Objective 6.1 – Land Use and Transportation Coordination for Livability:

Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl:

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) that supports the Urban Boundary objective to promote urban infill and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities:

	Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts on the multi-modal transportation network. **Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors Map:** Transportation corridors along with the future land uses shall be mapped to enhance the coordination of land use and transportation reflecting the intended context classification. **Policy 6.1.4 – Retrofit for Livability:** Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not limited lane width adjustments and streetscape improvements such as sidewalks and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.
Objective 1.3: [M] (EFF. 12/15/11) ENVIRONMENTAL AND NEIGHBORHOOD PROTECTION Evaluate and minimize impacts of transportation projects on the natural environment and neighborhood integrity by using transportation demand reduction strategies to maximize existing roadway capacity, reduce the need for new roadway construction or expansion, reduce peak time traffic, reduce vehicle miles traveled, and reduce greenhouse gas emissions and other environmentally damaging pollutants.	**Objective 6.1 – Land Use and Transportation Coordination for Livability:** Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.
Policy 1.3.1: [M] (EFF. 12/15/11)	**Policy 1.2.3 – Transportation Impact Mitigation:**

Evaluate the natural features of Leon County, as delineated in the future land use and conservation elements, to avoid fragmenting and degrading regionally significant natural resources, wildlife corridors, greenways, and aquifers when planning new or expanding existing transportation facilities.	The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated. **Policy 1.2.4 – Transportation Corridor Environmental Features:** Ensure context-based beautification, landscaping, and stormwater facilities that support environmental protection are integrated into existing and new transportation corridors where feasible by methods such as: • Increasing the amount of green spaces/open spaces • Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff • Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built • Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element • Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage
Policy 1.3.2: [M] (EFF. 12/15/11) Reduce demand for more and wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling and walking.	**Policy 6.8.9 - Traffic Operations Management**: The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking. *[Existing Policy Update]*
Policy 1.3.3: [M] (EFF. 12/15/11) Coordinate with Commuter Services of North Florida and state agencies regarding transportation demand reduction strategies such as staggered work hours for major employers, ridesharing, and parking fees**.**	**Policy 6.7.1: Implementation of Mobility Hubs** Implement a network of mobility hubs in partnership with StarMetro, incorporating transit with other shared mobility services, such as bikeshare and car-share.

Policy 1.3.4: [M] (EFF. 12/15/11) Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.	**Policy 1.6.5 – Transportation Corridor Resilience:** Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard. *[Existing Policy]*
Policy 1.3.5: [M] (EFF. 12/15/11) Require an analysis that measures environmental and neighborhood impact prior to funding any new roadway alignments, construction, or changes to the traffic circulation system. The level and type of review may vary with the anticipated impact, and shall include community involvement.	**Policy 1.6.5 – Transportation Corridor Resilience:** Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard. **Policy 1.2.2 – Environmental Analysis:** Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health. **Policy 1.2.3 – Transportation Impact Mitigation:** The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated. **Policy 1.2.4 – Transportation Corridor Environmental Features:** Ensure context-based beautification, landscaping, and stormwater facilities that support environmental protection are integrated into existing and new transportation corridors where feasible by methods such as: • Increasing the amount of green spaces/open spaces

	• Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff • Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built • Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element • Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage
Policy 1.3.6: [M] (EFF. 12/15/11) Require tree plantings, where practical, for both new and old roads to increase screening, beauty, runoff control and reduction of summer heat. Existing trees shall be protected during transportation system development and maintenance.	**Policy 1.4.4 – Public Development Tree Prioritization:** Public transportation projects shall prioritize protection of existing high-quality trees during transportation system planning, development, and maintenance. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality. *[Existing Policy]* **Policy 1.4.5 – Private Development Tree Standards:** Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees. **Policy 6.1.4 – Retrofit for Livability:** Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not limited lane width adjustments and streetscape improvements such as sidewalks and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.
Policy 1.3.7: [M] (EFF. 12/15/11) Aesthetically enhance and provide added environmental protection to existing and new transportation corridors by the following methods which include but are not limited to:	**Policy 1.6.5 – Transportation Corridor Resilience:** Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater

a) Incorporating for new, or increasing for existing corridors, the number of green spaces/open spaces and pedestrian oriented areas.

b) Recognizing plantations as a significant part of the natural landscape when roads are being designed in areas of the County where they are present.

c) Encouraging the use of native vegetation and natural systems such as swales to control runoff.

d) Maintaining natural ground cover, canopy and understory where new roads are built.

e) Design public infrastructure improvements to minimize development impacts to protect designated canopy roads consistent with the Conservation Element.

f) Applying access management strategies that enhance the character of transportation corridors and gateways to the community by promoting shared access and consolidated signage and preserving green space for landscaping.

quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.2.2 – Environmental Analysis:

Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation:

The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features:

Ensure context-based beautification, landscaping, and stormwater facilities that support environmental protection are integrated into existing and new transportation corridors where feasible by methods such as:

- Increasing the amount of green spaces/open spaces
- Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff
- Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built
- Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element
- Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage

	Policy 6.4.7 – Scenic Roadway Assessments: In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places. **Policy 1.1.2– Designated Canopy Roads:** Local governments shall maintain a map and spatial data that identify and depict designated canopy roads. **Policy 3.3.1 – Access Management Design:** The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users.
Objective 1.4: [M] (EFF. 12/15/11) CONNECTIVITY & ACCESS MANAGEMENT Reduce vehicle trip demand, increase access and safety for cyclists and pedestrians, and preserve the integrity of the transportation system with effective connectivity and access management programs.	**Objective 6.2 – Network Connectivity Improvement:** Improve the balance, connectivity, and capacity of the multimodal transportation network. **Objective 6.4 – Complete Streets:** Design, construct, and operate streets and roads to provide safe, convenient, and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.
Policy 1.4.1: [M] (EFF. 12/15/11) Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system without negatively impacting either development.	**Policy 6.2.5 – Interconnectivity for Development:** Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments when such connection has the potential to reduce the vehicular traffic on the external street system. *[Existing Policy]*

Policy 1.4.2: [M] (EFF. 12/15/11) Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through traffic on neighborhoods.	**Policy 3.3.6 – Neighborhood Through-Traffic:** Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods. *[Existing Policy]*
Policy 1.4.3: [M] (EFF. 12/15/11) Within the Urban Service Area, require private developers to include bikeways and pathways or sidewalks within proposed developments and connecting to surrounding land uses.	**Policy 6.2.7 – Interconnectivity to Adjacent Uses** Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses. *[Existing Policy]*
Policy 1.4.4: [M] (EFF. 12/15/11) All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.	**Policy 6.2.3 – Build and Enhance the Network:** Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.
Policy 1.4.5: [M] (EFF. 12/15/11) All development plans shall incorporate and continue all sub-arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.	**Policy 6.2.6: Continuation of Streets** All development plans shall incorporate and continue all sub arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development. *[Existing Policy]*
Policy 1.4.6: [M] (EFF. 12/15/11) Connections to and from energy efficiency districts. The transit, bike, and pedestrian networks within energy efficiency districts shall recognize the districts as activity nodes and thus logically interconnect with and service the surrounding areas.	**Policy 6.2.1 – Enhance Connectivity:** Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.
Policy 1.4.7: [M] (EFF. 12/15/11) Energy Efficiency District Network and Connectivity. Energy efficiency districts shall have a dense, interconnected network of local	**Policy 6.4.3 – Bicycle and Pedestrian Network:** The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the

and collector streets, sidewalks, bikelanes, and shared-use paths in accordance with the following:

1. The street, bicycle, and pedestrian network shall be comprised of a system of interconnected and direct routes with a connectivity index of 50 or more polygons per square mile;
2. For areas with a connectivity index below 50, the missing links in the network shall be identified and eliminated where feasible through the development and capital improvement process;
3. Prioritization of connectivity projects shall recognize the importance of areas with high concentrations of pedestrian activity and of areas where connections are needed to ensure easy access between transportation modes, with particular attention to bicycle and pedestrian access to schools, transit stops and regional greenway or trail systems.
4. Direct bicycle and pedestrian connections shall be provided within and between residential areas and supporting community facilities and services, such as shopping areas, employment centers, transit stops, neighborhood parks, and schools.
5. The local street circulation pattern shall maximize access to individual lots and activity center destinations (e.g. schools, commercial areas, parks).

Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan:

In coordination with the Capital Region Transportation Planning Agency, the Planning Department shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity, and pursue implementation funding. The bicycle and pedestrian master plan shall identify network need gaps.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure:

City Public Infrastructure and County Public Works shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 3.7.3 – Design Criteria for Mobility Hubs:

New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs will be encouraged through incentives to increase access to community services and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Policy 6.7.2: Mobility Hubs Location Coordination

The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs, and outreach regarding transportation options.

Policy 1.4.8: [M] (EFF. 12/15/11)

Policy 3.3.1 – Access Management Design:

The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, considering impacts to all modes and users.	The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users.
Policy 1.4.9: [M] (EFF. 12/15/11) No new lot or parcel shall be platted or created along arterial or collector roadways that would result in connection spacing that does not comply with the applicable local or FDOT connection spacing standard.	**Policy 3.3.5 – State Road Access Management:** The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways. *[Existing Policy]*
Policy 1.4.10: [M] (EFF. 12/15/11) Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access, rather than the maximum available for that property frontage.	**Policy 3.3.7 – Consolidated Properties:** Access points to such developments shall be the minimum necessary to provide reasonable access. Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. *[Existing Policy]*
Policy 1.4.11: [M] (EFF. 12/15/11) Service roads shall be used for access to development in the area surrounding new freeway interchanges and shall be separated from interchange ramps at a distance that conforms with the applicable FDOT or local access spacing standards, in order to preserve safe and efficient traffic operations in the interchange area. Circulation systems for interchange area development shall be continuous and designed to support both vehicular and pedestrian mobility.	**Policy 3.3.8 – Development Near Interchanges:** Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.
Policy 1.4.12: [M] (EFF. 12/15/11) Flexibility shall be provided in administration of access spacing standards to accommodate minor deviations, where appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.	**Policy 3.3.9 – Access Management Deviations**: Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Policy 1.4.13: [M] (EFF. 12/15/11)

As Capital Circle is converted to a high capacity, multi-lane arterial, future access-points shall be limited so that the improved roadway will function more efficiently and safely for its intended purpose. In order to protect traffic capacity of the improved roadway and to assure public safety, the following policies will apply:

1. No new parcel shall be platted nor created through subdivision that results in a parcel with sole access to Capital Circle. Consolidation of two or more parcels that currently have access to Capital Circle into a parcel with a single access to Capital Circle shall be permitted;

2. New development abutting Capital Circle shall contribute to the development of a supporting system of local or collector roads, service roads, and/or shared access systems (e.g. joint use driveways), as an alternative to individual driveway access.

3. Where individual driveways must be provided to preserve reasonable access to a development site, applicants shall enter an agreement to cooperate in any future project to consolidate access points or to share access with abutting properties as opportunities arise.

Policy 3.3.3 – Unified Access and Circulation Plans: Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.5 – State Road Access Management:

The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Objective 1.5: [M] (EFF. 12/15/11)

LEVELS OF SERVICE

Establish transportation level of service (LOS) standards in order to measure the impacts of new development on, and to prioritize improvements to, the transportation system.

Objective 6.3 – Context Based Mobility:

Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be in the future based on land use and zoning.

Policy 1.5.1: [M] (EFF. 12/15/11)

The peak hour roadway level of service for Tallahassee and Leon County is established as follows:

Table 9: Peak hour roadway level of service

Functional Classification	**Inside the USA**	**Outside the USA**

Policy 6.3.8 - Level of Service (LOS):

Peak Hour Roadway Level of Service shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastrate,	C	B

Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D / E*	C
Major and Minor Collectors	D / E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Limited Access Parkways		
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes *[Existing Policy]*.

Policy 1.5.2: [M] (EFF. 12/15/11)

The level of service on all roadway facilities on the state highway system operating at the state recommended adopted minimum level of service standard or better at the time of adoption of the Comprehensive Plan will be maintained at the state adopted minimum level of service standard or a more strict local standard for the facility (if required adopted as part of the Plan). Level of service will be based on revised peak hour data compiled after Plan adoption**.**

Policy 6.3.8 - Level of Service (LOS):

Peak Hour Roadway Level of Service shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastrate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes. *[Existing Policy]*

Policy 1.5.3: [M] (EFF. 12/15/11, REV. EFF. 8/9/2012)

The Roadway Level of Service Standards established under Goal 1.5, and as may be duplicated in the Capital Improvements Element, may be waived if a mobility fee program is adopted into the local concurrency management manuals by the City and/or County Commissions. If implemented, the mobility fee program shall: 1)

Policy 6.3.9 - Level of Service (LOS):

Peak Hour Roadway Level of Service shall be assessed during the Evaluation and Appraisal Report every 7 years.

account for the fact that development further from activity nodes creates greater fiscal and environmental costs to the community;

2) support compact, mixed use development and redevelopment within adopted energy efficiency districts.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastrate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes. *[Existing Policy]*

Policy 1.5.4: [M] (EFF. 12/15/11)

The City of Tallahassee and Leon County Concurrency Management systems will accumulate all development impacts, both below and above threshold standards, to determine cumulative impact of individual development orders. Cumulative impacts of all development will be monitored in order to maintain adopted level of service standards.

Policy 6.3.8 - Level of Service (LOS):

Peak Hour Roadway Level of Service shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastrate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes. *[Existing Policy]*

Policy 1.5.5: [M] (EFF. 12/15/11)

MMTD Areawide Multimodal Level of Service Standards and Performance Targets. In order to create community design that supports mobility, the following performance standards are established for the Multimodal Transportation District.

Policy 6.3.9 – Area Wide Level of Service (LOS):

In order to create community design that supports mobility, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards

Table 10: MMTD Areawide Multimodal Level of Service Standards.
Areawide Multimodal Level of Service Standards
(Pursuant to F.S. 163.3180(15)(c))

Pedestrian	Transit	Bicycle	Automobile
C	C	D	E+50%

In addition, because areawide level of service measures based on computer models do not recognize the full breadth of conditions affecting pedestrian, cycling, and transit comfort, safety and convenience, the following performance targets are also established. It is recognized these targets may take more than the 20-year planning period of this document to achieve, but are provided as continuing guidance for plan updates and capital investments.

Table 11: MMTD Areawide Multimodal Performance Targets

a) Areawide modal split		
	Transit that both originate & end within the district	Trips originating or ending outside the district (not including pass through trips)
Transit	40%	25%
Bike/pedestrian	30%	10%
Automobile	30%	65%
b) Bicycle and Pedestrian Mobility		
i)	Formally designated north/south & east/west bicycle routes functioning at LOS C or better are provided at 1½ mile intervals	

Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

[Existing Policy Update]

ii)	All buses are equipped with bicycle racks
iii)	All sidewalk and bicycle facilities within ½ mile of StarMetro transfer points function at LOS C or better;
iv)	All superstops are equipped with bicycle parking
v)	All intersections within ½ mile of StarMetro transfer points incorporate features to support safe and comfortable crossing for pedestrians and cyclists
c) Transit Mobility	
i)	All employees and dwelling units are within ¼ mile of a transit stop
ii)	80% of transit routes operate with 20 minute headways or less
iii)	80% of employees and dwelling units are served by routes operating at least 16 hours a day
iv)	40% of transit stops include benches, signage, lights, and covered or enclosed waiting areas
v)	80% of employees and dwelling units are within 1 mile of a StarMetro transfer point.
d) In Relation to Educational Uses	
i)	All pedestrian and bicycle facilities within 2 miles of primary schools function at LOS C or better
ii)	50% of students at Florida State University (FSU), Florida A&M

	University (FAMU), and Tallahassee Community College (TCC) commute to campus via non-auto modes
iii)	At least three satellite parking facilities for students are located outside of the MMTD but within a 20 minute transit ride of FSU, FAMU, or TCC

Policy 1.5.6: [M] (EFF. 12/15/11)

Transportation Concurrency within the MMTD. Pursuant to F.S. 163.3180(15)(c), development permits may be issued in reliance upon all planned community design capital improvements that are financially feasible over the development or redevelopment timeframe for the MMTD, without regard to the period of time between development or redevelopment and the scheduled construction of the capital improvements. Reflecting the purpose of a MMTD to promote higher density infill and to create a safe, desirable environment for pedestrians, the capital improvements plan will reflect primary emphasis on bicycle, pedestrian, and transit projects.

Transportation concurrency is addressed in the Capital Improvements Element.

Policy 1.5.7: [M] (EFF. 8/9/12)

Changes to roadway segment capacity that result from the reduction or restriction of automobile laneage from existing conditions in order to implement multimodal or other non-automobile-oriented comprehensive planning goals will not require transportation concurrency mitigation. An analysis shall be conducted of transportation and land use impacts on parallel roadways that would result from the lane changes.

Policy 6.3.5 – Lane Repurposing:

Evaluate the need for road diets to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or other non-automobile-oriented goals, objectives, or policies will not require transportation concurrency mitigation. Outside of the MMTD, an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Objective 1.6: [M] (EFF. 12/15/11)

CORRIDOR PRESERVATION

Identify right-of-way needed for planned future transportation improvements and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service for concurrency, to improve coordination between land use and transportation, and to minimize

Objective 6.2 – Network Connectivity Improvement:

Improve the balance, connectivity, and capacity of the multimodal transportation network.

the adverse social, economic, and environmental impacts of transportation facilities on the community.

Policy 1.6.3: [M] (EFF. 12/15/11)

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Future Right-of-Way Needs Map and the Long Range Transportation Plan.

Table 12: Future Right-of-Way Needs Without an Existing Corridor Alignment

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW (ft.) [1-3]**
Blueprint Principal Arterial[4]	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

Notes:

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

Policy 6.2.2 – Future Right-of-Way Needs:

Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through the development review process, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 2.2.10 – Corridor Preservation:

Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 343.03(29)—and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

A Corridor Preservation Map shall be maintained and reviewed every five years. The Corridor Preservation Map shall graphically represent planned future transportation projects in the City of Tallahassee and Leon County, and a table of projects indicating the project termini and access classifications.

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Corridor Preservation Map and the Long Range Transportation Plan. *[Existing Policy and Map]*

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of-way needs for future corridors:

a. Space for sidewalks to provide safe and convenient

movement of pedestrians.

b. The provision of bike lanes or separate bike paths.

c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

d. Accommodation of stormwater at the surface or in storm drains.

e. Accommodation of auxiliary lanes at intersections.

f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns.

2) Planned ROW needs for Capital Circle from Centerview to W. Tennessee, as accepted by the Blueprint Intergovernmental Agency on November 19, 2001.

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	ROW (ft.)[1-3]
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise

alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.

2) Alternative widths may be established by the local government, in consultation with other

affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the

determination of right-of- way needs for future corridors:

a. Space for sidewalks to provide safe and convenient movement of pedestrians.

b. The provision of bike lanes or separate bike paths.

c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow

placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

d. Accommodation of stormwater at the surface or in storm drains.

e. Accommodation of auxiliary lanes at intersections.

f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns.

This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected.

Policy 6.3.6 – One-Way Pair Conversions:

The City and County shall prioritize converting multi-lane one-way pair roadways to two-way streets to improve safety, walkability, and economic vitality. These conversions shall incorporate multimodal elements such as pedestrian, bicycle, and transit infrastructure, alongside speed management measures to reduce speeds and enhance safety. The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to conversion shall be acceptable within the MMTD, prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 1.6.4: [M] (EFF. 12/15/11)

All proposed development plans on designated future transportation corridors shall be reviewed for consistency with the Future Right-of-Way Needs Map, the Long Range Transportation Plan, and any specific alignment or engineering studies and shall be consistent with

Policy 2.2.10 – Corridor Preservation:

Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 343.03(29)—and protect it from building encroachment as development occurs to

identified right-of-way needs for designated future transportation corridors as a condition of development approval.

preserve the corridor for transportation use, to maintain transportation level of service standards, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

A Corridor Preservation Map shall be maintained and reviewed every five years. The Corridor Preservation Map shall graphically represent planned future transportation projects in the City of Tallahassee and Leon County, and a table of projects indicating the project termini and access classifications.

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Corridor Preservation Map and the Long Range Transportation Plan. *[Existing Policy and Map]*

This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected.

Policy 6.13.2 - Consistency with Regional Transportation Plans:

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 1.6.5: [M] (EFF. 12/15/11)

The Future Right-of-Way Needs Map shall be reviewed, and updated, if necessary, every five years concurrent with the Long Range Transportation Plan update, or more frequently as necessary to address the growth and mobility needs of the local government.

Policy 2.2.10 – Corridor Preservation:

Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 343.03(29)—and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

A Corridor Preservation Map shall be maintained and reviewed every five years. determination of right-of- way needs for future corridors:

a. Space for sidewalks to provide safe and convenient movement of pedestrians.

b. The provision of bike lanes or separate bike paths.

c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow

	placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged. d. Accommodation of stormwater at the surface or in storm drains. e. Accommodation of auxiliary lanes at intersections. f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter. g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns. This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected**.**
Policy 1.6.7: [M] (EFF. 12/15/11) Explore land banking policies, procedures and funding options to facilitate early acquisition of right-of-way for designated future transportation corridors.	**Policy 6.2.2 – Future Right-of-Way Needs:** Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes through the development review process, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period. *[Existing Policy and Map Update]*
Policy 1.6.8: [M] (EFF. 12/15/11) Right-of-way acquisition shall be facilitated by the establishment of a program to identify, prioritize, and acquire needed right-of-way consistent with the Right-of-Way Needs Map and Capital Improvements Element.	**Policy 6.2.2 – Future Right-of-Way Needs:** Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes through the development review process, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall

	not be constructed to accommodate development anticipated beyond the long-term planning period. *[Existing Policy and Map]*
Policy 1.6.9: [M] (EFF. 12/15/11) Where needed right-of-way is identified in the energy efficiency district connectivity plans, such projects shall also be included on the Right-of-Way Needs Map and/or in the Long Range Transportation Plan.	**Policy 6.2.2 – Future Right-of-Way Needs:** Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes through the development review process, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period. *[Existing Policy and Map Update]*
Goal 2: [M] (EFF. 12/15/11) TRANSIT Capture a five to ten percent mode share through the development and improvement of the mass transit system so that transit is seen as a viable alternative to the automobile as a means of transportation.	**Goal 6 [LM] – A Balanced Transportation Network:** Our community will provide a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.
Objective 2.1: [M] (EFF. 12/15/11) IMPLEMENTATION STRATEGIES In coordination with the Metropolitan Planning Organization, City of Tallahassee, Leon County and the Florida Department of Transportation, expand the integration of mass transit planning into the overall transportation delivery system by coordination of the short-range transit operations plan, Transit Development Plan, Bicycle and Pedestrian Master Plan and Long Range Transportation Plan development.	**Objective 6.9 – Transit:** Ensure that the community is well-connected via transit to major activity centers, transit stops and waiting areas are safe and comfortable, and transit is coordinated with other modes of transportation. **Objective 6.8 – Transportation for the Disadvantaged:** Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk. **Objective 6.10 – Transit:** Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas

	are safe and comfortable, and that transit is coordinated with other modes of transportation.
Policy 2.1.1: [M] (EFF. 12/15/11) Land use regulations shall be developed which emphasize pedestrian movement and the use of transit.	**Policy 1.6.2 – Multimodal Connectivity:** Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit networks and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties. **Policy 3.7.1 – Urban Design Principles:** General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a fine-grain mixture of land uses and housing types organized across a rural-to-urban transect framework. Outside of urban areas, design principles shall generally prioritize conservation and preservation of natural resources.
Policy 2.1.2: [M] (EFF. 12/15/11) Systematically extend and/or modify transit routes within the urban area to provide access to major employment, shopping, and business, recreational and other activity centers.	**Objective 6.10 – Transit (and associated policies):** Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation. *[Existing policy]*
Policy 2.1.3: [M] (EFF. 12/15/11) Coordinate the location and design of office parks to foster ride sharing and transit use**.**	**Policy 6.8.7 – Drop-Off & Pick-Up Zones:** The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, churches, community facilities, sporting facilities, parks, and other uses with a high-frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and

	may coincide with porte cocheres or valet operations that meet the design requirements.
Policy 2.1.4: [M] (EFF. 12/15/11) Discourage single occupancy vehicle use through design criteria for new development and innovative programs such an employee pass program.	**Policy 6.8.7 – Drop-Off & Pick-Up Zones:** The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, churches, community facilities, sporting facilities, parks, and other uses with a high-frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and may coincide with porte cocheres or valet operations that meet the design requirements.
Policy 2.1.5: [M] (EFF. 12/15/11) Encourage the elimination of the subsidy of public employee parking to encourage ride sharing and transit use.	**Policy 6.8.1 – Encourage Alternate Transportation Modes:** Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities including StarMetro and CRTPA. **Policy 6.8.3 – Enhance Bicycle and Pedestrian Infrastructure:** City Public Infrastructure and County Public Works shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.
Policy 2.1.6: [M] (EFF. 12/15/11) Develop and maintain a marketing strategy and campaign to inform the public on mass transit and to increase ridership.	No specific comprehensive plan directed marketing

Policy 2.1.7: [M] (EFF. 12/15/11) The potential impacts upon transit shall be determined and utilized in evaluating highway projects when planning new roads or capacity expansions to existing roads.	**Policy 4.2.1 – Coordinate Transit with Land Use:** As transit centers are planned, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement transit-oriented development. **Policy 6.2.3 – Build and Enhance the Network:** Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.
Policy 2.1.8: [M] (EFF. 12/15/11) For purposes of evaluating transit level of service over the Plan Horizon and to implement the Regional Mobility Plan goal of a 10% modal split, the local government should expand coverage to serve 80 to 89 percent of the residential population within the Urban Service Area by a transit route along an arterial or collector roadway within approximately 1/2 mile.	**Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS):** In order to create community design that supports mobility, the following performance standards are targeted for the Multimodal Transportation District
Policy 2.1.9: [M] (EFF. 12/15/11) Revisions to and expansion of transit service will be based on existing and major trip generators and densities to provide efficient mass transit services.	**Policy 6.8.1 – Encourage Alternate Transportation Modes:** Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities including StarMetro and CRTPA
Policy 2.1.10: [M] (EFF. 12/15/11) Future transit planning for Tallahassee and Leon County will include provisions for determining the location of transit regional transfer facilities and/or superstops.	**Policy 6.8.1 – Encourage Alternate Transportation Modes:** Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be

	encouraged by public and private sector transportation entities including StarMetro and CRTPA. **Policy 6.8.7 – Drop-Off & Pick-Up Zones:** The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, churches, community facilities, sporting facilities, parks, and other uses with a high-frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and may coincide with porte cocheres or valet operations that meet the design requirements.
Policy 2.1.11: [M] (EFF. 12/15/11) To provide efficient transit for Tallahassee and Leon County, future transit planning will address provisions for efficient and frequent service based on trip generations and density of land uses, safe and convenient transit facilities and adaptation for the special needs of the transportation disadvantaged.	**Policy 6.10.5 - Transit Corridors:** Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors. **Policy 6.9.4 - Transportation Disadvantaged Needs Assessment:** A needs assessment of the transportation disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs. A strategy to meet identified unmet needs of the transportation disadvantaged shall be developed.
Objective 2.2: [M] (EFF. 12/15/11) TRANSIT ALTERNATIVES Adopt and maintain a plan for expanding the transit system beyond buses.	**Objective 6.9 – Transit:** Ensure that the community is well-connected via transit to major activity centers, transit stops and waiting areas are safe and comfortable, and transit is coordinated with other modes of transportation.

	Objective 6.1 – Land Use and Transportation Coordination for Livability: Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.
Policy 2.2.1: [M] (EFF. 12/15/11) Initiate a study to evaluate the alternative types of transit in relation to their potential use in the City.	**Policy 6.10.3 - Southside Transit:** StarMetro and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact to the area. **Policy 6.10.4 - Employment and Activity Center Service**: Systematically prioritize the extension and/or route modifications within the urban area to provide access to major employment, shopping, and business, recreational, and other activity centers.
Policy 2.2.2: [M] (EFF. 12/15/11) Develop a long-range master plan for building the transit system type determined to be most feasible in Policy 2.2.1**.**	**Policy 6.10.5 - Transit Corridors:** Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors
Objective 2.3: [M] (EFF. 12/15/11) PROTECTION OF FUTURE TRANSIT CORRIDORS Develop and maintain a plan that identifies future transit rights-of-way and corridors and provides means of protecting and acquiring such areas.	**Objective 6.9 – Transit:** Ensure that the community is well-connected via transit to major activity centers, transit stops and waiting areas are safe and comfortable, and transit is coordinated with other modes of transportation. **Objective 6.2 – Network Connectivity Improvement:** Improve the balance, connectivity, and capacity of the multimodal transportation network.
Policy 2.3.1: [M] (EFF. 12/15/11)	**Policy 6.10.5 - Transit Corridors:** Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development

Existing and future transit rights-of-way and corridors shall be identified as a part of the comprehensive plan for integrating transit into the existing transportation system.	agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors. **Policy 6.13.2 - Consistency with Regional Transportation Plans:** Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.
Policy 2.3.2: [M] (EFF. 12/15/11) Incentives to encourage the donation of transit rights-of-way and corridors shall be developed.	**Policy 2.2.10 – Corridor Preservation:** Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 343.03(29)—and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities. A Corridor Preservation Map shall be maintained and reviewed every five years. The Corridor Preservation Map shall graphically represent planned future transportation projects in the City of Tallahassee and Leon County, and a table of projects indicating the project termini and access classifications. Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Corridor Preservation Map and the Long Range Transportation Plan. *[Existing Policy Update]* Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment

Functional Classification	ROW (ft.)[1-3]
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise

alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.

2) Alternative widths may be established by the local government, in consultation with other

affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the

determination of right-of- way needs for future corridors:

a. Space for sidewalks to provide safe and convenient movement of pedestrians.

b. The provision of bike lanes or separate bike paths.

c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

	d. Accommodation of stormwater at the surface or in storm drains. e. Accommodation of auxiliary lanes at intersections. f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter. g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns. This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected.
Policy 2.3.3: [M] (EFF. 12/15/11) Development agreements and land use regulations shall be utilized to preserve future transit corridors.	**Policy 6.10.5 - Transit Corridors:** Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.
Objective 2.4: [M] (EFF. 12/15/11) FUNDING OF TRANSIT By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.	**Objective 6.9 – Transit:** Ensure that the community is well-connected via transit to major activity centers, transit stops and waiting areas are safe and comfortable, and transit is coordinated with other modes of transportation. **Objective 6.1 – Land Use and Transportation Coordination for Livability:** Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.
Policy 2.4.1: [M] (EFF. 12/15/11)	**Policy 6.10.1 – Transit Development Plan:** Through the planning timeframe, the Transit Development Plan shall identify

Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.	transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan. **Policy 6.4.2 – Share Transportation Information:** The Planning Department shall share information with the public works staff, policy makers and general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.
Policy 2.4.2: [M] (EFF. 12/15/11) Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program**.**	**Policy 6.10.1 - Transit Development Plan:** Through the planning timeframe, StarMetro and CRTPA shall identify transit improvement needs in the transit development plan and the capital improvements plan and prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan. *[Existing Policy Update]*
Objective 2.5: [M] (EFF. 12/15/11) TRANSPORTATION FOR DISADVANTAGED Provide for full implementation of the requirements of Chapter 427, Florida Statutes and Section 3046(a)(9) of the SAFETEA-LU Act regarding planning and coordination of human services transportation in meeting the needs of the transportation disadvantaged.	**Objective 6.9 – Transportation for the Disadvantaged:** Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk. *[Existing Policy Update]*
Policy 2.5.1: [M] (EFF. 12/15/11) A needs assessment of the transportation disadvantaged shall be undertaken.	**Policy 6.9.4 - Transportation Disadvantaged Needs Assessment:** A needs assessment of the transportation disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs. A strategy to meet identified unmet needs of the transportation disadvantaged shall be developed.

Policy 2.5.2: [M] (EFF. 12/15/11) An assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs.	**Policy 6.9.4 - Transportation Disadvantaged Needs Assessment:** A needs assessment of the transportation disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs. A strategy to meet identified unmet needs of the transportation disadvantaged shall be developed.
Policy 2.5.3: [M] (EFF. 12/15/11) A strategy to meet identified unmet needs shall be developed with emphasis being given to meeting the needs of the transportation disadvantaged (i.e., those individuals who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase transportation).	**Policy 6.9.4 - Transportation Disadvantaged Needs Assessment:** A needs assessment of the transportation disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs. A strategy to meet identified unmet needs of the transportation disadvantaged shall be developed. *[Existing Policy]* **Policy 6.9.1 - Human Services Transportation:** Through the planning timeframe, the transit provider and CRTPA projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the transportation disadvantaged.
Goal 3: [M] (EFF. 12/15/11) AVIATION Provide for adequate capacity and safe, appropriate airport facilities to meet the demand for Commercial Service, cargo, military, and General Aviation services and to enhance aviation and airport development opportunities, with sensitivity to protecting existing residential and natural resources adjacent to the airport.	**Goal 6 [LM] – A Balanced Transportation Network:** Our community will provide a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.
Objective 3.1: [M] (EFF. 12/15/11) LONG TERM IMPLEMENTATION GUIDELINES	**Objective 6.11 – Aviation:** Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military

Expand and improve on a phased, incremental basis, the aviation facilities at and the access to Tallahassee Regional Airport to meet the transportation needs of the Capital Region while maintaining consistency with all elements of the comprehensive plan. The Tallahassee Regional Airport Master Plan will be maintained and monitored on an ongoing basis to ensure that implementation of the plan meets the aviation needs of the area.	services and to enhance aviation and airport development opportunities.
Policy 3.1.1: [M] (EFF. 12/15/11) Implement the Tallahassee Regional airport Master Plan for the Year 2005 and implement the recommendations of the Tallahassee Regional Airport Noise Compatibility Plan.	**Policy 6.11.2 - Airport Master Plan:** The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon. [*Existing Policy]* **Policy 6.11.4 - Compatibility for Noise and Safety:** Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.
Objective 3.2: [M] (EFF. 12/15/11) ACCESS TO AIRPORT Access routes to the Tallahassee Regional Airport will be integrated with the street and highway planning process of the City, County, MPO, and Florida DOT. Alternative modal choices will be studied as part of the mass transportation planning process.	**Objective 6.4 – Complete Streets:** Design, construct, and operate streets and roads to provide safe, convenient, and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities. **Objective 6.11 – Aviation:** Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities. **Objective 5.3 – Freight and Cargo:** Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo. *[Existing Policy]*

Policy 3.2.1: [M] (EFF. 12/15/11) An appropriate gateway from the airport to Downtown/Capitol Center/University destinations shall be designated and improved. Such improvements shall consider roadway capacity, adjacent land uses, landscaping, and incorporation of future mass transportation facilities.	**Policy 6.4.6 – Community Gateways:** Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.
Policy 3.2.2: [M] (EFF. 12/15/11) Conduct a feasibility study to determine the need for, type of, and proposed location of mass transportation services between the airport and priority destinations within the urban area.	**Policy 6.11.2 - Airport Master Plan:** The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon. **Policy 6.4.6 – Community Gateways:** Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.
Policy 3.2.3: [M] (EFF. 12/15/11) The interface between the roadway network and the airport vehicle circulation system shall be designed, constructed, and signalized (when warranted) to provide efficient on-site and off-site traffic flow.	**Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and the County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services. **Policy 5.3.2 – Tallahassee International Airport:** Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to

	enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.
Policy 3.2.4: [M] (EFF. 12/15/11) The City of Tallahassee will coordinate any aviation facilities plan with U.S. Army Corps of Engineers, the Federal Aviation Administration, the MPO, military service, the FDOT 5 Year Transportation Plan and the Continuing Florida Aviation System Planning Process.	**Policy 6.11.2 - Airport Master Plan:** The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon **Policy 5.2.1 – Airport Master Plan:** The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.
Policy 3.2.5: [M] (EFF. 12/15/11) The Traffic Circulation and Mass Transit sub-elements shall consider future airport access needs.	**Policy 6.11.2 - Airport Master Plan:** The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon. **Policy 5.3.2 – Tallahassee International Airport:** Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail. *[Updated Existing Policy Intent Retained]*

	Policy 5.2.1 – Airport Master Plan: The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.
Objective 3.3: [M] (EFF. 12/15/11) CRITERIA FOR OPERATION AND MODIFICATION TO AIRPORT Operation of and modification to Tallahassee Regional Airport shall take into account impacts to adjacent land uses, the natural resources, and the community in general.	**Objective 6.11 – Aviation:** Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities. **Policy 5.3.2 – Tallahassee International Airport:** Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.
Policy 3.3.1: [M] (EFF. 12/15/11) Future modifications to airport facilities shall take into account the potential for noise and safety hazards to surrounding land uses.	**Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses. *[Existing Policy Update]*

	Policy 6.11.2 - Airport Master Plan: The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.
Policy 3.3.2: [M] (EFF. 12/15/11) Future modifications to airport facilities shall be accomplished so as to be compatible with nearby natural resources.	**Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and the County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.
Policy 3.3.3: [M] (EFF. 12/15/11) Aviation and related facilities development and expansion shall be consistent with the conservation element.	**Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. City Growth Management and County Development Support and Environmental Management shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.
Policy 3.3.4: [M] (EFF. 12/15/11) Aviation and related facilities development and expansion shall mitigate structural and non-structural impact on adjacent natural resources**.**	**Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and the County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 3.3.5: [M] (EFF. 12/15/11) Additional parking shall be provided in ways that minimize impervious surfaces and that maintain the appearance of the airport terminal.	**Policy 5.2.1 – Airport Master Plan:** The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport. **Policy 6.11.2 - Airport Master Plan:** The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon. **Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses**.**
Policy 3.3.6: [M] (EFF. 12/15/11) Aesthetics shall be considered in any future airport facility design.	**Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses**.**

Objective 3.4: [M] (EFF. 12/15/11) LAND USE IN ADJACENT AREAS Development near the airport shall occur in ways and at locations compatible with the airport's operation and expansion and with sensitivity to protecting existing residential and natural resources adjacent to the airport.	**Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses. **Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and the County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services. **Policy 6.11.5 - Advanced Air Mobility:** Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas and not located within areas that may create compatibility issues. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.
Policy 3.4.1: [M] (EFF. 12/15/11) Land use decisions in the vicinity of the Tallahassee Regional Airport shall only be permitted if compatible with the current and future operation of the airport facility and the future land use element.	**Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 3.4.2: [M] (EFF. 12/15/11) Residential development or other noise-sensitive land uses shall not be permitted within the predicted 65 Ldn noise contours without the use of mitigative noise control measures. Incompatible land uses in airport approach zones shall not be permitted. The high noise contours associated with the airport shall be publicized.	**Policy 6.11.1 - Adjacent Land Use Compatibility:** Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.
Policy 3.4.3: [M] (EFF. 12/15/11) Additional land uses shall not be permitted in airport zones if, due to structural height, they hinder airport operation or reduce navigable airspace.	**Policy 6.11.3 - Compatibility of Land Use:** Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and the County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

An internal consistency analysis of the proposed comprehensive plan update provisions in the context of the existing 2030 Tallahassee-Leon County Comprehensive Plan by Element

Internal Consistency Review

Review of Draft Proposed Tallahassee-Leon County Comprehensive Plan Update

Tallahassee-Leon County Planning Department

Internal Consistency Review
By Element
Updated 08/28/2025

Utilities Element

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Solid Waste	
Proposed Policy 3.6.8 is for redevelopment of landfill sites to ensure that environmental concerns are addressed.	The proposed policy is consistent with policies in the solid waste section for landfill sites including Policy 2.1.7 [SW] monitoring; Policy 1.5.3 [SW] park reuse; Policies 1.3.1 [SW] and 1.3.2 [SW] general collection and safety; and Policies 1.4.1 through 1.4.4 [SW] disposal. Level of service in Policy 1.5.1 [SW] is not affected by the proposed amendments and remains consistent.
Aquifer Recharge	
Policies 1.1.1 and 1.1.4 – Soils and Water Features: Mapping of primary springs protection zone and aquifer vulnerability	The proposed policy on features, including the primary springs protection area and aquifer vulnerability areas, is consistent with Policy 1.1.1 [AR] mapping and maintenance.
Future Land Use Map Addendum Policy 1.2.2, Environmental Analysis for amendments	The proposed policies do not impact local environmental regulations for aquifer protection or stormwater, including stormwater level of service.
Potable Water and Sanitary Sewer	
Drinkable Water Goal 1 and Policy 1.1.1	The Goal to maintain drinkable water does not create inconsistencies with the Potable Water Goals, Objectives and Policies.

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Water and Sewer provisions Urban Service Area (USA) and land uses in Policies 2.2.1 through 2.2.4; Policy 2.4.2, Rural Areas; Policy 2.8.6, Rural Community; Policy 2.8.7, Lake Protection; Policy 2.8.8, Residential Preservation; and Policy 2.8.9, Sub-Urban Neighborhood	Proposed provision for providing services, including extensions, are consistent with Potable Water Policies Policy 1.2.5 [City and County] [PW] within the USA; Policy 2.1.4 [PW] Capital Improvements Projects; Policy 2.1.6 [PW] Water and Sewer Agreement; Policy 1.2.1 [SS] Future Land Use Map coordination; Policy 1.2.3 [SS] non-residential in the USA connection; Policy 1.2.4 [SS] heavy industry exception; and Policy 1.3.3 [SS] Package plants in Rural, Rural Community and Urban Fringe; Policy 2.1.2 [SS] services in USA; and 2.1.12 [SS] Rural community septic; and Conservation Policy 2.3.3 [C] connection to services in Lake Jackson Special Development Zone. Policies 1.3.1. and1.3.2. will require updating to revise the reference to the Urban Fringe land use, but the provisions remain consistent with the Land Use and Mobility Element policies. The proposed policies do not affect Level of Service standards in Policies 1.2.2 [PW] and 1.2.3 [PW]; and Policies 1.3.5 [SS].
Stormwater	
Stormwater that supports activities including Policies 1.2.4 and 1.6.5, Transportation Corridors Consistent with LOS; Policy 1.5.1, Environmental and Green Infrastructure; Policy 2.2.10, Corridor Preservation; Policy 3.1.1, Residential Character Preservation; Policy 3.6.3, Context-based Stormwater Site Requirements; Policy 6.2.2, Future Right-of-Way Support	The stormwater provisions are consistent with Utilities Policies including Policy 1.1.2 [AR] stormwater to protect groundwater; and Policies 1.5.1 [SM], 1.5.2 [SM] and 1.5.4 [SM] for permitting and level of service and Conservation Element Objective 2.1 [C] and associated Policies.

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Stormwater facilities for land use and Lake Protection Policies 2.8.2, Future Land Use and 2.8.7, Lake Protection	Land use provisions are consistent with policies 1.5.1 [SM], 1.5.2 [SM] and 1.5.4 [SM] for permitting and level of service.

Conservation Element

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Natural Resource Protection in Policies 1.1.1, Identification and Mapping; 1.2.2, Environmental Analysis; 1.2.3, Transportation Impacts; 1.2.4, Corridors; 1.2.6, Conservation Element Precedence; and 1.7.1 and 1.7.2, Coordination	Natural resource provisions in the proposed plan are consistent with natural resource protection in the Conservation Element including Objective 1.1 [C] environmental mapping- local government shall compile and maintain maps of features; Policy 1.2.3 [C] coordination on resources; Policies 1.3.1 [C] to 1.3.6 [C] conservation and preservation features; and Policies 2.2.1 [C], 2.2.2 [C]
Tree Protection and Canopy Roads in Policies 1.1.1, Significant Trees; 1.1.2, Designated Canopy Roads; 1.2.4, Transportation Corridor Protected Features; Policies 1.4.1 through 1.4.5, Urban Forests and Protection Prioritization; Policy 1.5.1, Tree Canopy; Policy 1.6.4, Urban Heat Islands; Policy 2.2.10, Placement of Trees in Street Corridors; Policy 2.8.3, Natural Areas; Policy 2.8.18, Planned Developments; Policy 3.1.1, Residential Character Preservation Tree Protection; and Policy 6.6.1, Shade Trees on Pedestrian Facilities	The tree and Canopy Road provisions are consistent with Policies 1.3.1 [C] to 1.3.6 [C] conservation and preservation features including canopy roads; and Conservation Objective 3.3 and associated policies for tree canopy, tree preservation and canopy road protection.

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Aquifer Recharge in Policy 1.1.1, Identification and Mapping; Policy 1.1.4, Protection of Aquifers and Springs; and 2.8.6, Rural Community per Conservation and Utilities Elements	The proposed policies for springs protection are generally consistent with Conservation Element including policies in Objective 4.2 [C] groundwater protection. To maintain consistency Policy 4.2.5 [C] that establishes a TDR system and requires density increases be subject to a plan amendment when outside the USA will need revision to capture the updated provisions in the comprehensive plan for the Woodville Rural Community that now has central sewer services in places.
Greenways in Policies 1.1.1, Identification and Mapping; 1.3.1, Maintain Greenways Master Plan; 2.8.18, Planned Developments; Policy 6.4.3, Bike/Ped Network with Greenways; and Policy 6.5.3, Required Connections to Greenways	The Greenways provisions in the proposed plan are consistent with Policy 6.1.1 [C] to include bicycle, trails, in the greenways network.

Parks and Recreation

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Access to Parks in Objective 1.3; Policy 1.3.2, Urban Recreation Spaces; Policy 1.3.3, Bicycle Parking at Parks; Policy 1.3.4, Multi-modal Access at Parks; 1.6.2, Multi-modal Connectivity to Parks; Policy 6.8.8, Drop-off Zones in Parks; and Policy 2.8.17, Parks and Civic Spaces Future Land Use Category	The existing Parks and Recreation objectives and policies do not address access. Thus, the provisions do not create inconsistencies.

Housing

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Housing Diversity in Policies 2.8.9, Sub-Urban Neighborhood, 2.8.10, Sub-Urban Mixed-Use, 2.8.11, Urban Neighborhood, 2.8.12, Urban General, and 2.8.18, Planned Development Future Land Use Categories for mix of housing types; Policy 3.1.2, Housing Diversity; Policy 3.2.3, Housing Investment; Policy 3.7.1, Urban Design that prioritizes housing types; and Goal 4 and associated objectives and policies, Housing Diversity	The housing diversity measures are consistent with the Housing Element Goal 1 [JH] and associated objectives and policies including policy 1.2.1 [JH] sufficient lands (in mixed-use); 1.2.2 [JH] density bonuses; and Policy 1.2.6 [JH] land trusts.
Housing Affordability in Policies 2.2.8, Adaptive Reuse/ Housing Stock Maintenance; Goal 4 and associated objectives and policies, Housing Diversity; and Policy 4.3.3, addresses Land Trusts	The housing affordability measures are consistent with the Housing Element Goal 1 [JH] and associated objectives and policies including policy 1.2.1 [JH] sufficient lands (in mixed-use); 1.2.2 [JH] density bonuses; and Policy 1.2.6 [JH] land trusts.
Urban General Land Use in Policy 2.8.12, Urban General Future Land Use Category	The land use category is generally consistent with the housing element. Policy 1.4.1 [JH] with the reference to the University Transition land use category will require updating after adoption of the revisions.

Historic Preservation

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Historic Resources Identification and Protection in Policies 1.1.1, Identification and Mapping; 1.1.3, Historic District Boundaries and Significant Properties; 1.2.3, Transportation Impacts on Historic Resources; 2.2.8, Adaptive Reuse Consideration of Historic Buildings; Policy 2.8.6, Rural Land Use making historic uses conforming; and 2.8.18, Planned Development and historic preservation	The historic resources provisions are generally consistent with the Historic Preservation Element including Policies 1.2.3 [HP] planning and development shall identify historic resources and the impact of any proposals on these resources; Policy 1.4.1 [HP] Recognize and protect historic resources, including structures, locations, and districts; and Policy 1.4.3 [HP] (Include the presence of historic resources, and mitigation of impacts of development on historic resources, in reviewing applications for rezoning or subdivision; Policy 1.5.4 [HP] In locally designated historic districts, public improvements or replaced infrastructure such as streetlights, signage, and sidewalks, should be compatible with neighborhood character; and Policy 1.5.5 [HP] encourage all providers to locate utilities in a manner consistent with the historic character of historic districts, and neighborhoods with historic resources. The impact of utilities on archeological historic resources shall be mitigated.

Intergovernmental Coordination

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Coordination on Protection of Natural Resources in Objective 1.7 and associated policies that identify key regional partners and universities	The coordination measures for protection of natural resources is generally consistent with the Intergovernmental Coordination Element including Policy 1.1.8 [I] that identifies key partners: Director of the Apalachee Regional Planning Council, the downtown Improvement Authority, the Capitol center Planning Commission, the Northwest Florida Water Management District, the two State Universities, and the community college shall be kept apprised of information being considered by the Planning Department; and Objective 1.6 and associated policies coordination with universities.
Economic Development Coordination in Objective 5.5 and associated policies for regional economic development and for grant funding	The Intergovernmental Coordination Element does not include specific requirements for economic development coordination. Thus, the provisions do not create inconsistencies.

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Transportation Systems Coordination in Objective 6.13 and associated policies addressing state, regional, and local coordination	The Intergovernmental Coordination Element does not include specific requirements for transportation system coordination. Thus, the provisions do not create inconsistencies.

Capital Improvements

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Transportation Level of Service in Policy 6.3.8	The transportation Level of Service is consistent with Capital Improvements Schedule policies 1.1.1, 1.1.2 and 1.1.3 that establish the roadway levels of service.
Concurrency Mitigation Exception for MMTD Policy 6.3.5 that exempts reduction or repurposing of automobile lanes to support MMTD or other non-automobile oriented goals, objectives, or policies.	There are no provisions that specifically address this issue in the Capital Improvements Element. The provision currently exists in Mobility Element Policy 1.5.7 which has been deemed consistent with the comprehensive plan since its adoption.

Economic Development

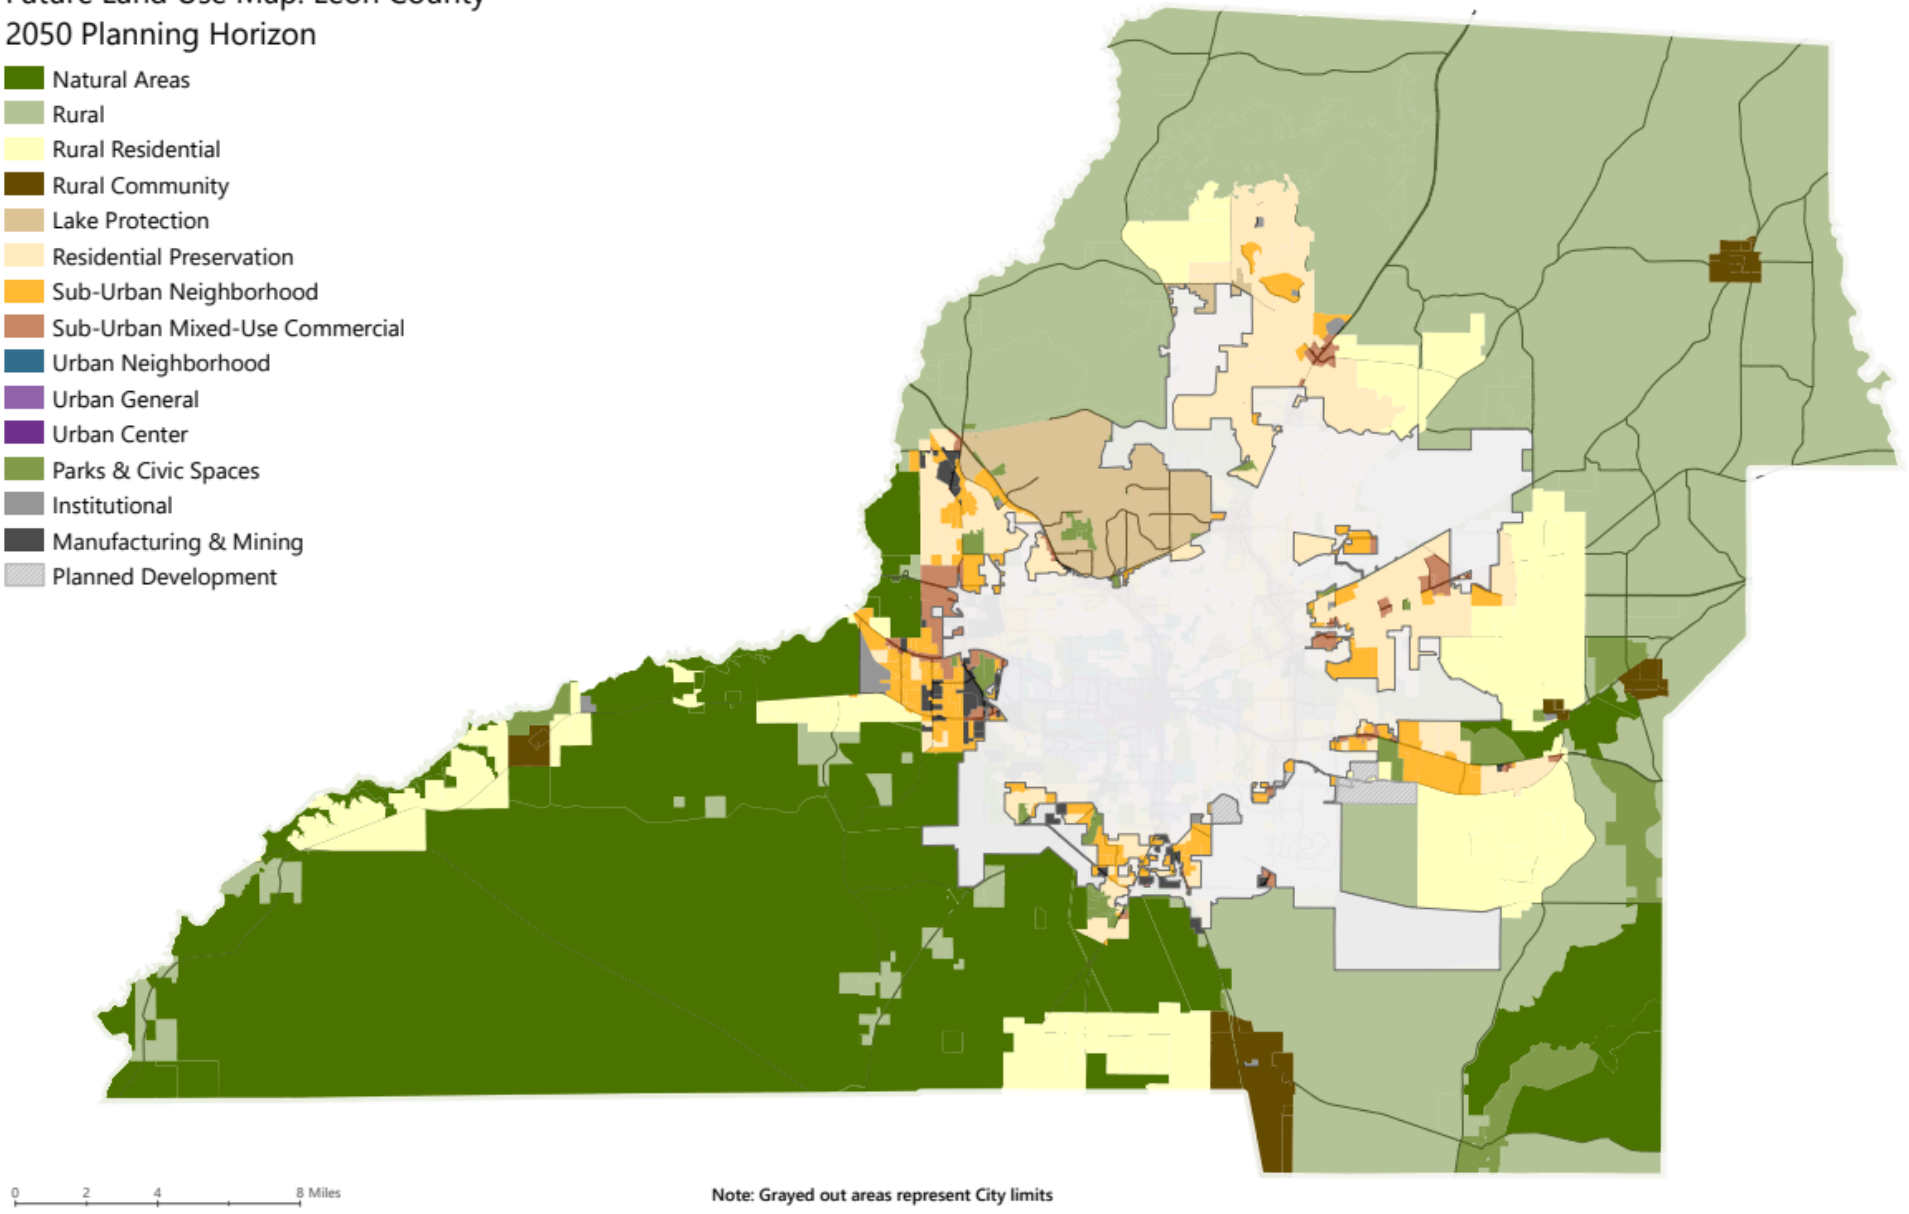
Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Economic Strategic Plan in Policy 5.1.1 that identifies the Office of Economic Vitality as the entity to maintain a strategic plan for target industries, etc.	The provisions for an Economic Strategic Plan are consistent with Economic Development Element Policy 1.1.1 [ED] Maintain an inventory of local, state and federal resources to support new business development and foster entrepreneurialism.

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Economic Development Plan in Policy 5.1.2 that includes coordination between public and private entities for economic development projects and efforts	The provisions for Economic Development Plan coordination are consistent with Economic Development Element Policies Policy 1.1.2 [ED] encourage coordination between private sector businesses, higher educational institutions, local, state, and federal government, and local, regional, and state-level economic development organizations, agencies, and other community economic development partners, consistent with local sustainability and environmental protection efforts; and Policy 1.2.1 [ED] through participation in local, regional, state, and federal economic development organizations, agencies, and other community partners, support employers where appropriate by helping provide economic development marketing, research, and technical and business assistance consistent with identified targeted industrial, tourism, and other related initiatives and strategic economic development priorities.

Public Schools Facilities Element

Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
Public School Siting in Policies 2.8.1 and 2.8.2 that identifies the ability to locate schools in all land use categories except Natural Areas: Policy 2.3.1, Public Facilities Siting; and Policy 2.3.2, School Siting Review Criteria	The public school siting provisions are consistent with the Public Schools Facilities Element Policies 1.2.2 for collocation of uses; and Goal 2 and related objectives and policies for school siting.
Safe routes to Schools in Policies 6.4.3, Bike and Pedestrian Network; and 6.4.5, Safe Routes to Schools	There are no provisions in the Public Schools Facilities Element that address Safe Routes to Schools. Thus, the provisions are consistent.

Property Rights Element



Proposed Plan Provision	*Existing Comprehensive Plan Provisions*
There are no proposed provisions specifically directed to property rights.	No issues.

Maps Series: Future Land Use Map

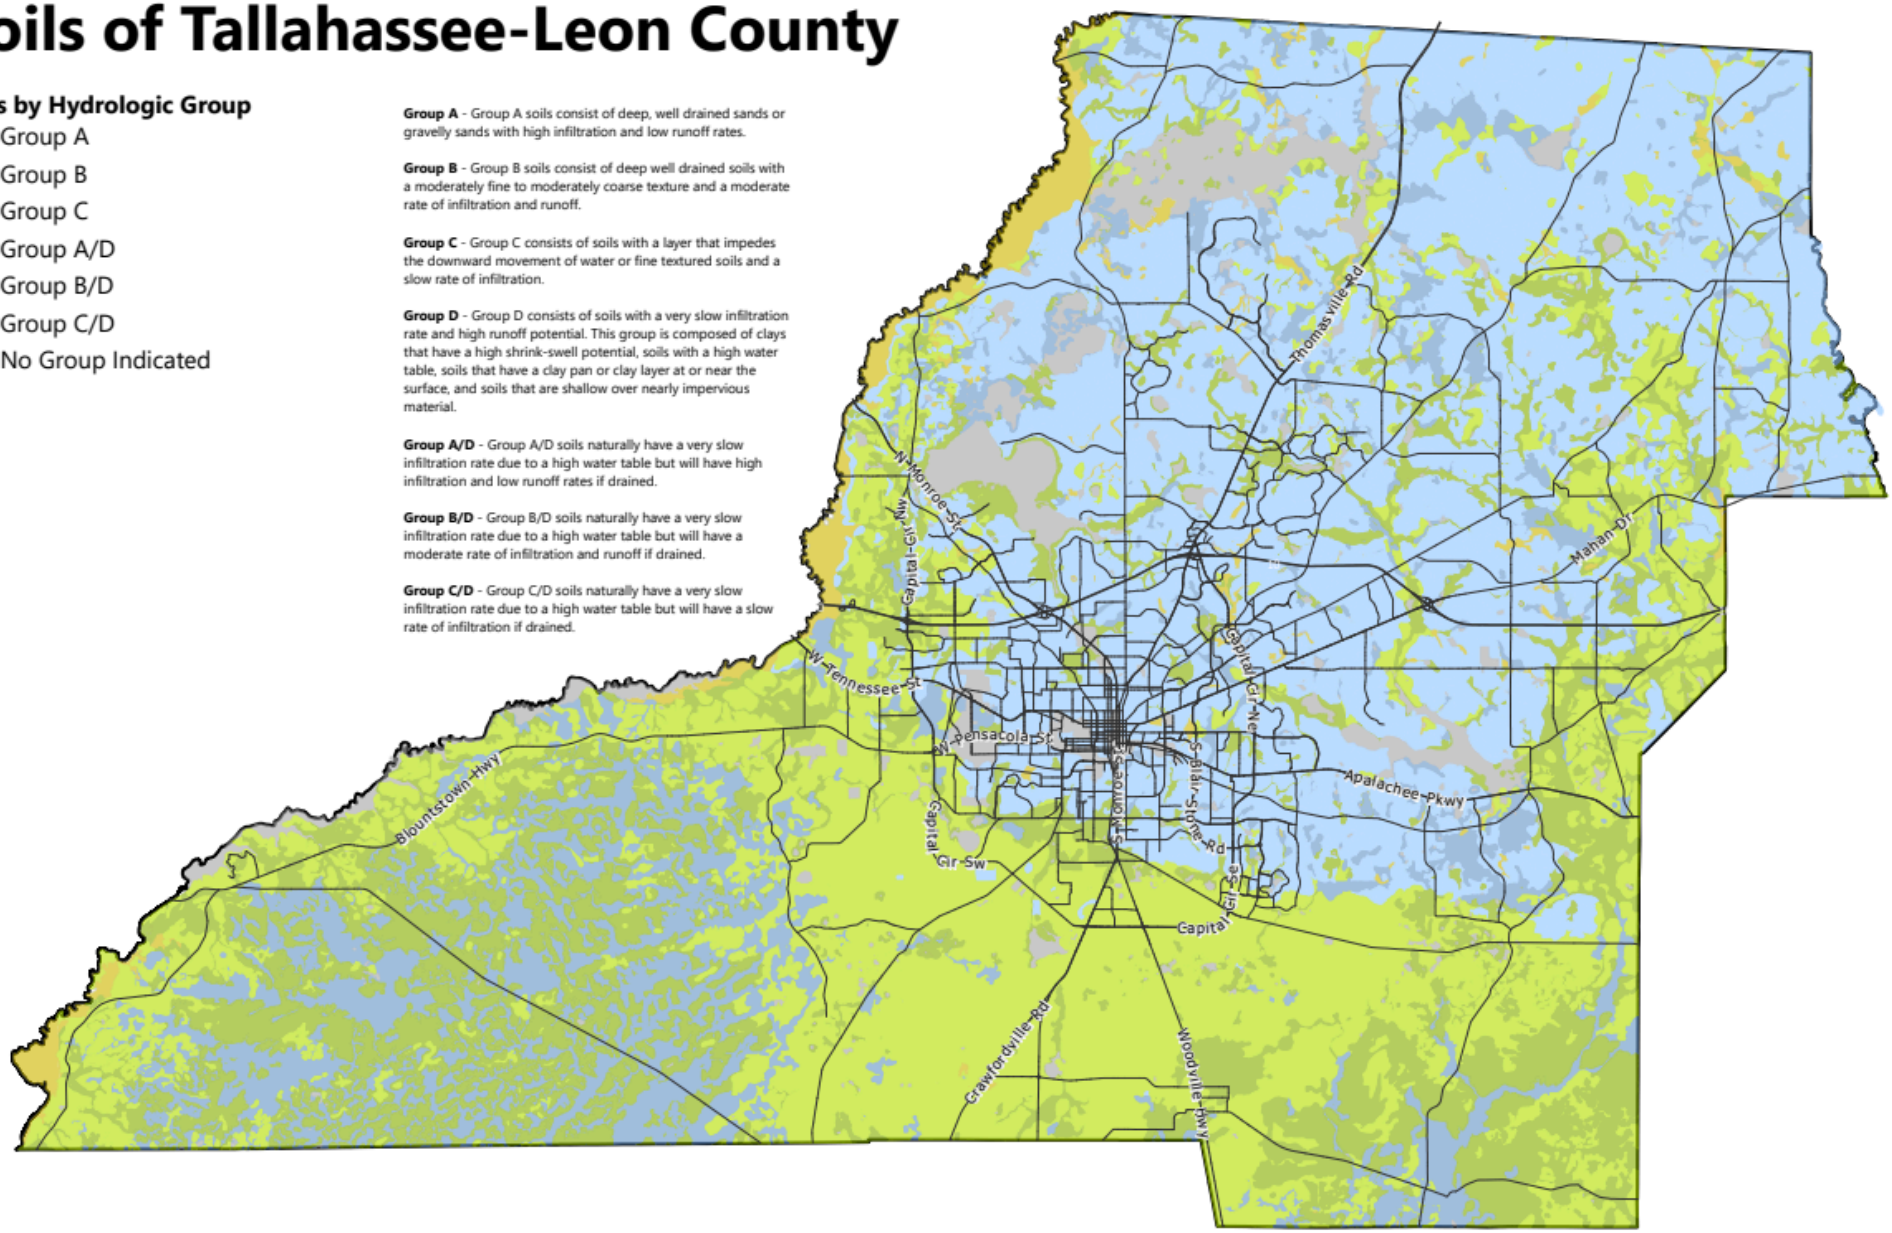
Soils of Tallahassee-Leon County

Soils by Hydrologic Group

- Group A
- Group B
- Group C
- Group A/D
- Group B/D
- Group C/D
- No Group Indicated

Group A - Group A soils consist of deep, well drained sands or gravelly sands with high infiltration and low runoff rates.

Group B - Group B soils consist of deep well drained soils with a moderately fine to moderately coarse texture and a moderate rate of infiltration and runoff.



Group C - Group C consists of soils with a layer that impedes the downward movement of water or fine textured soils and a slow rate of infiltration.

Group D - Group D consists of soils with a very slow infiltration rate and high runoff potential. This group is composed of clays that have a high shrink-swell potential, soils with a high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material.

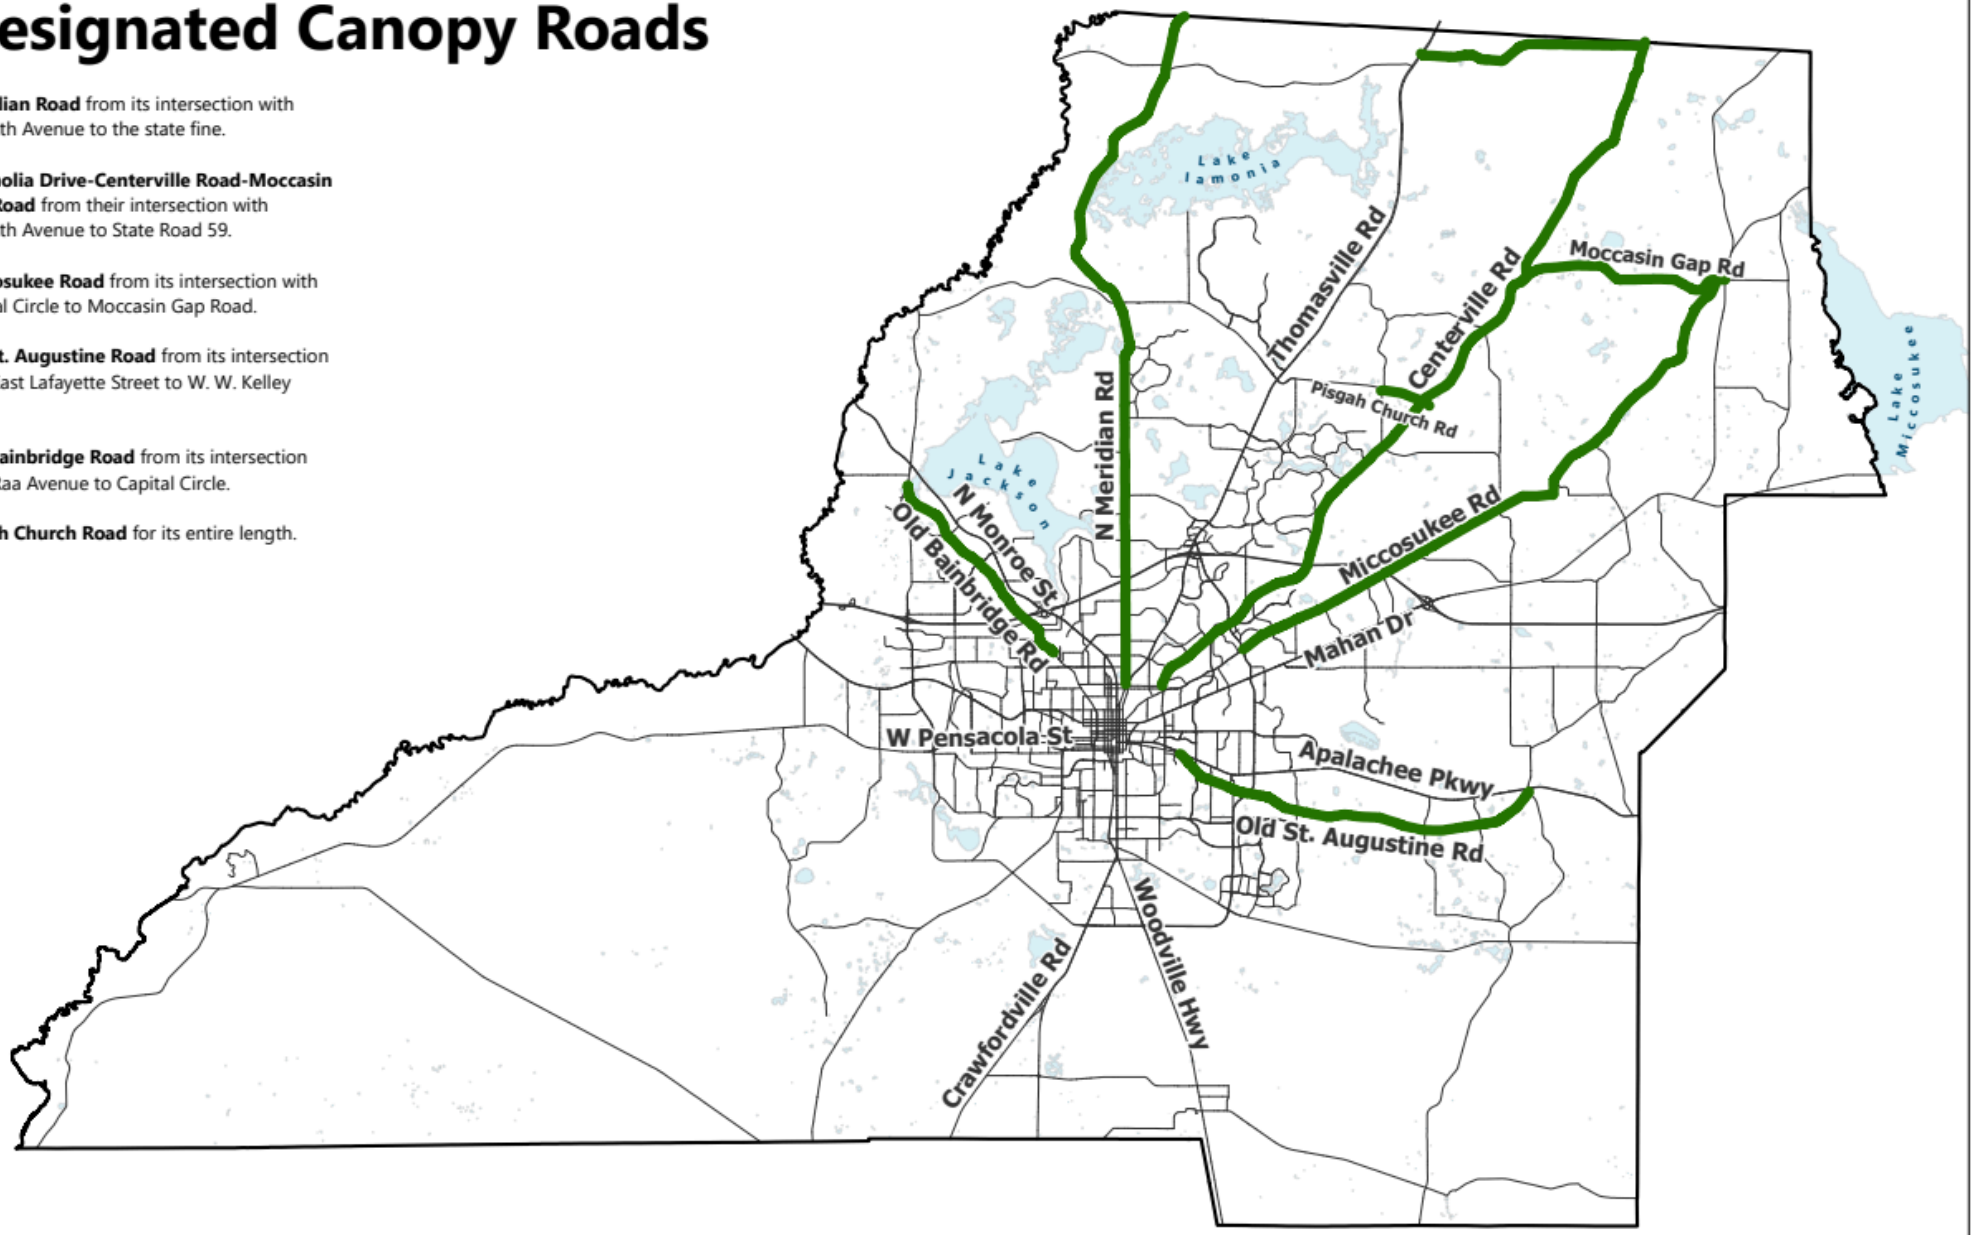
Group A/D - Group A/D soils naturally have a very slow infiltration rate due to a high water table but will have high infiltration and low runoff rates if drained.

Group B/D - Group B/D soils naturally have a very slow infiltration rate due to a high water table but will have a moderate rate of infiltration and runoff if drained.

Group C/D - Group C/D soils naturally have a very slow infiltration rate due to a high water table but will have a slow rate of infiltration if drained.

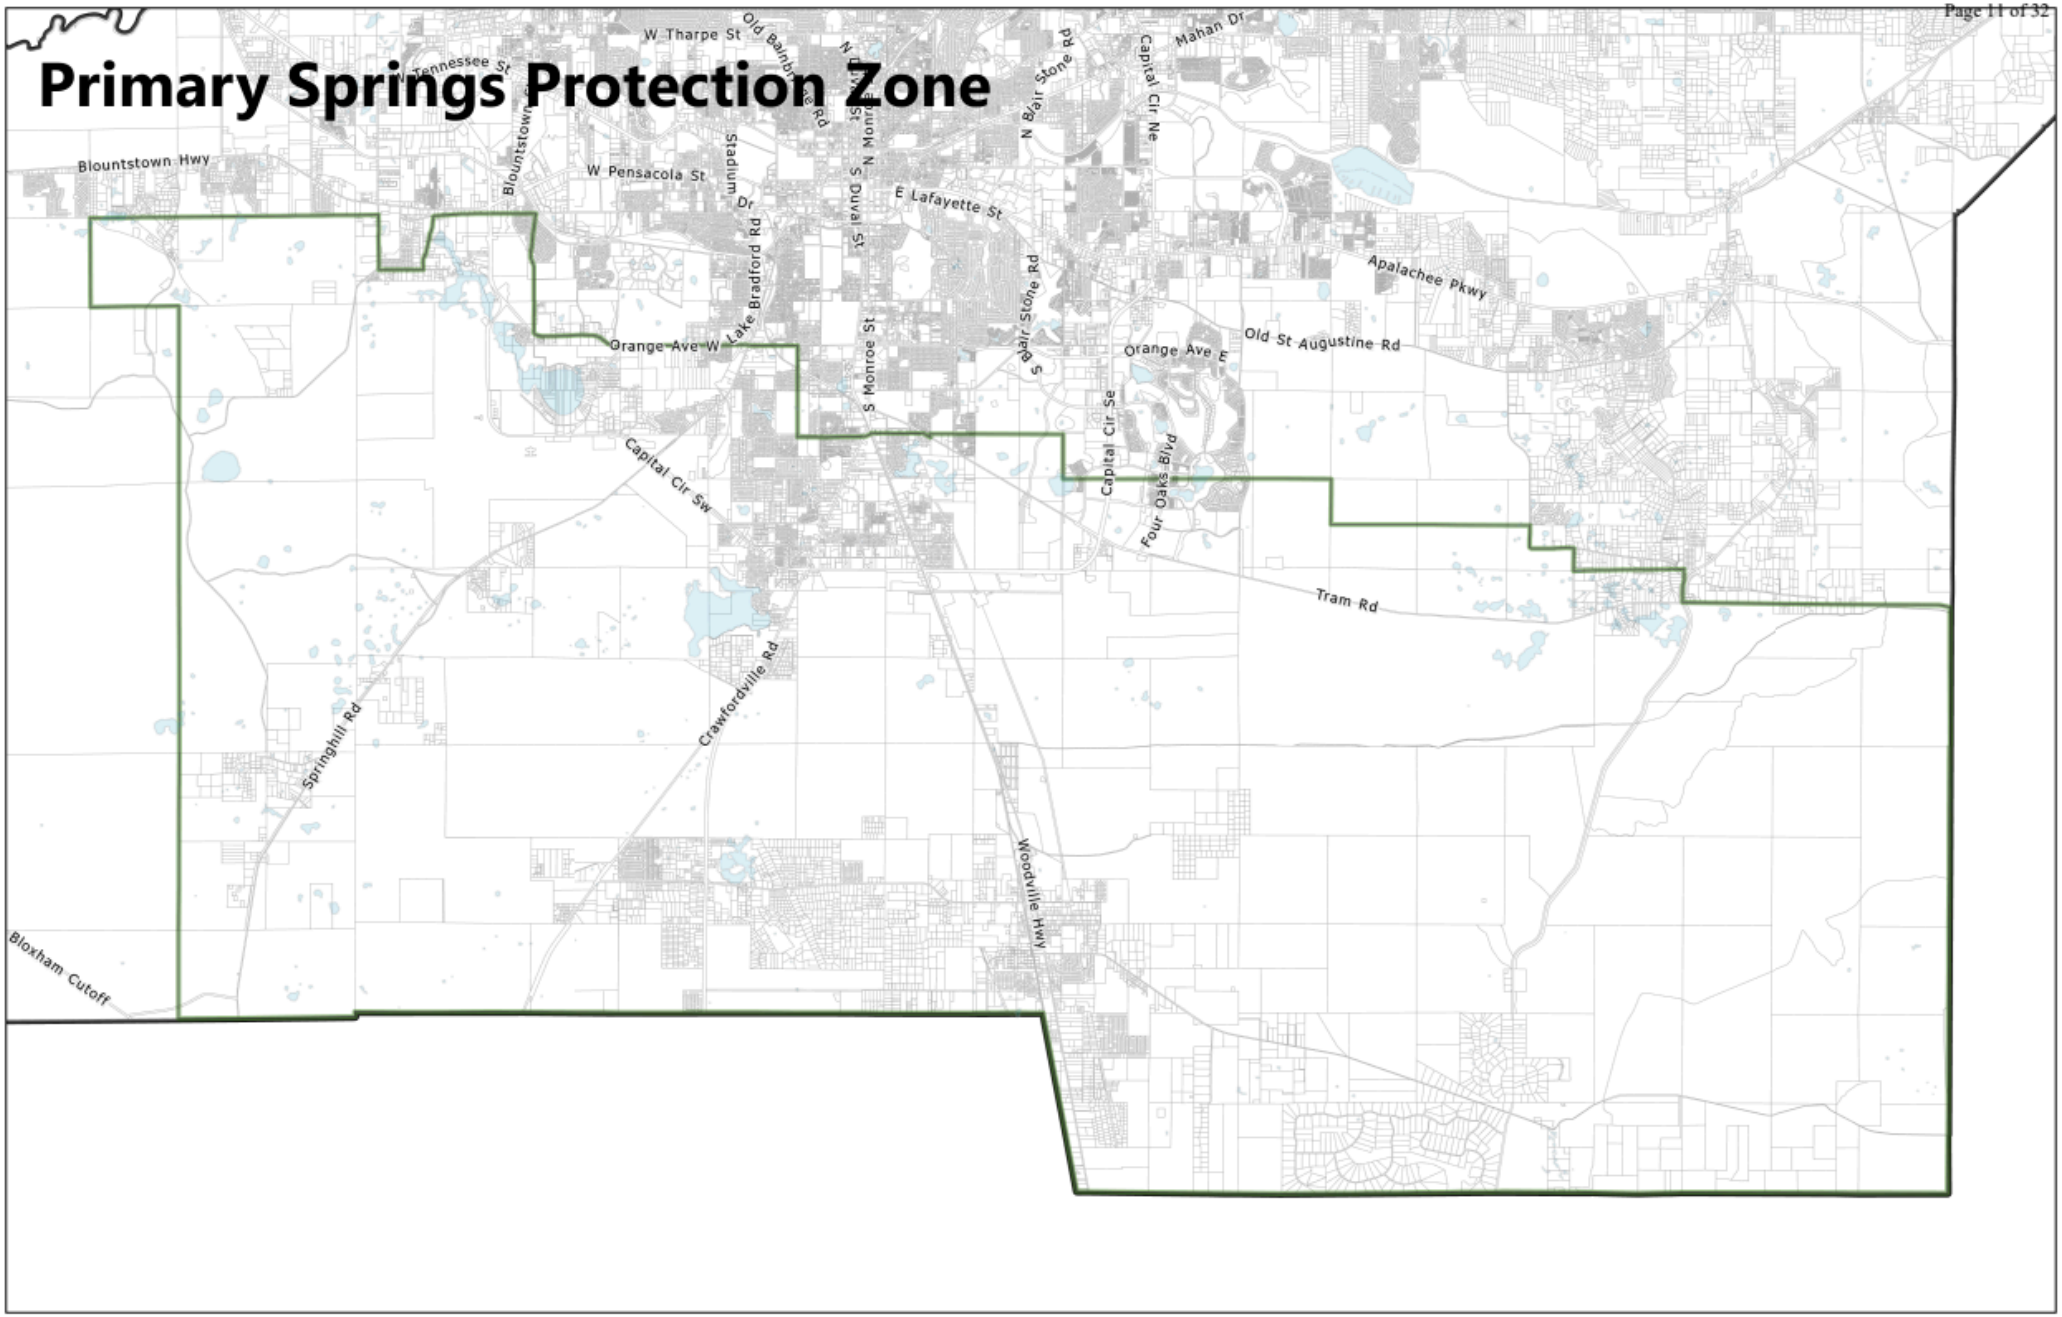
Designated Canopy Roads

Meridian Road from its intersection with Seventh Avenue to the state fine.

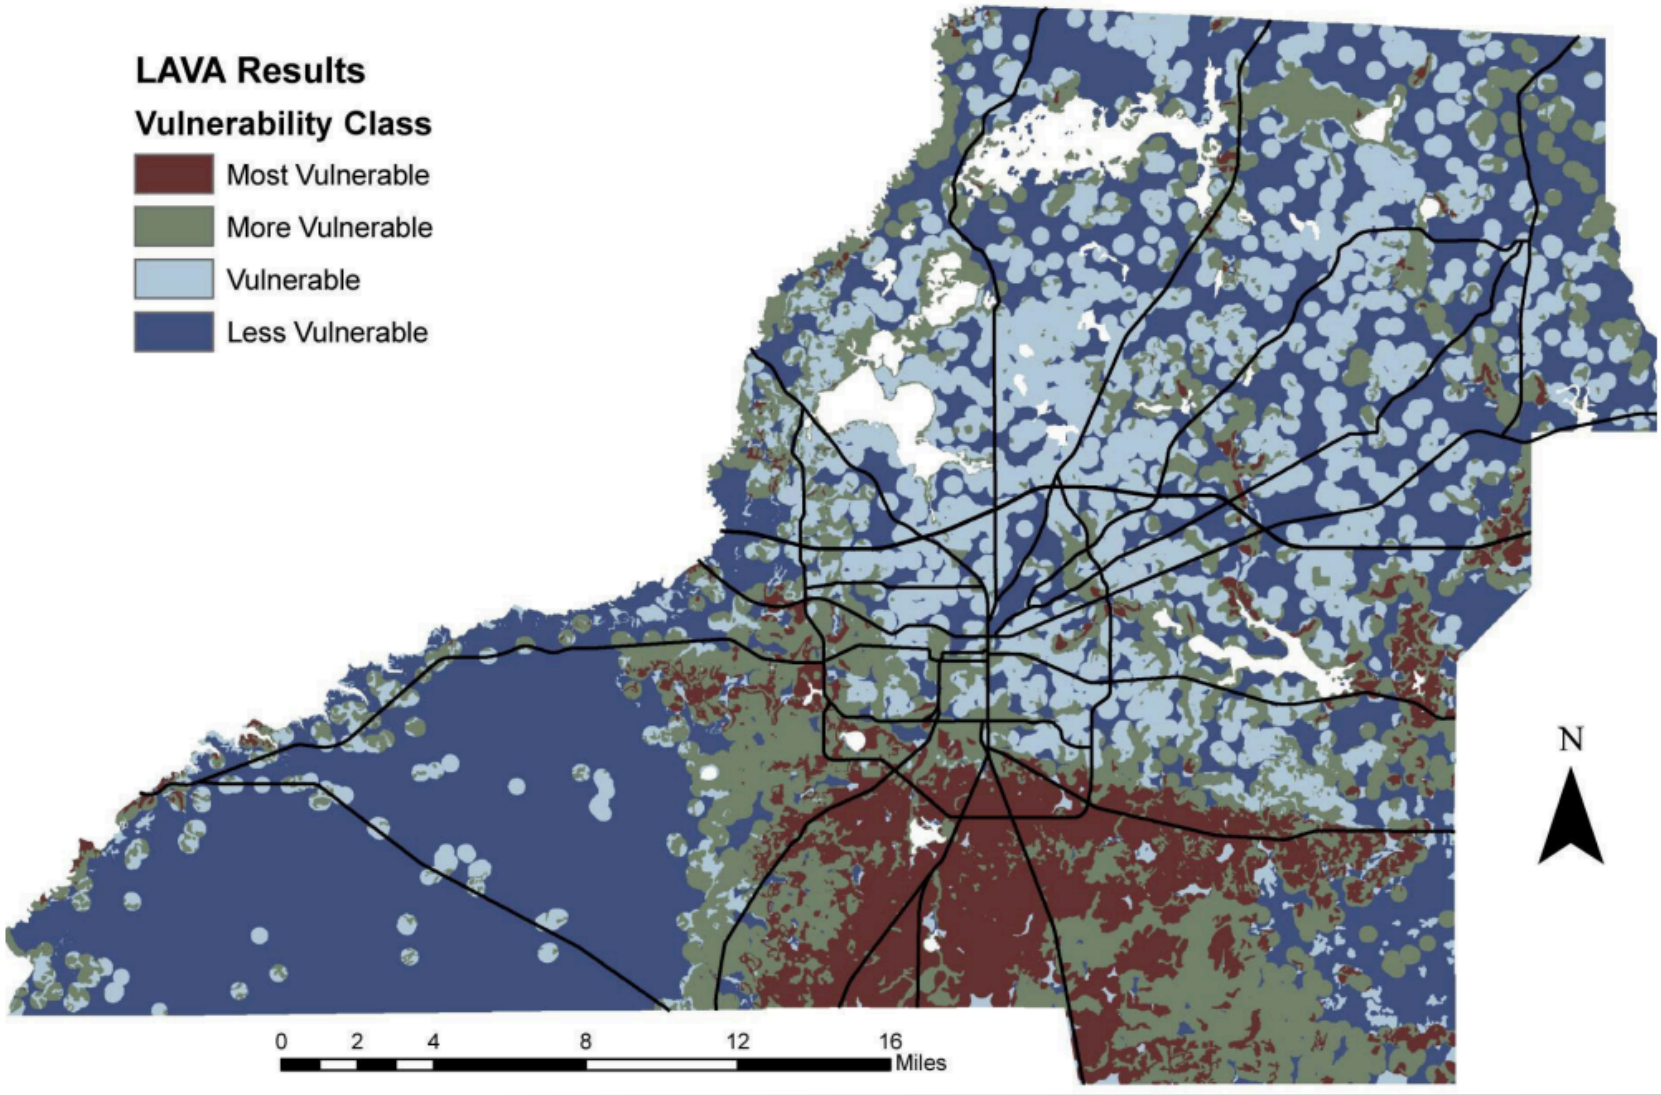


Magnolia Drive-Centerville Road-Moccasin Gap Road from their intersection with Seventh Avenue to State Road 59.

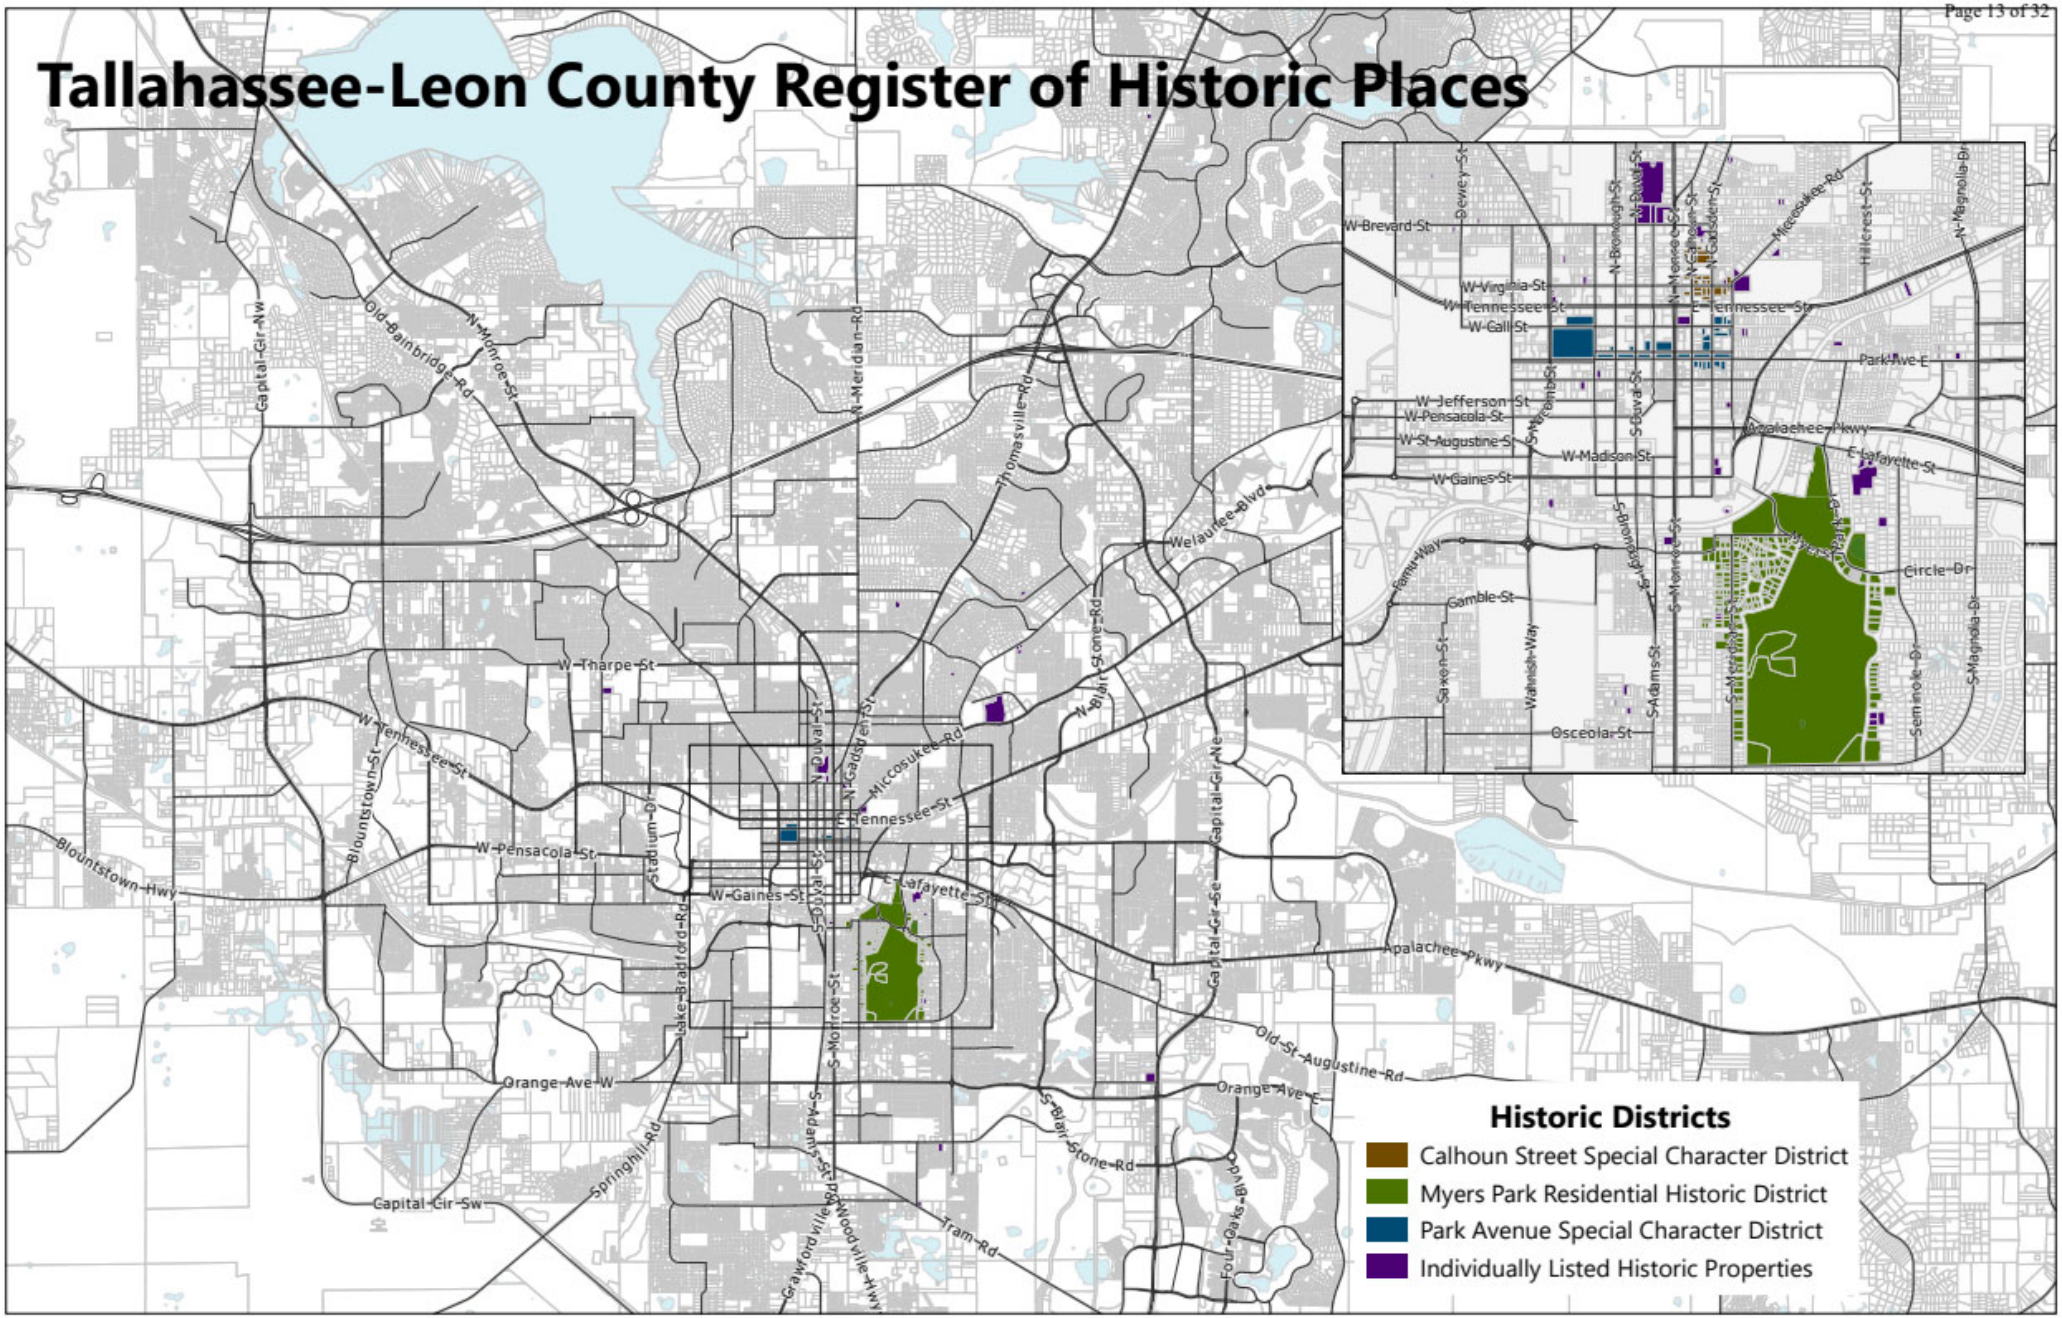
Miccosukee Road from its intersection with Capital Circle to Moccasin Gap Road.



Old St. Augustine Road from its intersection with East Lafayette Street to W. W. Kelley Road.



Old Bainbridge Road from its intersection with Raa Avenue to Capital Circle.



Pisgah Church Road for its entire length.

GLOSSARY
PROPOSED REVISIONS

ACCESS: **(EFF. 6/25/96)** The means of vehicular entry to or exit from property to or from a public or private road.

ACLF: **(EFF. 7/16/90)** Means adult congregate living facility as defined in Section 400.402 of the Florida Statutes.

ACQUISITION: **(EFF. 7/16/90)** Includes purchase, land exchange, donation, easement, assisting private owners in obtaining tax advantages, etc. "Purchase" shall include all acquisition costs, such as surveying and title insurance.

ACTIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are facility oriented, i.e. swimming pools, ball fields, tennis courts.

ADJOINING LAND USES: **(EFF. 8/17/92)** Land uses on parcels which are touching or contiguous to each other, as distinguished from lying near to or adjacent. For purposes of this Plan, land uses on parcels that are separated from each other by a local or a minor collector street or roadway shall also be considered adjoining; land uses on parcels that are separated by a major collector or an arterial street or roadway or by a railroad right of way shall not be considered adjoining.

ADVANCED AIR MOBILITY: Vehicles and infrastructure associated with vertical take-off and landing (VTOL), air taxis, electric and hybrid short-to-medium distance aircraft. These vehicles may be piloted or autonomous and carry either passengers or cargo.

ADVANCED WASTEWATER TREATMENT: **(EFF. 4/10/09)** Treatment of sewage that goes beyond the secondary or biological wastewater treatment stage and includes the removal of nutrients such as phosphorus and nitrogen and a high percentage of suspended solids and biochemical oxygen demand.

AFFORDABLE HOUSING: **(REV. EFF. 7/20/05; REV. EFF. 12/24/10)** Housing that costs no more than 33% of the annual income of a household earning 80% or less of area median income (AMI) for homeownership and 60% AMI or less for rental housing, adjusted for the number of people in the household, as defined by the U.S. Department of Housing and Urban Development (HUD) annually.

AGRICULTURE: **(EFF. 7/6/15)** The production, keeping or maintenance, for sale, lease or personal use, of plants and/or animals useful to humans, including, but not limited to, the growing of crops, dairying, grazing, the raising and maintenance of poultry and other livestock, horticulture, nursery, forestry, and sod farms. Commercial feed lots, the raising of furbearing animals, riding academies, livery or boarding stables or dog kennels are not considered to be normal agricultural uses.

AGRITOURISM: **(EFF. 7/6/15)** Any agricultural related activity consistent with a bona fide farm or ranch or in a working forest which allows members of the general public to view or enjoy activities related to farming, ranching, historical, cultural or harvest-your-own attractions for recreational, entertainment or educational purposes.

ALTERED FLOODPLAINS: **(EFF. 7/16/90)** Areas within the 100 year floodplain that have been either ditched, drained, filled or have had structures built on them, any of which have diminished the flood storage capacity of the floodplain.

ALTERED WETLANDS: **(EFF. 8/17/92)** Wetlands that have been degraded to the extent their ecological function has been detrimentally impaired and the likelihood that they cannot be re-established except through a distinct program of man-made mitigation. Wetlands that can have beneficial function restored through natural processes will not be considered altered.

ARCHAEOLOGICAL SITE: **(EFF. 7/16/90)** A location that has yielded or may yield information on history or prehistory.

AREA PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the urban service area, including but not limited to community parks and sports complexes.

BASIC LIVING SHELTER: **(EFF. 7/16/90)** Means a dwelling unit which, at a minimum, is structurally sound, includes indoor plumbing, has a functional heating source, and provides protection to its inhabitants from the elements.

BEST MANAGEMENT PRACTICES: **(EFF. 7/16/90)** Those practices and principles designed to reduce and manage non-point source pollution and in some cases, protect wildlife and habitat. These principles and practices are generally outlined in the latest updated version of various BMP manuals including “Silviculture Best Management Practices,” “Best Management Practices,” “A Landowners Handbook for Controlling Erosion for Forestry Operations,” “Management Guidelines for Forested Wetlands,” “DER: Florida Development Manual, A Guide to Sound Land and Water Management,” and other publications on best management practices that are accepted by the industries and regulatory bodies. The local government reserves the right to add to or alter BMPs in specific instances as part of development agreements or development orders.

BUFFER: **(EFF. 6/25/96)** Open spaces, planted areas, fences, walls, berms, any combination thereof, or any other structure or design mechanism that is used to physically separate or screen one land use from another so as to visually shield and/or mitigate potential negative impacts.

BUSINESS ACCELERATOR: **(EFF. 5/31/18)** An organization that offers a range of support services and funding opportunities for startup businesses, including capital and investment, mentorship, office space and supply chain resources.

BUSINESS INCUBATOR: **(EFF. 5/31/18)** Organizations that help new and startup companies develop by providing services such as management training or office space, and are often a good path to capital from investors.

CANOPY ROAD: **(EFF. 7/16/90)** Road designated by local government as having significant aesthetic, cultural and historical value.

CAPITAL FACILITIES: **(EFF. 7/16/90)** Means transportation systems or facilities, including roads, mass transit, bikeway, sidewalk and aviation facilities; sewer systems or facilities; solid waste systems or facilities; drainage and stormwater management systems or facilities; potable water systems or facilities; education systems or facilities; parks and recreation systems or facilities; and health systems or facilities.

CAPITAL INFRASTRUCTURE: **(REV. EFF. 8/17/92)** Consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

CAPITOL CENTER PLANNING COMMISSION: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

CDBG: **(EFF. 7/16/90)** Means the Community Development Block Grant, as authorized under Title I of the Housing and Community Development Act of 1974.

CLOSED BASIN: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

CLUSTERING: **(EFF. 12/7/99)** The grouping together of structures and infrastructure on a portion of a development site with the balance remaining undeveloped or reserved as green space, which may or may not be used for development at a later date.

COMMERCIAL: **(REV. EFF. 6/25/96)** Generally, an activity or business involving the sale of goods and/or services carried out for profit.

> **MINOR**: **(EFF. 7/16/90)** Provide for the sale of convenience goods and services to the immediate residential area. Gross floor area—less than 20,000 square feet except at a local street intersection where maximum allowable is 10,000 square feet.
>
> **NEIGHBORHOOD**: **(REV. EFF. 9/19/91)** Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods. Gross floor area—20,000 to 100,000 square feet. Except at intersection of collectors where maximum allowable is 50,000 square feet.

COMMUNITY: **(EFF. 7/16/90)** Same functions of neighborhood commercial but on a larger scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items. Gross floor area—100,000 to 200,000 square feet.

REGIONAL: **(EFF. 7/16/90)** Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings. Gross floor area - 200,000 to 1,000,000 square feet.

HIGHWAY: **(EFF. 7/16/90)** Provide for consumer oriented retail services designed for drive-in convenience. Gross floor area - 1,000 to 10,000 square feet.

COMMERCIALIZATION CENTERS: **(EFF. 5/31/18)** Facilities designed to further develop technologies through research partnerships, assistance with patents, and support for delivering products to the market through licensing and the creation of companies.

COMMUNITY FACILITIES: **(REV. EFF. 8/17/92)** Facility or service which may be public or privately owned, established, and intended to provide significant public benefit.

COMMUNITY SERVICES: **(EFF. 7/16/90; REV. EFF. 8/27/17)** A facility owned or operated by a public or private entity or agency that provides a service or significant public benefit directly to the general public, such as libraries, religious facilities, police/fire stations, hospitals, museums, and schools.

LIGHT INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 1/19/20)** Water wells, water tanks, sewage pump stations, electric substations, and solar power stations and systems.

HEAVY INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 12/24/10; REV. EFF. 1/19/20)** Government operational facilities, which have significant off-site impacts. Also included are such facilities operated by semi-public or private utility providers. These facilities shall include but are not limited to:

Waste-to-energy facilities
Materials recovery facilities
Sanitary sewer facilities
Sanitary sewer percolation ponds
Sewage treatment plants
Airports
Power generating stations (non-solar powered)
Landfills
Sludge disposal facilities
Incinerators
Correctional facilities
Water treatment plants
Outdoor storage facilities
Vehicle maintenance facilities
Solid waste transfer station
Correctional facilities

POST-SECONDARY: **(EFF. 7/16/90)** Public or private - Universities, colleges, vocational/technical schools.

COMMUNITY PARK: **(EFF. 7/16/90)** Means those parks that serve several neighborhoods with total populations of up to 25,000 and have a service area of up to a three mile radius. "Ride-to" facilities that are also accessible to bicyclists and pedestrians shall be included.

COMPATIBILITY: **(EFF. 5/31/18)** A condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition.

CONSERVATION: **(EFF. 7/16/90)** Allowing only carefully planned development activities to occur on a site; development activities must be compatible with the perpetuation of the ecological resources on the site.

CONSERVATION SUBDIVISION: **(EFF. 7/1/04)** A residential or mixed-use development that has been developed utilizing a design approach in which a significant fraction of the parent tract(s) is reserved as permanently protected open space and the remaining fraction of the land is developed. Under this design approach, development is clustered or concentrated on the least environmentally or otherwise significant portions of the development site.

CONTEXT SENSITIVE DESIGN: Land use and streetscape design that prioritizes physical and social context, while also preserving scenic, aesthetic, historic, and environmental resources, to provide mobility and safety for all users in a way that is reflective of the specific area in which the development and/or roadway is constructed.

COUNTYWIDE PARK: **(EFF. 7/16/90)** Means those park facilities that serve the entire county population, including but not limited to regional parks, boat landings and parks, golf courses, state parks, including university recreation areas, and national forest lands.

COWORKING SPACES: **(EFF. 5/31/18)** Shared workplaces or offices that facilitate the social gathering of a group of people who are still working independently. Unlike in a typical office, those utilizing coworking spaces are usually not employed by the same organization. Coworking spaces are often attractive to work-at-home professionals, independent contractors, or people who travel frequently.

DENSITY: **(EFF. 12/7/99)** *see* Gross Density

DENSITY NEUTRAL: **(EFF. 7/1/04)** As applied to Conservation Subdivisions, means that the allowable density achieved through the utilization of the conservation subdivision design approach shall not exceed the maximum density established for the Future Land Use Map category and base zoning district applicable to the subject property or properties.

DEVELOPMENT: **(EFF. 7/16/90)** Any proposed change in the use or character of the land, including but not limited to, land clearing or the placement of any structure or site improvement on the land except for silviculture activities employing best management practices.

DILAPIDATED: **(EFF. 7/16/90)** Means a structure which does not provide safe and adequate shelter in its present condition and endangers the health, safety and well-being of the occupants. A structure in the dilapidated classification cannot be economically repaired. A house is dilapidated when it has one or both of the following conditions:

1) Inadequate original construction such that it does not provide adequate protection against the elements;
2) Defects which would cost over 50% of the total value of the shelter to repair.

DRAINAGE BASIN: **(EFF. 12/7/99)** The area defined by topographic boundaries which contributes stormwater to a watershed or drainage system, including all areas artificially added to the basin.

ECOTOURISM: **(EFF. 7/6/15)** Tourism that focuses on the appreciation of natural areas, wildlife, or cultural and historical resources and strives to minimize ecological impact or damage. This nature-based tourism involves education and interpretation of the natural environment and is managed to be ecologically sustainable. Activities may include cycling, camping, fishing, hunting, paddling, hiking, birding, visiting scenic byways, agritourism, and wildlife viewing.

ENDANGERED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish and wildlife or plant naturally occurring in Florida, whose prospects of survival are in jeopardy due to modification or loss of habitat; over utilization for commercial, sporting, scientific or educational purposes; disease; predation; inadequacy of regulatory mechanisms; or other natural or man-made factors affecting his continued existence.

~~**ENTERPRISE ZONE**: **(EFF. 7/16/90)** Means an area in the state designated pursuant to Section 290 of the Florida Statutes and approved by the Secretary of the Department of Community Affairs.~~

ENVIRONMENTALLY SIGNIFICANT LANDS: **(EFF. 7/16/90)** Areas that provide breeding, wintering or foraging habitat, for federal, state, and locally listed plant and animal species; flood plains, wetlands, native forests and vegetated areas.

~~**FEDERAL UNIFORM RELOCATION ACT**: **(EFF. 7/16/90)** Means the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as passed and subsequently amended by the Congress of the United States.~~

FLOOD OR **FLOODING**: **(EFF. 1/23/09)** A temporary condition of partial or complete inundation of normally dry land or wetlands from the overflow of water bodies or watercourses in response to stormwater runoff, or from excessive overland flow of stormwater, or the accumulation of stormwater runoff in a closed basin.

FLOODPLAIN: **(EFF. 1/23/09)** An area of land susceptible to being flooded by stormwater. Floodplains are normally designated in terms of their probability of flooding with a specified period, such as one, ten, 25, 50, and 100 years.

FLOODWAY: **(EFF. 7/16/90; REV. EFF. 1/23/09)** That part of the floodplain associated with the channel of a river, steam, or other watercourse, or waterbodies and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation of the floodway.

FLOOR AREA RATIO: **(EFF. 6/25/96)** A measure of development intensity expressed as a ratio of the gross floor area of all buildings on a site divided by the total area of the site.

FLORIDA CAPITOL CENTER PLANNING DISTRICT: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

FLORIDA MASTER SITE FILE: **(EFF. 7/16/90)** A clearinghouse for information on archaeological sites, buildings and historic resource surveys. Inclusion in the Florida Master Site File does not necessarily mean that the resource possesses historic, architectural, archaeological or cultural significance, or is worthy of preservation.

FREEWAYS: **(EFF. 7/1/04)** Roadways that provide the highest level of mobility and are intended to carry the greatest amount of traffic at the highest speeds. Accordingly, freeway mainlanes provide no direct access to property and access to the freeway is provided only at interchanges and ramps.

FUNCTIONAL AREA OF AN INTERSECTION: **(EFF. 7/1/04)** The area beyond the physical intersection that comprises decision and maneuver distance, plus any required vehicle storage length, and is protected through corner clearance standards and connection spacing standards.

GREEN SPACE: **(EFF. 7/16/90)** Means that part of a lot open and unobstructed from its lowest level upward which is accessible to all residents on the lot, except as may be required for safety, and which is not used for off-street parking, streets, drives, refuse storage or other utility or building purposes.

GREEN INFRASTRUCTURE: Infrastructure that uses plants, soils, and other media to capture and treat stormwater. It relies on the natural processes of filtration, infiltration, and evapotranspiration to manage stormwater

GROSS DENSITY: **(EFF. 7/16/90)** Means the number of dwelling units per gross acre, an area of land containing forty three thousand, five hundred sixty (43,560) square feet including rights-of-way, common areas and the like. All residential densities referred to in the plan shall be gross densities unless otherwise noted.

GROUNDWATER RESOURCE PROTECTION: **(EFF. 7/16/90)** Areas determined to have high recharge to the aquifer and/or area where the potential for groundwater contamination is high.

GROUP HOME: **(EFF. 7/16/90)** Means a facility which provides a living environment for unrelated residents who operate as the functional equivalent of a family, including such supervision and care as may be necessary to meet the physical, emotional and social needs of the residents. Adult congregate living facilities comparable in size to group homes are included in this definition. It shall not include rooming or boarding homes, clubs, fraternities, sororities, monasteries or convents, hotel, residential treatment facilities, nursing homes, or emergency shelters.

HAZARD: **(EFF. 4/10/09)** Means a condition that exposes human life or property to harm from a man-made technological, or natural disaster.

HAZARD MITIGATION: **(EFF. 4/10/09)** Means any action taken to reduce or eliminate the exposure of human life or property to harm from a man-made or natural disaster.

HAZARDOUS WASTE: **(EFF. 7/16/90)** Means solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible or incapacitating reversible illness, or may pose a substantial present or potential hazard to human health or the environment when improperly transported, disposed of, stored, treated, or otherwise managed.

HEAVY INDUSTRIAL: **(EFF. 7/16/90; REV. EFF. 5/31/18)** Heavy industrial uses have or may have substantial offsite impacts, such as noise, vibrations, smoke, dust and particulate matter, and noxious or odorous gases. Heavy industrial uses typically depend on access to Strategic Intermodal System (SIS) facilities, rail facilities, or airport facilities.

HIGH QUALITY SUCCESSIONAL FOREST: **(REV. EFF. 12/10/91; REV. EFF. 7/19/13)** High quality successional forest shall mean a medium quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." These forests typically show signs of past disturbances, but still retain a good distribution of high quality indicator species. A medium quality natural community generally possesses the following characteristics:

1) The floristic composition contains many of the more common species typical of the natural community type, although most rare species are absent;
2) The community may contain invasive exotic plants that could be controlled through management;
3) The community has likely had some past disturbance, but not to the extent that the potential for recovery or restoration to a high quality natural community is significantly impaired (unauthorized activities in high quality successional forest areas resulting in a violation of the ordinances will not be excluded from protection as such).

HISTORIC RESOURCE: **(EFF. 7/16/90)** Means all areas, districts, or sites containing properties listed on the Florida Master Site File, the National Register of Historical Places, or designated by a local government as historically, architecturally or archaeologically significant.

HYDRAULIC FRACTURING: **(EFF. 5/31/18)** The process by which fractures are created by pumping fluids at high pressure into target rock formations to stimulate the flow of natural gas or oil, increasing the volumes that can be recovered.

INNOVATION DISTRICTS: **(EFF. 5/31/18)** Geographic areas that are physically compact, walkable, and transit-accessible where educational institutions, university-affiliated research and development facilities, and/or technology-focused companies cluster and connect with startup companies, business incubators, and business accelerators. Innovation Districts are mixed-use areas that provide housing, office, and retail in addition to the educational and business uses.

INTEGRATED ACCESS: **(EFF. 12/10/91)** The permitting of ingress and egress to a parcel of land in a manner which will minimize disruptions of the traffic flow due to turning movements on the local, collector, or arterial street on which the parcel fronts. Integrated access may include the requirement of shared access or the use of frontage or rear access roads.

INTENSITY: **(EFF. 12/7/99)** A measurement of the extent of land development, including the consumption or use of the space above, on, or below ground; examples of intensity measurement may include: the measurement of the use of or demand on facilities or services, allowed square footage or a floor area ratio of non-residential development, or the number of dwelling units per acre of residential development.

INTERMODAL: The term intermodal generally describes facilities that are used to move freight and cargo, as well as their transfer stations. Such facilities may include ports, railroad freight yards, freight/commercial airports, and the highways and railways that connect these facilities.

INTERSECTION: **(EFF. 6/25/96)** The point where the centerlines of two or more roads meet or cross and where allowance is made for the interchange of vehicular traffic.

LAND DEVELOPMENT REGULATIONS: **(EFF. 7/16/90)** Ordinances enacted by governing bodies for the regulation of any aspect of development, and including any local government zoning, rezoning, subdivision, building construction, or sign regulations, or any other regulations controlling the development of the land.

LDN: **(EFF. 7/16/90)** Means that measure of noise known as the Average Day-Night Sound Level rating which is the yearly energy average of the A-weighted sound level (to approximately the frequency response of the ear) integrated over a 24-hour period.

LEVEL OF SERVICE: **(EFF. 7/16/90)** Means an indicator of the extent or degree of service provided by, or proposed to be provided by a facility based on or related to the operational characteristics of the facility. Level of service shall indicate the capacity per unit of demand for each facility.

LEVELS OF SERVICE: (EFF. 7/16/90)

A Represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.

B Is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable.

C Is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

D Represents high density, but stable flow. Speed and freedom to maneuver are severely restricted.

E Represents operating conditions at or near the capacity level. All speeds are reduced. Freedom to maneuver within the traffic stream is extremely difficult.

LIGHT INDUSTRIAL: **(EFF. 7/16/90, REV. EFF. 5/31/18)** Light Industrial uses typically constrain potentially offensive impacts onsite, either through complete enclosure or a combination of enclosure and screening. Light Industrial uses shall include the finishing of products composed of previously manufactured component parts (such as the assembly of apparel or food processing excluding slaughter); and any manufacturing, storage, or distribution of products unlikely to cause any of the following impacts to be detected off-site: odor, noise, fumes or dispersion of waste, or radiation. Ancillary commercial uses designed to serve adjacent workers may be permitted. Light Industrial uses are not dependent upon direct access to rail facilities for off-loading and on-loading. Mixed Use Industrial sites allow light industrial uses supported by training facilities, offices, restaurants, small scale commercial storefronts, factory tours, retail, ancillary residential and/or open space uses.

LISTED SPECIES: **(EFF. 7/16/90)** Any plant or animal listed by the county, state or federal governments as an endangered or threatened species, or a species of special concern.

LIVE-WORK UNITS: **(EFF. 7/20/05)** Residential structures with their own lots, designed to accommodate and that include both living facilities and commercial/office components within the structure or on the same lot. The non-residential uses allowed in live-work units are “destination” businesses that do not rely on passerby and drive-by traffic, but more typically have visitation by appointment.

LOCALLY DESIGNATED HISTORIC RESOURCE: **(EFF. 7/16/90)** A resource that has been designated as historic under the Tallahassee-Leon County Zoning Code and that undergoes design review by the Tallahassee-Leon County Architectural Review Board.

LOCAL PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the corporate city limits, including but not limited to neighborhood parks and passive recreation facilities.

LOCAL STREETS: **(REV. EFF. 7/1/04)** Local streets collect traffic from adjacent land uses and other minor streets (cul-de-sacs, loops, alleys, lanes) and channel it to the collector/arterial system. Local streets are intended to carry the lowest traffic volumes at the lowest speeds, discourage through traffic (usually do not carry traffic between two streets of a higher classification), and to provide access to abutting land.

LOW IMPACT DEVELOPMENT: **(EFF. 4/10/09)** A land planning and engineering design approach that focuses on minimizing adverse impacts of development on water quality. This approach is implemented by replicating the pre-development hydrologic regime of the development site through infiltrating, filtering, storing, evaporating, and detaining stormwater runoff close to its source.

MAJOR COLLECTOR: **(REV. EFF. 7/1/04)** Major collector roadways channel traffic between arterials, from other collector streets to the arterial system, and from a major activity center to the arterial street system. Major collectors may carry relatively high traffic volumes.

MAJOR DETERIORATION: **(EFF. 7/16/90)** Means a dwelling unit which has major defects requiring extensive repairs. The unit will not necessarily provide safe and decent shelter unless the repairs are made. These housing units usually have critical defects of a substantial nature, such as:

1) Holes, open cracks, rotted or missing materials over a large part of the foundation, walls, roof or chimney;
2) Substantial sagging of floors, walls or roof,
3) Extensive damage by storm, fire or flood.

MAKERSPACES: **(EFF. 5/31/18)** Collaborative work spaces with tools available for the purposes of enabling people to design, prototype and create manufactured works that typically would not be possible to create with the resources available to individuals working alone. Makerspaces are intended to provide access to equipment, community, and education. Makerspaces often have a variety of equipment, such as 3D printers, laser cutters, CNC (Computer Numerical Control) machines, soldering irons, or sewing machines.

MASS TRANSIT: **(EFF. 7/16/90)** Means passenger transportation service, usually local in scope, that is available to any person who pays a prescribed fare. It operates on established schedules along designated routes or lines with specific stops and is designed to move relatively large number of people at one time.

MICROMOBILITY: The term micromobility is used to describe emerging transportation alternatives such as e-scooters, e-bikes, and electric skateboards. It is frequently used in describing bikeshare and e-scooter share schemes.

MINING: **(EFF. 5/31/18)** Mining uses have the potential for substantial offsite impacts and alterations to the land structure on and around the mining site. Mining uses shall include the mining and quarrying of sand, gravel, clay, limestone, ceramic, and refractory minerals. Mining uses do not include hydraulic fracturing. Mining uses typically depend on a transportation system that can support large and heavy trucks.

MINOR ARTERIAL: **(REV. EFF. 7/1/04)** Minor arterial roadways interconnect with and augment the principal arterial system. They are similar in function to principal arterials, but accommodate trips of more moderate length and distribute travel to geographic areas smaller than that of the principal arterial system. Therefore, they provide a somewhat higher degree of property access than principal arterials.

MINOR COLLECTOR: **(REV. EFF. 7/1/04)** Minor collector roadways channel traffic from minor streets to the major collector/arterial system, between other collectors, and from activity centers to a street of higher classification. Minor collectors provide access to adjoining properties and generally have lower volumes, shorter trip lengths, and fewer through trips than major collectors.

MISSING MIDDLE HOUSING: This type of housing is represented as house-scale buildings with multiple units, such as duplexes, fourplexes, cottage courts, and cluster housing types, that fit seamlessly into existing residential neighborhoods, offering more housing options and supporting walkability. These types are frequently "missing" from the typical Florida housing market.

MITIGATION: **(EFF. 7/16/90)** To lessen or eliminate the impact of development on a significant historic resource. Mitigation can include the modification of project plans to ensure preservation of the significant resource, landscape buffering, adaptive use of a historic building, archaeological salvage, or historic or photographic documentation or the resource.

MSTU/MSBU: **(EFF. 7/16/90)** Means municipal service taxing units or municipal service benefit units, as authorized and defined in Florida Statutes, Chapter 125.01 (1)(q).

MULTIMODAL: The term multimodal describes supporting the presence of a variety of transportation options including but not limited to walking, biking, rolling (wheelchair et al.), micromobility (e-scooters et al.), freight, trolly, bus, train, etc. The term is generally used to emphasize alternatives to vehicular modes of transportation.

NATIONAL REGISTER OF HISTORIC PLACES: **(EFF. 7/16/90)** A federal listing of culturally significant buildings, structures, objects, sites and districts in the United States. This program was established by Congress in 1935 and is maintained by the United States Department of the Interior.

NATIVE FOREST: **(EFF. 7/16/90; REV. EFF. 7/19/13)** Native forest shall mean a high quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." A high quality natural community generally possesses the following characteristics:

1) The plant species composition is dominated by high quality indicator species which are typical of their natural community type;
2) The community may contain invasive exotic plants that could be controlled through management;
3) Evidence of historical disturbance may be present, but the disturbance has not destroyed or prevented the re-establishment of a high quality natural community type.

NATURAL ACCESS CONTROL: **(EFF. 12/10/02)** A design concept directed primarily at decreasing opportunities for criminal activities by denying access to crime targets and creating a perception of risk for potential offenders. Natural access control is developed by designing streets, parking areas, sidewalks, building entrances, and neighborhood gateways, which clearly indicate public routes and discourage access to private areas with structural elements.

NATURAL SURVEILLANCE: **(EFF. 12/10/02)** A design concept directed primarily at identifying potential undesired r criminal activities. Natural surveillance is promoted by features that provide day and night visibility from windows, doors, and porches that oversee parking areas, pedestrian areas, play areas, building entrances, and similar areas.

NATURAL VEGETATION: **(EFF. 7/16/90)** The trees and plants occurring on a site prior to development, alteration or clearing of that site.

NEIGHBORHOOD PARK: **(EFF. 7/16/90)** Means those parks that serve as the focus for neighborhood units with a population of up to 5,000 and have a service area of approximately one-half mile and are accessible primarily to pedestrian and bicyclists.

NET ACRE: **(EFF. 7/16/90)** The amount of usable land area, exclusive of impervious areas and areas subject to environmental constraints.

NEW DEVELOPMENT: **(EFF. 7/16/90)** Means all land development activity subject to a development order after the adoption of this Comprehensive Plan, except those that shall be granted vested rights pursuant to the Plan itself.

OFFICE: **(REV. EFF. 6/25/96)** Generally, a room, group of rooms, or building used primarily for conducting the affairs of a business, profession, service, industry or government. An office shall not include the sale of goods for a profit as its primary use. For purposes of this Plan, the following are categories of office intensity:

MINOR: **(REV. EFF. 6/28/95)** Converted residence at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum of 2,500 square feet if located on a local street.

MAJOR: **(REV. EFF. 6/28/95)** An office building or buildings with more than a .25 floor area ratio, or at least 10,000 square feet. This includes a series of buildings within a subdivision that when combined is equal to or exceeds these thresholds.

OFF-SITE MITIGATION: **(EFF. 7/1/04) CITY OF TALLAHASSEE ONLY**—To compensate for the impacts of development on significant environmental resources in areas deemed important for infill or related conversions of land use by preserving, restoring and enhancing the environmental functions of ecosystems elsewhere.

ON-SITE SYSTEM: **(EFF. 7/16/90)** Means any sanitary sewer system designed and built to serve a single parcel of land, i.e. septic tank or package treatment plant with capacity sized to:

a) Meet the demand for a single parcel of land and its intended use
b) Meet the projected demand for a single parcel of land after its subdivision

An on-site system may serve more than one parcel but only to correct an existing environmental problem.

OPEN SPACE: **(EFF. 7/1/04)** Means undeveloped lands suitable for passive recreation or conservation uses. In the context of Conservation Subdivisions, Open Space refers to lands subject to a required conservation easement. These lands may include Conservation and Preservation features defined in this Plan, or agricultural or silvicultural properties, that are managed to preserve or promote environmental and aesthetic resources.

PASSIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are natural resource oriented, i.e. hiking trails, boat landings, neighborhood parks.

PEAK HOUR: **(REV. EFF. 8/17/92)** Means the period during which the maximum amount of travel occurs. The period when demand for transportation service is heaviest.

PLANT COMMUNITY: **(EFF. 7/16/90)** A natural association of plants that is dominated by one or more prominent species, or possesses a characteristic physical and discernible attribute.

~~**POLYGON CONNECTIVITY INDEX**: **(EFF. 4/10/09)** A measure of connections within a transportation network. A polygon is created when elements of the transportation network connect and create closed loops, thus allowing a traveler to make a loop on its perimeter. The more polygons there are within an area, the more route options exist for a traveler. More polygons equal a higher connectivity index and a higher degree of mobility.~~

POPULATION ACCOMMODATION RATIO (PAR): **(EFF. 4/18/02)** The Population Accommodation Ratio (PAR) is the relationship between the supply of land available for development and the expected population growth over a period of time. A PAR of 2.00 means that there is twice the supply of land available for development compared to the expected population growth over a period of time. A PAR of 1.50 means there is 50% more land available for development than is needed for the expected population growth over a period of time.

PRESERVATION: **(EFF. 7/16/90)** Establishing strict requirements for the maintenance of significant ecological resources in a natural state. Activities should be in strict compliance with an effort to perpetuate the ecological value of the site or surrounding areas, including maintenance of listed plant and animal species.

PRESERVE AREAS: **(EFF. 7/16/90)** Vegetative areas required to be preserved by law.

PRINCIPAL ARTERIAL: **(REV. EFF. 7/1/04)** Principal arterial roadways are designed to carry the next highest level of mobility and are intended to carry substantial traffic volumes over relatively long distances and at relatively high speeds. Direct property access may be provided but must be carefully managed to avoid creating unsafe and congested conditions and to preserve mobility.

PRIVATE RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Recreational resources provided by the private sector.

COMMERCIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities operated by the private sector as for profit or not-for profit.

RESIDENTIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities located within and associated with residential developments.

PROOF OF CONCEPT CENTERS: **(EFF. 5/31/18)** Facilities designed to provide services related to financial capital, business support, and university research to promote the adoption and further development of programs that aid technologies through phases between patenting and the creation of marketable products.

PUBLIC FACILITY: **(EFF. 7/16/90)** Means capital facilities that are owned by a governmental entity.

RECREATIONAL:

PASSIVE: **(EFF. 7/16/90)** Natural resource oriented, (hiking trails, boat landings, neighborhood parks).

ACTIVE: **(EFF. 7/16/90)** Facility oriented, (swimming pools, ball fields, tennis courts).

REGIONAL PARK: **(EFF. 7/16/90)** Means a large resource based area which serves the entire county. Such a park should serve a minimum of 100,000 population and be within a 30 minute driving time of that population.

REGULATED CLOSED BASINS: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface, at least 10 acres in size, for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

REHABILITATION: **(EFF. 7/16/90)** The act or process of returning a property to a state of utility through repair or alteration which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its historical, architectural, and cultural values.

RESEARCH AND DEVELOPMENT: **(EFF. 5/31/18)** Research and Development uses shall have minimal offsite impacts and include facilities for developing technologies related to the physical and life sciences. Facilities may include laboratories, wet laboratories, classrooms, commercialization centers, coworking spaces, makerspaces, craftsman studios, proof of concept centers, and related facilities. Active and passive recreation, open space, hotels, restaurants, and limited retail and residential are allowed as ancillary uses to support the collaborative nature of research and development centers.

RESIDENTIAL: **(REV. EFF. 6/25/96)** Land that is used for or proposed to be used for the principal purpose of providing dwelling unit(s) for human habitation.

LOW: **(EFF. 7/16/90)** 0-8 dwelling units per acre

MEDIUM: **(EFF. 7/16/90)** 8-16 dwelling units per acre

HIGH: **(EFF. 7/16/90)** 16-50 dwelling units per acre

URBAN: **(EFF. 1/19/02)** 51 units to 150 units

RESPONSIBLE MANAGEMENT ENTITY: **(EFF. 4/10/09)** A legal entity that has the technical, managerial, and financial capacity to ensure viable long-term, cost-effective, centralized management, operation, and maintenance of decentralized wastewater systems in accordance with appropriate regulations and generally accepted accounting principles. Viability is defined as the capacity of a responsible management entity to provide adequate technical, managerial, and financial resources to protect the public health and the environment consistently, in perpetuity, and at a minimal cost to taxpayers.

SANITARY SEWER FACILITIES: **(EFF. 7/16/90)** Means structures or systems designed for the collection, transmission, treatment, or disposal of sewage and includes trunk mains, interceptors, treatment plants and disposal systems.

SANITARY SEWER SERVICE: **(EFF. 7/16/90)** Means sewer service provided by sanitary sewer designed to serve a large service area and usually more than one land use type. These facilities have the intent and potential for expansion of their service areas.

SCHOOLS: **(EFF. 6/26/98)** Facilities intended primarily for the education of children pre-kindergarten through twelfth grade, children identified as exceptional regardless of age or grade, or for the vocational or community education of high school age students and adults. Unless otherwise stated elsewhere in the Plan, this term refers to public and private schools.

SECTION 8 PROGRAM: **(EFF. 7/16/90)** Means those programs authorized under the renumbered Section 8 of the United States Housing Act of 1937. These programs allow the Department of Housing and Urban Development to contract directly with the owner of existing, new, or rehabilitated units for the payment of the difference between a contract rent not exceeding a fair market rate for the dwelling and a specified percentage of the tenant's gross income.

SEVERE GRADES: **(EFF. 7/16/90)** Slopes greater than 20%.

SILVICULTURE: **(EFF. 7/6/15)** **A** practice, operation, or process following accepted forest management principles whereby the crops constituting forests are tended, harvested, and reforested.

SOLID WASTE: **(EFF. 7/16/90)** Means sludge from a waste treatment works, water supply treatment plant, or air pollution control facility or garbage, rubbish, refuse or other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from domestic, industrial, commercial, mining, agricultural, or governmental operations (as defined by Section 9J-5.002(88), F.A.C.).

SPECIAL NEEDS HOUSING: **(EFF. 7/16/90)** Means that part of the housing provision system designed to fulfill the demand of a household or individual who needs assistance, either permanent or temporary, in obtaining basic shelter, including but not limited to very low and low income handicapped individuals, homeless persons, group homes for persons with physical, emotional or cognitive disabilities, shelters for battered victims, adult congregate living facilities, and halfway houses for the non-criminal or non-delinquent.

SPECIES OF SPECIAL CONCERN: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: A species, subspecies or isolated population which warrants special protection, recognition or consideration because it has an inherent significant vulnerability to habitat modification, environmental alteration, human disturbances, or substantial human exploitation which, in the foreseeable future may result in its becoming a threatened species; may already meet certain criteria for designation as a threatened species but for which conclusive data are limited or lacking; may occupy such an unusually vital and essential ecological niche that should it decline significantly in numbers or distribution, other species would be adversely affected to a significant degree, or has not significantly recovered from past population depletion.

STARTUP COMPANY: **(EFF. 5/31/18)** An entrepreneurial venture that is typically a newly emerged, fast-growing business that aims to meet a marketplace need by developing a viable business model around an innovative product, service, process or a platform.

SUBSTANDARD HOUSING: **(EFF. 7/16/90)** Means any structure which falls within the structural conditions defined as “major deterioration” and “dilapidated.”

SUPERSTOPS: **(EFF. 4/10/09)** Transit stops that will serve as transfer stations for two or more routes, removing the need for riders to go to a single, centralized location to make transfers.

TERRITORIAL REINFORCEMENT DESIGNS: **(EFF. 12/10/02)** Create or extend the spheres of influence of legitimate users of designed environments. Properly designed environments allow legitimate users to develop a sense of territorial control, while potential offenders (perceiving the legitimate user control of the environment) are discouraged from attempting criminal activities. Territorial reinforcement is promoted by features that distinguish private spaces from public spaces with the use of fences, gateways, hedges, and similar design strategies.

THREATENED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish, wildlife and plants naturally occurring in Florida which exists in such small populations as to become endangered if it is subjected to increased stress as a result of further modifications of its environment.

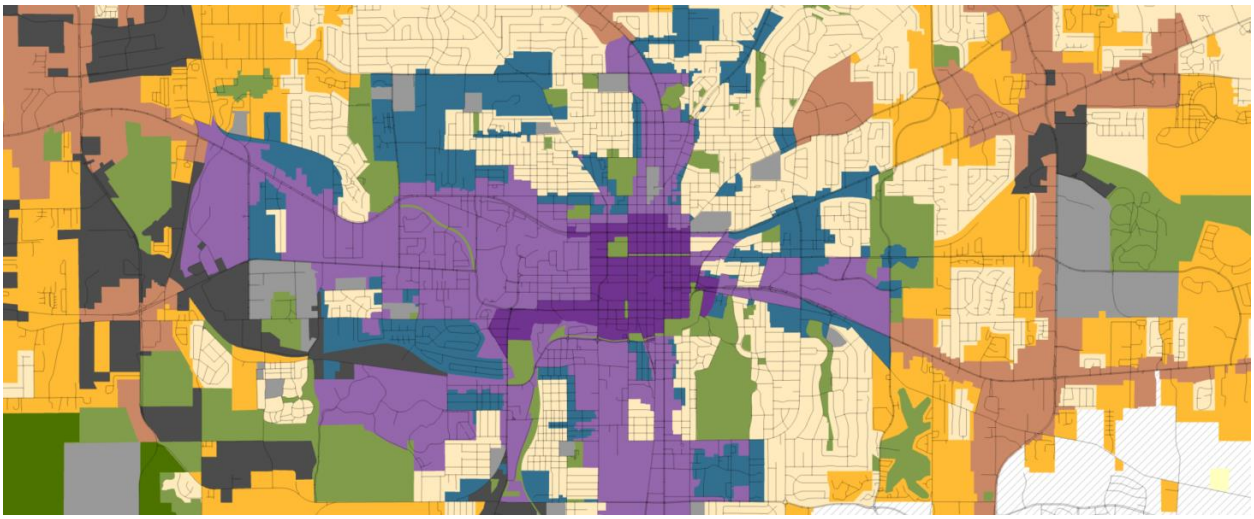
THROUGH TRIPS: **(EFF. 6/07/01)** A through trip is one that has neither a beginning point nor a destination point contained within the subject area or on a particular roadway segment.

TRAIL ORIENTED DEVELOPMENT (TrOD): Trail Oriented Development is designed to locate buildings in immediate proximity to multi-use path transportation corridors with the intention of connecting or relating residences and businesses to the nearby trail facilities. Generally TrOd is compact, walkable, pedestrian and bike-oriented, and mixed-use.

TRANSIT ORIENTED DEVELOPMENT (TOD): Transit Oriented Development is designed to be compact, walkable, pedestrian-oriented, and mixed-use development that is centered near and around transit. TOD supports vibrant communities with a mix of commercial, residential, office and entertainment uses.

TRANSPORTATION CORRIDOR: **(EFF. 7/16/90)** Means a broad geographical band that follows a general directional flow or connects major sources of trips. It may contain a number of streets and highways and transit lines or routes.

TRANSPORTATION SYSTEM: **(EFF. 7/16/90)** Means a coordinated system made up of one or several modes of transportation serving a common purpose of the movement of people, goods, or both.



UNDEVELOPED FLOODWAY/FLOODPLAIN: **(EFF. 7/16/90)** A floodway/floodplain which has not been altered.

VULNERABLE ROAD USER: The term vulnerable road use describes transportation systems users outside of vehicles. It includes pedestrians, cyclists, wheelchair/powerchair users, micromobility users, et al

WATER BODY AND NATURAL WATER BODY: **(EFF. 7/16/90)** A water body is a depression in the ground that normally and continually contains surface water. This is opposed to a wet depression that holds water only intermittently. There are some types of wetlands that are examples of areas that hold water only certain times of the year. A natural water body is a depression in the ground existing in and produced by nature, not man-made, and occurring due to the operation of the ordinary course of nature that normally and continually contains surface water or has historically held surface water on a continuing basis.

WET LABORATORIES: **(EFF. 5/31/18)** Laboratories where chemicals, drugs, or other materials are handled in liquid solutions or volatile phases, requiring direct ventilation and specialized piped utilities (typically water and various gases).

WETLAND: **(REV. EFF. 6/28/02; REV. EFF. 7/19/13)** Wetlands mean those areas included within the landward extent of surface waters of the state, pursuant to applicable rules in the Florida Administrative Code, or any area which is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and which under normal circumstances does support a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligated hydrophytic macrophytes that are typically adapted to areas having soils conditions described in this definition. These species, due to morphological, physiological, or reproductive adaptations have the ability to grow, reproduce, or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps and marshes, bayheads, bogs, cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps, and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto. The City of Tallahassee and Leon County intend to continue to protect isolated wetlands and wetlands on properties held by a single owner. Isolated wetlands and wetlands in one ownership must meet the State of Florida's definition for wetlands with regard to percent composition of wetland plant species, hydrologic indicators, and soils (Chapter 62-340, F.A.C.)

LAND USE COMPARISON

To address identification of changes, staff has provided an interactive GIS map to compare current and future land uses: Draft Future Land Use Map. The table below also summarizes the general change in land use categories. It identifies how the current future land use categories relate to the proposed future land use categories and the planned residential densities and intensities.

Current		Proposed	
Natural Areas, Conservation and Open Spaces			
Recreation/Open Space Open Space/Stormwater Facilities		Natural Areas Parks and Civic Spaces	
Rural			
Rural, Agriculture/Silviculture/Conservation and Rural with Residential Preservation Overlay	1 unit per 10 acres 2,000/acre and 10,000 per intersection	Rural	1 unit per 10 acres 2,000 sq ft per acre
Urban Fringe and with Residential Preservation Overlay	1 unit per 3 acres* N/A	Rural Residential	1 unit per 3 acres* 5,000 sq ft per acre

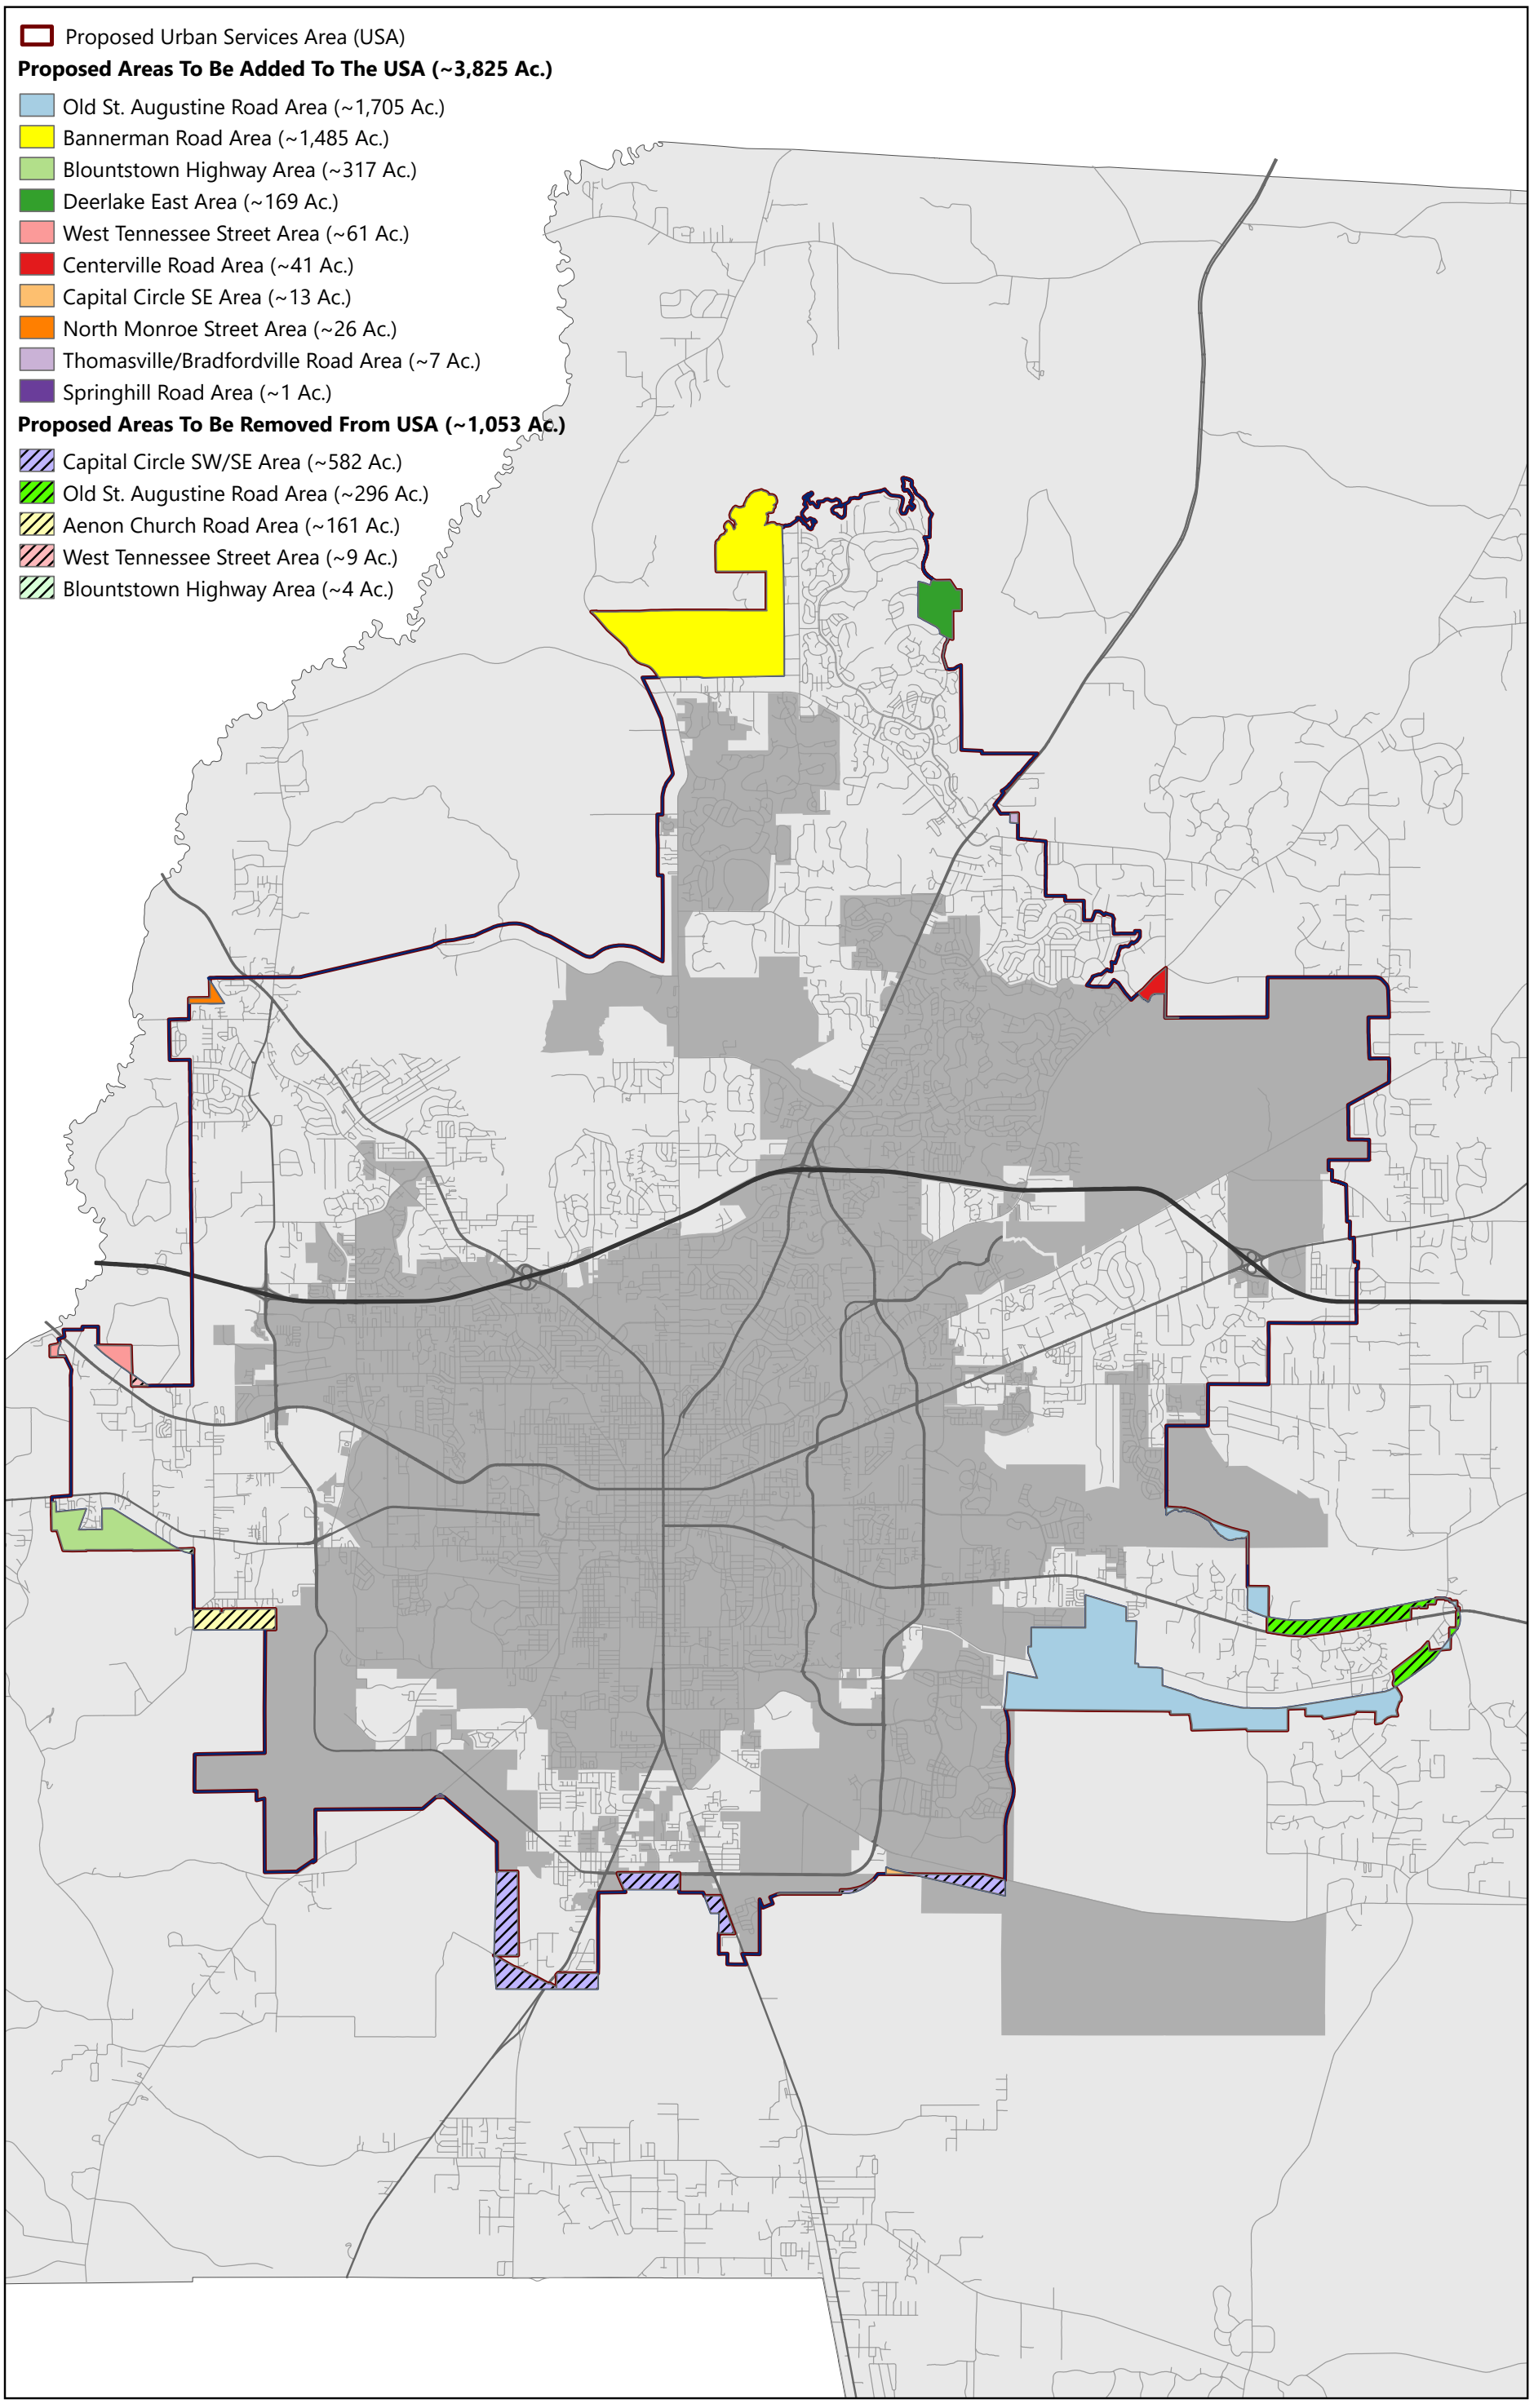
Rural Community Rural Community w/Residential Preservation Overlay Woodville Rural Community and w/Residential Preservation Overlay	4 units per acre* 50,000 sf/parcel	Rural Community	4 units per acre* 10,000 sq ft per acre
Sub-Urban			
Lake Protection	1 unit per 2 acres* 8 du/acre in Lake Protection Node	Lake Protection	1 unit per 2 acres* 10,000 sq ft per acre*
Residential Preservation	6 dwelling units per acre	Residential Preservation	6 units per acre N/A
Urban Residential, Urban Residential 2, and Neighborhood Boundary	UR: 4-8 units per acre UR2: 20 units per acre NBO: 18 units per acre/20,000 sf per acre	Sub-Urban Neighborhood	20 units per acre 20,000 sq ft per acre
Suburban/Activity Center/ Bradfordville Mixed Use/Mahan Gateway Node	Suburban: 20 units per acre/25,000 sf per acre Activity Center: 45 units per acre Bradfordville MU: 20 units per acre/25,000 sf per acre	Sub-Urban Mixed-Use Commercial	45 units per acre 25,000 sq ft per acre*

	Mahan GN: 16 units/acre and 12,000 sf/acre		
Urban			
Urban Residential and Urban Residential 2, and Neighborhood Boundary	UR: 4-8 units per acre UR2: 20 dwelling units per acre NBO: 18 dwelling units per acre/20,000 sf per acre	Urban Neighborhood	26 Units per acre 30,000 sq ft per acre*
Central Urban and University Transition	45 (CU) and 50 (UT) units per acre (100/acre on Gaines St); 200k/sf/acre	Urban General	50 units per acre 60,000 sq ft per acre
Central Core	150 units per acre N/A	Urban Center	150 units per acre 100% lot coverage with a max building height of 20 stories

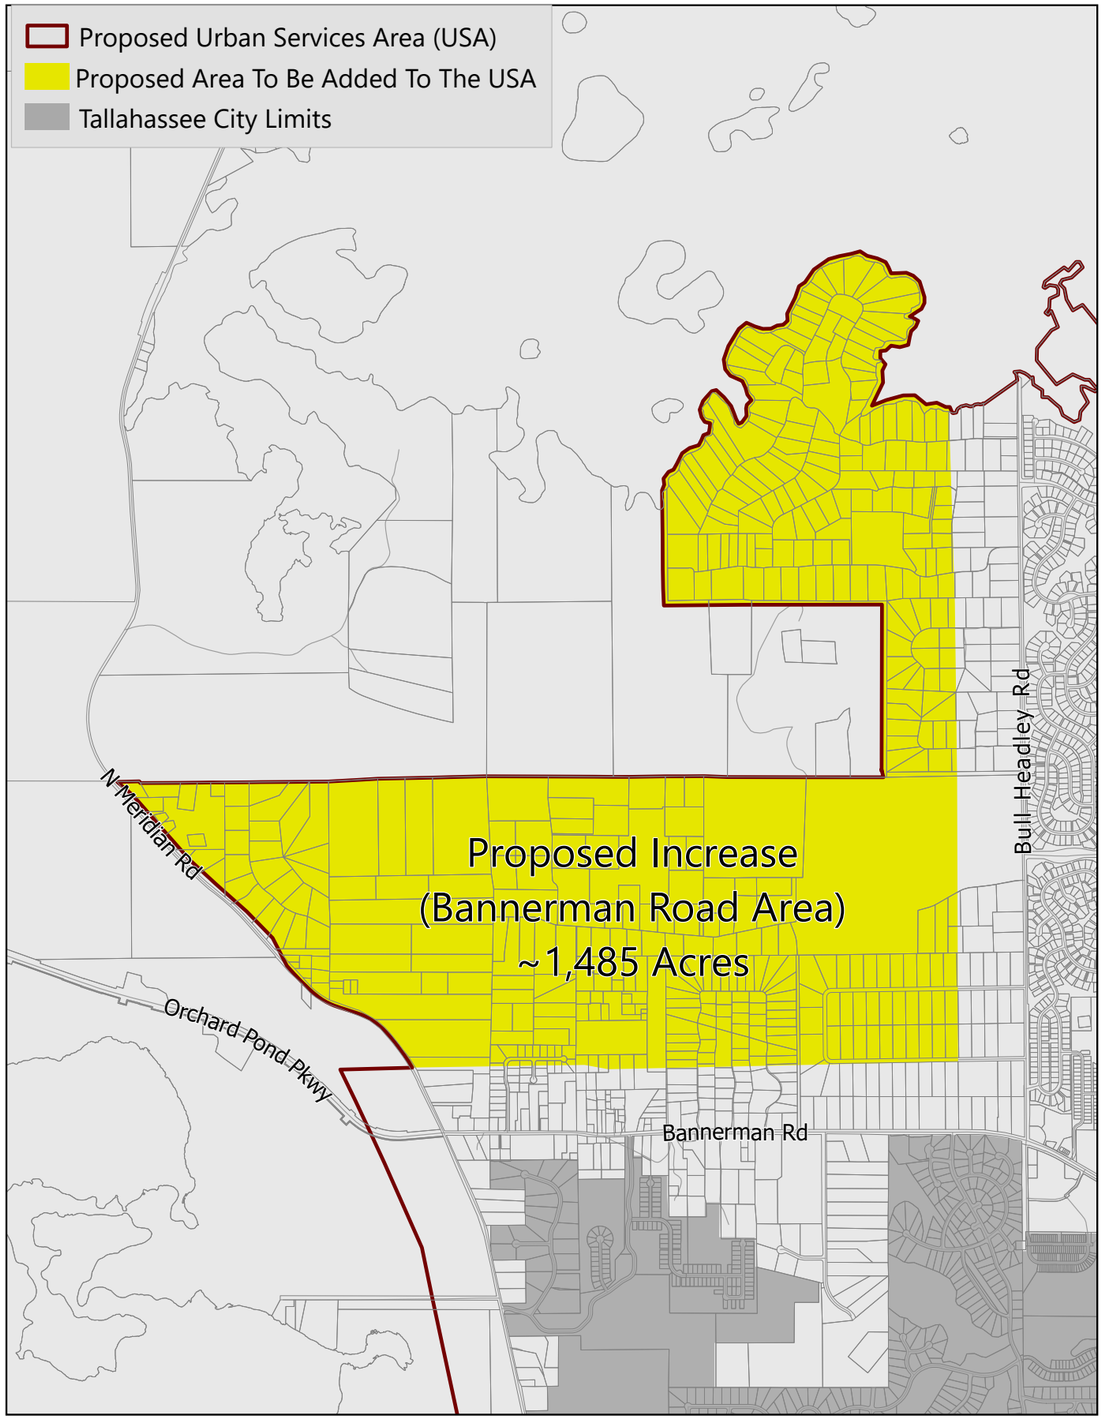
Special Districts			
Recreation/Open Space Recreation Stormwater	Public/private lands with passive or active recreation	Parks and Civic Spaces	Public/private lands with recreation or resource conservation; 1000 sf/acre for park enhancements
Educational Facilities; Government Operational	Schools/public lands Facilities	Institutional	Community facilities and heavy infrastructure
Industrial and Industry and Mining	45K sf/acre	Manufacturing and Mining	30K sf/acre
Planned Development	Specialized	Planned Development	Specialized

*See each Future Land Use Category description for density and intensity bonuses

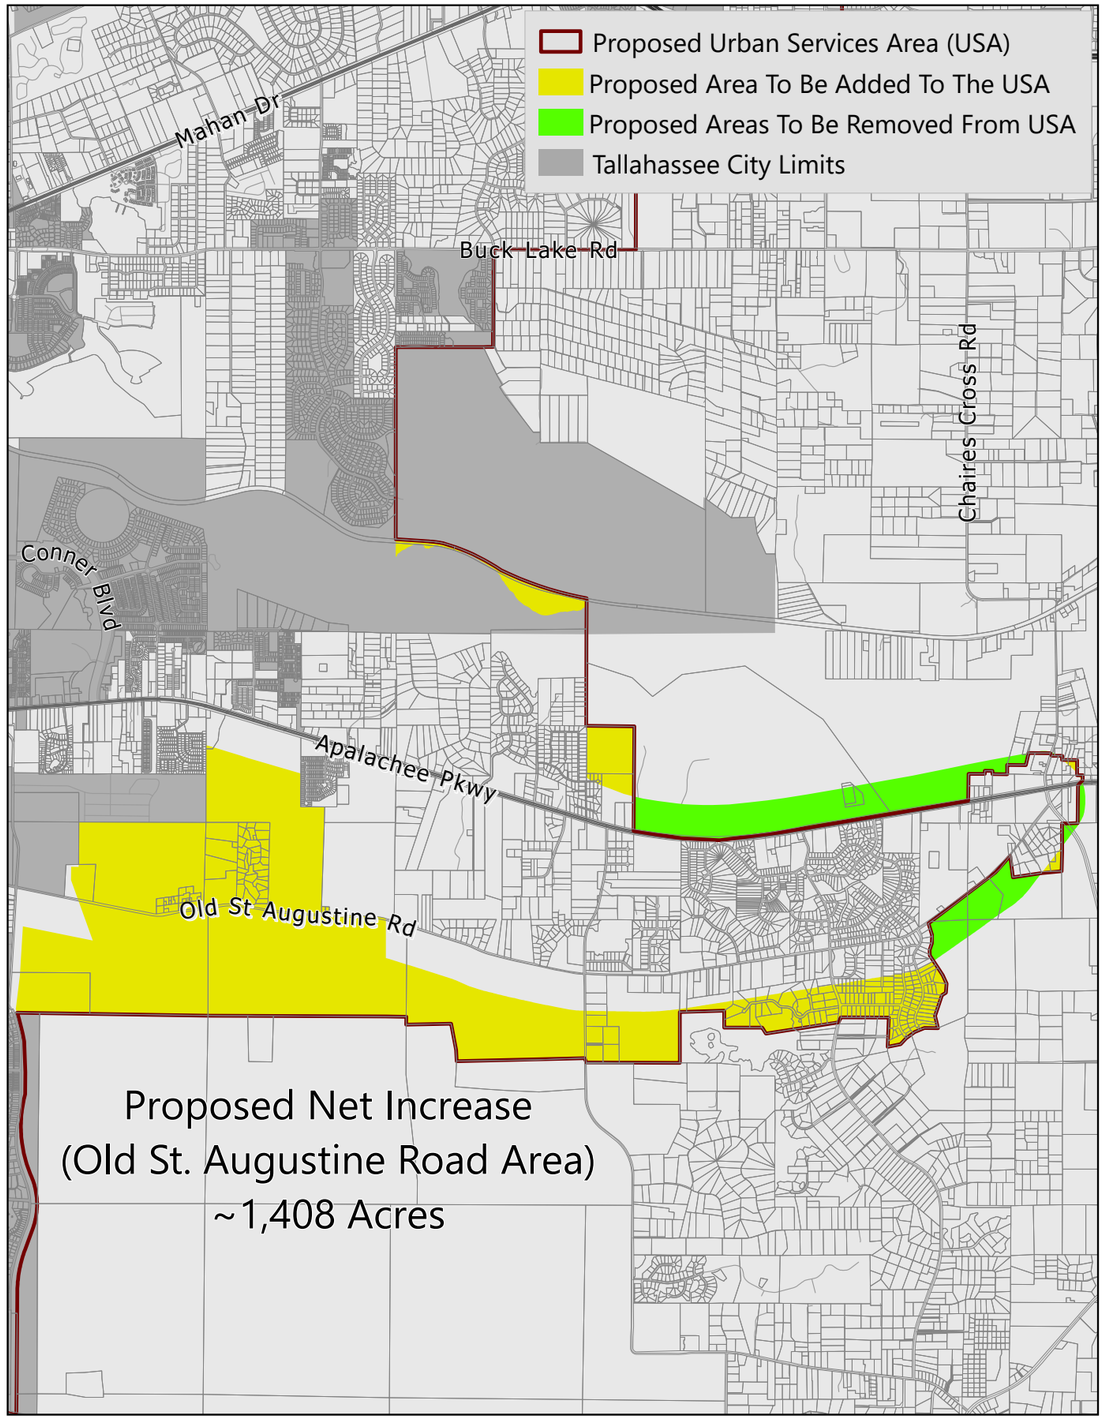
Land Use Compatibility



The compatibility of land uses in relation to one another is evaluated in a few different ways. The Future Land Use Map is the basis for establishing the rural, sub-urban, and urban contexts that help determine appropriate land use categories. Land use compatibility around the transition zones between contexts can be flexible, but the core areas of each context are limited to the land use categories prescribed for rural, sub-urban, and urban land uses. For example, urban land uses would not be located in the heart of sub-urban contexts and vice versa. In addition to the uses and densities, the future land use categories also identify special conditions for compatibility. Urban residential specifically includes compatibility provisions.



The current Comprehensive Plan includes a Land Use Compatibility Matrix that is intended to help assess compatibility. However, there are issues with the implementation of the matrix. The first is that a note on the matrix states that it is intended to be a pictorial representation of existing policies in the Comprehensive Plan. This means that the removal of the matrix does not impact the implementation of the policies described in the Comprehensive Plan. In addition, another note on the matrix states that it does not apply to



the Bradfordville Mixed Use, Suburban, Urban Residential 2, Village Mixed Use, Planned Development, University Transition, Downtown, Woodville Rural Community, Central Urban, Research/Innovation, and Industry/Mining land uses. This represents nearly half of the future land use categories in the current Comprehensive Plan. As a compatibility tool in the comprehensive, the matrix has been relatively ineffective as a consistent application and in producing consistent and quality development products.

While the proposed Comprehensive Plan policies continue to direct requirements for compatibility, the land development code regulations are a more appropriate avenue for development and land use details to ensure that land uses are compatible with one another. Proposed policies include general compatibility provisions in Policies 3.6.3 [site requirements], 3.6.6. [non-conforming uses], and 4.2.1 [coordination with transit], and prescriptions for the land development code for site plan requirements and buffering standards that are ultimately implemented at the project review and approval stage.

Additionally, the comprehensive plan continues to support the land development code provisions for “protected residential” including provisions in the proposed Urban Residential Preservation land use category that reflect compatibility standards. Protected residential standards in the land development code include buffering, lighting, signage, and building height setbacks and stepbacks, for compatibility. These standards apply to all development projects meeting the criteria next to low density residential. The comprehensive plan provisions do not pre-empt or preclude those continued applications.

Proposed Urban Services Area (USA)
Proposed Areas To Be Added To The USA (~3,825 Ac.)

FLORIDACOMMERCE

Ron DeSantis GOVERNOR
J. Alex Kelly SECRETARY

October 24, 2025

The Honorable John E. Dailey
Mayor, City of Tallahassee
300 South Adams Street
Tallahassee, Florida 32301

Dear Mayor Dailey,

FloridaCommerce has reviewed the City of Tallahassee proposed comprehensive plan amendment (Amendment No. 25-02ESR), received on September 25, 2025, pursuant to the expedited state review process in Section 163.3184(2) and (3), Florida Statutes (F.S.). We have identified no comments related to adverse impacts to important state resources and facilities within FloridaCommerce's authorized scope of review.

We are, however, providing a technical assistance comment consistent with Section 163.3168(3), F.S. The technical assistance comment will not form the basis of a challenge. It is offered either as a suggestion which can strengthen the City's comprehensive plan in order to foster a vibrant, healthy community or is technical in nature and designed to ensure consistency with the Community Planning Act in Chapter 163, Part II, F.S. The technical assistance comment is:

> Technical Assistance Comment: Planning Periods: The City should support the proposed updated planning periods of 2035 and 2050 with updated relevant and appropriate data and analysis of public facilities (potable water, potable water supply, sanitary sewer, solid waste, stormwater and recreation facilities).

The City should act by choosing to adopt, adopt with changes, or not adopt the proposed amendment. For your assistance, we have enclosed the procedures for adoption and transmittal of the comprehensive plan amendment. In addition, the City is reminded that:

- Section 163.3184(3)(b), F.S., authorizes other reviewing agencies to provide comments directly to the City. **If the City receives reviewing agency comments and they are not resolved, these comments could form the basis for a challenge to the amendment after adoption.**

- **The second public hearing,** which shall be a hearing on whether to adopt one or more comprehensive plan amendments, **must be held within 180 days** of your receipt of agency comments or the amendment shall be **deemed withdrawn** unless extended by agreement with notice to FloridaCommerce and any affected party that provided comment on the amendment pursuant to Section 163.3184(3)(c)1., F.S.

- **The adopted amendment must be transmitted to FloridaCommerce within ten working days after the final adoption hearing or the amendment shall be deemed withdrawn pursuant to section 163.3184(4)(e)2., F.S.** Under Section 163.3184(3)(c)2. and 4., F.S., the **amendment effective date** is 31 days after FloridaCommerce notifies the City that the amendment package is

An equal opportunity employer/program. Auxiliary aids and service are available upon request to individuals with disabilities. All voice telephone numbers on this document may be reached by persons using TTY/TTD equipment via the Florida Relay Service at 711.

complete or, if challenged, until it is found to be in compliance by FloridaCommerce or the Administration Commission.

If you have any questions concerning this review, please contact Scott Rogers, Regional Planning Administrator, by telephone at (850)-717-8510 or by email at Scott.Rogers@Commerce.fl.gov.

Sincerely,

James D. Stansbury, Chief
Bureau of Community Planning and Growth

JDS/sr

Enclosure(s): Procedures for Adoption

Chris Rietow, Executive Director, Apalachee Regional Planning Council

An equal opportunity employer/program. Auxiliary aids and service are available upon request to individuals with disabilities. All voice telephone numbers on this document may be reached by persons using TTY/TTD equipment via the Florida Relay Service at 711.

SUBMITTAL OF ADOPTED COMPREHENSIVE PLAN AMENDMENTS

FOR EXPEDITED STATE REVIEW

Section 163.3184(3), Florida Statutes

NUMBER OF COPIES TO BE SUBMITTED: Please submit electronically using FloridaCommerce's electronic amendment submittal portal "**Comprehensive Plan and Amendment Upload**" (*https://flcom.my.salesforce-sites.com/cp/*) **or** submit three complete copies of all comprehensive plan materials, of which one complete paper copy and two complete electronic copies on CD ROM in Portable Document Format (PDF) to the State Land Planning Agency and one copy to each entity below that provided timely comments to the local government: the appropriate Regional Planning Council; Water Management District; Department of Transportation; Department of Environmental Protection; Department of State; the appropriate county (municipal amendments only); the Florida Fish and Wildlife Conservation Commission and the Department of Agriculture and Consumer Services (county plan amendments only); and the Department of Education (amendments relating to public schools); and for certain local governments, the appropriate military installation and any other local government or governmental agency that has filed a written request.

SUBMITTAL LETTER: Please include the following information in the cover letter transmitting the adopted amendment:

_____ State Land Planning Agency identification number for adopted amendment package;

_____ Summary description of the adoption package, including any amendments proposed but not adopted;

_____ Identify if concurrency has been rescinded and indicate for which public facilities. (Transportation, schools, recreation and open space).

_____ Ordinance number and adoption date;

_____ Certification that the adopted amendment(s) has been submitted to all parties that provided timely comments to the local government;

_____ Name, title, address, telephone, FAX number and e-mail address of local government contact;

_____ Letter signed by the chief elected official or the person designated by the local government.

ADOPTION AMENDMENT PACKAGE: Please include the following information in the amendment package:

_____ In the case of text amendments, changes should be shown in strike-through/underline format.

_____ In the case of future land use map amendments, an adopted future land use map, **in color format,** clearly depicting the parcel, its future land use designation, and its adopted designation.

_____ A copy of any data and analyses the local government deems appropriate.

Note: If the local government is relying on previously submitted data and analysis, no additional data and analysis is required;

_____ Copy of the executed ordinance adopting the comprehensive plan amendment(s);

Suggested effective date language for the adoption ordinance for expedited review:

> "The effective date of this plan amendment, if the amendment is not timely challenged, shall be 31 days after the state land planning agency notifies the local government that the plan amendment package is complete. If the amendment is timely challenged, this amendment shall become effective on the date the state land planning agency or the Administration Commission enters a final order determining this adopted amendment to be in compliance."

_____ List of additional changes made in the adopted amendment that the State Land Planning Agency did not previously review;

_____ List of findings of the local governing body, if any, that were not included in the ordinance and which provided the basis of the adoption or determination not to adopt the proposed amendment;

_____ Statement indicating the relationship of the additional changes not previously reviewed by the State Land Planning Agency in response to the comment letter from the State Land Planning Agency.

FLORIDA DEPARTMENT OF Environmental Protection

Marjory Stoneman Douglas Building
3900 Commonwealth Boulevard
Tallahassee, FL 32399

Ron DeSantis
Governor

Jay Collins
Lt. Governor

Alexis A. Lambert
Secretary

October 24, 2025

Susan E. Poplin, Administrator of Comprehensive Planning
Tallahassee-Leon County Planning Department
300 South Adams Street
Tallahassee, FL 32301

Tallahassee-Leon County 25-02ESR Proposed Comprehensive Plan Amendment Expedited Review

The Office of Intergovernmental Programs of the Florida Department of Environmental Protection (Department) has reviewed the above-referenced amendment in accordance with the provisions of Chapter 163, Florida Statutes (F.S.). The Department's review of the proposed policies focused on important state resources and facilities that would be adversely impacted if the amendment is adopted, specifically: air and water pollution; wetlands and other surface waters of the state; federal and state-owned lands and interest in lands, including state parks, greenways and trails and conservation easements; solid waste; and water and wastewater treatment; and the Everglades ecosystem restoration.

Based on our review of the submitted amendment package, the Department provides the following technical assistance comments in addition to the resubmittal of our original comment letter provided on June 16, 2025, for Tallahassee-Leon County 25-01ESR Proposed:

Department staff have reviewed the proposed revisions to the previously transmitted amendment package (25-01ESR) and acknowledge the text changes to the Lake Protection Future Land Use Category, including the removal of the previously proposed Lake Protection Node (LPN) at the Meridian Road and Orchard Pond Parkway/Bannerman Road intersection. The Department recognizes the efforts of the City and County to protect water quality through local regulations and compliance with state stormwater standards and appreciates the Planning Department's response to agency comments on Tallahassee-Leon County 25-01ESR within this proposed transmittal package. However, due to the uncertainty of the final version of the amendment to be adopted, the Department is including the previously submitted comment letter in our response to the proposed Tallahassee-Leon County 25-02ESR to remain in consideration as the amendment process moves forward.

The Department appreciates the opportunity to review and comment on the proposed comprehensive plan amendment and looks forward to receiving the official response to agency comments in the forthcoming adopted amendment transmittals. Should you have questions or require additional information, please contact me at (850) 717-9037 or Lindsay.Weaver@FloridaDEP.gov.

Sincerely,

Lindsay Weaver, Director
Office of Intergovernmental Programs

Tallahassee-Leon County 25-01ESR Proposed Comprehensive Plan Amendment Expedited Review

The Office of Intergovernmental Programs of the Florida Department of Environmental Protection (Department) has reviewed the above-referenced amendment in accordance with the provisions of Chapter 163, Florida Statutes (F.S.). The Department's review of the proposed policies focused on important state resources and facilities that would be adversely impacted if the amendment is adopted, specifically: air and water pollution; wetlands and other surface waters of the state; federal and state-owned lands and interest in lands, including state parks, greenways and trails and conservation easements; solid waste; and water and wastewater treatment; and the Everglades ecosystem restoration.

PROPOSED AMENDMENTS

The proposed amendment replaces the City-County Future Land Use Element and Mobility Element with a new, consolidated Future Land Use and Mobility Element and replaces the existing Future Land Use Map with modifications to future land use categories that generally increase densities and intensities throughout the Urban Service Area (USA). The proposed amendment includes changes to future land use categories, development densities, and the USA boundary. The Department's comments focus on revisions specifically in the Lake Jackson Aquatic Preserve (LJAP) watershed (see Policy 2.8.7, p. 20 and Future Land Use Map). These revisions include 1) Land use categories changing from Rural to Lake Protection (LP) over a substantial acreage within the watershed, 2) Establishment of a new Lake Protection Node (LPN) at Meridian Road and Orchard Pond Parkway/Bannerman Road, and 3) Significant density bonuses for residential and commercial development within future LP and LPN locations.

The proposed Future Land Use Map changes the designation on approximately 1,755 acres adjacent to LJAP from Rural, with a maximum of 1 unit per 10 acres, to LP. The existing LP category limits densities to 1 unit per 2 acres with density bonuses up to 2 units per acre available to conservation subdivisions and identifies intersections where the LPN zoning district would allow bonuses up to 8 units per acre and 12,500 square feet of non-residential uses. The proposed amendments to the LP category would increase the maximum density and intensity bonuses up to 20 units per acre and 20,000 square feet

of non-residential uses per acre. Of particular concern to the amendment area surrounding LJAP, the revisions to the Lake Protection Policy 2.8.7 include the following provision:

Development of areas over 100 acres may be treated as a Planned Development Special District with the allowable densities, intensities, and uses of the Suburban Neighborhood land use category as long as the planned unit development for the development demonstrates adherence to the Lake Protection stormwater standards, meets design standards, and includes measures for protecting the water quality of Lake Jackson from impacts of the development. (Policy 2.8.7, p. 21)

The Department supports the existing LP land use category and use of LPNs as attempts to address documented and historic scientific concerns regarding degradation and pollution of LJAP. However, the proposed LP category allows for much higher densities in these areas, some directly adjacent to the lake edges. These proposed changes have the potential to add tens of thousands of new housing units and millions of square feet of non-residential uses (commercial, office, community services) adjacent to LJAP, leading to potential degradation of upland habitat, isolated wetlands, and the closed basin lakes through nonpoint source pollution.

IMPORTANT STATE RESOURCES

The Lake Jackson Aquatic Preserve was designated in 1973 to preserve its biologic, aesthetic and scientific value of the natural resource for generations to come. The LJAP encompasses Lake Jackson, Carr Lake and Mallard Pond, totaling 5,100 acres in Leon County. It is the only freshwater lake system designated a State Aquatic Preserve and Outstanding Florida Water (OFW). Currently, the north end of Lake Jackson, Carr Lake and Mallard Pond have good water quality. The South end of Lake Jackson generally has poorer water quality due to the impacts of historic development.

While Lake Jackson is not listed as impaired for nutrients or chlorophyll at this time, during the Department's next assessment for the data period of 2012-2024, Lake Jackson will likely be listed as impaired for chlorophyll-a, Total Nitrogen (TN), and Total Phosphorus (TP). In addition to the impacts of development, the lake is nearing a water quality tipping point due to the drought conditions from the "dry down" since 2020. Normally, natural dry downs are not detrimental to water quality. However, during continued low water conditions, nutrients and eutrophication tend to accumulate under lower volume of water, especially from the southern end of the lake.

DEPARTMENT COMMENTS

Although the proposed LP land use would require new development or redevelopment to be on central water and sewer within the USA (where available) and meet the highest of stormwater treatment standards, the Department is concerned that these proposed updates may conflict with the original intent of the LP category and could negatively impact the upland and wetland habitat corridors of the lakes, and ultimately water quality:

- Any dense development within the sub-basins would affect the water quality of LJAP through increases in traffic and expansion of infrastructure necessary to support the increased development.

- Further intensive development in the sub-basins could alter their ability to absorb runoff, resulting in more frequent discharges into the lakes.
- The Lake Protection land use category was established in 1990, and the provisions of Sec. 10-6.616 of the Land Development Code were enacted in 1991 for the protection of Lake Jackson. Removing the low-density components of the Lake Protection category and adding a new LPN in proximity to the LJAP when the lake system is under stress and still recovering from cyclical and natural dry downs for the last 25 years is presumably not prudent.
- The establishment of a new LPN location at the intersection of Orchard Pond Parkway/Bannerman Road and Meridian Road with higher density bonuses does not appear to be compatible with lake protection being in such proximity to Mallard Pond and Carr Lake (part of LJAP) and Special Development Zones A and B.

In addition to concerns regarding potential high-density development in the LP category, the overall changes to the existing future land use categories and Future Land Use Map have the potential to adversely impact water quality within the boundaries of the Upper Wakulla River and Wakulla Springs BMAP, which has been identified as an impaired Outstanding Florida Spring (OFS). The Florida Springs and Aquifer Protection Act (Sections 373.801-.813, F.S.) identifies and outlines actions the Department must take to address and restore impaired OFS and provides special protection by prohibiting certain activities in their vicinity.

With the proposed increases in density and intensity of existing land uses throughout the amendment area, appropriate measures should be taken to minimize any additional nutrient loading to the springshed. These measures include the proper treatment and disposal of wastewater in accordance with BMAP requirements, implementation of current and future onsite sewage treatment and disposal system (OSTDS) prohibitions, stormwater controls, and the implementation of adequate sediment and erosion control practices to mitigate any groundwater or surface water impacts. The Department also recommends implementing actions for conservation of green space and/or pervious area as much as practicable to assist with stormwater conveyance, groundwater recharge, and water quality integrity.

CONCLUSION

The Department has concerns that proposed changes in land use in the comprehensive plan would lead to adverse impacts on water quality and habitat in Lake Jackson Aquatic Preserve. According to the LJAP Management Plan (2020):

> *"The north end of the lake is currently minimally developed but is facing pressure from a growing Leon County population. The water quality in this portion of the lake is considered good, but if development increases at the same density seen in the south end of Lake Jackson watershed, water quality is likely to be negatively impacted. Local growth patterns and expected population increase for the county are important factors when developing a comprehensive lake management plan for the aquatic preserve. Cooperation and partnership between residents,*

developers, and governmental agencies will help facilitate responsible growth practices that will help restore the environment within the aquatic preserve." (p. 17).

The Department recommends exploring alternate proposals for the areas of concern, including options such as conserving Rural acreage in the drainage basin, preserving original LP and LPN provisions, and decreasing proximity of new LPNs to the aquatic preserve.

The Department appreciates the opportunity to provide comments on the proposed comprehensive plan and requests that the County address these concerns prior to adoption. Should you have questions or require additional information, please contact me at (850) 717-9037 or Lindsay.Weaver@FloridaDEP.gov.

Sincerely,

Lindsay Weaver, Environmental Specialist II

Re: Amendment Package Reference Number: Leon County – Tallahassee 25-02ESR

Dear Ms. Poplin,

The Florida Department of Agriculture and Consumer Services (the "Department") received the above-referenced proposed comprehensive plan amendment and has reviewed it pursuant to the provisions of Chapter 163, Florida Statutes to address any potential adverse impacts to important state resources or facilities related to agricultural, aquacultural, or forestry resources in Florida if the proposed amendment(s) are adopted. Based on our review of the amendment(s) submitted by your county, the Department has the following comments regarding the proposed changes:

State forests are managed by the Florida Forest Service in accordance with their respective 10-year Land Management Plans (F.S.253.034), which define land uses and outline major concepts that will guide management activities.

Most of the Natural Areas defined in this category are managed with frequent prescribed fire to meet objectives such as; ecological restoration and maintenance, wildlife habitat improvement, forest pest prevention and control, public access and aesthetics, and hazardous fuel reduction to protect communities and forest resources from catastrophic wildfires.

Please contact me at CompPlans@FDACS.gov if you have any questions.

Sincerely,

Thomas Poucher
Deputy Commissioner

FLORIDACOMMERCE

Ron DeSantis GOVERNOR
J. Alex Kelly SECRETARY

June 18, 2025

The Honorable Brian Welch
Chair, Leon County
Board of County Commissioners
301 South Monroe Street
Tallahassee, Florida 32301

Dear Chairman Welch,

FloridaCommerce has reviewed the Leon County proposed comprehensive plan amendment (Amendment No. 25-01ESR), received on May 19, 2025, pursuant to the expedited state review process in Section 163.3184(2) and (3), Florida Statutes (F.S.). We have identified no comments related to adverse impacts to important state resources and facilities within FloridaCommerce's authorized scope of review.

We are, however, providing three technical assistance comments consistent with Section 163.3168(3), F.S. The technical assistance comments will not form the basis of a challenge. They are offered either as suggestions which can strengthen the County's comprehensive plan in order to foster a vibrant, healthy community or is technical in nature and designed to ensure consistency with the Community Planning Act in Chapter 163, Part II, F.S. The technical assistance comments are:

Technical Assistance Comment: Planning Periods: The County should consider revising the proposed Policy 2.1.1 to: (1) state a meaningful and predictable period of time that identifies the specific years that are covered by the short-term 10-year planning period, and (2) clarify that both the short-term and long-term planning periods should be considered for amendment during the Evaluation and Appraisal Review process. In addition, the County should support the proposed updated planning periods with updated relevant and appropriate data and analysis of public facilities (transportation, potable water, potable water supply, sanitary sewer, solid waste, stormwater and recreation).

Technical Assistance Comment: Land Use Density and Intensity Standards: The County should consider revising the proposed Policy 3.6.4 to establish meaningful and predictable maximum residential density and non-residential intensity of use standards for the density and intensity incentives (bonuses) to meet the requirements of section 163.3177(1) and (6)(a)1., F.S.

Technical Assistance Comment: Future Transportation Maps: The County should consider revising the proposed Future Transportation Map series (Mobility Maps) to depict the proposed transportation system features regarding the functional classification and number of lanes for each roadway as required by section 163.3177(6)(b)1., F.S., and include the Context Classification Map that is referenced in proposed Policy 6..3.3.

The County should act by choosing to adopt, adopt with changes, or not adopt the proposed amendment. For your assistance, we have enclosed the procedures for adoption and transmittal of the comprehensive plan amendment. In addition, the County is reminded that:

- Section 163.3184(3)(b), F.S., authorizes other reviewing agencies to provide comments directly to the County. **If the County receives reviewing agency comments and they are not resolved, these comments could form the basis for a challenge to the amendment after adoption.**

- **The second public hearing,** which shall be a hearing on whether to adopt one or more comprehensive plan amendments, **must be held within 180 days** of your receipt of agency comments or the amendment shall be **deemed withdrawn** unless extended by agreement with notice to FloridaCommerce and any affected party that provided comment on the amendment pursuant to Section 163.3184(3)(c)1., F.S.

- **The adopted amendment must be transmitted to FloridaCommerce within ten working days after the final adoption hearing or the amendment shall be deemed withdrawn pursuant to section 163.3184(4)(e)2., F.S.** Under Section 163.3184(3)(c)2. and 4., F.S., the **amendment effective date** is 31 days after FloridaCommerce notifies the County that the amendment package is complete or, if challenged, until it is found to be in compliance by FloridaCommerce or the Administration Commission.

If you have any questions concerning this review, please contact Scott Rogers, Regional Planning Administrator, by telephone at (850)-717-8510 or by email at Scott.Rogers@Commerce.fl.gov.

Sincerely,

James D. Stansbury, Chief
Bureau of Community Planning and Growth

SUBMITTAL OF ADOPTED COMPREHENSIVE PLAN AMENDMENTS

FOR EXPEDITED STATE REVIEW

Section 163.3184(3), Florida Statutes

NUMBER OF COPIES TO BE SUBMITTED: Please submit electronically using FloridaCommerce's electronic amendment submittal portal "**Comprehensive Plan and Amendment Upload**" (*https://flcom.my.salesforce-sites.com/cp/*) **or** submit three complete copies of all comprehensive plan materials, of which one complete paper copy and two complete electronic copies on CD ROM in Portable Document Format (PDF) to the State Land Planning Agency and one copy to each entity below that provided timely comments to the local government: the appropriate Regional Planning Council; Water Management District; Department of Transportation; Department of Environmental Protection; Department of State; the appropriate county (municipal amendments only); the Florida Fish and Wildlife Conservation Commission and the Department of Agriculture and Consumer Services (county plan amendments only); and the Department of Education (amendments relating to public schools); and for certain local governments, the appropriate military installation and any other local government or governmental agency that has filed a written request.

SUBMITTAL LETTER: Please include the following information in the cover letter transmitting the adopted amendment:

_____ State Land Planning Agency identification number for adopted amendment package;

_____ Summary description of the adoption package, including any amendments proposed but not adopted;

_____ Identify if concurrency has been rescinded and indicate for which public facilities. (Transportation, schools, recreation and open space).

_____ Ordinance number and adoption date;

_____ Certification that the adopted amendment(s) has been submitted to all parties that provided timely comments to the local government;

_____ Name, title, address, telephone, FAX number and e-mail address of local government contact;

_____ Letter signed by the chief elected official or the person designated by the local government.

ADOPTION AMENDMENT PACKAGE: Please include the following information in the amendment package:

_____ In the case of text amendments, changes should be shown in strike-through/underline format.

_____ In the case of future land use map amendments, an adopted future land use map, **in color format,** clearly depicting the parcel, its future land use designation, and its adopted designation.

_____ A copy of any data and analyses the local government deems appropriate.

Note: If the local government is relying on previously submitted data and analysis, no additional data and analysis is required;

_____ Copy of the executed ordinance adopting the comprehensive plan amendment(s);

Suggested effective date language for the adoption ordinance for expedited review:

> "The effective date of this plan amendment, if the amendment is not timely challenged, shall be 31 days after the state land planning agency notifies the local government that the plan amendment package is complete. If the amendment is timely challenged, this amendment shall become effective on the date the state land planning agency or the Administration Commission enters a final order determining this adopted amendment to be in compliance."

_____ List of additional changes made in the adopted amendment that the State Land Planning Agency did not previously review;

_____ List of findings of the local governing body, if any, that were not included in the ordinance and which provided the basis of the adoption or determination not to adopt the proposed amendment;

_____ Statement indicating the relationship of the additional changes not previously reviewed by the State Land Planning Agency in response to the comment letter from the State Land Planning Agency.

Re: Amendment Package Reference Number: Leon County 24-01ESR

Dear Susan Poplin,

The Florida Department of Agriculture and Consumer Services (the "Department") received the above-referenced proposed comprehensive plan amendment on April 11, 2024. The Department has reviewed the proposed amendment pursuant to Section 163.3184, Florida Statutes, for any adverse impacts to important state resources or facilities related to agriculture, forestry, and aquaculture issues.

The Department has no comments on the above-referenced proposed comprehensive plan amendment as presented.

Please contact me at CompPlans@FDACS.gov if you have any questions.

Sincerely,

Steven Hall

Steven Hall
Assistant Deputy Commissioner

LAND USE AND MOBILITY ELEMENT
GOALS, OBJECTIVES AND POLICIES

Goal 1 [LM] – A Healthy Environment:

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 1.1 – Identification of Natural Resources and Historic Features~~:~~ (City of Tallahassee/Leon County):

Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Policy 1.1.1 – Geographic Data~~:~~ (City of Tallahassee/Leon County):

Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network
- Primary Springs Protection Zone
- Perpetual conservation easements

Policy 1.1.2 – Designated Canopy Roads: (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties: (City of Tallahassee/Leon County): Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Policy 1.1.4 – Soils and Water Features: (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Objective 1.2 – Preservation of Natural Areas: (City of Tallahassee/Leon County):
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 1.2.1 – Acquisition of Conservation and Preservation Lands: (City of Tallahassee/Leon County):
The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

Policy 1.2.2 – Environmental Analysis: (City of Tallahassee/Leon County):
Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation:

(City of Tallahassee/Leon County): The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features~~:~~ (City of Tallahassee/Leon County):

~~Ensure~~The City and the County shall consider context-based beautification, landscaping, and stormwater ~~facilities~~facility and land development regulations that ~~support~~provide environmental protection ~~are integrated into existing and new~~measures for transportation corridors, where feasible by ~~methods such as~~:

a. Increasing the amount of site and adjacent green spaces/open spaces.

b. Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff.

c. Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built.

d. Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan.

e. Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

Policy 1.2.5 – Connected Open Space~~:~~ (City of Tallahassee/Leon County):

Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected greenspaces.

Policy 1.2.6 – Conservation Element~~:~~ (City of Tallahassee/Leon County):

Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

Objective 1.3 – Access to Parks and Recreation~~:~~
(City of Tallahassee/Leon County): Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

Policy 1.3.1 – Greenways and Trails Master Plan~~:~~

(City of Tallahassee/Leon County): The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

Policy 1.3.2 – Urban Recreation Spaces~~:~~ (City of Tallahassee/Leon County):

Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces~~:~~ (City of Tallahassee/Leon County):
All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation~~:~~ (City of Tallahassee/Leon County):
All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Objective 1.4 – Urban Forests~~:~~ (City of Tallahassee/Leon County):
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

Policy 1.4.1 – Priority Planting Sites~~:~~ (City of Tallahassee/Leon County):
The City and County shall identify priority planting sites to guide the planting of trees~~, reduce~~ to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

Policy 1.4.2 – Species Suitability~~:~~ (City of Tallahassee/Leon County):
The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

Policy 1.4.3 – Public Tree Inventory~~:~~ (City of Tallahassee/Leon County):
The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

Policy 1.4.4 – Public Development Tree Prioritization~~:~~ (City of Tallahassee/Leon County):
Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance~~.~~ without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

Policy 1.4.5 – Private Development Tree Standards~~:~~
(City of Tallahassee/Leon County): Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees-

Objective 1.5 – Green infrastructure~~:~~ (City of Tallahassee/Leon County):
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

Policy 1.5.1 – Community Wide Green Infrastructure~~:~~
(City of Tallahassee/Leon County): The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- ~~—~~Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide ~~an~~a feasible opportunity for street-level stormwater management. ~~The land development regulations shall specify the range of retrofits that qualify for these incentives.~~
- Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy ~~within the City of Tallahassee~~ through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors.
- Support off-site regional stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).
- Supporting transit and alternative transportation modes.

Policy 1.5.2 – Site Specific Green Infrastructure~~:~~
(City of Tallahassee/Leon County): Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Policy 1.5.3 – Design Guidelines for Green Infrastructure~~:~~ (City of Tallahassee/Leon County):
Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

Objective 1.6 – Community Resilience~~:~~ (City of Tallahassee/Leon County):
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

Policy 1.6.1 – Energy Efficiency~~:~~ (City of Tallahassee/Leon County):
The City and County shall develop regulations and design standards for compact development~~-~~

and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

Policy 1.6.2 – Multimodal Connectivity~~:~~ (City of Tallahassee/Leon County):
Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances.~~-~~Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

Policy 1.6.3 – Smart Growth Strategies for Community Resilience~~:~~ (City of Tallahassee/Leon County):
The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

Policy 1.6.4 – Urban Heat Islands~~:~~ (City of Tallahassee/Leon County):
The local governments shall develop strategies that minimize effects of heat islands, such strategies may include:

a. Tree and vegetation cover.
b. Green roofs and rooftop gardens.
c. Roof coatings or materials with high albedo that significantly reflect heat away from a building.
d. Alternative pavements that mitigate heat island effects.

Policy 1.6.5 – Resiliency of Transportation ~~Corridor Resilience:~~ Facilities (City of Tallahassee/Leon County): Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.6.6 – Urban Forests and Climate Resilience~~:~~ (City of Tallahassee/Leon County):
Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

DRAFT

Objective 1.7 – Intergovernmental Coordination~~:~~

(City of Tallahassee/Leon County): Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

Policy 1.7.1 – Key Regional Partners~~:~~ (City of Tallahassee/Leon County):
Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

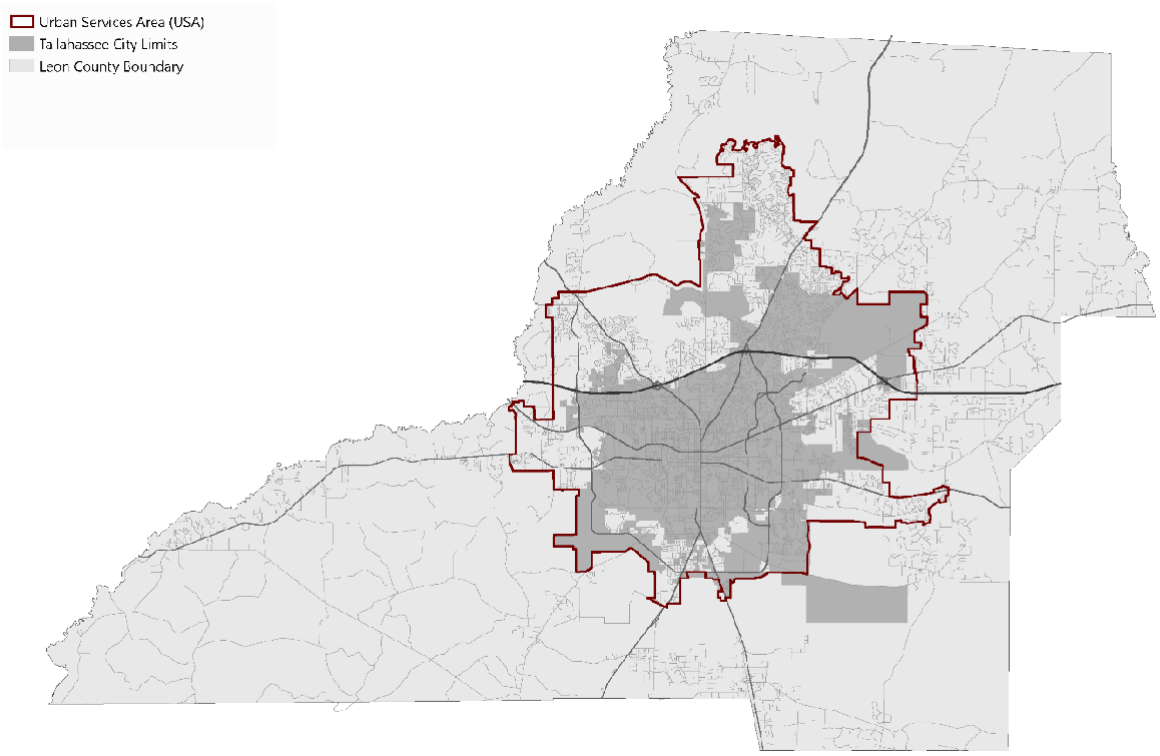
Policy 1.7.2 – Colleges and Universities~~:~~ (City of Tallahassee/Leon County):
Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide ~~diverse~~a variety of lifestyle ~~choice~~and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.



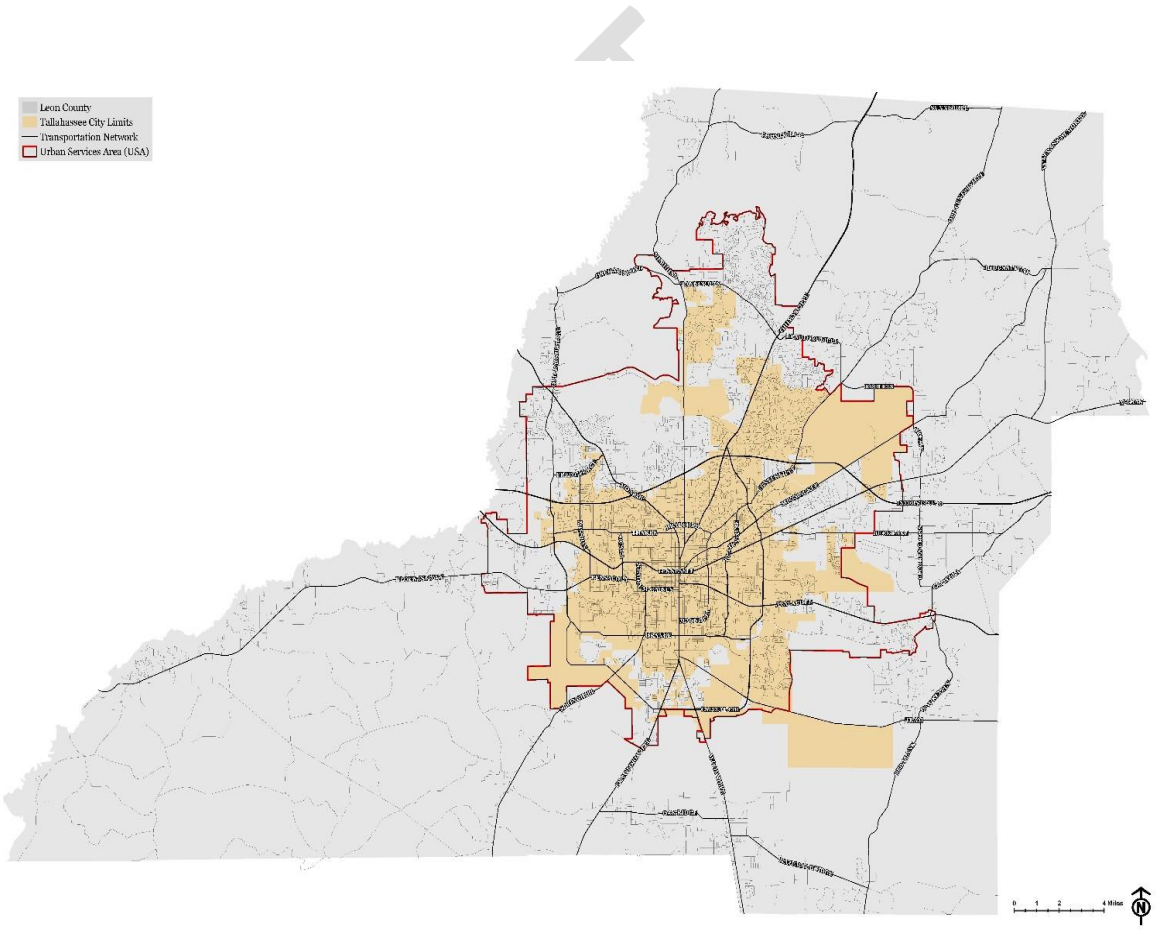
Objective 2.1 – Growth and Population Accommodation~~:~~
(City of Tallahassee/Leon County): Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

Policy 2.1.1 – Comprehensive Planning Periods~~:~~ (City of Tallahassee/Leon County):
The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon~~.~~ from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

Policy 2.1.2 – Population Projections~~:~~ (City of Tallahassee/Leon County):
Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

Objective 2.2 – Efficient Growth~~:~~ (City of Tallahassee/Leon County):
To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Policy 2.2.1 – Urban Services Area (USA) (City of Tallahassee/Leon County):



To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

Policy 2.2.2 – Improvement of Capital Infrastructure: (City of Tallahassee/Leon County):
Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

Policy 2.2.3 – Planning for Urban Services: (City of Tallahassee/Leon County): Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

Policy 2.2.4 – Urban Services Outside of the Urban Services Area: (City of Tallahassee/Leon County):

Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process. Emergency repairs and improvements necessary to maintain the public health, safety, and well being shall be allowed without inclusion in the capital improvement planning process.

Policy 2.2.5 – Densities and Intensities~~:~~

~~The Future Land Use Map is intended to reflect~~ **(City of Tallahassee/Leon County):** Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map, and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual ~~sites~~site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

Policy 2.2.6 – Exceptions to the Urban Services Area~~:~~
(City of Tallahassee/Leon County): Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and ~~the Woodville~~ Rural Community in Woodville or west of the ~~Woodville~~ Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

Policy 2.2.7 – Roadway Improvements~~:~~ (City of Tallahassee/Leon County):
The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

Policy 2.2.8 – Adaptive Reuse, Infill Development, and Redevelopment~~:~~ (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

Policy 2.2.9 – Greyfields & Brownfields~~:~~ (City of Tallahassee/Leon County):
The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses where appropriate, waiver of development fees or some combination of the two.

Policy 2.2.10 – ~~Corridor Preservation:~~
Transportation Corridors (City of Tallahassee/Leon County): Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 334.03(29)—and protect it from ~~building~~development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency, to improve coordination between land use and transportation, and to minimize the adverse~~-~~ social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below ~~and on the~~ . This map, table and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected~~Corridor Preservation Map and the Long-Range Transportation Plan.~~

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**~~ROW Width (ft.)[1-3]~~**
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. ~~Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review.~~ Actual road location and design will be determined by specific corridor ~~and~~alignment studies, engineering studies, or other design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of- way needs for future corridors:

   a. Space for sidewalks to provide safe and convenient movement of pedestrians.

   b. The provision of bike lanes or separate bike paths.

   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

   d. Accommodation of stormwater at the surface or in storm drains.

   e. Accommodation of auxiliary lanes at intersections.

   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

   g. Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

PLANNING DEPARTMENT

March 21, 2025

Objective 2.3 – Public Infrastructure~~:~~ (City of Tallahassee/Leon County):
Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Policy 2.3.1 – Public Facilities Siting~~:~~ (City of Tallahassee/Leon County):
Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

Policy 2.3.2 – Public Infrastructure Resilience~~:~~ (City of Tallahassee/Leon County):
To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

Policy 2.3.3 – School Siting Review & Criteria~~:~~ (City of Tallahassee/Leon County):
All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

Objective 2.4 – Preservation of Rural Areas~~:~~ (City of Tallahassee/Leon County):
Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

Policy 2.4.1 – Transfer of Development Rights~~:~~ (City of Tallahassee/Leon County):
A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

Policy 2.4.2 – Criteria for Urban Service Area Expansion (City of Tallahassee/Leon County):
To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

Objective 2.5 – Reconnecting Urban Sprawl~~:~~ (City of Tallahassee/Leon County):
Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles ~~travelled~~traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 2.5.1 – Suburban retrofit~~:~~ (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments ~~with complete streets~~using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated ~~context~~Roadway Context Classification and available right-of-way.
- ~~Build interconnected~~Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

Objective 2.6 – Recognizable Places~~:~~ (City of Tallahassee/Leon County):

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces~~:~~ (City of Tallahassee/Leon County):

The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

Policy 2.6.2 – Gateway Corridors~~:~~ (City of Tallahassee/Leon County):

Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

Policy 2.6.3 – North Monroe Corridor~~:~~ (City of Tallahassee/Leon County):

In addition to the Gateway Corridor components identified in Policy 2.6.~~3~~2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for ~~nonconforming~~non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.4 – Woodville Sense of Place~~:~~ (Leon County):
Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.5 – Future Downtown Development~~:~~ (City of Tallahassee):
The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

Policy 2.6.6 – Bradfordville Study Area~~:~~ (Leon County):
The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

Objective 2.7 (City of Tallahassee) – Multimodal Transportation District (MMTD):
Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 2.7.1 – MMTD Implementation~~:~~ (City of Tallahassee):
The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County ~~departments through the Multimodal Transportation District Management Plan and corresponding MMTD Code.~~

departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

Policy 2.7.2 ~~—~~Land Use Within the MMTD~~:~~ (City of Tallahassee):

The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

a. Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities.

b. Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD~~:~~ (City of Tallahassee):

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

e. Parking location.

Policy 2.7.4 – Minimum Parking Requirements~~:~~ (City of Tallahassee):

Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

Policy 2.7.5 – Transit in the MMTD~~:~~ (City of Tallahassee):

The MMTD ~~and energy efficiency districts~~ shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation~~:~~ (City of Tallahassee):

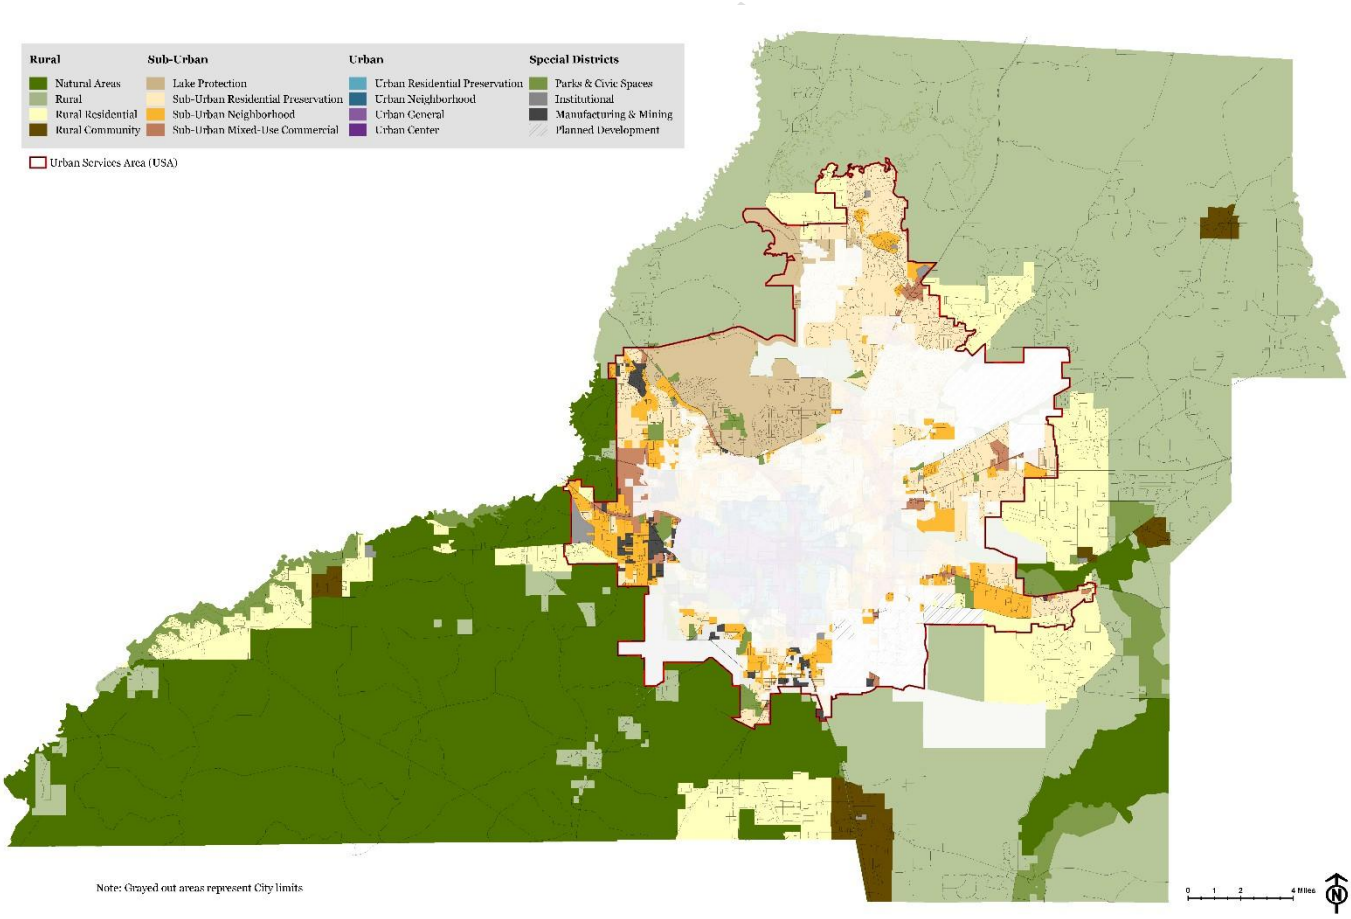
Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

Policy 2.7.7 – MMTD Evaluation~~:~~ (City of Tallahassee):

The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.

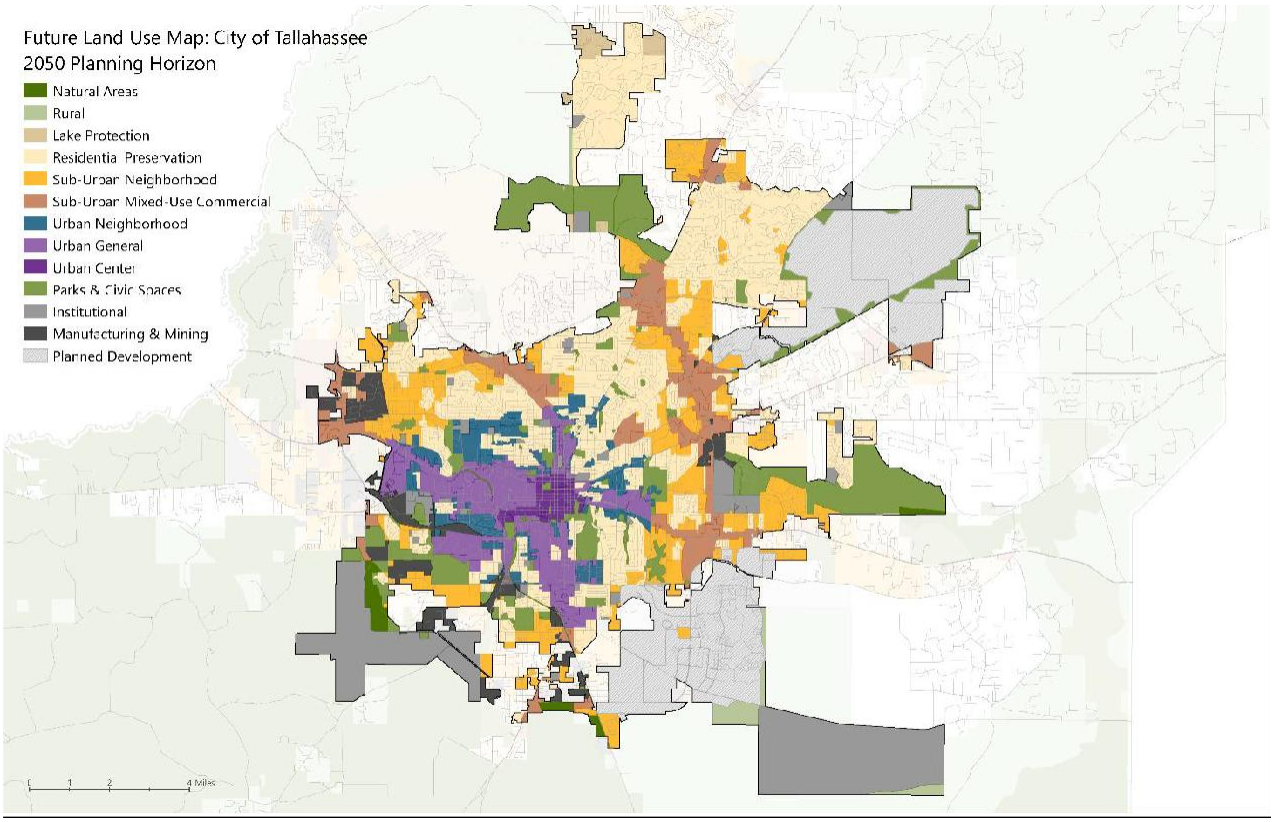
Objective 2.8 – Community Context~~:~~ (City of Tallahassee/Leon County):

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context



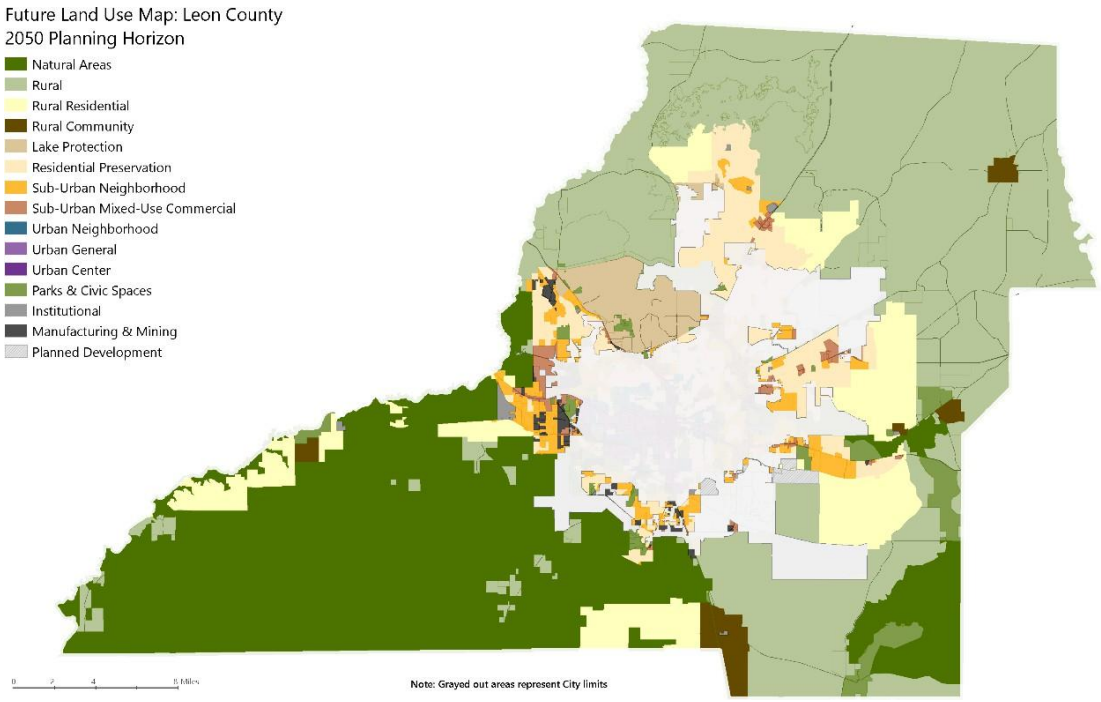
areas shall be used as the basis for planning and design of land uses, transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.

Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map~~:~~ (City of Tallahassee/Leon County):



Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses~~:~~ (City of Tallahassee/Leon County):



The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories within the Urban Services Area with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Future Land Map: City of Tallahassee

Future Land Use Map: Leon County

Future Land Use Categories (FLUCs)

Policy 2.8.3 – Natural Areas Future Land Use Category~~:~~ (City of Tallahassee/Leon County):
State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. No residential uses shall exceed a density of one dwelling unit per 10 acres.

The following special conditions shall apply to the Natural Areas future land use category:

1. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.
2. Accessory uses directly associated with the operation of silvicultural, wildlife conservation, and recreational hunting shall be allowed.
3. Light infrastructure shall be allowed within the Natural Areas future land use category, provided there is no reasonable alternative location outside of Natural Areas future land use areas that provide the same public benefit.
4. State forests managed by the Florida Forest Service may be managed with frequent prescribed fire to meet ecological restoration and maintenance, wildlife habitat improvement, forest pest prevention, access and aesthetic control, and hazardous fuel reduction objectives in accordance with their respective 10-year Land Management Plans (F.s. 253.034).

Policy 2.8.4 – Rural Future Land Use Category~~:~~ (City of Tallahassee/Leon County):

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of one dwelling unit per ~~ten~~10 acres.

Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways with development standards provided in land development code regulations for these nodes, except for non-residential uses supporting ecotourism activities, which shall be allowed near the waterbodies and natural features that are the focus of the ecotourism activity.

Community services, light infrastructure, and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 5,000 square feet per acre, with the primary structure not to exceed 7,500 square feet.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, or natural resource-based ecotourism activities are prohibited. This includes, but is not limited to, golf course, drag strips, and racetracks.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

The following special conditions shall apply to the Rural Land Use category:

1. Development proposals within the Rural Land Use category shall be evaluated for compatibility with adjacent agricultural and silvicultural uses and shall consider the land management activities associated with such uses, including prescribed fires which result in smoke. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural Land Use category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Services Area or a designated Rural Community.
3. Non-residential development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register as of July 6, 2015, shall be considered conforming.
5. Because urban services are not planned or programmed for areas within the Rural land use category, the Rural land use category shall not be applied to properties within the Urban Services Area.

Policy 2.8.5 – Rural Residential Future Land Use Category~~:~~ (Leon County):
The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

~~Minor~~ Community facilities, minor commercial activities, and minor offices are permitted ~~at a~~. The maximum ~~intensity of 5~~allowable gross square footage in Rural Residential may not exceed 20,000 square feet per acre~~.~~ for minor commercial and 100,000 square feet per acre for neighborhood commercial and shall be further detailed in the land development code.

Industrial, office, and more intensive commercial land uses are prohibited

due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

The following special conditions shall apply to the Rural Residential Land Use category:

1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site.

~~1.~~ Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.

2. To protect rural areas from premature development, facilitate infill and redevelopment inside the Urban Services Area, and in recognition of the significant area already mapped as Rural Residential, no additional lands designated Rural or Rural Residential shall be converted to a more dense or intense land use category unless it is within the Urban Services Area and adjoining lands are also within the designated Urban Services Area.
3. Existing, lawfully established, non-residential uses within the Rural Residential land use category that are compatible with surrounding uses shall be considered permitted uses.
4. Existing lots of record shall be considered vested for the purposes of single-family residential use regardless of lot size or density provided all other development standards can be met.
5. Drive-in and drive-thru facilities are not permitted in Rural Residential.

Policy 2.8.6 – Rural Community Future Land Use Category~~:~~ (Leon County):
The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of ~~4~~2 dwelling units per acre. Where central sewer is available, the maximum density allowed is 8 dwelling units per acre.

~~Minor~~Community facilities, minor offices and small to moderate-sized commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage clustering of businesses to discourage "strip" development, provide for ~~a minimum of~~utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

The following special conditions shall apply to the Rural Community Land Use category:

1. Water and wastewater systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development.
2. Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements.

Policy 2.8.7 – Lake Protection Future Land Use Category~~:~~ (City of Tallahassee/Leon County):

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner~~ with minimal impact to~~, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary. The boundaries of the Lake Protection category may be applied to areas outside but adjacent to the Lake Jackson basin where application of the category promotes cohesive development patterns along a mixed-use corridor or node.

The Lake Protection category shall allow for residential uses at a density of one dwelling unit per two acres. To encourage compact and efficient development, three density bonus options are available for properties within the category:

- A residential density of up to ~~four~~4 dwelling units per acre may be permitted within developments designed as a Conservation Subdivision, where served by central water and sewer systems.
- A residential density of up to 8 dwelling units per acre may be permitted within the Lake Protection Corridor (LPC) zoning district, where served by central water and sewer systems.
- A residential density of up to 20 dwelling units per ~~gross~~ acre may be permitted for properties on US Highway 27 within the Lake Protection Node (LPN) zoning district and 8 dwelling units per acre for the Bannerman Road and Bull Headley Road LPN zoning district, where served by central water and sewer systems, and where design standards, including buffering to adjacent low and density residential, as established in the land development code is met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted within areas designated with the LPN and LPC zoning districts. Within these districts, single use, non-residential development shall be allowed at a maximum intensity of 10,~~000 square~~000square feet per acre in the LPC zone and 20,000 square feet per acre in the LPN zone where buffering to low-density residential as established in the land development code is met. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 square feet per acre in the LPC zone and a bonus of 10,000 square feet per acre in the LPN zone.

Community services, light infrastructure, and recreational uses shall be permitted. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet per acre.

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The local governments shall implement the Lake Protection Land Use Category with a minimum of three zoning districts, including Lake Protection, LPC, and LPN.

2. The LPN zoning district shall only be permitted at the following intersections:

    a. Highway 27 North and Sessions Road

    b. Highway 27 North and Capital Circle NW/Old Bainbridge Road

    c. Highway 27 North and Fred George Road

    d. Bannerman Road and Bull Headley Road

    ~~e. Bannerman Road/Orchard Pond Parkway and Meridian Road~~

    The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.

3. The LPC zoning district shall only be permitted along Highway 27. The exact extent of the LPC shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the centerline of Highway 27~~.~~ and shall not include areas within a Special Development Zone (SDZ).

4. As an alternative to large-lot developments, ~~Clustered~~Conservation Subdivisions shall be permitted within the Lake Protection land use category and shall include the following:

    a. Contain a minimum of 60% open space preserved in perpetuity through a conservation easement and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity; and

    ~~b.~~ Be developed at a maximum gross density of two dwelling units per acre or a maximum gross density of four dwelling units per acre~~; and~~

    ~~c.~~b. ~~Be~~ when served by central water and sewer systems.

5. Land development regulations shall include stormwater treatment standards for all development and redevelopment within the Lake Protection land use category. To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites.

6. Minimum open space rquirements, Low Impact Development strategies, and maximum building footprints shall be included as development standards for the zoning districts implementing the Lake Protection land use category. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.

7. The land development regulations shall provide provisions for ~~nonconforming~~legally established non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards, including buffering to adjacent low-density uses, and water quality standards for the Lake Jackson basin established in land development regulations.

~~8. Development of areas over 100 acres may be treated as a Planned Development Special District with the allowable densities, intensities, and uses of the Suburban Neighborhood land use category as long as the planned unit development for the development demonstrates adherence to the Lake Protection stormwater standards, meets design standards, and includes measures for protecting the water quality of Lake Jackson from impacts of the development.~~

Policy 2.8.8 – ~~Sub-Urban~~ Residential Preservation Future Land Use Category~~:~~ (City of Tallahassee/Leon County):

~~The intent of Sub-Urban Residential Preservation category is to preserve established neighborhoods and their development patterns. The Sub-Urban Residential Preservation land use category allows for low-density residential uses and neighborhood supportive facilities in a manner consistent with existing development patterns and neighborhood character. Neighborhood supportive facilities consist of community services, recreational amenities, and light infrastructure.~~

~~The Sub-Urban Residential Preservation category shall allow for residential uses at a maximum density of eight dwelling units per acre. Allowed residential housing types are single-family detached houses, single-family attached, and duplexes. Pedestrian safety and comfort shall be prioritized over vehicle speed. Commercial uses are not permitted in the Sub-Urban Residential Preservation category.~~

~~Community services and recreational facilities are limited to a maximum of 5,000 square feet of building area, or a sewage flow estimated not to exceed 900 gallons per day, where central sanitary sewer is not available. Non-residential uses, other than community services and recreational facilities, are not permitted.~~

~~The following special conditions shall apply to the Sub-Urban Residential Preservation Future Land Use category and shall be included in the City and County Land Development Regulations:~~

~~The Sub-Urban~~Characterized by existing homogeneous residential areas within the community that are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development primarily will consist of infill due to the built-out nature of the areas.

Commercial, including office as well as any industrial land uses, are prohibited. Future arterials and expressways should be planned to minimize impacts within this category. Single family, townhouse, duplexes and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in this policy, existing legally established residential uses exceeding 6 units per acre shall be deemed conforming. Such uses may rebuild to existing building lot coverage percentage and density. Expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Nonresidential uses, other than community facilities and recreational facilities are not permitted. Community facilities are limited to a maximum of 60% impervious surface.

~~1.~~ The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet ~~the majority~~most, but not necessarily all of these criteria:

~~a.~~1) Existing land use within the area is predominantly residential~~.~~

~~b.~~2) Majority of traffic is local in nature~~.~~

~~i.~~a) Predominance of residential uses front on local street~~.~~

~~ii.~~b) Relatively safe internal pedestrian mobility~~.~~

~~c.~~3) Densities within the area generally of ~~eight~~six units per acre or less~~.~~

~~d.~~4) Existing residential type and density exhibits relatively homogeneous patterns~~.~~

~~e.~~5) Assessment of stability of the residential area, including but not limited to:

~~i.~~a) Degree of home ownership~~.~~

~~ii.~~b) Existence of neighborhood organizations~~.~~

~~Zoning districts~~

~~2.~~ In order to preserve existing stable and viable residential neighborhoods within the ~~Sub-Urban~~

Residential Preservation ~~Category allowing densities over six units per acre and/or allowing non-residential uses shall only be applied:~~

~~a. To implement a Commission-approved neighborhood plan that was developed with neighborhood participation. The implementation of the plan shall also incorporate neighborhood engagement;~~

~~b. To existing~~ land use category, development ~~exceeding a density of six units per acre; To serve as a transition between high-density residential development, major commercial uses, or arterial roads~~ and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

~~c.~~ Limitation on future commercial intensities adjoining low-density residential ~~neighborhoods; and/or~~

~~d.~~a) ~~To establish new~~preservation neighborhoods ~~on undeveloped property~~.

~~Except when applied to existing development exceeding a density of 6 units per acre or to new neighborhoods on undeveloped property, the implementation of zoning districts allowing more than 6 units per acre shall be accompanied with a plan for addressing compatibility with adjacent residential areas with densities less than 6 units per acre.~~

~~3. Zoning may be permitted at lower densities and intensities than the maximums specified in the Comprehensive Plan to achieve consistency with the intent of this category to preserve neighborhood character.~~

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by meeting land development regulation requirements for buffers, screenings, landscaping, noise, setbacks and stepbacks to be compatible with low density residential development in terms of size and appearance. The factors cited in paragraph (d) below shall be used when determining the compatibility and design techniques. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

b) Limitations on existing light industry adjoining ~~sub-urban~~ residential preservation neighborhoods~~:~~ .

~~4.~~ Expanding or redeveloped light industrial uses adjoining low-density residential areas within the ~~Sub-Urban Residential Preservation~~residential preservation land use category shall mitigate potential negative impacts and provide screening~~,~~ or buffering~~, sound buffering, or an area of low or medium density residential uses~~ between the light industrial uses and the ~~suburban residential preservation neighborhood~~low and medium density residential uses. The factors cited in paragraph (d) below shall be considered when determining compatibility and design techniques.

The design and layout of expanding or redeveloping light industrial uses adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Institutional Special District or the Manufacturing and Mining Special District t and applicable Land Development Regulations.

c) Additional development requirements ~~to provide~~for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions.

~~5.~~ Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) ~~shall be applied to community facilities,~~

~~including ancillary facilities to religious facilities, where they adjoin low density residential areas. Cemeteries or religious facilities used solely for religious functions shall be exempted from these requirements~~between the community facilities and the adjoining residential preservation area.

d) Land ~~development regulations shall address~~use compatibility ~~between areas designated Sub-urban Residential Preservation and areas~~ with ~~new or expanding non-residential uses or high~~low-density residential ~~uses through the provision~~preservation neighborhoods

~~6.~~ A number of ~~neighborhood compatibility standards that address buffering, sound buffering, screening, design standards, and/or~~ factors shall be considered when determining a land use compatible with the ~~provision of "step down"~~residential preservation land use category. The following factors shall continue be maintained in the land development regulations used to determine whether a new development is compatible with existing low density ~~areas between~~residential uses and with the ~~two that have low or medium density or~~ intensity ~~uses~~, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor.

e) Limitations on Planned Unit Developments in the Residential Preservation land use category. Planned Unit Developments proposed within the interior of a Residential Preservation area designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category~~:~~ (City of Tallahassee/Leon County):

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area~~.~~ It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities. Principal uses within the district shall include residential development, neighborhood commercial, and neighborhood supportive facilities such as community ~~services~~facilities, recreational amenities, and light infrastructure.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 dwelling units per acre. Allowed residential building types are single-family detached, single-family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

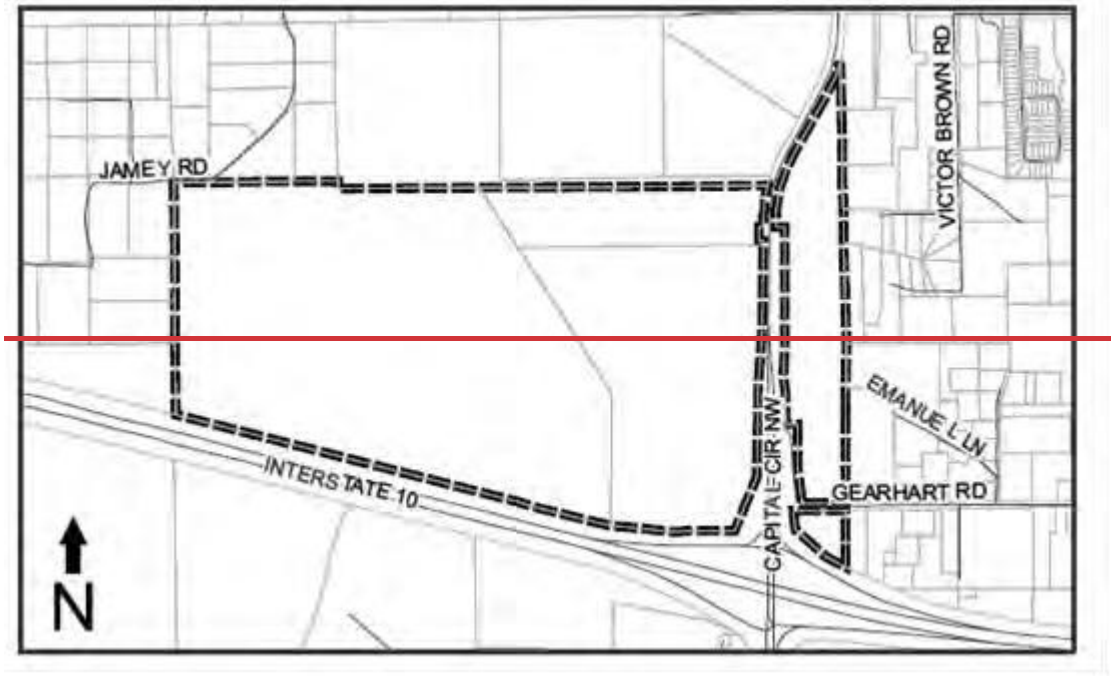
Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

The following special conditions shall apply to the Sub-Urban Neighborhood Future Land Use category:

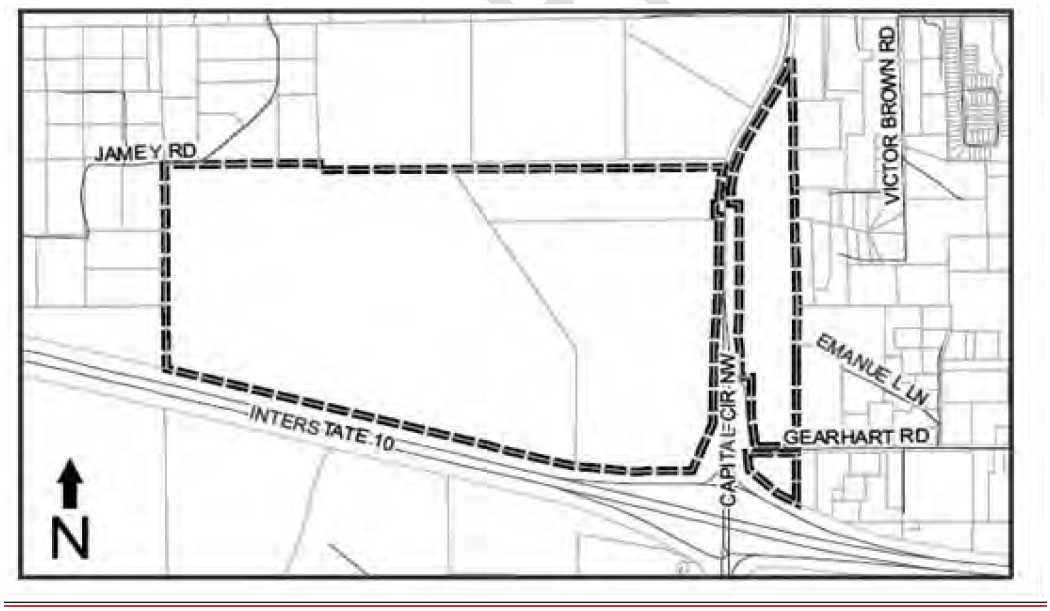
1. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Sub-Urban Neighborhood land use.
2. If central sanitary sewer is not available, non-residential development is limited to a maximum of 900 gallons of wastewater flow per day. Community service facilities are limited to no more than 5,000 square feet, or a sewage flow not to exceed 900 gallons per day. Also, refer to Sanitary Sewer Policies 1.2.3 and 2.1.2 of the Utilities Element of the Comprehensive Plan for additional requirements.

Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category~~:~~ (City of Tallahassee/Leon County):

The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities. An integrated pedestrian and bicycle access system shall be provided to afford safe and accessible foot and bike travel between the land uses. The district is intended to facilitate efficient traffic flow by allowing only land uses developed with comprehensively planned access, egresses, and internal circulation systems through the land development review and approval process.



Residential land uses at a maximum density of up to 45 dwelling units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential uses. Mass transit stops should be located at large commercial centers with appropriate connections established between commercial and residential areas to reduce the automobile dependency of residents and employers. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated.



Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre except for in the scenarios outlined in the special conditions below.

The following special conditions shall apply in the Sub-Urban Mixed Use Commercial Land Use Category:

1. Except within mixed-use centers, larger-scale commercial development shall be buffered from residential neighborhoods.
2. If development within the Sub-Urban Mixed Use Commercial Land Use Category only contains residential land uses, at least 5% of the gross site must be used for passive or active open space such as pocket parks, green space, or trails. The required 5% of the site shall be contiguous.

3. Non-residential development that is a part of a mixed-use development that includes medical centers may have an intensity of up to 80,000 square feet per acre, and up to 176,000 square feet per acre if it includes a hospital.Park Place is a designated Regional Activity Center subject to the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code.

Park Place meets the parameters for a Regional Activity Center as defined in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the map above. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan and the land development code.

Policy 2.8.11 – Urban ~~Residential Preservation~~ Neighborhood Future Land Use Category~~:~~

~~The Urban Residential Preservation category applies to neighborhoods close to the city center that were generally developed prior to the 1960s. The intent of the Urban Residential Preservation category is to preserve these existing historic walkable neighborhoods and their development patterns.~~

~~The Urban Residential Preservation category is intended to provide low to medium density residential uses with allowances for neighborhood-scale commercial uses in a manner consistent with the existing scale, general building heights, general building massing, and general setbacks that contribute to the neighborhood character.~~

~~Neighborhood pedestrian character shall be preserved and/or enhanced. Pedestrian safety and comfort shall be prioritized over vehicle speed.~~

~~Allowed land uses are residential and neighborhood serving non-residential, such as professional and personal services and community services. Auto-oriented uses, such as gas stations or drive-through facilities are prohibited. Permitted non-residential uses are limited to a maximum of 2,500 square feet of heated and cooled space per site.~~

~~A maximum gross residential density of 12 dwelling units per acre is allowed. Permitted housing types are single-family detached, single-family attached, duplexes, triplexes, and fourplexes.~~

~~The following special conditions shall apply to the Urban Residential Preservation Land Use Category:~~

~~1. Zoning districts within the Urban Residential Preservation Category allowing densities over 6 units per acre and/or allowing non-residential uses shall only be applied:~~

~~a. To implement a City Commission-approved neighborhood plan that was developed with neighborhood participation. The implementation of the plan shall also incorporate neighborhood engagement;~~

~~b. To existing development exceeding a density of 6 units per acre;~~

~~c. To serve as a transition between high-density residential development, major commercial uses, or arterial roads and low-density residential neighborhoods; and/or~~

~~d. To establish new neighborhoods on undeveloped property.~~

~~2. Except when applied to existing development exceeding a density of 6 units per acre or to new neighborhoods on undeveloped property, the implementation of zoning districts allowing more than 6 units per acre shall be accompanied with a plan for addressing compatibility with adjacent residential areas with densities less than 6 units per acre.~~

~~3. Zoning may be permitted at lower densities and intensities than the maximums specified in the Comprehensive Plan to achieve consistency with the intent of this category to preserve neighborhood character.~~

~~4. Standards addressing adjacency to protected residential areas including buffers, setbacks, stepbacks, noise, and landscaping shall be included be included in the~~ **(City of Tallahassee** ~~land development regulations to ensure compatibility between uses having residential densities greater than 8 dwelling units per acre and single-family uses, and between and non-residential uses within the Urban Residential Preservation land use.~~

~~5. Land development regulations shall address compatibility between areas designated Urban Residential Preservation and areas with new or expanding non-residential uses or high-density~~

~~residential uses through the provision of neighborhood compatibility standards that address buffering, screening, design standards, and/or the provision of areas with lower density or intensity uses between the Urban Residential Preservation areas and the areas with new or expanding non-residential uses or high-density residential uses.~~

~~6. The land development regulations shall provide provisions for existing nonconforming housing types in the Urban Residential Preservation land use category to be deemed conforming by incorporating site improvements and design standards that promote compatibility and protection of the existing neighborhood character. This provision does not allow new, non-conforming housing types.~~

~~Policy 2.8.12 Urban Neighborhood Future Land Use Category:~~
): The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter ~~strips.~~ strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities. The Urban Neighborhood area shall be characterized by a mix of uses on small lots, with residential uses being the predominant type, and a street network that generally connects to residential neighborhoods along corridors or behind the uses fronting major collectors or arterial roadways. Non-residential neighborhood-scale uses are allowed and intended to integrate into the surrounding neighborhood. Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services,-

small to moderate scale grocery stores, and small pharmacies and offices. ~~Office~~Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum gross density of 26 dwelling units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

A maximum intensity for commercial uses of 30,000 square feet per acre and a maximum intensity for office uses of 30,000 square feet per acre are allowed. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. The number of parking spaces may be reduced to reflect increased pedestrian access.

The following special conditions shall apply to the Urban Neighborhood Land Use Category:

1. Design and development standards for the Urban Neighborhood area shall detail the placement, scale, and relationship between buildings and the street, including landscaping standards, to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Urban Neighborhood land use category.

Policy 2.8.~~13~~12 – Urban General Future Land Use Category~~:~~ (City of Tallahassee):
The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities~~.~~ that are arranged in a manner to promote walkability and bikeability, or reduce automobile use. This category includes a variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of ~~a~~ high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities. A

maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for commercial uses of 60,000 square feet per acre and a maximum intensity for office uses of 60,000 square feet per acre are allowed.

Development in this category located along public frontages shall incorporate uses that emphasize and encourage pedestrian foot traffic and contribute towards a visually-interesting environment for the adjacent public realm. This can be achieved through methods such as high percentage of transparency, frequent pedestrian opening with connections to adjacent streetscapes, and human-scaled architectural details. Development that is primarily served by automobile traffic and generates low foot traffic shall be subject to a maximum intensity of 30,000 square feet per acre.

The following special conditions shall apply to the Urban General Land Use Category:

1. Design and development standards in the land development regulations for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and safety, and a continuous walkable street network throughout the district.

2. Development standards in the Tallahassee Land Development Code ~~shall~~may not require minimum parking requirements for uses in the Urban General land use category.

3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district.

4. Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements.

5. The land development regulations shall include standards for development that do not incorporate uses that emphasize and encourage pedestrian foot traffic or contribute towards a visually-interesting environment for the adjacent public realm. Standards shall include requirements such as enhanced bicycle and pedestrian amenities and streetscaping features, building façade enhancements, and building placement.

Policy 2.8.~~14~~13 – Urban Center Future Land Use Category~~:~~ (City of Tallahassee):
The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal

Transportation District, is to facilitate a shift from cars to pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed-use, pedestrian, bike and transit- oriented development.

~~1.~~2. Future Expansion of the Urban Center land use shall be subject to the following requirements.

   a. The proposed parcels shall be:

      i. Within the existing Downtown Overlay; and

      ii. Contiguous to the existing Urban Center FLUM area.

      iii. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.

      iv. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.8.~~15~~14 – Special Development Districts~~:~~
(City of Tallahassee/Leon County): The following Special Development Districts are created to address unique uses and areas throughout the community:

- Manufacturing and Mining – Heavy industrial land uses that do not, typically, have a defined intensity or density and may have the potential to create significant offsite impacts to surrounding areas, have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic, and vibrations that are not regulated by federal and/or state laws shall be regulated by the City and County.
- Institutional - Heavy infrastructure community facilities which may be public or privately owned or established that provide significant public benefit but may have the potential to create off-site impacts.
- Parks and Civic Spaces – City, County, State and Federal areas utilized for passive and/or active recreation uses. The principal land use will not, typically, have a defined density or intensity.
- Planned Development – Large, undeveloped land areas within the Urban Services Boundary that are generally under single ownership that are required to be master planned prior to

development.

Special Development Districts shall be subject to the provisions of the Comprehensive Plan except where otherwise specified by federal and state laws.

Policy 2.8.~~16~~15 – Manufacturing and Mining Special District~~:~~ (City of Tallahassee/Leon County):

Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services Area.

Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.

The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

- Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
- Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties.
- Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent impacts offsite or require mitigation and/or minimization techniques for impacts. Ancillary commercial uses designed to serve adjacent workers may be permitted.

The following special conditions shall apply to the Manufacturing and Mining Special District:

1. Noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented or mitigated to avoid negative impacts on properties in the vicinity of these uses. The City and Leon County Land Development Code shall provide minimum mitigation standards.
2. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Special District.

3. Site plans must demonstrate the protection of adjacent non-industry and non-mining properties through development standards outlined in the land development codes.
4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
5. Hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidizing, and similar activities, commonly referred to as fracking, are not permitted uses in the Industry and Mining Land Use.

Policy 2.8.~~17~~16 – Institutional Special District~~:~~ (City of Tallahassee/Leon County):
The purpose of this Special District is to provide lands for heavy infrastructure community facilities that must obtain federal and/or state approvals to be located, modified and/or-

expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90 percent of the entire site when located within the Urban Service Boundary or 75 percent of the entire site when located

outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

The following special conditions shall apply to the Institutional Special District:

1. Institutional land uses have the potential to create offsite impacts to surrounding areas. Because institutional uses vary in their operations and their potential offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.
2. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from institutional uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Policy 2.8.~~18~~17 – Parks and Civic Spaces Special District~~:~~ (City of Tallahassee/Leon County):
The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces.

The following special conditions shall apply to the Parks and Civic Spaces Special District:

1. Commercial active recreation land uses shall be established through the Planned Unit Development process.

2. Because commercial active recreation land uses vary in their operations and potential offsite impacts, the Planned Unit Development shall establish standards to address the potential offsite impacts, including, but not limited to noise, lighting, and traffic access and congestion.

Policy 2.8.~~19~~18 – Planned Development Special District~~:~~ (City of Tallahassee/Leon County):

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned Development Special District is located.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

The following special conditions shall apply to the Planned Development Special District:

1. Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, public or private open space) that are integrated with each other, as well as with the unique characteristics of the development area.
2. Master Plans shall identify the following:
    a. Boundary of area subject to Planned Development.
    b. General depiction of mix, location and intensities of future land uses.
    c. Activities permitted within each land use.
    d. Total dwelling units.
    e. Total square footage of non-residential development.
    f. How natural resources on-site will be protected.
    g. Major transportation system improvements that are consistent with adopted transportation plans.
    h. Capacity maintenance, bicycle, and pedestrian accessibility, impacts to surrounding areas and protection of canopy roads, if applicable.
    i. Address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development.
    j. Facilities and development requirements to provide alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit.
    k. An infrastructure plan which identifies the type, demand, and general location of needed utilities in relation to existing and scheduled utilities in the areas of the development.
    l. The location and adequacy of proposed schools, parks, and open space.
    m. How the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses.
    n. How the development will comply with applicable affordable housing policies and/ordinances.

o. How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed.

p. A set of development guidelines that will direct the development of implementing PUD/PUDs. These guidelines shall address, but not be limited to, building height, setbacks, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.

3. Previous approved Comprehensive Plan Area Plans shall constitute a Master Plan as required by this policy. The Southeast Sector Plan serves as the Master Plan for Southwood, Colin English Properties, and the former Southside DRI lands. The Welaunee Critical Area Plan serves as the Master Plan for the Welaunee Toe, Heel, and Arch. The Capital Circle Office Complex Planned Unit Development Master Plan Concept shall serve as the Master Plan for this area, and shall be exempted from the four use requirement of this policy.
4. Approved Master Plans are to be implemented by one or more Planned Unit Developments. Minimum size requirements for Planned Unit Developments within the district shall be established in the land development code. Minor and major amendments to the Master Plan may be approved through the Planned Unit Development requirements and procedures. The Planned Unit Development may serve as the Master Plan if it meets the requirements for a Master Plan enumerated in this policy.
5. Easements, right-of-way and other improvements located throughout the Planned Development District boundary may be required to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan.
6. Subdivision of a portion of a Planned Development District for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource-based recreation use shall not be contingent upon the adoption of a Master Plan or PUD.
7. Subdivision and development of a portion of a Planned Development area for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan or PUD. The land development code shall establish the process and requirements for siting and development of new schools and the expansion of existing schools. The conservation, preservation, passive recreation, educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduce the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.
8. Separate Master Plans may be approved for each Planned Development District that is divided by an interstate or arterial highway that limits integration across the entire development.
9. As demands from a rapidly increasing population may require the expansion of the Urban Service Boundary in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.
10. Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development areas shall be designated as Planned Development on the adopted Future Land Use Map and Zoning Map.

Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community ~~services~~facilities, including schools, community centers, and libraries.

Objective 3.1 – Residential Character~~:~~ (City of Tallahassee/Leon County):

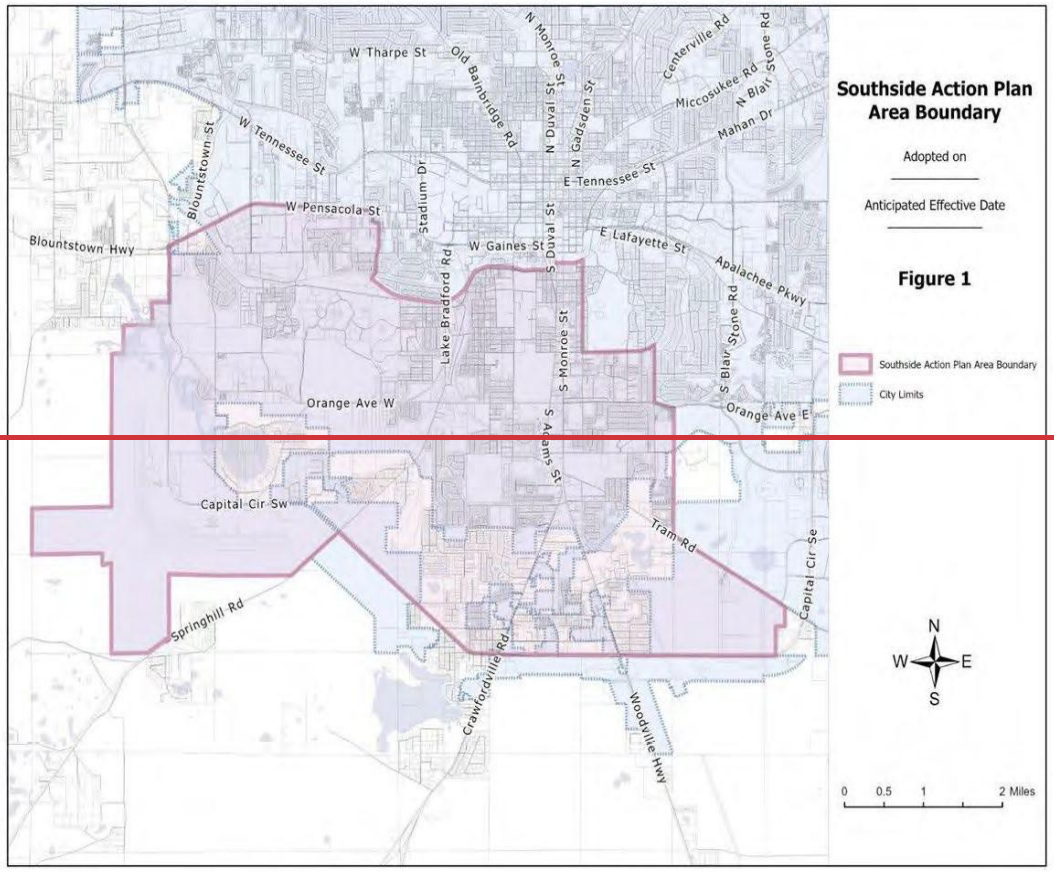
Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.

Policy 3.1.1 – Residential Character Criteria~~:~~ (City of Tallahassee/Leon County):

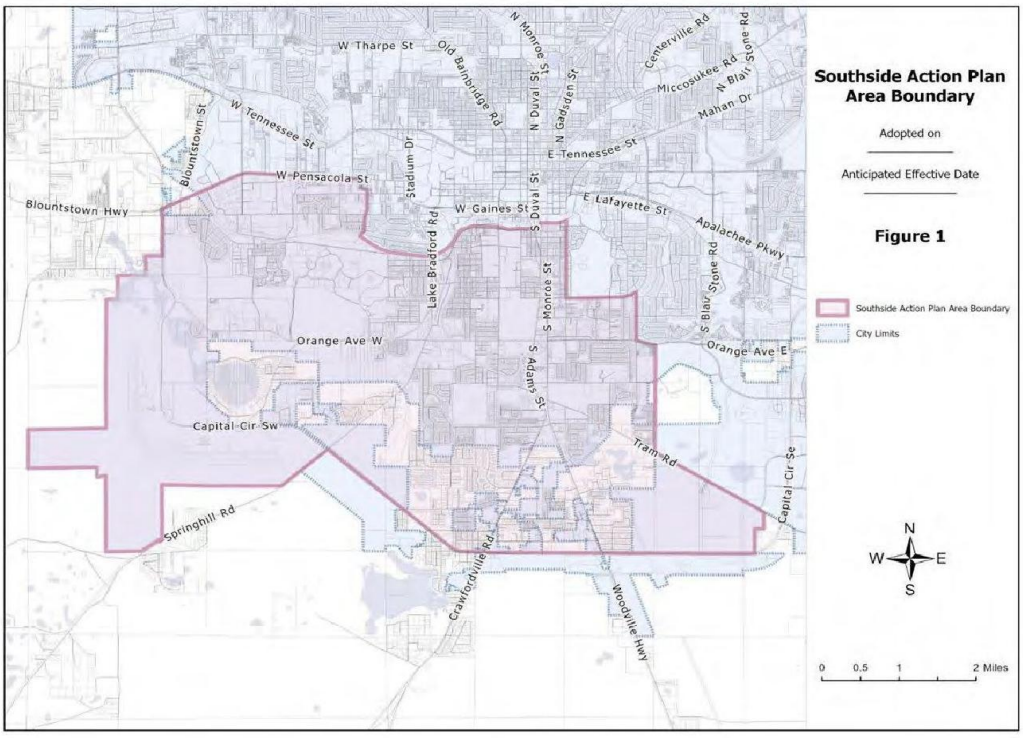
Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

Policy 3.1.2 – Housing Diversity~~:~~ (City of Tallahassee/Leon County):

Maintain a viable mix of available residential densities to accommodate a variety of housing types.



Policy 3.1.3 – Healthy Food Options~~:~~ (City of Tallahassee/Leon County):



The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

Objective 3.2 – Southside Action Plan~~:~~ (City of Tallahassee/Leon County):

Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Policy 3.2.1 – Southside Action Plan Area~~:~~ (City of Tallahassee/Leon County):
The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

Policy 3.2.2 – Beautification: (City of Tallahassee/Leon County):
Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Policy 3.2.3 – Investment: (City of Tallahassee/Leon County):
Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Policy 3.2.4 – Active and Engaged Citizens: (City of Tallahassee/Leon County):
Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

Policy 3.2.5 – Southside Action Plan Evaluation and Update: (City of Tallahassee/Leon County):
The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

Objective 3.3 – Connectivity Access Management: (City of Tallahassee/Leon County):
Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

Policy 3.3.1 – Access Management Design: (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

Policy 3.3.2 – Intersection and Interchange Restrictions: (City of Tallahassee/Leon County):
Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

Policy 3.3.3 – Unified Access and Circulation Plans: (City of Tallahassee/Leon County):
Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.4 – Access Management Improvements: (City of Tallahassee/Leon County): Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle

conflicts by implementing standards and strategies that:

1. Address the transition of vehicles from arterial roadways to internal circulation systems.
2. Prioritize the redesign of median openings that are inadequately designed.
3. Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

Policy 3.3.5 – State Road Access Management:

(City of Tallahassee/Leon County): The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Policy 3.3.6 – Neighborhood Through-Traffic:

(City of Tallahassee/Leon County): Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies.

Policy 3.3.7 – Consolidated Properties:

(City of Tallahassee/Leon County): Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

Policy 3.3.8 – Development Near Interchanges:

(City of Tallahassee/Leon County): Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

Policy 3.3.9 – Access Management Deviations:

(City of Tallahassee/Leon County): Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Objective 3.4 – Equitable Distribution of Land Uses: (City of Tallahassee/Leon County):

Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

Policy 3.4.1 – Distribution of Land Uses: (City of Tallahassee/Leon County):

The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

Policy 3.4.2 – Public Investments~~:~~ (City of Tallahassee/Leon County):
The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

Objective 3.5 – Safety~~:~~ (City of Tallahassee/Leon County):
Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

Policy 3.5.1 – Public Infrastructure Design~~:~~
(City of Tallahassee/Leon County): Public infrastructure, relevant to transportation, shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, ~~complete streets~~Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization, pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its

users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures

Objective 3.6 – Land Development Regulations~~:~~
(City of Tallahassee/Leon County): Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 3.6.1 – Criteria for Amendments to Land Development Regulations~~:~~ (City of Tallahassee/Leon County): Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

Policy 3.6.2 – Implementing Zoning Districts~~:~~ (City of Tallahassee/Leon County):
Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

Policy 3.6.3 – Site Requirements~~:~~ (City of Tallahassee/Leon County):
Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation

- Roadway access
- Context-based transit amenities
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise mitigation

Policy 3.6.4 – Density and Intensity Incentives~~:~~ (City of Tallahassee/Leon County):

Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the respective Future Land Use Category~~.~~ by up to 20%.

Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

Policy 3.6.5 – Planned Unit Developments~~:~~ (City of Tallahassee/Leon County):

The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

Policy 3.6.6 – Non-Conforming Uses~~:~~ (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on:

- The impact of the non-conformity to conforming land uses adjacent to the non-conformity.
- A determination that the non-conformity is not detrimental to public health, safety, and welfare.
- The ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between ~~nonconforming~~non-conforming uses which are to be terminated or amortized, and ~~nonconforming~~legally established non-conforming uses in nonresidential designations which may continue, but not be expanded.

Policy 3.6.7 – Previously Vested Development~~:~~ (City of Tallahassee/Leon County):

Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

Policy 3.6.8 – Landfill Redevelopment~~:~~ (City of Tallahassee/Leon County):
Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

Objective 3.7 – Urban Design~~:~~ (City of Tallahassee/Leon County):
Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging, accessible, and safe public spaces.

Policy 3.7.1 – Design Principles and Priorities~~:~~ (City of Tallahassee/Leon County):
General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

Policy 3.7.2 – Crime Prevention through Environmental Design~~:~~ (City of Tallahassee/Leon County):
Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to:

- Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private.
- Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces.
- Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users.
- Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability.
- CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

Policy 3.7.3 – Design Criteria for Mobility Hubs~~:~~

(City of Tallahassee/Leon County): New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community ~~services~~facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Goal 4 [LM] – Greater Housing Diversity:

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
    - Neighborhoods that are diverse in use and population.
    - Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
    - Places that offer inclusive access to public spaces and community institutions.

Objective 4.1 – Missing Middle Housing~~:~~ (City of Tallahassee/Leon County):

Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

Policy 4.1.1 – Accessory Dwelling Units (ADUs~~):~~) (City of Tallahassee/Leon County):

Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

Policy 4.1.2 – Missing Middle Housing as Conforming Uses~~:~~ (City of Tallahassee/Leon County):

Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

Policy 4.1.3 – Community Character Analysis~~:~~ (City of Tallahassee/Leon County):

In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

Policy 4.1.4 – Pattern Books~~:~~ (City of Tallahassee/Leon County):

Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability-

of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

Objective 4.2 – Mobility-Based Housing Incentives~~:~~ (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

Policy 4.2.1 – Coordinate Transit with Land Use~~:~~ (City of Tallahassee):
As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

Policy 4.2.2 – Transit-Oriented Development (TOD) Design Standards~~:~~ (City of Tallahassee/Leon County):
Land development regulations shall include design standards to encourage the following principles around transit centers:

- Site centers in locations with highest ridership potential and development opportunities.
- Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development.
- Create a range of densities with highest at centers, tapering down to existing neighborhoods.
- Design centers for seamless pedestrian connections to surrounding development.
- Create public plaza directly fronting one or more sides of the center building where feasible.
- Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible.
- Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets.
- Enhance multi-modal connections, making transfers easy, direct, and comfortable.
- Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas.
- Use centers as catalysts for major redevelopment of area and create placemaking around centers.

Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus~~:~~ (City of Tallahassee/Leon County):
Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within ¼ mile of a transit stop. This density bonus shall not apply to the ~~Urban Residential Preservation or Sub-Urban~~ Residential Preservation land use ~~categories~~category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4 – Coordinate Trails with Land Use~~:~~
(City of Tallahassee/Leon County): As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for

opportunities to implement trail-oriented development.

Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards: (City of Tallahassee/Leon County):
Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

Policy 4.2.6 – Trail-Oriented Development (TrOD) Density Bonus: (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 1/2 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Objective 4.3 – Affordability: (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

Policy 4.3.1 – Inclusionary Housing Policy: (City of Tallahassee/Leon County):
As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

Policy 4.3.2 – Establishing Community Land Trusts:
(City of Tallahassee/Leon County): To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing-
models that:

- Do not include resale restrictions, or
- Include resale restrictions that are temporary, forgiven, or set to expire over time, or
- Rely on local government land donations without long-term affordability guarantees.

Policy 4.3.3 – Requirements of Community Land Trusts: (City of Tallahassee/Leon County):
To qualify for local government assistance, Community Land Trusts shall:

- Require permanent affordability.
- Require that owners live in the homes as their primary residence.
- Include resale formulas in land leases.

Policy 4.3.4 – Affordable Housing Design Standards: (City of Tallahassee/Leon County):
Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

Policy 4.3.5 – Affordable Housing Density Bonus:
(City of Tallahassee/Leon County): Land development regulations shall include provisions that

allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

Objective 4.4 – Family Heir Subdivisions~~:~~ (City of Tallahassee/Leon County):
Provide a hardship provision by which owners of property outside of the Urban ~~Boundary~~Services Area who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

Policy 4.4.1 – Family Heir Subdivision Eligibility~~:~~
(City of Tallahassee/Leon County): The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Objective 5.1 – Economic Health~~:~~ (City of Tallahassee/Leon County):

Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

Policy 5.1.1 – Economic Development Strategic Plan~~:~~ (City of Tallahassee/Leon County):

The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with ~~the OEV strategic plan.~~ the OEV strategic plan.

Objective 5.2 – Airport Access~~:~~ (City of Tallahassee):

Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

Policy 5.2.1 – Airport Master Plan~~:~~ (City of Tallahassee):

The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

Objective 5.3 – Freight and Cargo~~:~~ (City of Tallahassee/Leon County):

Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

Policy 5.3.1 – Intermodal Centers~~:~~ (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall maintain an inventory of intermodal freight centers, including the locations, types of facilities, and activities of the centers.

Policy 5.3.2 – Tallahassee International Airport~~:~~
(City of Tallahassee/Leon County): Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

Policy 5.3.3 – Transportation Access~~:~~
(City of Tallahassee/Leon County): Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal ~~stations~~freight centers, or other freight transfer locations.

Objective 5.4 – Resilience Planning~~:~~ (City of Tallahassee/Leon County):
Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

Policy 5.4.1 – Post Disaster Redevelopment Plan~~:~~
(City of Tallahassee/Leon County): The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster-redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

Policy 5.4.2 – Local Mitigation Strategy (City of Tallahassee/Leon County):
The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

Objective 5.5 – Intergovernmental Coordination~~:~~

(City of Tallahassee/Leon County): Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

Policy 5.5.1 – Regional Economic Development Coordination~~:~~ (City of Tallahassee/Leon County):
The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

Policy 5.5.2 – Grant Funding Opportunities~~:~~ (City of Tallahassee/Leon County):
Local governments shall pursue grant opportunities for projects or programs of regional significance.

Goal 6 [LM] – A Balanced Transportation Network:
Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted ~~quality~~roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

Objective 6.1 – Land Use and Transportation Coordination for Livability~~:~~ (City of Tallahassee/Leon County):
Coordinate land use and transportation systems ~~that~~to foster vibrant communities across context areas with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl~~:~~ (City of Tallahassee/Leon County):
New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban ~~Boundary objective~~Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities~~:~~ (City of Tallahassee/Leon County):
Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts ~~on~~to the multi-modal transportation network.

Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors~~:~~ (City of Tallahassee/Leon County):
Transportation ~~corridors along with~~corridor maps showing the future land uses shall be ~~mapped~~developed and maintained to ~~enhance~~reflect the enhanced coordination ~~of~~between land use and transportation including new construction and improvements, reflecting the intended context classification.

Policy 6.1.4 (City of Tallahassee/Leon County) – Retrofit for Livability:
Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

Objective 6.2 – Network Connectivity Improvement~~:~~
(City of Tallahassee/Leon County) : Improve the balance of transportation ~~mode balance~~options, connectivity, and capacity of the multimodal transportation network.

Policy 6.2.1 – Enhance Connectivity~~:~~ (City of Tallahassee/Leon County):
Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

Policy 6.2.2 – Future Right-of-Way Needs~~:~~ (City of Tallahassee/Leon County):
Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through ~~the~~appropriate development review ~~process~~and other processes, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 6.2.3 – Build and Enhance the Network~~:~~ (City of Tallahassee/Leon County):
Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 6.2.4 – Corridor Management and Preservation~~:~~ (City of Tallahassee/Leon County):
Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

Policy 6.2.5 – Interconnectivity for Development~~:~~
(City of Tallahassee/Leon County): Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments~~-~~ when such connection has the potential to reduce the vehicular traffic on the external street system.

Policy 6.2.6 – Continuation of Streets~~:~~ (City of Tallahassee/Leon County):
All development plans shall incorporate and continue all sub arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 6.2.7 – Interconnectivity to Adjacent Uses
(City of Tallahassee/Leon County): Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

Objective 6.3 – Context Based Mobility~~:~~ (City of Tallahassee/Leon County):
Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

Policy 6.3.1 – Local Context Classification and Safe Systems~~:~~ (City of Tallahassee/Leon County):
A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use~~, zoning, and most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), Federal Transit Administration, and National Association of City Transportation Officials (NACTO)~~ and zoning, and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches ~~which~~using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

Policy 6.3.2 – Context Classification Application~~:~~
(City of Tallahassee/Leon County): The context classification system shall be applied to City and County roadway resurfacing and enhancement projects ~~shall be developed~~ in a manner that reflects the future vision and context of the area, and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

Policy 6.3.3 – Context Classification Map~~:~~ (City of Tallahassee/Leon County):
~~A~~By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification ~~map~~Map and the Future Land Use ~~map~~Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

Policy 6.3.4 – Downtown Traffic~~:~~ (City of Tallahassee/Leon County):
By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

Policy 6.3.5 – Lane Repurposing~~:~~ (City of Tallahassee/Leon County):
Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Policy 6.3.6 – One-Way Pair Studies~~:~~ (City of Tallahassee/Leon County):
Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements. ~~-~~The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 6.3.7 – Speed Management~~:~~ (City of Tallahassee/Leon County):
By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

Policy 6.3.8 – Level of Service (LOS) (City of Tallahassee/Leon County):
Peak Hour Roadway Level of Service is established below and shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS) (City of Tallahassee):
In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

Objective 6.4 – Complete Streets: (City of Tallahassee/Leon County):
Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe, and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 6.4.1 – Project Evaluation: (City of Tallahassee/Leon County):
Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

Policy 6.4.2 – Share Transportation Information:
(City of Tallahassee/Leon County): The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.3 – Bicycle and Pedestrian Network:
(City of Tallahassee/Leon County): The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan:
(City of Tallahassee/Leon County): In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature-

upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

Policy 6.4.5 – Safe Routes to Schools~~:~~ (City of Tallahassee/Leon County):
Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 6.4.6 – Community Gateways~~:~~ (City of Tallahassee/Leon County):
Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

Policy 6.4.7 – Scenic Roadway Assessments~~:~~ (City of Tallahassee/Leon County):
In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

Policy 6.4.8 – Maintenance of Traffic~~:~~ (City of Tallahassee/Leon County):
When construction or repair work infringes on regular corridor operation, ~~the~~a project specific Maintenance of the Traffic Plan shall ~~specify~~be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

Policy 6.4.9 – Multi-Modal Safety and Access~~:~~

(City of Tallahassee/Leon County): Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction.
- A documented absence of current or future need.
- Procedures and criteria for approving exceptions will be identified in the Land Development Code.

~~Additionally, new~~New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and ~~will utilize~~shall use innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 6.4.10 – Applicability~~:~~ (City of Tallahassee/Leon County):
All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present.

Policy 6.4.11 – Equity~~:~~ (City of Tallahassee/Leon County):
The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

Policy 6.4.12 – Design Standards~~:~~ (City of Tallahassee/Leon County):
Land Development Codes that apply to all development policies and programs shall be revised by 2030 to ~~reference~~use the latest professionally accepted design guidance, standards, and recommendations ~~in the implementation of~~for Complete Streets~~, including the most up~~ in coordination with the designated context classification Guidance resources shall include, but need not be limited to ~~date guidance from~~:

- ~~Federal Highway Administration~~
- ~~Florida DOT~~
- ~~The Florida Design Manual~~
- ~~National Association of City Transportation (NACTO)~~
- ~~American Association of State Highway and Transportation Official (AASHTO)~~
- ~~The~~Administration's Manual on Uniform Traffic Control Devices ~~(MUTCD)~~
- ~~The~~Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook)

- National Association of City Transportation (NACTO) published guidelines
- American Association of State Highway and Transportation Official (AASHTO) published guidelines
- U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach

Policy 6.4.13 – Pavement Markings and Signage~~:~~
(City of Tallahassee/Leon County): All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

Policy 6.4.14 – Two-Way Left Turn Lane Replacement~~:~~ (City of Tallahassee/Leon County):

Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

Policy 6.4.15 – Measuring Progress: (City of Tallahassee/Leon County):
The success of this Complete Streets Objective shall be measured by the Planning Department with assistance by the City and County during the Evaluation and Appraisal Review process, using but not limited to, the following performance measures:

- Total miles of new designated bike lanes
- Total miles of new shared-use paths (paved and natural surface)
- Total miles of neighborhood bikeways signed, marked, or constructed
- Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.)
- Number and type of crosswalk and intersection improvements and new installations
- Number of revenue service miles traveled by transit vehicles
- Rates of crashes, injuries, and fatalities by mode, as available
- Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices.
- Number of exceptions to this policy granted

The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

Policy 6.4.16 – Coordination with Placemaking Plans: (City of Tallahassee/Leon County):
Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

Objective 6.5 – Bicycle Facilities: (City of Tallahassee/Leon County):
Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance: (City of Tallahassee/Leon County):
All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

Policy 6.5.2 – Bicycle Facilities in New Development:

(City of Tallahassee/Leon County): New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at-
all non-residential uses, multi-family uses and other key destinations. Bicycle and trail-

connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

Objective 6.6 – Pedestrian Facilities~~:~~ (City of Tallahassee/Leon County):
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

Policy 6.6.1 – Pedestrian Level of ~~Service:~~Comfort (City of Tallahassee/Leon County):
As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 6.6.2 – Crosswalks~~:~~ (City of Tallahassee/Leon County):
Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Local Context Classification.

Policy 6.6.3 – Pedestrian Infrastructure for New Development~~:~~ (City of Tallahassee/Leon County):
New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

Objective 6.7 – Mobility Hubs~~:~~ (City of Tallahassee/Leon County):
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

Policy 6.7.1 – Implementation of Mobility Hubs~~:~~
(City of Tallahassee/Leon County): Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

Policy 6.7.2 – Mobility Hubs Location Coordination~~:~~ (City of Tallahassee/Leon County):
The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

Policy 6.7.3 – Mobility Hubs Design Guidelines Requirements: (City of Tallahassee/Leon County):

Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

Objective 6.8 – Transportation Demand Management:

(City of Tallahassee/Leon County): Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.1 – Encourage Alternate Transportation Modes: (City of Tallahassee/Leon County):

Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure: (City of Tallahassee/Leon County):

City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 6.8.3 – Land Development Patterns: (City of Tallahassee/Leon County):

The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

Policy 6.8.4 – Shared Parking Criteria: (City of Tallahassee/Leon County):

Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

Policy 6.8.5 – Parking Reduction for Certain Development Types: (City of Tallahassee/Leon County):

City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

Policy 6.8.6 – Private Parking Lots: (City of Tallahassee/Leon County):

City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size,

location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual

impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

Policy 6.8.7 – Drop-Off & Pick-Up Zones~~:~~ (City of Tallahassee/Leon County):
The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

Policy 6.8.8 – Intelligent Transportation Systems (ITS) (City of Tallahassee/Leon County):
City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.8.9 – Traffic Operations Management~~:~~
(City of Tallahassee/Leon County): The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

Objective 6.9 – Transportation for the Disadvantaged~~:~~
(City of Tallahassee/Leon County): Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people ~~with low incomes, and children at risk.~~
with low incomes, and children at risk.

Policy 6.9.1 – Human Services Transportation~~:~~
(City of Tallahassee/Leon County): Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

Policy 6.9.2 – Transport to Destinations~~:~~
(City of Tallahassee/Leon County): Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

Policy 6.9.3 – Affordable and Cost-Effective Service~~:~~

(City of Tallahassee/Leon County): Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on-~~demand providers, to reduce costs and provide superior service for the transportation~~ ~~disadvantaged that also increases~~

~~efficiency and provide local government savings.~~
demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

Policy 6.9.4 – Transportation Disadvantaged Needs Assessment~~:~~ (City of Tallahassee/Leon County):

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

Objective 6.10 – Transit~~:~~ (City of Tallahassee/Leon County):

Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

Policy 6.10.1 – Transit Development Plan~~:~~ (City of Tallahassee):

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 6.10.2 – Pedestrian Infrastructure Connectivity~~:~~ (City of Tallahassee/Leon County):

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

Policy 6.10.3 – Southside Transit~~:~~ (City of Tallahassee/Leon County):

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

Policy 6.10.4 – Employment and Activity Center Service~~:~~

(City of Tallahassee): Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity-
centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Policy 6.10.5 – Transit Corridors~~:~~ (City of Tallahassee/Leon County):

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

Objective 6.11 – Aviation~~:~~ (City of Tallahassee/Leon County):

Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

Policy 6.11.1 – Adjacent Land Use Compatibility~~:~~

(City of Tallahassee/Leon County): Protect the Tallahassee International Airport from the

encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, ~~and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.~~ and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 6.11.2 – Airport Master Plan~~:~~ (City of Tallahassee):

The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

Policy 6.11.3 – Compatibility of Land Use~~:~~

(City of Tallahassee/Leon County): Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and-
County shall coordinate with Airport staff to develop any additional regulations needed that are-not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 6.11.4 – Compatibility for Noise and Safety~~:~~

(City of Tallahassee/Leon County): Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

Policy 6.11.5 – Advanced Air Mobility~~:~~ (City of Tallahassee/Leon County):

Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas and not located within areas that may create compatibility issues. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

Objective 6.12 – Rail~~:~~ (City of Tallahassee/Leon County):

Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

Policy 6.12.1 – Railroad Crossings~~:~~ (City of Tallahassee/Leon County):

Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

Objective 6.13 – Intergovernmental Coordination~~:~~

(City of Tallahassee/Leon County): Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan

and manage transportation systems that extend beyond jurisdictional boundaries.

Policy 6.13.1 – Consistency with State Transportation Plans: (City of Tallahassee/Leon County):

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

Policy 6.13.2 – Consistency with Regional Transportation Plans: (City of Tallahassee/Leon County):

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 6.13.3 – Consistency with Local Transportation Plans: (City of Tallahassee/Leon County):

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

Policy 6.13.4 – Signal Coordination Plans:

(City of Tallahassee/Leon County): Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

Policy 6.13.5 – Project Planning Partnerships:

(City of Tallahassee/Leon County): Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

Policy 6.13.6 – Evacuation Routes: (City of Tallahassee/Leon County):

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.

Policy 6.13.7 – Emerging Technology: (City of Tallahassee/Leon County):

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

City Adoption Agenda Item
12/10/2025 Public Hearing Meeting*

Attachments identical to those in the Leon County Agenda item above are not repeated with the City Agenda item. See summary table at the end of the item.

CITY OF TALLAHASSEE

Agenda Item Details

Meeting	Dec 10, 2025 - City Commission Meeting
Category	16. 6:00 P.M. PUBLIC HEARINGS
Subject	16.01 Adoption Hearing on the Comprehensive Plan Update to the Land Use and Mobility Elements -- Mike Alfano, Planning
Type	Action, Public Hearing
Fiscal Impact	No
Recommended Action	Option 1 - Adopt Ordinance 25-O-02AA, thereby adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan in accordance with Policy 1.8.1. of the Intergovernmental Coordination Element of the Tallahassee-Leon County Comprehensive Plan.

For more information, please contact: Mike Alfano, Planning Director, Michael.Alfano@Talgov.com, 850-891-6400.

Statement of Issue

The purpose of this item is to hold the Adoption Hearing on Ordinance 25-O-02AA (Attachment #1) for the City Commission to consider adoption of proposed updates to the Land Use and Mobility Elements of the 2030 Tallahassee-Leon County Comprehensive Plan pursuant to Section 163.3184, Florida Statutes. In accordance with Policy 1.8.1 of the Tallahassee-Leon County Comprehensive Plan Intergovernmental Coordination Element, the proposed Land Use and Mobility Element must be adopted by both the City Commission and County Commission to become effective. If adopted by the Commissions, the Land Use and Mobility Element must be submitted within 30 days after the adoption public hearings to the State Land Planning Agency (Florida Commerce) and commenting agencies (Florida Department of Agriculture and Consumer Services and the Florida Department of Environmental Protection). The County Commission has scheduled their adoption hearing for December 9, 2025.

Fiscal Impact

None.

Recommended Action

Option 1 - Adopt Ordinance 25-O-02AA, thereby adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan in accordance with Policy 1.8.1. of the Intergovernmental Coordination Element of the Tallahassee-Leon County Comprehensive Plan.

Supplemental Material/Issue Analysis

History/Facts & Issues

The proposed Land Use and Mobility Element (LME) Goals, Objectives, and Policies (Attachment #1) provide a roadmap for what the Tallahassee-Leon County Community will look like in the future with the population growth projected between today and 2050.

Purpose of the Comprehensive Plan and Relation to Land Development Codes

The Tallahassee-Leon County Comprehensive Plan is intended to express the community's plan for how growth and development occur in the City of Tallahassee and Leon County. The current Comprehensive Plan includes Goals, Objectives, and Policies regarding how land is developed to accommodate projected population growth, how infrastructure is planned and provided to support anticipated growth, how natural features are protected, and how various other factors that promote a high quality of life are addressed in the community. The Comprehensive Plan also includes the land use plan that reflects assigned future land uses on a Future Land Use Map (FLUM). The Plan gives direction to programs and activities, and to regulation through land development codes, including zoning districts. When the update is completed, an assessment of the existing land development codes is needed to ensure that they implement the intent of the Comprehensive Plan including the FLUM and remain consistent with the Comprehensive Plan.

Implementation of the FLUM Through Zoning

Zoning districts defined in the City and County's respective Land Development Codes and reflected on the respective City and County official zoning maps implement the FLUM. In some cases, a Future Land Use Category (FLUC) is implemented by only one or two zoning districts. For example, the Urban Fringe FLUC is implemented by the Urban Fringe zoning district, the Recreation and Open Space zoning district, or a Planned Unit Development. In other cases, a FLUC may be implemented by numerous zoning districts. For example, the Suburban FLUC can be implemented by twenty-two different zoning districts. The zoning districts that implement the Suburban FLUC range from Residential Acre (RA) allowing up to one unit per acre to Medium Density Residential (MR) allowing up to 16 units per acre and from Neighborhood Commercial (C-1) allowing up to 12,500 square feet of commercial development per acre to Medical Arts Commercial (CM) allowing up to 80,000 square feet per acre. Other zoning districts that implement the Suburban FLUC include Commercial Parkway (CP), which is intended for large arterial roadways, Manufactured Home Park District (MH) for manufactured home parks, Airport Vicinity (OA-1) intended to be located off the ends of the runways at the Tallahassee International Airport, three different Office Residential districts (OR-1, OR-2, and OR-3) which are intended to be a mix of housing and small office uses, and two different Urban Pedestrian districts (UP-1 and UP-2) intended to promote the redevelopment of areas from lower intensity "strip" development pattern to a more intensive, higher density urban pattern. The current effort to update the FLUM does not change the current zoning designation of any property and allows existing districts to remain in place. Future zoning changes will continue to be assessed as required by the Comprehensive Plan and the land development codes.

Public Engagement

Public engagement on updates to the LME has been extensive and ongoing. Attachment #2 provides a history of the LME Update project, including a summary of opportunities to provide public engagement throughout the process.

The consultant team built upon the previous community engagement efforts described in Attachment #2. The community engagement led by the consultant team (described in greater detail in the attachment) included the following:

- Ambassador Program (Throughout project)
- Educational Roadshow (September 18 - 20, 2023)
- Roundtable Discussions (September 26 - 29, 2023)
- Vision Survey (October - November 2023)
- Community Building Blocks Survey (December 2023 - February 2024)
- Strengthen, Transform, Enhance and Preserve (STEP) Framework Workshops (January 29-30, 2024)
- Comprehensive Plan/Land Development Code Assessment Sessions (December 2024)
- Public Survey on Goals and Objectives (February - March 2024)
- Local Planning Agency Workshop on LME Goals and Objectives (February 4, 2025)
- Committees and Stakeholders Meeting (February 26, 2025)
- Community Engagement Meeting (March 3, 2025)
- Local Planning Agency Workshop on Future Land Use Map and Land Use Categories (March 11, 2025)
- Public Survey on Goals, Objectives, and Policies (March - April 2025)
- Local Planning Agency Public Hearing (April 1, 2025)

The Planning Department received input from community members and community organizations on draft LME Goals, Objectives, and Policies both through the public surveys on the draft Goals, Objectives, and Policies as well as comments submitted directly to staff. Public comment is included as Attachment #3. This input was reviewed and incorporated where consistent with the community values, data analysis, other Goals, Objectives, and Policies in the Comprehensive Plan, state statutes, and in line with the purpose of the Comprehensive Plan. Where more appropriate for land development code, the public input has been reserved for consideration when land development code updates are evaluated and updated in the future.

In addition to these public engagement efforts led by the consultant team, additional public engagement on the proposed LME occurred during the transmittal and adoption process as described in detail below.

Data Analysis

The proposed Comprehensive Plan update must be supported by required and appropriate data and analysis. Chapter 163.3177(6)(a) and (b), Florida Statutes, include minimum requirements for population projections, existing land uses and natural resources, general availability of public facilities and services, transportation circulation, and projected transportation levels of service. Business Impact Estimates (BIEs) were also completed for the City and the County as required and in support of the proposed update. The BIEs are published on the respective City and County websites. As part of the update, the consultant and Planning staff produced data and analyses, which are publicly available at: https://www.compplantlc.com/pages/dataandanalysis.

According to the National Association of Realtors, a housing supply of six months generally indicates a balanced market. Six months of supply on the market is associated with moderate price appreciation, and a lower level of months' supply tends to push prices up more rapidly. The current (July 2025) market in Tallahassee and Leon County reflects a housing supply of 3.8 months, which is an increase over the past few years (where the supply dropped below 3 months during the pandemic) but is still lower than what would be considered a balanced market and could continue to keep housing prices high. It should be noted that this indicator reflects the housing supply in general and that specific housing types may have additional supply constraints. For example, the Florida Apartment Association indicates a current shortage of 2,825 apartments in the Tallahassee Metro area across all income brackets. Shimberg Center for Housing Studies at the University of Florida analyses indicate a deficit of 7,855 affordable rental units for households earning less than 50% of the area median income. The Population Projections report included in the data analysis shows a projected population of 343,300 people in 2050, representing a population increase of approximately 41,500 people over the next 25 years. Accounting for the average household size in Leon County (2.28 people) and a standard multiplier (1.25), the projected population is expected to result in the need for approximately 23,000 new units.

Growth in the Urban Services Area (USA) will predominantly be accommodated on larger, undeveloped parcels such as the Colin English property and Welaunee Critical Planning Area Plan areas. As shown in Attachment #4, approximately 65% of the acreage inside the Urban Services Area is identified as low-density residential and, as such, has limited development and redevelopment potential. Additionally, parcels identified as vacant on Attachment #4 do not inherently mean that they are available or that they are not constrained by environmental features or other factors that limit development. With the high percentage of land within the USA dedicated to low-densities and limitations on properties that are both vacant and available, future expansions of the Urban Services Area may need to be considered to accommodate projected growth. However, at this time, proposed changes to the Urban Services Area (USA) generally reflect aligning the boundary with property lines, transportation corridors, or geographic features (instead of bisecting properties). The USA concept is maintained in the proposed LME to prioritize areas where development is directed and provided with planned services.

Planned Development Master Plans

Areas designated Planned Development on the FLUM require master plans prior to development occurring. Adopted policies in the Land Use Element state that "a Planned Development Master Plan shall be adopted as an area plan that is consistent with, but independent of the Comprehensive Plan." Consistent with this approach to Master Plans being consistent with, but independent of the Comprehensive Plan, the proposed LME removes the adopted Southeast Sector Plan and Welaunee Critical Area Plan from the Comprehensive Plan. Both the Southeast Sector Plan and the

Welaunee Critical Area Plan remain adopted Master Plans with no changes proposed. Changes to these Master Plans will still require City Commission approval and any future development in either master planned area must be consistent with the appropriate master plan. The Southeast Sector Plan and Welaunee Critical Area Plan are included as Attachment #5. Language has been added to the Planned Development FLUC to reiterate that these Master Plans remain the Master Plans for these areas, as well as indicating that the Capital Circle Office Complex PUD serves as the Master Plan for that specific Planned Development area.

Statutory Requirements

The proposed LME replaces the existing separate Future Land Use Element and Mobility Element of the Comprehensive Plan. As such, the proposed LME must meet both the requirements of Section 163.3177(6)(a), F.S., for Land Use, and (6)(b) for Transportation. Attachment #6 summarizes how the proposed Goals, Objectives, and Policies meet these statutory requirements.

Comprehensive Plans must also be internally consistent across each element. Attachment #7 provides a reference to illustrate how the Goals, Objectives, and Policies in the currently adopted Land Use and Mobility Elements are related to the Goals, Objectives, and Policies in the proposed LME. Attachment #7 also provides a review for internal consistency.

Section 163.3177, F.S. identifies requirements for a map series. Attachment #8 presents the required map series with Natural and Historic Resources as well as Mobility Maps. As required by statute, these maps include surface waters, wetlands, flood zones, soils, historic district boundaries, potable water wells, transportation concurrency management areas, and the transportation system.

Glossary Updates

Attachment #9 includes new and revised terms to add to the Comprehensive Plan Glossary.

Previous Direction from the City and County Commissions

At the February 25, 2025, Joint Workshop with the City and County Commissions, the Commissioners provided direction for the following to be addressed in the draft LME:

- Including policies and subsequent updates to land development code regulations that incentivize redevelopment along major roads and gateway corridors by allowing increased densities and intensities along with urban design standards.
- Addressing existing legally non-conforming uses, specifically in the Lake Protection FLUC, in ways that both improve water quality and achieve high-quality development.
- Coordinating and incorporating the efforts of the Woodville Sense of Place Plan with updates to the Comprehensive Plan and subsequent updates to the land development code.
- Evaluating densities allowed in the Rural FLUC and identifying areas on the south side of unincorporated Leon County that should have higher allowable densities and intensities.
- Eliminating parking minimums from the Comprehensive Plan and land development codes.

Based on the direction from the City and County Commissions, the following components are included in the Draft Goals, Objectives, and Policies:

Incentivizing development on major roadways and gateways: The proposed FLUM incorporates higher density and intensity land uses along major corridors. Additionally, proposed Policy 2.6.2 specifically addresses Gateway corridors, including South Monroe, North Monroe, and the West Pensacola Street corridors. Proposed Policy 1.2.4 also aims to enhance gateway corridors through access management, preserved green space for landscaping, and consolidated signage.

Non-conforming uses in the Lake Protection FLUC: The Lake Protection FLUC (Policy 2.8.7) includes a provision that allows uses that are compatible with surrounding area and meets water quality standards for the Lake Jackson Basin to be considered permitted uses. It also provides for the development of a Lake Protection Corridor zoning district that can address uses and design standards along North Monroe Street to improve the corridor.

Woodville Sense of Place Plan: The Woodville Sense of Place is included in Policy 2.6.4. acknowledging potential future adoption and the need to align the Comprehensive Plan and land development codes, as necessary, when that effort is completed.

Higher Densities on the Southside: The proposed FLUM changes properties inside the USA that are currently designated Rural to higher density/intensity land uses. This was primarily on the south side of Leon County. Having areas designated Rural inside the USA is inconsistent because Rural is intended for areas that do not have and are not planned to have urban services, while the USA is specifically intended to be where urban services exist or are planned.

Additionally, the Woodville Sense of Place policy (Policy 2.6.4) could result in areas around Woodville becoming higher density/intensity based on the recommendations that are developed through the Sense of Place planning process.

Finally, proposed Policy 2.2.6 streamlines the process for properties designated Rural or Rural Residential to become higher density/intensity when sewer services are available.

Parking Minimums: The Comprehensive Plan does not include any parking minimums. Proposed Policy 2.7.4 states that minimum parking requirements shall not be applied to areas designated Urban Center of the FLUM and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD. The proposed policy enables parking minimums to be eliminated (or reduced/made flexible as determined by the City Commission) in the City's Land Development Code. Additionally, proposed Policy 6.8.5 enables parking minimums to be reduced or eliminated for other types of development, including transit-oriented development, trail-oriented development, and mixed-use developments.

LPA Workshops and Public Hearing through April 1, 2025

The Local Planning Agency (LPA) has a significant role in review and recommendation for the comprehensive plan update. Leading up to public hearing on April 1, 2025, the Local Planning Agency held three workshops where it received information and progressively considered and made recommendations for the Land Use and Mobility Element (LME) Goals, Objectives, and Policies, and the Future Land Use Map. These workshops are summarized as follows:

- January 7, 2025 Workshop: Introductory Workshop on the comprehensive plan and plan update that included roles, process and potential schedule.
- February 4, 2025 Workshop: Workshop to review the draft Land Use and Mobility Element Goals and Objectives that resulted in recommendations to incorporate Neighborhood First Plans and address housing diversity.
- March 11, 2025 Workshop: Workshop on the Draft FLUM and FLUCs that resulted in additional compatibility provisions for Residential Preservation and data generation to identify the magnitude of changes for the land use plan (See Attachment #10).

At the February and March workshops, the LPA proposed revisions that were incorporated into the proposed drafts that were shared with the public and the Commissions.

Subsequent to the workshops, the LPA held a public hearing on April 1, 2025 to consider the proposed amendments to the LME of the Tallahassee-Leon County Comprehensive Plan for transmittal to the Commissions.

Staff provided a presentation highlighting policies addressing natural resources protection, neighborhood character preservation, densities and intensities, the FLUM, the USA, and transportation policies for connectivity and safety. The LPA received comments from 9 public speakers.

After discussion, the LPA voted unanimously to:

- Transmit the proposed Land Use and Mobility Element to the City Commission and Board of County Commissioners;

- Request the City Commission consider rescheduling the transmittal hearing to May 14, 2025; and
- Incorporate edits to the proposed Urban Residential Preservation, Sub-Urban Residential Preservation, and the Lake Protection FLUCs to address concerns with densities and commercial uses.

The proposed policies were revised to address the LPA recommendations; however, subsequent commission direction has resulted in the removal of the Urban Residential Preservation and Sub-Urban Residential Preservation FLUCs.

Additional Neighborhood Outreach

Planning Department staff followed up with additional public outreach and engagement from May through August 2025. Planning Department staff met with neighborhood representatives that spoke at the May 14, 2025, City Commission meeting to engage them on identified issues and specific concerns. These were separate meetings in May and June including the Bond Community, Woodland Drives, Myers Park, Parkside/Park Terrace, Los Robles, and Old Town neighborhoods, to vet proposed revisions, present information and answer questions. Additionally, Planning Department staff collaborated with the Alliance of Tallahassee Neighborhoods and the Los Robles Neighborhood on a community-wide meeting. The Alliance of Tallahassee Neighborhoods and the Los Robles Neighborhood hosted the meeting on June 3, 2025, at 6:00 P.M. at the Woman's Club of Tallahassee.

Engagement efforts in July and August 2025 included receiving additional comments and answering questions from telephone and e-mail inquiries. As a result, staff proposed revisions to provide more locational specificity for increased densities in the Sub-Urban Residential Preservation (Policy 2.8.8) and Urban Residential Preservation (Policy 2.8.11). As discussed in the next section, the proposed revisions were not accepted by the City Commission and additional direction was provided for public engagement.

Direction from City and County Commissions June through August

The City Commission considered transmittal of the proposed plan update at its June 11, 2025 meeting. At that meeting, the City Commission voted not to transmit the proposed updates to the LME in order to provide additional time to coordinate with residents on the proposed changes and to address concerns expressed by speakers at the public hearing. The City Commission directed staff to plan additional public engagement and schedule the Transmittal and Adoption Hearings at a future date.

The County Commission considered adoption of the proposed plan update at its July 8, 2025 meeting and voted to delay adoption for the purposes of additional community engagement. Staff was directed to bring a status update back by December 2025. Additional public engagement sessions occurred in late September and early October 2025.

On June 24, 2025, Planning staff presented information on the Comprehensive Plan to members of the Greater Bond Neighborhood and began discussions with other neighborhoods and community stakeholders to answer questions about the update and to conduct similar neighborhood meetings. The Mayor’s Office informed staff of a plan to gather neighborhood stakeholders together to propose replacing the Urban and Sub-Urban Residential Preservation FLUCs with the existing Residential Preservation FLUC. Staff recommended the inclusion of language addressing non-conforming uses, if such a change were to occur.

On August 18, 2025, the Mayor’s Office hosted a meeting of neighborhood stakeholders to which over 200 neighborhood representatives were invited. This meeting was attended by nearly 30 individuals representing the following neighborhoods:

- The Alliance of Tallahassee Neighborhoods
- Woodland Drives Neighborhood
- Greater Bond Neighborhood
- Griffin Heights Neighborhood
- Frenchtown Neighborhood
- Wellswood-Suburban Hills Neighborhood
- Jake Gaither Neighborhood
- Oak Ridge Place Neighborhood
- Richview Park Neighborhood
- Ox Bottom Crest Neighborhood

- Oak Grove Plantation Rd Neighborhood
- Old Town Neighborhood
- Southwood Neighborhood
- Copper Creek Neighborhood
- Summerbrooke Neighborhood
- Breakwood Drive Neighborhood
- Ventanas Neighborhood
- Hillcrest Village Neighborhood
- Grey's Run Neighborhood
- Lafayette Park Neighborhood
- Betton Hills Neighborhood
- Myers Park Neighborhood
- Sherwood Park Neighborhood

After the Mayor presented the proposal to keep the existing Residential Preservation FLUC, with discussed revisions, the neighborhood representatives voiced strong support for this action and indicated they would come to the City's Transmittal Hearing in support for the LME Update.

At its August 20, 2025 meeting, the City Commission discussed the meeting with neighborhood representatives and the proposal to retain the current Residential Preservation FLUC with language to address non-conforming uses and the support from neighborhood representatives for the proposal. The City Commission voted to direct staff to bring back the Land Use and Mobility Elements Update for transmittal at the September 17, 2025 City Commission meeting, with the proposed Sub-Urban Residential Preservation and Urban Residential Preservation FLUCs removed and replaced with the existing Residential Preservation FLUC, with language to address non-conforming uses. The proposed draft Attachment #1 reflects these changes.

LME Changes June – September 2025

The following section details the revisions made to the proposed LME between June and September 2025. Comments were received by state agencies in response to the proposed plan transmitted May 13, 2025, by Leon County, and several of the changes described below were directed to address technical assistance comments from Florida Commerce and the Florida Department of Environmental Protection.

Planning Periods

Policy 2.1.1 was updated to provide the specific years covered by the short term 10-year planning period and specify that the planning periods are to be considered for amendment during the Evaluation and Appraisal Review process using relevant and appropriate data and analysis of public facilities. This update addresses the technical assistance comment from Florida Commerce.

Density and Intensity Incentives

Policy 3.6.4 was updated to establish a maximum density and intensity standard for proposed density bonuses that facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. This update addresses the technical assistance comment from Florida Commerce.

Future Transportation Maps

The map series was updated to include a functional classification map, a map of planned roadway improvements with the number of lanes, and a context classification map. This update addresses the technical assistance comment from Florida Commerce.

Mahan Gateway Node

Mahan Gateway Nodes are calibrated to the Sub-Urban Mixed-Use Commercial FLUC proposed along the Mahan Corridor. The nodes will continue to be implemented by the existing Mahan Corridor Node and Mahan Corridor Ring zoning districts.

Community Facilities and Community Services

According to the current definition in the glossary of the Comprehensive Plan, Community Facilities include community services, light infrastructure, heavy infrastructure, and post-secondary uses. Community Facilities are allowed in all FLUCs subject to intensity standards included in the FLUCs. Further limitations on Community Facilities are established in implementing zoning districts. Updates to the proposed LME reflect the correct use of the terms “Community Facilities” and “Community Services” depending on the intent of specific FLUCs.

Lake Protection Land Use and Lake Jackson Basin Area

Upon the County’s transmittal hearing to the State agencies, FDEP raised concerns about the County’s proposed FLUM modification from Rural to Lake Protection in proximity to the Lake Jackson Aquatic Preserve and the inclusion of the area within the USA. The City does not have jurisdiction over the FLUM designations in the unincorporated area but the City and County Commissions must both approve the boundary of the USA.

The County recommended some changes to the unincorporated area FLUM and USA boundary. These revisions included the removal of the proposed Lake Protection Node at Meridian Road and Bannerman Road/Orchard Pond Parkway, the reduction of area proposed for the inclusion in the USA, the maintenance of lands designated Rural on the FLUM in the vicinity of the lakes, and the removal of the planned development provision for Lake Protection.

While these changes were made to address the potential impacts onto the environmentally sensitive features located within this area of Lake Jackson, and based on comments from the FDEP, it should be noted that the comments received from the FDEP do not acknowledge the environmental protections currently in place for Lake Jackson as required by the Leon County Land Development Code, nor do they take into account the newly adopted state stormwater rule (effective December 28, 2025) that introduces stricter nutrient loading standards (i.e., aimed at reducing nitrogen and phosphorus runoff).

In fact, Lake Jackson is protected under Section 10-4.301(d) of the Leon County Code, which requires developments to retain excess runoff from the 100-year, 24-hour storm events on-site. Additionally, redevelopment projects face even stricter standards: they must treat stormwater runoff based on the supposition that the site in its pre-development condition is in a natural\wooded condition. This significantly increases the volume of runoff that must be treated to meet water quality standards, thereby enhancing protection of the lake’s fragile ecosystem. Furthermore, residential subdivisions exceeding four dwelling units per acre must meet stringent landscaping and natural area preservation requirements, aimed at minimizing impervious surfaces and promoting infiltration.

Additionally, Leon County’s Special Development Zones A & B, as established in Section 10-4.323 of the Environmental Management Act (EMA), form a critical regulatory framework for protecting the Lake Jackson watershed. These zones impose strict limitations on site disturbance, mandate preservation of natural vegetation and buffers – especially within the most environmentally sensitive areas near the lake's shoreline. By restricting impervious surface expansion, prohibiting vehicle intrusion in Zone A, and requiring that at least 50% of Zone B be preserved in its natural state, these regulations are designed to minimize nutrient runoff, erosion, and habitat disruption.

Together, these regulations establish a comprehensive framework for limiting nutrient pollution, preserving hydrological function, and mitigating the impacts of high-density development around Lake Jackson. Their omission from FDEP’s analysis fails to account for existing robust safeguards that are already in place and actively enforced by the County.

At the July 8, 2025, County Commission meeting, revisions to the proposed comprehensive plan amendment affecting the Lake Jackson basin and the Lake Protection FLUC were presented in a map which reduced the area previously proposed for inclusion in the USA, specifically by reverting back to the existing USA boundary along the western side of North Meridian Road, and the removal of the proposed Lake Protection Node from the intersection of Meridian Road and Bannerman Road-Orchard Pond Parkway. The proposed USA depicted an expansion east of Meridian Road to include areas that were previously developed and parcels previously subdivided for development.

The County Commission directed staff to develop and implement a comprehensive public participation plan designed to actively engage residents. These efforts, detailed further below, garnered additional feedback from the unincorporated community, stakeholders, and reviewing agencies regarding this particular issue.

As presented at the City's September 17, 2025, Transmittal Hearing, the USA boundary was consistent with that reflected in the County Commission's May 13, 2025, transmittal, and did not reflect the revised map presented to the County Commission at their July 8, 2025, meeting since the Board did not adopt the map at that time.

Transmittal by the City Commission September 17, 2025

At its September 17, 2025 meeting, the City Commission voted to transmit the proposed LME and Glossary revisions, revised as detailed above, to the State Land Planning Agency as presented at the Transmittal Public Hearing.

Additional Community Engagement in the Unincorporated Area September – October 2025

At the July 8, 2025 meeting, the County Commission directed staff to conduct additional public engagement on the proposed LME and to bring back a status report with a summary of community input and a revised project schedule for the County Commission's consideration.

Following the July 8, 2025 meeting, staff scheduled community open houses across the County, developed materials for the public engagement, and began promoting the engagement through coordination with Leon County Community and Media Relations (CMR) staff. Information was shared via County social media platforms and press releases, fliers were put up at community centers where the open houses would be held, staff attended activity group meetings at community centers to inform citizens of the upcoming meetings, and staff gave interviews with local media outlets who covered the engagement efforts with reporting in several mediums. The schedule of community open houses in unincorporated Leon County included meetings at:

- Lake Jackson Community Center on Thursday, September 25, 2025
- Miccosukee Community Center on Monday, September 29, 2025
- Chaires Community Center on Tuesday, September 30, 2025
- Fort Braden Community Center on Wednesday, October 1, 2025
- Bradfordville Community Center on Wednesday, October 8, 2025
- Woodville Community Center on Wednesday, October 15, 2025, and Tuesday, October 21, 2025

Community engagement sessions on the LME at the Woodville Community Center were included in the larger engagement on the County's Woodville Sense of Place Plan because of the relevance and relationship between the Comprehensive Plan and the Sense of Place Plan.

A Status Report detailing this engagement, the feedback received, and additional analysis on the topics raised was presented to the County Commission at its November 18, 2025, meeting. Recommended revisions based on the engagement and analysis presented and accepted by the County Commission, relevant to the City's Adoption, and incorporated into the materials presented in this item are to:

1. Adjust the Urban Services Area (USA) east of Meridian Road where development patterns already reflect urban or previously subdivided parcels.
2. Do not expand the USA or change land use designations west of Meridian Road and maintain established rural and environmental protections.
3. Maintain the USA boundary in the Chaires Area as previously transmitted to the State Land Planning Agency and review agencies.
4. Change the Bexar property designation from *Sub-Urban Neighborhood* to *Sub-Urban Mixed-Use Commercial* to reflect the 2019 Comprehensive Plan amendment.
5. Maintain the Fort Braden Rural Community boundary as transmitted, with a minor expansion to include two parcels currently partially designated as Rural Community.
6. Clarify Rural Community density standards by limiting properties without sewer to a maximum of two dwelling units per acre and maintaining up to eight units per acre where central sewer service is available,

primarily within the Woodville area.

7. Clarify that public schools are directed to the USA, while remaining allowable in all Future Land Use Categories (FLUCs) except Natural Areas.
8. Confirm that existing Planned Developments—Southwood, Colin English, and Welaunee—continue to be governed by their adopted master plans.
9. Clarify the Lake Protection FLUC to emphasize sewer connections and redevelopment of existing developed nodes, with central sewer required in Conservation Subdivisions and Lake Protection Nodes along U.S. Highway 27 to achieve maximum density.
10. Confirm that Mahan Gateway Nodes correspond to the Sub-Urban Mixed-Use Commercial FLUC and remain implemented through existing Mahan Corridor Node and Ring zoning districts.
11. Standardize terminology to ensure consistent use of "Community Facilities" and "Community Services" throughout the LME, aligned with the Comprehensive Plan glossary and implementing zoning districts.
12. Remove the Urban and Sub-Urban Residential Preservation FLUCs and replace them with updated language addressing non-conforming uses, as directed by the City Commission on August 20, 2025.
13. Revise the Natural Areas FLUC to recognize the State's authority to manage publicly owned lands consistent with approved management plans, including the use of prescribed fire.

Summary of Changes Since September 2025

The following section details the revisions made to the proposed LME since the previous City Commission meeting on September 17, 2025. The revisions include responses to state agency comments and revisions made in response to public engagement or for language clarifications.

USA Boundary

The materials presented for adoption regarding the USA boundary are consistent with the recommendations presented at the September 17, 2025, City Commission Transmittal Hearing, with exception to the USA Boundary near Lake Jackson. The USA boundary presented for adoption reflects the revised boundary presented to the County Commission at their November 18, 2025 meeting (i.e. with no proposed USA expansion west of Meridian Road and a limited expansion east of Meridian Road).

If the City and County do not agree on the USA boundary, it will remain as it is currently adopted with no expansions or adjustments in the locations where there is disagreement.

Rural Community Maximum Density

Staff identified an internal inconsistency with the proposed base density of LME Policy 2.8.6 Rural Community, which would allow 4 dwelling units per acre. In the Sanitary Sewer Sub-Element of the Comprehensive Plan Utilities Element, Policy 1.2.1 [SS] states that the minimum lot size allowed for areas served by a septic tank shall be one-half acre, or 2 dwelling units per acre. As such, the maximum density in The Rural Community FLUC for properties not served by central sewer shall be 2 dwelling units per acre. Where properties are served by central sewer, the maximum density shall remain 8 dwelling units per acre. If adopted by the City Commission and County Commission, Rural Community will become a County-only policy as there are no designated Rural Communities within City limits.

Public Schools

Policy 2.8.2 describes land uses and includes Public Schools as an allowable use in all FLUCs except Natural Areas. The policy is revised to clarify that Public Schools are directed to be within the USA.

Planned Development Special District

Policy 2.8.18 provides for Planned Developments and is intended to continue to authorize those that are already approved. The policy is recommended to be revised to clarify Southwood, Colin English, Welaunee and Capital Circle Office Complex continue to be governed by their respective existing, adopted master plans. Additionally, this policy has been revised to indicate that the Capital Circle Office Complex PUD shall serve as the master plan for that Planned Development area.

Lake Protection FLUC

For efficiency of services within the Lake Protection FLUC, a recommendation is to clarify that the purpose of the bonuses is to connect properties with sanitary sewer and to incentivize redevelopment of currently developed nodes (i.e., not the newly constructed node on Bannerman Road at Bull Headley Road or any potential future nodes). Language requires that central services be available in Conservation Subdivisions and in Lake Protection Nodes for those properties on US Highway 27 (N Monroe Street) to achieve the allowed maximum density.

Additional Minor Policy Language Revisions to Clarify Policy Intent

Additional minor revisions based on community input and efforts to clarify policy intent have been incorporated and are included in the LME update materials presented for adoption.

State Agency Comments

Comments were received by state agencies in two sets. One set was received in June of 2025 as a result of the County transmittal of the proposed LME. As described above, the draft was revised in July 2025 to respond to comments from the State Land Planning Agency and Florida Department of Environmental Protection.

The second set of state agency comments were received by October 24, 2025, in response to the proposed LME transmitted September 17, 2025, by the City Commission. Changes described below are directed to address technical assistance comments from Florida Department of Commerce, Florida Department of Agriculture and Consumer Services (FDACS) and Florida Department of Environmental Protection (FDEP), included as Attachment #11.

Public Facilities

In a letter dated October 24, 2025, the Florida Department of Commerce indicated they identified no comments related to adverse impacts to important state resources and facilities within their authorized scope of review. The letter included a technical assistance comment offered either as a suggestion which can strengthen the City's comprehensive plan in order to foster a vibrant, healthy community, or is technical in nature and designed to ensure consistency with State Statutes. The letter indicated this comment would not form the basis of a challenge. The comment suggested supporting the proposed updated planning periods of 2035 and 2050 with updated relevant and appropriate data and analysis of public facilities (potable water, potable water supply, sanitary sewer, solid waste, stormwater and recreation facilities). Since transmitting to the State, a Community Services Report, analyzing the level of service for potable water, sanitary sewer, solid waste, and parks and recreation facilities and services in the Tallahassee-Leon County community has been finalized. This report satisfies the above suggestion, has been added to the Data and Analysis section of the LME website, and will be submitted with the final adoption packet.

State Managed Lands

The Florida Department of Agriculture and Consumer Affairs (FDACS) submitted a letter on October 10, 2025, and commented that there are managed state lands within the Natural Areas FLUC. Management of these lands is conducted consistent with state management plans and may include prescribed fire. To respond to this comment, the Natural Areas FLUC, Policy 2.8.3, is revised to add language recognizing the state's authority to manage its lands per its management plans that may include the use of prescribed fire.

Lake Jackson USA and Lake Protection Land Use

FDEP submitted a letter dated October 24, 2025. In this letter FDEP acknowledged text changes to the LME removing the previously proposed Lake Protection Node at the Meridian Road and Orchard Pond Parkway/Bannerman Road intersection, and further acknowledged the efforts of the City and County to protect water quality through local regulations and compliance with state stormwater standards and indicated appreciation for the Planning Department's response to agency comments within the transmittal packet. FDEP also included their previously submitted comments to remain in consideration as the LME moves forward. As provided above, the LME presented for adoption maintains the Rural and Urban Fringe (Rural Residential) land uses without proposed

changes. Additionally, the proposal does not include expansion of the USA west of Meridian Road near Lake Jackson. Any future proposed changes to the USA or FLUM would be processed as amendments to the Comprehensive Plan separate from the proposed LME being considered for adoption in this public hearing.

Next Steps in the Adoption of the LME

Policy 1.8.1 of the Intergovernmental Coordination Element requires both the City Commission and County Commission to adopt amendments to the text of the Comprehensive Plan. As such, based on interpretations by both City and County legal teams, the proposed LME is not considered adopted unless or until both the City Commission and County Commission adopt the proposed Element.

The County Commission approved staff recommendations at their November 18, 2025, Status Update on the LME, and directed staff to hold an adoption hearing on December 9, 2025. The materials presented for adoption reflected in this item incorporate the staff recommendations, as directed by the County Commission, for consideration and potential adoption by the City Commission.

If the LME is adopted by both the City Commission and Board of County Commissioners, the adopted amendment will be submitted to the Florida Department of Commerce and other reviewing agencies for a 30-day compliance review. Upon the expiration of this review period, if not timely challenged, the LME Update would become effective.

Options

1. Adopt Ordinance 25-O-02AA, thereby adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan in accordance with Policy 1.8.1. of the Intergovernmental Coordination Element of the Tallahassee-Leon County Comprehensive Plan.

2. Do not adopt Ordinance No. 25-O-02AA, thereby not adopting the proposed Land Use and Mobility Element and Glossary revisions to the Tallahassee-Leon County Comprehensive Plan.

3. Commission Direction.

ORDINANCE NO. 25-O-02AA

AN ORDINANCE OF THE CITY OF TALLAHASSEE AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM; MOBILITY ELEMENT; AND GLOSSARY; PROVIDING FOR SEVERABILITY AND CONFLICTS; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, Chapters 163 and 166, Florida Statutes, empower the City Commission of the City of Tallahassee to prepare and enforce comprehensive plans for the development of the City;

WHEREAS, Sections 163.3161 through 163.3215, Florida Statutes, the Community Planning Act, empower and require the City Commission of the City of Tallahassee to (a) plan for the City's future development and growth; (b) adopt and amend comprehensive plans, or elements or portions thereof, to guide the future growth and development of the City; (c) implement adopted or amended comprehensive plans by the adoption of appropriate land development regulations; and (d) establish, support, and maintain administrative instruments and procedures to carry out the provisions and purposes of the Act;

WHEREAS, pursuant to Section 163.3184, Florida Statutes, the City Commission of the City of Tallahassee has held public work sessions, public meetings, and several public hearings with due public notice having been provided, on this amendment to the Comprehensive Plan;

WHEREAS, on September 17, 2025, pursuant to Section 163.3184, Florida Statutes, the City Commission of the City of Tallahassee transmitted copies of the proposed amendment of the comprehensive plan to the Florida Department of Commerce and other state and regional agencies for written comment;

WHEREAS, the City Commission of the City of Tallahassee considered all oral and written comments received during public hearings, including the data collection and analyses packages, the recommendations of the Local Planning Agency/Planning Commission; and

WHEREAS, in exercise of its authority, the City Commission of the City of Tallahassee has determined it necessary and desirable to adopt this amendment to the comprehensive plan to preserve and enhance present advantages; encourage the most appropriate use of land, water and resources, consistent with the public interest; overcome present handicaps; and deal effectively with future problems that may result from the use and development of land within the City of Tallahassee, and to meet all requirements of law.

NOW, THEREFORE, BE IT ENACTED by the City Commission of the City of Tallahassee, Florida, as follows, that:

Section 1. Purpose and Intent.

This ordinance is hereby enacted to carry out the purpose and intent of, and exercise the authority set out in, Sections 163.3161 through 163.3215, Florida Statutes, the Community Planning Act.

Section 2. Comprehensive Plan Update Amendments.

The Ordinance does hereby adopt the following Comprehensive Plan Update Amendments attached hereto as Exhibit "A," and made a part hereof, as amendments to the Tallahassee-Leon County 2030 Comprehensive Plan as follows:

A. Consolidates the Future Land Use and Mobility Elements into the Land Use and Mobility Element;

B. Replaces the Land Use Element text and maps, including the Future Land Use Map and Addendum;

C. Replaces the Mobility Element text and maps; and

D. Revises the plan's Glossary of terms.

Section 3. Conflict With Other Ordinances and Codes.

All ordinances or parts of ordinances of the Code of Ordinances of the City of Tallahassee, Florida, in conflict with the provisions of this ordinance are hereby repealed to the extent of such conflict.

Section 4. Severability.

If any provision or portion of this ordinance is declared by any court of competent jurisdiction to be void, unconstitutional, or unenforceable, then all remaining provisions and portions of this Ordinance shall remain in full force and effect.

Section 5. Copy on File.

To make the Tallahassee-Leon County 2030 Comprehensive Plan available to the public, a copy of the enacting ordinance, as well as copies of the Tallahassee-Leon 2030 Comprehensive Plan and this amendment thereto, shall also be located in the Tallahassee-Leon County Planning Department. The Planning Director shall also make copies available to the public for a reasonable publication charge.

Section 6. Effective Date.

The effective date of this ordinance shall be after adoption by both the City Commission and County Commission and 31 days after the state land planning agency notifies the local governments that the plan amendment package is complete or as provided in section 163.3184(3)(c)(4), Florida Statutes.

INTRODUCED in the City Commission on the 11th day of June, 2025.

PASSED by the City Commission on the 19th day of November, 2025.

CITY OF TALLAHASSEE

LAND USE AND MOBILITY ELEMENT

GOALS, OBJECTIVES AND POLICIES

Goal 1 [LM] – A Healthy Environment:

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 1.1 – Identification of Natural Resources and Historic Features (City of Tallahassee/Leon County):

Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Policy 1.1.1 – Geographic Data (City of Tallahassee/Leon County):

Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network Primary Springs Protection Zone
- Perpetual conservation easements

Policy 1.1.2 – Designated Canopy Roads (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties (City of Tallahassee/Leon County): Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Policy 1.1.4– Soils and Water Features (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Objective 1.2 – Preservation of Natural Areas (City of Tallahassee/Leon County):
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 1.2.1 – Acquisition of Conservation and Preservation Lands (City of Tallahassee/Leon County):
The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

Policy 1.2.2 – Environmental Analysis (City of Tallahassee/Leon County):
Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation (City of Tallahassee/Leon County):
The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features (City of Tallahassee/Leon County):
The City and the County shall consider context-based beautification, landscaping, and stormwater facility and land development regulations that provide environmental protection measures for transportation corridors, where feasible by:

a. Increasing the amount of site and adjacent green spaces/open spaces.
b. Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff.

c. Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built.
d. Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan.
e. Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

Policy 1.2.5 – Connected Open Space (City of Tallahassee/Leon County):
Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected greenspaces.

Policy 1.2.6 – Conservation Element (City of Tallahassee/Leon County):
Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

Objective 1.3 – Access to Parks and Recreation (City of Tallahassee/Leon County):
Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

Policy 1.3.1 – Greenways and Trails Master Plan (City of Tallahassee/Leon County):
The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

Policy 1.3.2 – Urban Recreation Spaces (City of Tallahassee/Leon County):
Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces (City of Tallahassee/Leon County):
All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation (City of Tallahassee/Leon County):
All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Objective 1.4 – Urban Forests (City of Tallahassee/Leon County):
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

Policy 1.4.1 – Priority Planting Sites (City of Tallahassee/Leon County):
The City and County shall identify priority planting sites to guide the planting of trees to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

Policy 1.4.2 – Species Suitability (City of Tallahassee/Leon County):
The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

Policy 1.4.3 – Public Tree Inventory (City of Tallahassee/Leon County):
The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

Policy 1.4.4 – Public Development Tree Prioritization (City of Tallahassee/Leon County):
Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

Policy 1.4.5 – Private Development Tree Standards (City of Tallahassee/Leon County):
Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees.

Objective 1.5 – Green infrastructure (City of Tallahassee/Leon County):
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

Policy 1.5.1 – Community Wide Green Infrastructure (City of Tallahassee/Leon County):
The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide a feasible opportunity for street-level stormwater management.

- Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors.
- Support off-site regional stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).
- Supporting transit and alternative transportation modes.

Policy 1.5.2 – Site Specific Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Policy 1.5.3 – Design Guidelines for Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

Objective 1.6 – Community Resilience (City of Tallahassee/Leon County):
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

Policy 1.6.1 – Energy Efficiency (City of Tallahassee/Leon County):
The City and County shall develop regulations and design standards for compact development and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

Policy 1.6.2 – Multimodal Connectivity (City of Tallahassee/Leon County):
Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

Policy 1.6.3 – Smart Growth Strategies for Community Resilience (City of Tallahassee/Leon County):
The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

Policy 1.6.4 – Urban Heat Islands (City of Tallahassee/Leon County):
The local governments shall develop strategies that minimize effects of heat islands, such strategies may include:

a. Tree and vegetation cover.
b. Green roofs and rooftop gardens.
c. Roof coatings or materials with high albedo that significantly reflect heat away from a building.
d. Alternative pavements that mitigate heat island effects.

Policy 1.6.5 – Resiliency of Transportation Facilities (City of Tallahassee/Leon County):
Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.6.6 – Urban Forests and Climate Resilience (City of Tallahassee/Leon County):
Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

Objective 1.7 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

Policy 1.7.1 – Key Regional Partners (City of Tallahassee/Leon County):
Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

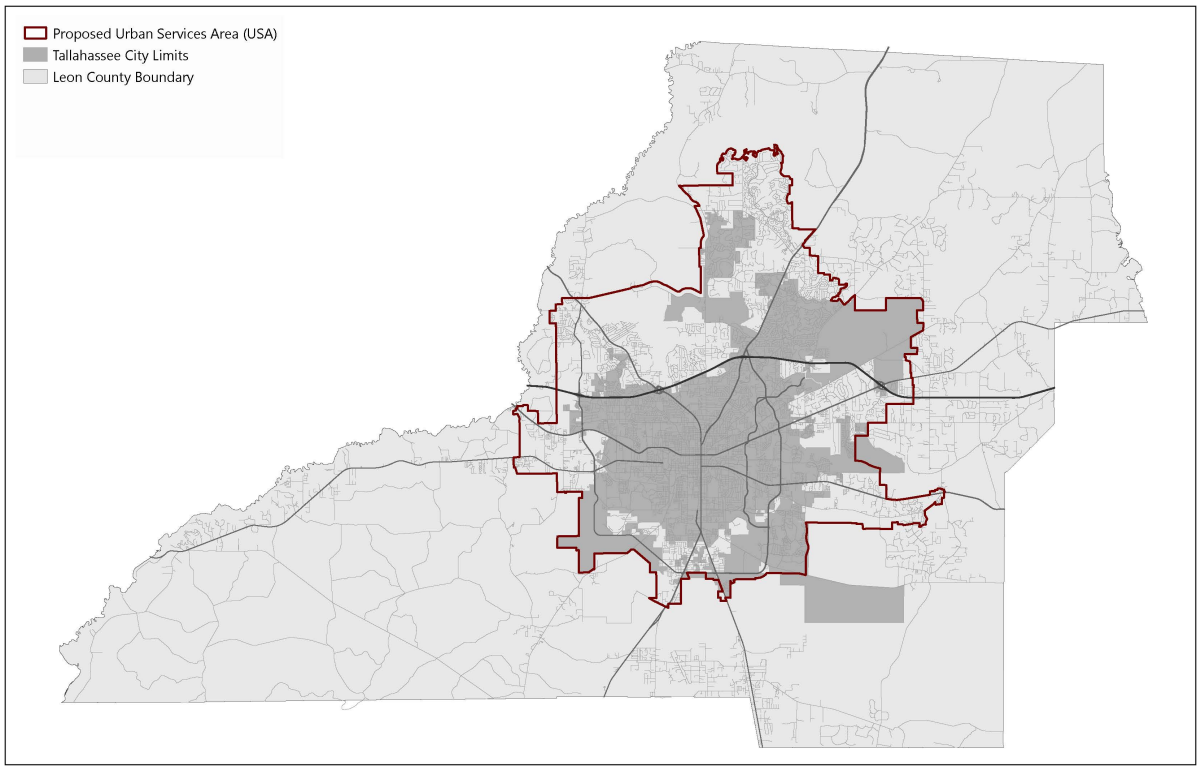
Policy 1.7.2 – Colleges and Universities (City of Tallahassee/Leon County):
Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide a variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.



Objective 2.1 – Growth and Population Accommodation (City of Tallahassee/Leon County):
Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

Policy 2.1.1 – Comprehensive Planning Periods (City of Tallahassee/Leon County):
The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

Policy 2.1.2 – Population Projections (City of Tallahassee/Leon County):
Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

Objective 2.2 – Efficient Growth (City of Tallahassee/Leon County):
To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Policy 2.2.1 – Urban Services Area (USA) (City of Tallahassee/Leon County):

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

Policy 2.2.2 – Improvement of Capital Infrastructure (City of Tallahassee/Leon County):

Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

Policy 2.2.3 – Planning for Urban Services (City of Tallahassee/Leon County):

Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

Policy 2.2.4 – Urban Services Outside of the Urban Services Area (City of Tallahassee/Leon County):

Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process. Emergency repairs and improvements necessary to maintain the public health, safety, and well-being shall be allowed without inclusion in the capital improvement planning process.

Policy 2.2.5 – Densities and Intensities (City of Tallahassee/Leon County):
Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map, and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

Policy 2.2.6 – Exceptions to the Urban Services Area (City of Tallahassee/Leon County):
Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and Rural Community in Woodville or west of the Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

Policy 2.2.7 – Roadway Improvements (City of Tallahassee/Leon County):
The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

Policy 2.2.8 – Adaptive Reuse, Infill Development, and Redevelopment (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

Policy 2.2.9 – Greyfields & Brownfields (City of Tallahassee/Leon County):
The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses where appropriate, waiver of development fees or some combination of the two.

Policy 2.2.10 – Transportation Corridors (City of Tallahassee/Leon County):
Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 334.03(29)—and protect it from development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below. This map,

table and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW Width (ft.)[1-3]**
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Actual road location and design will be determined by specific corridor alignment studies, engineering studies, or other design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of- way needs for future corridors:

   a. Space for sidewalks to provide safe and convenient movement of pedestrians.

   b. The provision of bike lanes or separate bike paths.

   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

   d. Accommodation of stormwater at the surface or in storm drains.

   e. Accommodation of auxiliary lanes at intersections.

   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

   g. Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

Corridor Preservation Map

Objective 2.3 – Public Infrastructure (City of Tallahassee/Leon County):
Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Policy 2.3.1 – Public Facilities Siting (City of Tallahassee/Leon County):
Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

Policy 2.3.2 – Public Infrastructure Resilience (City of Tallahassee/Leon County):
To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

Policy 2.3.3 – School Siting Review & Criteria (City of Tallahassee/Leon County):
All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

Objective 2.4 – Preservation of Rural Areas (City of Tallahassee/Leon County):
Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

Policy 2.4.1 – Transfer of Development Rights (City of Tallahassee/Leon County):
A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

Policy 2.4.2 – Criteria for Urban Service Area Expansion (City of Tallahassee/Leon County):
To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

Objective 2.5 – Reconnecting Urban Sprawl (City of Tallahassee/Leon County):
Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 2.5.1 – Suburban retrofit (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way.
- Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

Objective 2.6 – Recognizable Places (City of Tallahassee/Leon County):

Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces (City of Tallahassee/Leon County):

The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

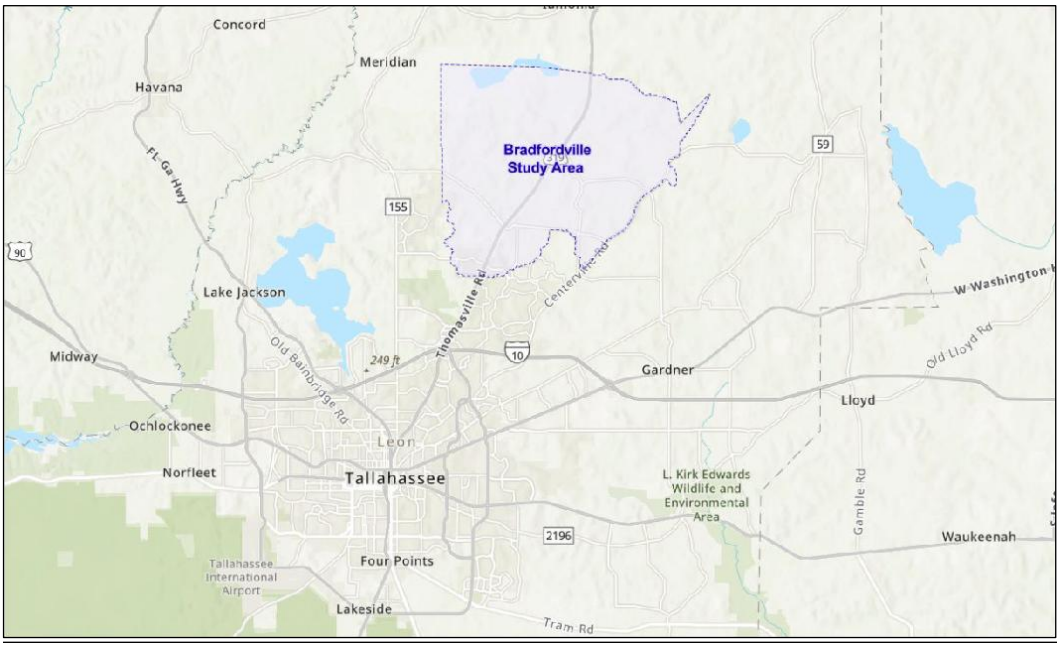
Policy 2.6.2 – Gateway Corridors (City of Tallahassee/Leon County):

Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

Policy 2.6.3 – North Monroe Corridor (City of Tallahassee/Leon County):

In addition to the Gateway Corridor components identified in Policy 2.6.2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.4 – Woodville Sense of Place (Leon County):



Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.5 – Future Downtown Development (City of Tallahassee):

The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

Policy 2.6.6 – Bradfordville Study Area (Leon County):

The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

Objective 2.7 (City of Tallahassee) – Multimodal Transportation District (MMTD):

Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 2.7.1 – MMTD Implementation (City of Tallahassee):

The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

Policy 2.7.2 Land Use Within the MMTD (City of Tallahassee):

The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

a. Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities.

b. Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD (City of Tallahassee):

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

e. Parking location.

Policy 2.7.4 – Minimum Parking Requirements (City of Tallahassee):

Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

Policy 2.7.5 – Transit in the MMTD (City of Tallahassee):

The MMTD shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation (City of Tallahassee):

Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

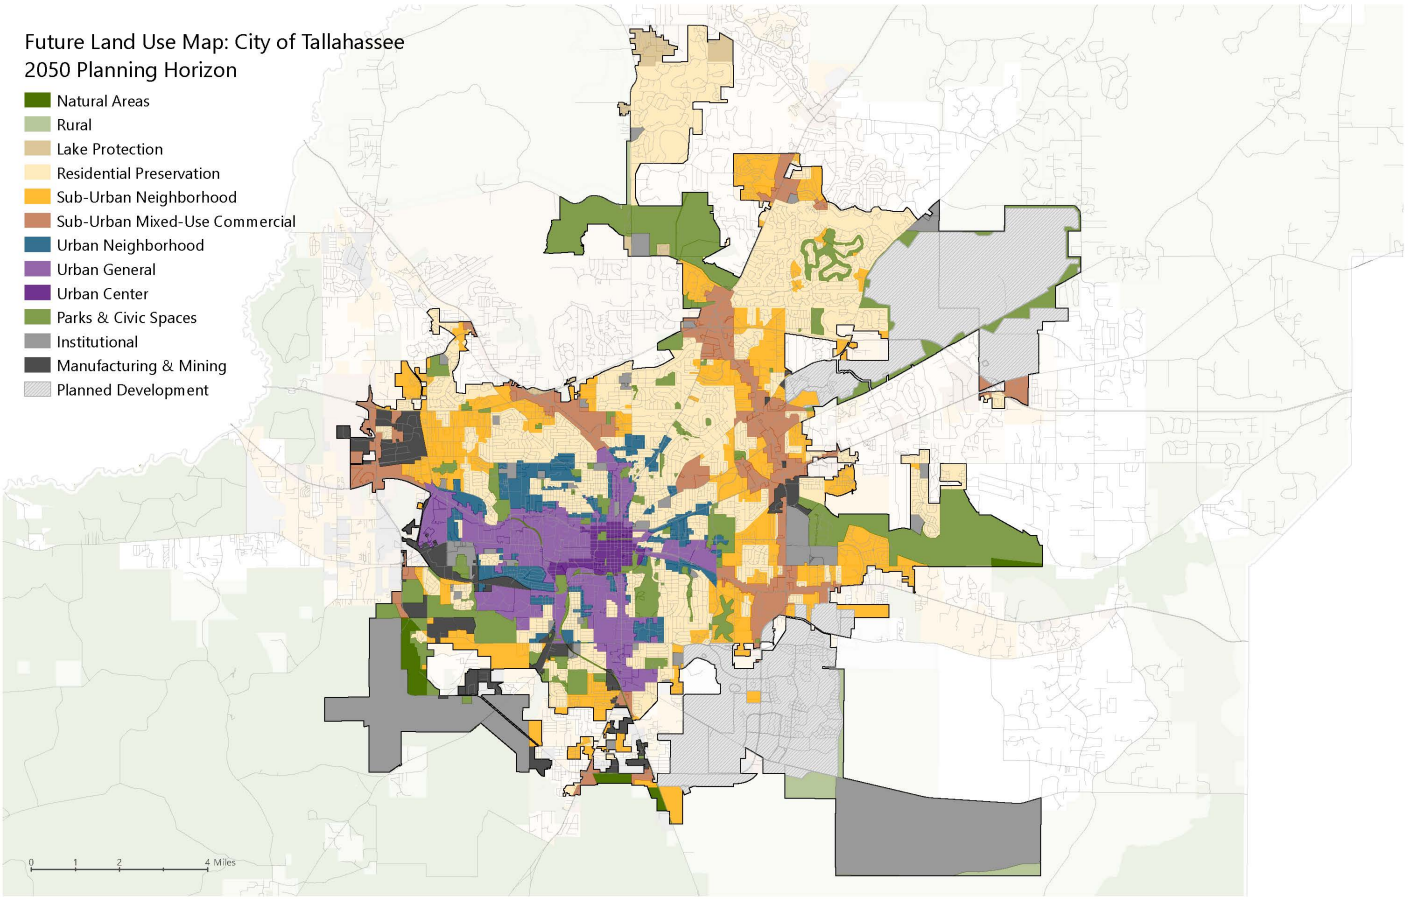
Policy 2.7.7 – MMTD Evaluation (City of Tallahassee):

The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.

Objective 2.8 – Community Context (City of Tallahassee/Leon County):

Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses,

transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.



Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map (City of Tallahassee/Leon County):

Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses (City of Tallahassee/Leon County):

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories within the Urban Services Area with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Future Land Map: City of Tallahassee

Future Land Use Categories (FLUCs)

Policy 2.8.3 – Natural Areas Future Land Use Category (City of Tallahassee/Leon County):

State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. No residential uses shall exceed a density of one dwelling unit per 10 acres.

The following special conditions shall apply to the Natural Areas future land use category:

1. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.
2. Accessory uses directly associated with the operation of silvicultural, wildlife conservation, and recreational hunting shall be allowed.
3. Light infrastructure shall be allowed within the Natural Areas future land use category, provided there is no reasonable alternative location outside of Natural Areas future land use areas that provide the same public benefit.
4. State forests managed by the Florida Forest Service may be managed with frequent prescribed fire to meet ecological restoration and maintenance, wildlife habitat improvement, forest pest prevention, access and aesthetic control, and hazardous fuel reduction objectives in accordance with their respective 10-year Land Management Plans (F.s. 253.034).

Policy 2.8.4 – Rural Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of one dwelling unit per 10 acres.

Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways with development standards provided in land development code regulations for these nodes, except for non-residential uses supporting ecotourism activities, which shall be allowed near the waterbodies and natural features that are the focus of the ecotourism activity.

Community services, light infrastructure, and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 5,000 square feet per acre, with the primary structure not to exceed 7,500 square feet.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, or natural resource-based ecotourism activities are prohibited. This includes, but is not limited to, golf course, drag strips, and racetracks.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

The following special conditions shall apply to the Rural Land Use category:

1. Development proposals within the Rural Land Use category shall be evaluated for compatibility with adjacent agricultural and silvicultural uses and shall consider the land management activities associated with such uses, including prescribed fires which result in smoke. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural Land Use category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Services Area or a designated Rural Community.
3. Non-residential development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register as of July 6, 2015, shall be considered conforming.
5. Because urban services are not planned or programmed for areas within the Rural land use category, the Rural land use category shall not be applied to properties within the Urban Services Area.

Policy 2.8.5 – Rural Residential Future Land Use Category (Leon County):

The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

Community facilities, minor commercial activities, and minor offices are permitted. The maximum allowable gross square footage in Rural Residential may not exceed 20,000 square feet per acre for minor commercial and 100,000 square feet per acre for neighborhood commercial and shall be further detailed in the land development code.

Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

The following special conditions shall apply to the Rural Residential Land Use category:

1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.
2. To protect rural areas from premature development, facilitate infill and redevelopment inside the Urban Services Area, and in recognition of the significant area already mapped as Rural Residential, no additional lands designated Rural or Rural Residential shall be converted to a more dense or intense land use category unless it is within the Urban Services Area and adjoining lands are also within the designated Urban Services Area.
3. Existing, lawfully established, non-residential uses within the Rural Residential land use category that are compatible with surrounding uses shall be considered permitted uses.
4. Existing lots of record shall be considered vested for the purposes of single-family residential use regardless of lot size or density provided all other development standards can be met.
5. Drive-in and drive-thru facilities are not permitted in Rural Residential.

Policy 2.8.6 – Rural Community Future Land Use Category (Leon County):
The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of 2 dwelling units per acre. Where central sewer is available, the maximum density allowed is 8 dwelling units per acre.

Community facilities, minor offices and small to moderate-sized commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage clustering of businesses to discourage "strip" development, provide for utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

The following special conditions shall apply to the Rural Community Land Use category:

1. Water and wastewater systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development.
2. Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements.

Policy 2.8.7 – Lake Protection Future Land Use Category (City of Tallahassee/Leon County):

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary. The boundaries of the Lake Protection category may be applied to areas outside but adjacent to the Lake Jackson basin where application of the category promotes cohesive development patterns along a mixed-use corridor or node.

The Lake Protection category shall allow for residential uses at a density of one dwelling unit per two acres. To encourage compact and efficient development, three density bonus options are available for properties within the category:

- A residential density of up to 4 dwelling units per acre may be permitted within developments designed as a Conservation Subdivision, where served by central water and sewer systems.
- A residential density of up to 8 dwelling units per acre may be permitted within the Lake Protection Corridor (LPC) zoning district, where served by central water and sewer systems.
- A residential density of up to 20 dwelling units per acre may be permitted for properties on US Highway 27 within the Lake Protection Node (LPN) zoning district, where served by central water and sewer systems, and where design standards, including buffering to adjacent low and density residential, as established in the land development code is met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted within areas designated with the LPN and LPC zoning districts. Within these districts, single use, non-residential development shall be allowed at a maximum intensity of 10,000square feet per acre in the LPC zone and 20,000 square feet per acre in the LPN zone where buffering to low-density residential as established in the land development code is met. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 square feet per acre in the LPC zone and a bonus of 10,000 square feet per acre in the LPN zone.

Community services, light infrastructure, and recreational uses shall be permitted. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet per acre.

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The local governments shall implement the Lake Protection Land Use Category with a minimum of three zoning districts, including Lake Protection, LPC, and LPN.
2. The LPN zoning district shall only be permitted at the following intersections:
    a. Highway 27 North and Sessions Road
    b. Highway 27 North and Capital Circle NW/Old Bainbridge Road
    c. Highway 27 North and Fred George Road
    d. Bannerman Road and Bull Headley Road

    The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.
3. The LPC zoning district shall only be permitted along Highway 27. The exact extent of the LPC shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the centerline of Highway 27 and shall not include areas within a Special Development Zone (SDZ).
4. As an alternative to large-lot developments, Conservation Subdivisions shall be permitted within the Lake Protection land use category and shall include the following:
    a. Contain a minimum of 60% open space preserved in perpetuity through a conservation easement and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity; and
    b. Be developed at a maximum gross density of two dwelling units per acre or a maximum gross density of four dwelling units per acre when served by central water and sewer systems.
5. Land development regulations shall include stormwater treatment standards for all development and redevelopment within the Lake Protection land use category. To

encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites.

6. Minimum open space requirements, Low Impact Development strategies, and maximum building footprints shall be included as development standards for the zoning districts implementing the Lake Protection land use category. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.

7. The land development regulations shall provide provisions for legally established non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards, including buffering to adjacent low-density uses, and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.8.8 – Residential Preservation Future Land Use Category (City of Tallahassee/Leon County):

Characterized by existing homogeneous residential areas within the community that are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development primarily will consist of infill due to the built-out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterials and expressways should be planned to minimize impacts within this category. Single family, townhouse, duplexes and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in this policy, existing legally established residential uses exceeding 6 units per acre shall be deemed conforming. Such uses may rebuild to existing building lot coverage percentage and density. Expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Nonresidential uses, other than community facilities and recreational facilities are not permitted. Community facilities are limited to a maximum of 60% impervious surface.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria:

1) Existing land use within the area is predominantly residential
2) Majority of traffic is local in nature
   a) Predominance of residential uses front on local street
   b) Relatively safe internal pedestrian mobility
3) Densities within the area generally of six units per acre or less
4) Existing residential type and density exhibits relatively homogeneous patterns
5) Assessment of stability of the residential area, including but not limited to:
   a) Degree of home ownership
   b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) Limitation on future commercial intensities adjoining low-density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by meeting land development regulation requirements for buffers, screenings, landscaping, noise, setbacks and stepbacks to be compatible with low density residential development in terms of size and appearance. The factors cited in paragraph (d) below shall be used when determining the compatibility and design techniques. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

b) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low-density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide screening or buffering between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (d) below shall be considered when determining compatibility and design techniques.

The design and layout of expanding or redeveloping light industrial uses adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Institutional Special District or the Manufacturing and Mining Special District t and applicable Land Development Regulations.

c) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions.

Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.

d) Land use compatibility with low-density residential preservation neighborhoods

A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. The following factors shall continue be maintained in the land development regulations used to determine whether a new development is compatible with existing low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor.

e) Limitations on Planned Unit Developments in the Residential Preservation land use category.
Planned Unit Developments proposed within the interior of a Residential Preservation area designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities. Principal uses within the district shall include residential development, neighborhood commercial, and neighborhood supportive facilities such as community facilities, recreational amenities, and light infrastructure.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 dwelling units per acre. Allowed residential building types are single-family detached, single-family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

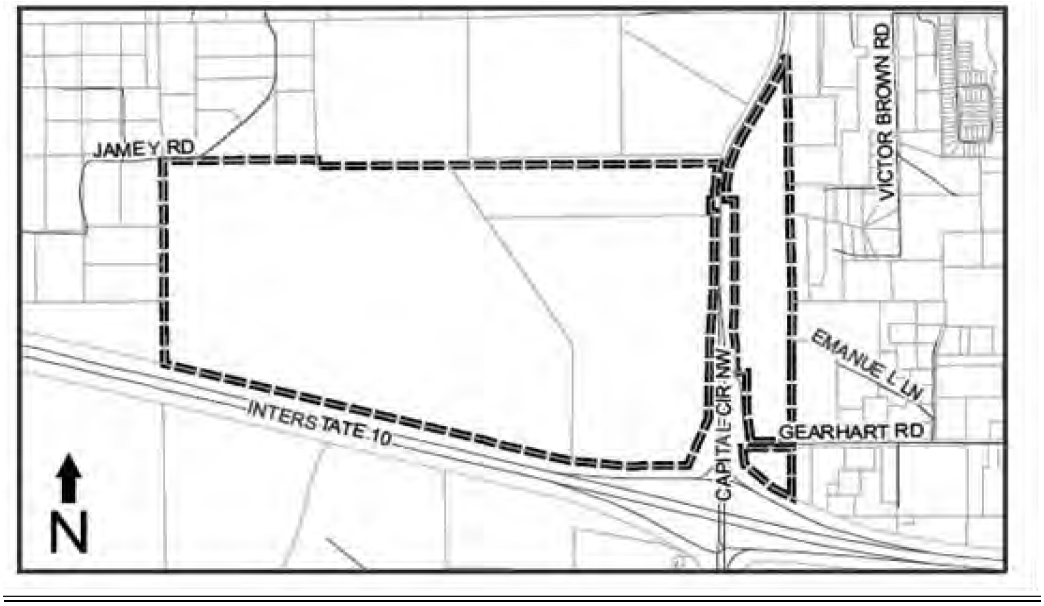
Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

The following special conditions shall apply to the Sub-Urban Neighborhood Future Land Use category:

1. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Sub-Urban Neighborhood land use.
2. If central sanitary sewer is not available, non-residential development is limited to a maximum of 900 gallons of wastewater flow per day. Community service facilities are limited to no more than 5,000 square feet, or a sewage flow not to exceed 900 gallons per day. Also, refer to Sanitary Sewer Policies 1.2.3 and 2.1.2 of the Utilities Element of the Comprehensive Plan for additional requirements.

Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities. An integrated pedestrian and bicycle access system shall be provided to afford safe and accessible foot and bike travel between the land uses. The district is intended to facilitate efficient traffic flow by allowing only land uses developed with comprehensively planned access, egresses, and internal circulation systems through the land development review and approval process.



Residential land uses at a maximum density of up to 45 dwelling units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential

uses. Mass transit stops should be located at large commercial centers with appropriate connections established between commercial and residential areas to reduce the automobile dependency of residents and employers. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated.

Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre except for in the scenarios outlined in the special conditions below.

The following special conditions shall apply in the Sub-Urban Mixed Use Commercial Land Use Category:

1. Except within mixed-use centers, larger-scale commercial development shall be buffered from residential neighborhoods.
2. If development within the Sub-Urban Mixed Use Commercial Land Use Category only contains residential land uses, at least 5% of the gross site must be used for passive or active open space such as pocket parks, green space, or trails. The required 5% of the site shall be contiguous.
3. Non-residential development that is a part of a mixed-use development that includes medical centers may have an intensity of up to 80,000 square feet per acre, and up to 176,000 square feet per acre if it includes a hospital.
4. Park Place is a designated Regional Activity Center subject to the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code.

Park Place meets the parameters for a Regional Activity Center as defined in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the map above. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur

consistent with the guiding land use policies within the local comprehensive plan and the land development code.

Policy 2.8.11 – Urban Neighborhood Future Land Use Category (City of Tallahassee):
The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities. The Urban Neighborhood area shall be characterized by a mix of uses on small lots, with residential uses being the predominant type, and a street network that generally connects to residential neighborhoods along corridors or behind the uses fronting major collectors or arterial roadways. Non-residential neighborhood-scale uses are allowed and intended to integrate into the surrounding neighborhood. Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum gross density of 26 dwelling units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

A maximum intensity for commercial uses of 30,000 square feet per acre and a maximum intensity for office uses of 30,000 square feet per acre are allowed. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. The number of parking spaces may be reduced to reflect increased pedestrian access.

The following special conditions shall apply to the Urban Neighborhood Land Use Category:

1. Design and development standards for the Urban Neighborhood area shall detail the placement, scale, and relationship between buildings and the street, including landscaping standards, to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Urban Neighborhood land use category.

Policy 2.8.12 – Urban General Future Land Use Category (City of Tallahassee):
The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities that are arranged in a manner to promote walkability and bikeability, or reduce automobile use. This category includes a variety of building types, short setbacks, wide sidewalks,

and a street scape with trees, typically defining medium-sized blocks within walking distance of high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities.

A maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for commercial uses of 60,000 square feet per acre and a maximum intensity for office uses of 60,000 square feet per acre are allowed.

Development in this category located along public frontages shall incorporate uses that emphasize and encourage pedestrian foot traffic and contribute towards a visually-interesting environment for the adjacent public realm. This can be achieved through methods such as high percentage of transparency, frequent pedestrian opening with connections to adjacent streetscapes, and human-scaled architectural details. Development that is primarily served by automobile traffic and generates low foot traffic shall be subject to a maximum intensity of 30,000 square feet per acre.

The following special conditions shall apply to the Urban General Land Use Category:

1. Design and development standards in the land development regulations for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and safety, and a continuous walkable street network throughout the district.
2. Development standards in the Tallahassee Land Development Code may not require minimum parking requirements for uses in the Urban General land use category.
3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district.
4. Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements.
5. The land development regulations shall include standards for development that do not incorporate uses that emphasize and encourage pedestrian foot traffic or contribute towards a visually-interesting environment for the adjacent public realm. Standards shall include requirements such as enhanced bicycle and pedestrian amenities and streetscaping features, building façade enhancements, and building placement.

Policy 2.8.13 – Urban Center Future Land Use Category (City of Tallahassee):
The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to

pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed-use, pedestrian, bike and transit- oriented development.
2. Future Expansion of the Urban Center land use shall be subject to the following requirements.
    a. The proposed parcels shall be:
        i. Within the existing Downtown Overlay; and
        ii. Contiguous to the existing Urban Center FLUM area.
        iii. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.
        iv. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.8.14 – Special Development Districts (City of Tallahassee/Leon County):
The following Special Development Districts are created to address unique uses and areas throughout the community:

- Manufacturing and Mining – Heavy industrial land uses that do not, typically, have a defined intensity or density and may have the potential to create significant offsite impacts to surrounding areas, have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic, and vibrations that are not regulated by federal and/or state laws shall be regulated by the City and County.
- Institutional - Heavy infrastructure community facilities which may be public or privately owned or established that provide significant public benefit but may have the potential to create off-site impacts.
- Parks and Civic Spaces – City, County, State and Federal areas utilized for passive and/or active recreation uses. The principal land use will not, typically, have a defined density

or intensity.

- Planned Development – Large, undeveloped land areas within the Urban Services Boundary that are generally under single ownership that are required to be master planned prior to development.

Special Development Districts shall be subject to the provisions of the Comprehensive Plan except where otherwise specified by federal and state laws.

Policy 2.8.15 – Manufacturing and Mining Special District (City of Tallahassee/Leon County):

Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services Area.

Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.

The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

- Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
- Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties.
- Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent impacts offsite or require mitigation and/or minimization techniques for impacts. Ancillary commercial

uses designed to serve adjacent workers may be permitted.

The following special conditions shall apply to the Manufacturing and Mining Special District:

1. Noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented or mitigated to avoid negative impacts on properties in the vicinity of these uses. The City and Leon County Land Development Code shall provide minimum mitigation standards.
2. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Special District.
3. Site plans must demonstrate the protection of adjacent non-industry and non-mining properties through development standards outlined in the land development codes.
4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
5. Hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidizing, and similar activities, commonly referred to as fracking, are not permitted uses in the Industry and Mining Land Use.

Policy 2.8.16 – Institutional Special District (City of Tallahassee/Leon County):
The purpose of this Special District is to provide lands for heavy infrastructure community facilities that must obtain federal and/or state approvals to be located, modified and/or expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90 percent of the entire site when located within the Urban Service Boundary or 75 percent of the entire site when located outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

The following special conditions shall apply to the Institutional Special District:

1. Institutional land uses have the potential to create offsite impacts to surrounding areas. Because institutional uses vary in their operations and their potential offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.
2. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from institutional uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Policy 2.8.17 – Parks and Civic Spaces Special District (City of Tallahassee/Leon County):

The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces.

The following special conditions shall apply to the Parks and Civic Spaces Special District:

1. Commercial active recreation land uses shall be established through the Planned Unit Development process.
2. Because commercial active recreation land uses vary in their operations and potential offsite impacts, the Planned Unit Development shall establish standards to address the potential offsite impacts, including, but not limited to noise, lighting, and traffic access and congestion.

Policy 2.8.18 – Planned Development Special District (City of Tallahassee/Leon County):

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned Development Special District is located.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

The following special conditions shall apply to the Planned Development Special District:

1. Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, public or private open space) that are integrated with each other, as well as with the unique characteristics of the development area.
2. Master Plans shall identify the following:
    a. Boundary of area subject to Planned Development.
    b. General depiction of mix, location and intensities of future land uses.
    c. Activities permitted within each land use.

d. Total dwelling units.

e. Total square footage of non-residential development.

f. How natural resources on-site will be protected.

g. Major transportation system improvements that are consistent with adopted transportation plans.

h. Capacity maintenance, bicycle, and pedestrian accessibility, impacts to surrounding areas and protection of canopy roads, if applicable.

i. Address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development.

j. Facilities and development requirements to provide alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit.

k. An infrastructure plan which identifies the type, demand, and general location of needed utilities in relation to existing and scheduled utilities in the areas of the development.

l. The location and adequacy of proposed schools, parks, and open space.

m. How the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses.

n. How the development will comply with applicable affordable housing policies and/ordinances.

o. How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed.

p. A set of development guidelines that will direct the development of implementing PUD/PUDs. These guidelines shall address, but not be limited to, building height, setbacks, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.

3. Previous approved Comprehensive Plan Area Plans shall constitute a Master Plan as required by this policy. The Southeast Sector Plan serves as the Master Plan for Southwood, Colin English Properties, and the former Southside DRI lands. The Welaunee Critical Area Plan serves as the Master Plan for the Welaunee Toe, Heel, and Arch. The Capital Circle Office Complex Planned Unit Development Master Plan Concept shall serve as the Master Plan for this area, and shall be exempted from the four use requirement of this policy.

4. Approved Master Plans are to be implemented by one or more Planned Unit Developments. Minimum size requirements for Planned Unit Developments within the district shall be established in the land development code. Minor and major amendments to the Master Plan may be approved through the Planned Unit Development requirements and procedures. The Planned Unit Development may serve as the Master Plan if it meets the requirements for a Master Plan enumerated in this policy.

5. Easements, right-of-way and other improvements located throughout the Planned Development District boundary may be required to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the

Master Plan.

6. Subdivision of a portion of a Planned Development District for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource-based recreation use shall not be contingent upon the adoption of a Master Plan or PUD.
7. Subdivision and development of a portion of a Planned Development area for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan or PUD. The land development code shall establish the process and requirements for siting and development of new schools and the expansion of existing schools. The conservation, preservation, passive recreation, educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduce the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.
8. Separate Master Plans may be approved for each Planned Development District that is divided by an interstate or arterial highway that limits integration across the entire development.
9. As demands from a rapidly increasing population may require the expansion of the Urban Service Boundary in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.
10. Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development areas shall be designated as Planned Development on the adopted Future Land Use Map and Zoning Map.

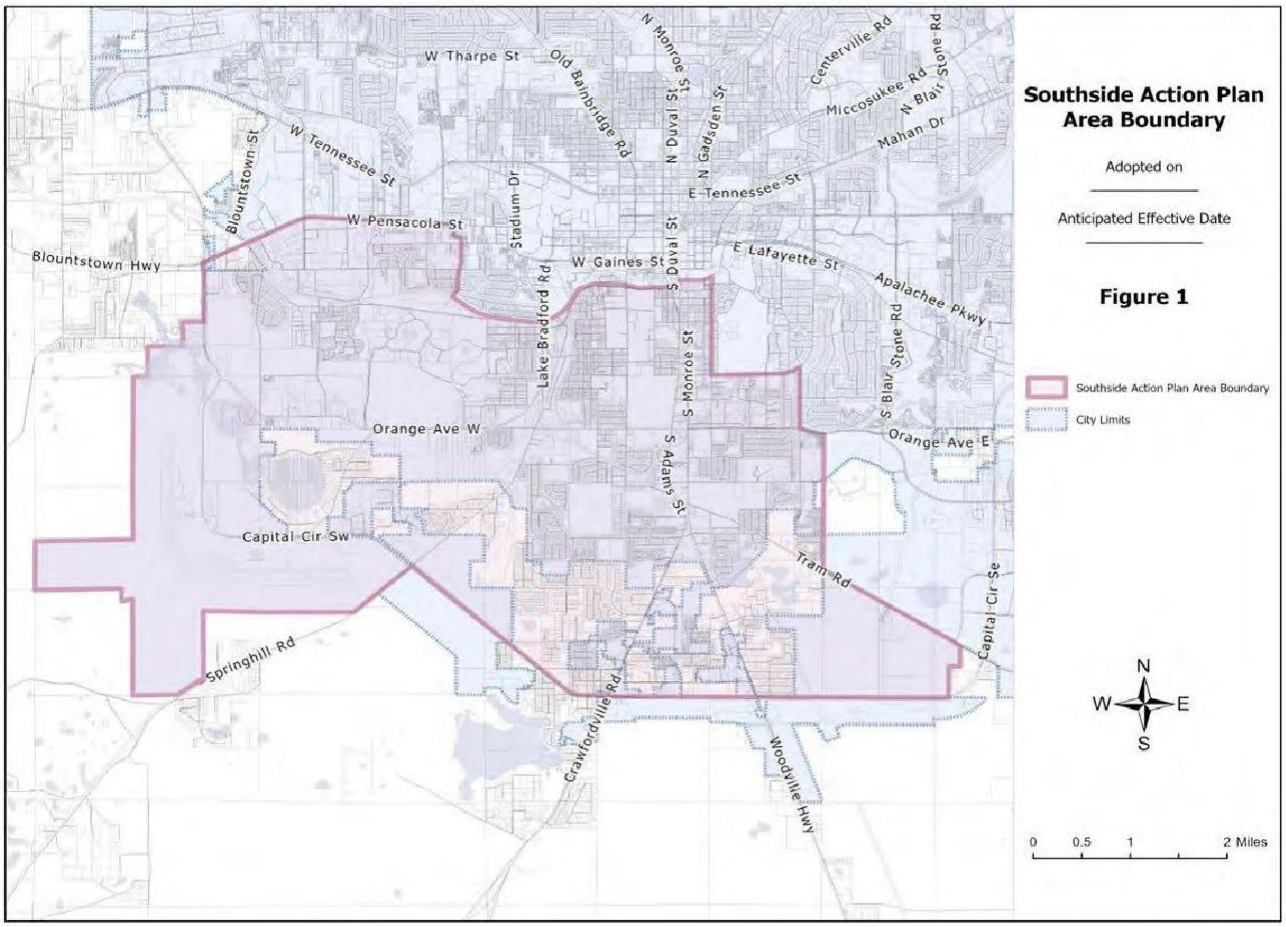
Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community facilities, including schools, community centers, and libraries.

Objective 3.1 – Residential Character (City of Tallahassee/Leon County):
Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.



Policy 3.1.1 – Residential Character Criteria (City of Tallahassee/Leon County):
Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

Policy 3.1.2 – Housing Diversity (City of Tallahassee/Leon County):
Maintain a viable mix of available residential densities to accommodate a variety of housing types.

Policy 3.1.3 – Healthy Food Options (City of Tallahassee/Leon County):
The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

Objective 3.2 – Southside Action Plan (City of Tallahassee/Leon County):
Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Policy 3.2.1 – Southside Action Plan Area (City of Tallahassee/Leon County):
The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

Policy 3.2.2 – Beautification (City of Tallahassee/Leon County):
Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Policy 3.2.3 – Investment (City of Tallahassee/Leon County):
Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Policy 3.2.4 – Active and Engaged Citizens (City of Tallahassee/Leon County):
Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

Policy 3.2.5 – Southside Action Plan Evaluation and Update (City of Tallahassee/Leon County):
The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

Objective 3.3 – Connectivity Access Management (City of Tallahassee/Leon County):
Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

Policy 3.3.1 – Access Management Design (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

Policy 3.3.2 – Intersection and Interchange Restrictions (City of Tallahassee/Leon County):
Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

Policy 3.3.3 – Unified Access and Circulation Plans (City of Tallahassee/Leon County):
Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.4 – Access Management Improvements (City of Tallahassee/Leon County):
Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that:

1. Address the transition of vehicles from arterial roadways to internal circulation systems.
2. Prioritize the redesign of median openings that are inadequately designed.
3. Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

Policy 3.3.5 – State Road Access Management (City of Tallahassee/Leon County):
The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Policy 3.3.6 – Neighborhood Through-Traffic (City of Tallahassee/Leon County):
Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies.

Policy 3.3.7 – Consolidated Properties (City of Tallahassee/Leon County):
Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

Policy 3.3.8 – Development Near Interchanges (City of Tallahassee/Leon County):
Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

Policy 3.3.9 – Access Management Deviations (City of Tallahassee/Leon County):
Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Objective 3.4 – Equitable Distribution of Land Uses (City of Tallahassee/Leon County):
Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

Policy 3.4.1 – Distribution of Land Uses (City of Tallahassee/Leon County):
The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

Policy 3.4.2 – Public Investments (City of Tallahassee/Leon County):
The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

Objective 3.5 – Safety (City of Tallahassee/Leon County):
Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

Policy 3.5.1 – Public Infrastructure Design (City of Tallahassee/Leon County):
Public infrastructure, relevant to transportation, shall be designed to increase the safety of its

users through strategies such as the application of context-based design and design speed, Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization, pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures

Objective 3.6 – Land Development Regulations (City of Tallahassee/Leon County):
Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 3.6.1 – Criteria for Amendments to Land Development Regulations (City of Tallahassee/Leon County): Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

Policy 3.6.2 – Implementing Zoning Districts (City of Tallahassee/Leon County):
Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

Policy 3.6.3 – Site Requirements (City of Tallahassee/Leon County):
Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Context-based transit amenities
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise mitigation

Policy 3.6.4 – Density and Intensity Incentives (City of Tallahassee/Leon County):
Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the respective Future Land Use Category by up to 20%. Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

Policy 3.6.5 – Planned Unit Developments (City of Tallahassee/Leon County):
The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

Policy 3.6.6 – Non-Conforming Uses (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on:

- The impact of the non-conformity to conforming land uses adjacent to the non-conformity.
- A determination that the non-conformity is not detrimental to public health, safety, and welfare.
- The ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between non-conforming uses which are to be terminated or amortized, and legally established non-conforming uses in nonresidential designations which may continue, but not be expanded.

Policy 3.6.7 – Previously Vested Development (City of Tallahassee/Leon County):
Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

Policy 3.6.8 – Landfill Redevelopment (City of Tallahassee/Leon County):
Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

Objective 3.7 – Urban Design (City of Tallahassee/Leon County):
Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging,

accessible, and safe public spaces.

Policy 3.7.1 – Design Principles and Priorities (City of Tallahassee/Leon County):
General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

Policy 3.7.2 – Crime Prevention through Environmental Design (City of Tallahassee/Leon County):
Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to:

- Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private.
- Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces.
- Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users.
- Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability.
- CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

Policy 3.7.3 – Design Criteria for Mobility Hubs (City of Tallahassee/Leon County):
New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Goal 4 [LM] – Greater Housing Diversity:

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
    - Neighborhoods that are diverse in use and population.
    - Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
    - Places that offer inclusive access to public spaces and community institutions.

Objective 4.1 – Missing Middle Housing (City of Tallahassee/Leon County):

Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

Policy 4.1.1 – Accessory Dwelling Units (ADUs) (City of Tallahassee/Leon County):

Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

Policy 4.1.2 – Missing Middle Housing as Conforming Uses (City of Tallahassee/Leon County):

Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

Policy 4.1.3 – Community Character Analysis (City of Tallahassee/Leon County):

In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

Policy 4.1.4 – Pattern Books (City of Tallahassee/Leon County):
Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

Objective 4.2 – Mobility-Based Housing Incentives (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

Policy 4.2.1 – Coordinate Transit with Land Use (City of Tallahassee):
As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

Policy 4.2.2 – Transit-Oriented Development (TOD) Design Standards (City of Tallahassee/Leon County):
Land development regulations shall include design standards to encourage the following principles around transit centers:

- Site centers in locations with highest ridership potential and development opportunities.
- Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development.
- Create a range of densities with highest at centers, tapering down to existing neighborhoods.
- Design centers for seamless pedestrian connections to surrounding development.
- Create public plaza directly fronting one or more sides of the center building where feasible.
- Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible.
- Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets.
- Enhance multi-modal connections, making transfers easy, direct, and comfortable.
- Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas.
- Use centers as catalysts for major redevelopment of area and create placemaking around centers.

Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within ¼ mile of a transit stop. This density bonus shall

not apply to the Residential Preservation land use category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4 – Coordinate Trails with Land Use (City of Tallahassee/Leon County):
As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.

Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards (City of Tallahassee/Leon County):
Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

Policy 4.2.6 – Trail-Oriented Development (TrOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 1/2 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Objective 4.3 – Affordability (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

Policy 4.3.1 – Inclusionary Housing Policy (City of Tallahassee/Leon County):
As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

Policy 4.3.2 – Establishing Community Land Trusts (City of Tallahassee/Leon County):
To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing models that:

- Do not include resale restrictions, or
- Include resale restrictions that are temporary, forgiven, or set to expire over time, or
- Rely on local government land donations without long-term affordability guarantees.

Policy 4.3.3 – Requirements of Community Land Trusts (City of Tallahassee/Leon County):

To qualify for local government assistance, Community Land Trusts shall:

- Require permanent affordability.
- Require that owners live in the homes as their primary residence.
- Include resale formulas in land leases.

Policy 4.3.4 – Affordable Housing Design Standards (City of Tallahassee/Leon County):

Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

Policy 4.3.5 – Affordable Housing Density Bonus (City of Tallahassee/Leon County):

Land development regulations shall include provisions that allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

Objective 4.4 – Family Heir Subdivisions (City of Tallahassee/Leon County):

Provide a hardship provision by which owners of property outside of the Urban Services Area who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

Policy 4.4.1 – Family Heir Subdivision Eligibility (City of Tallahassee/Leon County):

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Objective 5.1 – Economic Health (City of Tallahassee/Leon County):
Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

Policy 5.1.1 – Economic Development Strategic Plan (City of Tallahassee/Leon County):
The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan.

Objective 5.2 – Airport Access (City of Tallahassee):
Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

Policy 5.2.1 – Airport Master Plan (City of Tallahassee):
The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

Objective 5.3 – Freight and Cargo (City of Tallahassee/Leon County):
Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

Policy 5.3.1 – Intermodal Centers (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall maintain an inventory of intermodal freight centers, including the locations, types of facilities, and activities of the centers.

Policy 5.3.2 – Tallahassee International Airport (City of Tallahassee/Leon County):
Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

Policy 5.3.3 – Transportation Access (City of Tallahassee/Leon County):
Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal freight centers, or other freight transfer locations.

Objective 5.4 – Resilience Planning (City of Tallahassee/Leon County):
Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

Policy 5.4.1 – Post Disaster Redevelopment Plan (City of Tallahassee/Leon County):
The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

Policy 5.4.2 – Local Mitigation Strategy (City of Tallahassee/Leon County):
The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

Objective 5.5 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

Policy 5.5.1 – Regional Economic Development Coordination (City of Tallahassee/Leon County):
The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

Policy 5.5.2 – Grant Funding Opportunities (City of Tallahassee/Leon County):
Local governments shall pursue grant opportunities for projects or programs of regional significance.

Goal 6 [LM] – A Balanced Transportation Network:

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

Objective 6.1 – Land Use and Transportation Coordination for Livability (City of Tallahassee/Leon County):

Coordinate land use and transportation systems to foster vibrant communities across context areas with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl (City of Tallahassee/Leon County):

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities (City of Tallahassee/Leon County):

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts to the multi-modal transportation network.

Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors (City of Tallahassee/Leon County):
Transportation corridor maps showing the future land uses shall be developed and maintained to reflect the enhanced coordination between land use and transportation including new construction and improvements, reflecting the intended context classification.

Policy 6.1.4 (City of Tallahassee/Leon County) – Retrofit for Livability:
Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

Objective 6.2 – Network Connectivity Improvement (City of Tallahassee/Leon County) :
Improve the balance of transportation options, connectivity, and capacity of the multimodal transportation network.

Policy 6.2.1 – Enhance Connectivity (City of Tallahassee/Leon County):
Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

Policy 6.2.2 – Future Right-of-Way Needs (City of Tallahassee/Leon County):
Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through appropriate development review and other processes, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 6.2.3 – Build and Enhance the Network (City of Tallahassee/Leon County):
Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 6.2.4 – Corridor Management and Preservation (City of Tallahassee/Leon County):
Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

Policy 6.2.5 – Interconnectivity for Development (City of Tallahassee/Leon County):
Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments when such connection has the potential to reduce the vehicular traffic on the external street system.

Policy 6.2.6 – Continuation of Streets (City of Tallahassee/Leon County):
All development plans shall incorporate and continue all sub arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 6.2.7 – Interconnectivity to Adjacent Uses (City of Tallahassee/Leon County):
Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

Objective 6.3 – Context Based Mobility (City of Tallahassee/Leon County):
Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

Policy 6.3.1 – Local Context Classification and Safe Systems (City of Tallahassee/Leon County):
A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use and zoning, and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

Policy 6.3.2 – Context Classification Application (City of Tallahassee/Leon County):
The context classification system shall be applied to City and County roadway resurfacing and enhancement projects in a manner that reflects the future vision and context of the area, and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

Policy 6.3.3 – Context Classification Map (City of Tallahassee/Leon County):
By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification Map and the Future Land Use Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

Policy 6.3.4 – Downtown Traffic (City of Tallahassee/Leon County):
By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

Policy 6.3.5 – Lane Repurposing (City of Tallahassee/Leon County):
Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Policy 6.3.6 – One-Way Pair Studies (City of Tallahassee/Leon County):
Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements. The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 6.3.7 – Speed Management (City of Tallahassee/Leon County):
By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

Policy 6.3.8 – Level of Service (LOS) (City of Tallahassee/Leon County):
Peak Hour Roadway Level of Service is established below and shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS) (City of Tallahassee):
In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

Objective 6.4 – Complete Streets (City of Tallahassee/Leon County):
Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 6.4.1 – Project Evaluation (City of Tallahassee/Leon County):
Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

Policy 6.4.2 – Share Transportation Information (City of Tallahassee/Leon County):
The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.3 – Bicycle and Pedestrian Network (City of Tallahassee/Leon County):
The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan (City of Tallahassee/Leon County):
In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature

upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

Policy 6.4.5 – Safe Routes to Schools (City of Tallahassee/Leon County):
Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 6.4.6 – Community Gateways (City of Tallahassee/Leon County):
Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

Policy 6.4.7 – Scenic Roadway Assessments (City of Tallahassee/Leon County):
In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

Policy 6.4.8 – Maintenance of Traffic (City of Tallahassee/Leon County):
When construction or repair work infringes on regular corridor operation, a project specific Maintenance of the Traffic Plan shall be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

Policy 6.4.9 – Multi-Modal Safety and Access (City of Tallahassee/Leon County):
Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction.
- A documented absence of current or future need.
- Procedures and criteria for approving exceptions will be identified in the Land Development Code.

New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and shall use innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 6.4.10 – Applicability (City of Tallahassee/Leon County):
All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present.

Policy 6.4.11 – Equity (City of Tallahassee/Leon County):
The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

Policy 6.4.12 – Design Standards (City of Tallahassee/Leon County):
Land Development Codes that apply to all development policies and programs shall be revised by 2030 to use the latest professionally accepted design guidance, standards, and recommendations for Complete Streets in coordination with the designated context classification Guidance resources shall include, but need not be limited to:

- Federal Highway Administration's Manual on Uniform Traffic Control Devices
- Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook)
- National Association of City Transportation (NACTO) published guidelines
- American Association of State Highway and Transportation Official (AASHTO) published guidelines
- U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach

Policy 6.4.13 – Pavement Markings and Signage (City of Tallahassee/Leon County):
All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

Policy 6.4.14 – Two-Way Left Turn Lane Replacement (City of Tallahassee/Leon County):
Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

Policy 6.4.15 – Measuring Progress (City of Tallahassee/Leon County):
The success of this Complete Streets Objective shall be measured by the Planning Department

with assistance by the City and County during the Evaluation and Appraisal Review process, using but not limited to, the following performance measures:

- Total miles of new designated bike lanes
- Total miles of new shared-use paths (paved and natural surface)
- Total miles of neighborhood bikeways signed, marked, or constructed
- Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.)
- Number and type of crosswalk and intersection improvements and new installations
- Number of revenue service miles traveled by transit vehicles
- Rates of crashes, injuries, and fatalities by mode, as available
- Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices.
- Number of exceptions to this policy granted

The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

Policy 6.4.16 – Coordination with Placemaking Plans (City of Tallahassee/Leon County):
Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

Objective 6.5 – Bicycle Facilities (City of Tallahassee/Leon County):
Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance (City of Tallahassee/Leon County):
All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

Policy 6.5.2 – Bicycle Facilities in New Development (City of Tallahassee/Leon County):
New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at all non-residential uses, multi-family uses and other key destinations. Bicycle and trail connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

Objective 6.6 – Pedestrian Facilities (City of Tallahassee/Leon County):
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

Policy 6.6.1 – Pedestrian Level of Comfort (City of Tallahassee/Leon County):
As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 6.6.2 – Crosswalks (City of Tallahassee/Leon County):
Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Local Context Classification.

Policy 6.6.3 – Pedestrian Infrastructure for New Development (City of Tallahassee/Leon County):
New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

Objective 6.7 – Mobility Hubs (City of Tallahassee/Leon County):
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

Policy 6.7.1 – Implementation of Mobility Hubs (City of Tallahassee/Leon County):
Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

Policy 6.7.2 – Mobility Hubs Location Coordination (City of Tallahassee/Leon County):
The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

Policy 6.7.3 – Mobility Hubs Design Guidelines Requirements (City of Tallahassee/Leon County):
Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

Objective 6.8 – Transportation Demand Management (City of Tallahassee/Leon County):
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.1 – Encourage Alternate Transportation Modes (City of Tallahassee/Leon County):
Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure (City of Tallahassee/Leon County):
City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 6.8.3 – Land Development Patterns (City of Tallahassee/Leon County):
The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

Policy 6.8.4 – Shared Parking Criteria (City of Tallahassee/Leon County):
Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

Policy 6.8.5 – Parking Reduction for Certain Development Types (City of Tallahassee/Leon County):
City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

Policy 6.8.6 – Private Parking Lots (City of Tallahassee/Leon County):
City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

Policy 6.8.7 – Drop-Off & Pick-Up Zones (City of Tallahassee/Leon County):
The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

Policy 6.8.8 – Intelligent Transportation Systems (ITS) (City of Tallahassee/Leon County):
City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.8.9 – Traffic Operations Management (City of Tallahassee/Leon County):
The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

Objective 6.9 – Transportation for the Disadvantaged (City of Tallahassee/Leon County):
Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk.

Policy 6.9.1 – Human Services Transportation (City of Tallahassee/Leon County):
Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

Policy 6.9.2 – Transport to Destinations (City of Tallahassee/Leon County):
Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

Policy 6.9.3 – Affordable and Cost-Effective Service (City of Tallahassee/Leon County):
Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on-demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

Policy 6.9.4 – Transportation Disadvantaged Needs Assessment (City of Tallahassee/Leon County):

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

Objective 6.10 – Transit (City of Tallahassee/Leon County):

Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

Policy 6.10.1 – Transit Development Plan (City of Tallahassee):

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 6.10.2 – Pedestrian Infrastructure Connectivity (City of Tallahassee/Leon County):

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

Policy 6.10.3 – Southside Transit (City of Tallahassee/Leon County):

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

Policy 6.10.4 – Employment and Activity Center Service (City of Tallahassee):

Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Policy 6.10.5 – Transit Corridors (City of Tallahassee/Leon County):

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

Objective 6.11 – Aviation (City of Tallahassee/Leon County):

Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

Policy 6.11.1 – Adjacent Land Use Compatibility (City of Tallahassee/Leon County):
Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 6.11.2 – Airport Master Plan (City of Tallahassee):
The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

Policy 6.11.3 – Compatibility of Land Use (City of Tallahassee/Leon County):
Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 6.11.4 – Compatibility for Noise and Safety (City of Tallahassee/Leon County):
Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

Policy 6.11.5 – Advanced Air Mobility (City of Tallahassee/Leon County):
Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas and not located within areas that may create compatibility issues. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

Objective 6.12 – Rail (City of Tallahassee/Leon County):
Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

Policy 6.12.1 – Railroad Crossings (City of Tallahassee/Leon County):
Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

Objective 6.13 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan and manage transportation systems that extend beyond jurisdictional boundaries.

Policy 6.13.1 – Consistency with State Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

Policy 6.13.2 – Consistency with Regional Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 6.13.3 – Consistency with Local Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

Policy 6.13.4 – Signal Coordination Plans (City of Tallahassee/Leon County):

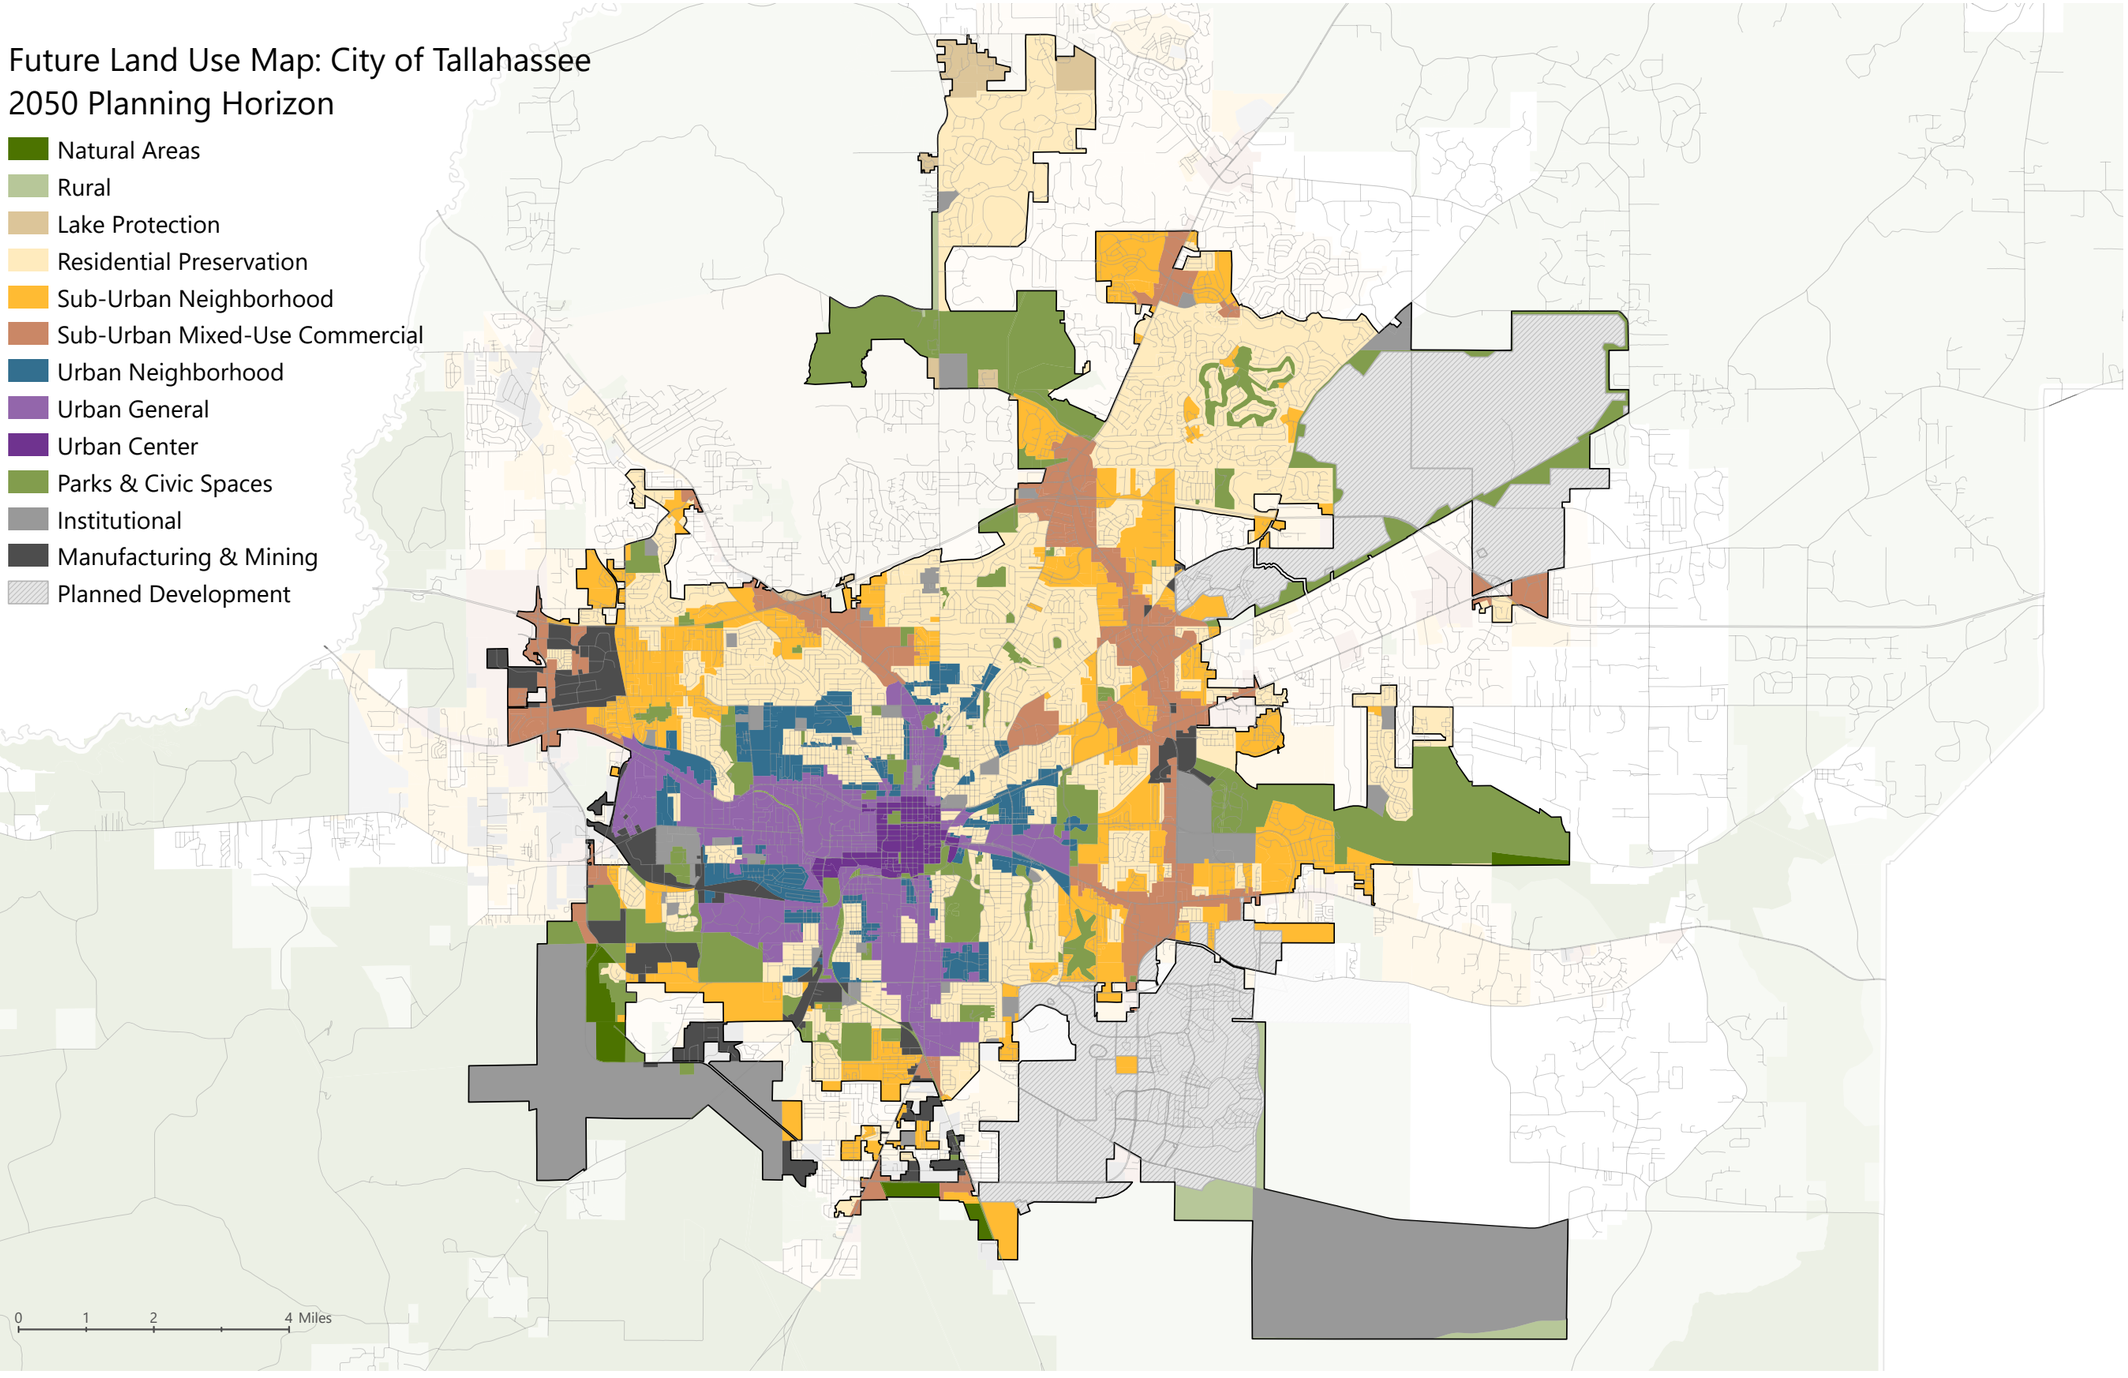
Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

Policy 6.13.5 – Project Planning Partnerships (City of Tallahassee/Leon County):

Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

Policy 6.13.6 – Evacuation Routes (City of Tallahassee/Leon County):

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.



Policy 6.13.7 – Emerging Technology (City of Tallahassee/Leon County):

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

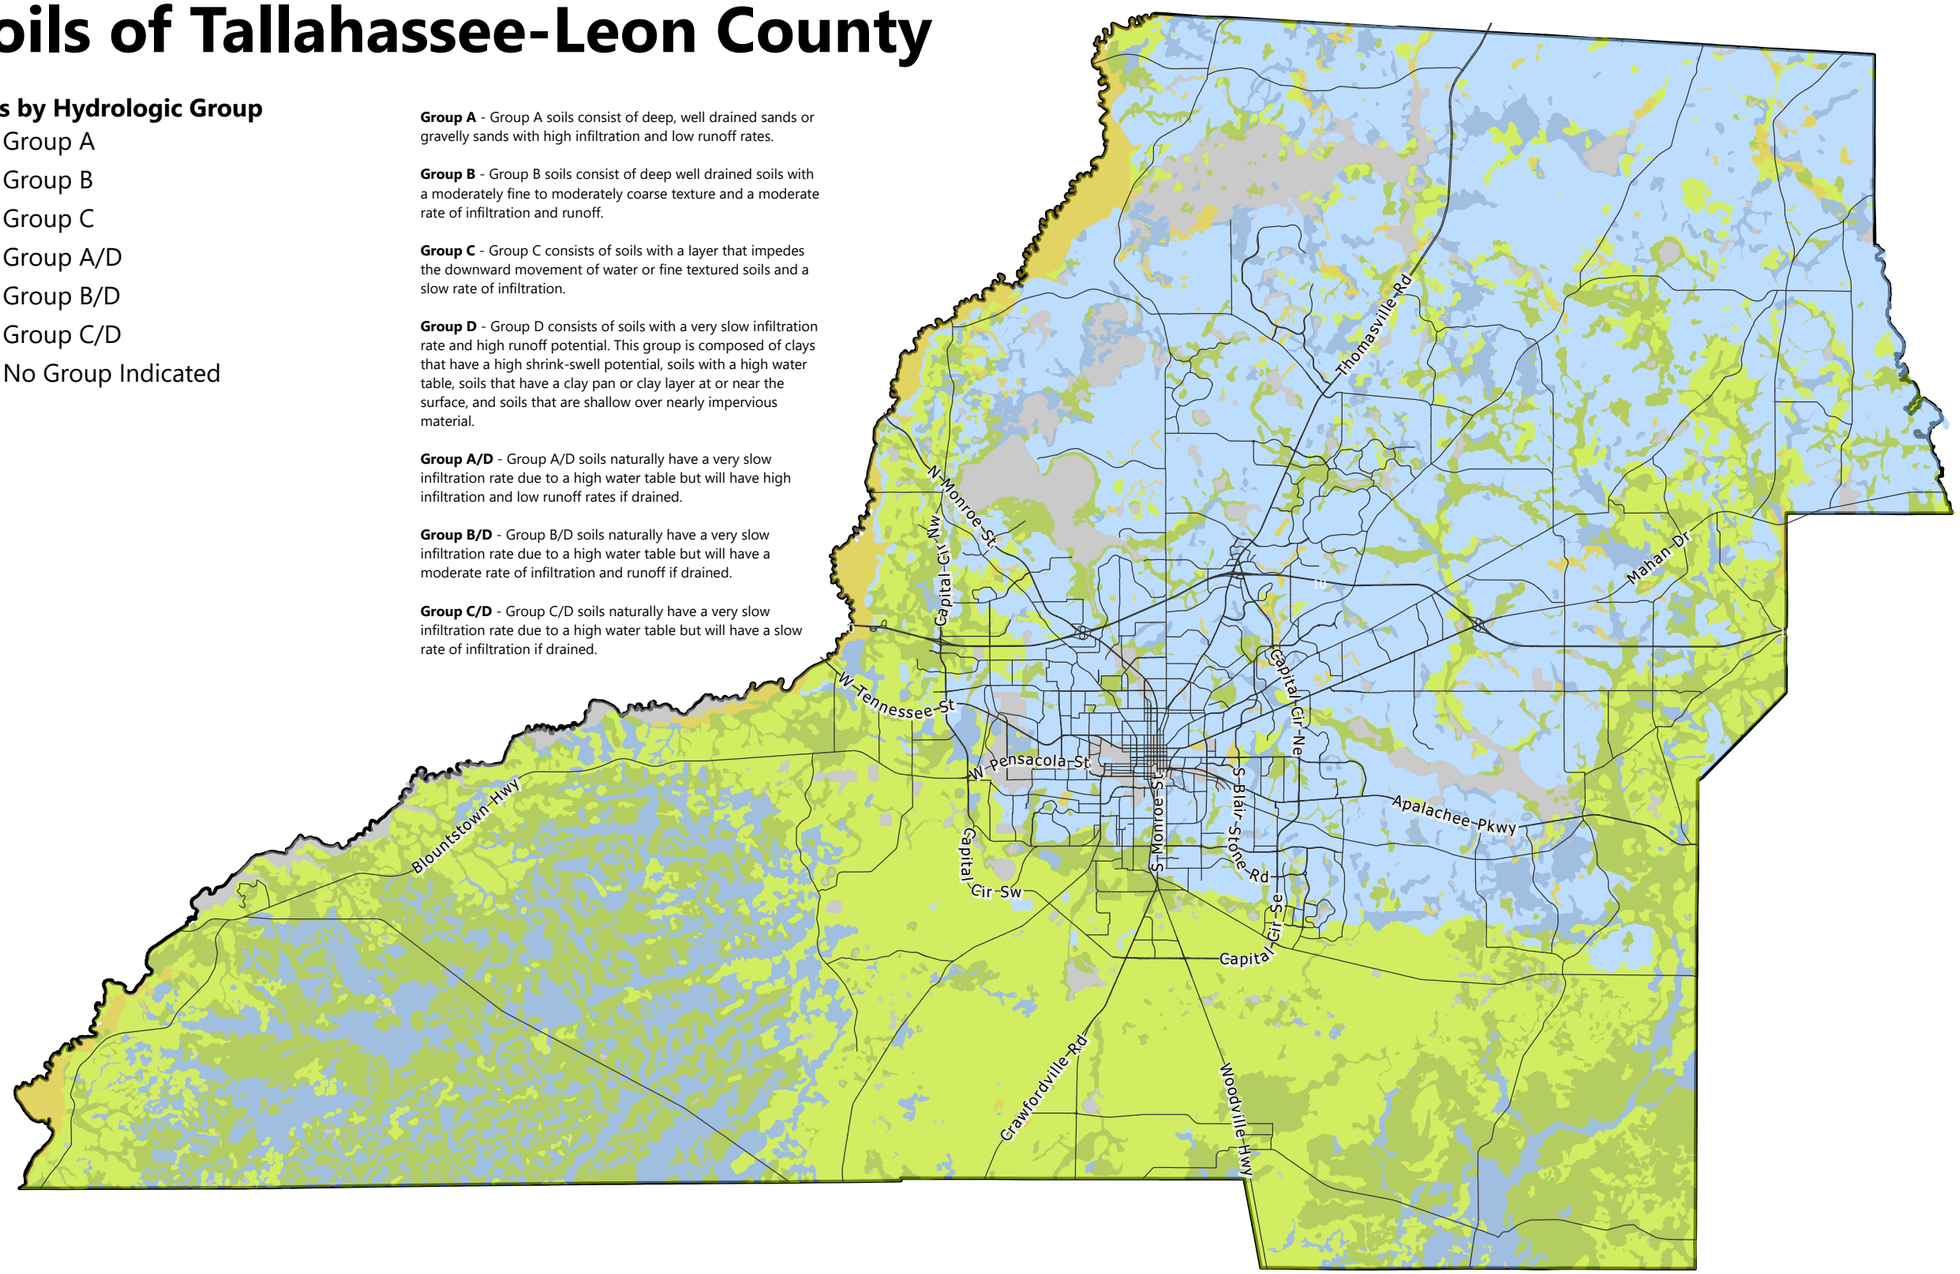
Soils of Tallahassee-Leon County

Soils by Hydrologic Group

- Group A
- Group B
- Group C
- Group A/D
- Group B/D
- Group C/D
- No Group Indicated

Group A - Group A soils consist of deep, well drained sands or gravelly sands with high infiltration and low runoff rates.

Group B - Group B soils consist of deep well drained soils with a moderately fine to moderately coarse texture and a moderate rate of infiltration and runoff.



Group C - Group C consists of soils with a layer that impedes the downward movement of water or fine textured soils and a slow rate of infiltration.

Group D - Group D consists of soils with a very slow infiltration rate and high runoff potential. This group is composed of clays that have a high shrink-swell potential, soils with a high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material.

Group A/D - Group A/D soils naturally have a very slow infiltration rate due to a high water table but will have high infiltration and low runoff rates if drained.

Group B/D - Group B/D soils naturally have a very slow infiltration rate due to a high water table but will have a moderate rate of infiltration and runoff if drained.

Group C/D - Group C/D soils naturally have a very slow infiltration rate due to a high water table but will have a slow rate of infiltration if drained.

LAND USE

GOALS, OBJECTIVES AND POLICIES

Goal 1: [L] (EFF. 7/16/90)

The Comprehensive Plan shall protect and enhance the quality of life in this community by providing economically sound educational, employment, cultural, recreational, commercial, industrial and professional opportunities to its citizens while channeling inevitable growth into locations and activities that protect the natural and aesthetic environments and residential neighborhoods.

GROWTH MANAGEMENT/ URBAN SERVICES AREA

Objective 1.1: [L] (EFF.7/16/90; REV. EFF. 7/26/06; REV. EFF. 12/24/10)

Direct development to those areas which have in place, or have agreements to provide, the land and water resources, fiscal abilities, and the service capacity to accommodate growth in an environmentally acceptable manner. This shall be accomplished in part through the establishment and maintenance of an Urban Service Area (USA) concept. This Urban Service Area (USA) concept is based upon a desire to have Tallahassee and Leon County grow in a responsible manner, with infrastructure provided economically and efficiently, and surrounding forest and agricultural lands protected from unwarranted and premature conversion to urban land use. An urban service strategy provides for well-managed, orderly growth, which preserves natural resources and promotes fiscal responsibility. The location and size of the USA shall be depicted on the Future Land Use Map and is based upon the area necessary to accommodate 90% of new residential dwelling units within the County by the Plan Horizon; the ability to provide urban infrastructure; and, the presence of environmentally sensitive lands and water bodies, requiring protection from the impacts of urban development.

Policy 1.1.1: [L] (REV. EFF. 7/20/05)

In order to discourage urban sprawl, new development shall be concentrated in the urban service area plus in the Woodville Rural Community future land use category and the rural communities of Capitola, Chaires, Ft. Braden and Miccosukee, as designated on the future land use map.

Policy 1.1.2: [L] (REV. EFF. 12/10/91)

Improvement of capital infrastructure shall be provided within the designated urban service area and shall be phased over the life of the plan.

Policy 1.1.3: [L] **(REV. EFF. 12/10/91; REV. EFF. 7/26/06)**

Capital infrastructure designed to support urban density outside the Urban Service Area shall be prohibited except as described below. Capital infrastructure which is designed or intended to provide services to the population of the Urban Service Area may be located outside the Urban Service Area. This policy includes but is not limited to landfill, spray irrigation facilities, and inter-county transportation roadways.

Capital improvement projects or expenditures designed to support urban density outside of the Urban Service Area will not occur outside the designated Urban Service Area unless a demonstrated hardship can be shown to occur for existing development or residents as of February 1, 1990. A demonstrated hardship refers to:

- Replacement of existing facilities due to deterioration or destruction from natural disaster.
- A public health and/or safety problem if no improvements are made (example - contaminated water wells).
- Potential of severe environmental degradation if no improvements are made (example - failing septic tanks).

The capacity of these facilities shall be limited to that necessary to serve development existing on or prior to February 1, 1990.

Policy 1.1.4: [L] **(REV. EFF. 7/20/05)**

Central water and sewer may be provided in areas designated as Rural Community, Woodville Rural Community, and enclaves within the Woodville Rural Community designated for Residential Preservation on the future land use map.

Policy 1.1.5: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Future Land Use Map densities and intensities are intended to reflect the availability of capital infrastructure. Capital infrastructure, which supports higher land use densities and intensities, consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

Policy 1.1.6: [L] **(EFF. 7/16/90)**

Areas within the urban service area will receive urban level capital facilities and services according to the schedule established in the Capital Improvements Element.

Policy 1.1.7: [L] **(EFF. 7/16/90)**

Higher density and mixed use development and its ancillary activities shall be channeled into locations which have proper access to the existing transportation system; minimal environmental constraints; sufficient stormwater treatment capacity; compatible existing land use and readily available sewer and water infrastructure.

~~I. Land Use~~

~~*Policy 1.1.8: [L]* **(EFF. 7/26/06; REV. EFF. 12/24/10)**~~

~~The size of the USA is related to the projected fiscal capacity of the local government to provide urban infrastructure. An assessment of changing conditions over the 20-year period of the plan is built in through the required seven year Evaluation and Appraisal Report (EAR) and the annual capital improvements process. The integrity of the USA concept is maintained by strict adherence to the premise of not funding or scheduling major capital improvement projects outside the USA, Rural Communities or the Woodville Rural Community in conjunction with a policy of discouraging premature use and underutilization of land designated for urban development. Additionally, the size of the USA should be limited to reflect the ability of the public to provide infrastructure, limitations of environmental constraints and existing development and to provide for a phasing mechanism to the Plan Horizon.~~

~~The area within the USA is sized to accommodate approximately 50% more vacant land than is necessary to accommodate the population growth expected within the USA from 1993 to the Plan Horizon. It is expected that a USA sized 50% larger than our vacant land needs will provide sufficient constraint for growth management policies to be effective, while not over constraining the supply of vacant land.~~

~~*Policy 1.1.9: [L]* **(EFF. 7/26/06)**~~

~~In order to achieve efficient and effective use of infrastructure and land, residential density within the USA shall average no less than 2 dwelling units per gross acre. Some future land use categories may establish higher minimum densities and minimum intensity requirements for nonresidential development. Attainment of minimum densities and intensities will be measured and reported annually and be evaluated at a minimum during subsequent Evaluation and Appraisal Reports and adjustments to the Comprehensive Plan necessary to achieve this measure will be recommended as warranted in the future.~~

~~*Policy 1.1.10: [L]* **(EFF.7/16/90; RENUMBERED EFF. 7/26/06; FORMERLY POLICY 1.1.8.)**~~

~~Compliance with the Conservation Element shall be met prior to consideration of requirements in the Land Use Element.~~

~~*Policy 1.1.11: [L]* **(REV. EFF. 3/14/07; REV. EFF. 1/7/10)**~~

~~The growth management strategy of the Tallahassee-Leon County Comprehensive Plan is designed to be implemented by a series of instruments which include:~~

~~1) An **Urban Service Area** strategy to guide and coordinate land use densities and intensities with the availability of capital infrastructure and to discourage urban sprawl.~~

~~2) A **Land Use Map** to graphically distribute broad categories of land use and allowable densities and intensities. In conjunction with the Land Use Map, an environmental overlay system has been included which depicts the general~~

location of environmental features which are to be preserved as required by the Conservation Element, or to which development limitations will apply as identified in the Conservation Element.

3) A **Future Right-of-Way Needs Map** to graphically represent planned future transportation projects in the City of Tallahassee (City) and Leon County (County) and a table of projects indicating the project termini and access classifications. This map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected. Objectives and policies related to the Future Right-of-Way Needs Map are provided in the Transportation Element. **(EFF. 7/1/04)**

4) **Commercial Site Location** standards, which apply to certain Future Land Use Categories other than Central Core, Central Urban, Village Mixed Use, Suburban, Bradfordville Mixed Use, Planned Development and Woodville Rural Community shall be implemented through the Land Development Regulations, are intended to integrate commercial land uses into the transportation network and development patterns in order to assure accessibility by the general public. **(REV. EFF. 3/14/07; REV. EFF. 1/7/10)**

5) **Land Use Category Summaries** for each Future Land Use which in conjunction with the land use map provide the allowable densities and intensities of uses use on specific sites.

6) The **Planned Development Future Land Use Category** applies to large land holdings that will be developed for a mix of land uses. **(REV. EFF. 3/14/07)**

7) Descriptions of eight different **Mixed Use development patterns** which establish development pattern intent, allowed density and intensity, development pattern location criteria, and development pattern access criteria within the Bradfordville Mixed Use Category (see Objective 1.7) **(REV. EFF. 3/14/07)**

8) **Goals, Objectives and Policies** which further add guidance by outlining courses of action to be taken in conjunction within the instruments listed above to further assure implementation.

These instruments do not act independently of each other. Rather, they combine to form a set of parameters in which land use decisions are made consistent with a growth management strategy designed to address the issues important to the community.

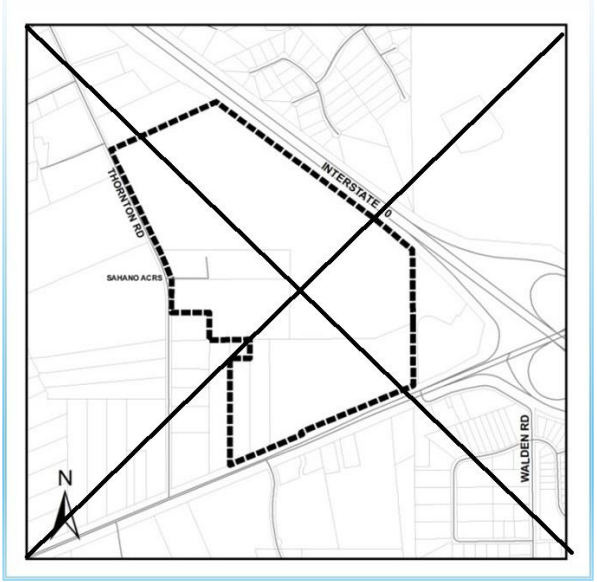
Policy 1.1.12: [L] **(EFF. 8/9/12)**

The parcel shown on the map below at the intersection of I-10 and US Highway 90 is within the designated Urban Service Area (USA), as defined in Section 163.3164(50), Florida Statutes, having public services and facilities, including, but not limited to, central water and sewer capacity and roads. As a parcel within a designated statutory USA, proposed development within the parcel is exempt from the development of regional impact process pursuant to Section 380.06(29)(c)3, Florida Statutes. As part of this

exemption, any future development on the subject parcels shall, in addition to applicable Comprehensive Plan policies, address the following objectives:

(a) Provide opportunities for a "main street" component that allows on street parking,

(b) Provide landscaping, buffering and screening or any of the three options for aesthetic enhancements if building facades are not oriented towards Thornton Road and US 90,



(c) Incorporate storm water management facilities and natural features as amenities into the project's overall design concept,

(d) Incorporate a consistent design theme for freestanding signage throughout the property,

(e) Coordination of appropriate location for mass transit stops and pedestrian connections to development on the property at the time of development,

(f) Buildings will incorporate architectural features and patterns that provide visual interest such as building facades that are not uniform in mass or scale and height and pedestrian scale facade treatments such as canopies, overhangs, arcades, gabled entryways, and porticos.

Map 1: I-10 and Mahan US 90 DRI Exemption Area

DEVELOPMENT IN RELATION TO ENVIRONMENTAL CONSTRAINTS

Objective 1.2: [L](EFF. 7/16/90; REV. EFF. 4/10/09)

Coordinate the location of land uses with local soil conditions, topography, and aquifer vulnerability as well as available services.

~~I. Land Use~~

~~*Policy 1.2.1: [L] Leon County only* **(EFF. 7/16/90)**~~

~~Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use.~~

~~*Policy 1.2.1: [L] City of Tallahassee only* **(REV. EFF. 7/1/04)**~~

~~Emphasize land use location that minimizes topographical changes. The proposed land use should fit the site location. The location should not be substantially altered to fit the proposed land use, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Such off-site mitigation plans shall recognize the contribution of preserved significant grades to community character, ameliorating the impacts of stormwater, and providing conditions for native plant communities.~~

~~*Policy 1.2.2: [L] Leon County only* **(REV. EFF. 9/19/91)**~~

~~The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize site designs that fit the topography, not changing the topography to fit the design. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of -way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.~~

~~*Policy 1.2.2: [L] City of Tallahassee only* **(REV. EFF. 7/1/04)**~~

~~The type, intensity and structural design of any development proposed for a site shall be appropriate to the existing natural topography. Site alterations will be limited to the absolute minimum necessary to develop a site safely. Design criteria in the land development regulations will emphasize site designs that fit the topography, not changing the topography to fit the design, unless an off-site mitigation plan for the development of a site with significant grades has been approved. Minimum grade changes typically associated with site development include those necessary for the safety of a building including parking, road right-of -way, handicapped access or utilities. Criteria for approval of development in areas with significant and severe grades will be limited to the type of land use that requires the least disturbance of sloped areas.~~

~~*Policy 1.2.3: [L]* **(REV. EFF. 12/7/99)**~~

(a) The local governments shall maintain a map indicating the locations of all known operating and abandoned land fill sites. As the location of additional abandoned land fill sites become known, this map shall be revised accordingly.

(b) By 2001, local government will include requirements in their land development regulations that the development of any property within a mapped landfill site shall be required to submit information relating to the subsurface geology of the property necessary to assure that future development of the site will not adversely impact the health, safety or welfare of the public.

(c) By 2001, local governments will include requirements in their land development regulations that regulate the location of stormwater facilities or conveyance systems within any abandoned landfills.

Policy 1.2.4: [L] **(EFF. 4/10/09)**

By 2010, local government shall adopt in the Land Development Regulations a mapped Primary Spring Protection Zone for Wakulla Springs based on the Leon County Aquifer Vulnerability Assessment. Accompanying land development regulations for the Primary Spring Protection Zone shall be developed as indicated in Policy 4.2.5 of the Conservation Element to aid in the protection of Wakulla Springs. These efforts shall be coordinated with Wakulla County.

Policy 1.2.5: [L] **(EFF. 4/10/09)**

1. By 2014, local government shall develop and maintain as part of the local geographic information system database areas of known hazards.

2. By 2014, local government will include requirements in their land development regulations that mitigate and/or prevent future development in areas of known hazards. The land development regulations shall also contain provisions for the mitigation of existing development in areas of known hazards so as to prevent repetitive hazard losses.

LEVEL OF SERVICE (REGULATIONS)

Objective 1.3: [L] **(EFF. 7/16/90)**

Achieve and maintain the adopted level of service standards set forth within the Tallahassee-Leon County Comprehensive Plan.

Policy 1.3.1: [L] **(EFF. 7/16/90)**

Before a development order or permit is issued, local government shall ensure that the adopted level of service standards for the affected public facilities will be maintained in accordance with the Concurrency Management System.

Policy 1.3.2: [L] **(REV. EFF. 12/16/94)**

Residential density and/or non-residential intensity of development allowed for individual sites shall be determined by the degree of compliance with the goals, objectives and policies of the Comprehensive Plan and the land use development matrix, which is intended to be a pictorial representation of existing policies in the plan, as implemented by the land development regulations. Overall densities and intensities should be consistent with capital facilities and services being available at the adopted level.

Policy 1.3.3: [L] **(REV. EFF. 12/10/91)**

Environmental and development ordinances shall include the following:

(a) Explicit and strict protection of environmentally sensitive areas, thus minimizing future costs to taxpayers by prohibiting unsound uses; and

(b) Availability and use of the conservation and preservation overlays as detailed in the Conservation Element prior to the issuance of development orders.

(c) Apportioning development costs so that those fees collected from the existing population be applied to elimination of current "deficits" in levels of service, while those fees collected in new developments are applied to maintain levels of service established by the entire community. Maintenance and enhancements to the adopted levels of service shall be the responsibility of both. This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer.

(d) Policies and procedures in the land development regulations shall ensure that the range of development types by percentage distribution are monitored and maintained.

This policy shall not preclude new development paying toward current deficits if such an arrangement can be worked out between the local government and the developer.

Policy 1.3.4: [L] **(DEL. EFF. 3/14/07)**

Reserved

LAND DEVELOPMENT REGULATIONS

Objective 1.4: [L] **(REV. EFF. 7/20/05)**

Maintain a set of specific and detailed Land Development Regulations, which implement and are consistent with the goals, objectives and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 1.4.1: [L] **(REV. EFF. 12/10/91)**

Density and intensity incentives shall be established within the required land development regulations to encourage growth in areas which minimize and mitigate development's negative impact on the natural and aesthetic environment.

Policy 1.4.2: [L] **(REV. EFF. 12/16/94; REV. EFF. 1/7/10)**

The Comprehensive Plan shall establish guidelines for the application of traditional zoning districts in order to implement a future land use regulatory system that is more predicable than area wide application of mixed use performance zoning. These traditional zoning districts shall specify a range of allowable land use within each district. In certain land use designations, mixed use performance zoning will be retained to integrate land uses which may be otherwise incompatible. Development regulations shall include development and design standards. Allowed land uses within a future land use category shall be implemented by one or more specific zoning districts consistent with the intent of a future land use category. The development and application of specific zoning districts to a zoning map implementing the Comprehensive Plan shall be based upon furthering the intent of the Comprehensive Plan:

(a) Zoning district use classifications shall be developed, based upon the Comprehensive Plan, existing land use patterns, previous zoning which continues to direct land use and development standards, and accepted guidelines for land use impact classifications and service requirements;

(b) Specific zoning districts shall be implemented through the application of the zoning district classification system as guided by the Comprehensive Plan.

(c) All zoning decisions will be made by the governing Commission based upon a finding of the furthering of and consistency with the intent of the Comprehensive Plan, in recognition of Land Use Policy 1.1.10, which establishes the supremacy of the Conservation Element.

(d) Specific zoning districts will be applied within the Urban Service Area except for University Transition, Activity Center, Central Urban, Central Core land use designations and Mixed Use parcels greater than 200 acres in area. Extension of site specific zoning beyond the Urban Service Area and to other areas is consistent with the intent of the Comprehensive Plan.

Policy 1.4.3: [L] **(DEL. EFF. 7/25/03)**

Reserved

Policy 1.4.4: [L] **(DEL. EFF. 7/20/05)**

Reserved

Policy 1.4.5: [L] **(REV. EFF. 3/14/07)**

The Tallahassee-Leon County Comprehensive Plan, its future land use map and future land use categories as defined within the Plan, the land use summary charts which are intended to be a pictorial representation of existing policies in the comprehensive plan, and land development regulations adopted by local government as provided in the Plan shall in combination provide a unified system for the regulation of land use. Land use

regulations shall be consistent with the intended functions, land uses and intensity of the land use category designated on the future land use map.

(a) Any requested text amendment to the Comprehensive Plan shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of the Plan;

(b) Any requested amendment to the Future Land Use Map shall be evaluated for consistency with the adopted Goals, Objectives, and Policies of the Plan as well as consistency with and the furtherance of the intent of the requested future land use category;

(c) Any request for a change in zoning use classification and specific zoning district mapping within a future land use category shall be evaluated for consistency with the adopted Goals, Objectives, and Policies of the Plan as well as consistency with and the furtherance of the intent of the future land use category in which it is located;

(d) The determination that a particular land use is permitted within a zoning district shall be made based upon a listing of allowable land uses within a zoning district or that an unlisted land use is substantially similar to allowable uses within the same district.

Policy 1.4.6: [L] **(EFF. 7/16/90; REV. EFF. 4/10/09)**

By 2014, land development regulations will include standards for the regulation of future land use categories, subdivision, signage, and areas subject to seasonal or periodic flooding and areas of known hazards. Regulations concerning areas subject to seasonal or periodic flooding shall be consistent with all applicable state and federal regulations.

Policy 1.4.7: [L] **(EFF. 7/16/90)**

The adopted land development regulations shall include requirements for stormwater management, open space, and convenient on-site traffic flow (including need).

Policy 1.4.8: [L] **(EFF. 7/16/90)**

The land use development matrix shall be adopted as part of the comprehensive plan and shall in conjunction with the future land use map and the goals, objectives and policies contained within the individual elements be used in evaluating future land use decisions.

Policy 1.4.9: [L] **(EFF. 7/16/90)**

Changes in classification of highways and streets that affect the allowable uses of property as set forth in the land development matrix and the comprehensive plan shall be considered plan amendments and shall be required to follow the plan amendment process.

Policy 1.4.10: [L] **(REV. EFF. 12/16/94)**

The land development regulations shall provide for zoning districts which shall indicate which land uses are allowed, prohibited, or conditional with specified constraints consistent with the criteria set forth in the narrative intent of the future land use categories, the land use development matrix which is intended to be a pictorial representation of existing policies in the Comprehensive Plan, and the Goals, Objectives, and Policies of the Comprehensive Plan.

(a) In those future land use categories that encourage a mixing of land uses, the land development regulations shall contain provisions that facilitate multiple land uses within the same site, the same development, or the same structure.

(b) When appropriate, the land development regulations may provide for zoning districts that allow for two or more land use types, consistent with the intent of the future land use category.

(c) The land development regulations may also provide for zoning districts that further divide any of the allowed land use types into two or more subsets.

Policy 1.4.11: [L] **(EFF. 9/19/91)**

The land development regulations shall include standards and criteria such as minimum open space requirements (between 25% and 10% depending on the land use and existing vegetation), internal circulation and minimum setbacks and buffers for uncomplimentary land uses. These buffer requirements will contain buffer widths between land uses, required number of trees and shrubs per linear foot of buffer, opacity of the buffer, etc. Additional buffering requirements may be related to Planned Unit Developments (PUDs).

Policy 1.4.12: [L] **(EFF. 9/19/91)**

(a) The intent of Site Plan and PUD planning and design requirements shall be to encourage and require the development of urban living and work spaces that minimize impacts to the natural environment. Environmental impacts shall be minimized through the development and redevelopment of compact and efficient urban land use patterns that closely integrate living and work spaces while maintaining compatibility through specified performance design criteria. Neighborhood and inter-site compatibility shall be implemented through site planning and design criteria that require objectionable impacts of particular land use activities to be internally located within site or building designs, rather than relying exclusively on standard landscape and setback buffering methods to reduce perimeter oriented objectionable impacts.

(b) Objectionable impacts of service and delivery areas, refuse and recycling collection areas, as well as the outdoor storage and work areas generally associated with commercial and residential buildings shall be planned to minimize off-site impacts.

(c) Site Plan and PUD requirements shall minimize impacts to the natural environment resulting from urban sprawl by not only identifying and protecting

environmentally sensitive lands, but just as importantly by limiting urban sprawl into less environmentally sensitive lands through the implementation of compact and efficient urban development and redevelopment.

Policy 1.4.13: [L] **(REV. EFF. 3/14/07)**

The intent of designating roads as nonresidential is to recognize existing nonresidential development patterns and to allow for planned mixed-use or nonresidential developments. As such, street access requirements contained in the Land Use Summary Charts are waived for those streets designated as nonresidential by clearly defining areas where existing development patterns will be allowed to continue. It also serves to protect residential and residential components such as elementary schools and neighborhood parks from adverse impacts of nonresidential development as well as protecting nonresidential development from the encroachment of residential uses.

The designation of a nonresidential street does not exempt any potential development along the street from further concurrency or consistency review.

Roadway access limitations and locational criteria from the nonresidential road classification system do not apply to the Woodville Rural Community, Suburban, Bradfordville Mixed Use, Planned Development, Village Mixed Use and Urban Residential 2 Future Land Use Categories. Roadway access limitations and locational criteria for these categories shall be established in Land Development Regulations.

Policy 1.4.14: [L] **(EFF. 8/17/92)**

Compile a list and waive access standards for non-residential minor collector and local streets based on the following criteria:

a) It is part of a platted non-residential subdivision.

b) It is part of an approved PUD.

c) It has over 66% of its developed frontage in non-residential land uses and essentially functions as an access road for these developments. The designation of these streets is a recognition of existing development patterns and is intended to permit future development compatible with existing land uses and consistent with road capacity and design. These streets will be reviewed by the respective elected Commission on a case by case basis and may be designated as non-residential streets.

A segment of a road, meeting the above criteria, may be designated a non-residential if it will not result in non-residential traffic impacting residential areas on other segments of the road or in the adjacent area. (A segment is the road length between two intersecting roads).

Policy 1.4.15: [L] **(EFF. 8/17/92; REV. EFF. 5/31/18)**

Waive access standards for heavy industrial land uses within the Heavy Industrial Future Land Use category and Industry and Mining Future Land Use category. This will be done

in conjunction with adopting a policy which waives local and minor collector access standards for all planned industrial and commercial development.

Policy 1.4.16: [L] **(EFF. 8/17/92)**

Unless otherwise specifically stated, all time lines stated in the Comprehensive Plan are intended to mean by December 31 of the stated year.

Policy 1.4.17: [L] (City of Tallahassee only) **(EFF. 8/17/92; REV. EFF. 6/6/08)**

New minor office uses may be permitted access to a local residential street in the Central Urban and University Transition land use categories within the city limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential land use in the vicinity.

Policy 1.4.18: [L] (City of Tallahassee only) **(REV. EFF. 3/14/07; REV. EFF. 6/6/08)**

New minor commercial uses shall not be permitted access to a local residential street within the city limits of Tallahassee. This limitation shall not apply to the Bradfordville Mixed Use, Suburban, Planned Development, Central Urban, University Transition, and Village Mixed Use Categories which establish street access standards by Land Development Regulations.

Policy 1.4.19: [L] **(EFF. 1/19/02)**

New commercial, office and residential land uses within the Gaines Street Corridor Study Area may be permitted access to any street classification or designation. Access limitations may be further restricted based on the Gaines Street Revitalization plan.

Policy 1.4.20: [L] **(REV. EFF. 7/25/03)**

Community services which are religious facilities to be used solely for religious functions, volunteer fire stations in the Rural or Agriculture/Silviculture/Conservation future land use categories, and community services that are operated by public agencies and are located outside of the Urban Service Area may be permitted access onto a local street only after a higher level of review as specified in the Land Development Regulations. Land development regulations shall require site design criteria addressing impacts which include, but are not limited to: peak use traffic, noise, building orientation and setbacks or any other potential negative impacts affecting adjacent residential uses or the residential character of the surrounding area. Religious facilities that have day care, recreation facilities, schools, or other similar ancillary activities shall not be permitted to access a local street.

~~I. Land Use~~

~~*Policy 1.4.21: [L]* **(EFF. 7/1/94; REV. EFF. 7/20/05)**~~

~~The land development regulations shall provide for minor and major office uses, minor commercial uses, and low and medium density residential uses with access to minor collector streets and, in specific instances, to local streets, as well as the relaxation of parking, landscape, and buffering standards to encourage a wider variety of uses and greater range of economic development opportunities in the Central Urban future land use category, without creating conditions leading to the conversion of midtown residential enclaves, which although not meeting all of the criteria for inclusion in and protection by the Residential Preservation future land use category, remain viable for residential use and provide important housing opportunities in close proximity to the downtown area, the universities, and employment centers.~~

~~The intent of these land development regulations is to promote the infill of vacant blocks and tracts and/or the redevelopment of existing non-residential areas. These additional land development regulations shall also establish criteria to avoid creation of low-density residential enclaves for neighborhoods that satisfy some but not most of the general criteria for the Residential Preservation category.~~

~~To facilitate this, the land development regulations shall, at a minimum, provide the following techniques: allowing utilization of the Urban Planned Unit Development zoning district; allowing for the establishment of *Live-work units* with access to any (functional) classification of street; and, allowing for the establishment of proprietary zoning districts tailored to fit neighborhood or sub-neighborhood conditions, reflecting local preferences and incorporating applicable restrictions for mitigating impacts relating to allowable use, traffic circulation and access design, parking, building design, orientation, and height.~~

~~*Policy 1.4.22: [L]* **(EFF. 7/1/04)**~~

~~Waive all street access, intersection and adjoining use restrictions for allowed uses internal to the Activity Center future land use category. The exception to this policy is that access shall be prohibited to any local street within a recorded or unrecorded residentially platted subdivision. It is not the intent of this policy to waive landscaping or buffer requirements.~~

~~*Policy 1.4.23: [L]* **(EFF. 7/1/04)**~~

~~By 2005, the Tallahassee-Leon County Comprehensive Plan and the implementing City and County land development regulations shall include provisions relating to regional recreational facilities. These regulations shall establish a definition of regional recreational facilities and shall specify the Future Land Use Map categories and zoning districts that regional recreational facilities are allowable with and shall require a greater level of review and additional site design criteria to address the off-site impacts of regional recreation uses. Impacts addressed shall include, but be not limited to: peak use traffic, hours of operation, lighting, noise, building orientation, buffers and setbacks, or any other potential negative impacts of such uses affecting adjacent or nearby residential uses or residential character of the nearby area.~~

NON-CONFORMING USES AND NONCOMPLYING CHARACTERISTICS

Objective 1.5: [L] (EFF. 7/16/90)

Provide a procedure within the land development regulations which will substantially mitigate or lead to the eventual elimination of nonconforming land uses created by the adoption of this plan.

Policy 1.5.1: [L] **(REV. EFF. 6/28/95)**

Existing land uses which are nonconforming to the Comprehensive Plan may be reviewed by the local government at the request of the owner in order to determine the degree on nonconformity. The review may result in:

1) A determination that the impact of the nonconformity is minimal upon surrounding conforming land use and is not detrimental to the public health, safety and welfare and as a result, the nonconforming status is waived; or

2) A determination that the impact of the nonconformity may be substantially mitigated in which the development may attain conforming status by implementing the required mitigation steps; or

3) A determination that the nonconformity has substantial impacts which may not be overcome by any mitigation procedures and as such the development shall remain in a nonconforming status and such use shall terminate according to law.

Policy 1.5.2: [L] **(EFF. 6/28/95)**

A legally established single family residential use shall be considered a conforming use of land in all Comprehensive Plan land use designations. However, this conforming status shall not be interpreted to preclude the use of property adjoining a low density use for an otherwise permitted non-residential use if the low density residential use accesses an arterial or major collector roadway.

Policy 1.5.3: [L] **(DEL. EFF. 8/1/07)**

Reserved

Policy 1.5.4: [L] **(EFF. 6/28/95)**

The local government shall implement development regulations which distinguish between nonconforming uses which are to be terminated or amortized, and nonconforming uses in nonresidential designations which may continue, but not be expanded.

Policy 1.5.5: [L] **(EFF. 6/28/95)**

The local government shall implement development regulations which distinguish between nonconforming use of property and noncomplying physical characteristics or features of the use. This procedure shall allow for the continued conforming use of the

noncomplying physical features, and shall require correction of non-structural, noncomplying physical features prior to any conforming expansion of use.

Objective 1.6: [L] (Eff. 6/28/95; Del. Eff. 1/7/10)

Reserved

Bradfordville Mixed Use Development Patterns (applies to Bradfordville Study Area Only)

Objective 1.7: [L] (Rev. Eff. 3/14/07)

The Comprehensive Plan provides an overall vision for the community. The arrangement of land uses is a major factor in achieving this vision. Within the Bradfordville Mixed Use Future Land Use Category, land uses may be further separated to achieve efficient and environmentally sound development patterns and to promote the Plan's overall vision. This objective and its policies describe the development patterns associated with the Bradfordville Mixed Use Future Land Use Category.

The following statements of intent express, in part, the overall vision of the community as established in the Comprehensive Plan. These statements of intent explain the basis for the development patterns described in the following policies and shall be achieved through the zoning process and other Land Development Regulations as appropriate. Application of these development patterns in combination with each other is expected to achieve these intents. Individual development patterns may only partially achieve the following purposes:

a) Provide opportunity for residential, shopping, employment, education and recreation use within walking distance of each other;

b) Promote higher density housing and concentrations of nonresidential activity in close proximity to each other;

c) Provide for a range of housing opportunities which does not isolate families or individuals based upon age, income or race;

d) Ensure that mapping of zoning districts is consistent the long term protection of environmental features;

e) Ensure that mapping of zoning districts will be appropriate to location, access and surrounding land use;

f) Ensure that mapping of zoning districts is consistent with the phasing and availability of infrastructure;

g) Encourage a mix of complimentary land uses and concentrations of mixed use development in appropriate locations;

h) Promote development patterns which reduce trip length and/or the need for private automobile travel;

i) Ensure that zoning implementation does not promote sprawl development, nor concentrations of single use development; and

j) Scale development densities and intensities to provide a range of appropriately located development patterns.

Policy 1.7.1: [L] **(REV. EFF. 3/14/07)**

Low Density Residential Development Pattern

INTENT–The low density residential development pattern is intended to provide for a wide range of housing types and opportunities within the low density range. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential use be allowed. Some low density residential areas may be restricted to limited density zoning due to existing development patterns, or environmental or utility constraints, while other areas may have zoning districts that allow for a broad range of density.

DENSITY/INTENSITY–Areas designated Low Density Residential shall not have a gross density greater than 8 dwelling units per acre. Nonresidential development shall not have a gross building area exceeding 10,000 square feet per acre.

LOCATION–Bradfordville Mixed Use Area is appropriate for zoning Low Density Residential development patterns. Other areas appropriate for zoning Low Density Residential activities may include: Areas in Bradfordville Mixed Use where intensity of uses is constrained or limited due to environmental features or lack of adequate infrastructure; and Bradfordville Mixed Use areas in proximity to Village Centers. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location.

ACCESS–Areas zoned for the Low Density Residential development pattern shall have public street access.

Policy 1.7.2: [L] **(REV. EFF. 3/14/07)**

Medium Density Residential Development Pattern

INTENT–The Medium Density Residential development pattern is intended to encourage a wide range of medium density housing opportunities in close proximity to more intensive nonresidential uses, both which can be efficiently served by existing or planned infrastructure, including mass transit. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential use be allowed.

DENSITY/INTENSITY–Areas designated Medium Density Residential shall not have a gross density greater than 16 dwelling units per acre. Minimum density shall be 6 dwelling units per acre unless constraints of concurrency or natural features would preclude attainment of the minimum density. Nonresidential development shall not have a gross building area exceeding 20,000 square feet per acre.

LOCATION–Areas designated Bradfordville Mixed Use on the Future Land Use Map are appropriate for zoning of Medium Density Residential Areas. Additional criteria for zoning are as follows: Areas of existing medium density development; Areas of transition from more intensive use to Low Density Residential and Residential Preservation; Areas in proximity to higher intensity uses; Areas served by mass transit service; Areas in

proximity to community schools, parks, and public greenways; Areas along arterial and collector roadways; and Areas adjacent to the Village Center, Suburban Corridor, and Urban Pedestrian Center Mixed Use development patterns. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location.

ACCESS – Areas zoned for the Medium Density Residential development pattern shall have access to an arterial or collector roadway.

Policy 1.7.3: [L] **(REV. EFF. 3/14/07)**

Low Density Residential Office Development Pattern

INTENT–The Low Density Residential Office development pattern is intended to provide areas for office employment and residential uses in close proximity to each other. While conversion of existing residential structures on arterial and collector streets to office use is a situation where this development pattern will be applied, this development pattern should not be applied to such an extent that it would disrupt the viability of residential neighborhoods and adjacent residential properties. Zoning districts will be created to distinguish Residential Office areas by density and intensity, so that developments are scaled appropriately to their setting. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to residential or office use be allowed in a manner which would ensure the protection of adjacent uses.

DENSITY/INTENSITY–Redevelopment or reuse of existing residential or office uses in this development pattern shall have a maximum gross density of eight dwelling units per acre and/or an intensity not to exceed the floor area of the existing structure. New development in the Low Density Residential Office Development Pattern shall have a maximum gross density of eight dwelling units per acre and nonresidential gross building area shall not exceed 10,000 square feet per acre and non-residential gross building area shall not exceed 10,000 square feet per acre. For mixes of residential and non-residential development on one parcel an overall limit to building floor area will be set at 12,500 square feet per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning of Low Density Residential Office for low density/low intensity uses. Additional criteria are as follows: Transition areas between Medium Density Residential, Village Center, and Urban Pedestrian Center Mixed Use development patterns to Low Density Residential and Residential Preservation; and Transitional land use areas along arterial and collector roadways and Areas of Low Density Residential Office as a principal land use along arterial and collector roadways.

ACCESS–Areas zoned for the Low Density Residential Office development pattern shall have access to an arterial or collector roadway.

Policy 1.7.4: [L] **(REV. EFF. 3/14/07)**

Medium Density Residential Office Development Pattern

INTENT–The Medium Density Residential Office development pattern is intended to provide areas for office employment and residential uses in close proximity to each other.

The Residential Office development pattern is intended in some locations to serve as an employment and residential area with medium densities and intensities. Zoning districts will be created to distinguish Medium Density Residential Office areas by density and intensity, so that developments are scaled appropriately to their setting. It is also intended that community facilities (Recreation, Community Services, Light Infrastructure and Post-Secondary Schools) related to residential or office use be allowed in a manner which would ensure the protection of adjacent uses. Ancillary first floor commercial use may also be permitted in Medium Density Residential Office.

DENSITY/INTENSITY–Residential use within this development pattern shall have a minimum density of 6 dwelling units per acre unless constraints of concurrency or natural features would preclude attainment of the minimum density and a maximum density of 16 dwelling units per acre in Bradfordville Mixed Use and nonresidential use shall not have a gross building area exceeding 20,000 square feet per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning of Medium Density Residential Office density medium intensity uses. Additional criteria for mapping these areas are as follows: Areas of existing offices and multi-family uses; Areas adjacent to Medium Density Residential, Village Center, Suburban Corridor, and Urban Pedestrian Center Mixed Use development patterns; and Areas of Medium Density Residential Office as a principal land use along arterial and collector roadways.

ACCESS - Areas zoned for the Medium Density Residential Office development pattern shall have access to an arterial or collector roadway.

Policy 1.7.5: [L] **(REV. EFF. 3/14/07)**

Village Center Development Pattern

INTENT–The Village Center development pattern is intended to provide locations for offices and commercial uses which provide goods and services, that people frequently use, in close proximity to their homes. Village Centers are intended to be compact and not promote strip commercial development; therefore, zoning districts implementing this development pattern will include limitations on arterial and collector street frontage and maximum development pattern size, not to exceed 20 acres and 200,000 square feet of commercial use per parcel, except a Village Center may be as large as 30 acres if its gross square footage does not exceed 250,000 square feet. Village Centers are characterized by a scale and design that is compatible with nearby residential areas and zoning districts implementing this development pattern will include appropriate development standards. Zoning districts may include additional thresholds in order to size Village Centers in relation to the needs of the surrounding area. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) related to the principal use of this development pattern be allowed in a manner which would ensure the protection of adjacent uses.

DENSITY/INTENSITY–Nonresidential development shall not exceed 12,500 square feet of a gross building area per acre for Village Centers 20 acres and less. Nonresidential development shall not exceed 250,000 square feet of gross building area for Village Centers from 20 to 30 acres in size. Residential use is permitted on the second floor and

above, above office or commercial use, up to a maximum density of sixteen dwelling units per acre.

LOCATION–Bradfordville Mixed Use areas are appropriate for zoning Village Centers. Additional criteria for zoning these areas are as follows: Areas adjacent to low and medium density residential development; and Areas adjacent to the Residential Preservation Future Land Use category and Low Density Residential, Medium Density Residential, Suburban Corridor, and Urban Pedestrian Center Corridor Mixed Use development patterns.

ACCESS–Areas zoned for the Village Center development pattern shall have access to an arterial or collector roadway.

Policy 1.7.6: [L] **(REV. EFF. 3/14/07)**

Suburban Corridor Development Pattern

INTENT–The Suburban Corridor development pattern is intended to accommodate existing development patterns representing a broad range of commercial, light industrial, and office uses which typically serve a regional or sub-regional population. Office use, and commercial use up to 200,000 square feet per parcel is allowed. Medium density residential use is also appropriate within this development pattern in order to promote a living working environment and make efficient use of infrastructure. It is also intended that community facilities (Recreation, Community Services and Light and Heavy Infrastructure) be allowed. Suburban Corridors are characterized by a linear pattern of single use development along arterial roadways, low floor area ratios and large impervious surface parking areas which are generally larger than the use that they serve. This pattern of development makes inefficient use of infrastructure and has a disproportionate impact upon the environment. Increases in land area zoned for the Suburban Corridor to accommodate a single use development are inconsistent with the Comprehensive Plan, except for increases in areas zoned for Suburban Corridor which permit an allowed use with an existing structure to expand. The intent of this exception is to encourage the continued use of existing structures, rather than the relocation of business to outlying locations. Reusing existing single use sites for multiple use developments, adding new uses to single use sites and/or new multiple use developments in the Suburban Corridor that share parking facilities, have parking structures and/or have high floor area ratios shall be facilitated by Land Development Regulations.

DENSITY/INTENSITY–Nonresidential development shall not have a gross building area exceeding 25,000 square feet per acre. Residential use shall not exceed sixteen dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

LOCATION–Bradfordville Mixed Use areas, which already exhibit the type of uses and intensity associated with the Suburban Corridor development pattern may be appropriate to be zoned Suburban Corridor. An increase in the area designated for Suburban Corridor may occur through limited expansion of the existing Suburban Corridors. In deciding whether to expand an existing Suburban Corridor, the following criteria shall be considered: Lack of suitably located land which can accommodate the Suburban Corridor development pattern; and Access to arterials with high traffic volumes, surrounded by

relatively low density and intensity uses, such as the Residential Preservation Future Land Use Category and Low Density Residential development pattern. Land Development Regulations shall establish access criteria for community facilities to assure their appropriate location. Expanding existing or establishing new Suburban Corridors shall require demonstration that more than one land use will be included in the expansion area.

ACCESS—Areas zoned for the Suburban Corridor development pattern shall have access to an arterial roadway.

Policy 1.7.7: [L] **(REV. EFF. 3/14/07; REV. EFF. 12/24/10)**

Urban Pedestrian Center Development Pattern

INTENT–The Urban Pedestrian Center is intended to encourage compact, linear and pedestrian scale urban development along arterial roadways that provide a wide range of uses and activities to serve both the corridor itself and surrounding areas. Although some areas within the Urban Pedestrian Center are currently of lower density and intensity, it is intended that Urban Pedestrian Centers will develop and redevelop with higher densities and floor area ratios. The arterial roadway along which the Urban Pedestrian Center is located is characterized by relatively high volume traffic with lower traffic speeds and served by mass transit. Zoning districts which implement the Urban Pedestrian Center will include urban design standards which establish criteria that will promote pedestrian activity. It is also intended that community facilities (Recreation, Community Services and Light Infrastructure) may also be allowed in a manner which would ensure the protection of the allowable uses within and adjacent to this development pattern. Residential use, office use, and commercial use up to 200,000 square feet per parcel is allowed.

DENSITY/INTENSITY–Nonresidential development in Bradfordville Mixed Use shall not exceed 20,000 square feet of gross building area per acre. Residential development in Bradfordville Mixed Use shall have a minimum density of 6 dwelling units per acre and shall not exceed sixteen dwelling units per acre. Building height shall not exceed six stories.

LOCATION–Bradfordville Mixed Use areas where the Urban Pedestrian Center is a transition between low density residential uses and more intensive uses may be appropriate for zoning of an Urban Pedestrian Center. Additional criteria for zoning these areas are as follows: Areas proximate to medium and high density residential land uses in urban areas; Areas proximate to higher intensity Mixed Use Development patterns, such as Medium Density Residential, Low and Medium Density Residential Office and Village Center; and Areas within walking distance of transit and along corridors designated for alternate transportation (per the most current adopted Long Range Transportation Plan).

ACCESS–Areas zoned for the Urban Pedestrian Center development pattern shall have access to an arterial roadway.

Policy 1.7.8: [L] **(REV. EFF. 3/14/07)**

Light Industrial Development Pattern

I. Land Use

INTENT–The Light Industrial development pattern is intended to provide areas for industrial and warehousing activities, including storage, service commercial, office and assembly activities. It is intended that regulations implementing this development pattern will preclude non-light industrial uses which would limit or interfere with industrial development. It is also intended that community facilities (Recreation, Community Services, Post-Secondary Schools, and Light and Heavy Infrastructure) may be allowed in a manner which would ensure the protection of the allowable uses within and adjacent to this development pattern. Office use, and commercial use up to 10,000 square feet per parcel, is allowed.

INTENSITY/DENSITY–Nonresidential development shall not exceed 25,000 square feet of gross building area per acre. Residential use (intended for a watchman or guard) shall not exceed one dwelling unit per industrial use. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

LOCATION–Areas within Bradfordville Mixed Use that are currently developed with industrial uses may be appropriate for zoning as Light Industrial. New areas within Bradfordville Mixed Use that may be appropriate for zoning as Light Industrial include: Areas proximate to interstate and intrastate highways and highways which connect to cities in adjacent counties.

ACCESS–Areas zoned for the Light Industrial development pattern shall have access to an arterial roadway.

Policy 1.7.9: [L] **(REV. EFF. 3/14/07)**

Table 1: Bradfordville Mixed Use Development Patterns

BRADFORDVILLE MIXED USE	Development Patterns	Allowed Land Uses	**Density**	**Intensity**
Primary: (From 68 - 82%)	Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	Up to 8 UNITS/ACRE	10,000 SQ FT/AC
	Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	Up to 8 UNITS/ACRE	10,000 SQ FT/AC
Secondary: (25% or less of Bradfordville Mixed Use)	Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 UNITS/ACRE	20,000 SQ FT/AC
	Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post-Secondary Schools	Up to 16 UNITS/ACRE	20,000 SQ FT/AC
	Village Center	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light Infrastructure & Community Service	Up to 16 UNITS/ACRE	12,500 SQ FT/AC
Tertiary: (7% or less of Bradfordville Mixed Use)	Urban Pedestrian Center	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light Infrastructure & Community Service	Up to 16 UNITS/ACRE (1)	20,000 SQ FT/AC
	Suburban Corridor	Residential, Office, Commercial up to 200,000 SQ FT, Recreation, Light & Heavy Infrastructure & Community Service	Up to 16 UNITS/ACRE	25,000 SQ FT/AC
	Light Industrial	Ancillary Residential, Office, Commercial up to 10,000 SQ FT, Light Industrial, Recreation, Light & Heavy Infrastructure, Community Service & Post-Secondary Schools	1 unit / develop-ment	20,000 SQ FT/AC

Notes: (1) 8 units/acre minimum for exclusively residential

Goal 2: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Provide for a high quality of life by planning for population growth, public and private development and redevelopment and the proper distribution, location and extent of land uses by type, density and intensity consistent with adequate levels of services and efficient use of facilities and the protection of natural resources and residential neighborhoods.

RESIDENTIAL LAND USE

Objective 2.1: [L] **(REV. EFF. 7/20/05)**

Enhance the livability of existing neighborhoods and in new neighborhoods provide for future mixed residential areas which will accommodate growth and provide a wide choice of housing types, densities and prices as well as commercial opportunities based on performance criteria. In furtherance of this, maintain a system of land development regulations and ordinances which will facilitate the implementation of the policies adopted in relation to residential land use. These shall include but not be limited to:

1) Setback requirements from natural waterbodies and wetlands
2) Buffering requirements
3) Open space requirements
4) Landscape requirements
5) Tree protection
6) Stormwater management requirements

Policy 2.1.1: [L] **(REV. EFF. 6/28/95; REV. EFF. 7/26/06; REV. EFF. 5/31/18)**

Protect existing residential areas from encroachment of incompatible uses that are destructive to the character and integrity of the residential environment. Comprehensive Plan provisions and Land Development Regulations to accomplish this shall include, but are not limited to:

a) Inclusion of a Residential Preservation category on the Future Land Use Map.

b) Limitations on future commercial intensities adjoining low density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the commercial uses and the low density residential uses; and are to allow only those commercial activities which are compatible with low density residential development in terms of size and appearance.

c) Limitations on future higher density residential adjoining low density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the higher density residential uses and the low density residential uses.

d) Limitations on future light industry adjoining low and medium density residential areas. Such limitations are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the light industrial uses and the low density residential uses.

~~e) Prevention or mitigation of off-site impacts from Industry and Mining uses.~~

~~f) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions. Such development requirements will also apply if ancillary facilities are proposed in conjunction with religious facilities, and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the low density residential uses.~~

~~*Policy 2.1.2: [L]* **(EFF. 7/16/90)**~~

~~Prohibit residential development where physical constraints or hazards exist, or require the density and design to be adjusted accordingly. Such constraints or hazards include but are not limited to flood, storm or slope hazards and unstable soil or geologic conditions.~~

~~*Policy 2.1.3: [L]* **(REV. EFF. 8/17/92)**~~

~~Require clustering of residential units on non-environmentally significant portions of parcels where conservation or preservation overlay districts exist elsewhere on the site. Net density on parcels where clustering is required on the developable portion of the parcel where the units are clustered shall not exceed double the allowable density for the land use category in which the parcel is located.~~

~~*Policy 2.1.4: [L]* **(EFF. 7/16/90)**~~

~~Residential densities shall not be permitted that would exceed the ability of local government or other providers to provide capital facilities and services in a cost effective manner.~~

~~*Policy 2.1.5: [L] (City of Tallahassee)* **(EFF. 7/16/90)**~~

~~Residential developments shall be designed to include a system of internal and inter-neighborhood circulation which promotes pedestrian and bicycle mobility. Within the Urban Service Area, sidewalks shall be required to provide pedestrian mobility.~~

~~*Policy 2.1.5: [L] (Leon County)* **(REV. EFF. 12/10/91)**~~

~~Bicycle facilities within residential developments shall only be required along major collectors or other streets with a higher functional classification.~~

~~*Policy 2.1.6: [L]* **(EFF. 7/16/90)**~~

Criteria shall be established within local development regulations which require within residential developments the provision of non-residential land uses such as parks, school sites and potential walk-to minor commercial and office opportunities.

Policy 2.1.7: [L] (Rev. Eff. 8/17/92)

Criteria established within the subdivision ordinances shall set aside land for active and passive contiguous green space in order to provide for accessible recreation and/or open space areas for all neighborhoods.

Policy 2.1.8: [L] (Rev. Eff. 7/26/06; Rev. Eff. 1/7/10)

Maintain a viable mix of available residential densities to accommodate a variety of housing types. Current residential densities are summarized below:

RESIDENTIAL DENSITIES RANGE (Rev. Eff. 12/15/11; Rev. Eff. 7/19/13)

Table 2: Residential Densities Range

Future Land Use Category	Maximum Gross Density - Dwelling Units (DU)/Acre (Ac)[1]	Minimum Gross Density Dwelling Units (DU)/Acre (Ac)
Rural	1 DU/10 AC	No minimum
Urban Fringe	1 DU/3 AC (standard) or 1 DU/3 AC (Conservation subdivision)	No minimum
Urban Residential	10 DU/AC	4 DU/AC
Urban Residential 2	20 DU/AC [2]	No minimum
Village Mixed Use	20 DU/AC [2]	No minimum
Suburban	20 DU/AC [2]	No minimum
Planned Development	20 DU/AC [2]	No minimum
Bradfordville Mixed Use [2]	20 DU/AC	No minimum
Central Urban [2, 3]	45 DU/AC	No minimum
Activity Center [2, 3]	45 DU/AC	No minimum
University Transition [2, 3]	50 DU/AC	No minimum
Central Core [2, 3] (Eff.1/7/10)	150 DU/AC (Eff. 1/19/02)	No minimum
Rural Community	4 DU/AC	No minimum
Residential Preservation [2]	6 DU/AC	No minimum
Lake Talquin Recreation/Urban Fringe [4]	1 DU/3 AC (standard)	No minimum
Lake Protection [4]	1 DU/2 AC (standard)	No minimum

Notes:

[1] Maximum gross density is based on the gross acreage of the site and may not be achievable after addressing applicable land development regulations (e.g., parking, stormwater, and other regulations that may limit maximum development potential).

[2] Density ranges can be increased up to 25% above the maximum limits listed above for the purpose of providing affordable housing units, consistent with Policy 2.1.14 [LU].

[3] Density ranges can be increased up to 35% above the maximum limits listed above for the purpose of encouraging infill development and redevelopment, consistent with Mobility Element Policy 1.1.10 [M] (Eff. 12/15/11; Rev. Eff. 7/19/13)
[4] Clustering Option Available

Policy 2.1.9: [L] (Leon County) **(REV. EFF. 6/6/08)**

Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations.

a) Family Heir Subdivisions

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan.

b) Non-Family Heir Subdivisions

To avoid a disproportionate impact on owners of small parcels of property, each parcel of property in single ownership as of February 1, 1990, in the Urban Fringe, and Rural and Lake Talquin Recreation/Urban Fringe areas may be developed at a maximum density of two units per acre, for the first six dwelling units on such parcel, including existing dwelling units. This provision for non-family heir subdivisions shall expire on February 1, 2010 at 12:01 a.m. when such subdivisions shall no longer be permitted.

Policy 2.1.9: [L] (City of Tallahassee) **(REV. EFF. 6/6/08)**

Either provision described in Policy 2.1.9 (a) and (b) below may apply only once to any individual, and may not be used in combination. Any parcel created through use of the non-family heir provision of this policy shall not be further divided using the family heir provision. Neither provision may be used to create a lot which is smaller than ½ acre in size. The provisions described below shall be further described and regulated within the implemented land development regulations.

a) Family Heir Subdivisions

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel to said individual is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel within this Plan.

b) Non-Family Heir Subdivisions

~~To avoid a disproportionate impact on owners of contiguous property 25 acres or less in size in single ownership as of February 1, 1990, in the Urban Fringe, and Rural and Lake Talquin Recreation/Urban Fringe areas may be developed at a maximum density of two units per acre, for the first six dwelling units on such parcel, including existing dwelling units. This provision for non-family heir subdivisions shall expire on February 1, 2010 at 12:01 a.m. when such subdivisions shall no longer be permitted.~~

~~*Policy 2.1.10: [L]* **(DEL. EFF. 7/6/15)**~~

~~*Reserved*~~

~~*Policy 2.1.11: [L]* **(EFF. 1/19/02; REV. EFF. 6/6/08)**~~

~~Criteria for approval of Central Urban development shall be established in the Land Development Regulations.~~

~~*Policy 2.1.12: [L]* **(DEL. EFF. 6/6/08)**~~

~~*Reserved*~~

~~*Policy 2.1.13: [L]* **(EFF. 8/17/92)**~~

~~Existing adjoining land uses are not to be a factor in determining the suitability for residential development which would allow high and medium density residential uses to be located anywhere in the University Transitional land use category.~~

~~*Policy 2.1.14: [L]* **(EFF. 6/07/01; REV. EFF. 7/26/06)**~~

~~The land development regulations may contain provisions that allow for densities greater than otherwise provided in the respective future land use classifications specified within the Land Use Element in exchange for the construction of affordable housing units. These density bonuses shall be limited to a density no greater than 25% higher than would otherwise be allowed within the respective future land use classification. In addition, to ensure that the additional density does not create unacceptable adverse impacts, the land development regulations shall provide additional qualifying criteria which must be met in order to qualify for the density bonus. At a minimum, these criteria should ensure:~~

~~1) that the development seeking the density bonus will be providing affordable housing units;~~

~~2) that the development seeking the density bonus is located within the urban services area, in a location where zoning allows density of greater than 2 dwelling units per acre and where infrastructure, utilities, and public services are adequate and sufficient to meet the projected demands associated with the requested additional density; and,~~

~~3) that the design and orientation of the development seeking the density bonus is compatible with the surrounding land use character, particularly with any low density residential neighborhoods. Building size and massing, site layout and design, architectural characteristics, and landscaping will be components of this criterion.~~

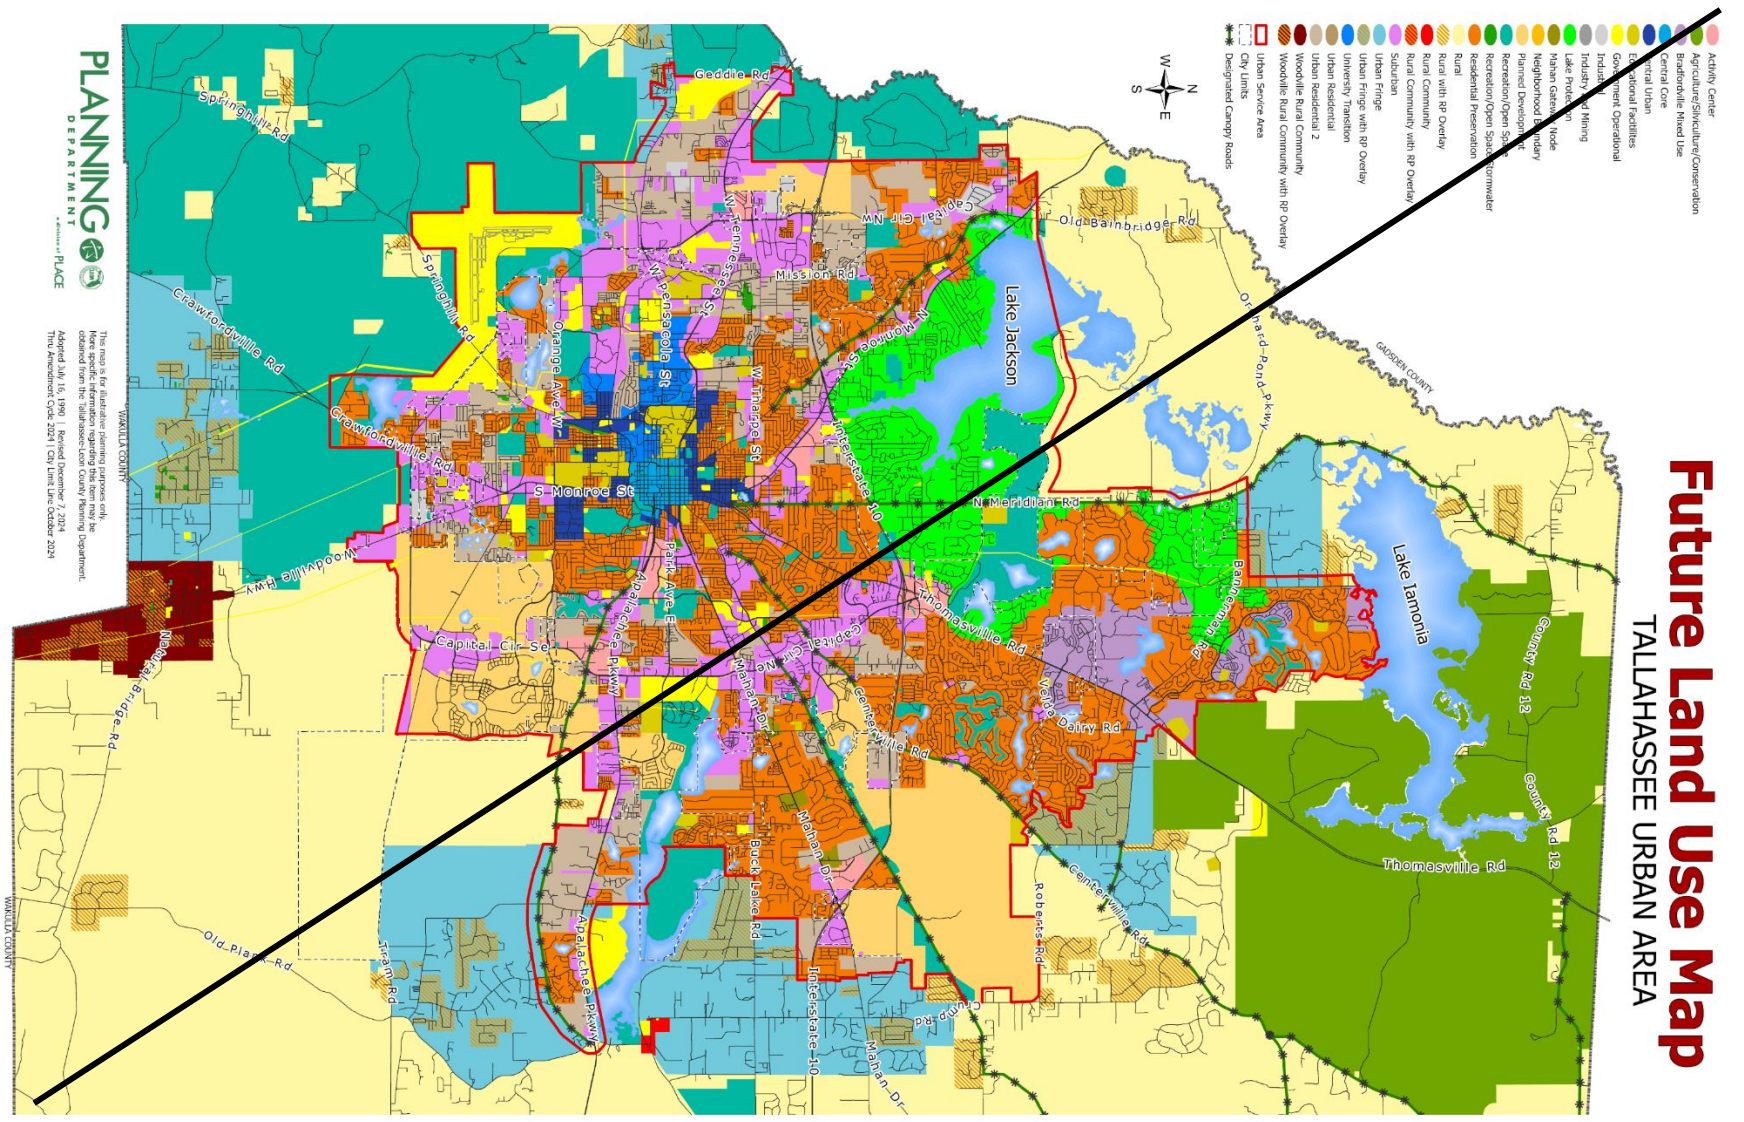
~~The land development regulations may further restrict the density bonus to be provided in proportion to the quantity of affordable housing units to be provided in the development seeking the density bonus.~~

~~In addition, in order to provide the site design flexibility necessary to accommodate these density bonuses, the land development regulations shall contain provisions that allow for a reduction or elimination of requirements to set aside land for urban forest or landscaping, subject to the following criteria:~~

~~1) the development meets all of the above criteria for density bonuses;~~

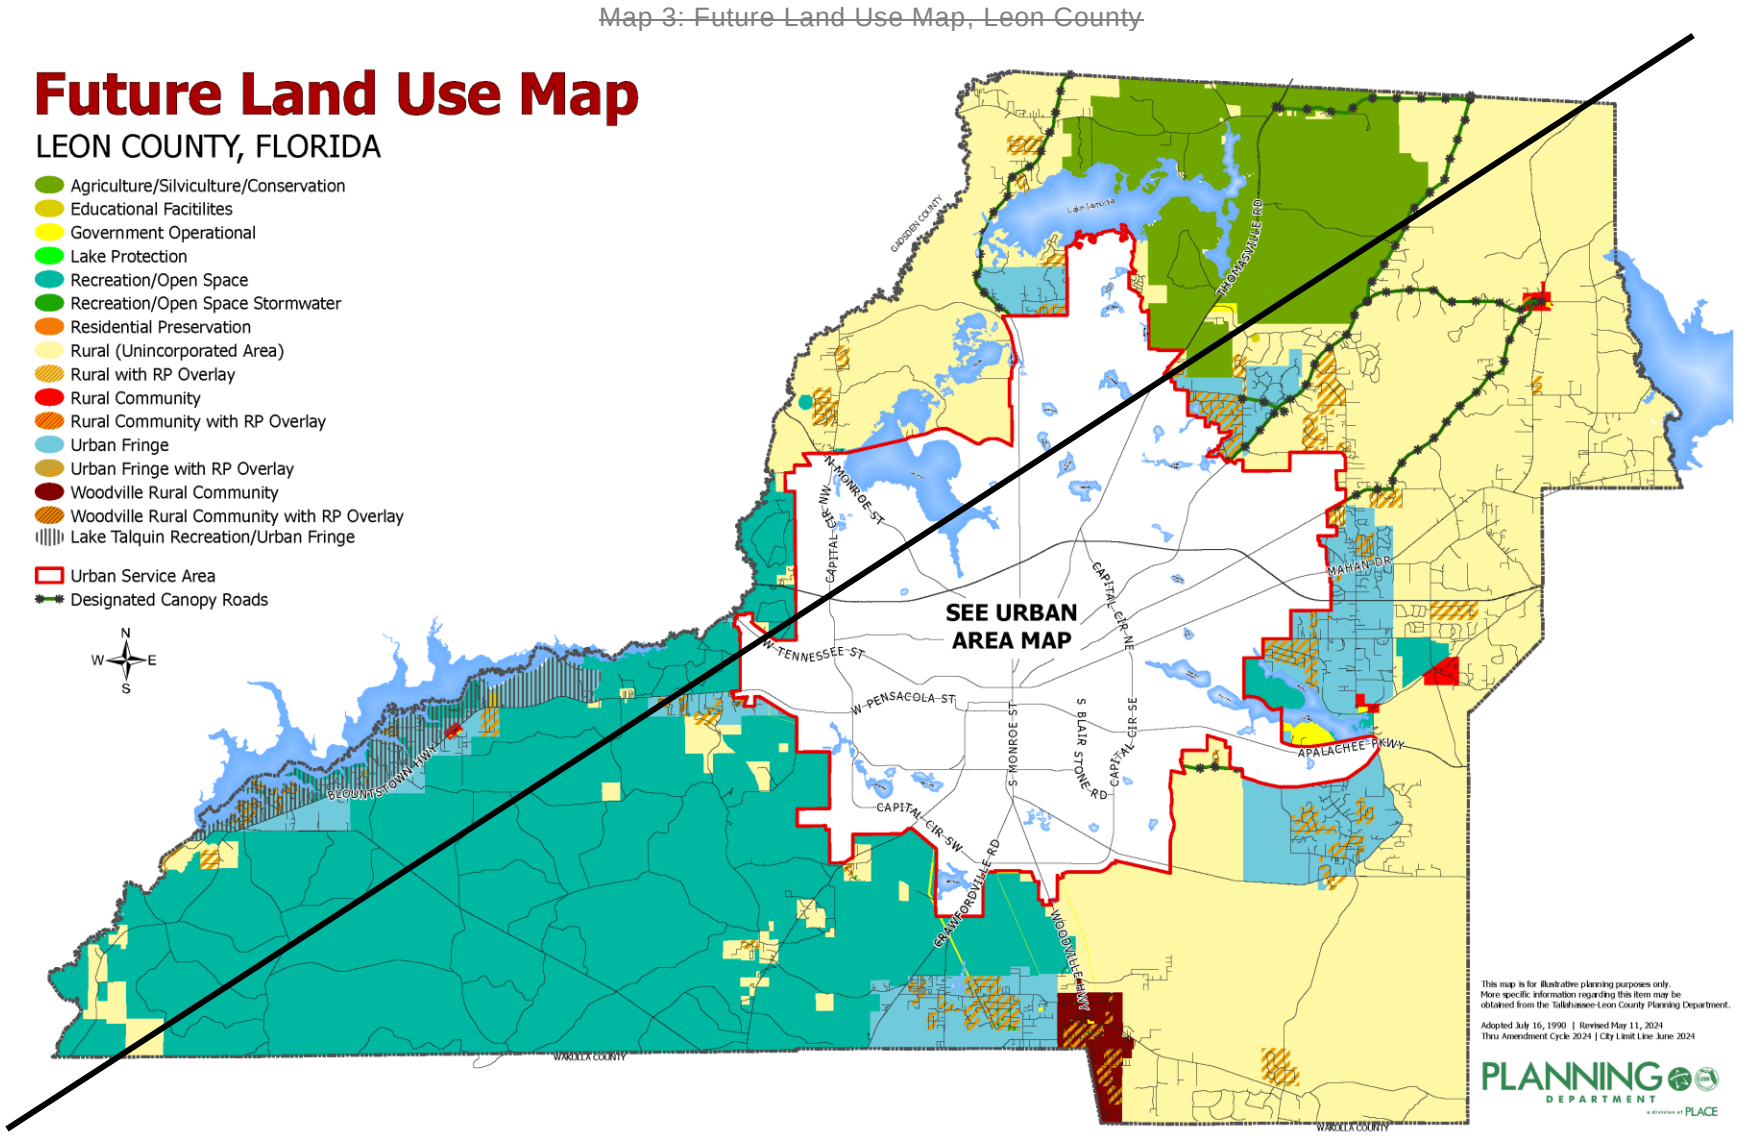
~~2) no less than 10% of the dwelling units within the development will be affordable housing units;~~

~~3) the reduction or elimination of requirements to set aside land for urban forest or landscaping shall not have an adverse impact to any Preservation or Conservation feature;~~



~~4) the development shall provide the minimum landscaping necessary to ensure compatibility with adjoining land uses; and~~

~~5) the development adheres to the general principles of Traditional Neighborhood Design, the Front Porch Florida program, and Crime Prevention Through Environmental Design (CPTED).~~



~~The land development regulations may base any reduction or elimination of requirements to set aside land for urban forest or landscaping on the quantity or percentage affordable housing units in the development and the proximity of the development to areas targeted for urban infill, redevelopment or more intensive land uses.~~

~~I. Land Use~~

~~Map 2: Future Land Use Map, Tallahassee Urban Area~~

~~Map 3: Future Land Use Map, Leon County~~

FUTURE LAND USE MAP CATEGORIES

Objective 2.2: [L] (REV. EFF. 7/26/06)

To coordinate future land uses with suitable topography and soil conditions, the protection of natural resources and with the availability of adequate infrastructure through the establishment of a Future Land Use Map depicting appropriate land use categories. In order to fulfill this intent, the Land Use Plan establishes policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community.

The Tallahassee-Leon County Comprehensive Plan shall promote appropriate location of land uses and regulation of development

density and intensity based upon: (1) protection of conservation and preservation features; (2) compatibility with adjacent existing and future residential land uses; (3) access to transportation facilities in keeping with their intended function; and (4) the availability of infrastructure.

The Plan shall also establish policies and guidance for the mapping of Future Land Use Categories, which are depicted on the Future Land Use Map. These categories are designed to promote a variety of land use types and patterns to meet the needs of the community and are shown on the following maps:

NOTES APPLICABLE TO URBAN AREA FUTURE LAND USE MAP (REV. EFF. 3/14/07)

Parcels 21-26-35-C-0010, 21-26-35-C-0020, 21-26-35-C-130 may be developed as an independent living facility for the elderly only if a Planned Unit Development is approved which includes Parcels 21-26-51-000-0040, 21-26-51-000-0050, and 21-26-51-000-120. Development intensity on the vacant parcels is limited to 45 units and 34,000 square feet and building height is limited to three stories. If the Planned Unit Development is not completed or approved, the vacant parcels shall only be developed as low-density residential development allowed under the R-1 or R-2 zoning districts.

Parcel 11-08-20-630-0000 shall only be developed with general office that may include a lending institution with a drive-through facility on the first floor. The total amount of development is limited to 30,000 square feet. The architecture and site design must be consistent with the adjacent Thomasville Road/I-10 Planned Unit Development. Site plans must be submitted to the Live Oak Plantation and Piedmont Neighborhood Associations, the 1300 Live Oak Plantation Property Owners Association, as well as the developers of the Thomasville Road/I-10 Planned Unit Development for comments prior to submitting the site plan to the City.

The area designated University Transition with hatching is subject to Transportation Element Objective 2.2, which may limit density to less than the maximum permitted by the category.

NOTES APPLICABLE TO LEON COUNTY FUTURE LAND USE MAP **(REV. EFF. 6/19/07)**

The allowable density is limited to 200 single-family residential dwelling units on parcels 15-17-20-224-0000 and 15-20-20-034-0000 combined and no non-residential development is permitted on these parcels. Also, for these parcels at least 50% of the entire combined acreage must be placed in permanent open space. The permanent protection of this open space shall be further defined through the PUD process.
(Parcels) 12-02-20-602-0000 and 12-11-20-202-0000 will be developed at a cumulative density no greater than 81 residential detached units.

Policy 2.2.1: [L]

RURAL/AGRICULTURE **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; REV. EFF. 12/24/10; REV. EFF. 7/6/15; REV. EFF. 1/19/20)**

INTENT

Leon County's agricultural and silvicultural lands have a long and productive history. They have served as both a source of food and materials for urbanized areas of the County and as a significant economic engine for the region. Decades of suburbanization have dramatically reduced the amount of arable land available for agriculture and silviculture within the County. These lands are now at a premium and require protection to ensure that they remain viable, unfragmented, and productive for future generations.

The intent of the Rural category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

To promote infill and redevelopment within the Urban Service Area (USA) and Rural Communities, higher density residential, and non-residential activities that are not functionally related to and supportive of agriculture, silviculture and other natural resource based activities shall be prohibited within the Rural category.

ALLOWABLE USES, DENSITIES, AND INTENSITIES

1. Residential

   The Rural category shall allow for single family residential uses at a maximum density of one (1) dwelling unit per ten (10) gross acres.

2. Non-residential

   Agriculture, silviculture, and other natural resource based activities shall comprise the primary non-residential uses within the Rural category.

   Consistent with Florida's Right to Farm Act, bona-fide agricultural uses, on land classified as agricultural land by the Leon County Property Appraiser, shall not be subject to a non-residential intensity limitation.

Non-residential uses functionally related to and directly in support of agricultural, silvicultural, and other natural resource based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 sq. ft. per gross acre. The location of such uses shall be limited to the intersection of major collector and arterial or arterial and arterial designated roadways. Total development at any one intersection shall not exceed 10,000 sq. ft.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional standards and limitations shall be included in the land development code.

3. Community and Recreational Facilities

Community services and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 2,000 sq. ft. per gross acre.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, natural resource based, or ecotourism activities, including, but not limited to golf courses, drag strips, and racetracks for motorized vehicles, are prohibited.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

SPECIAL CONDITIONS

The following special conditions shall apply to the Rural future land use category:

1. Development proposals within the Rural area shall be evaluated for compatibility with adjacent agricultural uses and shall consider the land management activities associated with such uses. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Service Area or a designated Rural Community.
3. Non-residential and light infrastructure development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register at the time of adoption of this amendment shall be considered conforming.

Policy 2.2.2: [L]

URBAN FRINGE* **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; REV. EFF. 4/10/09; REV. EFF. 12/24/10; REV. EFF. 12/15/11)**

The Urban Fringe category is intended to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Service Area. To protect Rural areas from premature development, facilitate infill and redevelopment inside the Urban Service Area, and in recognition of the significant area already mapped as Urban Fringe, no additional lands designated Rural or Urban Fringe as of August 26, 2006 shall be converted to a more dense or intense land use category unless adjoining lands are also within the designated Urban Service Area boundary or the designated Woodville Rural Community. Conversions to the Woodville Rural Community designation shall be consistent with the Transfer of Development Units provision in Policy 4.2.5: [C].

Conventional subdivision of land in the Urban Fringe may be permitted at a density of up to one unit per three acres. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivision developments are allowed and encouraged. Conservation Subdivision design in Urban Fringe may be permitted at a density of up to one unit per three gross acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land.

Appropriately sized minor commercial activities and minor offices are permitted. Industrial, office and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

Policy 2.2.3: [L]

RESIDENTIAL PRESERVATION **(Eff. 7/16/90; Rev. Eff. 7/26/06; Rev. Eff. 4/10/09; Rev. Eff. 5/31/18)**

Characterized by existing homogeneous residential areas within the community which are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions. Future development primarily will consist of infill due to the built out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterial and/or expressways should be planned to minimize impacts within this category. Single family, townhouse and cluster housing may be permitted within a range of up to six units per acre. Consistency with surrounding residential type and density shall be a major determinant in granting development approval.

For Residential Preservation areas outside the Urban Service area the density of the residential preservation area shall be consistent with the underlying land use category.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria.

1) Existing land use within the area is predominantly residential

2) Majority of traffic is local in nature

a) Predominance of residential uses front on local street
b) Relatively safe internal pedestrian mobility

3) Densities within the area generally of six units per acre or less

4) Existing residential type and density exhibits relatively homogeneous patterns

5) Assessment of stability of the residential area, including but not limited to:

a) Degree of home ownership
b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) The creation of transitional development area (TDA) for low density residential developments.

Higher density residential developments proposed for areas adjoining an established neighborhood within the residential preservation land use category shall provide a transitional development area along the shared property line in the higher density residential development. The development density in the transitional development area shall be the maximum density allowed in the Residential Preservation land use category. Development within the transitional development area shall be designed, sized and scaled to be compatible with the adjoining residential preservation area.

Transitional development areas shall be non-mapped areas and shall be approved at the time of site plan approval. The factors cited in paragraph (c) below shall be considered when determining the size of transitional development areas. The land development regulations shall specify development thresholds for the implementation of transitional development areas.

b) Limitation on future commercial intensities adjoining low density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by providing a transitional development area between the commercial uses and residential preservation uses and only those commercial activities which are compatible with low density residential development in terms of size and appearance shall be allowed. The factors cited in paragraph (c) below shall be used when determining the compatibility, design techniques and the size of transitional development areas. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

c) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide screening, buffering, or a transitional development area between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (c) below shall be considered when determining compatibility, design techniques and the size of the transitional development area.

~~The design and layout of expanding or redeveloping light industrial uses and adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Research and Innovation Land Use category or the Industry and Mining Land Use category and applicable Land Development Regulations.~~

~~d) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions. Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities, and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.~~

~~e) Land use compatibility with low density residential preservation neighborhoods~~

~~A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. At a minimum, the following factors shall be considered to determine whether a proposed development is compatible with existing or proposed low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor. These factors shall also be used to determine the size of transitional development areas.~~

~~f) Limitations on Planned Unit Developments in the Residential Preservation land use category.~~

~~Planned Unit Developments proposed within the interior of a Residential Preservation designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.~~

~~The existing predominant development density patterns in Residential Preservation are listed in paragraph (g) below. Within 18 months of adoption, the PUD regulations shall be amended to include provisions addressing the preservation of established residential preservation designated areas. Said provisions shall address any proposed increase in density and the factors cited in paragraph (e) above.~~

~~g) Limitations on resubdivision of lots within established Residential Preservation designated areas.~~

~~To protect established single family neighborhoods from density intrusions, consistency within the recorded or unrecorded subdivision shall be the primary factor in granting approval for development applications. Consistency for the purposes of this paragraph shall mean that parcels proposed for residential development shall develop consistent with the lot size and density of the recorded or unrecorded subdivision.~~

1. Guidance on the resubdivision of lots in recorded and unrecorded single family subdivisions shall be provided in the Land Development Code.
2. Parcels proposed for residential development shall develop at densities generally consistent with the density of existing residential development in the recorded or unrecorded subdivision with the exception of parcels abutting arterial and/or major collector roadways which may be permitted up to six dwelling units per acre.

   There may be two distinct density patterns in the Residential Preservation land use category as shown below:

Existing land use character of the subdivision	Gross residential density
Homogenous, very low density single family detached units (City Only)	0-3.6 dwelling units per acre (generally consistent with density of the subdivision)
Low density single family detached and/or non-single family detached units (including but not limited to townhomes and duplexes)	0-6.0 dwelling units per acre (generally consistent with density of the subdivision)

This section shall not be construed as to restrict the development of building types allowed by the applicable zoning district.

Policy 2.2.4: [L]

VILLAGE MIXED USE **(REV. EFF. 12/23/96; REV. EFF. 7/26/06; REV. EFF. 3/14/07)**

To create traditional neighborhood developments with an emphasis on low to medium density residential land use, small to medium scale commercial shopping opportunities for area residents, schools and small to moderate scale churches, and recreational and leisure oriented amenities for the enjoyment of area residents. Development in this category shall require compliance with traditional neighborhood development standards to be established in the Land Development Regulations. New development in this category requires the establishment of a true, mixed-use project, either through buildings that integrate a mixture of uses or series of buildings that result in a compatible mix of uses. Integration includes the establishment of pedestrian connections, shared public spaces, streetscapes that focus on people before automobiles and parking designs that minimize their visibility. Commercial development shall be of a walkable scale and intensity. Residential development shall include a mix of housing densities and housing types.

Traditional neighborhood development regulations shall include specific criteria to ensure that development in this category results in walkable, mixed-use neighborhoods that satisfy a variety of housing needs and provide easy access to goods and services. The regulations shall require:

- A minimum of 40 acres per project unless the proposed project compatibly integrates with existing development abutting the project to establish an effective area of at least 40 acres that is consistent with traditional neighborhood development standards;
- A high degree of connectivity;
- Flexible greenspace requirements;

- Design and amenities that facilitates pedestrian access throughout each development;
- Minimum densities that are consistent with the Village Mixed Use Intensity Guidelines;
- Maximum setback requirements and standards that orient entrances and windows toward streets and pedestrian facilities;
- A mix of uses that is consistent with the Village Mixed Use Intensity Guidelines; and
- Requirements for public spaces that are readily accessible by pedestrians.

Development shall comply with the Village Mixed Use Intensity Guidelines. The scale of all nonresidential land uses shall be limited to preclude large automobile-oriented retail businesses and to ensure that non-residential uses remain accessible to pedestrians living in surrounding residences. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. In village centers, the number of spaces may be reduced to reflect increased pedestrian access. These characteristics are reflective of the village life-style. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

Village Mixed Use Intensity Guidelines **(REV. EFF. 3/14/07)**

Table 3: Village Mixed Use Intensity Guidelines

Minimum Percentage of Land Use by Acreage (1)	Development Patterns	*Allowed Land Uses (3)*	Residential Density (2)	Non-Res Intensity
10% of net area	Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	0 to 8 units/ acre	10,000 SQ. FT. per acre
5% of net area	Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	0 to 8 units/ acre	13,000 to 20,000 SQ. FT. per acre
10% of net area	Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 units/ acre	12,500 SQ. FT. per acre
5% of net area	Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post-Secondary Schools	8 to 16 units/ acre	17,000 to 25,000 SQ. FT. per acre

Minimum Percentage of Land Use by Acreage (1)	Development Patterns	*Allowed Land Uses (3)*	Residential Density (2)	Non-Res Intensity
5% of net area	Village Center	Residential, Office, Commercial up to 50,000 SQ FT, maximum business size. Centers shall not be located closer than ¼ mile to another village center or commercial development including more than 20,000 SQ FT of floor area.	8 to 20 units/ acre	17,000 to 40,000 SQ. FT. per acre
10% of gross area	Public Spaces	Recreation and cultural facilities, plazas, trails, parks and other public gathering places		

Notes:

(1) All percentages except public spaces are based on net area to be defined in the land development regulations as excluding undevelopable land;

(2) Densities apply to residential acreage only.

(3) All projects in the Village Mixed Use category must have a discernible center with a minimum of 10,000 retail and/or office. The project must also have a minimum of 50 residential units in order to ensure a mixed use project is developed on site.

An essential component of Village Mixed Use is residential land use. The village also will require small shops and some services to serve nearby residents. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Office and commercial development in scale with surrounding residential areas are appropriate. Allowed land uses within the Village Mixed Use Future Land Use Category shall be regulated by zoning districts that implement the intent of this category, and reflect the unique land use patterns, character, and availability of infrastructure in the different Village Mixed Use areas. In areas lacking the necessary infrastructure, the Land Development Regulations may necessitate a lower intensity interim use that the maximum intensities established in this Plan. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure, as well as compatibility with and appropriate connectivity to existing residential neighborhoods. Industrial development is prohibited in this Future Land Use Category.

Policy 2.2.5: [L]

SUBURBAN **(EFF. 3/14/07)**

To create an environment for economic investment or reinvestment through the mutually advantageous placement of employment and shopping opportunities with convenient access to low to medium density residential land uses. Employment opportunities should be located near residential areas, if possible within walking distance. This category recognizes the manner in which much of Tallahassee-Leon County has developed since the 1940s. The category predominantly consists of single-use projects that are interconnected whenever feasible. Mixed-use projects and the principles of traditional neighborhood developments are encouraged, though not required. The Suburban category is most suitable for those areas outside of the Central Core. However, additional

areas inside the Central Core may be designated as appropriate based on existing land use pattern.

To complement the residential aspects of this development pattern, recreational opportunities, cultural activities, commercial goods and services should be located nearby. To reduce automobile dependency of residents and employers alike, mass transit stops should be located at large commercial centers and appropriate street and pedestrian connections established between commercial and residential areas. Except within mixed use centers, larger scale commercial development should be buffered from adjacent residential neighborhoods.

Development shall comply with the Suburban Intensity Guidelines. Business activities are not intended to be limited to serve area residents; and as a result may attract shoppers from throughout larger portions of the community.

Suburban Intensity Guidelines **(EFF. 3/14/07; REV. EFF. 7/14/14; REV. EFF. 5/31/18)**

Table 4: Suburban Intensity Guidelines

Development Patterns	*Allowed Land Uses*	Gross Residential Density	Non-Res Intensity	Percentage Mix of Uses
Low Density Residential	Residential, Recreation, Light Infrastructure & Community Service	0 to 8 UNITS/ ACRE (4)	10,000 SQ FT/ACRE	65-80%
Low Density Residential Office	Residential, Office, Recreation, Light Infrastructure & Community Service	0 to 8 UNITS/ ACRE (4)	10,000 SQ FT/ACRE (5)	
Medium Density Residential	Residential, Recreation, Light Infrastructure & Community Service	8 to 16 UNITS/ ACRE	20,000 SQ FT/ACRE	
Medium Density Residential Office	Residential, Office, Ancillary 1st Floor Commercial, Recreation, Light Infrastructure, Community Service & Post-Secondary Schools	8 to 20 UNITS/ ACRE	20,000 SQ FT/ACRE (6)	
Village Center	Residential, Office, Commercial up to 50,000 SQ FT, maximum business size. Centers shall not be located closer than ¼ mile to another village center or commercial development including more than 20,000 SQ FT of floor area.	8 to 16 UNITS/ ACRE	12,500 SQ FT/ACRE per parcel for center 20 acres or less (7)	
Urban Pedestrian Center	Residential, Office, Commercial, Recreation, Light Infrastructure & Community Service	6 to 16 UNITS/ ACRE (3)	Up to 20,000 SQ FT/ACRE (3)	35-50%
Suburban Corridor	Residential, Office, Commercial, Recreation, Light & Heavy Infrastructure & Community Service	Up to 16 UNITS/ ACRE	Up to 25,000 SQ FT/ACRE (8)	

I. Land Use

Development Patterns	Allowed Land Uses	Gross Residential Density	Non-Res Intensity	Percentage Mix of Uses
Medical Center	Residential, Office, Commercial, Recreation, Light Infrastructure & Community Service	6 to 20 UNITS/ ACRE (1)	80,000 SQ FT/ACRE (2)	
Business Park	Office, Residential and Commercial	Up to 16 UNITS/ ACRE	20,000 SQ FT/ ACRE	5-10%

Notes:
(1) 8 units/acre minimum for exclusively residential;
(2) Hospitals up 176,000 sq ft/acre;
(3) 20 units/acre and 40,000 sq ft/acre for multiple use development; Combined residential and non-residential development may have up to 40,000 SF and up to a six story building. Residential use, office use and commercial use is allowed.
(4) Low Density Residential and Residential Office development patterns can have a minimum of 1 unit per acre if water and sewer are not available.
(5) The maximum square footage is increased to 12,500 SF if the project is a mixed-use development.
(6) The maximum square footage increases to 40,000 SF per acre and maximum height increases to six stories if 50% of parking is structured. This provision only applies to areas previously designated as Mixed Use C
(7) 250,000 SF of total development permitted on 20 to 30 acre centers.
(8) Storage areas may be 50,000 SF per acre. Office and Retail is allowed.

While mixed land uses are encouraged in the Suburban Future Land Use Category, the more prevalent pattern will be a compatibly integrated mix of single-use developments that include low and medium density residential, office, and retail development. Allowed land uses within the Suburban Future Land Use Category shall be regulated by zoning districts which implement the intent of this category, and which recognize the unique land use patterns, character, and availability of infrastructure in the different areas within the Suburban Future Land Use Category. In those areas lacking the necessary infrastructure, the Land Development Regulations may designate a low intensity interim use. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure.

Policy 2.2.6: [L]

BRADFORDVILLE MIXED USE **(REV. EFF. 12/23/96; REV. EFF. 7/26/06; REV. EFF. 3/14/07) (APPLIES TO BRADFORDVILLE STUDY AREA ONLY)**

The Bradfordville Mixed Use Category is depicted on the Future Land Use Map. The category establishes differing proportions of allowed land uses and land use densities and intensities and is intended to be implemented by zoning districts which will reflect eight different development patterns which are described in Objectives 1.7 and 6.1.

The Mixed Use Development patterns shall be applied through zoning and Land Development Regulations in a manner consistent with the Future Land Use Map delineation of Bradfordville Mixed Use. These eight different development patterns are not intended to be mapped as part of the Future Land Use Map, rather they are intended to serve as a mechanism to assure that the appropriate location and mixture of land uses occur within the category.

Commercial development allocations in the Bradfordville Mixed Use Future Land Use Category are intended to limit gross leasable square footage per parcel as defined in the Land Development Regulations.

Intended Function: Create a village atmosphere with an emphasis on low to medium density residential land use, small scale commercial shopping opportunities for area residents, schools and churches, and recreational and leisure oriented amenities for the enjoyment of area residents.

The intensity of all nonresidential land uses shall be kept minimal to reduce the intrusive impact upon the residential land use. The intensity of all nonresidential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be minimal. These characteristics are reflective of the village life-style.

The essential component of Bradfordville Mixed Use is residential land use. The low to medium density residential development will be located to provide for maximum land use compatibility and enjoyment of recreational and leisure opportunities (recreational land uses are included in the description of Community Facilities). The village will also allow small shops and some services to serve nearby residents. Emphasis on commercial uses shall be limited to convenience, grocery, and small pharmacies and offices. Office and commercial development in scale with and meeting the needs of the surrounding predominately residential area are appropriate.

It is also possible that appropriate sites within the area designated for Bradfordville Mixed Use may be developed for enclosed industrial uses. These are land uses that would usually be considered incompatible with the mixed use village, but due to site conditions, with careful design and facility planning, may be successfully integrated. Compatibility is also protected by allowing few such uses and limiting their size (development intensity).

All of the development patterns are appropriate within Bradfordville Mixed Use as described in Policy 1.7.9 [L]. The development pattern descriptions established under Objective 1.7 guide the density and intensity, location and access to areas of complementary land use.

Allowed land uses within the Bradfordville Mixed Use future land use category shall be regulated by zoning districts which implement the intent of this category, and which recognize the unique land use patterns, character, and availability of infrastructure in the different areas within the Bradfordville Mixed Use future land use category. In those areas lacking the necessary infrastructure, the Land Development Regulations may designate a low intensity interim use. Any evaluation of a proposed change of zoning to a more intensive district shall consider, among other criteria, the availability of the requisite infrastructure.

Policy 2.2.7: [L]

HEAVY INDUSTRIAL **(Eff. 12/10/91; Rev. Eff. 7/26/06; Renumbered 3/14/07; Rev. Eff. 5/31/18)**

Contains industrial uses which have or may have substantial off-site impacts. These areas have locational criteria more stringent than residential or commercial. Off-site impacts

require extensive buffering and/or relative distance from other land uses. Ancillary commercial uses designed to serve adjacent workers may be permitted. Other commercial and residential land uses are prohibited due to the encroachment factor. No additional property shall be designated with the Heavy Industrial Land Use category. Amendments to the Future Land Use Map adopted for the purposes of developing heavy industrial uses shall be designated with the Industry and Mining Land Use category.

Policy 2.2.8: [L]

CENTRAL URBAN **(REV. EFF. 6/07/01; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 6/6/08)**

Characterized by older developed portions of the community that are primarily located adjacent to or in close proximity to the urban core and major universities. Intended to provide a variety of residential types (up to 45 DU/AC), employment (includes light manufacturing), office and commercial activities. Infill and potential redevelopment and/or rehabilitation activity should be encouraged. Actual siting of land uses within the category are dependent on implementing zoning districts. Roadway access standards are determined by application of land development regulations. Land use intensity is intended to be higher (up to 20,000 sq. ft. for minor commercial uses; up to 100,000 sq. ft. for neighborhood commercial uses; and up to 200,000 sq. ft. for community commercial uses) due to the presence of requisite capital infrastructure and location of employment and activity centers.

Policy 2.2.9: [L]

HIGH INTENSITY URBAN ACTIVITY CENTER**(EFF. 7/16/90; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

Designed to function as urban activity centers by primarily providing for community wide or regional commercial activities located in proximity to multi-family housing and office employment centers. Intended to provide large scale commercial activities to serve retail needs of large portions of the population. Promotes efficiency of the transportation system by consolidating trips and discouraging unabated sprawl of commercial activities. Planned, integrated development is required to promote synergy between the different allowable land uses. An integrated pedestrian mobility system designed to provide safe and accessible foot and bike travel between the land uses shall be stressed in granting development approvals. Access and egress to Activity Centers as well as internal vehicle travel shall be planned in a comprehensive manner in order to facilitate traffic movement. Residential development shall be permitted up to 45 dwelling units per acre.

Policy 2.2.10: [L]

CENTRAL CORE **(EFF. 1/19/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/7/10; REV. EFF. 7/19/13)**

The current Central Core of Tallahassee has a strong government presence. However, the character of this area has changed since 2002 to a more mixed use center with new office, commercial, retail and residential uses. The Central Core of Tallahassee is intended to

expand into a vibrant 18-hour urban activity center with quality development. The emphasis in this area is intended to shift from cars to pedestrian, bike and transit modes of transportation. The development regulations within the Central Core area have to be amended to allow for a more urban kind of development where the primary emphasis is on pedestrian, bike and transit modes of transportation. The Central Core area is within the Downtown Overlay. The City of Tallahassee intends to promote mix of uses and higher densities and intensities within its Central core, while promoting multiple modes of transportation. The City shall establish Design Guidelines for this area in order to allow for more mixed use, pedestrian, bike and transit oriented development. Residential development may be permitted up to 150 units per acre.

Any development with density of more than 10 dwelling units per acre shall be consistent with the design standards identified in Policy 1.1.10 [M] subject to further clarification in the Land Development Code.

The future expansion of the Central Core FLUM will be limited to only those parcels within the Downtown Overlay District when:

- The proposed parcels are contiguous to existing central core FLUM area;
- The proposed parcel has all the infrastructure available;
- The proposed parcel has to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.2.11: [L]

RURAL COMMUNITY* **(REV. EFF. 6/28/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

The Rural Community future Land Use Designation is intended to distinguish long-established unincorporated communities located outside of the urban service area. These communities have existing concentrations of residential land use at densities typically less than those desirable within an urban area (gross densities are typically less than 2 dwelling units per acre and the most intensely developed portions rarely exhibit net densities above 4 dwelling units per acre). The intensity and layout of development within these communities more closely reflect rural design characteristics than urban design characteristics, with home sites and businesses typically being situated on larger lots, with greater setback than their urban counterparts, and while some commercial development in these communities occurs in the geographically compact "nodes", located at or near the intersections of major roads, it is also common to find established existing linearly developed commercial areas along limited portions of State Highway frontage. Communities so designated have grown as historically independent communities outside of the urban area and not extensions of urban sprawl. As such, this future land use designation recognizes that these communities typically have their own small, business-commercial "districts", where minor offices and small to moderate-sized commercial development provide local and surrounding rural residents access to basic shopping opportunities accordingly, the intensity of non-residential development is limited to a maximum of 50,000 square feet building and 50,000 square feet per parcel. Residential development may be permitted up to 4 dwelling units per acre. Development intensity

may be further limited according to the absence or presence of central water and sewer service, roadway capacity, and environmental limitations. Although some urban services may be available to serve development within areas designated Rural Community, urban services are not prerequisites for the limited development intensities allowed within these areas. Central sewer and water systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development or functions as a growth node.

Policy 2.2.12: [L]

WOODVILLE RURAL COMMUNITY* **(REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 4/10/09)**

The Woodville Rural Community shares many of the same characteristics as other Rural Communities, but has experienced different types of growth pressures than the other areas designated as Rural Community. Therefore it has received a separate Future Land Use designation with specific objectives and policies to address the issues unique to Woodville. Non-residential development is limited to a maximum of 50,000 square feet per building and 50,000 square feet per parcel; residential development is limited to a density of 4 dwelling units per acre. Through the transfer of development units system provided for in Policy 4.2.5 [C] residential densities of up to 8 dwelling units per acre may be allowed.

*Category located outside of designated Urban Service Area.

Policy 2.2.13: [L]

EDUCATIONAL FACILITIES **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This category contains:

(1) All public schools including elementary, middle school, high school, and post-secondary.

(2) All public lands for which educational facilities are proposed or planned.

(3) Private facilities with capacities for over three hundred students are also included in this category.

Permitted uses in this land use category are limited to educational facilities and ancillary community services to serve the student population, or the community in general. Allowed land uses within the Educational Facilities future land use category shall be regulated by zoning districts which implement the intent of this category.

Policy 2.2.14: [L]

RECREATION/OPEN SPACE **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This category contains:

(1) Government owned lands which have active or passive recreational facilities, historic sites, forests, cemeteries, or wildlife management areas.

(2) Privately owned lands which have golf courses, cemeteries, or wildlife management areas.

Permitted uses include passive recreation and silviculture. Active recreation facilities are included if the site is within the USA or a rural community.

Policy 2.2.15: [L]

RECREATION/OPEN SPACE - STORMWATER FACILITY **(EFF. 7/2/99; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This is a sub-category of the Institutional Recreation/Open Space category. This category is intended for government owned stormwater facilities.

Included in this category are the following:

(1) Government owned lands which serve as structural or non-structural stormwater facilities.
(2) The primary function of land in this category is stormwater attenuation, stormwater treatment for water quality, or stormwater conveyance.
(3) These areas may be used for passive parks that do not contain any permanent structure. Allowable open space uses include parks, nature preserves, cultivation, grazing, and unimproved pervious parking areas.

Policy 2.2.16: [L]

GOVERNMENT OPERATIONAL **(EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 12/24/10)**

Contains facilities, which include those defined on the Land Use Development Matrix as Community Services, Light Infrastructure, Heavy Infrastructure, and Post-Secondary, that provide for the operation of and provision of services on property owned or operated by local, state and federal government. The government facilities may include services and uses provided by private entities operating on property owned by the local, state, or federal government. These facilities shall include, but are not limited to:

Airports*	Offices
Correctional Facilities	Outdoor Storage Facilities

Policy 2.2.17: [L]

UNIVERSITY TRANSITION**(REV. EFF. 12/14/04; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/7/10)**

The University Transition land use category may only be applied through amendment to the Future Land Use Map to lands located generally within the rectangle created by the Florida State University main campus and Florida A & M University, Tallahassee Community College/Lively Technical Institute campuses and Innovation Park. Specifically, lands lying west of South Adams Street, South of West Tennessee Street, north of Orange Avenue and adjoining Innovation Park and Tallahassee Community College to the east. It is intended to be a compact land use category that provides higher density residential opportunities near the campuses, serving both to provide opportunities for student housing near the universities and to protect existing residential neighborhoods located away from the campuses from student housing encroachment. However, it is not intended that this category be applied in a manner that would encourage or facilitate the premature conversion of existing viable single family residential neighborhoods. The category is intended to transition from present industrial and lower density residential uses to those more compatible with vibrant urban areas and shall remain within a compact area located in close proximity land owned by the universities and existing areas designated as University Transition.

Higher density residential redevelopment of up to 50 DU/AC is allowed to provide housing for students and close in housing opportunities to the downtown for professionals. Retail commercial limited to a smaller scale classification to provide essential services to immediate residents and ancillary needs of universities such as book stores and photo copying establishments may be permitted. State and private offices properly designed and scaled to surrounding uses may be permitted as well as central parking facilities, artistic studios and workshops. Restaurants, movie theaters, lounges and other entertainment commercial uses shall be permitted as commercial. Development regulations which allow flexibility in their design and operation to permit such uses as outdoor cafe and gardens shall be incorporated into zoning code. Pedestrian pathways and access systems shall be designed to connect universities, downtown, civic/arts center, and residential and commercial areas to cut down on dependence of automobile travel. Design controls shall be employed to provide land use compatibility by offsetting potential negative impacts.

The areas within the Gaines Street Revitalization Plan Study Area will have up to 100 DU/AC.

Policy 2.2.18: [L]

LAKE PROTECTION **(REV. EFF. 12/22/95; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 7/14/14; REV. EFF. 7/6/15)**

INTENT

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. Historically, the lake has suffered from water quality issues associated with rapid urbanization and large-scale roadway projects. Lake Jackson's water quality has improved since adoption of the Comprehensive Plan, due in large part to the adoption of stringent stormwater treatment standards and the implementation of capital projects; however, nutrient levels in the Lake remain elevated and the Lake continues to be designated "Impaired" by the Florida Department of Environmental Protection.

The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner with minimal impact to water quality. The Lake Protection category is the basis for regulation and, where appropriate, limitation of development and redevelopment of land within the Lake Jackson Basin. The bounds of this category are to be the Lake Jackson basin boundary adjusted to include contributing watersheds but excluding existing, more intensely developed areas south of Interstate 10 and areas outside the Urban Service Area.

ALLOWABLE USES, DENSITIES, AND INTENSITIES

1. Residential

The Lake Protection category shall allow for residential uses at a base density of one (1) dwelling unit per two (2) gross acres.[1] To encourage compact and efficient development, two density bonus options are available for properties within the category:

i) A residential density of up to two (2) dwelling units per gross acre may be permitted within developments designed as a Clustered Subdivision.
ii) A residential density of up to eight (8) dwelling units per gross acre may be permitted within the Lake Protection Node (LPN) zoning district.

[1] (Leon County) Any development affecting real property located in whole or in part within the Lake Protection Future Land Use Map category west of US 27 North for which an initial Planned Unit Development Concept or Final Development Plan was approved before January 1, 2005 shall be vested for all uses, intensities and densities set forth in the PUD Concept Plan Ordinance. Said PUD shall be entitled to rely on the closed basin exemption previously set forth in this section if the Commission determined prior to January 1, 2005 that the PUD met the requirements for such closed basin exceptions and that such determination has not been overturned by a court of competent jurisdiction at the time vested rights are sought under this provision. If a court of competent jurisdiction invalidates such a PUD due to reasons unrelated to whether the property met the requirements for the closed basin exception, any new or modified PUD application relating to the same real property shall be vested for the uses, intensities and densities of the previously approved PUD. All development within said certified closed basins approved pursuant to this provision shall be approved through the PUD amendment process, except that in unincorporated Leon County a one-into-two residential lot split exemption shall be processed according to the established County procedures instead of the PUD process.

2. Mixed-use & Non-residential

Non-residential and mixed-use development (including, but not limited to, office and commercial uses) within the Lake Protection category may only be permitted within areas designated with the Lake Protection Node (LPN) zoning district. Within this district, single use, non-residential development shall be allowed at a maximum intensity of 10,000 square feet (S.F.) per gross acre. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 S.F. per gross acre, for a total of 12,500 S.F. per gross acre.

3. Community and Recreational Facilities

Community services, light infrastructure, and recreational uses shall be permitted within the Lake Protection (LP) and Lake Protection Node (LPN) zoning districts. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet (S.F.) per gross acre.

SPECIAL CONDITIONS

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The Lake Protection Node zoning district shall only be permitted at the following intersections:

- Highway 27 North and Sessions Road
- Highway 27 North and Capital Circle NW/Old Bainbridge Road
- Highway 27 North and Fred George Road
- Bannerman Road and Bull Headley Road

The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations, but generally shall not extend beyond ¼ mile from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.

2. As an alternative to large-lot developments, Clustered Subdivisions shall be permitted within the Lake Protection zoning district. Clustered Subdivisions shall:

- Contain a minimum of 60% contiguous open space preserved in perpetuity and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity;
- Be developed at a maximum density of two (2) dwelling units per gross acre; and,
- Be served by central water and sewer systems.

3. A volume control based stormwater treatment standard shall be required for all development and redevelopment within the Lake Protection land use category. This standard shall ensure that runoff volumes in excess of the pre-development runoff volume shall be retained for all storm events up to a 100-year, 24-hour duration storm. To encourage redevelopment in the Lake Protection category, a partial credit may be applied toward existing impervious surface on previously developed sites.

4. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.
5. Existing, lawfully established, non-residential uses within the Lake Protection land use category that are compatible with surrounding uses and meet all water quality standards for the Lake Jackson Basin shall be considered permitted uses.

Policy 2.2.19: [L]

LAKE TALQUIN RECREATION/URBAN FRINGE* **(REV. EFF. 8/17/92; REV. EFF. 7/26/06; RENUMBERED 3/14/07)**

This is a category that is specific to the eastern shore area of Lake Talquin north of State Highway 20. This area has unique characteristics in that it has developed to a large extent with weekend or vacation homes along the lake. This category is intended to allow one unit per three acres or one unit per acre if the development is clustered on 25% of the site. This is intended to protect environmentally sensitive areas until the critical areas study is completed.

A critical areas study will be required for this area in order to ascertain the environmental impacts of further development in this area as well as a strategy to provide services. Once the critical areas study has been completed, allowable densities, based on the information from the study, will be reassessed.

*Category located outside of designated Urban Service Area.

Policy 2.2.20: [L]

AGRICULTURE/SILVICULTURE/CONSERVATION **(REV. EFF. 6/28/02; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/19/20; REV. EFF 7/25/24)**

Conserving large tracts of plantation and former plantation land, forest land, agriculture and silviculture lands and wildlife and conservation and recreational hunting areas is an efficient means of protecting natural resources that constitute important physical, social, aesthetic and economic assets to all of the residents of Leon County. The expansion of urban development into agriculture/ silviculture/ conservation areas creates conflicts between farm and urban activities that encourage the premature conversion of agricultural and silvicultural land to other uses, and results in the loss of open space and natural beauty. The designation of land as ASC substantially protects the continued existence of the land for agriculture, silviculture, forest wildlife conservation and recreational hunting purposes, and otherwise promotes the public health, safety and general welfare of the residents of Leon County.

Extensions of Community Services (libraries, religious facilities, and police/fire stations) and Light Infrastructure (water wells, water tanks, sewage pump stations, and electric substations) within all ASC areas is allowed. Solar facilities shall comply with the setback and landscape buffer area criteria for other similar uses in this land use category. Very low residential density not to exceed 1 unit per 10 acres, is also allowed within the entire

ASC land use category. Accessory uses directly associated with the operation of agriculture, silvicultural, wildlife conservation, recreational hunting and permitted residential uses shall be allowed.

Areas which meet the criteria for inclusion in the ASC category include, but are not limited to the tracts known as Foshalee, Cherokee and Horseshoe plantations, and the Tall Timbers Research, Inc. ownerships. These large-ownership properties are in the Rural Zoning District and some of the smaller portions of the properties within the District currently have minor commercial uses or have had such in the past.

In recognition of the existence of those uses, the need to provide nodes of non-residential land use between long distances of rural plantation lands to serve the needs of pass-by traffic, and the need for a potential expansion of similar uses such as office uses that are currently not permitted in the Rural Land Use District portions of the properties lying within the ASC Land Use Category may be developed utilizing the Planned Unit Development process for rezoning to allow the expansion of uses permitted within a special development district provided that the proposed ASC PUD meets and addresses the following criteria:

(A) The development parcel and Planned Unit Development is located in only one quadrant of the intersection of a Minor Collector or Major Collector and an Arterial Roadway of parcels in excess of 200 acres in size; and
(B) Other quadrants must be dedicated as a conservation easement in perpetuity.
(C) The arterial road frontage of the lands surrounding the proposed development remains in its natural state for a minimum of 500 feet from the right of way in a Conservation Easement;
(D) The development area for the non-residential component of the PUD is a maximum of 30 acres; and
(E) The area to be dedicated as a Conservation Easement in perpetuity is conveyed prior to the issuance of Environmental Management permits; and
(F) The following site plan and design criteria are incorporated into the overall PUD:
    (1) Parking is buffered from the adjacent roadways;
    (2) Clustering of buildings and parking areas is utilized; and
    (3) A maximum of 10,000 square feet per structure not to exceed 50,000 gross square feet in total of non-residential is provided; and
    (4) Asphalt/concrete areas are minimized by providing grassed overflow parking, etc.; and
    (5) A limitation to a maximum of 30% total impervious area is utilized; and
    (6) Maximum building height is limited to two (2) stories; and
    (7) The overall PUD site is limited to one access entrance to the arterial roadway and one access to the collector roadway and provides internal connection to the overall parent parcel; and
    (8) There is an architecturally consistent theme that reflects the regional plantation vernacular throughout the development; and
    (9) The development incorporates an overall infrastructure plan (sewer, water, fire, sheriff, garbage, etc.) designed to serve the proposed development without extending existing services; and
    (10) Retail uses are limited to tourist-related retail, convenience stores (including gasoline sales), restaurants, and hotel/motel lodging. Office uses are limited

to civic and social organizations, offices serving primarily rural and agricultural/silvicultural needs, membership sports and recreations clubs, cultural and educational retreat facilities, and research and testing services related to agriculture/silviculture and plantations. Recreational uses are limited to museums, art galleries, and botanical and zoological gardens.

Policy 2.2.21: [L]

NEIGHBORHOOD BOUNDARY **(EFF. 7/25/03; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 11/26/20)**

Intent: This future land use category is intended to create a transition area between residential development and more intensive development such as higher density multi-family and higher intensity non-residential development while still preserving roadway capacity through access management practices. Where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan, this future land use category may also be used to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses.

Allowable Uses: Low-density residential including duplexes, townhomes, triplexes, and quadplexes; and non-residential development scaled to serve the surrounding neighborhood such as limited retail, offices, bed and breakfast inns and community services. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. The use must not cause excessive traffic, noise, light, odor, or dust impacts. Auto-oriented uses, such as gas stations or any other use having drive-through facilities, are not allowed in order to protect neighborhoods from any negative impacts associated with increased vehicular traffic.

Intensity/Density: Density and intensity standards for residential and non-residential development shall be established within the implementing zoning district's development standards. In no case shall the maximum density established exceed eighteen (18) dwelling units per acre. Non-residential structures are permitted up to a maximum of 20,000 square feet of gross building floor area per acre.

Design Standards: The land development regulations shall establish design standards to promote compatibility with adjacent residential development.

Location and Orientation: The location of this land use category shall either serve as a buffer between residential development and more intensive development or to establish mixed-use corridors, or nodes, with neighborhood-scale, non-residential uses and a variety of residential uses where identified in a City or County coordinated placemaking, sense of place, neighborhood, or sector plan. Those properties currently within the Lake Protection land use category may not be amended to the Neighborhood Boundary land use category.

Access Management: The land development regulations shall specify specific vehicular access management requirements that will serve to mitigate possible negative impacts to roadways associated with the implementation of this category.

Policy 2.2.22: [L] **(EFF. 1/7/10; MAHAN DRIVE LAND USE CATEGORIES DEL. 1/7/10)**

MAHAN GATEWAY NODE LAND USE CATEGORY

INTENT

The Mahan Gateway Node land use category is applicable only within the Mahan Drive Corridor Study area (see reference map below). The application of this land use category and associated implementation regulations to the Mahan Drive Corridor is intended:

- To preserve existing residential preservation neighborhoods;
- To create an attractive gateway into Florida's Capital City, Tallahassee;
- To foster an appropriate mix and location of land uses along the corridor to preserve the scenic and residential character of a majority of the corridor;
- To provide for the potential development of commercial and retail developments within designated nodes along the corridor;
- To prohibit strip commercial development along the corridor;
- To maximize and promote efficient use of infrastructure within the Tallahassee-Leon County Urban Service Area;
- To facilitate the development and provision of transit service along the corridor;
- To promote pedestrian activities by providing neighborhood-serving commercial and office uses within walking distance of one another, nearby to existing and future residential developments; and
- To promote shorter vehicular trips for adjacent neighborhood residents and to increase usage of non-vehicular transportation modes.

ALLOWABLE LAND USES, DENSITY AND INTENSITY

1. Residential

   The Mahan Gateway Node shall provide for low to medium density residential development, ranging in maximum permitted density from 4-16 dwelling units per acre. The maximum residential density shall be allowed in the mixed use zoning district(s) as defined below. Residential uses and types ranging from single family detached houses to multi-family residential structures shall be allowed.

2. Mixed-use & Non-Residential

   Mixed-use developments and non-residential uses such as a combination of commercial/office uses and residential uses, shall be allowed within the Mahan Gateway Node future land use category based on the following intensity standards.

   iii) Maximum non-residential uses shall not exceed 12,000 gross square feet per acre. The highest intensity of non-residential uses shall be allowed in mixed-use developments, which combine residential and non-residential uses in a common plan of development.

   iv) Mixed-use development must include a residential component. The land development regulations shall specify the percentage range for the residential component.

3. Community Facilities

The Mahan Gateway Node future land use category shall allow community facilities related to residential uses including but not limited to religious facilities, libraries, police/fire stations, elementary and middle schools. Leon County shall consider siting public community facilities needed to support development in the Mahan Drive corridor, within the Mahan Gateway Node future land use category. Density transfers shall be allowed for properties dedicated and accepted by the appropriate local government for the location of public community facilities within these nodes.

IMPLEMENTATION DISTRICTS

In order to achieve the intent of the Mahan Gateway Node future land use category, the future land use category shall be implemented through zoning districts, based on the criteria cited below and further defined in the land development regulations.

Mixed-use zoning district(s)

The Mahan Gateway Node future land use category shall include at least one mixed-use zoning district which shall allow for medium density residential uses, non-residential uses and a combination of medium density residential uses and non-residential uses (mixed-use developments).

Mixed-use zoning district(s) for Mahan Gateway Node shall be guided by the following requirements:

1. Location

   i) The areas immediately surrounding the intersections of Mahan Drive and the following streets: Dempsey Mayo Road, Edenfield Road and Thornton Road and as further defined in the land development regulations.

   ii) The properties designated Residential Corridor Node (Future Land Use Map Amendment 2005-2-M-015) east of Highland Drive and on the south side of Mahan Drive.

   Mixed-use zoning district(s) shall have frontage on Mahan Drive and shall be limited in its extent along Mahan Drive as further defined in the land development. The depth of the district(s) shall be specified in the land development regulations.

2. Limitation on Non-Residential Uses: The land development regulations shall establish limits for the location of non-residential structures along the designated cross streets cited in subparagraph (a) above.

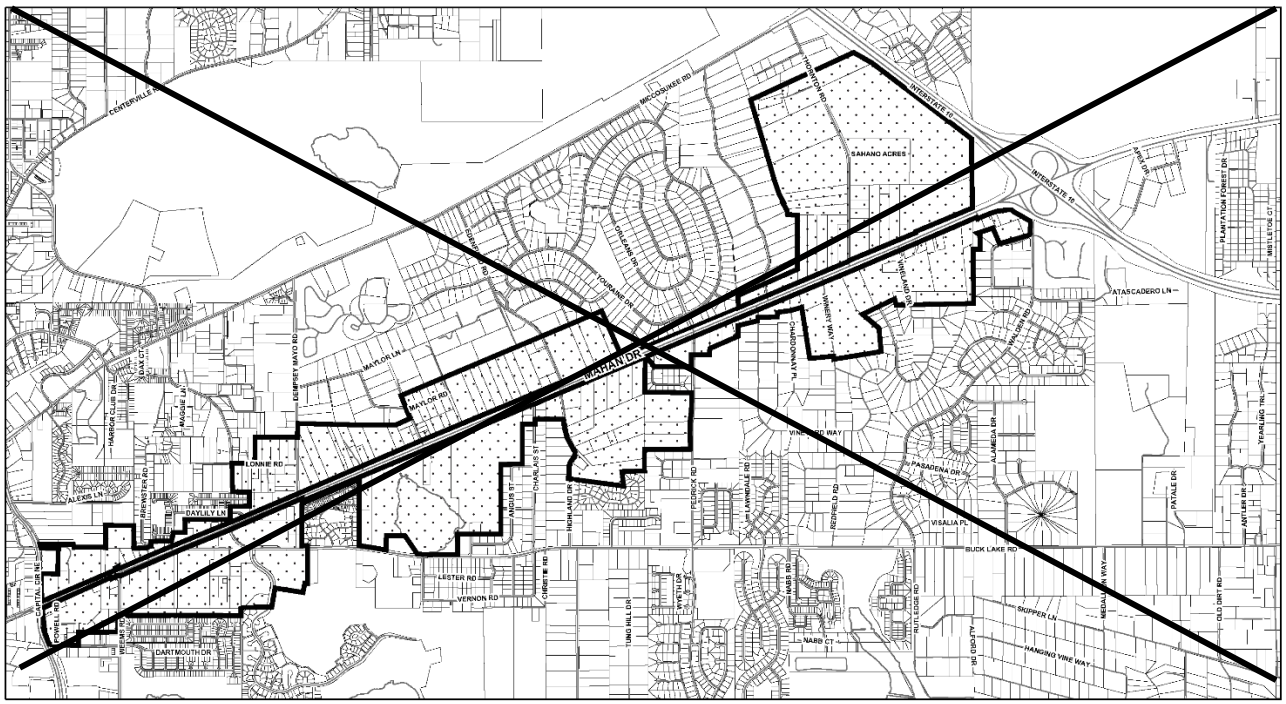
3. Access Management: Where feasible, practical and safe, access to Mahan Drive and the intersecting streets associated with each node shall be limited to one access driveway per node quadrant. Temporary access may be allowed until the desired interconnectivity for each node quadrant is achieved. The land development regulations shall specify criteria for access management, including, if necessary, the development of an access management plan.

4. Adjacency to Residential Preservation: Properties not currently designated Residential Corridor Node, as January 30, 2009, shall not be designated/zoned

in a manner to allow the mixed-use zoning district(s) to abut areas designated Residential Preservation. This provision is not applicable when the abutting properties in the Residential Preservation area have been developed with community facility uses. The mixed-use zoning district(s) are intended to be located in the core area of each designated node, around the identified arterial/collector roadway intersection with Mahan Drive.

5. Incentives for Unified Master Plan: To encourage, within the maximum development density and intensity standards, the combined development of properties within the Mahan Gateway Node future land use category, Leon County and/or the City of Tallahassee shall provide development incentives to property owners/developers within a node quadrant who proposed a binding master plan for a significant amount of the acreage or multiple properties within a node quadrant. The land development regulations shall provide a framework and guiding principles for the development of master plan(s) under this policy and the incentives to be provided.

Residential zoning district(s)



At least one residential zoning district shall be created and shall include all properties within the Mahan Gateway Node that are not designated mixed-use zoning district. The residential zoning district(s) shall develop primarily with residential uses and shall function as a transition area between the higher intensity/density uses allowed in the mixed-use zoning district(s) and the surrounding Residential Preservation areas. The residential zoning district(s) can also provide for community facilities and other neighborhood related uses as allowed by other policies in the comprehensive plan.

IMPLEMENTING LAND DEVELOPMENT REGULATIONS

The land development regulations may create density ranges to ensure compatibility with existing residential developments and other gateway development criteria. Standards addressing design elements to regulate development within the Mahan Gateway Node may include but are not limited to requirements addressing roofs, building scale, exterior building materials, building setbacks and height, fenestration, buffering, landscaping, solid waste disposal, parking lighting, transit oriented development, and signs. Such standards shall be included in the adopted land development regulations.

~~**I. Land Use**~~

~~Map 4: Mahan Drive Corridor Study Area~~

~~*Policy 2.2.23: [L]*~~

~~URBAN RESIDENTIAL~~ **~~(EFF. 7/20/05; REV. EFF. 7/26/06; RENUMBERED 3/14/07; REV. EFF. 1/22/16)~~**

~~The primary intent of the Urban Residential land use category, which is to be applied only within the Urban Services Area, is to encourage medium density (4-10 dwelling units per acre) housing, thereby promoting infill development, reducing urban sprawl, and maximizing the efficiency of infrastructure. The implementing zoning district shall contain design standards as well as locational criteria in order to accomplish these goals. The Urban Residential category allows townhouses, single-family detached, two-family, and multiple-family dwelling units as well as community facilities related to residential uses. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. Urban Residential may serve as a transition category between lower density residential categories and more intensive development such as higher density residential and/or office land uses or major roadways where alternative modes of transportation are available to support the increased residential densities. The category is not intended to be applied within the interior of an existing neighborhood, unless to correct, legal non-conforming uses and/or densities. The maximum residential density within the Urban Residential is 10 DU/AC and the minimum is 4 DU/AC.~~

~~*Policy 2.2.24: [L]*~~

~~URBAN RESIDENTIAL 2~~**~~(REV. EFF. 7/26/06; REV. EFF. 3/14/07; REV. EFF. 1/22/16)~~**

~~The primary intent of the Urban Residential 2 land use category, which is to be applied only within the Urban Services Area, is to encourage a range of density (20 dwelling units per acre) housing, thereby promoting infill development, reducing urban sprawl, and maximizing the efficiency of infrastructure. The implementing zoning district(s) shall contain design standards as well as locational criteria in order to accomplish these goals. The Urban Residential 2 category allows townhouses, single-family detached, two-family, and multiple-family dwelling units as well as open space/recreation and community facilities related to residential uses. The implementing zoning district(s) within the land development regulations shall further specify the allowable uses. Urban Residential 2 may serve as a transition category between lower density residential categories and more intensive development such as higher density residential and/or office land uses or major roadways where alternative modes of transportation are available to support the increased residential densities. The category is not intended to be applied within the interior of an existing designated residential preservation area, unless to correct, legal non-conforming uses and/or densities. The maximum residential density within the Urban Residential 2 category is 20 units per acre.~~

~~*Policy 2.2.25: [L]*~~

~~PLANNED USE OVERLAY DISTRICT~~ **~~(EFF. 7/25/03; REV. EFF. 7/26/06; RENUMBERED 3/14/07)~~**

~~Planned Use Overlay District is an overlay district that may be applied on any specific property inside the Urban Service Area, except for those properties currently within the Lake Protection land use category. The regulatory conditions pertaining to this overlay district shall be adopted by ordinance as an amendment to the Future Land Use Map of this Comprehensive Plan.~~

~~The Planned Use Overlay District is created to allow the consideration of unique, innovative or narrowly defined land use proposals that, because of the specificity of the applied regulatory conditions, can be found compatible with the character of the surrounding land uses and the environmental conditions of the subject land. This district may allow residential and non-residential uses that might otherwise not be allowed in the underlying land use category, subject to unique design features or other regulatory conditions adopted to promote compatibility with adjacent areas. Such features include but are not limited to recreational areas, mixed use development, buffering, and landscaping. Development within this overlay shall result in an integrated plan of development. and each adopted Planned Use Overlay District designation shall address the following: the intent of the specific overlay district designation, density and intensity; permitted uses; access and interconnectivity by car, foot, bicycle, and transit; trip generation and trip capture; identification and protection of environmental features; open space; buffering of adjacent uses when necessary; and unique design features.~~

~~Applicants seeking amendment of the Future Land Use map in order to apply this overlay district to (a) specified parcel(s) shall be required to meet with those registered neighborhood association(s), if any, within ¼ mile circumference of the amendment site prior to the first scheduled public hearing regarding the specific development proposal. This meeting shall be in addition to the normal Comprehensive Plan amendment notice procedures and requirements. Due to the requirements above, applicants shall be required to request the application of the Planned Use Overlay District prior to the relevant Comprehensive Plan amendment application deadline. Planned Unit Development zoning shall be required to implement each Planned Use Overlay District and the entitlements granted through the application of the Planned Use Overlay District may be further limited by the Planned Unit Development zoning requirements. However, the minimum size requirement for Planned Unit Development shall not apply.~~

~~In the event that the Future Land Use Map overlay district has been applied to a site and no Planned Unit Development zoning has received approval by action of the City or County within 18 months of land use designation effective date, the Planned Use Overlay District shall be deemed null and void and shall be removed from the Future Land Use Map, leaving the original and underlying land use category in place. If, subsequent to the amendment to the Planned Unit Development (PUD) zoning district, the applicant seeks to rezone the property from PUD to another zoning district, the rezoning must be consistent with the underlying and existing Future Land Use Map category unless an amendment to the Future Land Use Map is also sought and approved. In instances where rezonings to zoning districts other than the required PUD zoning district and amendments to the Future Land Use Map, if necessary, are approved the Planned Unit Overlay District shall be deemed null and void.~~

~~*Policy 2.2.26: [L]*~~

LAND USE DEVELOPMENT MATRIX **(REV. EFF. 7/26/06; REV. EFF. 3/14/07; REV. EFF. 6/6/08)**

The land use development matrix depicts set performance criteria from which an individual can measure the development potential of any parcel of property. In effect the matrix provides guidance as to where a parcel would fall on the permittable development ranges outlined within the future land use categories. As mentioned earlier, the relationships within the matrix are based upon the policies included within the individual elements of the plan. The matrix measures a parcel's development potential based on the following land use principles:

(1) The parcel's designation on the future land use map.
(2) Its potential compatibility with surrounding existing land use.
(3) The degree of accessibility to the parcel (commercial uses only).
(4) Potential land use in relation to the function of the road which will carry traffic resulting from any subsequent development of the parcel.
(5) Environmental constraints on site.
(6) Availability of sewer and water.

The review standards outlined above are listed across the top of the matrix. Potential land uses beginning with minor commercial and ending with heavy industrial are listed vertically and are measured in relation to the review standards listed across the top. Each cell of the matrix contains an inherent policy based on the relationship between the proposed land use for that parcel (vertical axis) and a performance standard (horizontal axis). An "X" in that cell indicates the proposed use would be allowed. Conversely, an "O" indicates that the proposed use is not allowed. All cell blocks which are applicable to a proposed land use must contain an "x" in order for the proposal to be allowed. Thus an individual would locate the proposed land use along the vertical axis and review along the row of cells next to it in a left to right direction to determine which conditions would allow or prohibit the proposed use. As stated under the performance concept, each site is individually measured for suitability in relation to performance standards. As a result, growth management guidance is provided.

(Note: The Land Use Development Matrix does not apply to Bradfordville Mixed Use, Suburban, Research and Innovation, Industry and Mining, Urban Residential 2, Village Mixed Use, Planned Development, Central Core, Central Urban, University Transition, and Woodville Rural Community.) (REV. EFF. 6/28/02; REV. EFF. 3/14/07; REV. EFF. 6/6/08; REV. EFF. 1/7/10; REV. EFF. 5/31/18)

Policy 2.2.27: [L] **(EFF. 5/31/18)**

RESEARCH AND INNOVATION LAND USE

INTENT

Districts that support research and innovation are key components of an economic development strategy for the City of Tallahassee and Leon County. Maintaining lands used for research and innovation and expanding these uses in appropriate areas are necessary for job creation, flexibility to adapt to changing economic trends, and economic diversification essential for the community's future.

The intent of the Research and Innovation Land Use category is to recognize the variety of uses that occur in these districts and to facilitate the location of jobs relative to the homes of people who can provide critical talent in skilled trades.

Research and Innovation uses should be encouraged in areas with access to transit, bicycle, and pedestrian facilities. Because of the need for infrastructure and public services, the Research and Innovation Land Use shall only apply to areas located within the Urban Services Area.

ALLOWABLE LAND USES, DENSITIES, AND INTENSITIES

The Research and Innovation Land Use category accommodates a variety of uses that may have similar demands on public infrastructure. Research and Development and Innovation District uses are allowable in the Research and Innovation Land Use.

1. Research and Development – Research and Development uses shall be permitted at a maximum intensity of 45,000 square feet of gross building floor area per acre. Mixed use Research and Development projects may include commercial, office (other than the research and development uses), and residential uses. These ancillary uses may not exceed 40% of the total gross square footage of a Research and Development project.
2. Innovation District – Innovation Districts may include up to 45,000 square feet of gross building floor area per acre. The mixture of uses shall emphasize the technological and collaborative nature of these districts by including in the buildable square footage up to 80% in Innovation District, Research and Development, or compatible Light Industrial uses, up to 40% residential uses, and up to 40% in other non-residential support uses. Design standards detailed in the land development code shall provide for the protection of adjacent non-research and innovation properties by arranging the residential uses and non-research and innovation uses as a buffer or transition to adjacent properties.

SPECIAL CONDITIONS

The following special conditions shall apply to the Research and Innovation Future Land Use category:

1. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Research and Innovation Land Use.
2. Site plans must demonstrate the protection of adjacent non-research and innovation properties through development standards outlined in the land development codes.
3. A plan for vehicular access to and from the site addressing delivery trucks and specialized equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.

Policy 2.2.28: [L] **(EFF. 5/31/18)**

INDUSTRY AND MINING LAND USE

INTENT

Advanced manufacturing, industrial uses, and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional industrial uses. Industry and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Industry and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. Because of the need for infrastructure and public services, the Industry and Mining Land Use shall only apply to areas located within the Urban Services Area.

Because industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

ALLOWABLE LAND USES, DENSITIES, AND INTENSITIES

The Industry and Mining Land Use category accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Industry and Mining Land Use.

1. Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
2. Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties. All mining uses are subject to fencing requirements as identified in the land development regulations. Mining uses may be subject to an Environmental Resource Permit (ERP) pursuant to Chapter 373, F.S., and Rule 62-330, Florida Administrative Code (F.A.C.) and mandatory reclamation requirements pursuant to Chapter 378, F.S., and Rule 62C-39, F.A.C.
3. Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. All applicable development must comply with Title 14 Code of Federal Regulations Part 77.9 Construction or alteration requiring notice. Those industries that have the potential to result in any other pollution of the air or ground shall adhere to existing local, state and federal operational or industry standards, and avoid or mitigate these potential impacts.

These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent substantial impacts off-site or require mitigation and/or minimization techniques for impacts. Ancillary commercial uses designed to serve adjacent workers may be permitted.

SPECIAL CONDITIONS

The following special conditions shall apply to the Industry and Mining Land Use category:

1. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Land Use.
2. Site plans must demonstrate the protection of adjacent non-industry and mining properties through development standards outlined in the land development codes.
3. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
4. Hydraulic fracturing, commonly referred to as fracking, is not a permitted use in the Industry and Mining Land Use.

CONSERVATION SUBDIVISIONS

Objective 2.3: [L] (EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 8/1/07)

Conservation Subdivision land development regulations in the County shall continue to provide design options and guidelines for the development of Conservation Subdivisions that advance environmental resource protection or restoration or promote infill and redevelopment. The City may adopt similar provisions.

Policy 2.3.1: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

To minimize the threat of premature conversion of rural land, including properties supporting bona fide agriculture and silviculture, the Conservation Subdivision option shall not be allowed within the Rural Future Land Use category, with the exception of those areas designated as Rural Residential within the Bradfordville Sector Plan.

Policy 2.3.2: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06; REV. EFF. 12/15/11)**

Within the land development regulations, local government shall define for various Future Land Use categories in which Conservation Subdivisions are allowed, any applicable density bonus incentives, and the minimum percentages of parent tract(s) to be protected as contiguous open space within Conservation Subdivisions. It shall be the intent to establish higher open space percentages for the less dense Future Land Use Map categories.

Policy 2.3.3: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

To better judge the impacts of Conservation Subdivisions on the demands for services and the effects of coordinating protected open space, local government may phase the implementation of Conservation Subdivisions within Future Land Use Categories more dense than Urban Fringe via the adoption of land development regulation provisions, beginning with Urban Fringe Future Land Use category and those areas designated as Rural Residential within the Bradfordville Sector Plan.

Policy 2.3.4: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Conservation Subdivisions may be zoned as Planned Unit Developments (PUDs) or the land development regulations shall be otherwise crafted in order to provide the necessary flexibility with respect to setbacks, minimum lot sizes, street widths, and parking requirements etc. to increase the likelihood of employing this site design option and foster the long-term viability and usefulness of the open space subject to the required conservation easement.

Policy 2.3.5: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Preservation features defined in Policies 1.3.4 [C] and 1.3.5 [C] shall be incorporated into the open space of any Conservation Subdivision. Conservation features defined in Policy 1.3.1 [C], archaeological sites, bona fide agriculture and silviculture, viewsheds of canopy roads and of other open space shall be incorporated into the open space of a Conservation Subdivision to the greatest extent practicable.

The Planning and respective Growth Management departments shall encourage the use of Conservation Subdivisions wherever parent tracts have been demonstrated to contain bona fide agriculture and silviculture, environmentally significant features, historically or archaeologically significant resources, or direct connections with existing or planned greenway corridors identified in either the Tallahassee-Leon County Greenway Master Plan or the Blueprint 2000 Project Definitions Report.

Policy 2.3.6: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

In the implementation of Conservation Subdivisions, all critical on-site resources that are to be preserved shall be of adequate size and buffered to ensure protection of the resource.

Policy 2.3.7: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Where possible, local government shall require protected open space(s) within conservation subdivisions to be established adjacent or contiguous with existing or planned greenspace, whether public or private.

Policy 2.3.8: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

In the implementation of Conservation Subdivisions, local government shall require open space and related resources to be placed under a permanent easement that runs with the land. Said easement may be assigned to (1) local government or (2) a local or national land trust that is a 501(c)(3) organization for which conservation of resources is a principal goal and which can provide reasonable assurance it has financial and staff resources to monitor and manage the easement in accordance with the intent of the Objective 2.2 [L] and its supporting policies.

Policy 2.3.9: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Local Government shall require all applications for Conservation Subdivisions to prepare a management plan for all protected open space and a dedicated source of revenues to ensure that all appropriate management activities are undertaken on a regular basis and that all terms of the conservation easement are monitored and enforced.

Policy 2.3.10: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Local and State Government shall be encouraged to enter into agreements with the managers of protected open space within Conservation Subdivisions where it would be

mutually advantageous to consolidate management activities between the subdivision and any adjoining public lands.

Policy 2.3.11: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

It shall be the policy of the Property Appraiser's office to assess at the minimum rate or charge the applicable fee to all land preserved within a Conservation Subdivision, including property in bona fide agricultural and silvicultural use. However, the appraised value of associated developed land shall reflect any added value provided by proximity to protected open space.

Policy 2.3.12: [L] **(EFF. 7/1/04; RENUMBERED EFF. 7/26/06)**

Conservation Subdivisions shall be encouraged to include a range of housing types and sizes, and shall not be exempt from any adopted applicable affordable housing provisions.

Goal 3: [L] (EFF. 7/16/90; REV. EFF. 7/26/06)

Tallahassee-Leon County should continue to grow with an emphasis on selected growth that pays for itself through the provision of well-paid jobs and economic leverage factors which enhance the quality of life of the community.

COMMERCIAL LAND USE

Objective 3.1: [L] (REV. EFF. 7/20/05)

Provide for convenient, aesthetically pleasing and environmentally sound commercial opportunities which are easily accessible through planned integration into the existing transportation network. In furtherance of this objective, maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to commercial land use.

Policy 3.1.1: [L] **(EFF. 7/16/90; REV. EFF. 7/26/06)**

Commercial development shall occur only in locations that are appropriate to its service and trade area and that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities. Commercial sites are determined through the use of site location standards contained within policy 3.1.2 below. The intensity of the commercial use is dependent upon the land use category which the potential site is in and the functional roadway classification of the immediate adjacent roads. Individual road classifications are depicted on the functional roadway classification map found within the Transportation Element.

Policy 3.1.2: [L] (REV. EFF. 12/23/96; REV. EFF. 6/28/02; REV. EFF. 7/26/06)

Allowed commercial development in the Mixed Use Category shall be determined in accordance with Objective 1.7 and the development pattern policies. Allowed commercial development in the Woodville Rural Community Category shall be determined in accordance with Objective 3.4 and subsequent implementing policies. In other Future Land Use Categories, development type and location standards for minor, neighborhood, community, regional, and highway commercial sites shall be as outlined below. These requirements are intended to group commercial land use toward intersections to provide access and prevent strip commercialization. Stringent access criteria which may include increased design considerations or the construction of frontage or service roads for development approval may be applied for commercial sites not located according to the commercial site location standards.

A. COMMERCIAL CLASSIFICATIONS

1. MINOR COMMERCIAL
   a. Major Function
      Provide for sale of convenience goods and services to immediate residential area.
   b. Location
      1) On or near the intersection (access within 330 feet of the centerline of the intersection) of local and arterial, collector and arterial, collector and collector; or
      2) May be located within Planned Development provided it is located and designed to meet commercial needs of the majority of the residents of the development.
      3) If on a local street, only one quadrant of the intersection shall be used for commercial purposes.
   c. Trade Area
      Generally within one mile and not considered as an attractor.
   d. Site Area
      Two acres or less. One-half acre if located on a local street.
   e. Range of Gross Floor Area
      Less than 20,000 square feet. Maximum 10,000 sq. ft. if located on a local street.
   f. Design Standards
      1) Aesthetically compatible with adjacent uses.
      2) Adequate buffering, screening, landscaping and architectural treatment if integrated into neighborhood.
      3) Sufficient parking; properly designed and safe internal traffic circulation.
2. NEIGHBORHOOD COMMERCIAL
   a. Major Function
      Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods.

~~b. Leading Tenants (examples)~~
~~Supermarket, drugstore and postal substation.~~

~~c. Location*~~
~~At the intersection* of major collector and arterial or arterial and arterial or major collector and major collector. Only one neighborhood commercial development will be allowed at the intersection of a major collector and arterial road. Commercial development at the intersections of major collectors shall be restricted to 50,000 sq. ft. Planned integrated access to the transportation system is required.~~
~~* See definition of *Intersection* in Glossary.~~

~~d. Radius of Primary Trade Area~~
~~One to three miles.~~

~~e. Site Area~~
~~Minimum two acres.~~

~~f. Range of Gross Floor Area~~
~~20,000 to 100,000 square feet.~~

~~3. COMMUNITY COMMERCIAL~~
~~a. Major Function~~
~~Same functions of neighborhood commercial but on a large scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items.~~

~~b. Leading Tenants (examples)~~
~~Supermarket, drug store, minor department stores, home improvement center, variety or discount center.~~

~~c. Location~~
~~At the intersection of arterials. Prohibited on designated canopy roads. Planned integrated access to the transportation system required.~~

~~d. Radius of Trade Area~~
~~Five miles or 15 to 20 minutes driving time. Service distinct geographical quadrants or three or more combinations of neighborhoods within community.~~

~~e. Site Area~~
~~Minimum ten acres.~~

~~f. Range of Gross Floor Area~~
~~20,000 to 100,000 square feet.~~

~~4. REGIONAL COMMERCIAL~~
~~a. Major Function~~
~~Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings.~~

~~b. Leading Tenants (examples)~~
~~One or more full line department stores.~~

c. Location

Integrated into local transportation system and accessible by combination of arterials, major collectors, expressways and interstate highways. Potential on-site and off-site transportation improvements which may include additional turn lanes, intersection improvements, and frontage roads, may be required to provide adequate ingress and egress. Prohibited on designated canopy roads. Restricted to high intensity urban activity center land use category.

d. Radius of Primary Trade Area

Regional

e. Site Area

Minimum thirty-five acres.

f. Range of Gross Floor Area

200,000 to 1 million square feet.

5. HIGHWAY COMMERCIAL

a. Major Function

Provide for consumer oriented retail services designed for drive-in convenience.

b. Leading Tenants (examples)

Fast food franchise, liquor store, automotive service (i.e. oil change), convenience stores.

c. Location

At the intersection of arterial or collector streets in accordance with the Land Development Matrix, with driveway access to those streets, or integrated into the transportation network through a system of shared access or an access road system.

Unless the proposed development is at an intersection, it must be accessed from a frontage or service road with parking in the rear, or screened from the road by substantial existing or landscape vegetation if located in the front or side of the commercial establishment. Shared access may be authorized by local government only if prior or existing development precludes the use of a frontage or service road.

Structural setbacks from the road in these situations must be sufficient to accommodate the access road, and any front parking and landscaping. If the site has existing commercial use on both sides, and has road frontage of no more than 150 feet, the access requirement does not apply.

d. Radius of Trade Area

May serve immediate area but relies heavily on passerby traffic.

e. Site Area

One-half to two acres.

f. Range of Gross Floor Area

1,000 to 10,000 square feet

g. Design Standards
1) Adequate setback
2) Aesthetic landscaping
3) Rear parking or substantial screening if located in front or side

Policy 3.1.3: [L] **(EFF. 7/16/90)**

Commercial development shall provide adequate and appropriate landscaping, open space and buffering and be architecturally designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas.

Policy 3.1.4: [L] **(REV. EFF. 7/1/94; REV. EFF. 12/24/10)**

Commercial development shall be designed to protect the design volume of the roads and streets which it impacts. Design requirements may include but not be limited to:

1) Shared access
2) Acceleration and deceleration lanes
3) Right in and right out limited access and,
4) Access via frontage and/or service roads

During development of the Long Range Transportation Plan, the City of Tallahassee and Leon County will adopt ordinances incorporating specific criteria for the following policy provisions. The arterial and collector roadways which will incorporate front or rear service roads will be delineated.

Level One - Short Range Service Road Implementation:

Roadways designated for short range service road implementation will incorporate service roads as part of the development or coordinate, design and schedule implementation of the service road in conjunction with adjacent development.

Level Two - Long Range Service Road Implementation:

Roadways designated for long range service road implementation will provide development setbacks for future service roads but will in the interim incorporate ingress and egress access controls to minimize traffic friction entering and leaving the roadway system. Immediate implementation of frontage roads may be required on parcels with frontage exceeding 275 feet.

Policy 3.1.5: [L] **(REV. EFF. 8/17/92)**

Commercial site location access standards may be waived except in low density residential areas if:

a) Access to the proposed non-residential development from either an arterial or major collector shall be by way of a frontage road, rear service road or existing local road which serves as a frontage or service road, unless the site has existing commercial uses on both sides: and the proposed site has no more than 150 feet of frontage on the major collector or arterial; and,

b) Parking for the proposed site is in the rear or screened from the road by existing or landscape vegetation if located in front of the commercial establishment or,
c) The planned unit development process is utilized and the adjoining properties are commercially developed.

Policy 3.1.6: [L] **(Eff. 9/19/91)**

Development along federal and state highways will be limited so as to control the adverse effects of strip commercial land uses. The commercial location standards of Land Use Policy 3.1.2. and the design options of Land Use Policy 3.1.4. shall specifically apply, along with other plan policies that have the effect of protecting the design capacity of federal and state highways.

Objective 3.2: [L] (Eff. 6/28/95)

Provide for the convenient, aesthetically pleasing and compatible location of office uses to provide business and professional services and employment opportunities that are easily accessible through planned integration into the existing transportation network.

Policy 3.2.1: [L] **(Eff. 6/28/95)**

Unless otherwise provided for by specific policies for the future land use categories in this Plan, site location standards for the location of minor and major office development shall be consistent with the following minimum criteria:

Minor offices shall include converted residences at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum size shall be 2,500 square feet if located on a local street. Minor offices may access a local street in the unincorporated area. Within the City, minor offices may access a local street if it is a designated nonresidential street.

Major offices shall include office buildings that exceed one or more of the minor office thresholds and unless specifically permitted by other Plan policies, shall be limited to having access to a major collector or arterial road.

Bradfordville Mixed Use and Suburban Future Land Use Category Nonresidential Development Category

Objective 3.3: [L]**(Eff. 12/23/96; Rev. Eff. 3/14/07)**

Commercial and nonresidential development in the Bradfordville Mixed Use and Suburban Future Land Use Categories will be located consistent with the intended functions of the categories. The negative effects of commercial and nonresidential development on adjacent development and on roadway capacity will be mitigated through site design and locational standards in the land development regulations. Comprehensive Plan goals and objectives regarding the promotion of transit, bicycling and walking, and the preservation of roadway capacity will be incorporated into the design of commercial and nonresidential development.

Policy 3.3.1: [L] **(EFF. 12/23/96; REV. EFF. 3/14/07)**

Zoning for commercial development in the Suburban and Bradfordville Mixed Use Future Land Use Category shall occur only in locations that are compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities.

a. Regulation of Impacts

The Land Development Regulations shall establish zoning districts and development standards that mitigate the impacts of the allowed commercial uses. The impacts of commercial development that may require additional regulation include, but are not limited to, hours of operation, outdoor sales lots, night lighting, traffic volume and flow, noise, odor, signage, or other such impacts.

b. Location of Commercial and Nonresidential Zoning Districts

The Land Development Regulations shall establish zoning districts within Bradfordville Mixed Use and Suburban Future Land Use Categories that insure that the location of commercial and nonresidential zoning districts will provide for the appropriate integration of uses and the protection of residential areas consistent with Plan policies. Commercial zoning districts shall be geographically compact and located at or near the intersections of major roads or in a manner that reflects the existing linear development pattern.

Policy 3.3.2: [L] **(EFF. 12/23/96)**

The zoning districts which allow commercial and nonresidential development shall require adequate and appropriate landscaping, open space and buffering and be designed so as to discourage criminal activity and to enhance the appearance of structures and parking areas. In order to minimize the negative visual and off-site impacts of commercial development, the Land Development Regulations shall provide for development standards regulating commercial and nonresidential development as follows:

1) The Land Development Regulations shall provide for the following development standards for commercial and nonresidential development, which include, but are not limited to:

   a) Mass and height compatible with adjacent uses.
   b) Adequate buffering, screening, landscaping and architectural treatment if adjoining a residential area.
   c) Sufficient parking designed to minimize noise and visual impacts to adjoining residential areas, and safe internal vehicular and pedestrian circulation.
   d) Interconnections for vehicular and pedestrian traffic between adjacent nonresidential development
   e) Vehicular access to and from the site shall be designed to discourage traffic through adjoining residential areas.
   f) Provide for easy and safe pedestrian access to adjoining residential areas.

2) A commercial or nonresidential development accessing a minor collector, local street, or located adjoining a residential area shall be compatible with residential development in terms of its off-site impacts as defined in Land Use Policy 3.3.1.a.

The Land Development Regulations shall define as allowed uses the specific uses and provide for development standards which further the intent of this policy.

Policy 3.3.3: [L] **(EFF. 12/23/96)**

The Land Development Regulations shall regulate commercial development access to protect the safe and efficient operating characteristics of roads and streets. Commercial development shall meet access management criteria as set forth in the Land Development Regulations. In order to reduce the negative impact of commercial development to the volume of the road, the Land Development Regulations shall contain provisions which encourage the reduction in the number of commercial access points by requiring the sharing of access by two or more commercial developments for those uses that result in a large number of vehicular trips. Access management design requirements provided for in the Land Development Regulations may include but not be limited to:

a) Shared access;
b) Acceleration and deceleration lanes;
c) Right in and right out limited access and,
d) Access via frontage and/or service roads;
e) Minimum uninterrupted throat lengths for access drives;
f) Minimum lot width and depth requirements for allowing the full range of commercial uses;
g) Access provisions for transit and safe pedestrian movement both internal to the site and to adjacent properties.

COMMERCIAL (RETAIL, SERVICES, AND OFFICE) DEVELOPMENT IN THE WOODVILLE RURAL COMMUNITY FUTURE LAND USE CATEGORY

Objective 3.4: [L] **(EFF. 6/28/02)**

Commercial (retail, service, and office) development in the Woodville Rural Community Future Land Use Category will be consistent with the intended function of the Rural Community Future Land Use Category. The scale and intensity of commercial land use will reflect the location and size of the Rural Community in which it is situated; commercial and other non-residential development will be located, oriented, and designed in a manner that promotes compatibility with adjacent land uses and facilitates safe and efficient access for both vehicular and pedestrian traffic; and utilizes access management to protect the safe and efficient operation of the public highway and street system. Non-residential land use intensity is limited to 10,000 square feet per acre, not to exceed a maximum of 50,000 square feet per building and 50,000 square feet per parcel, except that principle structures for warehousing, storage, and mini-warehousing principal uses may have a gross floor area of no greater than 20,000 square feet per acre.

Policy 3.4.1: [L] **(EFF. 6/28/02)**

Objective 3.4 will be met through the enactment and implementation of land development regulations, including zoning district regulations, which address commercial development in the Woodville Rural Community Future Land Use Category.

~~*Policy 3.4.2: [L]* **(Eff. 6/28/02)**~~

~~Zoning Districts allowing commercial development in the Woodville Rural Community Land Use Category shall only be located where ensuing development can occur in a manner that would be compatible with adjacent existing and proposed land uses and with existing and programmed public services and facilities, in accordance with the following criteria:~~

~~a) Regulation of Impacts~~

~~The Land Development Regulations shall establish zoning districts and development standards that mitigate the impacts of the allowed commercial uses. The impacts of commercial development that may require additional regulation include, but are not limited to: outdoor sales lots, night lighting, traffic access, noise, signage, or other such impacts.~~

~~b) Location of Commercial Zoning Districts~~

~~The zoning districts that allow commercial land uses within the Woodville Rural Community Future Land Use Category shall ensure that commercial uses are located in a manner that minimizes the incompatible land use impacts. Commercial zoning districts shall be geographically compact and located at or near the intersections of major roads, with the sole exception of those zoning districts located in a manner that recognizes established linear commercially-developed areas along limited portions of State Highway frontage.~~

~~c) Access~~

~~The zoning districts that allow commercial land uses within the Woodville Rural Community Future Land Use Category shall establish access management standards that promote safe, convenient, and efficient movement of vehicular traffic within the public street system. These access management standards shall ensure the viability and safety of other modes of travel are not compromised for the purpose of limiting or controlling access. The zoning districts may allow access to a local street provided such access does not adversely impact residential areas or neighborhoods. The zoning districts shall prohibit commercial and non-residential access to a canopy road except as provided for by Conservation Policy 3.4.10.~~

~~*Policy 3.4.3: [L]* **(Eff. 6/28/02)**~~

~~In order to minimize the negative visual and off-site impacts of commercial development, the Land Development Regulations shall provide for development standards regulating commercial development. The Land Development Regulations shall establish specific regulations, standards, and/or limitations for commercial development and design aspects including, but not limited to:~~

- ~~Mass and height compatible with adjacent uses.~~
- ~~Adequate buffering, screening, landscaping and treatment of other design details as may be appropriate to further compatibility with adjoining residential areas.~~

- Location of parking facilities to minimize noise and visual impacts to adjoining residential areas, and facilitate safe internal vehicular and pedestrian circulation.
- Interconnections for vehicular and pedestrian traffic between adjacent non-residential development.
- Limitations on vehicular access to and from the site to discourage traffic through adjoining residential areas.

Policy 3.4.4: [L] **(Eff. 6/28/02)**

The Land Development Regulations shall regulate commercial development access. Commercial development shall meet access management criteria as set forth in the Land Development Regulations. The Land Development Regulations shall contain provisions which encourage the reduction in the number of commercial access points. Access management design requirements provided in the Land Development Regulations may include, but not be limited to:

a) Shared access;
b) Access provisions for safe pedestrian movement both internal to the site and to adjacent properties;
c) Limited direct access to commercial parking from residential streets.

Industrial Land Use

Objective 4.1: [L] **(Rev. Eff. 7/20/05)**

Provide opportunities for the location of industrial land uses in accessible areas with applicable available infrastructure while promoting protection from encroaching non-compatible land uses. To accomplish this, local government will maintain a system of land development regulations and/or ordinances which facilitate the implementation of the policies adopted in relation to industrial land use.

Policy 4.1.1: [L] **(Eff. 7/16/90)**

Industrial land shall be located in areas appropriate to its special needs and constraints including but not limited to consideration of: topography; choice and flexibility in site selection; access by truck, air or rail; commuter access for home-to-work trips; utilities; air and water quality considerations; proximity to supportive and related land uses; and compatibility with neighboring uses.

Policy 4.1.2: [L] **(Eff. 7/16/90)**

The timing and location of industrial development shall be permitted only with the availability and adequacy of existing or planned services and facilities.

Policy 4.1.3: [L] **(Rev. Eff. 12/23/96; Rev. Eff. 3/14/07; Rev. Eff. 5/31/18)**

Industrial development shall be located in such a manner as to prohibit industrial traffic through predominantly residential areas. Land Development Regulations shall address access standards for Industry and Mining uses to protect predominantly residential areas from traffic impacts traffic generated by industrial development.

Policy 4.1.4: [L] **(EFF. 7/16/90; REV. EFF. 5/31/18)**

Environmental impacts, infrastructure availability, transportation and land use compatibility criteria, as pictorially depicted on the matrix, shall be major factors in reviewing and approving Industry and Mining Land Uses.

PUBLIC FACILITIES LAND USE

Objective 5.1: [L] (EFF. 7/16/90)

Coordinate the future plans of State government, School Board, the institutions of higher learning, and other applicable entities with this Comprehensive Plan.

Policy 5.1.1: [L] **(DEL. EFF. 8/16/07)**

Reserved

Policy 5.1.2: [L] **(REV. EFF. 7/20/05)**

All proposals to site public schools, including post-secondary schools, shall be reviewed for consistency with the entire Comprehensive Plan. Such reviews shall be made in conjunction with the School Board to promote to the greatest extent possible, opportunities for residential, shopping, employment, education and recreation within walking distance of each other, and to encourage development patterns which reduce trip length and/or the need for private automobile trips.

Objective 5.2: [L] (EFF. 7/16/90)

By 1992, establish standards and regulations for the location of public facilities.

Policy 5.2.1: [L] **(EFF. 7/16/90; REV. EFF. 4/10/09)**

Develop regulations that will apply to the siting of public facilities and buildings. By 2014, local government shall also develop regulations that ensure the siting of critical facilities from within hazard areas and include provisions for the mitigation of existing critical facilities located in hazard areas.

Policy 5.2.2: [L] **(EFF. 12/7/99; REV. EFF. 5/31/18)**

Land development regulations shall establish the maximum allowable dimension of water distribution pipelines necessary to support urban intensity development. Water distribution pipelines that do not exceed this dimension shall be considered public facilities, necessary to support urban development, and allowed within all land use categories. New water distribution pipelines in excess of the established dimension limit for public facilities shall be considered as industrial uses and shall be required to be located within the Government Operational or Industry and Mining land use category.

Objective 5.3: [L] (Rev. Eff. 7/20/05)

All decisions regarding land requirements for future utility facilities shall be consistent with the goals, objectives, and policies of the plan so as to ensure the availability of suitable land for those facilities.

Policy 5.3.1: [L] (Eff. 7/16/90)

Based on population projections, master plans for future utility facilities shall include an assessment of land needs for those facilities, and the Capital Improvements Element shall be amended, in conjunction with the annual budget processes of the City and the County, to include costs and sources of revenues for those facilities.

Policy 5.3.2: [L] (Eff. 7/16/90)

By 1991, land development regulations shall include regulatory standards for the provision of public facilities.

Policy 5.3.3: [L] (Eff. 8/17/92)

All land uses permitted within the Educational Facilities, Recreation/Open Space, and Government Operational future land use categories shall, upon the transfer of land designated Institutional to an individual or private entity, require a future land use map amendment before any use other than existing, may occur.

Plan Implementation and Procedures
Critical Areas Study

Goal 6: [L] (Eff. 6/28/95)

The City and County will identify existing undeveloped areas within the Urban Service Area that are expected to undergo rapid development on a large scale. Planning guidelines will be developed for these areas on a systematic basis, with the planning implementation mechanism being dependent upon the size of the undeveloped area. By planning for undeveloped areas in a comprehensive manner, a mixture of integrated uses may be provided that are predominantly self-supporting, rather than predominantly dependent on public funding for additional infrastructure, and place a greater emphasis on pedestrian mobility and transportation alternatives. Nothing in this section shall negate the requirement for developments of regional impact to comply with Chapter 380 F.S.

Planned Development
Objective 6.1: [L](Rev. Eff. 12/23/96; Rev. Eff. 11/26/21)

This Future Land Use Category is intended to identify large land holdings that will be developed for various mixes of land uses, resulting in different types of commercial and residential neighborhoods. This category is assigned to large, undeveloped tracts of land for which more detailed planning is required to establish the most appropriate mix and arrangement of uses in accordance with this objective and the related policies. Developments in this category are intended to have a mix of uses that results in greater internal capture of automotive trips and a net fiscal benefit for local governments.

The intensities of development in planned development categories mirror the intensities authorized in the Suburban Future Land Use Category until a Planned Development Master Plan is completed and an amendment reflecting the Planned Development Master Plan is adopted into the Comprehensive Plan.

The mix of uses shall be established at the time of development through the planned unit development processes in accordance with this objective and related policies. Each Planned Development shall include a mix of residential unit types and complementary non-residential uses that, at build-out of the project, result in an internal capture of at least 20 percent of the trips generated by the development.

Policy 6.1.1: [L](Rev. Eff. 12/23/96; Rev. Eff. 3/14/07; Rev. Eff. 11/26/21)

Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership, including contiguous parcels under the same ownership or control, and encompassing more than 200 acres shall be defined as Planned Development Areas. These Planned Development Areas shall require, prior to subdivision or development:

- Allocation of future land uses and intensities through the Comprehensive Plan amendment process in conjunction with approval of the Planned Development Master Plan;

- Approval of a Planned Development Master Plan for development of all contiguous land holdings as an area plan that is consistent with, but not formally adopted as part of the Comprehensive Plan. The Planned Development Master Plan shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development;
- Approval of a PUD, subject to Type D review as specified in the Zoning Code, that is consistent with the Planned Development Master Plan and identifies the specific criteria for development with the Planned Development. PUD approval may be granted in phases where a portion of the property is to be developed at any given time. If a Planned Unit Development is completed and approved for the entire contiguous Planned Development area along with the other Planned Development Master Plan requirements identified in Policy 6.1.2, the Planned Unit Development may serve as the Planned Development Master Plan once reflected in the Comprehensive Plan through a plan amendment.
- To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Planned Development Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, open space, and/or public that are integrated with each other, as well as with the unique characteristics of the Planned Development Area.

*Policy 6.1.2: [L]***(REV. EFF. 6/28/95; REV. EFF. 3/14/07; EFF. 11/26/21)**

Except as provided by Policy 6.1.3, prior to approval of development or subdivision within Planned Development Areas, a Planned Development Master Plan shall be adopted as an area plan that is consistent with, but independent of the Comprehensive Plan. If a Planned Unit Development is completed and approved for the entire contiguous Planned Development area along with the other Planned Development Master Plan requirements identified in Policy 6.1.2, the Planned Unit Development may serve as the Planned Development Master Plan once reflected in the Comprehensive Plan through a plan amendment. The Comprehensive Plan shall be amended concurrently with the Planned Development Master Plan to allocate the mix, locations and intensities of future land uses as well as any public facilities required to serve proposed land uses. No comprehensive plan amendment shall be required if the Planned Development Master Plan is consistent with the Suburban land use category and the Planned Development does not create an inconsistency with the Comprehensive Plan.

The Master Plan shall identify the following:

a) Boundary of area subject to Planned Development;
b) General depiction of mix, location and intensities of future land uses;
c) Activities permitted within each land use;
d) Total dwelling units;
e) Total square footage of non-residential development;
f) How natural resources on-site will be protected;
g) Major transportation system improvements that are consistent with adopted transportation plans and address the impacts to the surrounding area, including canopy roads and required interconnections. The plan shall address the issues of capacity maintenance, bicycle and pedestrian accessibility, and protection of

~~canopy roads, if applicable. The Master Plan will also address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development;~~

~~h) Facilities and development requirements to provide for alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit;~~

~~i) A facilities plan which identifies the type, demand, and general location of needed utilities (including a master stormwater plan) in relation to existing and scheduled utilities in the areas of the development, as well as the location and adequacy of proposed schools, parks and open space;~~

~~j) How the development will reduce transportation demand by allowing for internal trip capture of at least 20% at project build-out through a mixture of uses that includes at least four of the following: residential; commercial; office; recreational, public, open space and light industrial;~~

~~k) How the development will comply with applicable affordable and inclusionary housing ordinances;~~

~~l) How the development will provide for the recreational needs of the community;~~

~~m) How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed;~~

~~n) A phasing plan showing the phasing of future land uses for the area and the minimum and maximum allowable densities and intensities, total dwelling units, and total square footage; and~~

~~o) A set of development guidelines that will direct the development of subsequent site specific development projects as part of a PUD. These guidelines shall address, but not be limited to, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.~~

~~*Policy 6.1.3: [L]*~~ ~~**(REV. EFF. 12/7/99; REV. EFF. 3/14/07)**~~

~~a) A portion of a Planned Development Area not exceeding either 20% of the Planned Development Area or 200 acres, whichever is less, may be developed through the PUD process as established in the LDRs prior to the submittal of a Planned Development Master Plan for the remainder of the Planned Development. This advanced portion must include at least two different land uses (excluding public and recreation) unless the applicant can justify that the parcel size would not support that amount of uses. In this case, the applicant is still required to develop a mixed use project for the advanced portion. As part of the PUD approval, the applicant shall submit a map of all contiguous land holdings. Easements, right-of-way and other improvements located throughout and needed to serve the larger development may be required to be dedicated in conjunction with this development in advance of the Master Plan. This option shall not be used to reduce the overall area below the Planned Development threshold and any development authorized in advance of Master Plan approval must be included in the Master Plan. This option shall not be utilized by subsequent property owners resulting from the use of this option;~~

b) It is the intent of local government to allow timely installation of facilities and infrastructure recognized by the City and/or County Commission as being important for the orderly growth of the community. Subdivision of a portion of a Planned Development for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource based recreation use shall not be contingent upon the adoption of a Master Plan and PUD Districts, but the applicant shall be required to submit a management plan to be approved by the local government in lieu of a PUD or site plan. Subdivision and development of a portion of a Planned Development for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan and PUD Districts, but shall be required to follow the review procedures for a PUD. Onsite infrastructure needed primarily for the future development of the Planned Development shall not be included as part of the advance development option provided in this paragraph. The educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduces the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.

Policy 6.1.4: [L] **(EFF. 12/7/99; REV. EFF. 3/14/07)**

For Planned Developments that are split by an interstate highway that limits integration across the entire development, separate Master Plans and implementing PUDs may be adopted for each side. Subdivision or development of an area on one side of the interstate shall be dependent upon the prior adoption of a Master Plan for that side of the interstate only.

Policy 6.1.5: [L] **(EFF. 6/28/95; REV. EFF. 3/14/07)**

Local governments are authorized to adopt Land Development Regulations necessary to implement the Planned Development provisions as set forth in this objective and related policies. Planned Development Master Plans *(*including major modifications and minor amendments*)* shall be approved by the governmental entity having legal jurisdiction. The implementing PUDs shall also be approved by that governmental entity having legal jurisdiction for the lands included in the PUD.

Policy 6.1.6: [L] **(EFF. 3/14/07)**

The City of Tallahassee and Leon County shall establish a process in their respective land development codes, which provides for review and comment of Planned Development Master Plans by adjacent local governments and the Leon County School Board. The process shall establish for review and comment by state and regional agencies, if appropriate, and a pre-application meeting for City, County, and School Board staff to discuss proposed development impacts; and shall contain time frames for processing a Planned Development Master Plan approval.

Policy 6.1.7: [L] **(EFF. 6/28/95; REV. EFF. 3/14/07)**

Planned Developments which are to be developed at urban densities and provided with urban services shall be considered appropriate for annexation.

Policy 6.1.8: [L] **(EFF. 3/14/07)**

Those lands included in the Southeast Sector Plan and the Welaunee Critical Area Plan, which were approved consistent with the Critical Area Plan provisions of the Comprehensive Plan, are not subject to this section and are entitled to all uses, densities and intensities set forth in those plans. Any major modifications or increases in overall density/intensities would require these projects to conform to the Planned Development requirements.

FUTURE PLANNED DEVELOPMENT AREAS

Objective 6.2: [L]**(EFF. 6/28/95; REV. EFF. 3/14/07)**

As demands from a rapidly increasing population may require the expansion of the Urban Service Area in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.

Policy 6.2.1: [L] **(EFF. 12/23/96; REV. EFF. 3/14/07)**

Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development Areas shall be designated such as part of the adopted Future Land Use Map and Zoning Map.

DOWNTOWN OVERLAY DISTRICT (EFF. 7/1/94; Objective 9.1: [L] REV. EFF. 1/7/10; REV. EFF. 7/6/15)

Promote revitalization, reinvestment and redevelopment characterized by site design which is pedestrian friendly and contains a mix of land uses which are designed to achieve compatibility.

Policy 9.1.1: [L] **(EFF. 7/1/94; REV. EFF. 1/7/10; RENUMBERED 7/6/15)**

Within those areas of the overlay that have a Residential Preservation land use designation, the Downtown Overlay designation is not intended to allow the development of nonresidential, or higher density than the Residential Preservation designation.

Policy 9.1.2: [L] **(REV. EFF. 1/7/10; RENUMBERED 7/6/15)**

Those parcels within the Downtown Overlay (except Gaines Street Corridor Study Area) are eligible to be added to the Central Core FLUM when

- The proposed parcels are contiguous to existing Central Core FLUM area;
- The proposed parcel has all the infrastructure available;
- The proposed parcel has to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the current Central Core FLUM for the proposed development).

Policy 9.1.3: [L] **(REV. EFF. 1/7/10; RENUMBERED 7/6/15)**

The City shall establish special design standards in this overlay district in order to encourage more urban development. These regulations include but are not limited to:

- Pedestrian oriented design standards;
- Reduced parking requirements;
- Flexibility in landscape, and buffer standards;
- Increased sidewalk and streetscape requirements.

Policy 9.1.4: [L] **(REV. EFF. 1/7/10; RENUMBERED 7/6/15)**

The City shall adopt Land Development Regulations to establish eligibility criteria (Such as minimum density) for developments in order to receive the incentives allowed under the Downtown Overlay goal.

REDEVELOPMENT
Objective 9.2: [L]**(FORMERLY OBJ. 1.6; REV. EFF. 1/7/10)**

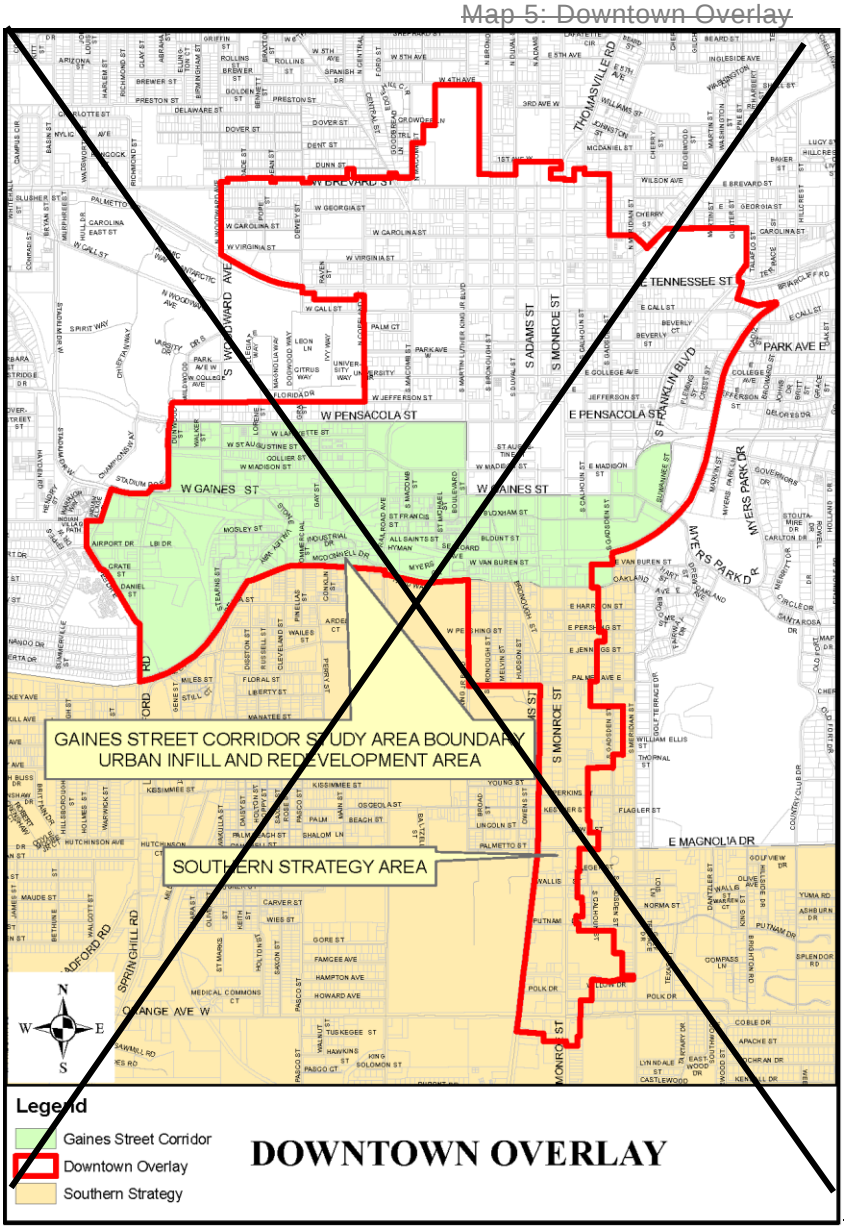
Provide a strategic framework to encourage redevelopment within the City of Tallahassee. The strategies should be implemented in such a manner as to convey an economic

~~advantage for redevelopment without compromising the urban design and environmental quality of the community.~~

~~*Policy 9.2.1: [L]* **(EFF. 6/28/95; REV. EFF. 1/7/10)**~~

~~As part of the Redevelopment Strategy, the Gaines Street Corridor Study Area is designated as an Urban Infill and Redevelopment Area for the purpose of targeting economic development, housing, transportation, community revitalization and preservation, and land use incentives to encourage urban infill and redevelopment within the urban core of the community. This area is depicted on the Downtown Overlay map as "Gaines Street Corridor Study Area Urban Infill and Redevelopment Area."~~

~~*Policy 9.2.2: [L]*~~



~~*Reserved*~~

~~*Policy 9.2.3: [L]* **(EFF. 12/8/00; FORMERLY POL. 1.6.4; REV. EFF. 1/7/10)**~~

~~For the Gaines Street Corridor Study Area the maximum density permitted is 100 dwelling units per acre. Densities within specific districts may be further restricted based on the Gaines Street Revitalization plan.~~

~~I. Land Use~~

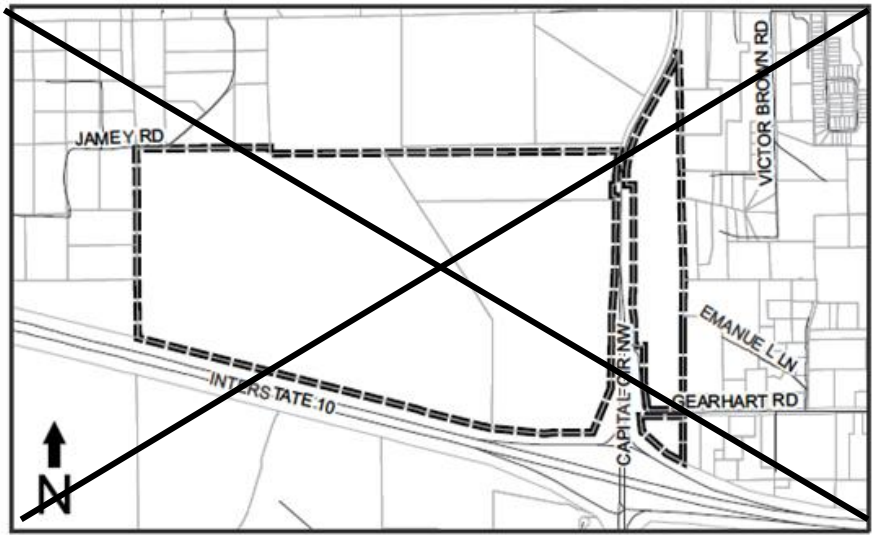
~~Map 5: Downtown Overlay~~

~~DRI THRESHOLDS FOR A REGIONAL ACTIVITY CENTER~~

~~Objective 9.3: [L] (EFF. 1/7/10)~~

~~To encourage functional mixed use development, and to encourage revitalization and redevelopment, the Commissions may choose to designate specific land as a statutory "Regional Activity Center" (RAC), pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C., to allow development of the specified land at greater density and intensity without necessarily obligating the developer to proceed through the Development of Regional Impact (DRI) process.~~

~~I. Land Use~~



~~*Policy 9.3.1: [L]* **(EFF. 1/7/10)**~~

~~After the City of Tallahassee or Leon County designates a statutory Regional Activity Center (RAC, pursuant to Chapter 380.06(2)(e), F.S. and Rule 28-24.014(10)(a), F.A.C.), subsequent development approvals will include requirements for developers to provide necessary transportation system, drainage, protection of environmentally sensitive areas as defined in the Conservation Element, and utility infrastructure to support the RAC densities and intensities.~~

~~*Policy 9.3.2: [L]* **(EFF. 8/9/12)**~~

~~It is the intent of the local government to designate Park Place as a Regional Activity Center pursuant to Objective 9.3 [L] to use the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code. Park Place meets the parameters for a Regional Activity Center as defined in Section 380.06(2)(e), Florida Statutes, and in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the following map. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan.~~

~~Map 6: Park Place Activity Center~~

SOUTHEAST SECTOR PLAN

Objective 10.1: [L] - Southeast Sector Plan (EFF. 5/20/96; REV. EFF. 8/25/08)

In keeping with the City's and County's commitment to promote the Southern Strategy, and to satisfy the Comprehensive Plan requirements for a comprehensive development plan for the Southwood property within the urban service area, the local governments hereby adopt the Southeast Sector Planned Development, known as the Southeast Sector Plan, that is consistent with Objective 6.1 [L] and its associated policies and with the Comprehensive Plan's Urban Service Area policies, that promotes innovative planning, promotes compact development strategies and protects the natural resources of the area. This plan shall contain design standards that promote compact commercial development, walk to shopping, higher density housing in close proximity to offices, commercial uses and employment centers. The same attention will be given to alternate modes of transportation and pedestrian mobility as is given to automobile transportation. Innovative ways may be developed to protect natural resources, the major focus being on the continued protection of conservation and preservation areas within the Southeast Sector Planning Area (Figure 10.A).

Policy 10.1.1: [L] - Southeast Sector Plan Overview **(REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)**

The Southeast Sector Plan is hereby developed for an area in southeast Tallahassee and Leon County (see the Southeast Sector Planning Area map, Figure 10.A). For the Southwood, Colin English Properties, and the former Southside DRI lands, the Southeast Sector Plan shall constitute the Planned Development Master Plan consistent with Objective 6.1 [L] and its associated policies.

The following densities, intensities and development standards are hereby established for the Southeast Sector Planning Area:

A. Percent Mix of Land Uses Required:

The following percent mixes of land uses shall be required for the Southeast Sector Planning Area. The percentages shall be applied separately to both Southwood and the Colin English properties. In addition, the percentages shall also be applied separately to the former Southside DRI properties outside of Southwood within the Southeast Sector Plan.

(1) 40-60% of the land area in residential development

(2) 10-30% of the land area in commercial, office and/or industrial development

(3) 10-15% of the land area in community facilities/services and utility easements and recreational facilities.

(4) 20-30% of the land in open space/greenways. Open space shall comprise a minimum of 22% of each of the Southwood PUD and Colin English properties.

B. Densities and Intensities:

(1) The maximum densities and intensities for development within the Southeast Sector Planning Area are established in Policy 10.1.2.

C. Phasing:

(1) The Southeast Sector Planning Area will be permitted to develop in phases.

(2) Southwood has an approved Development of Regional Impact DRI development order and Planned Unit Development PUD zoning. These approvals establish the development entitlements and master plan for the Project. For this reason, the Southwood entitlements and development phasing are not identified in Table A below. The maximum and minimum densities and intensities for the Implementing Land Use Districts for Southwood are established in Policy 10.1.2.

(3) Additional development beyond Phase I of the English lands shall require a comprehensive plan amendment supported by adequate data and analysis if the Phase I lands (approximately 601 acres) have not been built consistent with the mix of uses established herein.

(4) No particular percent mix of uses within Phase I for the English properties will be required to meet or exceed the percent requirements for the total Southeast Sector Plan acreage and percentage of mix amounts.

TABLE A: ENGLISH PROPERTY DENSITIES, INTENSITIES AND PHASING **(REV. EFF. 8/25/08; REV. EFF. 11/26/21)**

	Maximum Residential Units	Minimum Residential Densities	Maximum Non-Residential	Hotel	Hospital
Phase I					
Colin English Phase I (603 acres)	6,030	As required by Policy 10.1.2 [L]	3,606,000 GSF		
Phase II					
Colin English Phase II (458 acres)	4,580	As required by Policy 10.1.2 [L]	2,740,000 GSF		

Notes:
The Colin English Property densities and intensities are those found within the Suburban Land Use Category consistent with Objective 6.1 [L].

D. Land Use Location Criteria:

(1) Industrial development, if constructed, is to be located in the southwest quadrant of the Southeast Sector Planning Area, primarily utilizing Tram Road and Capital Circle. Industrial development is not required in this quadrant; therefore, the quadrant may have no industrial development at buildout.

(2) Office development, and commercial (retail/possible hotel) uses to be located primarily in the northwest quadrant of the Southeast Sector Planning Area (English property, primarily utilizing Blair Stone Road) and surrounding the Capital Circle Office Center.

~~(3) Medium Density Residential to be located primarily, but not solely limited to areas adjacent to the Capital Circle Office Center and interspersed with office development in the northwest quadrant. Priority shall be given to areas adjacent to the Capital Circle Office Center.~~

~~(4) Low Density Residential to develop primarily in the northeast quadrant of the Southeast Sector Planning Area (Old St. Augustine Road vicinity), and secondarily in the northwest and southeast quadrants (perhaps as golf course communities).~~

~~(5) Large Lot Single Family Residential development to develop primarily in, but not limited to, the southeast quadrant of the Southeast Sector Planning Area;~~

~~(6) Community Facilities and Services to be located within each quadrant of the Southeast Sector Planning Area;~~

~~E. Affordable Housing:~~

~~Development must comply with applicable affordable and inclusionary housing ordinances.~~

~~F. Additional Requirements:~~

~~(1) A school site parcel for an elementary school at thirty (30) acres shall be set aside on the English Property, based on a projected build-out population of approximately 30,000. One elementary school shall be located on the English property and the other two schools shall be located on the Southwood property, provided that each of the public school sites on the Southwood property may be the location of a pre-kindergarten through grade 8 facility with the agreement of the Leon County School Board. The school site shall be located proximate to residential areas and shall be collocated with other compatible public facilities to the extent possible.~~

~~(2) In accordance with community wide requirements of the Comprehensive Plan, the Capital Improvements Element shall be amended to reflect the 5 year plan for the provision of urban services in accordance with this sector plan.~~

~~(3) Parcel # 31-03-20-602-000-0 and that portion of parcel # 31-11-20-001-000-0 which is directly south of parcel #602 shall be designated as low density residential and be limited to no more than three units per acre.~~

~~(4) No additional acreage within the Urban Service Area may be added to the Southeast Sector Planning Area except by a Comprehensive Plan Amendment. Any addition to the Southeast Sector Planning Area must be in conformance with the guidelines and standards of the Southeast Sector Plan Objective 10.1 and implementing policies 10.1.1 through 10.1.7.~~

~~*Policy 10.1.2: [L] SESP Implementing Land Use Districts* **(REV. EFF. 7/7/99; REV. EFF. 8/25/08; REV. EFF. 11/26/21)**~~

~~I. Land Use~~

~~The Southeast Sector Planning Area shall be developed utilizing the following implementing PUD districts that allows a range of types of residential, commercial, office and industrial uses with varying densities and *intensities*:~~

~~(A) NEIGHBORHOOD VILLAGE CENTER – VC~~

~~Designed to serve as the center of the neighborhood, and discourage commercial strip development and sprawl along roadways.~~

- ~~Each Village Center shall have a consistent design theme and complementary palate of materials.~~
- ~~Village centers shall provide ample open space to allow for community gatherings or public events.~~
- ~~Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.~~

~~TNDs (Traditional Neighborhood Districts) and VCs (Village Center) implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial village center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan.~~

~~Development in the VCs may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or a VC in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the VC district. Local government shall conduct an environmental assessment at the time of an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in a TND or VC district prior to designating the boundaries of conservation and preservation areas, if present, within a TND or VC to determine the extent and location of conservation and preservation features. TNDs and VCs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].~~

~~Allowed Uses:~~

- ~~Community facilities: Community Services and Light Infrastructure~~
- ~~Office uses~~
- ~~Commercial land uses~~
- ~~Residential uses in conformance with the Medium Density standards~~
- ~~Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8~~
- ~~Assisted Living Facilities~~

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC
Maximum Floor Area Ratio:

1.0 for parcels larger than 20,000 sq. ft.
2.0 for parcels 20,000 sq. ft. or smaller

Minimum Floor Area Ratio:
0.5 F.A.R.

Clustering may be permitted provided maximum densities are not exceeded.

(B) TRADITIONAL NEIGHBORHOOD DISTRICT – TND

Location mix and configuration of land uses are designed to encourage alternatives to automobiles and provide more identifiable pedestrian-friendly neighborhoods. More restrictive planning and architectural standards will be applied in order to maintain traditional town form.

TNDs and VCs implement the development pattern that creates compact urban development with higher density residential uses focused around a commercial Village Center. TNDs and VCs shall be located together in order to promote convenient walk-between shopping and entertainment opportunities; an area that is pedestrian and bicycle friendly and is not designed with an over-reliance on the automobile. This pattern of development is strongly encouraged by the Comprehensive Plan. The specific development criteria and phasing for the TNDs and VCs shall be included in the LDRs and be determined by local government.

TNDs will locate close to Village Centers, parks and recreation, employment; allow for a variety of housing types which promote increased density; use energy-saving concepts in block and building designs; be located within close proximity to Village Centers, High Intensity Urban Centers and Mixed Use Office Parks; and be designed for bicycle and pedestrian accessibility.

Allowed Uses:

- Community facilities: light infrastructure.
- Restricted to mid-rise, multi-unit townhouses and row houses, attached residential units and single-unit townhouses and row houses.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Accessory commercial use which is subordinate to the principal residential use.
- Specific densities and intensities, ratio of uses and implementation criteria shall be contained in the zoning code.

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC

Clustering may be permitted provided maximum densities are not exceeded.

Development in the TNDs may obtain a waiver from the requirements in the EMO and EMA for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements, provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for TNDs and VCs shall be designed in accordance with applicable standards and shall be located outside of a TND or VC in order to promote a compact pedestrian oriented arrangement of land uses except in situations where alternative sites for stormwater are available consistent with the intent of the TND district. Local government shall conduct at the time of an application for development or prior to rezoning, consistent with Conservation Policy 1.1.1 in a TND or VC district, an environmental assessment prior to designating the boundaries of conservation and preservation areas, if present, within a TND to determine the extent and location of conservation and preservation features. TNDs shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

(C) MEDIUM DENSITY RESIDENTIAL - MDR

Provides moderate-density housing located within walking and biking distance of civic facilities, retail, schools and employment.

- Design of MDR shall use energy saving concepts and maximize roadway connections.
- Elementary schools shall be provided within close proximity and land will be reserved.
- All collectors and arterials shall have bike and pedestrian paths.
- It is the intent to have bike and pedestrian facilities as important as automobiles in regard to mobility when designing MDR areas.

Allowed Uses:

- Multi-family residential.
- Single-family attached and detached residential.
- Golf courses and recreation facilities.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure.
- Community parks and recreation areas shall be located within close proximity to the residential uses.
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood and the design, parking, and signage should reflect this intent.
- Assisted Living Facilities

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 20 DU/AC

Clustering may be permitted provided the maximum density is not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(D) Low Density Residential - LDR

Provides for low-density residential units which are not necessarily convenient to shopping and employment areas. Density shall be between 2 to 8 units per acre.

Allowed Uses:

- Detached and attached single-family residential
- Parks, golf courses, recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure
- Neighborhood-scale commercial uses are allowed on corner lots to promote walk-to shopping. This use is intended to be the same scale, design and materials as the surrounding neighborhood. It is intended for the convenience of the surrounding neighborhood, and the design, parking and signage should reflect this intent.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 8 DU/AC

Clustering may be permitted provided the maximum densities are not exceeded.

Specific densities and intensities, ratio of uses and implementation criteria will be contained in the zoning code.

(E) Large Lot Single Family Residential - LSF

Provide single-family residential uses in keeping with the rural character of outlying areas. This category is most likely not located conveniently to shopping and employment. Minimum size of lots will be 1/3 acre; maximum size of lots shall be 5 acres.

Allowed Uses:

- Detached single-family residential
- Golf courses and recreational facilities
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.
- Community facilities: community services and light infrastructure.

Residential Densities:
Minimum Density 1 DU/5 AC
Maximum Density 3 DU/AC
Clustering may be permitted provided maximum densities are not exceeded.

(F) Mixed Use Office/Commercial - MUOC

Provides for higher-intensity commercial uses that are more intense than uses located in Village Centers. Intended as activity centers and shall include public plazas and other amenities.

- ~~Uses and intensities shall be designed for maximum internal capture of shopping and business trips.~~
- ~~Maximum pedestrian accessibility internal to the office/commercial centers.~~
- ~~Centers shall be designed to blend with TND/MDR districts.~~
- ~~Provide mass transit accessibility if transit is available, and~~
- ~~May have regional stormwater facilities.~~

~~Allowed Uses:~~

- ~~Community facilities: community services, light infrastructure and post-secondary educational facilities~~
- ~~Community Commercial uses (100,000 to 200,000 square feet)~~
- ~~Regional Commercial (200,000 to 1 million square feet)~~
- ~~Office- Allows office uses 10,000 square feet or greater. The intent is to allow commercial and service oriented uses as an accessory use within an office building.~~
- ~~Medium Density Residential in association with nonresidential uses.~~
- ~~Hotels~~
- ~~Medical facilities and institutional uses, including assisted living facilities. Hospitals may be permitted if based on design criteria such as access and building scale in relation to adjacent uses, as described in the LDRs.~~
- ~~Golf Courses~~
- ~~Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.~~

~~Maximum Floor Area Ratios:~~
~~2.0 F.A.R.~~

~~(G) MIXED USE INDUSTRIAL - MUI~~

~~Provides for the location of manufacturing, warehouses, distribution centers, and research and development uses, with some commercial uses allowed that are designed to accommodate the needs of the industrial park work force.~~

- ~~Commercial uses shall be provided within walking distance of work place.~~
- ~~Equal access for mass transit, automotive, bicycle and pedestrian modes of transportation shall be provided.~~

~~Allowed Uses:~~

- ~~Community facilities~~
- ~~Light and heavy industrial~~
- ~~Research and development~~
- ~~Showroom warehouses~~
- ~~Office associated with industrial and distribution uses~~
- ~~Retail designed to serve the work force of the industrial park~~
- ~~Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.~~

Maximum Floor Area Ratios:
1.0 for nonresidential uses

(H) OFFICE/RESIDENTIAL

The Office/Residential district shall contain a variety of office and residential uses that range from duplexes to townhouses to multi-family. The residential uses will be integrated with the office development. The Office/Residential district shall be located in areas where there is access to collector and arterial roadways, and where the emerging development pattern is not predominantly low-density residential. In order to provide for a more pedestrian-friendly environment that efficiently utilizes land area and provides for interaction between the uses, large expanses of surface parking will be discouraged in favor of shared parking, mid-block parking, and parking garages. Provision will be made to serve this district with mass transit. Commercial uses may be permitted as ancillary uses to the office uses and located within office buildings.

Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Allowed Uses:

- Community facilities: community services, light infrastructure, and post-secondary
- Office uses- not to exceed 300,000 sq. ft.
- Commercial uses- not to exceed 10,000 sq. ft., contained within office building.
- Hotels- May be permitted based on design criteria such as access and scale of the building in relation to adjacent uses, as described in the LDRs.

Residential Densities:
Minimum Density 4 DU/AC
Maximum Density 16 DU/AC

Floor Area Ratio (F.A.R.):
Maximum F.A.R. of .25 for parcels greater than 20,000 sq. ft.
Minimum F.A.R. of 1.0 for parcels smaller than 20,000 sq. ft.

(I) SOUTHWOOD TOWN CENTER - TC

Designed to serve as the pedestrian-oriented urban center of Southwood, containing a wide range of commercial, entertainment, residential, office and community services at urban intensities.

Development in the TC district may obtain a waiver from the requirements in the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) for natural area, landscaping and buffers as long as a landscape plan is prepared that meets established minimum requirements provided it is consistent with the requirements in the Comprehensive Plan. Stormwater detention and treatment facilities for the TC district shall be designed in accordance with applicable standards and shall be located outside of the TC district in order to promote a compact pedestrian-oriented arrangement of land uses, except in situations where alternative sites for stormwater facilities are available that are consistent with the intent of the TC district. Local government shall conduct an environmental assessment at the time of

an application for development or prior to rezoning consistent with Conservation Policy 1.1.1, in the TC district prior to designation of the boundaries of conservation and preservation areas, if present, within the TC district, to determine the extent and location of conservation and preservation features. The TC district shall be located so as to minimize the impact on conservation and preservation features consistent with Conservation Policy 1.3.11 [C].

Allowed Uses:

- Commercial, including retail, entertainment and hotel uses.
- Residential, including assisted living, at the full range of densities in LDR and MDR. Residential uses may be collocated with compatible nonresidential uses in the same buildings.
- Office.
- Institutional.
- Community Facilities, such as police/fire stations and churches.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Mixture of Uses:

Development within the TC district shall include a mixture of uses consistent with the following minimums:

- 60,000 square feet of commercial
- 200 residential units

Additional development may include any other uses permitted in the TC district, such as office, institutional/community facilities, medical and assisted living facilities. Maximum development shall be limited by the allowable densities and maximum Floor Area Ratios (FAR).

Residential Densities:

Minimum Density 2 DU/AC (no minimum density for residential uses second story and above for commercial or office uses)
Maximum Density 20 DU/AC

Specific densities and intensities, ratio of uses and implementation criteria, including standards to promote pedestrian-scale mixed-use development, will be included in the zoning code.

Maximum Floor Area Ratio:

2.0 F.A.R.

Minimum Floor Area Ratio:

0.25 F.A.R.

(J) MIXED USE EDUCATIONAL/INSTITUTIONAL - MUEI

Provides for educational, institutional and civic uses, and related activities including residential, which includes assisted living, office, sports and recreation, and related commercial uses, which include inns and hotels.

Allowed Uses:

- Schools, colleges and universities, museums, and civic facilities.
- Residential, including assisted living at the full range of densities in LDR and MDR.
- Sports and recreation facilities.
- Related supporting commercial facilities, including office, retail, inns and hotels.
- Agriculture and silviculture uses are allowable interim uses until development approval is granted for a subject parcel, consistent with SESP Policy 10.1.8.

Residential Densities:
Minimum Density 2 DU/AC
Maximum Density 20 DU/AC

Maximum Floor Area Ratio:
1.0 F.A.R.

Minimum Floor Area Ratio:
0.25 F.A.R.

(K) HISTORIC HOUSE OVERLAY (HHO)

The existing main house on the Southwood property is a historical resource within the Southeast Sector Planning Area. In order to preserve the character of the house and its grounds while providing for its future use as a component of the development in the Southeast Sector Planning Area, the Southwood PUD shall establish an overlay zoning district on the house and surrounding grounds. The allowable uses within the overlay district shall be those uses allowed within the LSF district. The following additional uses shall also be allowed within the HHO district so long as the design is compatible with the surrounding LSF uses and the historic nature of the house:

- Bed and Breakfast Inn
- Restaurant
- Conference Center

Policy 10.1.3: [L] Transportation **(REV. EFF. 7/7/99; REV. EFF. 11/26/21)**

Transportation guidelines for the Southeast Sector Plan shall be as follows:

Transportation systems shall be designed to promote alternatives to single-occupancy vehicle travel and to capture internal trips. Emphasis will be placed on designing commercial, office, employment and higher-density residential areas to be pedestrian and bicycle friendly. Emphasis will also be placed on alternative transportation modes.

(a) Right of way shall be planned and dedicated for the ultimate laneage needed based on total build-out of the plan.

~~(b) If mass transit is available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan, Mass transit routes shall be included along major roadways in coordination with Star Metro.~~

~~(c) All land development shall provide for bicycle and pedestrian modes of transport.~~

~~(d) Traffic calming devices will be utilized along roadways in areas with high pedestrian activity.~~

~~(e) Access to canopy roads can only be permitted for uses other than medium or high density residential uses, commercial, office uses, and then only if there is no access to an alternative roadway and one cannot be secured. New access points must be configured to share access.~~

~~(f) Access management standards will be developed and implemented for all roadways.~~

~~(g) Use of roundabouts will be encouraged at intersections.~~

~~(h) A 100 foot tract on both sides of the centerline of Old St. Augustine Road shall be dedicated to the City of Tallahassee along the entire length of the property in excess of 200 acres in common ownership adjoining Old St. Augustine Road between Capital Circle and the Urban Service Area boundary. For properties in common ownership in excess of 200 acres, access to Old St. Augustine Road within the Southeast Sector Study Area will be limited to the following: 1) the tract of land referred to in Section I of Policy 10.1.2; 2) a new north-south roadway up to 1/2 mile west of Southwood Plantation Road. This intersection with Old St. Augustine Road will be a four-way stop unless a more efficient design can be developed that provides the maximum protection for the canopy on Old St. Augustine Road; 3) Southwood Plantation Road.~~

~~(i) The recommendations that are produced by the Scenic Vista and Conservation Easement Acquisition Plan will be taken under advisement by the developer when designing development adjacent to Old St. Augustine Road.~~

~~(j) The Transportation Element will be amended to reflect the transportation network needed to serve development within the Southeast Sector Planning Area.~~

~~(k) Any alignment of a limited access roadway/parkway shall be required to follow the Comprehensive Plan amendment process and be consistent with the Long Range Transportation Plan.~~

~~(l) In order to protect the traffic capacity of Capital Circle within the Southeast Sector Planning Area, the Capital Circle Access Points plan is established and shall be implemented by LDRs. Subdivisions adjoining Capital Circle shall not allow creation of parcels with sole access to Capital Circle (see Figure 10.B).~~

Policy 10.1.4: [L] - Open Space/Greenways **(REV. EFF. 7/7/99)**

The Southeast Sector Plan shall contain a pooled open space/greenway concept that will contain the majority of the open space requirements within a connected corridor. The following guidelines will be used in mapping the open space/greenway corridor:

(a) All conservation and preservation areas within the Southeast Sector Planning Area shall be mapped and protected consistent with Conservation Objective 1.3 and its implementing policies. In addition, the mapping of the open space/greenway corridor shall consider the location of conservation and preservation areas, except significant grades. Interconnected areas that best protect the conservation and preservation features of the area and provide open space will be included in the open space/greenway corridor. Consistent with the supporting data and analysis, such corridors shall constitute at least twenty-two percent of the Southeast Sector Planning Area. The City and the County will make all efforts to connect open space and greenways outside the Southeast Sector Planning Area to the open space/greenway system within the Southeast Sector Planning Area.

(b) Conservation and preservation areas shall be protected as required by the Comprehensive Plan.

(c) The mapped open space/greenway area will be generally mapped for the sector plan. Field verification of the exact delineation shall be conducted by a qualified biologist and approved by the Growth Management Department that has jurisdiction at the time development permits are sought.

(d) The following uses will be allowed and designated in the mapped open space/greenways areas:

(1) Passive recreation - Improvements that are natural resource-oriented, such as hiking and biking trails, boat landings and passive parks, may be constructed in passive recreation areas. Public access will be assured in designated passive recreation areas.

(2) Stormwater management facilities may be located in designated open space areas. This does not preclude the possible locating of stormwater facilities in preservation or conservation areas. Each facility and site must be evaluated individually in terms of impacts. The beneficial functioning of each preservation or conservation area is to be preserved. All stormwater facilities must meet the requirements of the EMA and EMO and must be consistent with the comprehensive plan.

(3) Wildlife management areas.

(4) Public roadways and utilities may cross through these areas if no alternative route can be secured.

(5) Golf courses (active recreation) are not permitted in conservation/preservation areas or in open space/greenways, but they may abut open space/greenways and conservation and preservation areas. Golf courses may cross these areas so long as the crossing does not adversely affect such areas and is consistent with the comprehensive plan.

~~All open space/greenway corridors shall have a management plan approved by the local government with jurisdiction that maintains these open space/greenway areas to protect the values for which these areas were designated. This may include but not be limited to: aesthetic open space, wildlife habitat, interconnection, preservation of floodplains and protection of conservation and preservation areas.~~

~~(c) Open space/greenway corridors may be privately owned or dedicated to the public by conveyance to a general or special purpose local governmental entity, or be designated as part of the statewide system of greenways and trails pursuant to State law. Privately owned, open space/greenway corridor areas shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development.~~

~~It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas with proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.~~

~~*Policy 10.1.5: [L] – Interrelationships* **(REV. EFF. 7/7/99; REV. EFF. 8/25/08)**~~

~~The interrelationship between the sector plan, the Comprehensive Plan, and the implementing PUDs is defined as follows:~~

- ~~The Southeast Sector Plan shall focus on land use decisions that avoid the promotion of strip commercial development along arterial roadways. The implementing PUDs for this sector plan shall be designed to avoid strip commercialization of arterial roadways. The sector plan shall reflect land uses along arterials, which do not promote strip commercial development.~~
- ~~An objective and policies setting the guidelines for the development of the Southeast Sector Planning Area shall be adopted into the Comprehensive Plan.~~
- ~~Within the implementing PUDs the Southeast Sector Planning Area may contain architectural controls, densities, intensities and criteria specific to each implementing PUD district provided for in Policy 10.1.2 [L].~~
- ~~Specific criteria related to development districts, transportation, access management, architectural controls and specific development standards will be contained within the applicable LDRs implementing PUDs.~~
- ~~The mapped open space requirements will count as the open space required in the EMO/EMA. Any open space dedicated outside the mapped area must meet all EMO/EMA requirements. The 10% site design alternative of the EMO/EMA will not be allowed in the Southeast Sector Planning Area~~

- ~~Parcels that contain significant grades may be developed as long as best management practices are used, such as off-grade construction, minimum-grade changes and structures designed to accommodate the slopes.~~
- ~~All land uses that border the study area shall be consistent with the adjacency requirements in the Comprehensive Plan.~~
- ~~Access to canopy roads can only be permitted for low-density or large-lot single-family residential uses and only if there is no access to an alternative roadway and one cannot be secured. Roadways within the Southeast Sector Plan will be designed so that access to canopy roads will not be necessary.~~
- ~~With the approval of the regulating authority, individual small closed basins within the DRI boundary may be aggregated into larger closed basin perimeters. The closed basin requirements of the Environmental Management Ordinance/Environmental Management Act (EMO/EMA) will apply within these larger closed basin areas, however, the Developer will have the flexibility to convey water between the smaller depressions within the boundary of the individual aggregated closed basin perimeters. Inter basin transfers out of any aggregated closed basin perimeter will not be allowed without a variance from the inter basin transfer restrictions in the EMO/EMA. Such a variance may be approved only if condition (c) of (3) of subsection 4.2.(3)(c) of the EMO/condition (c) of Article VII Section 10-188 of the EMA is met. If the receiving basin is itself a closed basin, pre/post volume control and all other closed basin requirements of the EMO/EMA will apply to the receiving basin.~~
- ~~The applicant may request approval for a minor amount of development that may proceed prior to the issuance of the final development order. This development will consist of a sales office, limited commercial/office development and a limited number of model homes. This area will not exceed 25 acres (exclusive of right of way) and will meet access, environmental and Comprehensive Plan policy requirements. The specific amount of development that can occur pursuant to this policy shall be identified in the DRI Development Order.~~

~~*Policy 10.1.6: [L] – Implementation*~~ ~~**(Eff. 5/20/96; Rev. Eff. 8/25/08)**~~

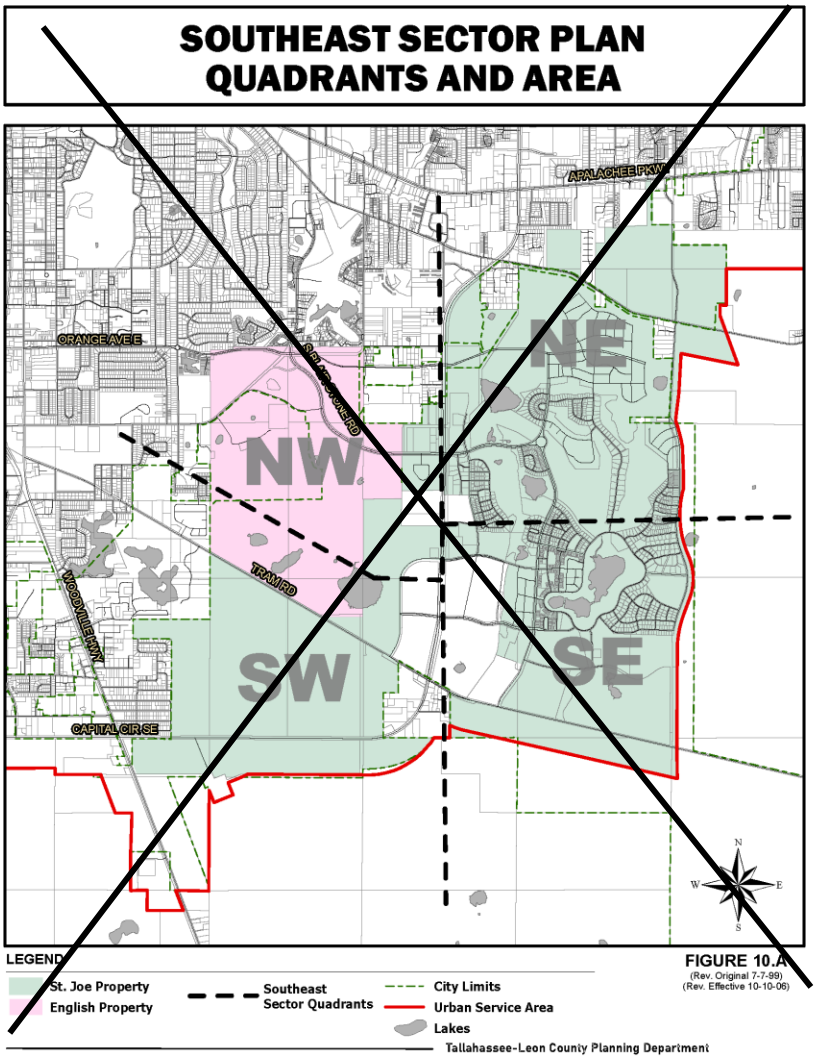
~~A framework for detailed implementation of the development standards and requirements will be contained in the implementing PUDs. They shall include but not be limited to:~~

- ~~Detailed definition of each district area in the zoning code. Also included will be design, development, transportation and density requirements for each district in sufficient detail to accomplish the intent of each district.~~
- ~~Detailed criteria developed in order to adequately implement all the bicycle, pedestrian, access management and roadway design guidelines listed in the transportation guidelines policy (10.1.3).~~
- ~~Access management criteria developed and implemented through the zoning code. It shall address access for all modes of transportation and shall include but not be limited to pedestrian, bicycle, mass transit, emergency vehicle, disabled, and car/van pooling.~~

- Unless otherwise specified in the Southeast Sector Plan amendment, the procedures and requirements in the Comprehensive Plan will be applicable to this area.

Policy 10.1.7: [L] - Specific Southeast Sector Land Development Regulations **(EFF. 5/20/96)**

The LDRs related to specific requirements will be amended to reflect any criteria or requirements related to environmental constraints specific to the Southeast Sector Plan guidelines, as adopted in the Comprehensive Plan.



Policy 10.1.8: [L] - Agriculture and Silviculture Uses **(REV. EFF. 7/7/99)**

It is the intent of the requirements in this amendment to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to assure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Southeast Sector Planning Area up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Southeast Sector Planning Area.
(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Southeast Sector Planning Area, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or subdivision plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the subdivision or site plan and to all land included in these parcels, such as land proposed to serve as buffer or open space.
(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Southeast Sector Planning Area in accordance with "1993 Silviculture Best Management Practices," Florida Department of Agriculture and Consumer Services, or its successor, and existing local government ordinances.
(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

~~Southside Action Plan~~

~~Goal 11: [L] – Southside Action Plan (Eff. 8/5/23)~~

~~A plan shall be developed and monitored to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this goal, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the~~

Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Objective 11.1 [L] – Beautification(Eff. 8/5/23)

Beautify and enhance both public and private spaces across the Southside Action Plan area by improving maintenance and increasing investment.

Policy 11.1.1: [L] **(Eff. 8/5/23)**

Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Objective 11.2: [L] Investment (Eff. 8/5/23)

Direct collaborative efforts of both the public and private sectors towards an increase of homeownership, diverse development and redevelopment types, business variety, and infrastructure in the Southside Community.

Policy 11.2.1: [L] **(Eff. 8/5/23)**

Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public.

Policy 11.2.2: [L] **(Eff. 8/5/23)**

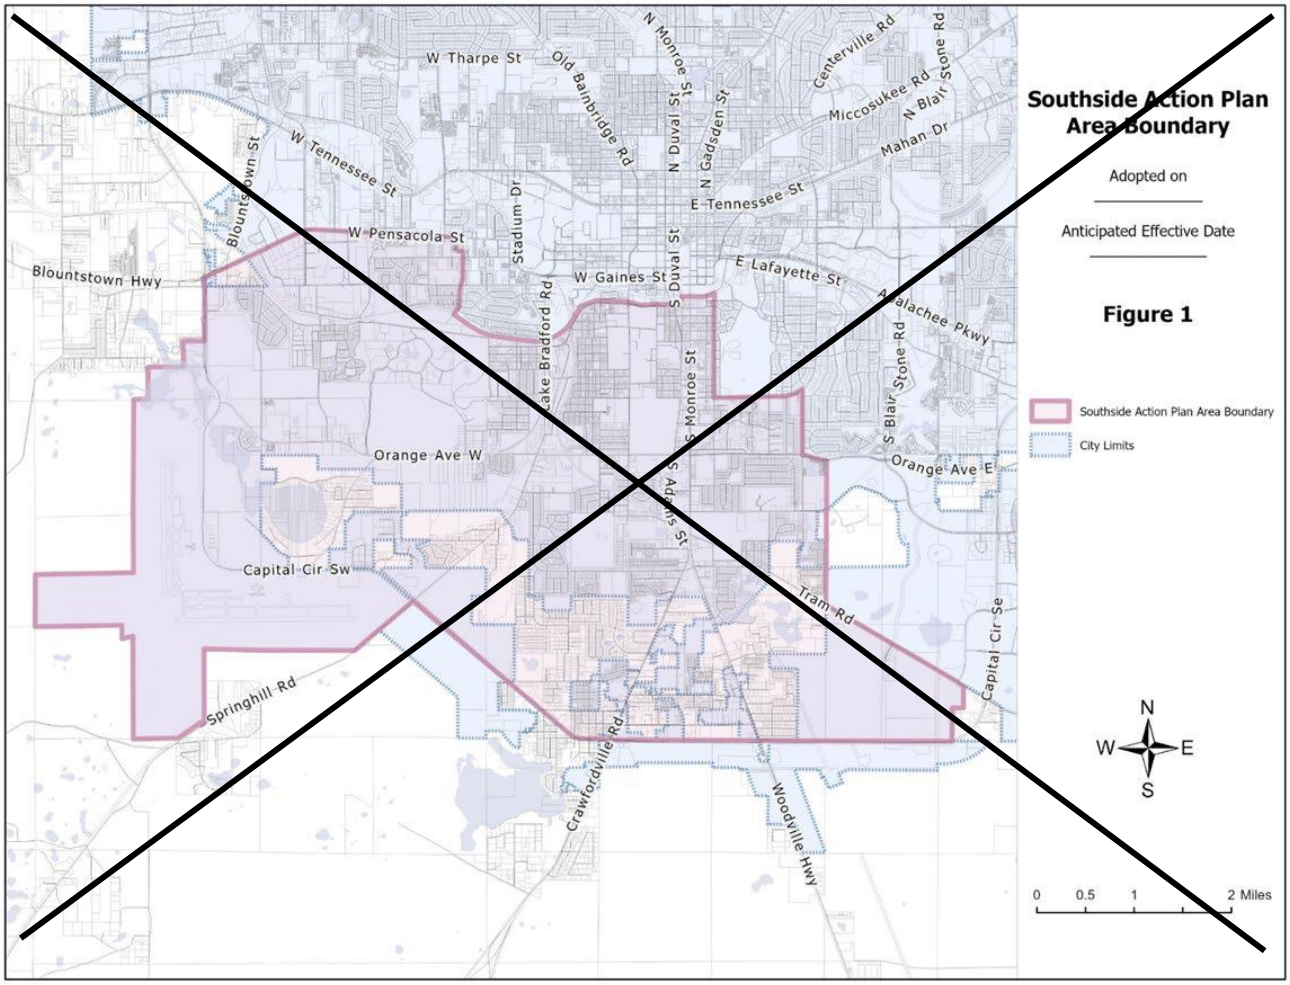
Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Objective 11.3: [L] Engaged and Activated Citizens (Eff. 8/5/23)

Foster community involvement and celebration of the Southside.

~~*Policy 11.3.1: [L]* **(EFF. 8/5/23)**~~

~~Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.~~



~~Objective 11.4: [L] Southside Action Plan Evaluation and Update; Relation to Other Goals, Objectives & Policies(EFF. 8/5/23)~~

~~*Policy 11.4.1: [L]* **(EFF. 8/5/23)**~~

~~The Tallahassee-Leon County Planning Department will monitor project implementation of the Southside Action Plan by reporting annually on Objective 11.1, 11.2, and 11.3; in coordination with the Leon County and the City of Tallahassee strategic plans.~~

Welaunee Critical Area Plan

Goal 13: [L] (Eff. 12/10/02)

Guide planned development within the Welaunee Critical Planning Area through implementation of a critical area plan which includes a mixture of integrated land uses that are predominantly self-supporting rather than dependent upon public funding, places a greater emphasis on pedestrian mobility and transportation alternatives, provides new employment opportunities near major transportation arteries and protects natural systems in an urbanized setting.

Objective 13.1: Planned Development through 2020 (Eff. 12/10/02)

By 2020, the Welaunee Critical Planning Area may develop in the portions which are south of Interstate 10 ("Toe") and south of Miccosukee Road and north of U.S. 90 ("Heel") with a development pattern that includes predominantly walkable neighborhoods, mixed-use centers, a major employment center, diversity of housing choices, protection of conservation and preservation areas, and a transportation system which accommodates both vehicular and non-vehicular transportation.

Policy 13.1.1: Plan Overview for Toe and Heel **(Eff. 12/10/02; Rev. Eff. 7/20/05; Rev. Eff. 8/27/17)**

The Toe and Heel shall develop as new mixed-use communities that provide employment opportunities, protect natural resources in an urbanized setting and emphasize pedestrian mobility and transportation alternatives. The intent of this policy is to locate employment and shopping in close proximity to residential land uses, provide activities that serve area residents as well as shoppers and employees from outside the area, offer housing to diverse socio-economic groups, establish recreation, educational, and cultural activities nearby, reduce automobile dependency of residents and employers, place public transportation facilities in population and employment centers, and protect natural systems within the context of a mixed-use built environment. The intent of this policy will be achieved through phased development consistent with these guidelines:

(1) A buildout population of approximately 5,950 for the Toe and 4,600 for the Heel.

(2) A buildout employment of approximately 1,240 jobs in the Toe and 3,560 jobs in the Heel.

(3) Development which reflects the following general allocation of land uses on an acreage basis:

(A) Residential uses on 35 percent to 45 percent of the Toe and 30 percent to 40 percent of the Heel.

(B) Retail and office uses on 3 percent to 8 percent of the Toe and retail, office and light industrial uses on 15 percent to 25 percent of the Heel.

~~(C) Primary open space and recreation uses (excluding the Miccosukee Canopy Road Greenway) on 15 percent to 25 percent of the Toe and 20 percent to 30 percent of the Heel.~~

~~(D) Community facilities and institutional, educational, civic and similar uses on 15 percent to 25 percent of the Toe and 10 percent to 20 percent of the Heel.~~

~~(4) The Toe and Heel may develop in phases consistent with necessary infrastructure and services and, for the Heel, consistent with the phasing schedules on Table 13-2, which is based on projections of densities and intensities of use derived from the corresponding acreage. Sub phases or stages of each phase may be developed in separate PUDs. The Toe and the Heel may be developed concurrently. Table 13-2 is attached as part of this Objective.~~

~~(5) A comprehensive plan amendment shall be required in order to exceed the projected total number of residential units or the projected total nonresidential square footage for the Heel, as set forth in Table 13-2. Such an amendment shall be consistent with the requirements of Objective LU 6.2 and its supporting policies.~~

~~(6) Development will comply with any ordinances in effect at the time of development that address the need for affordable housing. In addition, development shall comply with any other applicable requirements at the time of development.~~

~~(7) Specific guidelines and requirements for land use categories, transportation, access management, and other specific design standards shall be included in one or more PUD Concept Plans applicable to the Toe or Heel, respectively. Each PUD Concept Plan shall be adopted by the local government with jurisdiction before any development may take place on the parcel or tract included in the PUD Concept Plan, except as otherwise allowed pursuant to Policy LU 6.2.4. Each PUD Concept Plan shall be consistent with development guidelines and general design standards herein.~~

~~(8) Land Use Goal 13, its supporting objectives, policies and data and analysis, and all activities undertaken leading to and including adoption, is not intended to be considered evidence of a unified plan of development for purposes of §380.0651(4), F.S.~~

~~(9) The Toe and Heel will be developed with the infrastructure required to serve permitted development, including but not limited to water, sewer, stormwater management and on-site and off-site transportation mitigation, consistent with this Comprehensive Plan and all applicable regulations.~~

~~(10) Development within the Toe and Heel shall be aggregated under the City's concurrency regulations, as currently interpreted and applied by the City; unless, at some time in the future, the concurrency regulations are revised so that aggregation is not required for such development.~~

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.l.9.

Policy 13.1.2: Primary Open Space Systems and Greenways **(EFF. 12/10/02; REV. EFF. 7/20/05)**

The primary open space systems for the Toe and Heel are defined as connected, continuous networks of open space. They constitute fundamental building blocks of these planned communities and are intended to serve multiple purposes in an urbanized setting, including but not limited to protection of conservation and preservation areas. Primary open space systems may include but are not limited to conservation and preservation areas, buffers for environmentally sensitive areas, pathways to facilitate pedestrian and bicycle mobility, aesthetic open space, passive recreation opportunities and community gathering places. Primary open space systems, together with other green spaces set aside to meet the Urban Forest and landscape requirement shall also meet the requirements of the comprehensive plan, Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. The intent of this policy will be achieved through implementation of the following guidelines:

(1) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by policy LU 6.2.4, a Natural Features Inventory consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable, shall be submitted for the entire Toe or the entire Heel respectively.

(2) Credits for open space, wetland mitigation, slope mitigation, stormwater management or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Toe, or Heel, respectively.

(3) Areas with severe and significant slopes that are not located in the primary open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan, Chapter 5, Environmental Management, Tallahassee Land Development Code and the Leon County EMA, whichever is applicable.

(4) Wetlands, watercourses and water bodies, except Dove Pond, shall be protected by a 50-foot natural buffer from the jurisdictional wetland line where adjacent to developable land. If Dove Pond is not included as part of a regional stormwater management system to provide flood protection for downstream off-site properties as provided by Policy LU 13.1.5 and Policy LU 13.1.7, then Dove Pond shall be protected by a 50 foot natural buffer from jurisdictional wetlands where adjacent to developable land.

(5) The primary open space systems shall be open to the general public and be designed to provide connections with the Miccosukee Canopy Road Greenway at multiple locations, and to integrate internal recreational multi-use paths with the

greenway's trails. Connections to future regional greenways shall be considered in the design of the primary open space systems.

(6) The primary open space systems shall be designed to provide additional buffering as established in PUD Concept Plans for designated canopy road protection zones, in addition to the required 100-foot setback, where feasible.

(7) The primary open space system in the Heel may include a portion of the existing Miles Johnson Road with the consent of the local government with jurisdiction and construction of new roads adjacent to and on each side of the Miles Johnson Road roadbed and canopy.

(8) Primary open space may be privately owned, or be dedicated to the public by conveyance to a general- or special-purpose local governmental entity; or be designated as part of the statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the conservation and preservation areas in accordance with local government regulations.

(9) The primary open space systems shall each have a management plan approved by the local government with jurisdiction in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of the primary open space systems, including any preservation or conservation areas located within them, shall be provided by conservation easements and other measures consistent with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, except as otherwise provided by Policy LU 13.1.5 and Policy LU 13.1.7. Conservation easements within the City will be required consistent with City Growth Management Department's written policy. Conservation and preservation areas placed in conservation easements may be used toward satisfying the urban forest/ landscaping requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(10) Acreage in the primary open space systems shall be counted toward satisfying the open space requirement established in PUD Concept Plans as provided by Policy LU 13.1.7.

(11) The following guidelines shall apply to uses within the primary open space systems as established in PUD Concept Plans:

(A) Passive recreation improvements that are natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular and pedestrian access only, provided these activities are reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.

~~(B) Wildlife management areas may be included in the primary open space systems with protective measures addressed in the management plans, in accordance with Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.~~

~~(C) Public roads and utilities may cross through the primary open space systems if no alternative route can be secured and impacts are minimized. Except for existing roads and specifically located existing road access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3, Toe Generalized Transportation Plan and Figure 13-4, Heel Generalized Transportation Plan, are approximate.~~

~~(D) Stormwater management facilities may be located in the primary open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. Dove Pond may be utilized as part of a regional stormwater management system to provide flood protection for downstream off-site property owners in the Tri-Basin Study Area as provided the criteria in Policy LU 13.1.5 (4) and Policy LU 13.1.7 are met. Each other stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. If stormwater facilities are contained within the primary open space, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. Conservation and preservation areas are not to be used as conveyances for increased stormwater rates from development. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation and/or preservation areas.~~

~~(E) Access facilities for canoes and other watercraft without internal combustion engines may be located in the primary open space system. Fueling facilities shall not be allowed. If access facilities are located in conservation or preservation areas these activities shall be reviewed and approved as part of the management plan required for the conservation easement, when these activities are located such that impact to the conservation and preservation area is minimized and at the same time the overall purpose of the conservation easement is protected.~~

~~(12) The cemetery in the Toe shall be protected as provided by state law. The churches owning the cemetery should fence the cemetery and prohibit disturbance.~~

*~~Policy 13.1.3: Land Use~~***~~(EFF. 12/10/02; REV. EFF. 7/20/05; REV. EFF. 8/27/17)~~**

~~I. Land Use~~

~~The Toe and Heel shall contain an integrated mixture of uses that allows a broad range of residential, commercial, office, employment, recreation and civic, institutional and community uses with varying densities and intensities of use. The intent of this policy is to create a community pattern of multiple neighborhoods that are compact and walkable, with a mixture of uses, diversity of housing types and prices, and interconnected fine-grained street systems. A mix of uses should be encouraged throughout each phase of development and at buildout. Neighborhood densities and development intensities generally should be arranged in a hierarchical continuum radiating from center to edge. Pedestrian accessibility should be given precedence over automobile convenience as established in PUD Concept Plans.~~

~~(1) Land uses in the Toe and Heel shall be assigned on the basis of the following categories as established in PUD Concept Plans:~~

~~(A) EMPLOYMENT CENTER~~

~~Employment centers shall be located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities. Employment centers are intended to contain a mix of uses and not be a single-use environment. They shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. An employment center shall range in size between 15 acres and 150 acres. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed except when located above the ground floor in mixed-use office buildings.~~

~~Development intensities shall range from 8,000 square feet per acre to 15,000 square feet per acre. Ground-floor, pedestrian-friendly uses should be included to provide walk-to-shopping opportunities. A minimum five percent on-site open space requirement shall be required for each preliminary plat in an employment center.~~

~~(B) TOWN CENTER~~

~~Town centers shall be planned as compact, efficient nodes. Traffic calming measures such as onstreet parking, buildings close to the road with parking in back, streetscape, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. A town center shall range in size between 10 to 30 acres and contain uses that serve surrounding neighborhoods as well as those traveling through the area. Uses shall be mixed horizontally and vertically to the maximum extent feasible. It is the design intent to plan for multiple storefronts and multiple retailers in town centers so all of the available retail space is not aggregated into one or two "big-box" stores. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, and civic, religious and institutional uses (including day care services for children and adults).~~

~~Development intensities in town centers shall range from 8,000 square feet per acre up to 20,000 square feet per acre. Residential densities shall be allowed up to 16 dwelling units per acre with no minimum density required. Residential uses shall be encouraged above ground floor retail and other nonresidential uses. Town centers shall be planned on a block system with a gridded road network and on-street parking.~~

~~Stormwater management facilities shall be located outside of town centers to promote a compact, pedestrian-oriented development pattern except where alternative sites for stormwater facilities are not reasonably available. Community open space in the form of public squares and greens shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat.~~

~~(C) NEIGHBORHOOD CENTER~~

~~Neighborhood centers shall allow small retail, specialty retail, office, restaurants, services, residential and other uses (including day care services for children and adults) that support residential uses within a neighborhood. These centers are also intended to function as a neighborhood focal point and are envisioned to have churches, town squares, and other civic, religious, and institutional uses. The neighborhood centers shall range in size from 5 to 8 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape, and other such solutions, shall be utilized to create a pedestrian-friendly, walkable center.~~

~~Development intensities in the neighborhood center shall range from 4,000 square feet per acre to 12,500 square feet per acre. The maximum residential density in the neighborhood center shall be 16 units per acre. No minimum density shall be required. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens shall be planned as the focal point of a neighborhood center. No minimum on-site open space shall be required for each preliminary plat.~~

~~(D) MULTI-FAMILY RESIDENTIAL~~

~~Multi-family residential areas shall include residential units with a maximum density of 16 units per acre and a minimum density of 8 units per acre. Allowable uses include town homes, apartments, condominiums and other multi-family uses, single-family attached and detached residential units, office as a ground-floor use with residential uses above or in a live-work unit, civic, religious and institutional uses, infrastructure including stormwater management facilities, parks and recreation. A minimum 10 percent on-site open space shall be required on each preliminary plat.~~

~~(E) RESIDENTIAL HIGH DENSITY~~

~~Residential high-density areas should be within easy walking distance of town and neighborhood centers and/or arranged along either side of some of the internal roads. The maximum allowable density shall be 10 units per acre and~~

the minimum density should be 4 units per acre. Allowable uses include residential, civic, religious and institutional uses, parks and recreation, and infrastructure including stormwater facilities. A minimum of 10 percent on-site open space shall be required on each preliminary plat.

(F) RESIDENTIAL MEDIUM DENSITY

Residential medium density areas shall include single-family residential uses up to a maximum density of 4 units per acre with a minimum density of 2 units per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. These areas shall have an interconnected local road system with a range of lot sizes. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(H) RESIDENTIAL LOW DENSITY

Residential low-density areas shall include single-family residential uses with a maximum density of 2.5 units per acre and a minimum of 1 unit per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(I) RESIDENTIAL ESTATE

Residential estate areas shall include single-family residential uses up to a density of up to 1 unit per acre. Allowable uses include residential, parks, open space and other recreational uses, civic, religious and institutional uses and infrastructure including stormwater facilities. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(J) SCHOOLS AND COMMUNITY USES

The school and community uses category is intended for public and private schools, as well as a broad range of community, civic, religious and institutional uses, including but not limited, to libraries, fire stations, police stations, civic educational centers, places of worship and supporting uses, community centers and clubhouses. School support facilities are also allowable, and include but are not limited to, play fields, gymnasiums, and other education-related uses. A minimum of 15 percent on-site open space shall be required on each preliminary plat.

(2) Land uses should develop on the Toe, shown in Figure 13-1, consistent with the following locational criteria as established in PUD Concept Plans:

(A) One or more town centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.

(B) One or more neighborhood centers should be located at strategic points along Welaunee Boulevard with no more than one each in the eastern and western sections.

(C) Town and neighborhood centers shall be located within a one-quarter mile walking radius from the majority of the denser residential areas.

(D) Town and neighborhood centers, higher-density residential areas and the primary open space system shall be located proximate to school and community uses when feasible.

(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space systems when feasible.

(F) Residential medium density areas generally shall be located within one-quarter mile walking distance from town and neighborhood centers.

(G) Residential low density and residential estate areas shall be located outside the one-quarter mile walking radius from town and neighborhood centers. Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either residential low density or residential estate.

(H) Institutional uses (including but not limited to an elementary school, senior citizens' activity center, assisted living facility, adult living facility, rehabilitation center, and adult care/memory unit) may be located in any land use district in the Toe.

(3) Unless developed pursuant to Policy LU 13.1.9, land uses should develop on the Heel, shown on Figure 13-2, consistent with the following locational criteria as established in PUD Concept Plans:

(A) Employment centers should be located as follows:

(i) An employment center should be proximate to the interchange of Interstate 10 and U.S. 90 and be compatible with nearby residential and mixed-use development. This employment center shall have direct access to an arterial, which will traverse the Heel.

(ii) An employment center should be located in the southern section of the Heel with direct access to U.S. 90. To minimize traffic loadings on U.S. 90, this employment center shall be connected to the Heel by internal roadways.

(B) No more than one town center may be located in the central section of the Heel proximate to residential areas. Employment centers should be located preferably within a one-quarter mile walking radius of the town center to provide restaurants, services, retail and other uses for employees.

(C) No more than two neighborhood centers may be located in the northern section of the Heel within a one-quarter mile walking radius of nearby residential development. No more than one neighborhood center may be located in the central section of the Heel.

(D) Town or neighborhood centers shall be located at the center of a one-quarter mile walking radius from the majority of the denser residential areas.

~~(E) School and community uses shall be located proximate to town or neighborhood centers, higher density residential areas and the primary open space system when feasible.~~

~~(F) Residential areas adjacent to the Miccosukee Canopy Road Greenway or along currently designated canopy roads shall be either single-family residential low density or single-family residential estate.~~

~~(G) Residential estate areas should be located in the northeastern section of the Heel adjacent to existing estate-type rural residential areas on adjacent lands.~~

~~*Policy 13.1.4: Transportation* (EFF.12/10/02; REV.EFF.7/20/05; REV. EFF. 8/27/17)~~

~~The transportation systems on the Toe and Heel, in addition to the arrangement of land uses, shall be designed to capture internal trips, promote alternatives to single-occupancy vehicle travel and support a mixed-use development pattern. The transportation network for the Toe and Heel shall support and enhance livable community concepts while meeting level of service standards. It is the intent of this policy to create communities and supporting transportation systems that encourage walkability and pedestrian accessibility, provide a road network with connectivity on-site and to surrounding areas, relieve pressure on canopy roads, minimize environmental impacts and encourage transit and other modes of transportation. Except for existing roads and specifically located existing access easements, subject to the requirements of Policy LU 13.1.4 (2)(B) (related to an additional access to Miccosukee Road), the location of the roads shown on Figures 13-3 Toe Generalized Transportation Plan and Figure 13-4 Heel Generalized Transportation Plan are approximate.~~

~~(1) These general transportation guidelines shall apply on the Toe and Heel as established in PUD Concept Plans and shown in Figure 13-3 and Figure 13-4, respectively:~~

~~(A) A fine-grained network of internal roads shall provide alternative travel routes and ensure that all roadways operate at acceptable levels of service at buildout.~~

~~(B) All land uses shall provide for alternative modes of transportation, with connections to the transit hub and bus shelters. The nature of and extent of any required accommodations shall vary based upon business size.~~

~~(C) Recreational and alternative transportation multi-use paths shall be planned internally for bicycle and pedestrian travel and shall be incorporated into the primary open space systems when feasible. The paths shall accommodate bicyclists, pedestrians and other forms of recreational use and connect to the Miccosukee Canopy Road Greenway at multiple locations consistent with the Miccosukee Canopy Road Greenway Management Plan.~~

~~(D) Multi-modal facilities (for motorists, cyclists, and pedestrians) shall be provided on all collector and arterial roads.~~

(E) Traffic-calming measures shall be utilized on local roads where significant pedestrian activity is expected.

(F) All access roads through a designated canopy road protection zone shall minimize disturbance to the canopy and understory in consultation with the City's Urban Forester. Utilities shall be collocated in these access roads when feasible.

(G) Transit shall be encouraged through planning and design by focusing density in areas where transit can serve the largest number of potential passengers. Bus shelters shall be provided by the developer at locations designated by Taltran.

(H) The road network in the Toe shall:

(i) Promote and enhance a livable community pattern, including mixed use and a pedestrian environment;

(ii) Protect the adjacent canopy roads by relieving traffic pressure on them;

(iii) Enhance the scale and pedestrian accessibility of town and neighborhood centers along Welaunee Boulevard, and

(iv) Provide for adequate road capacity to serve the development.

(I) Whenever possible, neighborhoods need to be interconnected and not solely dependent upon Welaunee Boulevard for ingress and egress. The street pattern should be planned to accommodate the highest frequency of street crossings in the town and neighborhood centers with decreasing frequency through residential areas and the least number of crossings in low density or "country" areas.

(J) No residential driveways shall connect directly to Welaunee Boulevard or the Shamrock South extension on the Heel. Direct access to canopy roads shall not be permitted for any residential or non-residential uses. Roadways within the Toe and the Heel will be designed so road access through designated canopy road protection zones will not be necessary except as otherwise expressly allowed in Policy 13.1.4.

(2) The following transportation guidelines shall apply in the Toe as established in PUD Concept Plans and shown in Figure 13-3:

(A) A transit hub for the transfer of passengers between bus routes shall be provided in a town or neighborhood center. The transit hub shall include facilities to accommodate up to four buses on a site not to exceed two acres and which is adjacent to available parking that can accommodate park and ride vehicles.

(B) Road access to the Toe from Miccosukee Road shall occur only within the existing road access easements across the Miccosukee Canopy Road Greenway at Arendell Way and Edenfield Road. In addition, road access to the Toe from Miccosukee Road at Dempsey Mayo within the existing road access easement may be approved in a PUD Concept Plan if it is determined by the local government with jurisdiction, based on analysis, that such a connection would

have a desirable impact on the Miccosukee Canopy Road. All impacts to the canopy road protection zone from such access roads shall be minimized.

(C) Road access to the Toe from Fleischmann Road shall be provided in accordance with City standards and subject to City approval.

(D) Road access to the Toe from Centerville Road shall be provided at one location.

(E) Welaunee Boulevard shall be designed consistent with a mixed-use development pattern and a pedestrian-friendly environment.

(i) It is the intent to promote the Welaunee Boulevard corridor as a "livable" roadway that supports and enhances a pedestrian-friendly environment. The character of this roadway, and the land uses along it, should be protected to ensure that strip development and auto-dependent land uses do not occur. Welaunee Boulevard should be designed to minimize changes to the natural contours of the landscape and vegetated areas along its length. Welaunee Boulevard should be designed so that the character of the roadway changes along its corridor.

(ii) In the "town" sections, Welaunee Boulevard should have a narrower right-of-way with roadway sections to be determined at the time of the PUD Concept Plans which may include on-street parking. Buildings should be placed close to the right-of-way with parking located behind. Pedestrians should have priority in the town and neighborhood centers. The highest number of road connections from the adjacent street network should occur in the town sections. Higher density residential uses and non-residential uses should be planned in the town sections.

(iii) In the "country" sections, land uses along the roadway should be lower density residential or open space. In these country sections, the design of the road shall minimize environmental impacts by utilizing split profile sections and wide medians to respond to topography and preserve vegetation. Right-of-way width shall vary consistent with the character of the area it is traversing while meeting level of service demands. Right-of-way in these areas shall accommodate medians with landscaping and may provide for an "eyebrow" road or, if necessary, accommodate a split-section profile for the purpose of minimizing environmental impacts.

(F) Welaunee Boulevard shall connect to an interchange with Interstate 10 subject to approval by Federal Highway Administration and Florida Department of Transportation. The interchange of Welaunee Boulevard and Interstate 10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange, which supports a gridded street system and city blocks on the south side of I-10. The gridded street system should serve to divert traffic onto a network of town center streets and should support a pedestrian environment. Until an interchange is approved and constructed, Welaunee Boulevard may pass over Interstate 10.

(G) Construction of Welaunee Boulevard shall be phased to accommodate transportation impacts from approved development of the Toe. The roadway phases shall be consistent with the Urban Services-Development Agreement

~~between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement) and shall be established in PUD Concept Plans in a manner that complies with the adequate public facilities requirements of this comprehensive plan and the land development code.~~

~~(3) The following transportation guidelines shall apply in the Heel as established in PUD Concept Plans and shown in Figure 13-4:~~

~~(A) Road access to the Heel from U.S. 90 shall occur in compliance with Florida Department of Transportation rules including the Shamrock South extension, which will traverse the Heel.~~

~~(B) Contingent upon approval by the Tallahassee Leon County M.P.O., the Shamrock South extension between Miccosukee Road and U.S. 90 will be shown on the 2025 updated long-range transportation plan as a component of the cost feasible plan, consistent with the Urban Services Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Service Agreement).~~

~~(C) Road access to the Heel from Miccosukee Road shall occur only at the existing Miles Johnson Road intersection and the Shamrock South extension, which will traverse the Heel, including the Miccosukee Canopy Road Greenway.~~

~~(D) Two roads may be constructed adjacent to the Miles Johnson Road roadbed and canopy if the local government with jurisdiction approves of incorporation of the existing Miles Johnson Road into the primary open space system.~~

~~(4) In PUD Concept Plans, the local government with jurisdiction shall require development on the Toe and Heel, respectively, to implement Transportation Demand Management (TDM) strategies, as appropriate, to reduce single-occupancy vehicle trips. Such strategies may include, but are not limited to, alternative work schedules, transportation allowances (carpool and vanpool programs), guaranteed ride home programs, telecommuting, transit supportive facilities (bus stops, shelters, etc.), and additional bicycle and pedestrian facilities and equipment.~~

~~*Policy 13.1.5: Public Facilities* **(EFF. 12/10/02; REV. EFF. 7/20/05)**~~

~~Public facilities shall be provided to serve residential and non-residential uses on a phased basis consistent with the level-of-service and availability standards of this comprehensive plan. The intent of this policy is to provide infrastructure needed to serve development that is predominantly self-supporting rather than predominantly dependent upon public funding consistent with the Urban Services Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990 as may be amended from time to time (referred to as the Urban Services Agreement). The intent of this policy will be achieved through implementation of the following guidelines:~~

~~(1) Potable water, sanitary sewer, electricity and natural gas service shall be provided to development on the Toe and Heel pursuant to the existing Urban Services-Development Agreement.~~

~~(2) All stormwater management facilities shall be designed to meet treatment standards for Outstanding Florida Waters (OFW) (i.e. the first .75 inches of rainfall) or the applicable local standard, whichever is greater. Maintenance responsibility for all stormwater management facilities shall be provided as established in the Stormwater Facilities Master Plan and the Urban Services Agreement. Facilities which are dedicated to the City must be constructed to City standards.~~

~~(3) Dove Pond may be incorporated into a regional stormwater management system and be utilized for the storage of treated stormwater to provide flood protection for downstream off-site property owners provided:~~

~~(A) It can be shown through the completion of an Environmental Impact Analysis (EIA) incorporated into a Stormwater Facilities Master Plan (SFMP) that, with any increase in flood volume or flood stage, the wetlands and associated conservation and preservation areas are minimally impacted.~~

~~(B) Such use may be undertaken only with the landowner's express approval.~~

~~(C) Public agencies shall pay a pro rata share of capital costs based on the off-site stormwater runoff to be stored in Dove Pond during flood events, provided the landowner makes available the necessary land or rights of use at no cost to the public contemporaneous with issuance of a final local development order which establishes and allocates buildout stormwater capacity for the Toe.~~

~~(D) Local government funding shall not be utilized for the portion of any stormwater management facilities necessary to accommodate on-site development.~~

~~(E) Criteria in Policy 13.1.7 are also achieved.~~

~~(4) To provide flood protection for downstream off-site property owners in the Tri-Basin Study Area, inter-basin transfers of stormwater may be permitted between sub-basins of the Welaunee Closed Basin and from the Welaunee Closed Basin to the Lafayette Oaks and Pedrick Closed Basins through a public conveyance system. Such transfers may occur only from Dove Pond as provided by this policy and Policy LU 13.1.7 and shall be deemed consistent with Policy 1.1.5 [SM], Policy 2.2.5 [C] and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable, when they comply with these criteria:~~

~~(A) Approval by the local government with jurisdiction of a regional stormwater management plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to water quality, quantity and rate of discharge due to inter-basin transfers to the receiving watershed.~~

~~(B) Approval of public funding, in an adopted local government budget, for off-site stormwater management facilities required by the regional plan.~~

~~(5) Facilities which discharge to or from an isolated or aggregated closed basin shall provide storage for the post-development increase in runoff volume for the 100-year, 24-hour critical storm.~~

~~(6) Facilities which discharge to Lake Lafayette shall provide both treatment and attenuation for storms consistent with the requirements of Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.~~

~~(7) The landowner shall reserve for future dedication, to the City of Tallahassee, a site for fire protection and emergency services, not to exceed two acres.~~

~~(8) Unless developed pursuant to Policy LU 13.1.9, a 24-acre site for a 500-pupil elementary school for Leon County Schools shall be reserved for future dedication to the Leon County School Board in the Heel proximate to residential areas, a town or neighborhood center and the primary open space system, with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.~~

~~(9) Public facilities and improvements necessary to serve development on the Toe and Heel may be financed, planned, established, acquired, constructed, reconstructed, enlarged, extended, equipped, operated or maintained by one or more community development districts subject to the requirements of Chapter 190, Florida Statutes.~~

~~(10) Prior to approval of the first PUD Concept Plan on the Toe or the Heel, except as allowed by Policy LU 6.2.4, a Stormwater Facilities Master Plan (SFMP) shall be prepared by the applicant and approved by the local government for the entire Toe and the entire Heel. The SFMP shall accommodate stormwater flows from full build out conditions from any upstream offsite property and the entire Toe or the entire Heel, as applicable. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance, establish infrastructure requirements necessary to manage stormwater in compliance with local, state and federal regulations, document the phasing, implementation and easement reservations necessary to serve full build-out and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land use, soils and topographic data, the conceptual land use plan, stage and water quality monitoring data and the applicable results and findings of the Natural Features Inventory and Environmental Impact Assessment. The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under full build-out conditions. Flood extents delineated by the SFMP shall allow identification of the 100-year flood exclusion area. No habitable structures shall be constructed within the post-~~

development (full build-out) 100-year floodplain. The SFMP's scope of work shall be approved by local government prior to development of the SFMP.

NOTE: Notwithstanding the above, the Heel may be developed under Policy LU 13.1.9, in which case the guidelines stated above will be adjusted to reflect the requirements of Policy LU 13.1.9.

Policy LU 13.1.6: General Design Standards **(EFF. 12/10/02; REV. EFF. 7/20/05)**

PUD Concept Plans shall incorporate design standards that will insure and guide mixed-use, integrated development that is pedestrian-friendly. In addition to the general design standards set forth in other policies, which support Land Use Objective 13.1, PUD Concept Plans shall be consistent with these general design standards:

(1) Sidewalks shall be provided throughout the Toe and Heel as follows:

(A) On both sides of Welaunee Boulevard. Sidewalks shall also be provided on both sides of collector roads and arterial roads in the Toe.

(B) On both sides of the Shamrock South extension which will traverse the Heel and on all other arterial and collector roadways in the Heel.

(C) On both sides of all streets in employment centers, town centers, and neighborhood centers.

(D) On one side in residential low-density and residential estate areas.

(E) On one side (fronting residences) of the two roads running parallel to Miles Johnson Road if it is closed to through traffic and incorporated into the primary open space system.

(F) Sidewalks shall be provided on both sides of streets in residential medium-density and residential high-density areas.

(2) On-street parking shall be accommodated where feasible in neighborhood and town centers and shall be credited toward parking requirements as specified in PUD Concept Plans.

(3) In town and neighborhood centers, parking shall be provided in the rear of buildings to the maximum extent feasible. Buildings shall be oriented to the street and designed with minimal setbacks from the road to promote a pedestrian-friendly environment. Criteria for a variance from build-to and setback lines may be established in PUD Concept Plans.

(4) PUD Concept Plans shall include integrated parking management strategies designed to achieve more efficient utilization of parking resources, mitigate peak travel demand and optimize the return on investments in public right-of-way. Integrated parking management strategies may include shared parking plans, short-term parking plans, parking areas "unbundled" from specific buildings, parking spillover prevention measures and time-limit strategies for on-street parking. Reductions from generally applicable parking space standards shall be granted in PUD Concept Plans when justified on the basis of integrated parking

~~management strategies, the mixed-use character of various portions of the development or other professionally accepted methodology.~~

~~(5) Town centers shall be designed as a marketplace for a variety of retailers to ensure that not all retail space is aggregated into one or two single "big-box" retail buildings.~~

~~(6) Building heights in town centers and neighborhood centers shall not exceed 65 feet from grade. Building heights in other land use categories shall be established in PUD Concept Plans at heights compatible with development in mixed-use centers and other land uses.~~

~~(7) Property signage in non-residential areas shall be provided in a coordinated manner that is compatible with the architectural vernacular and scale of development. It shall be consistent with a master signage plan established in PUD Concept Plans.~~

~~(8) Landscaping in common areas, residential areas, along roadways and in town, neighborhood and employment centers shall utilize only drought-resistant native plant species in an approved plant list established in PUD Concept Plans.~~

~~(9) Landscaping in town centers, neighborhood centers, employment centers and residential areas located within a one-quarter mile walking distance of those centers shall include street trees identified in an approved plant list established in PUD Concept Plans.~~

~~(10) Stormwater management facilities shall be designed consistent with the "Stormwater and Erosion and Sediment Control Best Management Practices for Developing Areas" as described in Chapter 6 of the FDEP Florida Development Manual, Appendix F of the Concurrency Manual and subject to local government approvals. During construction, sediment and erosion control shall be required as specified in Chapter 8 of the "Erosion and Sediment Control Handbook" (Goldman, Jackson, Bursztynsky).~~

~~(11) Constructed stormwater management facilities may be utilized to satisfy the open space requirements established in the PUD Concept Plans if the following general design standards are met:~~

~~(A) Stormwater management facilities shall be designed and constructed using predominantly non-angular, freeform, curvilinear contouring that visually integrates the facility into the overall landscape design.~~

~~(B) Retaining walls may be incorporated to maximize storage volume and to minimize excessive grade changes or tree removal, but may not exceed 50 percent of the limits of the facilities perimeter and may not exceed six feet in height. Terraced side slopes utilizing multiple retaining walls may be used when augmented with landscaping between retaining walls.~~

~~(C) Stabilized side slopes exceeding 4:1 slopes shall be planted with either artificial, erosion-resistant materials or with appropriate vegetative cover.~~

~~(D) Perimeter landscaping is a part of the design of the stormwater facility for dry retention/detention facilities as well as wet detention/treatment facilities.~~

(12) Integrated mixtures of land uses shall be located and designed to be consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement and natural access control.

Policy 13.1.7: Allowances **(EFF. 12/10/02; REV. EFF. 7/20/05)**

Development shall be designed on the Toe and the Heel to be consistent with the thresholds for impacts established in the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. Notwithstanding any other provisions of this Comprehensive Plan, development of the Toe and Heel may be subject to the following provisions as established in PUD Concept Plans:

(1) To reduce downstream flooding of off-site property owners in the Tri-Basin Study Area, Dove Pond may be utilized for the storage of treated stormwater as provided by this policy and Policy LU 13.1.5. If after the completion of the Environmental Impact Analysis (EIA) and Stormwater Facilities Master Plan (SFMP) it can be shown that impact to the wetlands and associated conservation and preservation areas have been minimized and that the impact to conservation and preservation areas is determined to be greater than 5 percent as allowed in Comprehensive Plan Policy 1.3.11[C], the Public Linear Infrastructure Variance process may be utilized to authorize the public regional stormwater management facility subject to the following:

(A) Local government approval of a regional stormwater plan for the Tri-Basin Study Area, based on a detailed assessment indicating minimal negative impacts to wetlands, water quality, quantity and rate of discharge both on-site and off-site due to inter-basin transfers to the receiving watershed.

(B) Approval of public funding, in an adopted local government budget, for off-site stormwater management facilities required by the regional plan.

(C) Impacts shall be permitted only when demonstrated to be the minimal impacts reasonably necessary to implement the regional plan.

(2) If Dove Pond is not utilized as a public regional stormwater management facility, then use of Dove Pond as a stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Comprehensive Plan and Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable.

(3) To promote creation of the primary open space systems and their integration into the planned mixed-use communities with appropriate credit, the PUD Concept Plans shall establish an open space requirement which includes credit for the primary open space system, protected preservation and conservation areas, areas of constructed landscape and the minimum on-site landscaping required for individual sites set forth in Policy LU 13.1.2. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designed to meet or exceed, on a cumulative basis, the

Landscape and Urban Forest requirements in Chapter 5, Environmental Management, Tallahassee Land Development Code or the Leon County EMA, whichever is applicable. These landscape standards shall include, but not be limited to, standards for provision of street trees in town centers and along public roadways, canopy trees and landscaped islands within parking lots, and special consideration of patriarch tree preservation. These standards will be developed to reflect the intent that town and neighborhood centers will be developed in an urban character with minimized setbacks and an emphasis on dense, mixed-use development. Various land uses in the Toe and the Heel shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5, Environmental Management, Tallahassee and Development Code or the Leon County EMA, whichever is applicable.

Policy 13.1.8: Agricultural and Silvicultural Activities **(EFF. 12/10/02; REV. EFF. 7/20/05)**

It is the intent of this Policy to ensure that land identified for urban development within the time frame of the Comprehensive Plan is available for development and will not be encroached upon by incompatible land uses. It is also the intent to insure the long-term viability of open space areas and conservation and preservation areas through the proper management of these areas. Open space, conservation and preservation areas are valuable amenities to developing areas. It is intended that agriculture and silviculture uses will continue in the Toe and the Heel up to the point that individual tracts are converted to urban land uses. It is expected that agriculture and silviculture uses will be compatible with the long-term viability of planned open space, conservation, and preservation areas through proper management. It is also expected that the amenity value of those natural resources for urban development will be far greater than their agriculture or silviculture values.

(1) Agriculture and silviculture will be recognized as an allowable interim use in all land use categories within the Toe and Heel.

(2) As soon as local government site plan or subdivision approval is granted for any portion of property within the Toe and Heel, agriculture and silviculture activities shall cease to be allowable activities on the land for which local government approval has been granted and shall be phased out as set forth in the development order approving the site plan or sub-division plat. This elimination of agriculture and silviculture uses is intended to apply to parcels of land identified within the site plan or subdivision and to all land included in these parcels, such as land proposed to serve as buffer or open space.

(3) Prior to subdivision or site plan approval, agriculture and silviculture uses shall be allowed to continue within the Toe and Heel in accordance with the "2000 Silviculture Best Management Practices" as may be amended from time to time, Florida Department of Agriculture and Consumer Services, and existing local government ordinances.

(4) Timber harvesting activities shall not be conducted until such time as the landowner has obtained a timber-harvesting permit in accordance with the environmental and stormwater management ordinances of the appropriate local government.

Policy LU 13.1.9 Alternative Heel Program **(Eff. 7/20/05)**

Notwithstanding any other provision of this comprehensive plan, at the election of the landowner or an authorized developer as much as 800 acres in the Heel as depicted on Figure 13-5 may be developed as a separate project, without regard to other development in the Welaunee Critical Planning Area, with a land use designation of "Residential Estate" and a zoning designation of "Residential Acre." Such development shall be reviewed by the City as a residential subdivision and shall be required to meet all normal and customary requirements for such a development under the City's land development regulations, including but not limited to the EMO. Any portion of the Heel developed under this alternative program shall be exempt from the Critical Area Plan except for the following provisions:

(1) LU 13.1.1(6)
(2) LU 13.1.1(8)
(3) LU 13.1.1(9)
(4) LU 13.1.2(1)
(5) LU 13.1.3(1)(H)
(6) LU 13.1.4(1)(F)
(7) LU 13.1.4(1)(J)
(8) LU 13.1.4(3)(A)
(9) LU 13.1.4(3)(B)
(10) LU 13.1.4(3)(C)
(11) LU 13.1.4(3)(D)
(12) LU 13.1.5(1)
(13) LU 13.1.5(6)
(14) LU 13.1.5(10) as modified
(15) LU 13.1.6(8)
(16) LU 13.1.6(10)
(17) LU 13.1.6(11)
(18) LU 13.1.8

Any portion of the Heel depicted in Figure 13-5 not developed under this alternative program shall be subject to the Critical Area Plan as it otherwise would apply. Uses and maximum densities and intensities of use for such portion shall be allocated pro rata based on the uses and maximum densities and intensities of use on Table 5-2 of the data and analysis report for the "Welaunee Critical Area Plan – Toe and Heel" (Jan. 17, 2002).

Objective 13.2: Development Concept for the Welaunee Arch **(Eff. 12/10/02; Rev. Eff. 1/11/21)**

The intent of the Welaunee Arch Master Plan is to provide an area-wide plan for the portion of the Welaunee Critical Planning Area located north of Interstate-10 and west of Miccosukee Road (i.e. the "Arch"). This master plan sets the standards and guidelines to coordinate one or more implementing development plans such that the development of the Arch results in a new, integrated community with a variety of land uses, diverse neighborhoods and mixed-use centers, a region-serving activity center, active and passive recreational options, and abundant open space. The development of the Arch consistent with this master plan shall be implemented in phases, connected by a multi-modal transportation system, served by regional, master planned stormwater facilities, and designed in ways that protect natural resources.

Policy 13.2.1: Concept. **(EFF. 1/11/21)**

This Welaunee Arch Master Plan satisfies the requirements of the Tallahassee-Leon County Comprehensive Plan for a planned development master plan in order to foster development on the Welaunee Arch with a region-serving, mixed-use activity center; residential areas with a strong sense of place and a range of diverse housing choices; transportation choices with linkage to commercial services and jobs; and planned recreation and open space.

Policy 13.2.2: Discourage Urban Sprawl. **(EFF. 1/11/21)**

The Welaunee Arch is located wholly within the Urban Services Area. Development within the Arch will discourage urban sprawl by, among other things, directing growth to a next-in-line area identified for future urban development since 1990; promoting walkable, connected neighborhoods that support a range of housing choices; implementing a multimodal transportation system that supports the internal capture of transportation trips; creating a balance of residential and nonresidential land uses through integrated, mixed-use centers and diverse housing types in close proximity to nonresidential uses; promoting the efficient and cost-effective provision or extension of public facilities and services; protecting and preserving natural resources; protecting environmentally sensitive lands; and providing public recreation and open space.

Policy 13.2.3: Implementation. **(EFF. 1/11/21)**

The Welaunee Arch Master Plan shall be implemented by one or more Planned Unit Development (PUD) Concept Plans, Regulating Plans with Form-based Codes, or other implementing plan as allowed by the Comprehensive Plan at the time of development. All such plans are referred to herein as Planned Development Concept Plans or PUD Concept Plans. Such PUD Concept Plans shall be consistent with this master plan and contain guidelines and requirements for land use categories, transportation facilities, access management, and other specific design standards. All PUD Concept Plans shall be consistent with the stormwater facility master plan and with transportation plans for the Phase of the Arch in which they are located, as developed and approved prior to or concurrent with the initial PUD Concept Plan for that Phase. The phasing of development in the Arch shall be consistent with necessary infrastructure and supporting services and the phasing requirements of Policy 13.2.5. Development Phases and PUD Concept Plans shall consider previously approved PUD Concept Plans within the Arch and anticipated development based on Figures 13-5 through 13-7 such that open space, stormwater, and transportation systems are planned and implemented consistent with the Policies in this Welaunee Arch Master Plan portion of the Welaunee Critical Area Plan.

A PUD Concept Plan may address only a portion of a Phase or may address more than one Phase. The minimum size for the initial PUD Concept Plan for any Phase of the Arch shall be 350 acres. Subsequent PUD Concept Plans shall be implemented consistent with this Master Plan and the applicable implementing plan standards allowed by the Comprehensive Plan at the time of development.

LAND USE

Policy 13.2.4: Land Use Districts. (EFF. 1/11/21)

The Master Plan forms the basis upon which organizing elements are oriented to convey the overall urban form. Lands within the Welaunee Arch shall be planned for the generalized land uses described in this Policy and Table 1. As depicted on Figure 13-5, the Welaunee Arch shall be designed with the following land use districts:

(1) **Northeast Gateway District –** The intent of the Northeast Gateway District is to provide an area that capitalizes on the location of a potential future interchange with Interstate-10 and Welaunee Boulevard by including well-designed, region-serving commercial and employment uses. The Northeast Gateway District as identified on Figure 13-5 shall be comprised of:

a. Activity Center. An activity center zone shall be a mixed use zone including between 75 and 280 acres. The activity center zone shall be located east of the residential zone, as generally depicted on Figure 13-5, and no closer than 1,000 feet from the Buckhead subdivision. This zone shall contain a diverse mixture of region-serving commercial, office, hotel, and other non-residential uses with a trade area extending beyond the Welaunee Arch. This zone may also contain higher-density residential and public and civic uses that can contribute to the center's vitality and sustainability. Residential densities in this zone shall have a minimum of 10 dwelling units per acre and a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Non-residential intensities shall range from 4,000 square feet per acre to 30,000 square feet per acre. The mixture of uses shall be 10% to 55% residential and community services uses and 45% to 90% non-residential uses. The activity center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

b. **Employment Center.** An employment center zone shall be a mixed-use zone located proximate to major transportation arteries in order to provide jobs for residents as well as regional employment opportunities and shall contain 75 to 280 acres. Employment centers are intended to contain a mix of uses and not be a single-use environment. Allowable uses include office, hotels and inns, light industrial, warehousing and distribution, laboratories, research, printing, banks, retail, restaurants and cafes, infrastructure

including stormwater management facilities, civic, religious and institutional uses and educational uses. Residential uses shall not be allowed in Employment Center zones except when located above the ground floor in mixed-use buildings. Development intensities of non-residential uses in the employment center zone shall range from 8,000 square feet per acre to 40,000 square feet per acre. This zone shall be designed with shared parking opportunities for nonresidential uses that have peak parking demands other than during normal office hours. The development of a PUD Concept Plan that includes this zone shall include coordination with Star Metro to include preliminary plans for transit connectivity between this zone and other mixed-use zones in the Arch. The employment center shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center.

c. **Residential.** A residential zone shall be located between the Buckhead subdivision and the mixed-use zones as generally depicted on Figure 13-5. This residential zone shall include between 30 and 100 acres. Residential development density shall be no less than 2 dwelling units per acre and not exceed 6 dwelling units per acre. Accessory dwelling units shall not count towards the residential density in this zone.

d. **Open Space/Greenway.** The Open Space and Greenway area within the Northeast Gateway District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with the development standards of Policy 13.2.37. Specifically, an open space zone shall be located along the border with the established Buckhead Neighborhood serving as a buffer between the existing Buckhead Neighborhood and new development in the Arch. This zone shall be no less than 250 feet wide and will include the Welaunee Greenway and existing utility easements. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(2) **West Arch District** – The intent of the West Arch District is to provide an area with a mixed-use center that serves residents of both Welaunee via Welaunee Boulevard and Killearn Neighborhoods via Shamrock South. It is the intent of this District to allow the highest density and intensity development within the mixed-use center, gradually transitioning to lower densities and intensities as distance

from the mixed-use center increases. The West Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the West Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone.

b. Town Center. A town center zone shall be a mixed-use development planned as a compact, efficient node between 20 and 120 acres in size. A town center shall contain uses that serve surrounding neighborhoods as well as those traveling through the area. Allowable uses include office, retail, restaurants, bed and breakfasts, hotels and inns, theaters and other entertainment venues, specialty retail, grocery stores, residential, home occupational uses, open space, and civic, religious and institutional uses (including day care services for children and adults). The Town Center shall include uses mixed horizontally and vertically. It is the design intent to plan for multiple storefronts and multiple retailers in the town center, so all of the available retail space is not aggregated into one or two "big-box" stores.

Development intensities in the town center shall range from 4,000 square feet per acre up to 30,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 50,000 gross square feet. Residential densities shall be no less than 8 dwelling units per acre up to a maximum of 20 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. The mixture of uses shall be 10% to 55% residential and community services and 45% to 90% non-residential uses. Town centers shall be planned on a block system with a gridded road network to facilitate connectivity. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages. Traffic calming measures such as on-street parking, buildings close to the road with parking in back, streetscapes with street trees and landscaping, and other such solutions shall be utilized to create a pedestrian-friendly, walkable center. Community open space in the form of public squares and greens or urban forest canopy areas shall be planned as a focal point for a town center. No minimum on-site open space shall be required on each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

c. **Village Center.** A village center zone shall allow small retail, specialty retail, office, restaurants, services, open space, residential and other uses (including day care services for children and adults) that support residential uses within the District. This zone is also intended to function as a neighborhood focal point and is envisioned to have churches, town squares, and other civic, religious, and institutional uses. The village center zone shall range in size from 5 to 50 acres and shall be designed to create a pedestrian-friendly environment. Traffic calming measures, such as on-street parking, buildings up close to the road with parking in back, streetscape with street trees and landscaping, and other such solutions, shall be utilized to create a pedestrian friendly, walkable center. Block lengths shall generally be less than 500 feet with block perimeters generally being less than 3,000 feet. Bicycle and Pedestrian paths and drive aisles that directly connect to the parallel street may count as block end points, provided they include pedestrian facilities and accommodations that are required along frontages.

The mixture of uses shall be 0% to 50% residential and community services and 50% to 100% non-residential uses. Development intensities in the village center zone shall range from 4,000 square feet per acre to 20,000 square feet per acre. Individual building footprints for non-residential uses shall not exceed 30,000 gross square feet. Residential development in the Village Center shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre for residential development not in vertically mixed-use buildings. Residential uses shall be encouraged above ground-floor retail and other nonresidential uses. Community open space in the form of village squares and village greens or urban forest canopy areas shall be planned as the focal point of a village center. No minimum on-site open space shall be required for each preliminary plat; however, exceptional specimen trees, patriarch trees, and trees of significant size for its species that are in very good health shall be protected.

d. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In the neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use zones that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods. Residential development shall be limited to a minimum of 2 dwelling units per acre with a maximum density of 10 dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway.

f. **Open Space/ Greenway.** The Open Space and Greenway area within the West Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated as Open Space.

(3) **North Arch District** – The intent of the North Arch District is to provide an area with a mixed-use center that serves residents of Welaunee, Killearn, and the residents along Roberts Road and Crump Road. The North Arch District as identified on Figure 13-5 shall be comprised of:

a. Mixed-Use Center. Development of the North Arch District shall include a single mixed-use center designated as either a Town Center zone or Village Center zone as defined in the West Arch District policy.

b. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall be not exceed 10,000 gross square feet.

c. **Residential.** The Residential zone is intended to provide the opportunity for a range of housing choices in proximity to mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. Residential development shall be a minimum of 2 dwelling units per acre and shall not exceed a density of 10

dwelling units per acre, comparable to the maximum density of the Urban Residential land use category, mixed with open spaces and compatible with protected areas such as the Welaunee Greenway. This zone is intended to provide a transition from the mixed-use center and neighborhood zones to existing development in the Killearn neighborhoods.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the North Arch District includes all open space within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37. In total, a minimum of 20% of the gross area in Phase 1 shall be designated Open Space.

Additionally, high quality native forests in the North Arch District shall be protected, preserved, and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

e. **Regional Park.** A regional park with active recreation may be located in the North Arch District. If a regional park is designated within this District, it shall be designed to include connectivity with the trail system around any high-quality successional forests/native forests as described in the open space zone for this District.

(4) **Conservation Design District** - The intent of the Conservation Design District is to provide an area that is primarily residential in nature with a small village center. The residential development is intended to be arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. The village center is intended to include non-residential uses in a location that minimizes the number of miles residents drive to meet their daily needs and promote the internal capture of vehicular trips. The Conservation Design District as identified on Figure 13-5 shall be comprised of:

a. **Clustered Residential.** The cluster residential zone shall be comprised of clustered development that sets aside a minimum of 50% open space as a reserve area, comprised of such things as special development zones, preservation and conservation features, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, and stormwater facilities designed as a community amenity. Adjacent open space as designated on

~~Figure 13-5 and consistent with Policy 13.2.37 may be included in the Conservation Design District reserve area calculations for cluster development. The development area shall be the area not set aside as reserve area and shall comprise no more than 50% of the total conservation design district. Within this district, development area shall be located on the least environmentally sensitive areas; be contiguous to the greatest extent practicable; and allow maximum open space to be easily maintained in the reserve area. The development area shall be developed at a minimum of two dwelling units per acre and a maximum of 12 dwelling units per acre. Planned Unit Developments may provide for a density bonus up to 20 dwelling units per acre where more area is set aside than required or where greenways, trails, or other passive recreational opportunities are provided in the reserve area.~~

~~The conservation design district shall contain a mixture of housing types. Allowable housing types include single family detached homes, single family attached homes, duplexes, triplexes, fourplexes, courtyard buildings (a 1 to 3.5 story detached structure consisting of multiple side-by-side and/or stacked dwelling units oriented around a courtyard or series of courtyards), and cottage courts (a group 1 to 1.5 story detached structures arranged around a shared court visible from the street). The conservation design district shall not contain greater than 80% of any one housing type. Accessory dwelling units are allowable per City of Tallahassee land development code. Accessory dwelling units do not count towards the overall density and do not count as a different housing type for the purpose of requiring a mixture of housing types. Design standards for this District shall include Dark Sky principles to prevent and reduce light pollution.~~

~~The acreage of the reserve area shall be preserved as open space consistent with Policy 13.2.37, shall incorporate existing or planned public or private open space and greenspace to the greatest extent practicable, and shall be of sufficient size and buffered to ensure the protection of all critical on-site resources that are to be preserved and to accommodate authorized uses which includes natural open space, passive recreation uses (e.g., greenways, picnic areas or open fields), stormwater facilities, or other environmental conservation purposes.~~

~~All preservation areas, special development zones, conservation areas, archaeological sites and view-shed areas within designated protection zones for canopy roads shall be incorporated into the reserve area to the greatest extent practicable.~~

~~Stormwater management facilities which are otherwise permissible are allowed in the reserve area provided that the facilities are located outside of preservation areas, canopy road zones, naturally forested areas, special development zones, and meet either of the applicable following two standards:~~

i. Stormwater management facilities shall have side slopes of flatter than 4:1, and/or
ii. Stormwater management facilities shall have appropriate tree and plant species that visually integrates the stormwater facility into the overall reserve area.

All such facilities shall be designed as community amenities, with trails, observation decks, or platforms where appropriate.

b. **Village Center.** The Conservation Design District shall include a Village Center Zone subject to the design standards for a Village Center zone in the West Arch District Policy.

c. **Neighborhood.** The neighborhood zone is intended to provide the opportunity for a range of housing choices integrated with neighborhood scale, non-residential uses in proximity to a mixed-use land use districts that include nonresidential uses which can provide commercial shopping opportunities to meet daily needs. This zone shall be located within ¼ to ½ mile from the edge of the mixed-use center zone. In this neighborhood zone, residential development shall be no less than 4 dwelling units per acre and not exceed 14 dwelling units per acre. The maximum gross intensity allowed for new non-residential development is 20,000 square feet per acre. Building footprints for non-residential uses shall not exceed10,000 gross square feet.

d. **Open Space/ Greenway.** The Open Space and Greenway area within the Conservation Design District includes all open space and reserve area within the district and may incorporate the adjacent primary open space system as depicted on Figure 13-5. This area shall be consistent with Policy 13.2.37 and shall be included in the reserve area calculations for cluster development. At a minimum 50% of this District shall be designated as Open Space.

High quality successional forests and native forests as defined in the Tallahassee-Leon County Comprehensive Plan Glossary in the Conservation Design District shall be protected and preserved and included in the open space area. Trails shall be planned around the high-quality successional forests/native forest areas to serve as both recreational facilities and as fire breaks when these areas are managed with prescribed fires. Potential locations of high-quality successional forests/native forests are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features

Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

Core canopy or core forests, as defined in the City of Tallahassee's Urban Forest Master Plan, that is part of the fragmentation class of Core Canopy (>500 acres) and shown on the Preliminary Environmental Map (Figure 13-6), shall be protected, included in the open space area, and shall be connected to greenways and open space that function as wildlife corridors. These areas may be included in the reserve area calculations for cluster development. Potential locations of core forest areas that are part of the fragmentation class of Core Canopy (>500 acres) are shown on the Preliminary Environmental Map (Figure 13-6). The location of protected areas will be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes this District.

(5)**Residential Reserve District** - The Residential Reserve District as identified on Figure 13-5 is intended to be residential in nature, arranged as cluster subdivisions in order to maximize the efficiency of infrastructure and to preserve environmental features and open spaces. This District is also intended to maintain compatibility with established residential development along Roberts Road and Crump Road. The Residential Reserve District shall be subject to the Clustered Residential policy of the Conservation Design District with a maximum density of 6 dwelling units per acre and a minimum reserve area requirement of 60%. The Residential Reserve District shall include open space buffers of a minimum width of 250 feet to Roberts Road and Crump Road that may include the Welaunee Greenway system, open space, and reserve area from cluster subdivision development. The Residential Reserve District may alternatively be established as Open Space through an optional Alternative Development Program as established in Policy 13.2.44.

(6) **Open Space** – Open Space area shall be incorporated into each District. Districts shown in Figure 13-5 include the adjacent open space. The Primary Open Space System shall be designed as a connected network of open space as generally depicted on Welaunee Arch Map, Figure 13-5, which shall include Conservation and Preservation areas as generally depicted on the Preliminary Environmental Features Map, Figure 13-6, aesthetic open space, Greenways, and the Perpetual Drainage Easement held by the City and County. A minimum of 20% of Phase 1, 50% of Phase 2, 60% of Phase 3, and 40% of the total gross area of the Arch shall be designated Open Space unless offset through the Alternative Development Program in Policy 13.2.44. Conservation and Preservation Areas as defined in Policy 1.3.1 and 1.3.4 of the Conservation Element account for approximately 19% of the overall gross area of the Welaunee Arch. The remainder of the designated open space, which will include approximately 21% of the overall gross area, shall consist of open space incorporated into the development plan for each District or part of the Primary Open Space System. The Open Space Area shall be subject to

~~the design and development criteria in Policy 13.2.37. The Conservation and Preservation Areas shall be subject to the design and development criteria of Policy 13.2.38.~~

~~*Policy 13.2.5: Phasing.* **(EFF. 1/11/21)~~**

~~Development of the Arch shall be implemented in phases consistent with this plan and necessary infrastructure (including water and sewer) and supporting services (including adequate schools, police and fire service). Phase 1 shall include the Gateway District, West Arch District, and the North Arch District. Phase 2 shall include the Conservation Design District. Phase 3 shall include the Residential Reserve District. A PUD Concept Plan may address only a portion of a phase or may address more than one phase. Phase 1 of the Welaunee Arch must include one Town Center Zone and one Village Center Zone, either of which can be located in the West Arch District or North Arch District.~~

~~Phase 2 shall not be developed until 1,500 dwelling units and 150,000 square feet of non-residential uses have been constructed in Phase 1.~~

~~Phase 3 shall not be developed until at least 70% of the gross acreage of Phase 2 is included in an adopted PUD Concept Plan. Sub phases or stages of each phase may be developed in separate PUD Concept Plans.~~

~~It is the intent that infrastructure improvements occur contemporaneous with development. This timing of infrastructure with development prevents stranded or early investment in infrastructure.~~

~~I. Land Use~~

Table 1. Land Uses in the Welaunee Arch

~~District~~	~~Zone~~	~~Size~~	~~Nonresidential Intensity~~	~~Residential Density~~	~~Mixture~~
~~Northeast Gateway District (Phase 1)~~	~~Activity Center~~	~~75-280 acres~~	~~4,000-30,000 SF/acre~~	~~10-20 DU/acre~~	~~10-55% residential~~ ~~45-90% nonresidential~~
	~~Employment Center~~	~~75-280 acres~~	~~8,000-40,000 SF/acre~~	~~n/a[1]~~	~~n/a[1]~~
	~~Residential~~	~~30-100 acres~~	~~n/a~~	~~2-6 DU/acre~~	~~n/a~~
	~~Open Space~~	~~Min. 20% of gross area in Phase 1~~			
~~West Arch District (Phase 1)~~	~~Town Center[2]~~	~~20-120 acres~~	~~4,000-30,000 SF/acre~~	~~8-20 DU/acre~~	~~10-55% residential~~ ~~45-90% nonresidential~~
	~~Neighborhood~~	~~¼-½ mile from Town Center~~	~~Max 20,000 SF/acre~~	~~4-14 DU/acre~~	~~n/a~~
	~~Residential~~		~~n/a~~	~~2-10 DU/acre~~	~~n/a~~
	~~Open Space~~	~~Min. 20% of gross area in Phase 1~~			
~~North Arch District (Phase 1)~~	~~Village Center[2]~~	~~5-50 acres~~	~~4,000-20,000 SF/acre~~	~~4-14 DU/acre~~	~~0-50% residential~~ ~~50-100% nonresidential~~
	~~Neighborhood~~	~~¼-½ mile from Village Center~~	~~Max 20,000 SF/acre~~	~~4-14 DU/acre~~	~~n/a~~
	~~Residential~~		~~n/a~~	~~2-10 DU/acre~~	
	~~Open Space~~	~~Min. 20% of gross area in Phase 1~~			
~~Conservation Design District (Phase 2)~~	~~Village Center~~	~~5-50 acres~~	~~4,000-20,000 SF/acre~~	~~4-14 DU/acre~~	
	~~Neighborhood~~	~~¼-½ mile from Village Center~~	~~Max 20,000 SF/acre~~	~~4-14 DU/acre~~	~~n/a~~

	Conservation Design Clustered Residential	Maximum 50% of Conservation Design District	n/a	2-12 DU/acre	
	Open Space	Min. 50% gross area as Reserve Area in Phase 2.			
Residential Reserve (Phase 3)	Residential Reserve Clustered Residential	40% of Residential Reserve District	n/a	0-6 DU/acre	
	Open Space	60% gross area as Reserve Area in Phase 3.			
Open Space[3,4]	Open Space	Minimum of 20% of Phase 1; 50% of Phase 2; no less than 60% of Phase 3; and no less than 40% of total area in Welaunee Arch. Open Space includes Conservation and Preservation Areas, Reserve Area, and Primary Open Space Areas.			
	Conservation/ Preservation[5]	Approximately 900 acres (19% of the Arch)			
	Other Open Space	Approximately 1000 acres (21% of the Arch)			

1. Residential uses permitted only above ground floor in mixed-use buildings

2. Town Center Zone and Village Center Zone are permitted in West Arch District and North Arch District, provided one of each zone is located in Phase 1.

3. Open Space, including Conservation and Preservation Areas and Greenways shall be incorporated into all development Phases.

4. Open Space requirements apply unless offset through the Alternative Development Program in Policy 13.2.44.

5. Precise size and location of Conservation and Preservation Areas to be determined through a Natural Features Inventory.

Policy 13.2.6: Development Totals. **(EFF. 1/11/21)**

Densities and intensities for development of the Arch shall be consistent with Policy 13.2.4 and other policies of this master plan. The maximum development for the Arch shall not exceed 12,500 residential units and 3,000,000 square feet of non-residential development.

Policy 13.2.7: Development Standards for Mixed-Use Zones. **(Eff. 1/11/21)**

The Activity Center, Employment Center, Town Center, and Village Centers (collectively "Mixed-Use Zones") shall be subject to the following development standards in addition to the requirements of Policy 13.2.4:

(1) PUD Concept Plans that include mixed-use zones shall include specific design standards, public facility standards, and building standards, such that the district develops as a compact, walkable urban district. At a minimum, the form-based code or design standards shall address relationship between building facades and the public realm, the form and mass of buildings in relation to one another, and the scale and types of streets and blocks. Design standards shall also minimize driveway cuts along sidewalks facilities by requiring alleys, shared access points, and/or structured parking facilities.
(2) Development in the Mixed-Use Zones may request a waiver from the requirements in the Environmental Management Ordinance for natural area, landscaping and buffers for the purpose of maximizing intensity and density within the mixed-use zone.
(3) Stormwater detention and treatment facilities for Mixed-Use Zones shall be designed in accordance with applicable standards and should be located outside of a Mixed-Use Zones in order to promote a compact pedestrian-oriented arrangement of land uses. Stormwater facilities may be located within mixed-use zones if alternative sites are not reasonably available outside of mixed-use zones or where stormwater facilities can be integrated with pedestrian friendly environments. PUD Concept Plans shall include design standards for stormwater facilities that are consistent with the intent of the zone.
(4) Building heights in mixed-use centers shall not exceed 65 feet from grade.

Policy 13.2.8: Inclusionary housing. **(Eff. 1/11/21)**

Development within the Welaunee Arch shall comply with any ordinances in effect at the time of development that address the need for affordable or inclusionary housing. Each PUD Concept Plan shall include a Housing Plan designed to achieve compliance with the City's Inclusionary Housing Ordinance, or other affordable and inclusionary housing ordinances in effect, by buildout of the area governed by that Concept Plan.

Policy 13.2.9: Housing affordability. **(Eff. 1/11/21)**

In addition to complying with ordinances in effect at the time of development that address the need for affordable or inclusionary housing, a range of housing choices shall be provided to accommodate diverse income levels, age groups, people with a range of abilities, and housing needs. Granny flats, garage apartments, and other accessory dwelling units will not be included in unit or density calculations or transportation impact analyses. The range of housing options provided shall be based on the land use districts and zones within each District. No land use district or zone within a district that allows residential development shall limit housing types to only single-family detached homes.

In order to promote a range of housing types and choices, the City of Tallahassee shall incentivize the development of workforce housing within ¼ mile of mixed-use zones or transit hubs. The City shall also incentivize the provision of housing for low-income and very-low income families, seniors, and/or people with disabilities. Incentives shall be incorporated into PUD Concept Plans and may include increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures such as the incentives allowed in the City's Inclusionary Housing Ordinance.

Policy 13.2.10: Community Facilities. **(EFF. 1/11/21)**

Community Services, Light Infrastructure, Community Parks, and Neighborhood Parks shall be allowed uses in any land use district or zone consistent with the intent of each district and zone.

Policy 13.2.11: Essential Services. **(EFF. 1/11/21)**

Mixed-use centers and residential neighborhoods shall be designed to facilitate essential services, such as fire, police, and emergency medical services consistent with generally accepted response times. PUD Concept Plans shall include the locations of essential services upon request by and through coordination and formal agreement with the City of Tallahassee and/or the Leon County School Board.

Policy 13.2.12: Landscaping. **(EFF. 1/11/21)**

All landscaped areas, except athletic playing fields and golf course fairways and greens, shall utilize drought-resistant native plant materials from the "Florida Friendly Landscaping™ Guide to Plant Selection and Landscape Design" or other regionally appropriate plant material guide approved by the City. Landscaping may not include invasive species listed by the Florida Exotic Pest Plan Council. Landscaping in mixed-use and neighborhood zones shall include shade trees planted as street trees. PUD concept plans may include incentives, such as reduced tree mitigation, for shade trees planted as street trees outside of mixed use and neighborhood zones.

Policy 13.2.13: Crime Prevention through Design. **(EFF. 1/11/21)**

Integrated mixtures of uses shall be located and designed consistent with comprehensive crime prevention strategies of natural surveillance, territorial reinforcement, and natural access control.

Policy 13.2.14: General Compatibility. **(EFF. 1/11/21)**

Development in the Welaunee Arch shall be compatible with adjoining land uses through measures including but not limited to density and height limitations, setbacks, and

vegetative and open space buffers. Unless otherwise specified in this master plan, buffers are not required between or within land use districts in the Welaunee Arch.

Policy 13.2.15: Compatibility with Existing Residential Development. **(EFF. 1/11/21)**

To facilitate compatibility with the existing residential developments located east of Centerville Road and west of Miccosukee Road that are designated as Residential Preservation or Urban Residential-2 on the Future Land Use Map, land in the Welaunee Arch that is within 1,000 feet of such neighborhoods as measured from the boundary of the neighborhood shall be limited to open space, greenways, and residential uses with a maximum density of 6 dwelling units per acre comparable to the Residential Preservation Land Use Category. Mixed Use Land Use districts shall extend no closer than 1,000 feet from these existing residential developments. The location and size of each specific use category shall be depicted on a Planned Unit Development (PUD) Concept Plan.

Policy 13.2.16: Interim Uses. **(EFF. 1/11/21)**

Agricultural and silvicultural uses, whether existing or new, shall be an allowed interim use in any area of the Welaunee Arch on which development is planned to occur, up to and until the start of actual construction on the applicable land.

TRANSPORTATION

Policy 13.2.17: Transportation System. **(EFF. 1/11/21)**

The Welaunee Arch shall be served by a transportation system designed to optimize mobility. Major thoroughfares shall be generally located as depicted on Welaunee Arch Transportation Map, Figure 13-7, with the final location and design to be based upon site-specific environmental, engineering, and related considerations. Thoroughfares connecting through the Arch to areas beyond the Arch shall be arterials designed as boulevards for high vehicular capacity and moderate speeds not to exceed a design speed of 45 miles per hour with sidewalks on both sides of the roadway and bicycle facilities. Thoroughfares connecting mixed use areas within the Arch shall be collectors designed as avenues with high vehicular capacity and low to moderate speeds not to exceed a design speed of 30 miles per hour with sidewalks on both side of the roadway and bicycle facilities. On thoroughfares, a shared use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for the sidewalk on one side of the road and the bike lanes for that facility. Within mixed-use centers and neighborhoods, where feasible based on engineering design criteria and the protection of environmental features, a grid of interconnected streets will provide alternative travel paths. Energy efficiency shall be accomplished in areas that are intended for greater densities and intensities through support of frequent transit service and providing a safe, comfortable and attractive environment for pedestrians and cyclists. Transportation facility needs, including planned future corridors and projected deficiencies on existing facilities surrounding the Arch, resulting from projected development in the Arch as identified through traffic models completed as part of the I-10 Interchange PD&E and/or updates to MPO Long Range Transportation Plans shall be adopted into the applicable Mobility Element

policies and/or figures and updates to the Capital Improvements Element when applicable.

Policy 13.2.18: Internal Trip Capture. **(EFF. 1/11/21)**

The transportation system, along with the mixture of uses, shall be designed to achieve an internal capture of at least 20% of the vehicular trips generated on-site at buildout. To achieve this minimum internal capture rate, mixed-use and neighborhood zones shall be developed with a mixture of uses and higher density residential development located adjacent to non-residential uses. Residential zones shall be connected to mixed use zones by a network of sidewalks, shared use paths, and bicycle facilities designed to provide safe, comfortable transportation options. Transit facilities shall be coordinated with Star Metro to ensure infrastructure that supports connectivity to various transit routes.

Policy 13.2.19: Northeast Gateway/Welaunee Boulevard. **(EFF. 1/11/21)**

The Northeast Gateway, which is a major infrastructure project for the entire Welaunee Critical Planning Area, consists of region-serving roads to distribute traffic north, south, east and west from a potential I-10 interchange at Welaunee Boulevard, which was recommended in the Florida Department of Transportation (FDOT) Master Plan Update on February 28, 2013. North of I-10, the roadways that make up the Northeast Gateway include the extension of Welaunee Boulevard from south of I-10 north through the Arch, and the extension of Shamrock South from Centerville Road to U.S. 90 (Mahan Drive). Welaunee Boulevard and Shamrock South Extension are programmed to be constructed by the Blueprint Intergovernmental Agency consistent with the voter-approved Northeast Gateway project and may be phased based upon trip demand. Within the Arch, both Welaunee Boulevard and Shamrock South Extension shall be designed to function as a complete street to promote mobility for multiple users – pedestrians, bicyclists, motorists, and transit riders of all ages. No residential driveways shall connect directly to Welaunee Boulevard or Shamrock South Extension.

Policy 13.2.20: I-10 Flyover or Interchange. **(EFF. 1/11/21)**

Welaunee Boulevard shall connect to a flyover across I-10 or a potential interchange, if approved by the Federal Highway Administration, in order to facilitate vehicular movement to Welaunee Boulevard south of I-10. Any flyover or potential interchange shall meet federal requirements to ensure the safe and efficient use of I-10.

Welaunee Boulevard shall connect to a potential interchange with Interstate-10, subject to approval by the Federal Highway Administration and the Florida Department of Transportation. The potential interchange of Welaunee Boulevard and Interstate-10 shall be designed consistent with a federally approved Interchange Justification Report. It is the intent to allow for the design of an interchange that supports a gridded street network and city blocks on the north side of Interstate-10. The gridded street system shall serve to divert traffic onto a network of town center streets and shall support an environment that

prioritizes pedestrian mobility. Welaunee Boulevard may pass over Interstate 10 unless and until such time that a potential interchange is approved and constructed.

Policy 13.2.21: Right-of-Way Reservation. **(EFF. 1/11/21)**

The landowner shall reserve for future conveyance the right-of-way for Welaunee Boulevard, the Shamrock South Extension, and the I-10 Flyover or Interchange as generally depicted on Welaunee Arch Transportation Map, Figure 13-7. The terms of such reservation shall be consistent with the Urban Services-Development Agreement between the City of Tallahassee and Powerhouse, Inc. dated April 15, 1990, as restated and amended. Rights-of-way shall be restricted to transportation facilities and compatible infrastructure.

Policy 13.2.22: Complete Streets. **(EFF. 1/11/21)**

The transportation system shall be designed with complete streets in accordance with Objective 1.2 [M] and associated policies in the Mobility Element. A PUD Concept Plan shall provide in mixed-use centers for complete streets that include safe and convenient pedestrian facilities reasonably free from hazards and adequately separated from streets that carry high volumes of vehicular traffic and create a reasonable and direct route between destinations. Sidewalks shall be provided on both sides of local streets in mixed-use zones. Sidewalks shall be provided on at least one side of local streets in zones that allow only residential development.

Policy 13.2.23: Bicycle Facilities. **(EFF. 1/11/21)**

A PUD Concept Plan shall include a network of bicycle facilities, including on-street and off-street facilities, which should be coordinated with the open space areas of the Arch. The intent is to provide safe and convenient movement for bicycles reasonably free from hazard and providing a reasonable and direct route between destinations. Bicycle facilities shall be designed where practical to connect to similar facilities in other PUD Concept Plans. Where feasible, a shared-use path of adequate width to accommodate bicycle and pedestrian traffic may substitute for sidewalks and bike lanes. Protected bicycle lanes may be incorporated where feasible. Where bicycle, pedestrian, and/or shared use path facilities intersect the Welaunee Greenway, opportunities shall be provided to access the Greenway.

Policy 13.2.24: Parking in Mixed-Use Centers. **(EFF. 1/11/21)**

In mixed-use centers, vehicular parking shall be located on the street, in parking structures, or off-street at the street level. Off-street parking shall be provided in the rear of buildings where feasible based on engineering design standards and the protection of environmental features, or on the side of buildings and shall be limited in size and scale through such measures as shared parking, parking credits, and maximum parking limits. PUD Concept Plans may include incentives, such as reduced parking or setback requirements, for the use of building-mounted solar systems on parking structures.

~~Policy 13.2.25: Canopy Roads.~~ **~~(Eff. 1/11/21)~~**

~~Direct access to Canopy Roads shall not be permitted for any residential or nonresidential uses except parks or open space. Road access to the Welaunee Arch shall be provided from Miccosukee Road at no more than three locations. Road access to the Arch shall be provided from Centerville Road in no more than two locations. Canopy Road Zones shall be provided along Miccosukee Road and Centerville Road in addition to the Welaunee Greenway. PUD Concept Plans may include incentives, such as reduced tree mitigation, in return for new roadways being designed and planted with shade trees consistent with the requirements for future canopy road designation.~~

~~Policy 13.2.26: Transit.~~ **~~(Eff. 1/11/21)~~**

~~Mixed use centers are intended to be designed with transit as a component of the multimodal transportation system in the Welaunee Arch. As PUDs are developed, coordination with Star Metro shall occur to ensure the plan accommodates necessary infrastructure to support anticipated transit service. PUDs shall address connectivity between mixed use zones and the transit hub identified in Policy 13.1.4.~~

~~Policy 13.2.27: Electric, Connected and Automated Vehicles.~~ **~~(Eff. 1/11/21)~~**

~~As PUDs are developed, coordination with the Planning Department and the City's Public Infrastructure departments shall occur to ensure the plan accommodates necessary infrastructure to support charging infrastructure for electric vehicles and infrastructure to support Connected and Automated Vehicles (CAV). PUDs may include incentives, such as reduced parking and setback requirements, for development that is electric vehicle capable or electric vehicle ready by providing for the future installation and use of Electric Vehicle Supply Equipment (EVSE) in accordance with the National Electrical Code. Incentives will be greater for electric vehicle-ready than for electric vehicle-capable developments.~~

~~Policy 13.2.28: Transportation Concurrency.~~ **~~(Eff. 1/11/21)~~**

~~Prior to approval, PUD Concept Plans shall be required to demonstrate sufficient capacity of concurrency facilities to meet the standards for level of service for the existing population, previously permitted development and for the proposed development plan in accordance with the City of Tallahassee Concurrency requirements. This demonstration shall include a transportation analysis for limited access, arterial, and collector roads, including the Northeast Gateway/Welaunee Boulevard, in accordance with the City Concurrency Management System Policy and Procedures Manual. If the City's transportation concurrency system is replaced with a Mobility Fee or another alternative mobility funding system, PUD Concept Plans shall comply with the mobility funding system in place at the time.~~

~~PUBLIC FACILITIES AND SERVICES~~

~~*Policy 13.2.29: Adequate Public Facilities and Services.* **(EFF. 1/11/21)**~~

~~The supply and delivery of safe and adequate public facilities shall accommodate existing and future development consistent with the Comprehensive Plan. Development in the Welaunee Arch shall be served by adequate public facilities and services as required by law and consistent with the Welaunee Urban Services-Development Agreement, as restated and amended. Public facilities and services may be phased and financed, constructed, owned, operated, or maintained by any entity allowed by law, including but not limited to independent or dependent special districts, property owner associations, homeowner associations, or any combination of such entities. Any such entity may finance public facilities through any means allowed by law.~~

~~*Policy 13.2.30: Utilities.* **(EFF. 1/11/21)**~~

~~Potable water, sanitary sewer, and electricity service shall be provided by the City pursuant to the Welaunee Urban Services-Development Agreement, as restated and amended. Private providers shall provide telecommunications services. The installation of utilities may be phased consistent with the level-of-service and availability standards of the Tallahassee-Leon County Comprehensive Plan. Utility infrastructure improvements shall occur consistent with the general timing of development, instead of the infrastructure being provided well before development occurs. This timing of infrastructure with development is intended to ensure that there is no stranded or early investment in infrastructure waiting for future development to occur.~~

~~*Policy 13.2.31: Clean Energy.* **(EFF. 1/11/21)**~~

~~PUD Concept Plans may incorporate strategies and standards that are consistent with the City of Tallahassee's Clean Energy Resolution or any clean energy plan adopted by the City subsequent to the resolution. PUD Concept Plans shall comply with applicable clean energy and renewable energy ordinances in effect at the time of development. PUDs may include additional incentives to encourage energy efficiency.~~

~~*Policy 13.2.32: Energy Efficient Environmental Design.* **(EFF. 1/11/21)**~~

~~Planned Unit Development Concept Plans may provide for incentives such as increases in building height, waiver or reduction of mobility and impact fees, reduction of parking and setback requirements, reservation of infrastructure capacity without cost, expedited processing of applications for Concept Plans and site development plans, and similar measures in each District where developments incorporate Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar systems that generate threshold MW levels of electricity. Alternatively, PUD Concept Plans may provide for utility fee or other similar exaction offsets commensurate to estimated energy efficiency gains from incorporating Leadership in Energy and Environmental Design (LEED) standards or similar industry-recognized green certifications and/or provide building-mounted solar~~

systems that generate threshold MW levels of electricity. This policy does not apply to the Residential Reserve Zone.

Policy 13.2.33: Stormwater Management. **(EFF. 1/11/21)**

Prior to approval of the first PUD Concept Plan, a Stormwater Facilities Master Plan (SFMP) shall be prepared for the entirety of the Welaunee Arch. The Stormwater Facilities Master Plan must be reviewed and approved by the City before PUD Concept Plans can be approved. For areas not included in a PUD, the stormwater plan may be conceptual and generalized based upon the projected development allowed by this master plan accounting for non-developable areas.

The SFMP shall take into consideration stormwater flows from full build out conditions from any upstream, off-site property. However, nothing herein shall relieve the upstream, off-site properties from complying with applicable environmental ordinances or standards. The SFMP shall, at a minimum, identify regional impacts to flood extents and stormwater conveyance; establish infrastructure requirements necessary to manage stormwater in compliance with local, state, and federal regulations; document the phasing, implementation, and easement reservations necessary to serve projected full build out; and facilitate environmental and stormwater permitting. To accomplish these goals, the SFMP shall provide analysis and design of the primary stormwater system based on detailed hydrologic and hydraulic modeling of existing and post-development conditions. The analysis shall incorporate existing land uses, soils and topographic data, and the conceptual land use plan (Figures13-5 through 13-7). The design shall provide general parameters associated with the primary stormwater management facilities, drainage easements and conservation easements necessary to serve the development under projected full build-out conditions. Flood extents delineated by the SFMP shall identify the 100-year flood exclusion area under the full build-out condition. No habitable structures shall be constructed within the post-development, full build-out 100-year floodplains or 100-year flood exclusion areas. The SFMP shall incorporate low-impact design best management practices to encourage the disconnection of impervious surfaces and increase the removal of nutrients from stormwater discharges. The SFMP shall also evaluate the existing nutrient pollutant loading to Class III surface water resources and ensure net improvement in the post development condition. The SFMP scope of work must be approved by the City prior to development of the SFMP.

The Stormwater Facilities Master Plan shall identify the feasibility and location of regional stormwater facilities and how they should be designed and constructed as amenities within parks or publicly accessible areas. Stormwater facilities shall be located outside wetlands and floodplains. Stormwater facilities may be located in Open Space that is not wetland or floodplain subject to design standards in a PUD Concept Plan and consistent with protection of conservation and preservation lands required by the comprehensive plan and the Environmental Management Ordinance.

Policy 13.2.34. Wetlands and Floodplains. **(EFF. 1/11/21)**

Development shall minimize encroachment into wetland habitat areas by ensuring that public and private roads avoid crossing wetlands or require that such crossings are cited at the narrowest point of a wetland allowing for an efficient transportation design while maintaining the continuity of identified wildlife corridors. No net reduction in floodplain storage shall be permitted within the 100-year floodplain. Otherwise floodplains shall be managed consistent with the Comprehensive Plan Conservation Element.

Wetland acreage and function within the Welaunee Arch shall be protected through compliance with local, state, and federal environmental permitting requirements. For purposes of permanent protection of Conservation and Preservation lands designated on Figure 13-6 the delineation of wetlands shall be based upon the jurisdictional determination by the governing agency.

Wetlands depicted on Figure 13-6 utilized for mitigation within the Welaunee Arch shall be made subject to conservation easements consistent with the requirements of the authorizing regulatory agency. These easements will be defined in a manner that serves as permitted mitigation for wetland and other impacts or species relocation. To the extent authorized by federal, state, and local permitting agencies, Conservation and Preservation Lands association with the PUD Concept Plan under consideration may be utilized for achieving any mitigation requirements. The mitigation conservation easement area shall allow passive recreation facilities and shall be subject to a management plan.

Policy 13.2.35. Florida Springs and Aquifer Protection. **(EFF. 1/11/21)**

Wakulla Spring is an impaired first magnitude Outstanding Florida Springs. Planned development for the Welaunee Arch is within the springshed boundaries of the Upper Wakulla River and Wakulla Spring Basin Management Action Plan. Development activities associated with the project have the potential to impact water quality; therefore, PUD Concept Plans shall mitigate potential nutrient loadings by implementing measures such as proper treatment and disposal of wastewater, stormwater, and the implementation of adequate sediment and erosion control practices to mitigate any surface water impacts.

Policy 13.2.36: Schools. **(EFF. 1/11/21)**

Each PUD Concept Plan shall be analyzed for impacts on public schools based upon then-applicable pupil generation rates utilized by Leon County Schools. Schools shall be located in relation to neighborhoods in order to serve residents, provide a focal point for the neighborhoods, and be safely accessible by pedestrians and bicyclists. The co-location of schools, civic spaces, and active parks is encouraged. The City and County shall adhere to the Public School Concurrency and Facility Planning Interlocal Agreement, as required by Section 1013.33, F.S., which establishes procedures for, among other things, coordination and sharing of information; planning processes; school siting procedures; site design and development plan review; and school concurrency implementation. Prior

to site plan approval of the 500th residential dwelling unit in Phase 1, a 10-acre site shall be reserved for future dedication to the Leon County School Board proximate to residential areas, a Town or Village center and the primary open space system with off-site stormwater management provided through a regional system. Impacts to existing public schools shall be addressed during the development review process as required by this comprehensive plan, provided that the fair market value of the school site, any off-site stormwater treatment and storage capacity and any other land or improvement to support a public school shall be a credit, on a dollar-for-dollar basis, against any fee or exaction for public school impacts.

Policy 13.2.37: Fire and Emergency Services. **(Eff. 1/11/21)**

Upon request of the City, PUD Concept Plans shall include identified sites for fire and/or emergency services in coordination and formal agreement with the City.

RECREATION, OPEN SPACE and CONSERVATION

Policy 13.2.38: Primary Open Space System. **(Eff. 1/11/21)**

The intent of the Open Space and Conservation strategy is to identify, conserve, manage, restore, and protect significant natural resources during and after development of the Welaunee Arch in accordance with the Conservation Element of the Tallahassee-Leon County Comprehensive Plan and consistent with this Master Plan. No less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the gross area in the Welaunee Arch shall be designated Open Space which shall include the Primary Open Space System, Conservation and Preservation Areas, Greenways, and other designated open space in each development District.

Open Space shall comprise no less than 40% (no less than 37% if the Alternative Development Program is utilized per Policy 13.2.44) of the total gross area within the Welaunee Arch, or approximately 1,900 acres. Of the Open Space, approximately 900 acres (19% of the total gross area of the Welaunee Arch) are designated Conservation or Preservation Areas as defined in policies 1.3.1 and 1.3.4 of the Conservation Element. The precise size and location of Conservation and Preservation Areas shall be determined through a Natural Features Inventory approved by the City prior to approval of a PUD Concept Plan that includes such Conservation and Preservation area. The remainder of the Open Space, approximately 1,000 acres (21% of the total gross area of the Welaunee Arch), shall be open space incorporated into the development plan for each District or part of the Primary Open Space System.

~~Open Space shall include Conservation Areas and Preservation Areas, Canopy Road Zones, Greenways, and aesthetic open space. Outside of these designated areas, the additional Open Space shall prioritize additional buffers around Conservation and Preservation Features, areas that provide continuous and contiguous connectivity of Open Space, additional buffers for Canopy Road Zones, additional areas around the Core canopy or core forests that are part of the fragmentation class of Core Canopy (>500 acres), additional areas that support the network of wildlife corridors, undeveloped uplands, oak-hickory forest, significant trees, passive recreation areas, priority planting areas identified in the Urban Forest Master Plan, and stormwater facilities designed as a community amenity.~~

~~The Welaunee Arch shall contain a primary open space system concept that will contain the majority of the open space requirements within a connected corridor as depicted on Figure 13-5. This connected, continuous network of open space constitutes a fundamental building block of the Arch and is intended to serve multiple purposes including but not limited to protection of conservation and preservation areas. The Primary Open Space System shall include Conservation and Preservation areas. Primary Open Space may also include buffers for residential areas and canopy roads, greenways, environmentally sensitive areas, including wildlife corridors, aesthetic open space, active and passive recreation areas, and community gathering spaces. The Primary Open Space may be incorporated into any PUD Concept Plan to satisfy requirements of the Environmental Management Ordinance. Constructed stormwater facilities consistent with Policy 13.2.33 may be utilized to satisfy open space requirements in a PUD Concept Plan.~~

~~Primary open space systems, together with other open space and green spaces set aside to meet the urban forest and landscape requirements shall also meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. The intent of this policy will be achieved through the following:~~

~~(1) Credits for open space requirements, wetland mitigation, slope mitigation, stormwater management and/or urban forest requirements may be requested outside of individual parcels or tracts under review but elsewhere within the Arch.~~

~~(2) Areas with severe and significant slopes that are not located in the open space systems shall be protected in site-specific plans in accordance with the Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code.~~

~~(3) The Open Space systems shall be open to the general public and be designed to include and provide connections with the Miccosukee Canopy Road Greenway and Welaunee Greenway at multiple locations and to integrate internal recreational~~

multi-use paths with the greenways trails. Connections to future regional greenways shall be considered in the design of open space.

(4) The open space systems shall be designed to provide additional buffering for existing designated canopy road zones.

(5) Open space may be privately owned or dedicated to the public by conveyance to a general-purpose or special-purpose local government entity; or be designated a part of a statewide system of greenways and trails pursuant to state law. Privately owned open space/greenways shall, at a minimum, guarantee designated public trail access in perpetuity at the time of development. All required conservation easements will be placed over the Conservation and Preservation areas in accordance with local government regulations.

(6) The open space systems shall be governed by one or more management plans approved by the City in order to protect the values for which they were designated. The management plans may be adopted in phases so long as they are consistent with one another. Protection of Conservation and Preservation areas shall be provided by conservation easements and other measures consistent with Chapter 5 – Environmental Management, Tallahassee Land Development Code. Conservation and Preservation areas placed in conservation easements may be used towards satisfying the urban forest and landscaping requirements of Chapter 5 – Environmental Management, Tallahassee Land Development Code. A single management plan may be adopted for all open space and conservation and preservation area lands.

(7) Any Open Space area located within the geographic boundary of a PUD Concept Plan Shall be included in the lands to be designated as Open Space/Greenway as a result of approval of that PUD Concept Plan. If additional Open Space area are required to meet the minimum Open Space area for that Phase set forth in Policy 13.2.4(6) then such additional land will be designated as such from the adjacent Primary Open Space system as shown in Figure 13-5. To the extent that a PUD Concept Plan provides Open Space acreage beyond the required minimum, subsequent PUD Concept Plans are entitled to a credit for the additional acreage provided in proceeding PUD Concept Plans.

(8) Acreage in the primary open space system shall be counted towards satisfying the open space requirements established in PUD Concept Plans.

(9) The following guidelines shall apply to uses within the open space system as established in PUD Concept Plans:

a. Passive recreation improvements that are natural resource-oriented, such as hiking, biking, and riding trails and passive parks, may be constructed in the primary open space systems. Also allowable are community facilities such as bandshells, amphitheaters, gazebos and other improved gathering places if designed for non-vehicular access only, provided these activities are located such that impacts to conservation and preservation areas are minimized and the overall purpose of the conservation easement is maintained.

b. Active Recreation uses may be constructed in the open space area within each development district and in the primary open space system outside of Conservation and Preservation areas.

c. Wildlife management areas may be included in the primary open space systems protective measures addressed in the management plans, including a wildlife habitat management plan, in accordance with Chapter 5 – Environmental Management, Tallahassee Land Development Code.

d. Public roads and utilities may cross through the open space systems and buffers if the impacts are minimized. The location of the roads shown on Figure 13-5 are approximate.

e. Stormwater Management facilities may be located in the open space systems subject to design criteria in the PUD Concept Plans and consistent with protection of conservation and preservation features pursuant to Chapter 5 – Environmental Management, Tallahassee Land Development Code. Each stormwater management facility must be evaluated in terms of impacts and meet the requirements of the Tallahassee-Leon County Comprehensive Plan and Chapter 5 – Environmental Management, Tallahassee Land Development Code. If stormwater facilities are contained in the open space system, the public and/or private entities responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facilities level of service. The SFMPs shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within conservation or preservation areas.

(10) To promote creation of the open space systems and their integration into the planned mixed-use communities with appropriate credit, PUD Concept Plans shall establish an open space requirement that includes credit for the open space system, protected preservation and conservation areas, areas of constructed landscape, and the minimum onsite landscaping required for individual sites set forth in Policy 13.2.12. Specific landscape standards and requirements shall be established in PUD Concept Plans. Such standards and requirements shall be designated to meet or exceed, on a cumulative basis, the Landscape and Urban Forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code. These landscape standards shall include, but not be limited to, standards for provision of street trees in mixed use zones, along public roadways, shade trees and landscaped islands within parking lots, and patriarch tree preservation. These standards will be developed to reflect the intent that town

and neighborhood centers will be developed in an urban context with minimal setbacks and an emphasis on dense, mixed use development. Various land uses in the Arch shall satisfy the Urban Forest/Landscaping requirements based on thresholds established in the PUD Concept Plans. Such requirements shall be designed to meet or exceed, on a cumulative basis, the landscaping and urban forest requirements in Chapter 5 – Environmental Management, Tallahassee Land Development Code.

(11) The portion of the Arch bordering Miccosukee Road shall be designated as Open Space and shall include the Canopy Road Zone for Miccosukee Road. An additional area with a minimum width of 75 feet along the length of the Canopy Road Zone shall be designated as open space. The Canopy Road Zone and contiguous Open Space area shall serve as a wildlife corridor that terminates in the core forest area that is part of the fragmentation class of Core Canopy (>500 acres) in the Conservation Design District as shown on the Preliminary Environmental Map (Figure 13-6). This area may serve as a greenway as long as the greenway does not preclude the ability of the area to serve as a wildlife corridor.

Policy 13.2.39: Conservation and Preservation Lands. **(EFF. 1/11/21)**

Lands identified for permanent preservation and conservation are shown generally on the Preliminary Environmental Map (Figure 13-6) as Designated Wetlands, 100-year Floodplains, and High-Quality Successional forests/Native Forest. These protected areas create a regionally significant environmental and open space framework that protects the natural flows of water and preserves wildlife habitat while allowing limited, low-impact human access to natural spaces, where appropriate.

These allocations are intended to protect significant environmental resources on the Welaunee Arch and account for approximately 900 acres or approximately 19% of the total gross area of the Welaunee Arch. The precise size and location of Conservation and Preservation Lands shall be determined through a Natural Features Inventory to be conducted prior to or concurrent with the initial PUD Concept Plan for each Phase of the Welaunee Arch in which the feature is located. Additional environmental resources will be designated as Open Space as addressed in this Master Plan.

Conservation and Preservation lands shall be subject to a management plan to be reviewed and approved concurrent with the PUD Concept Plan that includes the applicable Conservation and Preservation lands. Such management plan shall address wildlife preservation, maintenance of native species diversity, management of the natural environment, restoration of environmental resources where warranted, and responsibility for long term management. Such management plan shall include measures to protect the values for which such lands were designated, including wildlife habitat and corridors, and may include conservation easements and other measures consistent with the Environmental Management Ordinance. Conservation and Preservation lands may be

utilized for public access, including trails, subject to the Environmental Management Ordinance. To the extent allowed by local, state, or federal law, Conservation or Preservation lands may be utilized to achieve mitigation required by permits. A single management plan may be adopted for all open space and conservation and preservation area lands.

Lands that are not otherwise identified as Conservation and Preservation Lands on Figure 13-6 and are identified as areas suitable for future development may contain areas of natural upland or wetland communities. These resources will be identified through the Natural Features Inventory process and protected as required by the Comprehensive Plan's Conservation Element and will be incorporated into the lands identified as Open Space and Greenways consistent with the overall conservation and development strategy for the Welaunee Arch planning area.

Conservation easements for Conservation and Preservation lands shall be effective before or concurrent with the effective dates of the PUD Concept Plan for which they are granted. Protection of the lands identified in the Preliminary Environmental Features Map shall be phased or staged in coordination with the PUD Concept Plans. The required preservation of both Conservation and Preservation Lands within the Welaunee Arch will occur in conjunction with the PUD Concept Plan approvals and will be in place in advance of actual physical development within the PUD for which the Conservation and Preservation Lands are being protected. All identified Conservation and Preservation Lands within the Preliminary Environmental Features Map shall be subject to permanent preservation no later than the date of actual physical development commencing within the final PUD Concept Plan for the Welaunee Arch.

Policy 13.2.40: Recreation Areas. **(EFF. 1/11/21)**

A PUD Concept Plan shall provide for reasonable public access to parks, recreation areas, natural areas, and open space. A multi-use trail system will be included that will link these areas where feasible to residential neighborhoods, mixed-use centers, schools, civic spaces, employment, recreation and open space, parks, and the Welaunee Greenway and Miccosukee Canopy Road Greenway.

Policy 13.2.41. Historic and Cultural Resources. **(EFF. 1/11/21)**

Through the completion of Natural Features Inventories, Planned Unit Developments shall identify historic and cultural resources including archaeological sites, historic structures and districts, and historic cemeteries. PUDs shall include standards sensitive to locating, assessing, and avoiding

potential adverse impacts to these resources. At a minimum, these standards shall comply with applicable state and local regulations. Where feasible based on the geographic

location of the resource and appropriate given the historic and cultural context of resource, informational and interpretive signage may be considered for these resources.

Policy 13.2.42: Natural Area Resident Notifications. **(EFF. 1/11/21)**

PUD Concept Plans will include notification requirements for informing residents, once development is completed, with information on how to avoid human-bear conflicts and notices of proximity to areas that are actively managed with prescribed fires.

Policy 13.2.43: Perpetual Drainage Easement. **(EFF. 1/11/21)**

The Perpetual Drainage Easement across the Welaunee Arch shall be subject to the Order Clarifying Definition of Perpetual Drainage Easement, entered by Leon County Circuit Court on March 13, 1997. Lands within the Perpetual Drainage Easement shall be considered Open Space and may be utilized for active and passive recreation facilities and activities, including but not limited to, walking and bicycle trails, and playgrounds associated with development of lands owned by the landowner within the altered or undisturbed floodplains so long as the function of the easement is not impaired.

Policy 13.2.44: Welaunee Greenway. **(EFF. 1/11/21)**

The Welaunee Greenway shall consist at a minimum of an 8.4-mile-long shared-use trail corridor along the northeast, north, and west perimeter of the Arch, and shall be developed consistent with adopted local government plans, including the Greenways Master Plan. As defined in the Tallahassee-Leon County Greenways Master Plan, "The Greenway will range from approximately 75' to 150' in width in much of the corridor with greater widths in select areas due to wetlands and stream flow ways. This corridor will be comprised of the existing edge canopy and understory and the Welaunee firebreak road which may provide a readymade trail alignment. The preserved canopy and understory along the other side of the firebreak road will be preserved to provide privacy from adjacent roadways and homes." The final design of the Welaunee Greenway shall be determined through the Blueprint Intergovernmental Agency's Northeast Gateway project and may consider other, non-paved trail surface treatments consistent with the Greenways Master Plan. Trail crossings and trailheads may be located in the Canopy Road Zone and the design of such facilities shall strive to minimize impacts to the tree canopy. The Welaunee Greenway shall connect to the existing Miccosukee Canopy Road Greenway to create a 17-mile linear park loop and a pedestrian bridge across Interstate-10. Connections shall be provided to and from the Greenway from interior multi-use trails along roadways or from other open space areas. The Welaunee Greenway shall be subject to a management plan approved by the City that is consistent with the policies of this master plan. A single management plan may be adopted for all open space, conservation and preservation area lands, and the Welaunee Greenway. Public roadways and utilities may cross through the Welaunee Greenway at points specified as road crossings on the land use and transportation maps, or at additional points if necessary, provided the crossing includes restoration of the Greenway and open space area. PUD Concept Plans that include or are adjacent to the Welaunee Greenway or Miccosukee Canopy Road Greenway shall provide access to those facilities. Development of the Arch should be

incentivized through the PUD process to provide pedestrian and bicycle connectivity to the Greenway, particularly where it interfaces with Open Space areas and associated trail systems.

Policy 13.2.45: Alternative Development Program. **(Eff. 1/11/21)**

Notwithstanding any other provision of this Master Plan, at the election of the PUD applicant, PUD Concept Plans in Phase 1 and Phase 2 may offset open space and urban forest mitigation requirements through an optional alternative development program that preserves additional open space area within the Residential Reserve District (Phase 3). The intent of this Alternative Development Program is to incentivize preservation of a large area of open space in the northeast area of the Welaunee Arch that may be designated as a wildlife habitat area. Participation in this alternative development program is optional and must be agreed to by the PUD Concept Plan applicant and the owner of the property that would be used for the offset. Participation in this alternative development program is subject to all of the following provisions:

(1) Open Space Requirement Offset. PUD Concept Plans in any District of Phase 1 or Phase 2 may offset the open space requirements for that District by preserving lands in the Residential Reserve District (Phase 3) as open space.
   a. The offset shall be calculated on a per acre basis with a 15% bonus, resulting in an exchange of a 1.15 acre reduction in the open space requirement of the receiving District for each 1 acre of preserved open space in the Residential Reserve District. This exchange shall reduce the overall open space requirement for the Welaunee Arch by the net bonus amount (0.15 acres for each 1 acre preserved).
   b. The reserve area requirements for cluster residential zones in Phase 2 shall be offset concurrently with the open space requirements for any PUD Concept Plan including a cluster subdivision.
   c. Under the Alternative Development Program, preservation or conservation areas in the Residential Reserve District may count towards the open space requirements in the Conservation Design District. Conservation and Preservation areas in the Residential Reserve District shall be integrated with the Welaunee Habitat Park.
   d. If this Alternative Development Program is exercised, total Open Space in Phase 1 shall not be less than 15%, the total Open Space in Phase 2 shall not be less than 25%, and the overall total Open Space in the Arch at buildout shall not be less than 37%.
   e. The open space offset shall not apply within the area 1,000 feet from the Buckhead Neighborhood as identified in Policy 13.2.15.

(2) Urban Forest Mitigation Offset. PUD Concept Plans in Phase 1 and Phase 2 may offset required urban forest mitigation requirements in any District by preserving lands in the Residential Reserve District (Phase 3) as open space.

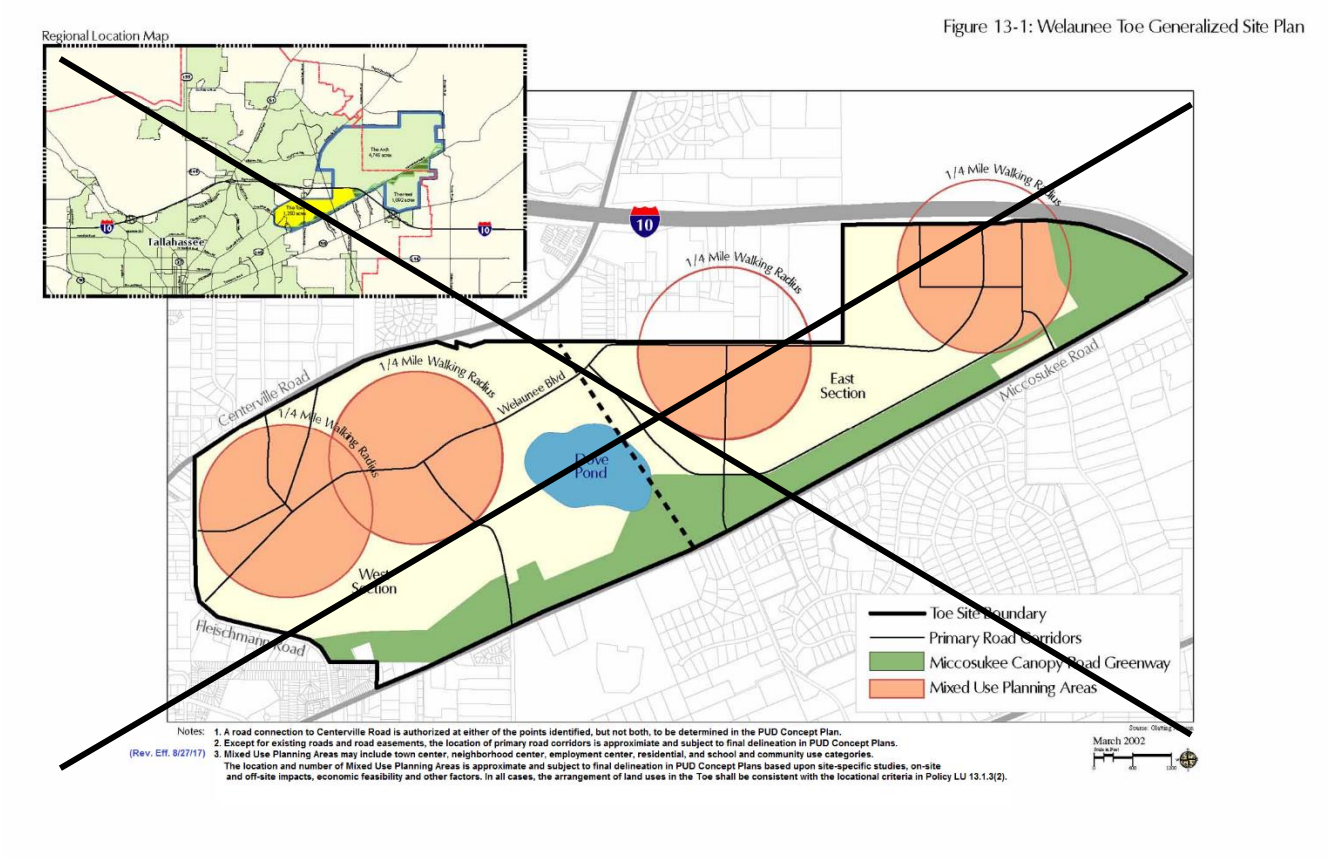
a. ~~The urban forest mitigation requirement offset through this program is exchanged based on the urban forest mitigation value of the land being established as Open Space in the Residential Reserve District. The mitigation value of the preserved open space shall be calculated with an additional 10% mitigation credits which may offset urban forest impacts in Phase 1 and Phase 2.~~

(3) ~~All lands located in the Residential Reserve District, designated as Phase 3 on the Land Use Districts Map (Figure 13-5), are eligible for preservation under this alternative development program. Priority for preservation under this program shall be in the following order: 1) lands in the Residential Reserve District (Phase 3) that do not meet the definition of a preservation area or conservation area 2) any designated conservation and preservation areas in Residential Reserve District (Phase 3) as generally depicted on the Preliminary Environmental Features Map or as determined through a subsequent natural feature inventory. Priority shall be given to property along the eastern boundary of the Residential Reserve District with subsequent lands preserved under this alternative development program being contiguous with this area.~~

(4) ~~Protection of the open space area in the Residential Reserve District (Phase 3), including any preservation or conservation areas, shall be provided by conservation easements, covenants, or other measures consistent with City Growth Management Department's adopted regulations. The lands preserved as open space under this alternative development plan shall be subject to the criteria of Policy 13.2.38 regarding Conservation and Preservation Areas. Any conservation easements established under this alternative development program shall be issued to the City of Tallahassee as the sole grantee and beneficiary. While open space area in the Residential Reserve District remains in private ownership, any conservation easements, covenants, or other measures shall allow for continued use of the preserved open space for silviculture operations of planted pine stands which adhere to Florida Division of Forestry Best Management Practices. Lands preserved under this development program for urban forest mitigation offsets may not be utilized for silviculture operations.~~

(5) ~~Welaunee Habitat Park. Notwithstanding the phasing requirements in policy 13.2.5, at such time when all lands in in the Residential Reserve District have been preserved as open space under this alternative development program, or at such time when the final PUD Concept Plan for the Welaunee Arch is approved, the preserved Open Space in the Residential Reserve District, including the Conservation and Preservation lands, shall be designated as a Habitat Park. The Habitat Park shall be subject to the requirements of Policies 13.2.37 and 13.2.38. Prior to establishment of the Habitat Park, the existing uses of the property shall be permitted. Any previously established conservation easements shall remain in effect on lands in the Habitat Park. Passive recreation improvements that are~~

~~natural resource-oriented, such as hiking, biking and riding trails and passive parks, may be constructed in the Welaunee Habitat Park. Active Recreation uses are not permitted in the Welaunee Habitat Park.~~



~~(6) By adoption of a separate ordinance, the City may create and administer a Welaunee Habitat Park credit bank. The Welaunee Habitat Park credit bank would facilitate the purchase of lands in the Residential Reserve District (Phase 3) and the sale of open space and tree mitigation credits in accordance with this development program. The Welaunee Habitat Park credit bank may be established independent of and prior to the creation of the Welaunee Habitat Park. If the City creates a Welaunee Habitat Park credit bank, consideration may be given to utilizing the credit bank to offset open space requirements and urban forest mitigation requirements associated with the development of properties located in other growth priority areas inside the Urban Services Area.~~

~~(7) If stormwater facilities are contained within the Residential Reserve District, then the public or private agency responsible for maintenance shall be allowed to perform necessary maintenance of these facilities consistent with each facility's level of service. The Stormwater Facilities Master Plan shall identify areas where drainage easements will be needed for proper maintenance of stormwater conveyances located within preserved open space and conservation or preservation areas.~~

~~(8) Any lands in the Residential Reserve District not preserved as open space in accordance with this alternative development plan may be included in a PUD Concept Plan and development under the Residential Reserve District development guidelines in Policy 13.2.4(4). Development of the Residential Reserve District on remaining lands shall be clustered in the portion of the site that will result in the least environmental impact. Lands preserved as open space offset under this Alternative Development Program shall not count towards the 60% reserve area requirements for development of any remaining developable land in the Residential Reserve District.~~

I. Land Use

TOTALS	715	1,291 DUs 686,224 GSF	377	816 DUs 457,248 GSF	1,092	2,107 DUs 1,143,472 GSF

Notes:

1. Acreage totals are based on conceptual planning and are only approximate. Acreage totals may change based on final development review.

2. Residential land use includes above-street units in town and neighborhood centers. No acreage has been allocated to these units because they will be located above nonresidential uses.

3. Retail uses shall comprise between 50% and 70% of total Phase 1 development in town and neighborhood centers with office uses to comprise between 30% and 50%. At buildout, the mix of uses in town and neighborhood centers shall be approximately 67% retail and 33% office.

4. Office and light industrial uses shall comprise between 75% and 95% of total Phase 1 development in employment centers with retail uses to comprise between 5% and 25%. At buildout, the mix of uses in employment centers shall be approximately 90% office and light industrial with approximately 10% retail.

5. Total includes 24 acre site for Leon County School Board for a 500 pupil elementary school with stormwater management facilities in off-site regional systems. Institutional uses in town, neighborhood and employment centers are included in square footage totals for those areas.

6. Although under State ownership, the Miccosukee Canopy Road Greenway shall be considered within the Welaunee Critical Planning Area for planning purposes.

7. Total includes stormwater management facilities, road rights-of-way and other community infrastructure.

8. These figures may be modified pro-rata to represent buildout if Heel is developed under Policy 13.1.9. (REV. EFF. 7/20/05)

Drainage Basin Study Areas

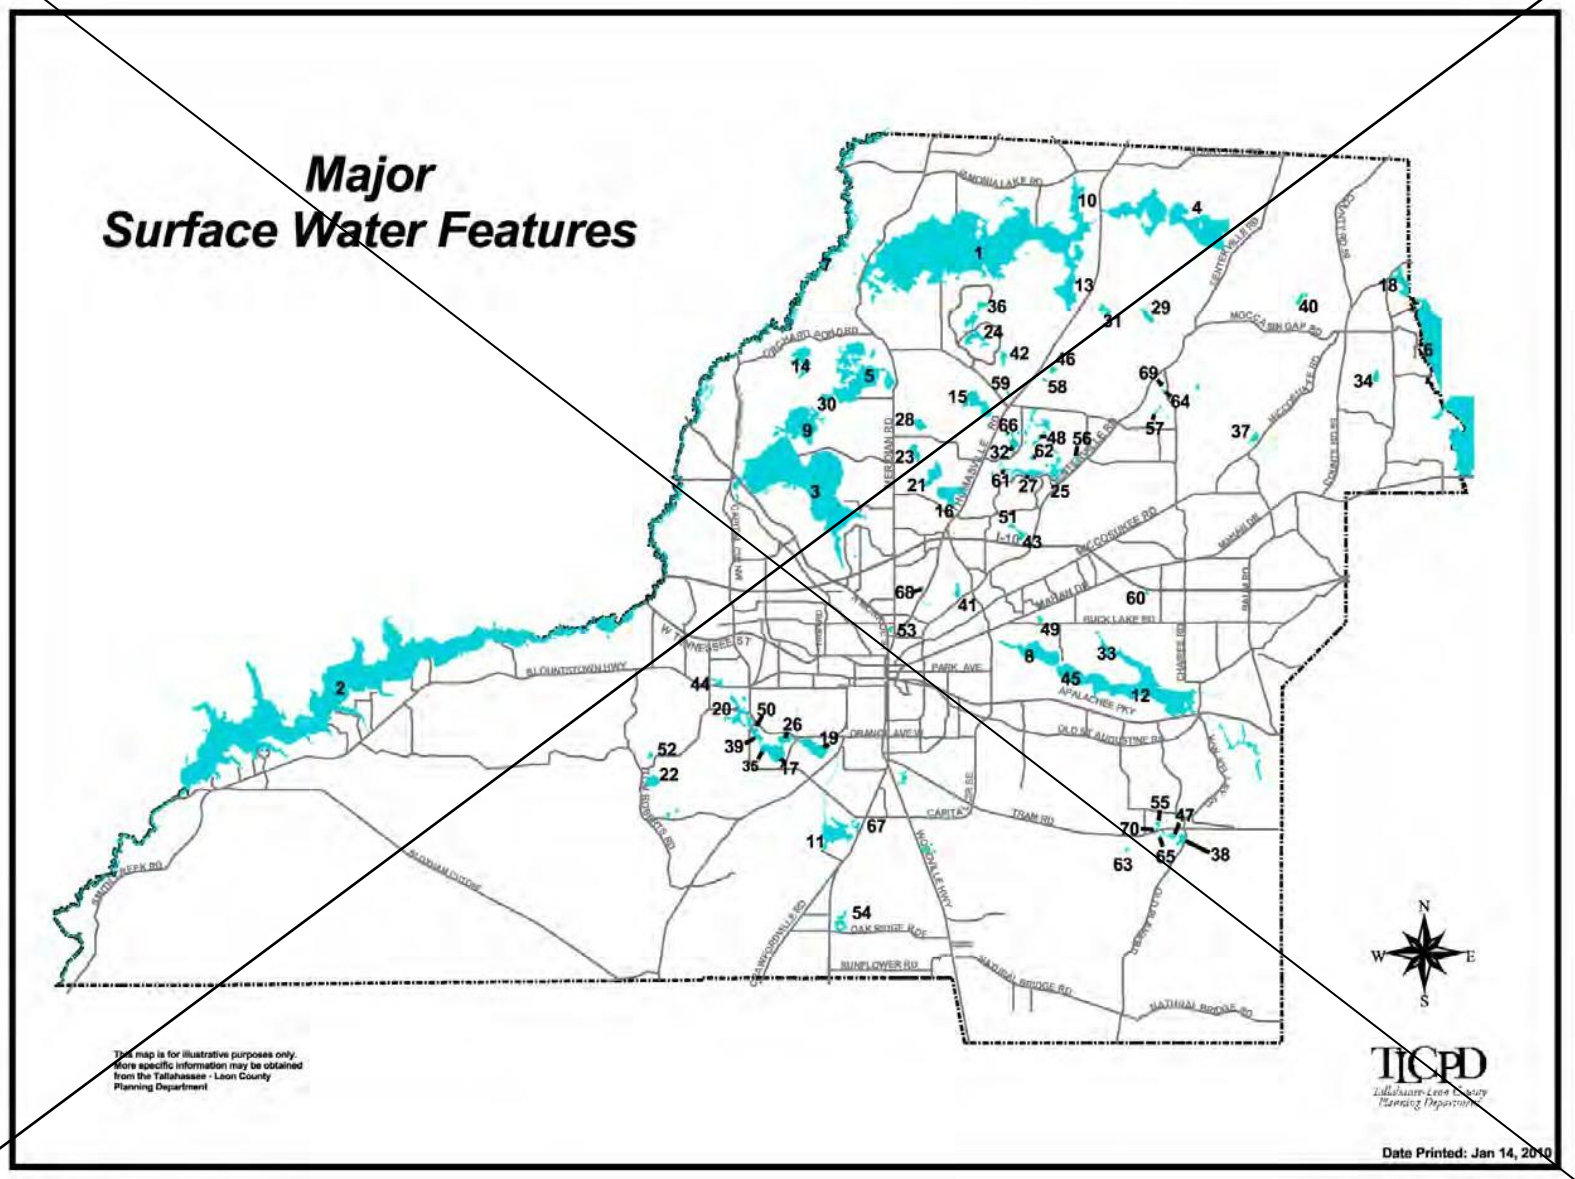
Goal 14 [L] (Leon County only) (Eff. 12/15/03)

Leon County and the City of Tallahassee will work cooperatively to further identify and address the special characteristics and needs of sub-areas of the City and County. This goal shall be implemented through the following objective and policy:

Objective 14.1 [L] (Leon County only) (Eff. 12/15/03)

By 2004, the City and County shall commence a process to evaluate the environmental conditions and issues relating to major drainage basin study areas of the county including but not limited to the following basins: Fred George, Lake Iamonia, Lake Jackson, Lake Lafayette, Lake Miccosukee, Lake Munson, Ochlockonee, St. Marks, and Woodville Recharge, to be used as one basis for sector plans and other major planning decisions of the local government. This evaluation shall address matters such as protection of conservation and preservation areas (as defined within this Plan), flooding, water quality, aquifer protection, and other issues as identified by the local governments. This evaluation shall be conducted cooperatively by the City and County, irrespective of jurisdictional boundaries, and the evaluation shall be based on technical and scientific information.

Policy 14.1.1 [L] (Leon County only) **(Eff. 12/15/03)**



Sector planning shall be implemented as determined appropriate by the City or County; however, sector planning involving a joint effort of both jurisdictions, shall be encouraged. These sector plans may address elements such as land use, transportation, housing, economic development, environmental protection, infrastructure phasing, development standards and any other matter as identified by the local government. These sector planning efforts shall take into consideration the data gathered through the implementation of Objective 14.1 and shall use this information as background environmental data necessary for the completion of sector planning efforts.

Policy 14.1.2 [L] (Leon County only) **(Eff. 12/15/03)**

The data collected or gathered through the implementation of Objective 14.1 shall be used as a basis for determining whether or not future amendment to the Comprehensive Plan or land development regulations is necessary. However, Goal 14 and its associated Objective 14.1 are not intended to replace existing Comprehensive Plan policies related to environmental protection or storm water management. Instead, this goal and its associated objective is intended to support and aid in the implementation of existing Comprehensive Plan policies and is to be considered additive in this regard.

MOBILITY

GOALS, OBJECTIVES AND POLICIES

Overall Goal (EFF. 12/15/11)

Establish a safe, energy efficient multi-modal transportation system that provides mobility for pedestrians, bicyclists, transit users, motorized vehicle users, users of rail and aviation facilities, supports public health through active living, and is sensitive to the cultural and environmental amenities of Tallahassee and Leon County.

Goal 1: [M] (EFF. 12/15/11)

MOTORIZED, BICYCLE, AND PEDESTRIAN CIRCULATION

Establish and maintain a safe, convenient, energy efficient, and environmentally sound automobile, transit, bicycle and pedestrian transportation system, capable of moving people of all ages and abilities as well as goods.

Objective 1.1: [M] **(EFF. 12/15/11)**

LAND USE AND TRANSPORTATION COORDINATION

Coordinate transportation and land use systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce vehicle miles traveled and greenhouse gases, and to enhance pedestrian and bicycle mobility and transit accessibility.

Policy 1.1.1: [M] **(EFF. 12/15/11)**

Identification and programming of new road projects or substantial improvements to existing roads shall be consistent with the Future Land Use Element of the Comprehensive Plan and specifically the Urban Service Area strategy to promote urban infill and discourage urban sprawl.

Policy 1.1.2: [M] **(EFF. 12/15/11)**

Designate energy efficiency districts in areas that are intended for greater densities and intensities to support frequent transit service and where primary priority is to be placed on providing a safe, comfortable and attractive environment for pedestrians and cyclists. For each district:

1. evaluate and modify, if necessary, the zoning and land development regulations to ensure standards that will support compact, walkable, mixed-use development; and
2. adopt and maintain a connectivity plan identifying needed bicycle, pedestrian, roadway, and transit projects to increase connectivity and safety, minimize travel

distances for pedestrians and cyclists, and provide connections to other parts of the City, County, and Capital Region;

3. Coordinate with the Capital Region Transportation Planning Agency to include the Mobility District Plan priorities in Long Range Transportation Plan updates.

Policy 1.1.3: [M] **(EFF. 12/15/11)**

Promote the Downtown as an 18-hour activity center by supporting development of housing, restaurants, and cultural activities to encourage use beyond working hours.

Policy 1.1.4: [M] **(EFF. 12/15/11)**

Promote neighborhood parks to reduce the need for long distance trips for recreation.

Policy 1.1.5: [M] **(EFF. 12/15/11)**

Maintain a Greenways Master Plan that integrates pedestrian and bicycle mobility into a linear park and open space system that connects local, regional, and state facilities, with specific emphasis on connections within Downtown and energy efficiency districts.

Policy 1.1.6: [M] **(EFF. 12/15/11)**

A functional transportation network shall be coordinated and maintained with the Florida State University, Florida A&M University, and Tallahassee Community College master plans to link those educational institutions and provide access to transit and surrounding supporting land uses.

Policy 1.1.7: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain ordinances providing for safe and convenient on-site traffic flow, considering motorized and non-motorized vehicle parking.

Policy 1.1.8: [M] **(EFF. 12/15/11)**

Development projects shall contribute to providing a safe, convenient, comfortable and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Appropriate improvements or enhancements to the multimodal network shall be required as a condition of development approval, such as, but not limited to, the following:

a) Full accommodations for pedestrian access and movement, including shaded sidewalks, benches and enhanced crossings;
b) Full accommodations for bicycles, including lockers, showers, and racks;
c) Direct connections to the regional bicycle/pedestrian network;
d) Installation of shared use paths in accordance with FDOT recognized standards;
e) Well-designed accommodations for transfer of passengers at designated transit facilities;
f) Preferential parking for rideshare participants;

g) Well-designed access for motor vehicle passenger drop-offs and pick-ups at designated transit facilities and at commercial and office development sites;
h) Full accommodation for the mobility impaired, including parking spaces, sidewalks and ramps for handicapped access;
i) Weather protection at transit stops.

Policy 1.1.9: [M] **(EFF. 12/15/11)**

Designation of Multimodal Transportation District (MMTD). In accordance with the provisions of Florida Statute 163.3180(15), the City of Tallahassee and Leon County hereby establish a Multimodal Transportation District, as shown in the Multimodal District Boundaries Map, for the purpose of promoting walking, bicycling and transit use in order to reduce dependence on the automobile. Those roadways and associated rights-of-way shown as boundaries for the MMTD shall be considered part of the MMTD.

Policy 1.1.10: [M] **(EFF. 12/15/11; REV. EFF. 7/19/13)**

MMTD Residential Density Bonus. In order to increase redevelopment and infill development, residential densities within the MMTD may be increased up to 35% above the maximum allowed in the Residential Densities Range Table. This bonus shall not apply to lands designated Residential Preservation. Further bonuses may be applied to the Downtown. Eligibility criteria for these bonuses will be established within the land development regulations and shall include design standards facilitating pedestrian oriented site and building design with enhanced pedestrian access and amenities, urban scale development, innovative parking strategies, integrated mix of land uses, and other urban design features.

Policy 1.1.11: [M] **(EFF. 12/15/11)**

Land Use Within the MMTD. The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the district boundary(ies) and modify them as necessary to provide for appropriate densities, intensities and mixture of land uses to support 18-hour activity and multimodal transportation, based on the following targets:

a) A center(s) consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to mass transit facilities;
b) Ratio of uses:
    i. Residential = 20%-60%
    ii. Nonresidential (office, commercial, light industrial, etc.) = 30%-70%
    iii. Public spaces (open space, parks, recreational, squares, etc.) = 5%-15%;
c) Specifically to facilitate walking and bicycling as an alternative to driving, areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses;
d) In order to support redevelopment in the urban center of Tallahassee that could support ten minute transit headways and/or light rail, an areawide (excluding open space) residential density of at least 20 units per acre, recognizing that some areas, such as Central Core, may have densities in excess of 150 units per acre and others in

established neighborhoods and areas designated Residential Preservation may have significantly less.

Policy 1.1.12: [M] **(EFF. 12/15/11)**

MMTD and Energy Efficiency District Urban Design and Land Development Regulations. Adopt and maintain land development regulations that ensure new construction and infill or redevelopment will contribute positively to the character and livability of the MMTD and energy efficiency districts, based on the following:

1. Buildings and blocks oriented to provide pedestrians and bicyclists easy access and a visually interesting environment;
2. Maximum block (length or perimeter);
3. Easy access to/from transit stops and surrounding land uses;
4. Recognition of more intense densities & intensities around center(s);
5. Special design considerations to support compatibility between uses, particularly between residential and non-residential uses;
6. Creating active sidewalks with buildings opening onto streets;
7. Transparency (i.e., windows) and active uses at ground levels;
8. Parking generally located to the sides and rear, internal to blocks, and/or in structured of off-site facilities;
9. Maximum parking standards that discourage single-occupant vehicle commuting and reinforce non-auto modes, but not so limited as to adversely impact the viability and vitality of the MMTD;
10. The use of shared parking;
11. For multifamily developments, pricing of parking separately from the units;
12. Recognizing that parking demand may change over time as more multimodal infrastructure and mixed uses are developed, building parking facilities such that they may be readapted for more active uses in the future.

Policy 1.1.13: [M] **(EFF. 12/15/11)**

Transit in the MMTD and Energy Efficiency Districts. The MMTD and energy efficiency districts shall be well-connected via transit to major trip generators and attractors both inside and outside of these areas, transit stops and waiting areas shall be safe and comfortable, and intermodal connections shall be made where feasible.

1. Priority should be given to funding of improvements that increase the availability, speed, frequency, duration and reliability of transit serving these areas.
2. StarMetro shall coordinate with the Capital Region Transportation Planning Agency regarding the provision of transit centers, super stops, and other facilities for the transfer of passengers to and from these areas through potential regional connections.
3. Benches, signage, lights, and covered or enclosed waiting areas shall be used to create safe, comfortable transit stops.
4. Bicycle parking at transit stops and bicycle racks on buses shall be provided as a means to interface bicycle travel with public transit.

Policy 1.1.14: [M] **(EFF. 7/17/21)**

The City of Tallahassee and Leon County will support the implementation of the Capital Region Transportation Planning Agency's (CRTPA's) Tallahassee-Leon County Bicycle and Pedestrian Master Plan, adopted by the CRTPA in 2020, to the extent that it does not conflict with goals, objectives, and policies in this Comprehensive Plan.

Objective 1.2: [M] **(EFF. 12/15/11)**

COMPLETE STREETS

The transportation system shall be designed and operated to provide safe, convenient and context-sensitive access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 1.2.1: [M] **(EFF. 12/15/11)**

Recognizing that urban, suburban, and rural areas have different needs, develop and maintain context sensitive design standards for transportation facilities to protect and enhance community character and enhance the safety and desirability of walking, cycling, and transit.

Policy 1.2.2: [M] **(EFF. 12/15/11)**

Safe and convenient facilities for pedestrians, cyclists and transit users shall be evaluated for all new road and road widening projects. Specifically, all road projects, including resurfacing projects, shall be evaluated for the addition of bicycle lanes or paved shoulders, and transit shelters where they did not previously exist.

Policy 1.2.3: [M] **(EFF. 12/15/11)**

Establish and maintain a safe and effective system of bicycle lanes, sidewalks, and shared-use paths in conjunction with existing and planned roadways and the Greenways Master Plan. Where design criteria allow and safe operation will occur, separate bicycle and pedestrian traffic from vehicular traffic. Provide adequate and secure bicycle parking facilities at major destinations.

Policy 1.2.4: [M] **(EFF. 12/15/11)**

In coordination with the Capital Region Transportation Planning Agency, maintain a bicycle and pedestrian master plan and pursue implementation funding.

Policy 1.2.5: [M] **(EFF. 12/15/11)**

Designate preferred entrance corridors into and connecting Tallahassee and Leon County, and adopt and maintain land development regulations to convert them into shaded pedestrian ways over time.

Policy 1.2.6: [M] **(Eff. 12/15/11)**

Require a scenic roadway assessment, environmental assessment, and landscape component in the planning and construction of new roads, and in the improvement of existing roads.

Policy 1.2.7: [M] **(Eff. 12/15/11)**

Require that all new or rebuilt multi-lane (four or six-lane) arterial and major collector streets be constructed with grassed and/or landscaped medians where sufficient right-of-way can be obtained, unless limited by environmental constraints.

Policy 1.2.8: [M] **(Eff. 12/15/11)**

Provide a safe, accessible environment and support active living for students by: developing and maintaining programs to increase biking and walking to schools; prioritizing sidewalk and bicycle infrastructure within a two mile radius of primary schools; and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 1.2.9: [M] **(Eff. 12/15/11)**

Special consideration shall be given to areas with concentrations of students, seniors, low-income families or others that are more dependent on modes other than the automobile to provide a safe, accessible environment.

Policy 1.2.10: [M] **(Eff. 12/15/11)**

Educate the population on the health benefits of non-motorized modes of transportation. Increase safety to those who choose to walk or ride a bicycle by educating the public on existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 1.2.11: [M] **(Eff. 12/15/11)**

Enforce vehicle, bicycle and pedestrian regulations concerning obedience of traffic control signals and devices, use of pedestrian crosswalks, walking along the roadway, etc. Provide proper pavement markings and signage to enhance recognition of bicycle lanes and pedestrian crossings.

Policy 1.2.12: [M] **(Eff. 12/15/11)**

Adopt and maintain a City and County sign ordinance to control sign and billboard placement and limit lighted and motion activated sign usage.

Policy 1.2.13: [M] **(EFF. 12/15/11)**

Wherever feasible, bury utility lines. Priority should be given to areas where underground utilities can be incorporated into roadway construction and reconstruction projects.

Policy 1.2.14: [M] **(EFF. 12/15/11)**

Coordinate the transportation systems in Tallahassee and Leon County with one another and with the programs of the Capital Region Transportation Planning Agency and the Florida Department of Transportation to implement land use, transportation, and parking policies that promote transportation choice and to overcome identified deficiencies in the multimodal transportation network.

Objective 1.3: [M] **(EFF. 12/15/11)**

ENVIRONMENTAL AND NEIGHBORHOOD PROTECTION

Evaluate and minimize impacts of transportation projects on the natural environment and neighborhood integrity by using transportation demand reduction strategies to maximize existing roadway capacity, reduce the need for new roadway construction or expansion, reduce peak time traffic, reduce vehicle miles traveled, and reduce greenhouse gas emissions and other environmentally damaging pollutants.

Policy 1.3.1: [M] **(EFF. 12/15/11)**

Evaluate the natural features of Leon County, as delineated in the future land use and conservation elements, to avoid fragmenting and degrading regionally significant natural resources, wildlife corridors, greenways, and aquifers when planning new or expanding existing transportation facilities.

Policy 1.3.2: [M] **(EFF. 12/15/11)**

Reduce demand for more and wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling and walking.

Policy 1.3.3: [M] **(EFF. 12/15/11)**

Coordinate with Commuter Services of North Florida and state agencies regarding transportation demand reduction strategies such as staggered work hours for major employers, ridesharing, and parking fees.

Policy 1.3.4: [M] **(EFF. 12/15/11)**

Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater quantity, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.3.5: [M] **(EFF. 12/15/11)**

Require an analysis that measures environmental and neighborhood impact prior to funding any new roadway alignments, construction, or changes to the traffic circulation system. The level and type of review may vary with the anticipated impact, and shall include community involvement.

Policy 1.3.6: [M] **(EFF. 12/15/11)**

Require tree plantings, where practical, for both new and old roads to increase screening, beauty, runoff control and reduction of summer heat. Existing trees shall be protected during transportation system development and maintenance.

Policy 1.3.7: [M] **(EFF. 12/15/11)**

Aesthetically enhance and provide added environmental protection to existing and new transportation corridors by the following methods which include but are not limited to:

a) Incorporating for new, or increasing for existing corridors, the number of green spaces/open spaces and pedestrian oriented areas.
b) Recognizing plantations as a significant part of the natural landscape when roads are being designed in areas of the County where they are present.
c) Encouraging the use of native vegetation and natural systems such as swales to control runoff.
d) Maintaining natural ground cover, canopy and understory where new roads are built.
e) Design public infrastructure improvements to minimize development impacts to protect designated canopy roads consistent with the Conservation Element.
f) Applying access management strategies that enhance the character of transportation corridors and gateways to the community by promoting shared access and consolidated signage and preserving green space for landscaping.

Objective 1.4: [M] **(EFF. 12/15/11)**

CONNECTIVITY & ACCESS MANAGEMENT

Reduce vehicle trip demand, increase access and safety for cyclists and pedestrians, and preserve the integrity of the transportation system with effective connectivity and access management programs.

Policy 1.4.1: [M] **(EFF. 12/15/11)**

Require vehicular, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments if it has the potential to reduce the vehicular traffic on the external street system without negatively impacting either development.

Policy 1.4.2: [M] **(Eff. 12/15/11)**

Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through traffic on neighborhoods.

Policy 1.4.3: [M] **(Eff. 12/15/11)**

Within the Urban Service Area, require private developers to include bikeways and pathways or sidewalks within proposed developments and connecting to surrounding land uses.

Policy 1.4.4: [M] **(Eff. 12/15/11)**

All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 1.4.5: [M] **(Eff. 12/15/11)**

All development plans shall incorporate and continue all sub-arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 1.4.6: [M] **(Eff. 12/15/11)**

Connections to and from energy efficiency districts. The transit, bike, and pedestrian networks within energy efficiency districts shall recognize the districts as activity nodes and thus logically interconnect with and service the surrounding areas.

Policy 1.4.7: [M] **(Eff. 12/15/11)**

Energy Efficiency District Network and Connectivity. Energy efficiency districts shall have a dense, interconnected network of local and collector streets, sidewalks, bikelanes, and shared-use paths in accordance with the following:

1. The street, bicycle, and pedestrian network shall be comprised of a system of interconnected and direct routes with a connectivity index of 50 or more polygons per square mile;
2. For areas with a connectivity index below 50, the missing links in the network shall be identified and eliminated where feasible through the development and capital improvement process;
3. Prioritization of connectivity projects shall recognize the importance of areas with high concentrations of pedestrian activity and of areas where connections are needed to ensure easy access between transportation modes, with particular attention to bicycle and pedestrian access to schools, transit stops and regional greenway or trail systems.
4. Direct bicycle and pedestrian connections shall be provided within and between residential areas and supporting community facilities and services, such as

shopping areas, employment centers, transit stops, neighborhood parks, and schools.

5. The local street circulation pattern shall maximize access to individual lots and activity center destinations (e.g. schools, commercial areas, parks).

Policy 1.4.8: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County shall adopt and maintain access management ordinances and supporting design standards to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, considering impacts to all modes and users.

Policy 1.4.9: [M] **(EFF. 12/15/11)**

No new lot or parcel shall be platted or created along arterial or collector roadways that would result in connection spacing that does not comply with the applicable local or FDOT connection spacing standard.

Policy 1.4.10: [M] **(EFF. 12/15/11)**

Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access, rather than the maximum available for that property frontage.

Policy 1.4.11: [M] **(EFF. 12/15/11)**

Service roads shall be used for access to development in the area surrounding new freeway interchanges and shall be separated from interchange ramps at a distance that conforms with the applicable FDOT or local access spacing standards, in order to preserve safe and efficient traffic operations in the interchange area. Circulation systems for interchange area development shall be continuous and designed to support both vehicular and pedestrian mobility.

Policy 1.4.12: [M] **(EFF. 12/15/11)**

Flexibility shall be provided in administration of access spacing standards to accommodate minor deviations, where appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Policy 1.4.13: [M] **(EFF. 12/15/11)**

As Capital Circle is converted to a high capacity, multi-lane arterial, future access points shall be limited so that the improved roadway will function more efficiently and safely for

its intended purpose. In order to protect traffic capacity of the improved roadway and to assure public safety, the following policies will apply:

1) No new parcel shall be platted nor created through subdivision that results in a parcel with sole access to Capital Circle. Consolidation of two or more parcels that currently have access to Capital Circle into a parcel with a single access to Capital Circle shall be permitted;
2) New development abutting Capital Circle shall contribute to the development of a supporting system of local or collector roads, service roads, and/or shared access systems (e.g. joint use driveways), as an alternative to individual driveway access.
3) Where individual driveways must be provided to preserve reasonable access to a development site, applicants shall enter an agreement to cooperate in any future project to consolidate access points or to share access with abutting properties as opportunities arise.

Objective 1.5: [M] **(EFF. 12/15/11)**

LEVELS OF SERVICE

Establish transportation level of service (LOS) standards in order to measure the impacts of new development on, and to prioritize improvements to, the transportation system.

Policy 1.5.1: [M] **(EFF. 12/15/11)**

The peak hour roadway level of service for Tallahassee and Leon County is established as follows:

Table 1: Peak hour roadway level of service

Functional Classification	**Inside the USA**	**Outside the USA**
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D / E*	C
Major and Minor Collectors	D / E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southern Strategy. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 1.5.2: [M] **(EFF. 12/15/11)**

The level of service on all roadway facilities on the state highway system operating at the state recommended adopted minimum level of service standard or better at the time of adoption of the Comprehensive Plan will be maintained at the state adopted minimum level of service standard or a more strict local standard for the facility (if required adopted as part of the Plan). Level of service will be based on revised peak hour data compiled after Plan adoption.

Policy 1.5.3: [M] **(EFF. 12/15/11, REV. EFF. 8/9/2012)**

The Roadway Level of Service Standards established under Goal 1.5, and as may be duplicated in the Capital Improvements Element, may be waived if a mobility fee program is adopted into the local concurrency management manuals by the City and/or County Commissions. If implemented, the mobility fee program shall:

1) account for the fact that development further from activity nodes creates greater fiscal and environmental costs to the community;
2) support compact, mixed use development and redevelopment within adopted energy efficiency districts.

Policy 1.5.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee and Leon County Concurrency Management systems will accumulate all development impacts, both below and above threshold standards, to determine cumulative impact of individual development orders. Cumulative impacts of all development will be monitored in order to maintain adopted level of service standards.

Policy 1.5.5: [M] **(EFF. 12/15/11)**

MMTD Areawide Multimodal Level of Service Standards and Performance Targets. In order to create community design that supports mobility, the following performance standards are established for the Multimodal Transportation District.

Table 2: MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards (Pursuant to F.S. 163.3180(15)(c))			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

In addition, because areawide level of service measures based on computer models do not recognize the full breadth of conditions affecting pedestrian, cycling, and transit comfort, safety and convenience, the following performance targets are also established. It is recognized these targets may take more than the 20-year planning period of this document to achieve, but are provided as continuing guidance for plan updates and capital investments.

Table 3: MMTD Areawide Multimodal Performance Targets

a) Areawide modal split:		
	Trips that both originate & end within the district	Trips originating or ending outside the district (not including pass through trips)
Transit	40%	25%
Bike/pedestrian	30%	10%
Automobile	30%	65%
b) Bicycle and Pedestrian Mobility		
i)	Formally designated north/south & east/west bicycle routes functioning at LOS C or better are provided at 1½ mile intervals	
ii)	All buses are equipped with bicycle racks	

iii)	All sidewalk and bicycle facilities within ½ mile of StarMetro transfer points function at LOS C or better;
iv)	All superstops are equipped with bicycle parking
v)	All intersections within ½ mile of StarMetro transfer points incorporate features to support safe and comfortable crossing for pedestrians and cyclists
c) Transit Mobility	
i)	All employees and dwelling units are within ¼ mile of a transit stop
ii)	80% of transit routes operate with 20 minute headways or less
iii)	80% of employees and dwelling units are served by routes operating at least 16 hours a day
iv)	40% of transit stops include benches, signage, lights, and covered or enclosed waiting areas
v)	80% of employees and dwelling units are within 1 mile of a StarMetro transfer point.
d) In Relation to Educational Uses	
i)	All pedestrian and bicycle facilities within 2 miles of primary schools function at LOS C or better
ii)	50% of students at Florida State University (FSU), Florida A&M University (FAMU), and Tallahassee Community College (TCC) commute to campus via non-auto modes
iii)	At least three satellite parking facilities for students are located outside of the MMTD but within a 20 minute transit ride of FSU, FAMU, or TCC

Policy 1.5.6: [M] **(EFF. 12/15/11)**

Transportation Concurrency within the MMTD. Pursuant to F.S. 163.3180(15)(c), development permits may be issued in reliance upon all planned community design capital improvements that are financially feasible over the development or redevelopment timeframe for the MMTD, without regard to the period of time between development or redevelopment and the scheduled construction of the capital improvements. Reflecting the purpose of a MMTD to promote higher density infill and to create a safe, desirable environment for pedestrians, the capital improvements plan will reflect primary emphasis on bicycle, pedestrian, and transit projects.

Policy 1.5.7: [M] **(EFF. 8/9/12)**

Changes to roadway segment capacity that result from the reduction or restriction of automobile laneage from existing conditions in order to implement multimodal or other non-automobile-oriented comprehensive planning goals will not require transportation concurrency mitigation. An analysis shall be conducted of transportation and land use impacts on parallel roadways that would result from the lane changes.

Objective 1.6: [M] **(EFF. 12/15/11)**

CORRIDOR PRESERVATION

Identify right-of-way needed for planned future transportation improvements and protect it from building encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service for concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities on the community.

Policy 1.6.1: [M] **(EFF. 12/15/11)**

The City and County shall adopt and maintain corridor management ordinances, in accordance with subsection 337.273(6), F.S., which are designed to protect future transportation corridors designated in the Tallahassee-Leon County Comprehensive Plan from development encroachment, to provide for right-of-way acquisition, and to mitigate potential adverse impacts on affected property owners.

Policy 1.6.1(a): [M] **(EFF. 12/15/11)**

Development orders may require conveyance of transportation rights-of-way consistent with a Future ROW Needs Map and Future Right-of-Way Needs and Access Classifications Table, as a condition of plat or development approval, provided that any required dedication shall not exceed the amount of land that is roughly proportionate to the impacts of the development on the transportation network.

Policy 1.6.2: [M] **(EFF. 12/15/11)**

Acquire and maintain sufficient right-of-way when building new roads or widening old facilities in order to protect waterbodies, wetlands, and flood plains. Plan corridor alignments to avoid environmentally sensitive areas and where this is not possible, acquire wide roadside buffers and prohibit driveways by purchase of access rights, as necessary, to prevent development from occurring within the environmentally sensitive area, as a result of the roadway availability.

Policy 1.6.3: [M] **(EFF. 12/15/11)**

Future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are generally depicted in the table below and in the Future Right-of-Way Needs Map and the Long Range Transportation Plan.

Table 4: Future Right-of-Way Needs Without an Existing Corridor Alignment

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW (ft.)[1 3]**
Blueprint Principal Arterial[4]	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

Notes:

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Where a specific alignment is established through alignment studies, engineering studies or design, such alignment shall apply for the purpose of development review. Actual road location and design will be determined by specific corridor and design studies.
2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based

upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of-way needs for future corridors:
   a. Space for sidewalks to provide safe and convenient movement of pedestrians.
   b. The provision of bike lanes or separate bike paths.
   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.
   d. Accommodation of stormwater at the surface or in storm drains.
   e. Accommodation of auxiliary lanes at intersections.
   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.
   g. Allowing for changes in the paved section, utilities, or other modifications, that may be necessary in order to meet unseen changes in vehicular, pedestrian, bicycle, or other transportation needs as a result of changes in land use and activity patterns.

2) Planned ROW needs for Capital Circle from Centerview to W. Tennessee, as accepted by the Blueprint Intergovernmental Agency on November 19, 2001.

Policy 1.6.4: [M] **(EFF. 12/15/11)**

All proposed development plans on designated future transportation corridors shall be reviewed for consistency with the Future Right-of-Way Needs Map, the Long Range Transportation Plan, and any specific alignment or engineering studies and shall be consistent with identified right-of-way needs for designated future transportation corridors as a condition of development approval.

Policy 1.6.5: [M] **(EFF. 12/15/11)**

The Future Right-of-Way Needs Map shall be reviewed, and updated if necessary, every five years concurrent with the Long Range Transportation Plan update, or more frequently as necessary to address the growth and mobility needs of the local government.

Policy 1.6.6: [M] **(EFF. 12/15/11)**

City and County Staff shall consult with the Florida Department of Transportation in determining conceptual alignments, acquiring future right-of-way, and reviewing proposed development that substantially impacts state highways designated for improvement in the Tallahassee-Leon County Comprehensive Plan to ensure that local decisions are consistent with state and federal policy, and to ensure that development

activity does not substantially impair the viability of the future state transportation corridor.

Policy 1.6.7: [M] **(EFF. 12/15/11)**

Explore land banking policies, procedures and funding options to facilitate early acquisition of right-of-way for designated future transportation corridors.

Policy 1.6.8: [M] **(EFF. 12/15/11)**

Right-of-way acquisition shall be facilitated by the establishment of a program to identify, prioritize, and acquire needed right-of-way consistent with the Right-of-Way Needs Map and Capital Improvements Element.

Policy 1.6.9: [M] **(EFF. 12/15/11)**

Where needed right-of-way is identified in the energy efficiency district connectivity plans, such projects shall also be included on the Right-of-Way Needs Map and/or in the Long Range Transportation Plan.

Goal 2: [M] (EFF. 12/15/11)

TRANSIT

Capture a five to ten percent mode share through the development and improvement of the mass transit system so that transit is seen as a viable alternative to the automobile as a means of transportation.

Objective 2.1: [M] **(EFF. 12/15/11)**

IMPLEMENTATION STRATEGIES

In coordination with the Metropolitan Planning Organization, City of Tallahassee, Leon County and the Florida Department of Transportation, expand the integration of mass transit planning into the overall transportation delivery system by coordination of the short-range transit operations plan, Transit Development Plan, Bicycle and Pedestrian Master Plan and Long Range Transportation Plan development.

Policy 2.1.1: [M] **(EFF. 12/15/11)**

Land use regulations shall be developed which emphasize pedestrian movement and the use of transit.

Policy 2.1.2: [M] **(EFF. 12/15/11)**

Systematically extend and/or modify transit routes within the urban area to provide access to major employment, shopping, and business, recreational and other activity centers.

Policy 2.1.3: [M] **(EFF. 12/15/11)**

Coordinate the location and design of office parks to foster ride sharing and transit use.

Policy 2.1.4: [M] **(EFF. 12/15/11)**

Discourage single occupancy vehicle use through design criteria for new development and innovative programs such an employee pass program.

Policy 2.1.5: [M] **(EFF. 12/15/11)**

Encourage the elimination of the subsidy of public employee parking to encourage ride sharing and transit use.

Policy 2.1.6: [M] **(EFF. 12/15/11)**

Develop and maintain a marketing strategy and campaign to inform the public on mass transit and to increase ridership.

Policy 2.1.7: [M] **(EFF. 12/15/11)**

The potential impacts upon transit shall be determined and utilized in evaluating highway projects when planning new roads or capacity expansions to existing roads.

Policy 2.1.8: [M] **(EFF. 12/15/11)**

For purposes of evaluating transit level of service over the Plan Horizon and to implement the Regional Mobility Plan goal of a 10% modal split, the local government should expand coverage to serve 80 to 89 percent of the residential population within the Urban Service Area by a transit route along an arterial or collector roadway within approximately 1/2 mile.

Policy 2.1.9: [M] **(EFF. 12/15/11)**

Revisions to and expansion of transit service will be based on existing and major trip generators and densities to provide efficient mass transit services.

Policy 2.1.10: [M] **(EFF. 12/15/11)**

Future transit planning for Tallahassee and Leon County will include provisions for determining the location of transit regional transfer facilities and/or superstops.

Policy 2.1.11: [M] **(EFF. 12/15/11)**

To provide efficient transit for Tallahassee and Leon County, future transit planning will address provisions for efficient and frequent service based on trip generations and density of land uses, safe and convenient transit facilities and adaptation for the special needs of the transportation disadvantaged.

Objective 2.2: [M] **(EFF. 12/15/11)**

TRANSIT ALTERNATIVES

Adopt and maintain a plan for expanding the transit system beyond buses.

Policy 2.2.1: [M] **(EFF. 12/15/11)**

Initiate a study to evaluate the alternative types of transit in relation to their potential use in the City.

Policy 2.2.2: [M] **(EFF. 12/15/11)**

Develop a long-range master plan for building the transit system type determined to be most feasible in Policy 2.2.1.

Objective 2.3: [M] **(EFF. 12/15/11)**

PROTECTION OF FUTURE TRANSIT CORRIDORS

Develop and maintain a plan that identifies future transit rights-of-way and corridors and provides means of protecting and acquiring such areas.

Policy 2.3.1: [M] **(EFF. 12/15/11)**

Existing and future transit rights-of-way and corridors shall be identified as a part of the comprehensive plan for integrating transit into the existing transportation system.

Policy 2.3.2: [M] **(EFF. 12/15/11)**

Incentives to encourage the donation of transit rights-of-way and corridors shall be developed.

Policy 2.3.3: [M] **(EFF. 12/15/11)**

Development agreements and land use regulations shall be utilized to preserve future transit corridors.

Objective 2.4: [M] **(Eff. 12/15/11)**

Funding of Transit

By 2012, alternative and innovative funding sources shall be developed to support an effective transit system.

Policy 2.4.1: [M] **(Eff. 12/15/11)**

Transit shall be regarded as a vital public service with increased funding to allow it to compete with the private automobile on an equal basis.

Policy 2.4.2: [M] **(Eff. 12/15/11)**

Funding for transit operating expenses should include and should not be limited to the following sources: sales tax, property tax, future charter county surtax, gas tax, impact fees, and the significant benefits program.

Objective 2.5: [M] **(Eff. 12/15/11)**

Transportation for Disadvantaged

Provide for full implementation of the requirements of Chapter 427, Florida Statutes and Section 3046(a)(9) of the SAFETEA-LU Act regarding planning and coordination of human services transportation in meeting the needs of the transportation disadvantaged.

Policy 2.5.1: [M] **(Eff. 12/15/11)**

A needs assessment of the transportation disadvantaged shall be undertaken.

Policy 2.5.2: [M] **(Eff. 12/15/11)**

An assessment of existing public and private transit programs shall be undertaken with an analysis to determine unmet needs.

Policy 2.5.3: [M] **(Eff. 12/15/11)**

A strategy to meet identified unmet needs shall be developed with emphasis being given to meeting the needs of the transportation disadvantaged (i.e., those individuals who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase transportation).

Goal 3: [M] (Eff. 12/15/11)

Aviation

Provide for adequate capacity and safe, appropriate airport facilities to meet the demand for Commercial Service, cargo, military, and General Aviation services and to enhance aviation and airport development opportunities, with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Objective 3.1: [M] **(Eff. 12/15/11)**

Long Term Implementation Guidelines

Expand and improve on a phased, incremental basis, the aviation facilities at and the access to Tallahassee Regional Airport to meet the transportation needs of the Capital Region while maintaining consistency with all elements of the comprehensive plan. The Tallahassee Regional Airport Master Plan will be maintained and monitored on an ongoing basis to ensure that implementation of the plan meets the aviation needs of the area.

Policy 3.1.1: [M] **(Eff. 12/15/11)**

Implement the Tallahassee Regional airport Master Plan for the Year 2005 and implement the recommendations of the Tallahassee Regional Airport Noise Compatibility Plan.

Objective 3.2: [M] **(Eff. 12/15/11)**

Access to Airport

Access routes to the Tallahassee Regional Airport will be integrated with the street and highway planning process of the City, County, MPO, and Florida DOT. Alternative modal choices will be studied as part of the mass transportation planning process.

Policy 3.2.1: [M] **(Eff. 12/15/11)**

An appropriate gateway from the airport to Downtown/Capitol Center/University destinations shall be designated and improved. Such improvements shall consider roadway capacity, adjacent land uses, landscaping, and incorporation of future mass transportation facilities.

Policy 3.2.2: [M] **(Eff. 12/15/11)**

Conduct a feasibility study to determine the need for, type of, and proposed location of mass transportation services between the airport and priority destinations within the urban area.

Policy 3.2.3: [M] **(EFF. 12/15/11)**

The interface between the roadway network and the airport vehicle circulation system shall be designed, constructed, and signalized (when warranted) to provide efficient on-site and off-site traffic flow.

Policy 3.2.4: [M] **(EFF. 12/15/11)**

The City of Tallahassee will coordinate any aviation facilities plan with U.S. Army Corps of Engineers, the Federal Aviation Administration, the MPO, military service, the FDOT 5 Year Transportation Plan and the Continuing Florida Aviation System Planning Process.

Policy 3.2.5: [M] **(EFF. 12/15/11)**

The Traffic Circulation and Mass Transit sub-elements shall consider future airport access needs.

Objective 3.3: [M] **(EFF. 12/15/11)**

CRITERIA FOR OPERATION AND MODIFICATION TO AIRPORT

Operation of and modification to Tallahassee Regional Airport shall take into account impacts to adjacent land uses, the natural resources, and the community in general.

Policy 3.3.1: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall take into account the potential for noise and safety hazards to surrounding land uses.

Policy 3.3.2: [M] **(EFF. 12/15/11)**

Future modifications to airport facilities shall be accomplished so as to be compatible with nearby natural resources.

Policy 3.3.3: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall be consistent with the conservation element.

Policy 3.3.4: [M] **(EFF. 12/15/11)**

Aviation and related facilities development and expansion shall mitigate structural and non-structural impact on adjacent natural resources.

Policy 3.3.5: [M] **(EFF. 12/15/11)**

Additional parking shall be provided in ways that minimize impervious surfaces and that maintain the appearance of the airport terminal.

Policy 3.3.6: [M] **(EFF. 12/15/11)**

Aesthetics shall be considered in any future airport facility design.

Objective 3.4: [M] **(EFF. 12/15/11)**

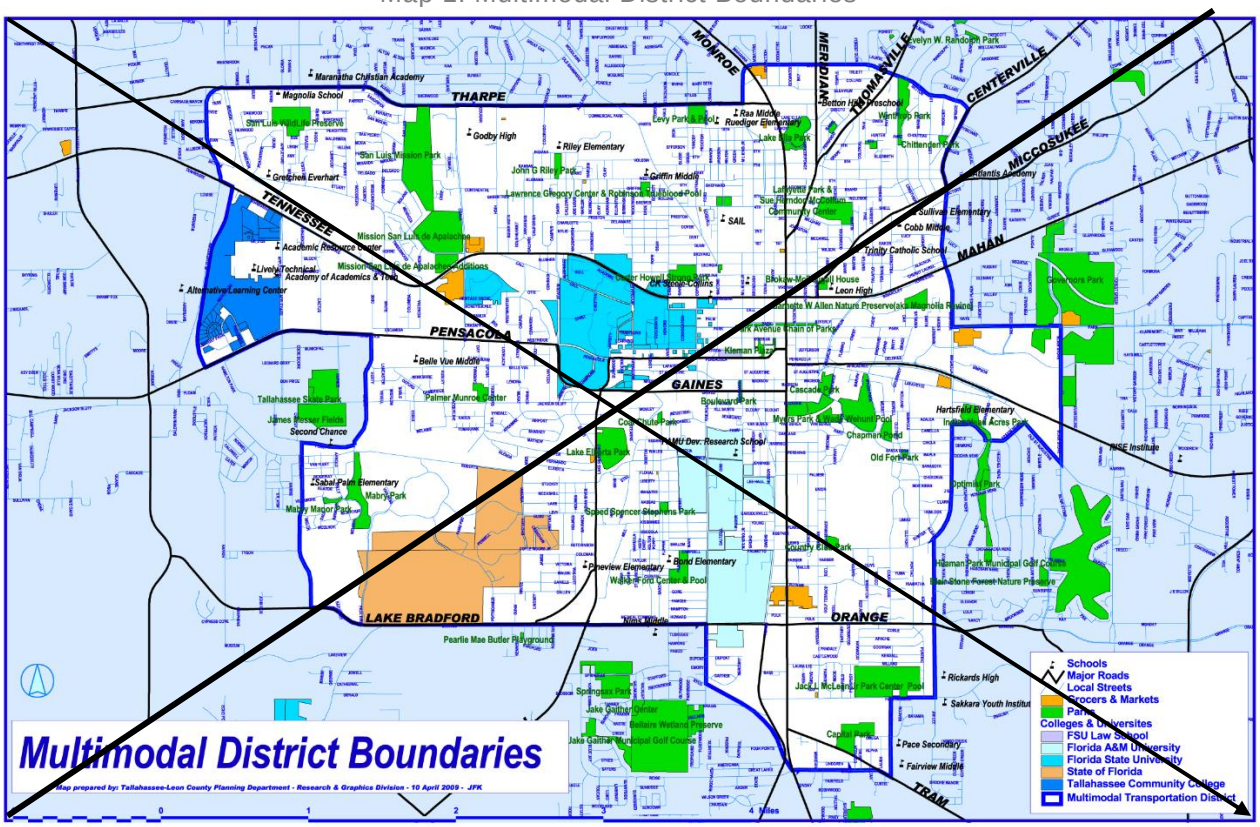
LAND USE IN ADJACENT AREAS

Development near the airport shall occur in ways and at locations compatible with the airport's operation and expansion and with sensitivity to protecting existing residential and natural resources adjacent to the airport.

Policy 3.4.1: [M] **(EFF. 12/15/11)**

Land use decisions in the vicinity of the Tallahassee Regional Airport shall only be permitted if compatible with the current and future operation of the airport facility and the future land use element.

Policy 3.4.2: [M] **(EFF. 12/15/11)**



Residential development or other noise-sensitive land uses shall not be permitted within the predicted 65 Ldn noise contours without the use of mitigative noise control measures. Incompatible land uses in airport approach zones shall not be permitted. The high noise contours associated with the airport shall be publicized.

Policy 3.4.3: [M] **(EFF. 12/15/11)**

Additional land uses shall not be permitted in airport zones if, due to structural height, they hinder airport operation or reduce navigable airspace.

GLOSSARY

ACCESS: **(EFF. 6/25/96)** The means of vehicular entry to or exit from property to or from a public or private road.

ACLF: **(EFF. 7/16/90)** Means adult congregate living facility as defined in Section 400.402 of the Florida Statutes.

ACQUISITION: **(EFF. 7/16/90)** Includes purchase, land exchange, donation, easement, assisting private owners in obtaining tax advantages, etc. "Purchase" shall include all acquisition costs, such as surveying and title insurance.

ACTIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are facility oriented, i.e. swimming pools, ball fields, tennis courts.

ADJOINING LAND USES: **(EFF. 8/17/92)** Land uses on parcels which are touching or contiguous to each other, as distinguished from lying near to or adjacent. For purposes of this Plan, land uses on parcels that are separated from each other by a local or a minor collector street or roadway shall also be considered adjoining; land uses on parcels that are separated by a major collector or an arterial street or roadway or by a railroad right of way shall not be considered adjoining.

ADVANCED AIR MOBILITY: Vehicles and infrastructure associated with vertical take-off and landing (VTOL), air taxis, electric and hybrid short-to-medium distance aircraft. These vehicles may be piloted or autonomous and carry either passengers or cargo.

ADVANCED WASTEWATER TREATMENT: **(EFF. 4/10/09)** Treatment of sewage that goes beyond the secondary or biological wastewater treatment stage and includes the removal of nutrients such as phosphorus and nitrogen and a high percentage of suspended solids and biochemical oxygen demand.

AFFORDABLE HOUSING: **(REV. EFF. 7/20/05; REV. EFF. 12/24/10)** Housing that costs no more than 33% of the annual income of a household earning 80% or less of area median income (AMI) for homeownership and 60% AMI or less for rental housing, adjusted for the number of people in the household, as defined by the U.S. Department of Housing and Urban Development (HUD) annually.

AGRICULTURE: **(EFF. 7/6/15)** The production, keeping or maintenance, for sale, lease or personal use, of plants and/or animals useful to humans, including, but not limited to, the growing of crops, dairying, grazing, the raising and maintenance of poultry and other livestock, horticulture, nursery, forestry, and sod farms. Commercial feed lots, the raising of furbearing animals, riding academies, livery or boarding stables or dog kennels are not considered to be normal agricultural uses.

AGRITOURISM: **(EFF. 7/6/15)** Any agricultural related activity consistent with a bona fide farm or ranch or in a working forest which allows members of the general public to view or enjoy activities related to farming, ranching, historical, cultural or harvest-your-own attractions for recreational, entertainment or educational purposes.

ALTERED FLOODPLAINS: **(EFF. 7/16/90)** Areas within the 100 year floodplain that have been either ditched, drained, filled or have had structures built on them, any of which have diminished the flood storage capacity of the floodplain.

ALTERED WETLANDS: **(EFF. 8/17/92)** Wetlands that have been degraded to the extent their ecological function has been detrimentally impaired and the likelihood that they cannot be re-established except through a distinct program of man-made mitigation. Wetlands that can have beneficial function restored through natural processes will not be considered altered.

ARCHAEOLOGICAL SITE: **(EFF. 7/16/90)** A location that has yielded or may yield information on history or prehistory.

AREA PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the urban service area, including but not limited to community parks and sports complexes.

BASIC LIVING SHELTER: **(EFF. 7/16/90)** Means a dwelling unit which, at a minimum, is structurally sound, includes indoor plumbing, has a functional heating source, and provides protection to its inhabitants from the elements.

BEST MANAGEMENT PRACTICES: **(EFF. 7/16/90)** Those practices and principles designed to reduce and manage non-point source pollution and in some cases, protect wildlife and habitat. These principles and practices are generally outlined in the latest updated version of various BMP manuals including “Silviculture Best Management Practices,” “Best Management Practices,” “A Landowners Handbook for Controlling Erosion for Forestry Operations,” “Management Guidelines for Forested Wetlands,” “DER: Florida Development Manual, A Guide to Sound Land and Water Management,” and other publications on best management practices that are accepted by the industries and regulatory bodies. The local government reserves the right to add to or alter BMPs in specific instances as part of development agreements or development orders.

BUFFER: **(EFF. 6/25/96)** Open spaces, planted areas, fences, walls, berms, any combination thereof, or any other structure or design mechanism that is used to physically separate or screen one land use from another so as to visually shield and/or mitigate potential negative impacts.

BUSINESS ACCELERATOR: **(EFF. 5/31/18)** An organization that offers a range of support services and funding opportunities for startup businesses, including capital and investment, mentorship, office space and supply chain resources.

BUSINESS INCUBATOR: **(EFF. 5/31/18)** Organizations that help new and startup companies develop by providing services such as management training or office space, and are often a good path to capital from investors.

CANOPY ROAD: **(EFF. 7/16/90)** Road designated by local government as having significant aesthetic, cultural and historical value.

CAPITAL FACILITIES: **(EFF. 7/16/90)** Means transportation systems or facilities, including roads, mass transit, bikeway, sidewalk and aviation facilities; sewer systems or facilities; solid waste systems or facilities; drainage and stormwater management systems or facilities; potable water systems or facilities; education systems or facilities; parks and recreation systems or facilities; and health systems or facilities.

CAPITAL INFRASTRUCTURE: **(REV. EFF. 8/17/92)** Consists of sewer and water, roads, mass transit, solid waste, drainage, and parks.

CAPITOL CENTER PLANNING COMMISSION: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

CDBG: **(EFF. 7/16/90)** Means the Community Development Block Grant, as authorized under Title I of the Housing and Community Development Act of 1974.

CLOSED BASIN: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

CLUSTERING: **(EFF. 12/7/99)** The grouping together of structures and infrastructure on a portion of a development site with the balance remaining undeveloped or reserved as green space, which may or may not be used for development at a later date.

COMMERCIAL: **(REV. EFF. 6/25/96)** Generally, an activity or business involving the sale of goods and/or services carried out for profit.

> **MINOR**: **(EFF. 7/16/90)** Provide for the sale of convenience goods and services to the immediate residential area. Gross floor area—less than 20,000 square feet except at a local street intersection where maximum allowable is 10,000 square feet.
>
> **NEIGHBORHOOD**: **(REV. EFF. 9/19/91)** Provide for the sale of convenience goods and personal services such as food, drugs, sundries and hardware items to one or more neighborhoods. Gross floor area—20,000 to 100,000 square feet. Except at intersection of collectors where maximum allowable is 50,000 square feet.

COMMUNITY: **(EFF. 7/16/90)** Same functions of neighborhood commercial but on a larger scale. Provide for sale of retail goods such as clothing, variety items, appliances and furniture, hardware and home improvement items. Gross floor area—100,000 to 200,000 square feet.

REGIONAL: **(EFF. 7/16/90)** Same functions of community center, provide full range and variety of shopping goods for comparative shopping such as general merchandise apparel, furniture and home furnishings. Gross floor area - 200,000 to 1,000,000 square feet.

HIGHWAY: **(EFF. 7/16/90)** Provide for consumer oriented retail services designed for drive-in convenience. Gross floor area - 1,000 to 10,000 square feet.

COMMERCIALIZATION CENTERS: **(EFF. 5/31/18)** Facilities designed to further develop technologies through research partnerships, assistance with patents, and support for delivering products to the market through licensing and the creation of companies.

COMMUNITY FACILITIES: **(REV. EFF. 8/17/92)** Facility or service which may be public or privately owned, established, and intended to provide significant public benefit.

COMMUNITY SERVICES: **(EFF. 7/16/90; REV. EFF. 8/27/17)** A facility owned or operated by a public or private entity or agency that provides a service or significant public benefit directly to the general public, such as libraries, religious facilities, police/fire stations, hospitals, museums, and schools.

LIGHT INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 1/19/20)** Water wells, water tanks, sewage pump stations, electric substations, and solar power stations and systems.

HEAVY INFRASTRUCTURE: **(EFF. 7/16/90; REV. EFF. 12/24/10; REV. EFF. 1/19/20)** Government operational facilities, which have significant off-site impacts. Also included are such facilities operated by semi-public or private utility providers. These facilities shall include but are not limited to:

Waste-to-energy facilities
Materials recovery facilities
Sanitary sewer facilities
Sanitary sewer percolation ponds
Sewage treatment plants
Airports
Power generating stations (non-solar powered)
Landfills
Sludge disposal facilities
Incinerators
Correctional facilities
Water treatment plants
Outdoor storage facilities
Vehicle maintenance facilities
Solid waste transfer station
Correctional facilities

POST-SECONDARY: **(EFF. 7/16/90)** Public or private - Universities, colleges, vocational/technical schools.

COMMUNITY PARK: **(EFF. 7/16/90)** Means those parks that serve several neighborhoods with total populations of up to 25,000 and have a service area of up to a three mile radius. "Ride-to" facilities that are also accessible to bicyclists and pedestrians shall be included.

COMPATIBILITY: **(EFF. 5/31/18)** A condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition.

CONSERVATION: **(EFF. 7/16/90)** Allowing only carefully planned development activities to occur on a site; development activities must be compatible with the perpetuation of the ecological resources on the site.

CONSERVATION SUBDIVISION: **(EFF. 7/1/04)** A residential or mixed-use development that has been developed utilizing a design approach in which a significant fraction of the parent tract(s) is reserved as permanently protected open space and the remaining fraction of the land is developed. Under this design approach, development is clustered or concentrated on the least environmentally or otherwise significant portions of the development site.

CONTEXT SENSITIVE DESIGN: Land use and streetscape design that prioritizes physical and social context, while also preserving scenic, aesthetic, historic, and environmental resources, to provide mobility and safety for all users in a way that is reflective of the specific area in which the development and/or roadway is constructed.

COUNTYWIDE PARK: **(EFF. 7/16/90)** Means those park facilities that serve the entire county population, including but not limited to regional parks, boat landings and parks, golf courses, state parks, including university recreation areas, and national forest lands.

COWORKING SPACES: **(EFF. 5/31/18)** Shared workplaces or offices that facilitate the social gathering of a group of people who are still working independently. Unlike in a typical office, those utilizing coworking spaces are usually not employed by the same organization. Coworking spaces are often attractive to work-at-home professionals, independent contractors, or people who travel frequently.

DENSITY: **(EFF. 12/7/99)** *see* Gross Density

DENSITY NEUTRAL: **(EFF. 7/1/04)** As applied to Conservation Subdivisions, means that the allowable density achieved through the utilization of the conservation subdivision design approach shall not exceed the maximum density established for the Future Land Use Map category and base zoning district applicable to the subject property or properties.

DEVELOPMENT: **(EFF. 7/16/90)** Any proposed change in the use or character of the land, including but not limited to, land clearing or the placement of any structure or site improvement on the land except for silviculture activities employing best management practices.

DILAPIDATED: **(EFF. 7/16/90)** Means a structure which does not provide safe and adequate shelter in its present condition and endangers the health, safety and well-being of the occupants. A structure in the dilapidated classification cannot be economically repaired. A house is dilapidated when it has one or both of the following conditions:

1) Inadequate original construction such that it does not provide adequate protection against the elements;
2) Defects which would cost over 50% of the total value of the shelter to repair.

DRAINAGE BASIN: **(EFF. 12/7/99)** The area defined by topographic boundaries which contributes stormwater to a watershed or drainage system, including all areas artificially added to the basin.

ECOTOURISM: **(EFF. 7/6/15)** Tourism that focuses on the appreciation of natural areas, wildlife, or cultural and historical resources and strives to minimize ecological impact or damage. This nature-based tourism involves education and interpretation of the natural environment and is managed to be ecologically sustainable. Activities may include cycling, camping, fishing, hunting, paddling, hiking, birding, visiting scenic byways, agritourism, and wildlife viewing.

ENDANGERED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish and wildlife or plant naturally occurring in Florida, whose prospects of survival are in jeopardy due to modification or loss of habitat; over utilization for commercial, sporting, scientific or educational purposes; disease; predation; inadequacy of regulatory mechanisms; or other natural or man-made factors affecting his continued existence.

~~**ENTERPRISE ZONE**: **(EFF. 7/16/90)** Means an area in the state designated pursuant to Section 290 of the Florida Statutes and approved by the Secretary of the Department of Community Affairs.~~

ENVIRONMENTALLY SIGNIFICANT LANDS: **(EFF. 7/16/90)** Areas that provide breeding, wintering or foraging habitat, for federal, state, and locally listed plant and animal species; flood plains, wetlands, native forests and vegetated areas.

~~**FEDERAL UNIFORM RELOCATION ACT**: **(EFF. 7/16/90)** Means the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as passed and subsequently amended by the Congress of the United States.~~

FLOOD OR **FLOODING**: **(EFF. 1/23/09)** A temporary condition of partial or complete inundation of normally dry land or wetlands from the overflow of water bodies or watercourses in response to stormwater runoff, or from excessive overland flow of stormwater, or the accumulation of stormwater runoff in a closed basin.

FLOODPLAIN: **(EFF. 1/23/09)** An area of land susceptible to being flooded by stormwater. Floodplains are normally designated in terms of their probability of flooding with a specified period, such as one, ten, 25, 50, and 100 years.

FLOODWAY: **(EFF. 7/16/90; REV. EFF. 1/23/09)** That part of the floodplain associated with the channel of a river, steam, or other watercourse, or waterbodies and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation of the floodway.

FLOOR AREA RATIO: **(EFF. 6/25/96)** A measure of development intensity expressed as a ratio of the gross floor area of all buildings on a site divided by the total area of the site.

FLORIDA CAPITOL CENTER PLANNING DISTRICT: **(EFF. 8/17/92)** As defined by §272.12, Florida Statutes.

FLORIDA MASTER SITE FILE: **(EFF. 7/16/90)** A clearinghouse for information on archaeological sites, buildings and historic resource surveys. Inclusion in the Florida Master Site File does not necessarily mean that the resource possesses historic, architectural, archaeological or cultural significance, or is worthy of preservation.

FREEWAYS: **(EFF. 7/1/04)** Roadways that provide the highest level of mobility and are intended to carry the greatest amount of traffic at the highest speeds. Accordingly, freeway mainlanes provide no direct access to property and access to the freeway is provided only at interchanges and ramps.

FUNCTIONAL AREA OF AN INTERSECTION: **(EFF. 7/1/04)** The area beyond the physical intersection that comprises decision and maneuver distance, plus any required vehicle storage length, and is protected through corner clearance standards and connection spacing standards.

GREEN SPACE: **(EFF. 7/16/90)** Means that part of a lot open and unobstructed from its lowest level upward which is accessible to all residents on the lot, except as may be required for safety, and which is not used for off-street parking, streets, drives, refuse storage or other utility or building purposes.

GREEN INFRASTRUCTURE: Infrastructure that uses plants, soils, and other media to capture and treat stormwater. It relies on the natural processes of filtration, infiltration, and evapotranspiration to manage stormwater

GROSS DENSITY: **(EFF. 7/16/90)** Means the number of dwelling units per gross acre, an area of land containing forty three thousand, five hundred sixty (43,560) square feet including rights-of-way, common areas and the like. All residential densities referred to in the plan shall be gross densities unless otherwise noted.

GROUNDWATER RESOURCE PROTECTION: **(EFF. 7/16/90)** Areas determined to have high recharge to the aquifer and/or area where the potential for groundwater contamination is high.

GROUP HOME: **(EFF. 7/16/90)** Means a facility which provides a living environment for unrelated residents who operate as the functional equivalent of a family, including such supervision and care as may be necessary to meet the physical, emotional and social needs of the residents. Adult congregate living facilities comparable in size to group homes are included in this definition. It shall not include rooming or boarding homes, clubs, fraternities, sororities, monasteries or convents, hotel, residential treatment facilities, nursing homes, or emergency shelters.

HAZARD: **(EFF. 4/10/09)** Means a condition that exposes human life or property to harm from a man-made technological, or natural disaster.

HAZARD MITIGATION: **(EFF. 4/10/09)** Means any action taken to reduce or eliminate the exposure of human life or property to harm from a man-made or natural disaster.

HAZARDOUS WASTE: **(EFF. 7/16/90)** Means solid waste, or a combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics, may cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible or incapacitating reversible illness, or may pose a substantial present or potential hazard to human health or the environment when improperly transported, disposed of, stored, treated, or otherwise managed.

HEAVY INDUSTRIAL: **(EFF. 7/16/90; REV. EFF. 5/31/18)** Heavy industrial uses have or may have substantial offsite impacts, such as noise, vibrations, smoke, dust and particulate matter, and noxious or odorous gases. Heavy industrial uses typically depend on access to Strategic Intermodal System (SIS) facilities, rail facilities, or airport facilities.

HIGH QUALITY SUCCESSIONAL FOREST: **(REV. EFF. 12/10/91; REV. EFF. 7/19/13)** High quality successional forest shall mean a medium quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." These forests typically show signs of past disturbances, but still retain a good distribution of high quality indicator species. A medium quality natural community generally possesses the following characteristics:

1) The floristic composition contains many of the more common species typical of the natural community type, although most rare species are absent;
2) The community may contain invasive exotic plants that could be controlled through management;
3) The community has likely had some past disturbance, but not to the extent that the potential for recovery or restoration to a high quality natural community is significantly impaired (unauthorized activities in high quality successional forest areas resulting in a violation of the ordinances will not be excluded from protection as such).

HISTORIC RESOURCE: **(EFF. 7/16/90)** Means all areas, districts, or sites containing properties listed on the Florida Master Site File, the National Register of Historical Places, or designated by a local government as historically, architecturally or archaeologically significant.

HYDRAULIC FRACTURING: **(EFF. 5/31/18)** The process by which fractures are created by pumping fluids at high pressure into target rock formations to stimulate the flow of natural gas or oil, increasing the volumes that can be recovered.

INNOVATION DISTRICTS: **(EFF. 5/31/18)** Geographic areas that are physically compact, walkable, and transit-accessible where educational institutions, university-affiliated research and development facilities, and/or technology-focused companies cluster and connect with startup companies, business incubators, and business accelerators. Innovation Districts are mixed-use areas that provide housing, office, and retail in addition to the educational and business uses.

INTEGRATED ACCESS: **(EFF. 12/10/91)** The permitting of ingress and egress to a parcel of land in a manner which will minimize disruptions of the traffic flow due to turning movements on the local, collector, or arterial street on which the parcel fronts. Integrated access may include the requirement of shared access or the use of frontage or rear access roads.

INTENSITY: **(EFF. 12/7/99)** A measurement of the extent of land development, including the consumption or use of the space above, on, or below ground; examples of intensity measurement may include: the measurement of the use of or demand on facilities or services, allowed square footage or a floor area ratio of non-residential development, or the number of dwelling units per acre of residential development.

INTERMODAL: The term intermodal generally describes facilities that are used to move freight and cargo, as well as their transfer stations. Such facilities may include ports, railroad freight yards, freight/commercial airports, and the highways and railways that connect these facilities.

INTERSECTION: **(EFF. 6/25/96)** The point where the centerlines of two or more roads meet or cross and where allowance is made for the interchange of vehicular traffic.

LAND DEVELOPMENT REGULATIONS: **(EFF. 7/16/90)** Ordinances enacted by governing bodies for the regulation of any aspect of development, and including any local government zoning, rezoning, subdivision, building construction, or sign regulations, or any other regulations controlling the development of the land.

LDN: **(EFF. 7/16/90)** Means that measure of noise known as the Average Day-Night Sound Level rating which is the yearly energy average of the A-weighted sound level (to approximately the frequency response of the ear) integrated over a 24-hour period.

LEVEL OF SERVICE: **(EFF. 7/16/90)** Means an indicator of the extent or degree of service provided by, or proposed to be provided by a facility based on or related to the operational characteristics of the facility. Level of service shall indicate the capacity per unit of demand for each facility.

LEVELS OF SERVICE: (EFF. 7/16/90)

A Represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.

B Is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable.

C Is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

D Represents high density, but stable flow. Speed and freedom to maneuver are severely restricted.

E Represents operating conditions at or near the capacity level. All speeds are reduced. Freedom to maneuver within the traffic stream is extremely difficult.

LIGHT INDUSTRIAL: **(EFF. 7/16/90, REV. EFF. 5/31/18)** Light Industrial uses typically constrain potentially offensive impacts onsite, either through complete enclosure or a combination of enclosure and screening. Light Industrial uses shall include the finishing of products composed of previously manufactured component parts (such as the assembly of apparel or food processing excluding slaughter); and any manufacturing, storage, or distribution of products unlikely to cause any of the following impacts to be detected off-site: odor, noise, fumes or dispersion of waste, or radiation. Ancillary commercial uses designed to serve adjacent workers may be permitted. Light Industrial uses are not dependent upon direct access to rail facilities for off-loading and on-loading. Mixed Use Industrial sites allow light industrial uses supported by training facilities, offices, restaurants, small scale commercial storefronts, factory tours, retail, ancillary residential and/or open space uses.

LISTED SPECIES: **(EFF. 7/16/90)** Any plant or animal listed by the county, state or federal governments as an endangered or threatened species, or a species of special concern.

LIVE-WORK UNITS: **(EFF. 7/20/05)** Residential structures with their own lots, designed to accommodate and that include both living facilities and commercial/office components within the structure or on the same lot. The non-residential uses allowed in live-work units are “destination” businesses that do not rely on passerby and drive-by traffic, but more typically have visitation by appointment.

LOCALLY DESIGNATED HISTORIC RESOURCE: **(EFF. 7/16/90)** A resource that has been designated as historic under the Tallahassee-Leon County Zoning Code and that undergoes design review by the Tallahassee-Leon County Architectural Review Board.

LOCAL PARK: **(EFF. 7/16/90)** Means those park facilities that serve the population of the corporate city limits, including but not limited to neighborhood parks and passive recreation facilities.

LOCAL STREETS: **(REV. EFF. 7/1/04)** Local streets collect traffic from adjacent land uses and other minor streets (cul-de-sacs, loops, alleys, lanes) and channel it to the collector/arterial system. Local streets are intended to carry the lowest traffic volumes at the lowest speeds, discourage through traffic (usually do not carry traffic between two streets of a higher classification), and to provide access to abutting land.

LOW IMPACT DEVELOPMENT: **(EFF. 4/10/09)** A land planning and engineering design approach that focuses on minimizing adverse impacts of development on water quality. This approach is implemented by replicating the pre-development hydrologic regime of the development site through infiltrating, filtering, storing, evaporating, and detaining stormwater runoff close to its source.

MAJOR COLLECTOR: **(REV. EFF. 7/1/04)** Major collector roadways channel traffic between arterials, from other collector streets to the arterial system, and from a major activity center to the arterial street system. Major collectors may carry relatively high traffic volumes.

MAJOR DETERIORATION: **(EFF. 7/16/90)** Means a dwelling unit which has major defects requiring extensive repairs. The unit will not necessarily provide safe and decent shelter unless the repairs are made. These housing units usually have critical defects of a substantial nature, such as:

1) Holes, open cracks, rotted or missing materials over a large part of the foundation, walls, roof or chimney;
2) Substantial sagging of floors, walls or roof,
3) Extensive damage by storm, fire or flood.

MAKERSPACES: **(EFF. 5/31/18)** Collaborative work spaces with tools available for the purposes of enabling people to design, prototype and create manufactured works that typically would not be possible to create with the resources available to individuals working alone. Makerspaces are intended to provide access to equipment, community, and education. Makerspaces often have a variety of equipment, such as 3D printers, laser cutters, CNC (Computer Numerical Control) machines, soldering irons, or sewing machines.

MASS TRANSIT: **(EFF. 7/16/90)** Means passenger transportation service, usually local in scope, that is available to any person who pays a prescribed fare. It operates on established schedules along designated routes or lines with specific stops and is designed to move relatively large number of people at one time.

MICROMOBILITY: The term micromobility is used to describe emerging transportation alternatives such as e-scooters, e-bikes, and electric skateboards. It is frequently used in describing bikeshare and e-scooter share schemes.

MINING: **(EFF. 5/31/18)** Mining uses have the potential for substantial offsite impacts and alterations to the land structure on and around the mining site. Mining uses shall include the mining and quarrying of sand, gravel, clay, limestone, ceramic, and refractory minerals. Mining uses do not include hydraulic fracturing. Mining uses typically depend on a transportation system that can support large and heavy trucks.

MINOR ARTERIAL: **(REV. EFF. 7/1/04)** Minor arterial roadways interconnect with and augment the principal arterial system. They are similar in function to principal arterials, but accommodate trips of more moderate length and distribute travel to geographic areas smaller than that of the principal arterial system. Therefore, they provide a somewhat higher degree of property access than principal arterials.

MINOR COLLECTOR: **(REV. EFF. 7/1/04)** Minor collector roadways channel traffic from minor streets to the major collector/arterial system, between other collectors, and from activity centers to a street of higher classification. Minor collectors provide access to adjoining properties and generally have lower volumes, shorter trip lengths, and fewer through trips than major collectors.

MISSING MIDDLE HOUSING: This type of housing is represented as house-scale buildings with multiple units, such as duplexes, fourplexes, cottage courts, and cluster housing types, that fit seamlessly into existing residential neighborhoods, offering more housing options and supporting walkability. These types are frequently "missing" from the typical Florida housing market.

MITIGATION: **(EFF. 7/16/90)** To lessen or eliminate the impact of development on a significant historic resource. Mitigation can include the modification of project plans to ensure preservation of the significant resource, landscape buffering, adaptive use of a historic building, archaeological salvage, or historic or photographic documentation or the resource.

MSTU/MSBU: **(EFF. 7/16/90)** Means municipal service taxing units or municipal service benefit units, as authorized and defined in Florida Statutes, Chapter 125.01 (1)(q).

MULTIMODAL: The term multimodal describes supporting the presence of a variety of transportation options including but not limited to walking, biking, rolling (wheelchair et al.), micromobility (e-scooters et al.), freight, trolly, bus, train, etc. The term is generally used to emphasize alternatives to vehicular modes of transportation.

NATIONAL REGISTER OF HISTORIC PLACES: **(EFF. 7/16/90)** A federal listing of culturally significant buildings, structures, objects, sites and districts in the United States. This program was established by Congress in 1935 and is maintained by the United States Department of the Interior.

NATIVE FOREST: **(EFF. 7/16/90; REV. EFF. 7/19/13)** Native forest shall mean a high quality natural plant community that is a forest type described in the Florida Natural Areas Inventory publication "Guide to the Natural Communities of Florida." A high quality natural community generally possesses the following characteristics:

1) The plant species composition is dominated by high quality indicator species which are typical of their natural community type;
2) The community may contain invasive exotic plants that could be controlled through management;
3) Evidence of historical disturbance may be present, but the disturbance has not destroyed or prevented the re-establishment of a high quality natural community type.

NATURAL ACCESS CONTROL: **(EFF. 12/10/02)** A design concept directed primarily at decreasing opportunities for criminal activities by denying access to crime targets and creating a perception of risk for potential offenders. Natural access control is developed by designing streets, parking areas, sidewalks, building entrances, and neighborhood gateways, which clearly indicate public routes and discourage access to private areas with structural elements.

NATURAL SURVEILLANCE: **(EFF. 12/10/02)** A design concept directed primarily at identifying potential undesired r criminal activities. Natural surveillance is promoted by features that provide day and night visibility from windows, doors, and porches that oversee parking areas, pedestrian areas, play areas, building entrances, and similar areas.

NATURAL VEGETATION: **(EFF. 7/16/90)** The trees and plants occurring on a site prior to development, alteration or clearing of that site.

NEIGHBORHOOD PARK: **(EFF. 7/16/90)** Means those parks that serve as the focus for neighborhood units with a population of up to 5,000 and have a service area of approximately one-half mile and are accessible primarily to pedestrian and bicyclists.

NET ACRE: **(EFF. 7/16/90)** The amount of usable land area, exclusive of impervious areas and areas subject to environmental constraints.

NEW DEVELOPMENT: **(EFF. 7/16/90)** Means all land development activity subject to a development order after the adoption of this Comprehensive Plan, except those that shall be granted vested rights pursuant to the Plan itself.

OFFICE: **(REV. EFF. 6/25/96)** Generally, a room, group of rooms, or building used primarily for conducting the affairs of a business, profession, service, industry or government. An office shall not include the sale of goods for a profit as its primary use. For purposes of this Plan, the following are categories of office intensity:

MINOR: **(REV. EFF. 6/28/95)** Converted residence at the existing size or newly constructed building less than 10,000 square feet and .25 floor area ratio or less. Maximum of 2,500 square feet if located on a local street.

MAJOR: **(REV. EFF. 6/28/95)** An office building or buildings with more than a .25 floor area ratio, or at least 10,000 square feet. This includes a series of buildings within a subdivision that when combined is equal to or exceeds these thresholds.

OFF-SITE MITIGATION: **(EFF. 7/1/04) CITY OF TALLAHASSEE ONLY**—To compensate for the impacts of development on significant environmental resources in areas deemed important for infill or related conversions of land use by preserving, restoring and enhancing the environmental functions of ecosystems elsewhere.

ON-SITE SYSTEM: **(EFF. 7/16/90)** Means any sanitary sewer system designed and built to serve a single parcel of land, i.e. septic tank or package treatment plant with capacity sized to:

a) Meet the demand for a single parcel of land and its intended use
b) Meet the projected demand for a single parcel of land after its subdivision

An on-site system may serve more than one parcel but only to correct an existing environmental problem.

OPEN SPACE: **(EFF. 7/1/04)** Means undeveloped lands suitable for passive recreation or conservation uses. In the context of Conservation Subdivisions, Open Space refers to lands subject to a required conservation easement. These lands may include Conservation and Preservation features defined in this Plan, or agricultural or silvicultural properties, that are managed to preserve or promote environmental and aesthetic resources.

PASSIVE RECREATION FACILITY: **(EFF. 7/16/90)** Means those recreation lands and improvements that are natural resource oriented, i.e. hiking trails, boat landings, neighborhood parks.

PEAK HOUR: **(REV. EFF. 8/17/92)** Means the period during which the maximum amount of travel occurs. The period when demand for transportation service is heaviest.

PLANT COMMUNITY: **(EFF. 7/16/90)** A natural association of plants that is dominated by one or more prominent species, or possesses a characteristic physical and discernible attribute.

~~**POLYGON CONNECTIVITY INDEX**: **(EFF. 4/10/09)** A measure of connections within a transportation network. A polygon is created when elements of the transportation network connect and create closed loops, thus allowing a traveler to make a loop on its perimeter. The more polygons there are within an area, the more route options exist for a traveler. More polygons equal a higher connectivity index and a higher degree of mobility.~~

POPULATION ACCOMMODATION RATIO (PAR): **(EFF. 4/18/02)** The Population Accommodation Ratio (PAR) is the relationship between the supply of land available for development and the expected population growth over a period of time. A PAR of 2.00 means that there is twice the supply of land available for development compared to the expected population growth over a period of time. A PAR of 1.50 means there is 50% more land available for development than is needed for the expected population growth over a period of time.

PRESERVATION: **(EFF. 7/16/90)** Establishing strict requirements for the maintenance of significant ecological resources in a natural state. Activities should be in strict compliance with an effort to perpetuate the ecological value of the site or surrounding areas, including maintenance of listed plant and animal species.

PRESERVE AREAS: **(EFF. 7/16/90)** Vegetative areas required to be preserved by law.

PRINCIPAL ARTERIAL: **(REV. EFF. 7/1/04)** Principal arterial roadways are designed to carry the next highest level of mobility and are intended to carry substantial traffic volumes over relatively long distances and at relatively high speeds. Direct property access may be provided but must be carefully managed to avoid creating unsafe and congested conditions and to preserve mobility.

PRIVATE RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Recreational resources provided by the private sector.

COMMERCIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities operated by the private sector as for profit or not-for profit.

RESIDENTIAL RECREATIONAL FACILITIES: **(EFF. 7/1/04)** Facilities located within and associated with residential developments.

PROOF OF CONCEPT CENTERS: **(EFF. 5/31/18)** Facilities designed to provide services related to financial capital, business support, and university research to promote the adoption and further development of programs that aid technologies through phases between patenting and the creation of marketable products.

PUBLIC FACILITY: **(EFF. 7/16/90)** Means capital facilities that are owned by a governmental entity.

RECREATIONAL:

PASSIVE: **(EFF. 7/16/90)** Natural resource oriented, (hiking trails, boat landings, neighborhood parks).

ACTIVE: **(EFF. 7/16/90)** Facility oriented, (swimming pools, ball fields, tennis courts).

REGIONAL PARK: **(EFF. 7/16/90)** Means a large resource based area which serves the entire county. Such a park should serve a minimum of 100,000 population and be within a 30 minute driving time of that population.

REGULATED CLOSED BASINS: **(EFF. 7/16/90)** A naturally depressed portion of the earth's surface, at least 10 acres in size, for which there is no natural outlet for runoff other than percolation, evaporation, or transpiration.

REHABILITATION: **(EFF. 7/16/90)** The act or process of returning a property to a state of utility through repair or alteration which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its historical, architectural, and cultural values.

RESEARCH AND DEVELOPMENT: **(EFF. 5/31/18)** Research and Development uses shall have minimal offsite impacts and include facilities for developing technologies related to the physical and life sciences. Facilities may include laboratories, wet laboratories, classrooms, commercialization centers, coworking spaces, makerspaces, craftsman studios, proof of concept centers, and related facilities. Active and passive recreation, open space, hotels, restaurants, and limited retail and residential are allowed as ancillary uses to support the collaborative nature of research and development centers.

RESIDENTIAL: **(REV. EFF. 6/25/96)** Land that is used for or proposed to be used for the principal purpose of providing dwelling unit(s) for human habitation.

LOW: **(EFF. 7/16/90)** 0-8 dwelling units per acre

MEDIUM: **(EFF. 7/16/90)** 8-16 dwelling units per acre

HIGH: **(EFF. 7/16/90)** 16-50 dwelling units per acre

URBAN: **(EFF. 1/19/02)** 51 units to 150 units

RESPONSIBLE MANAGEMENT ENTITY: **(EFF. 4/10/09)** A legal entity that has the technical, managerial, and financial capacity to ensure viable long-term, cost-effective, centralized management, operation, and maintenance of decentralized wastewater systems in accordance with appropriate regulations and generally accepted accounting principles. Viability is defined as the capacity of a responsible management entity to provide adequate technical, managerial, and financial resources to protect the public health and the environment consistently, in perpetuity, and at a minimal cost to taxpayers.

SANITARY SEWER FACILITIES: **(EFF. 7/16/90)** Means structures or systems designed for the collection, transmission, treatment, or disposal of sewage and includes trunk mains, interceptors, treatment plants and disposal systems.

SANITARY SEWER SERVICE: **(EFF. 7/16/90)** Means sewer service provided by sanitary sewer designed to serve a large service area and usually more than one land use type. These facilities have the intent and potential for expansion of their service areas.

SCHOOLS: **(EFF. 6/26/98)** Facilities intended primarily for the education of children pre-kindergarten through twelfth grade, children identified as exceptional regardless of age or grade, or for the vocational or community education of high school age students and adults. Unless otherwise stated elsewhere in the Plan, this term refers to public and private schools.

SECTION 8 PROGRAM: **(EFF. 7/16/90)** Means those programs authorized under the renumbered Section 8 of the United States Housing Act of 1937. These programs allow the Department of Housing and Urban Development to contract directly with the owner of existing, new, or rehabilitated units for the payment of the difference between a contract rent not exceeding a fair market rate for the dwelling and a specified percentage of the tenant's gross income.

SEVERE GRADES: **(EFF. 7/16/90)** Slopes greater than 20%.

SILVICULTURE: **(EFF. 7/6/15) A** practice, operation, or process following accepted forest management principles whereby the crops constituting forests are tended, harvested, and reforested.

SOLID WASTE: **(EFF. 7/16/90)** Means sludge from a waste treatment works, water supply treatment plant, or air pollution control facility or garbage, rubbish, refuse or other discarded material, including solid, liquid, semisolid, or contained gaseous material resulting from domestic, industrial, commercial, mining, agricultural, or governmental operations (as defined by Section 9J-5.002(88), F.A.C.).

SPECIAL NEEDS HOUSING: **(EFF. 7/16/90)** Means that part of the housing provision system designed to fulfill the demand of a household or individual who needs assistance, either permanent or temporary, in obtaining basic shelter, including but not limited to very low and low income handicapped individuals, homeless persons, group homes for persons with physical, emotional or cognitive disabilities, shelters for battered victims, adult congregate living facilities, and halfway houses for the non-criminal or non-delinquent.

SPECIES OF SPECIAL CONCERN: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: A species, subspecies or isolated population which warrants special protection, recognition or consideration because it has an inherent significant vulnerability to habitat modification, environmental alteration, human disturbances, or substantial human exploitation which, in the foreseeable future may result in its becoming a threatened species; may already meet certain criteria for designation as a threatened species but for which conclusive data are limited or lacking; may occupy such an unusually vital and essential ecological niche that should it decline significantly in numbers or distribution, other species would be adversely affected to a significant degree, or has not significantly recovered from past population depletion.

STARTUP COMPANY: **(EFF. 5/31/18)** An entrepreneurial venture that is typically a newly emerged, fast-growing business that aims to meet a marketplace need by developing a viable business model around an innovative product, service, process or a platform.

SUBSTANDARD HOUSING: **(EFF. 7/16/90)** Means any structure which falls within the structural conditions defined as “major deterioration” and “dilapidated.”

SUPERSTOPS: **(EFF. 4/10/09)** Transit stops that will serve as transfer stations for two or more routes, removing the need for riders to go to a single, centralized location to make transfers.

TERRITORIAL REINFORCEMENT DESIGNS: **(EFF. 12/10/02)** Create or extend the spheres of influence of legitimate users of designed environments. Properly designed environments allow legitimate users to develop a sense of territorial control, while potential offenders (perceiving the legitimate user control of the environment) are discouraged from attempting criminal activities. Territorial reinforcement is promoted by features that distinguish private spaces from public spaces with the use of fences, gateways, hedges, and similar design strategies.

THREATENED SPECIES: **(EFF. 7/16/90)** Are defined based on the same criteria and analogous to the state and federal list: Any species of fish, wildlife and plants naturally occurring in Florida which exists in such small populations as to become endangered if it is subjected to increased stress as a result of further modifications of its environment.

THROUGH TRIPS: **(EFF. 6/07/01)** A through trip is one that has neither a beginning point nor a destination point contained within the subject area or on a particular roadway segment.

TRAIL ORIENTED DEVELOPMENT (TrOD): Trail Oriented Development is designed to locate buildings in immediate proximity to multi-use path transportation corridors with the intention of connecting or relating residences and businesses to the nearby trail facilities. Generally TrOd is compact, walkable, pedestrian and bike-oriented, and mixed-use.

TRANSIT ORIENTED DEVELOPMENT (TOD): Transit Oriented Development is designed to be compact, walkable, pedestrian-oriented, and mixed-use development that is centered near and around transit. TOD supports vibrant communities with a mix of commercial, residential, office and entertainment uses.

TRANSPORTATION CORRIDOR: **(EFF. 7/16/90)** Means a broad geographical band that follows a general directional flow or connects major sources of trips. It may contain a number of streets and highways and transit lines or routes.

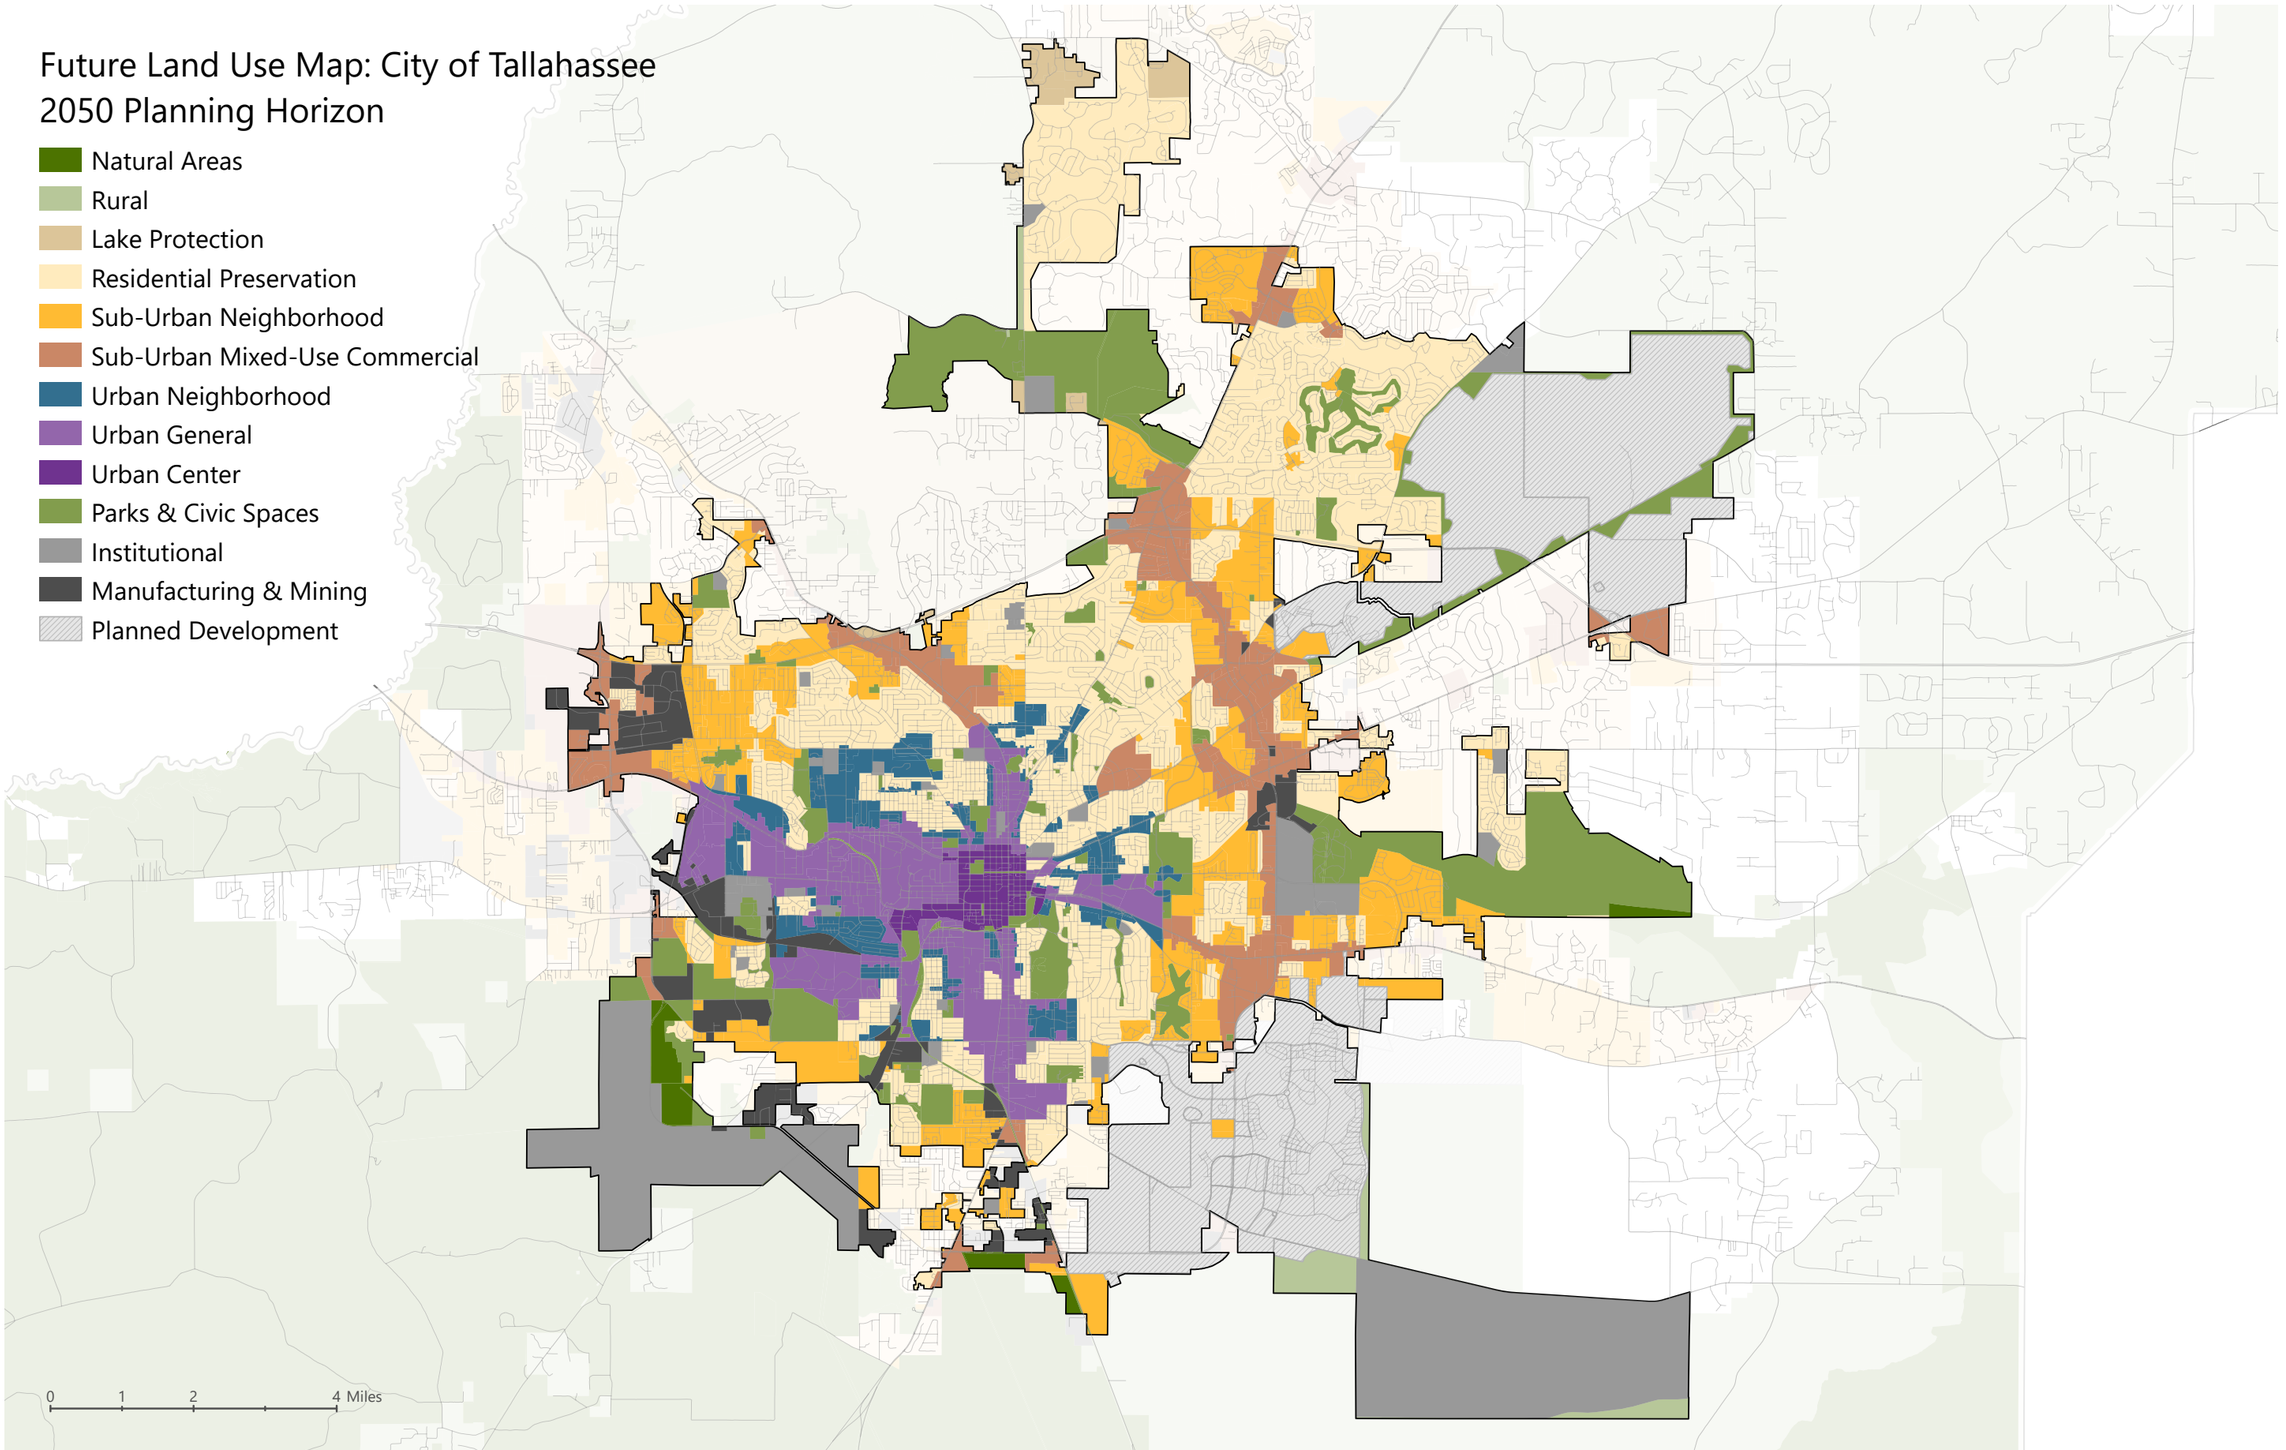
TRANSPORTATION SYSTEM: **(EFF. 7/16/90)** Means a coordinated system made up of one or several modes of transportation serving a common purpose of the movement of people, goods, or both.

UNDEVELOPED FLOODWAY/FLOODPLAIN: **(EFF. 7/16/90)** A floodway/floodplain which has not been altered.

VULNERABLE ROAD USER: The term vulnerable road use describes transportation systems users outside of vehicles. It includes pedestrians, cyclists, wheelchair/powerchair users, micromobility users, et al

WATER BODY AND NATURAL WATER BODY: **(EFF. 7/16/90)** A water body is a depression in the ground that normally and continually contains surface water. This is opposed to a wet depression that holds water only intermittently. There are some types of wetlands that are examples of areas that hold water only certain times of the year. A natural water body is a depression in the ground existing in and produced by nature, not man-made, and occurring due to the operation of the ordinary course of nature that normally and continually contains surface water or has historically held surface water on a continuing basis.

WET LABORATORIES: **(EFF. 5/31/18)** Laboratories where chemicals, drugs, or other materials are handled in liquid solutions or volatile phases, requiring direct ventilation and specialized piped utilities (typically water and various gases).



WETLAND: **(REV. EFF. 6/28/02; REV. EFF. 7/19/13)** Wetlands mean those areas included within the landward extent of surface waters of the state, pursuant to applicable rules in the Florida Administrative Code, or any area which is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and which under normal circumstances does support a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligated hydrophytic macrophytes that are typically adapted to areas having soils conditions described in this definition. These species, due to morphological, physiological, or reproductive adaptations have the ability to grow, reproduce, or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps and marshes, bayheads, bogs, cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps, and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto. The City of Tallahassee and Leon County intend to continue to protect isolated wetlands and wetlands on properties held by a single owner. Isolated wetlands and wetlands in one ownership must meet the State of Florida's definition for wetlands with regard to percent composition of wetland plant species, hydrologic indicators, and soils (Chapter 62-340, F.A.C.)

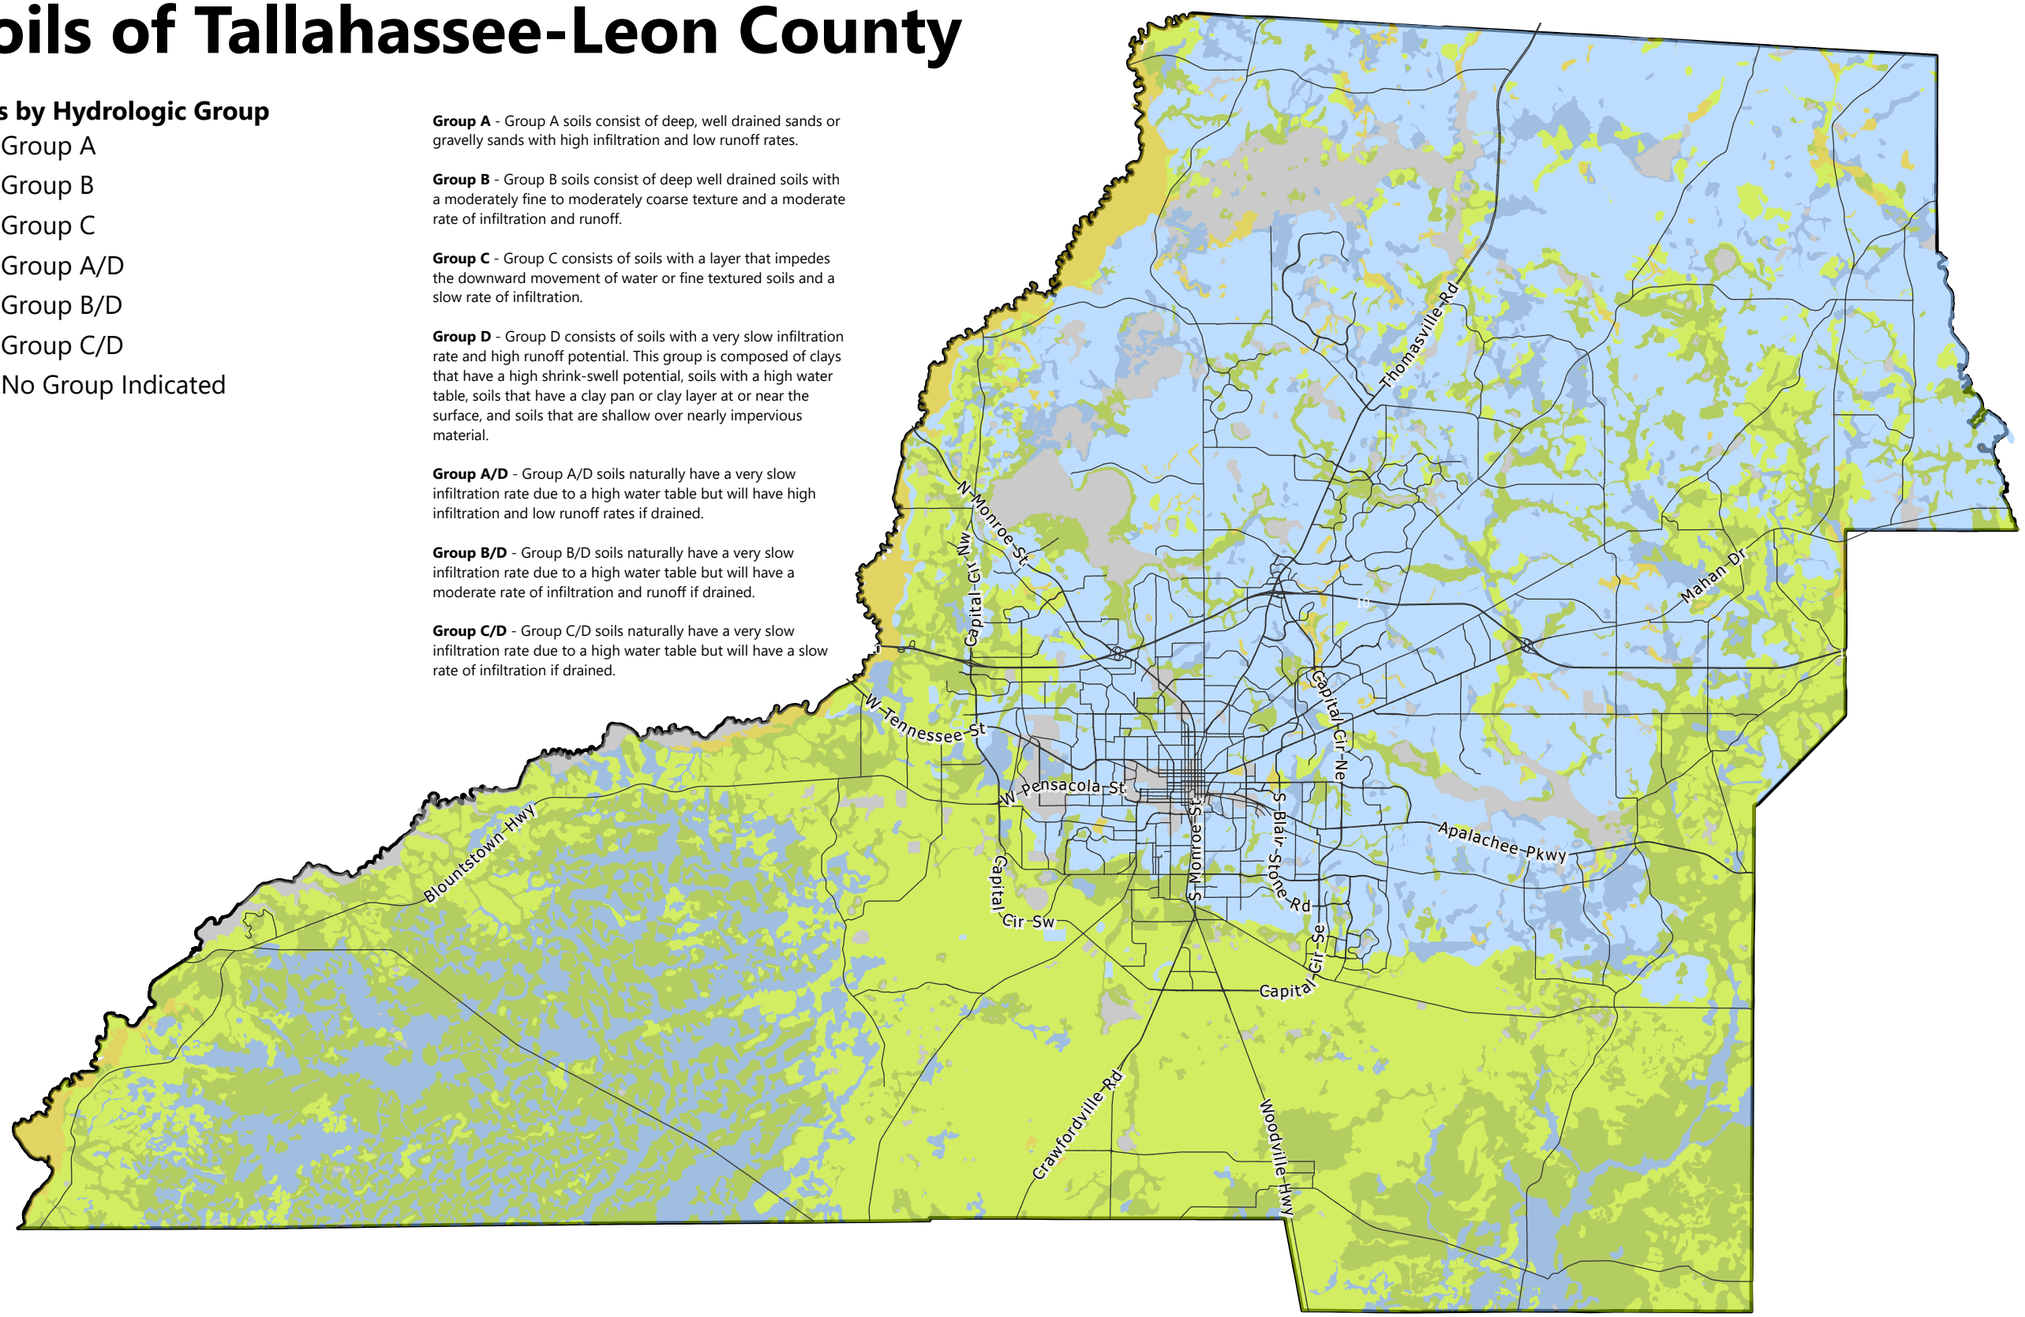
Soils of Tallahassee-Leon County

Soils by Hydrologic Group

- Group A
- Group B
- Group C
- Group A/D
- Group B/D
- Group C/D
- No Group Indicated

Group A - Group A soils consist of deep, well drained sands or gravelly sands with high infiltration and low runoff rates.

Group B - Group B soils consist of deep well drained soils with a moderately fine to moderately coarse texture and a moderate rate of infiltration and runoff.



Group C - Group C consists of soils with a layer that impedes the downward movement of water or fine textured soils and a slow rate of infiltration.

Group D - Group D consists of soils with a very slow infiltration rate and high runoff potential. This group is composed of clays that have a high shrink-swell potential, soils with a high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material.

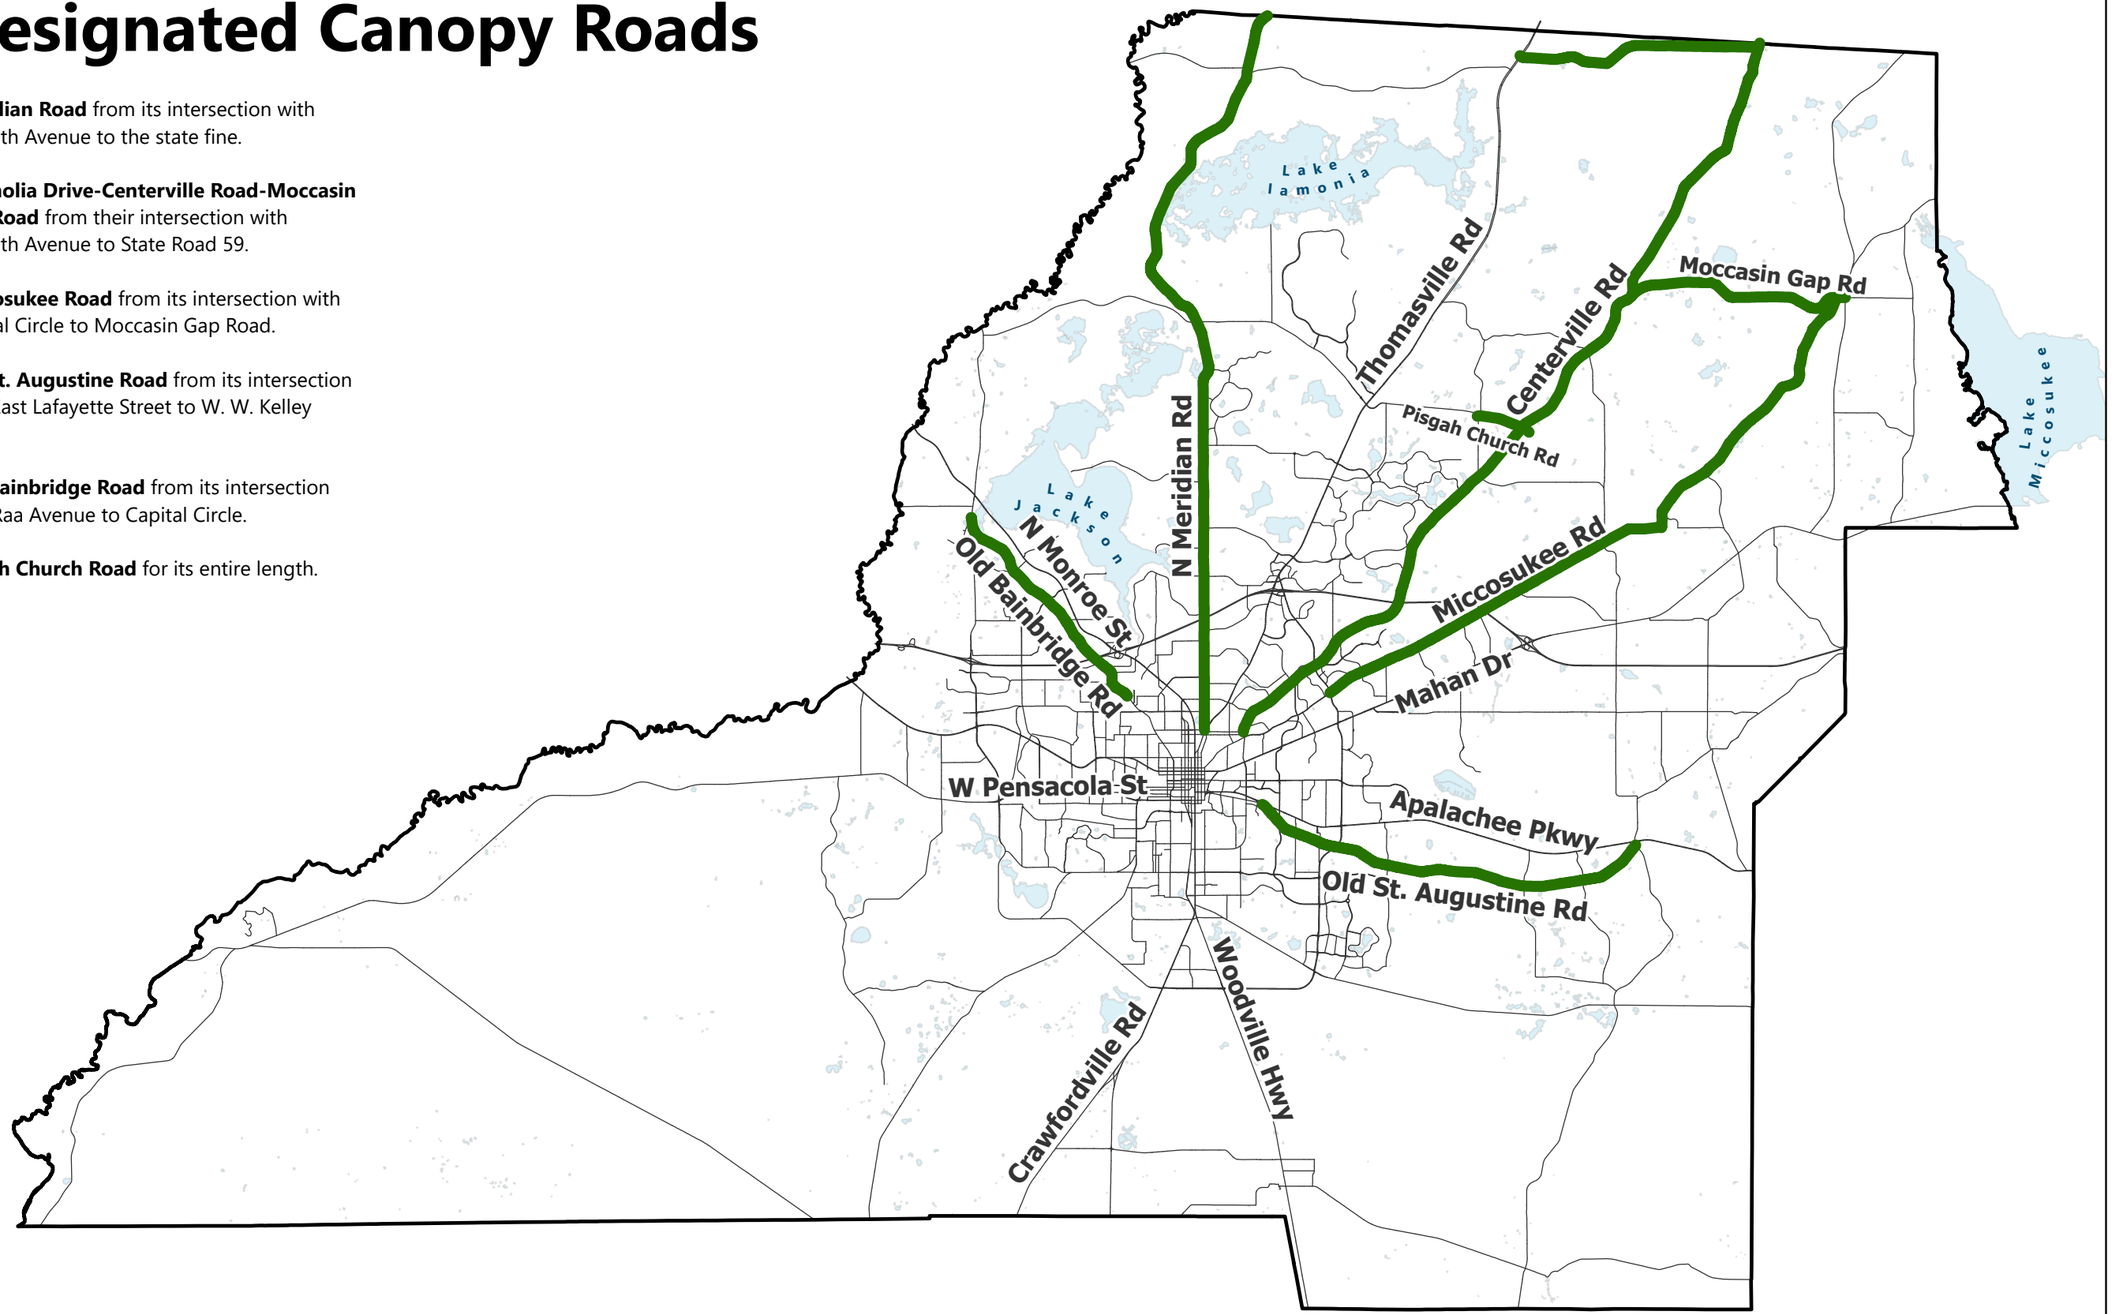
Group A/D - Group A/D soils naturally have a very slow infiltration rate due to a high water table but will have high infiltration and low runoff rates if drained.

Group B/D - Group B/D soils naturally have a very slow infiltration rate due to a high water table but will have a moderate rate of infiltration and runoff if drained.

Group C/D - Group C/D soils naturally have a very slow infiltration rate due to a high water table but will have a slow rate of infiltration if drained.

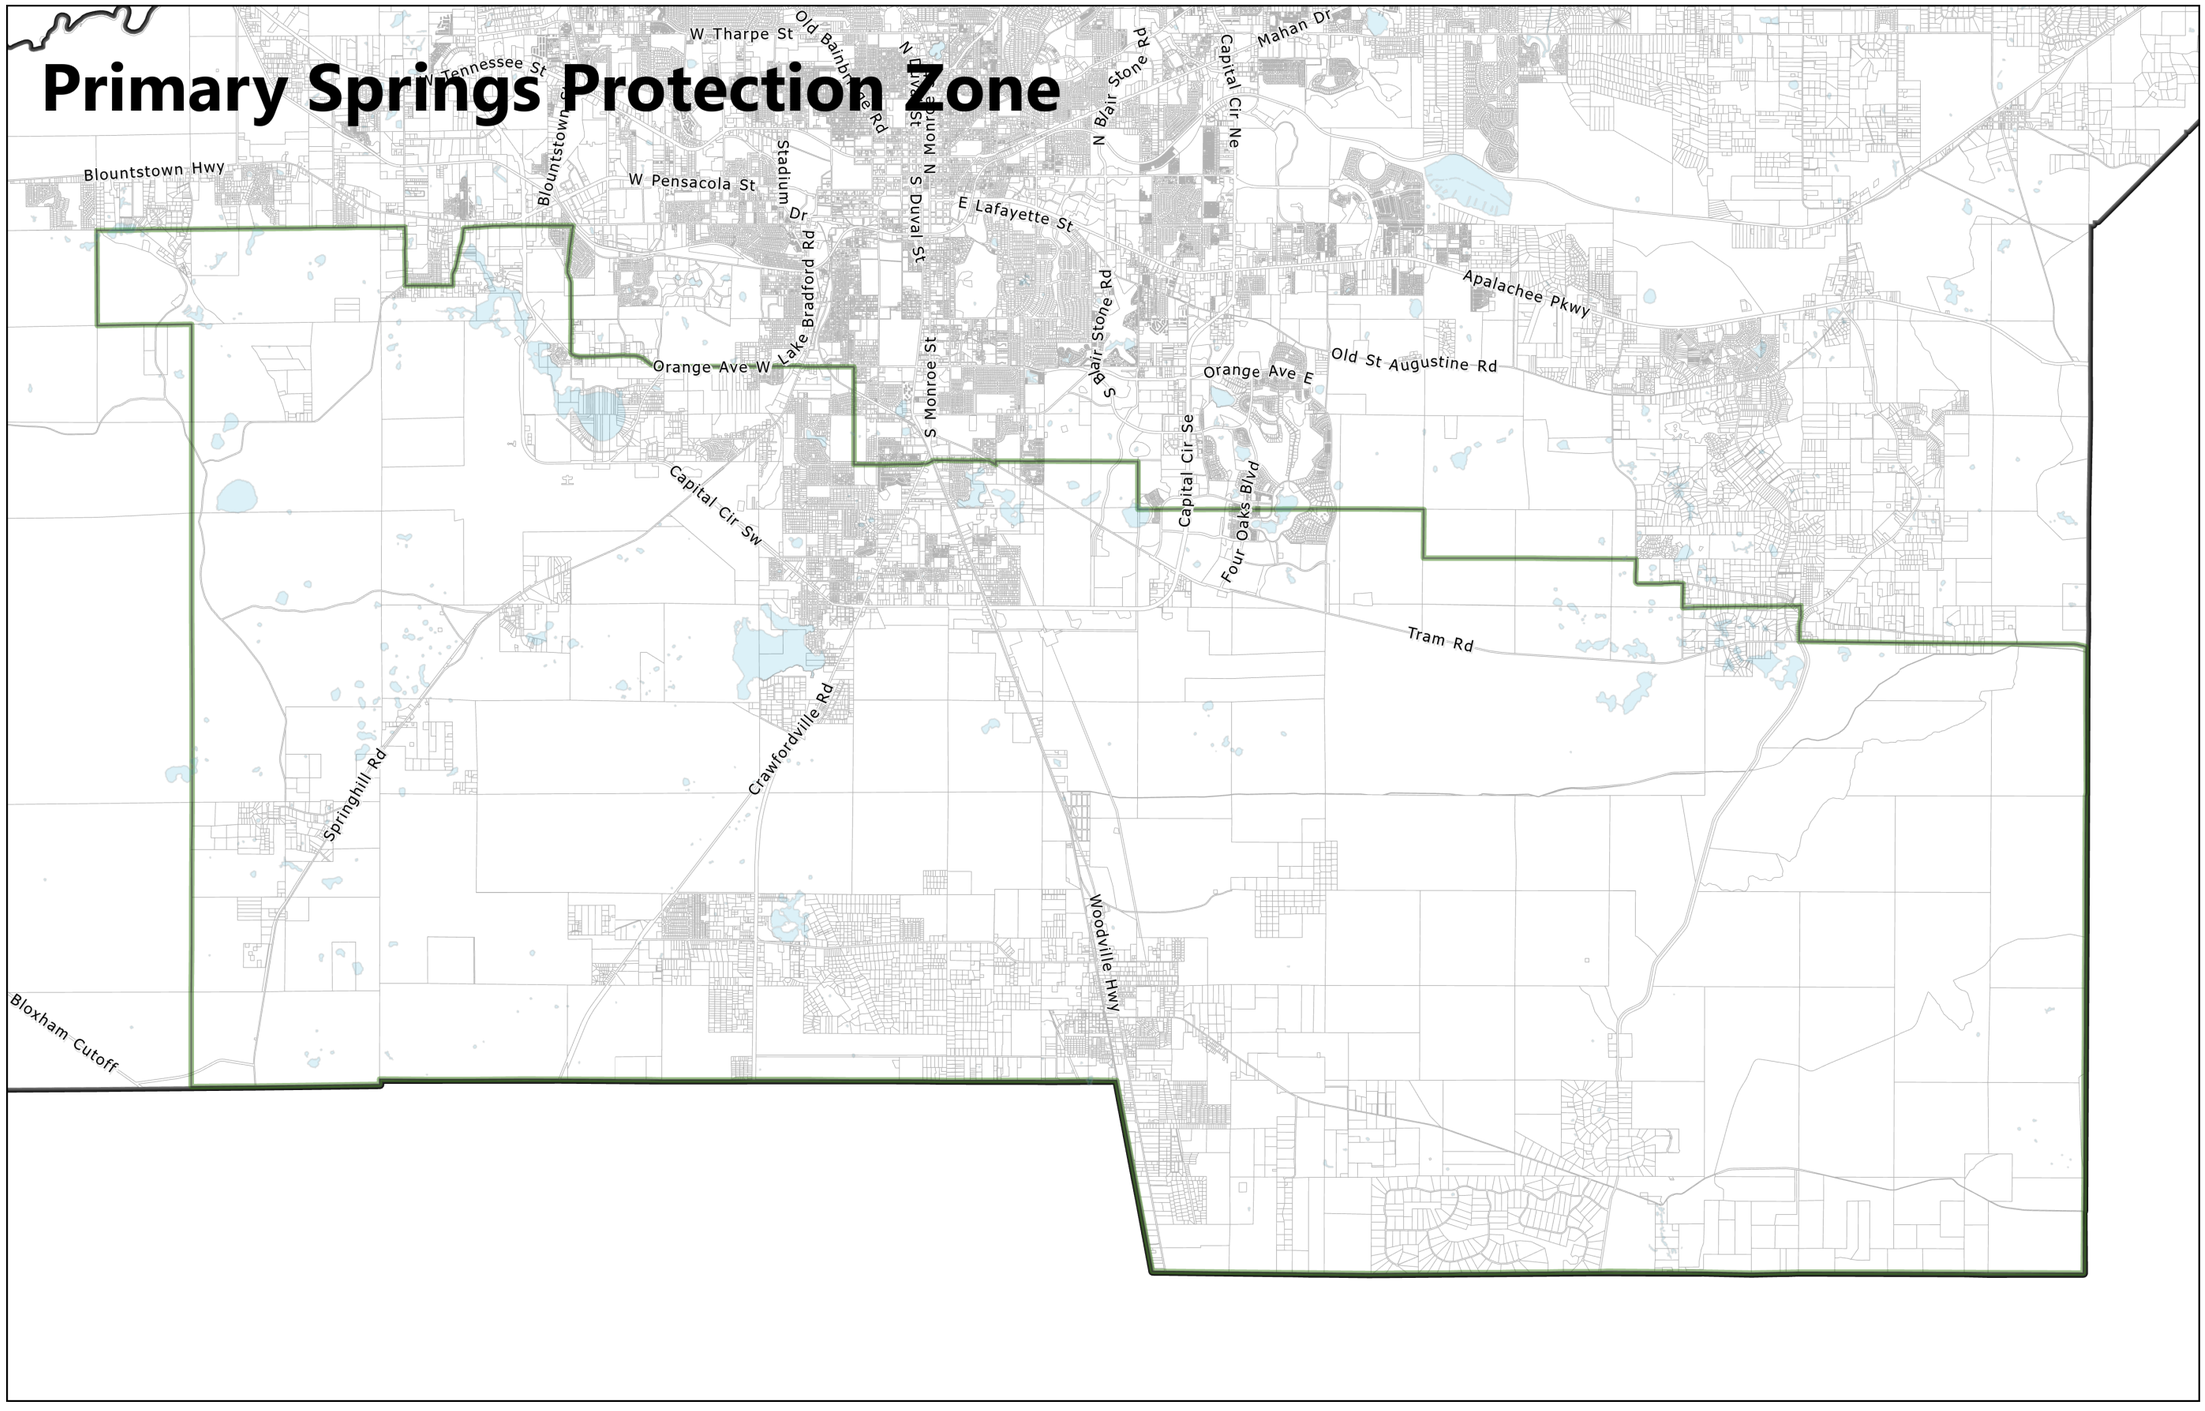
Designated Canopy Roads

Meridian Road from its intersection with Seventh Avenue to the state fine.

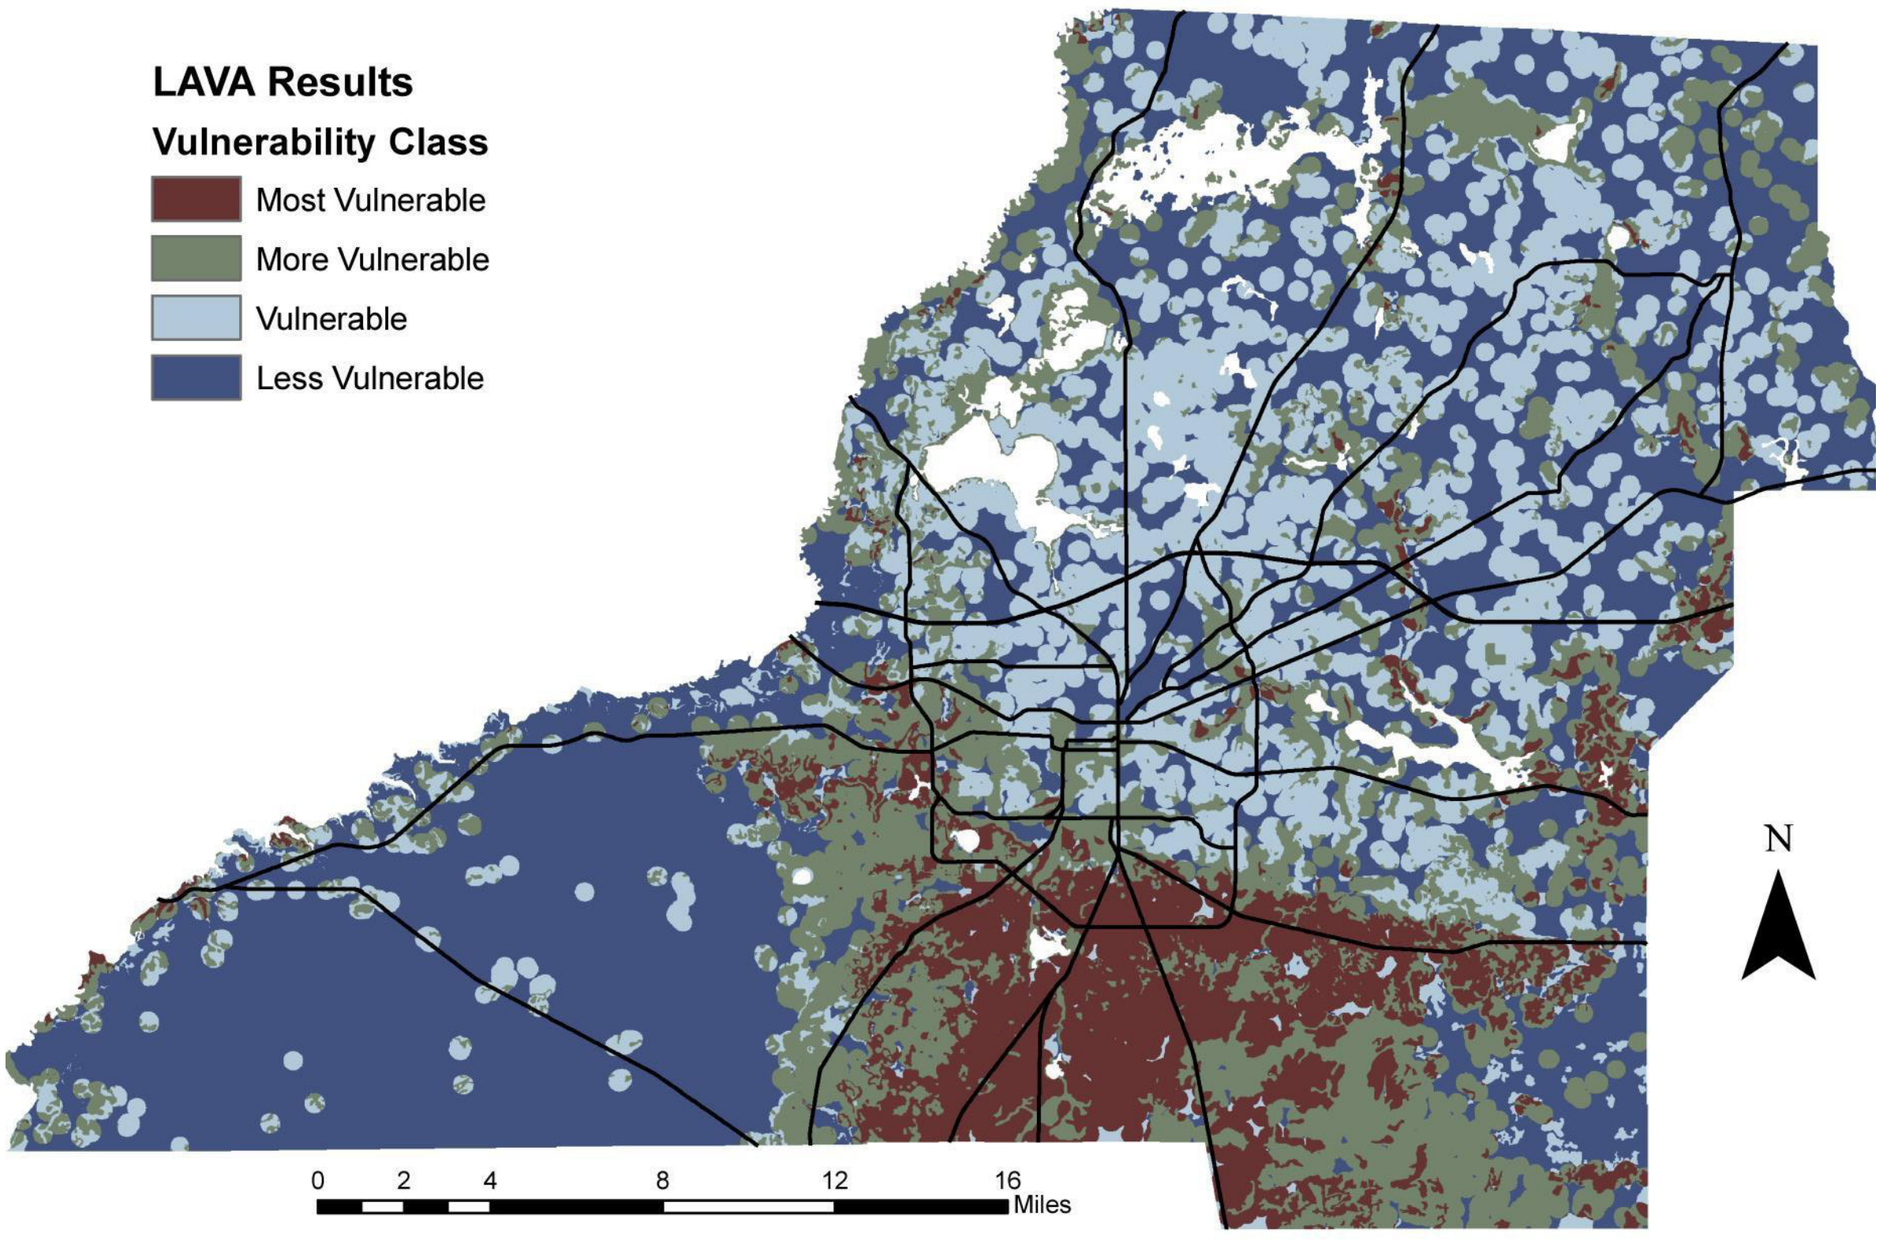


Magnolia Drive-Centerville Road-Moccasin Gap Road from their intersection with Seventh Avenue to State Road 59.

Miccosukee Road from its intersection with Capital Circle to Moccasin Gap Road.



Old St. Augustine Road from its intersection with East Lafayette Street to W. W. Kelley Road.



Old Bainbridge Road from its intersection with Raa Avenue to Capital Circle.

Pisgah Church Road for its entire length.

LAND USE AND MOBILITY ELEMENT
GOALS, OBJECTIVES AND POLICIES

Goal 1 [LM] – A Healthy Environment:

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 1.1 – Identification of Natural Resources and Historic Features (City of Tallahassee/Leon County):
Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Policy 1.1.1 – Geographic Data (City of Tallahassee/Leon County):
Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network Primary Springs Protection Zone
- Perpetual conservation easements

Policy 1.1.2 – Designated Canopy Roads (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties (City of Tallahassee/Leon County): Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Policy 1.1.4– Soils and Water Features (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Objective 1.2 – Preservation of Natural Areas (City of Tallahassee/Leon County):
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 1.2.1 – Acquisition of Conservation and Preservation Lands (City of Tallahassee/Leon County):
The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

Policy 1.2.2 – Environmental Analysis (City of Tallahassee/Leon County):
Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation (City of Tallahassee/Leon County):
The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features (City of Tallahassee/Leon County):
The City and the County shall consider context-based beautification, landscaping, and stormwater facility and land development regulations that provide environmental protection measures for transportation corridors, where feasible by:

a. Increasing the amount of site and adjacent green spaces/open spaces.
b. Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff.
c. Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built.
d. Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan.
e. Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

Policy 1.2.5 – Connected Open Space (City of Tallahassee/Leon County):
Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected greenspaces.

Policy 1.2.6 – Conservation Element (City of Tallahassee/Leon County):
Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

Objective 1.3 – Access to Parks and Recreation (City of Tallahassee/Leon County):
Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

Policy 1.3.1 – Greenways and Trails Master Plan (City of Tallahassee/Leon County):
The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

Policy 1.3.2 – Urban Recreation Spaces (City of Tallahassee/Leon County):
Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces (City of Tallahassee/Leon County):
All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation (City of Tallahassee/Leon County):
All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Objective 1.4 – Urban Forests (City of Tallahassee/Leon County):
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

Policy 1.4.1 – Priority Planting Sites (City of Tallahassee/Leon County):
The City and County shall identify priority planting sites to guide the planting of trees to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

Policy 1.4.2 – Species Suitability (City of Tallahassee/Leon County):
The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

Policy 1.4.3 – Public Tree Inventory (City of Tallahassee/Leon County):
The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

Policy 1.4.4 – Public Development Tree Prioritization (City of Tallahassee/Leon County):
Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

Policy 1.4.5 – Private Development Tree Standards (City of Tallahassee/Leon County):
Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with

preservation of existing trees to reduce the need for deviations when preserving qualifying trees.

Objective 1.5 – Green infrastructure (City of Tallahassee/Leon County):
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

Policy 1.5.1 – Community Wide Green Infrastructure (City of Tallahassee/Leon County):
The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide a feasible opportunity for street-level stormwater management.
- Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors.
- Support off-site regional stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).
- Supporting transit and alternative transportation modes.

Policy 1.5.2 – Site Specific Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Policy 1.5.3 – Design Guidelines for Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

Objective 1.6 – Community Resilience (City of Tallahassee/Leon County):
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

Policy 1.6.1 – Energy Efficiency (City of Tallahassee/Leon County):
The City and County shall develop regulations and design standards for compact development

and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

Policy 1.6.2 – Multimodal Connectivity (City of Tallahassee/Leon County):
Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

Policy 1.6.3 – Smart Growth Strategies for Community Resilience (City of Tallahassee/Leon County):
The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

Policy 1.6.4 – Urban Heat Islands (City of Tallahassee/Leon County):
The local governments shall develop strategies that minimize effects of heat islands, such strategies may include:

a. Tree and vegetation cover.
b. Green roofs and rooftop gardens.
c. Roof coatings or materials with high albedo that significantly reflect heat away from a building.
d. Alternative pavements that mitigate heat island effects.

Policy 1.6.5 – Resiliency of Transportation Facilities (City of Tallahassee/Leon County):
Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.6.6 – Urban Forests and Climate Resilience (City of Tallahassee/Leon County):
Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

Objective 1.7 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

Policy 1.7.1 – Key Regional Partners (City of Tallahassee/Leon County):
Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

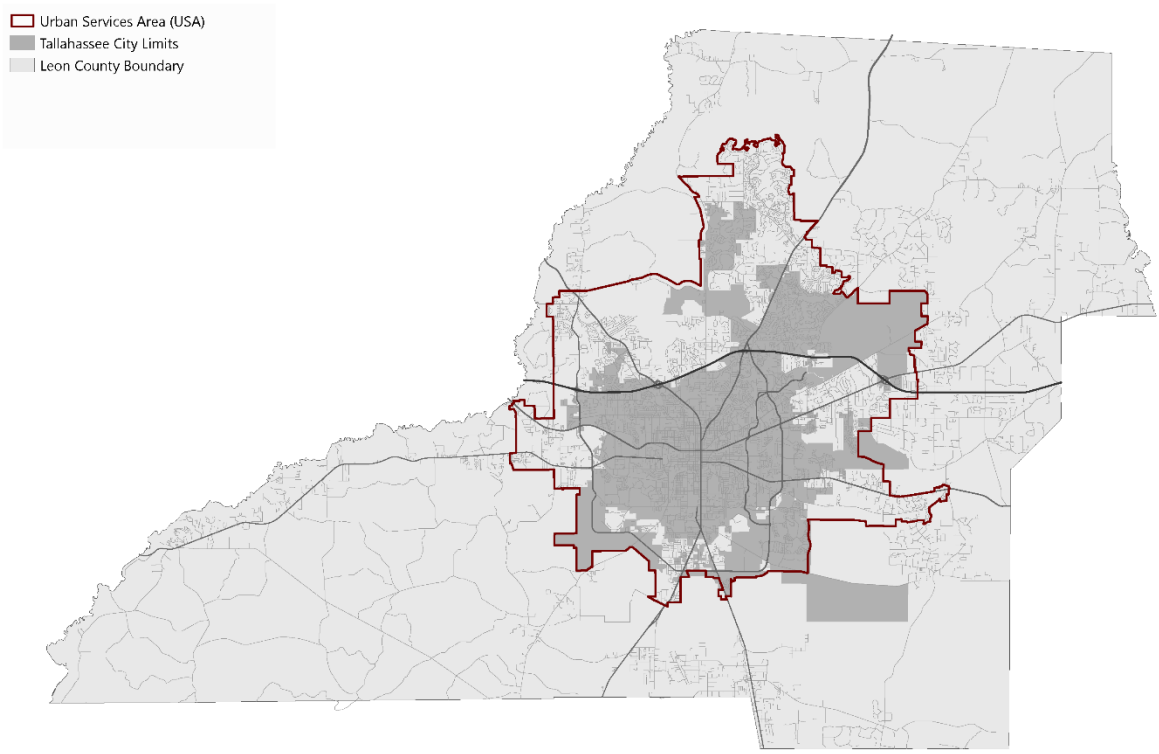
Policy 1.7.2 – Colleges and Universities (City of Tallahassee/Leon County):
Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide a variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.



Objective 2.1 – Growth and Population Accommodation (City of Tallahassee/Leon County):
Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

Policy 2.1.1 – Comprehensive Planning Periods (City of Tallahassee/Leon County):
The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

Policy 2.1.2 – Population Projections (City of Tallahassee/Leon County):
Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

Objective 2.2 – Efficient Growth (City of Tallahassee/Leon County):
To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Policy 2.2.1 – Urban Services Area (USA) (City of Tallahassee/Leon County):

~~**Urban Services Area Map Placeholder**~~

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

Policy 2.2.2 – Improvement of Capital Infrastructure (City of Tallahassee/Leon County):

Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

Policy 2.2.3 – Planning for Urban Services (City of Tallahassee/Leon County):

Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

Policy 2.2.4 – Urban Services Outside of the Urban Services Area (City of Tallahassee/Leon County):

Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process.

Emergency repairs and improvements necessary to maintain the public health, safety, and well-being shall be allowed without inclusion in the capital improvement planning process.

Policy 2.2.5 – Densities and Intensities (City of Tallahassee/Leon County):
Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map, and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

Policy 2.2.6 – Exceptions to the Urban Services Area (City of Tallahassee/Leon County):
Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and Rural Community in Woodville or west of the Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

Policy 2.2.7 – Roadway Improvements (City of Tallahassee/Leon County):
The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

Policy 2.2.8 – Adaptive Reuse, Infill Development, and Redevelopment (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

Policy 2.2.9 – Greyfields & Brownfields (City of Tallahassee/Leon County):
The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses where appropriate, waiver of development fees or some combination of the two.

Policy 2.2.10 – Transportation Corridors (City of Tallahassee/Leon County):
Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 334.03(29)—and protect it from development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency,

to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below. This map, table and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW Width (ft.)[1-3]**
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Actual road location and design will be determined by specific corridor alignment studies, engineering studies, or other design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of- way needs for future corridors:

   a. Space for sidewalks to provide safe and convenient movement of pedestrians.

   b. The provision of bike lanes or separate bike paths.

   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

   d. Accommodation of stormwater at the surface or in storm drains.

   e. Accommodation of auxiliary lanes at intersections.

   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

   g. Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

PLANNING DEPARTMENT

March 21, 2025

Objective 2.3 – Public Infrastructure (City of Tallahassee/Leon County):
Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Policy 2.3.1 – Public Facilities Siting (City of Tallahassee/Leon County):
Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

Policy 2.3.2 – Public Infrastructure Resilience (City of Tallahassee/Leon County):
To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

Policy 2.3.3 – School Siting Review & Criteria (City of Tallahassee/Leon County):
All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

Objective 2.4 – Preservation of Rural Areas (City of Tallahassee/Leon County):
Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

Policy 2.4.1 – Transfer of Development Rights (City of Tallahassee/Leon County):
A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

Policy 2.4.2 – Criteria for Urban Service Area Expansion (City of Tallahassee/Leon County):
To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

Objective 2.5 – Reconnecting Urban Sprawl (City of Tallahassee/Leon County):
Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 2.5.1 – Suburban retrofit (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way.
- Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

Objective 2.6 – Recognizable Places (City of Tallahassee/Leon County):
Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces (City of Tallahassee/Leon County):
The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

Policy 2.6.2 – Gateway Corridors (City of Tallahassee/Leon County):
Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

Policy 2.6.3 – North Monroe Corridor (City of Tallahassee/Leon County):
In addition to the Gateway Corridor components identified in Policy 2.6.2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.4 – Woodville Sense of Place (Leon County):
Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.5 – Future Downtown Development (City of Tallahassee):
The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

Policy 2.6.6 – Bradfordville Study Area (Leon County):
The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

Objective 2.7 (City of Tallahassee) – Multimodal Transportation District (MMTD):
Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 2.7.1 – MMTD Implementation (City of Tallahassee):
The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County

departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

Policy 2.7.2 Land Use Within the MMTD (City of Tallahassee):
The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

a. Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities.

b. Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD (City of Tallahassee):
Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

e. Parking location.

Policy 2.7.4 – Minimum Parking Requirements (City of Tallahassee):
Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

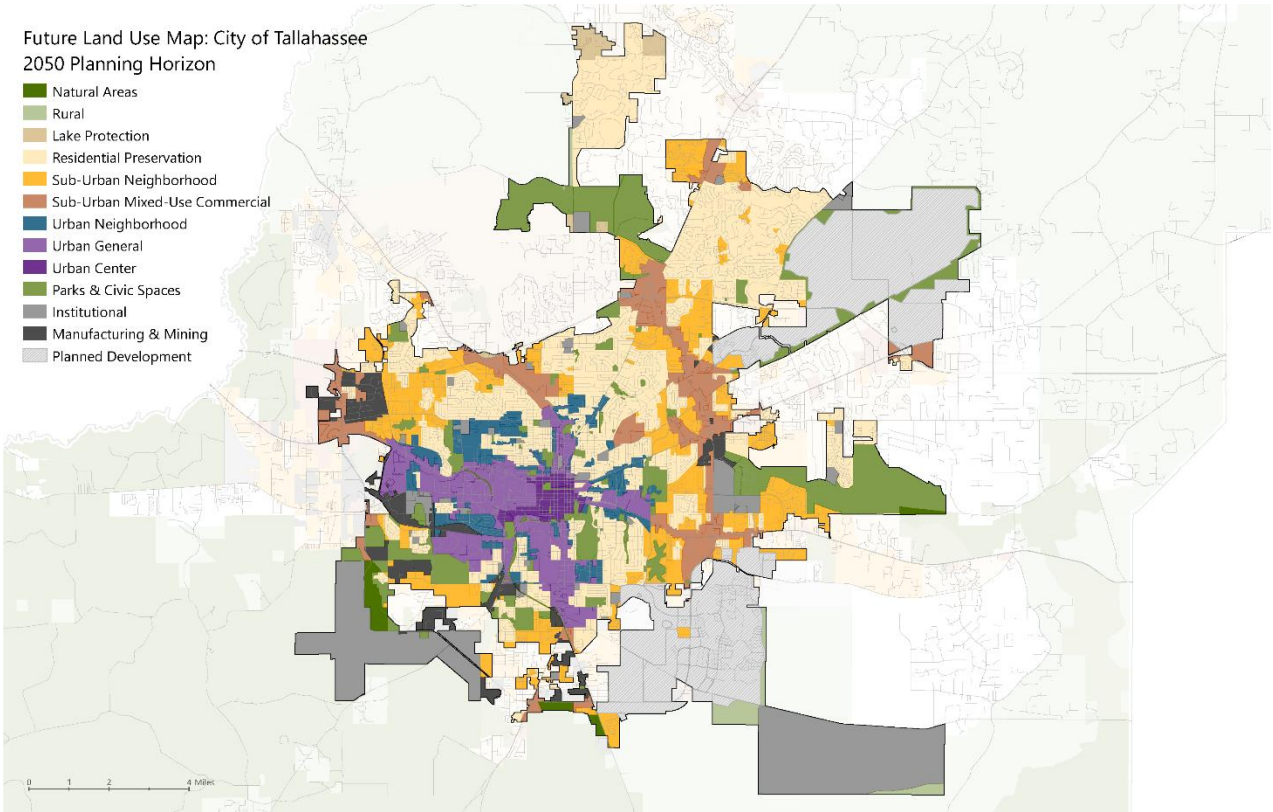
Policy 2.7.5 – Transit in the MMTD (City of Tallahassee):
The MMTD shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation (City of Tallahassee):
Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

Policy 2.7.7 – MMTD Evaluation (City of Tallahassee):
The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.

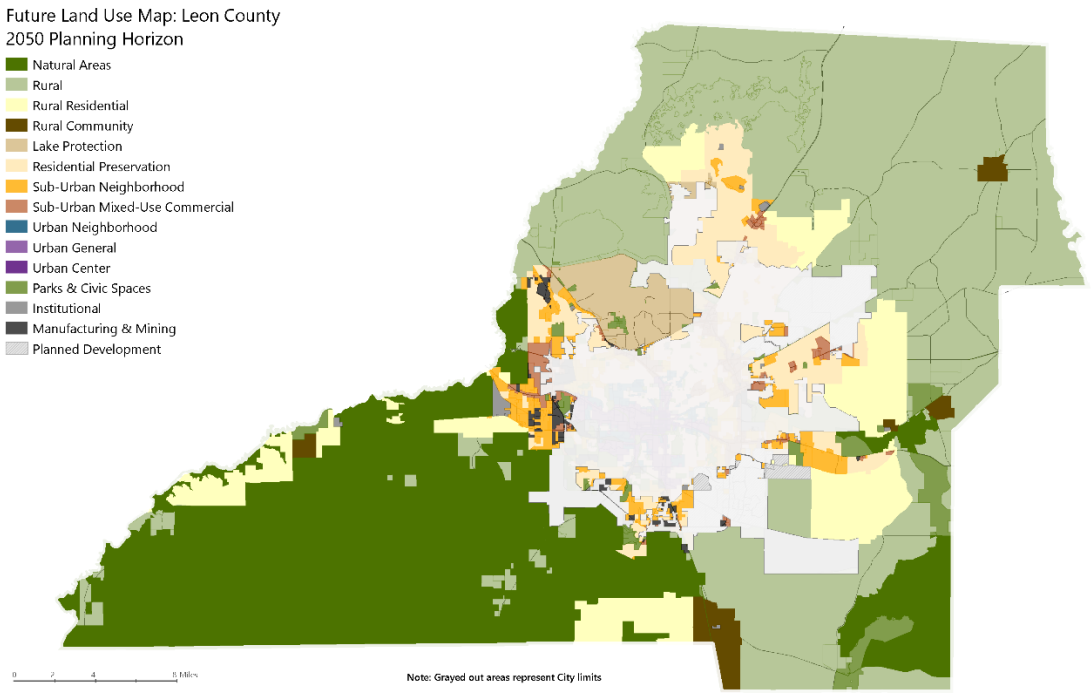
Objective 2.8 – Community Context (City of Tallahassee/Leon County):
Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the

context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.



Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map (City of Tallahassee/Leon County):

Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.



Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses (City of Tallahassee/Leon County):

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories within the Urban Services Area with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Future Land Map: City of Tallahassee

Future Land Use Map: Leon County

Future Land Use Categories (FLUCs)

Policy 2.8.3 – Natural Areas Future Land Use Category (City of Tallahassee/Leon County):

State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. No residential uses shall exceed a density of one dwelling unit per 10 acres.

The following special conditions shall apply to the Natural Areas future land use category:

1. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.
2. Accessory uses directly associated with the operation of silvicultural, wildlife conservation, and recreational hunting shall be allowed.
3. Light infrastructure shall be allowed within the Natural Areas future land use category, provided there is no reasonable alternative location outside of Natural Areas future land use areas that provide the same public benefit.
4. State forests managed by the Florida Forest Service may be managed with frequent prescribed fire to meet ecological restoration and maintenance, wildlife habitat improvement, forest pest prevention, access and aesthetic control, and hazardous fuel reduction objectives in accordance with their respective 10-year Land Management Plans (F.s. 253.034).

Policy 2.8.4 – Rural Future Land Use Category (City of Tallahassee/Leon County):
The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of one dwelling unit per 10 acres.

Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways with development standards provided in land development code regulations for these nodes, except for non-residential uses supporting ecotourism activities, which shall be allowed near the waterbodies and natural features that are the focus of the ecotourism activity.

Community services, light infrastructure, and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 5,000 square feet per acre, with the primary structure not to exceed 7,500 square feet.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, or natural resource-based ecotourism activities are prohibited. This includes, but is not limited to, golf course, drag strips, and racetracks.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

The following special conditions shall apply to the Rural Land Use category:

1. Development proposals within the Rural Land Use category shall be evaluated for compatibility with adjacent agricultural and silvicultural uses and shall consider the land management activities associated with such uses, including prescribed fires which result in smoke. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural Land Use category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Services Area or a designated Rural Community.
3. Non-residential development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register as of July 6, 2015, shall be considered conforming.
5. Because urban services are not planned or programmed for areas within the Rural land use category, the Rural land use category shall not be applied to properties within the Urban Services Area.

Policy 2.8.5 – Rural Residential Future Land Use Category (Leon County):
The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

Community facilities, minor commercial activities, and minor offices are permitted. The maximum allowable gross square footage in Rural Residential may not exceed 20,000 square feet per acre for minor commercial and 100,000 square feet per acre for neighborhood commercial and shall be further detailed in the land development code.

Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

The following special conditions shall apply to the Rural Residential Land Use category:

1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site.

Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.

2. To protect rural areas from premature development, facilitate infill and redevelopment inside the Urban Services Area, and in recognition of the significant area already mapped as Rural Residential, no additional lands designated Rural or Rural Residential shall be converted to a more dense or intense land use category unless it is within the Urban Services Area and adjoining lands are also within the designated Urban Services Area.
3. Existing, lawfully established, non-residential uses within the Rural Residential land use category that are compatible with surrounding uses shall be considered permitted uses.
4. Existing lots of record shall be considered vested for the purposes of single-family residential use regardless of lot size or density provided all other development standards can be met.
5. Drive-in and drive-thru facilities are not permitted in Rural Residential.

Policy 2.8.6 – Rural Community Future Land Use Category (Leon County):

The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of 2~~4~~ dwelling units per acre. Where central sewer is available, the maximum density allowed is 8 dwelling units per acre.

Community facilities, minor offices and small to moderate-sized commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage clustering of businesses to discourage "strip" development, provide for utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

The following special conditions shall apply to the Rural Community Land Use category:

1. Water and wastewater systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development.
2. Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements.

Policy 2.8.7 – Lake Protection Future Land Use Category (City of Tallahassee/Leon County):

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary. The boundaries of the Lake Protection category may be applied to areas outside but adjacent to the Lake Jackson basin where application of the category promotes cohesive development patterns along a mixed-use corridor or node.

The Lake Protection category shall allow for residential uses at a density of one dwelling unit per two acres. To encourage compact and efficient development, three density bonus options are available for properties within the category:

- A residential density of up to 4 dwelling units per acre may be permitted within developments designed as a Conservation Subdivision, where served by central water and sewer systems.
- A residential density of up to 8 dwelling units per acre may be permitted within the Lake Protection Corridor (LPC) zoning district, where served by central water and sewer systems.
- A residential density of up to 20 dwelling units per acre may be permitted for properties on US Highway 27 within the Lake Protection Node (LPN) zoning district and 8 dwelling units per acre for the Bannerman Road and Bull Headley Road LPN zoning district, where served by central water and sewer systems, and where design standards, including buffering to adjacent low and density residential, as established in the land development code is met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted within areas designated with the LPN and LPC zoning districts. Within these districts, single use, non-residential development shall be allowed at a maximum intensity of 10,000square feet per acre in the LPC zone and 20,000 square feet per acre in the LPN zone where buffering to low-density residential as established in the land development code is met. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 square feet per acre in the LPC zone and a bonus of 10,000 square feet per acre in the LPN zone.

Community services, light infrastructure, and recreational uses shall be permitted. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet per acre.

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The local governments shall implement the Lake Protection Land Use Category with a minimum of three zoning districts, including Lake Protection, LPC, and LPN.
2. The LPN zoning district shall only be permitted at the following intersections:
    a. Highway 27 North and Sessions Road

b. Highway 27 North and Capital Circle NW/Old Bainbridge Road

c. Highway 27 North and Fred George Road

d. Bannerman Road and Bull Headley Road

The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.

3. The LPC zoning district shall only be permitted along Highway 27. The exact extent of the LPC shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the centerline of Highway 27 and shall not include areas within a Special Development Zone (SDZ).

4. As an alternative to large-lot developments, Conservation Subdivisions shall be permitted within the Lake Protection land use category and shall include the following:

   a. Contain a minimum of 60% open space preserved in perpetuity through a conservation easement and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity; and

   b. Be developed at a maximum gross density of two dwelling units per acre or a maximum gross density of four dwelling units per acre when served by central water and sewer systems.

5. Land development regulations shall include stormwater treatment standards for all development and redevelopment within the Lake Protection land use category. To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites.

6. Minimum open space requirements, Low Impact Development strategies, and maximum building footprints shall be included as development standards for the zoning districts implementing the Lake Protection land use category. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.

7. The land development regulations shall provide provisions for legally established non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards, including buffering to adjacent low-density uses, and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.8.8 – Residential Preservation Future Land Use Category (City of Tallahassee/Leon County):

Characterized by existing homogeneous residential areas within the community that are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development primarily will consist of infill due to the built-out nature of the areas.

Commercial, including office as well as any industrial land uses, are prohibited. Future arterials and expressways should be planned to minimize impacts within this category. Single family, townhouse, duplexes and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in this policy, existing legally established residential uses exceeding 6 units per acre shall be deemed conforming. Such uses may rebuild to existing building lot coverage percentage and density. ~~; and c~~Expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Nonresidential uses, other than community facilities and recreational facilities are not permitted. Community facilities are limited to a maximum of 60% impervious surface.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria:

1) Existing land use within the area is predominantly residential
2) Majority of traffic is local in nature
    a) Predominance of residential uses front on local street
    b) Relatively safe internal pedestrian mobility
3) Densities within the area generally of six units per acre or less
4) Existing residential type and density exhibits relatively homogeneous patterns
5) Assessment of stability of the residential area, including but not limited to:
    a) Degree of home ownership
    b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) Limitation on future commercial intensities adjoining low-density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by meeting land development regulation requirements for buffers, screenings, landscaping, noise, setbacks and stepbacks to be compatible with low density residential development in terms of size and appearance. The factors cited in paragraph (d) below shall be used when determining the compatibility and design techniques. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

b) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low-density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide screening or buffering between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (d) below shall be considered when determining compatibility and design techniques.

The design and layout of expanding or redeveloping light industrial uses adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Institutional Special District or the Manufacturing and Mining

Special District t and applicable Land Development Regulations.

c) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions.

Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.

d) Land use compatibility with low-density residential preservation neighborhoods

A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. The following factors shall continue be maintained in the land development regulations used to determine whether a new development is compatible with existing low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor.

e) Limitations on Planned Unit Developments in the Residential Preservation land use category.
Planned Unit Developments proposed within the interior of a Residential Preservation area designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities. Principal uses within the district shall include residential development, neighborhood commercial, and neighborhood supportive facilities such as community facilities, recreational amenities, and light infrastructure.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 dwelling units per acre. Allowed residential building types are single-family detached, single-family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

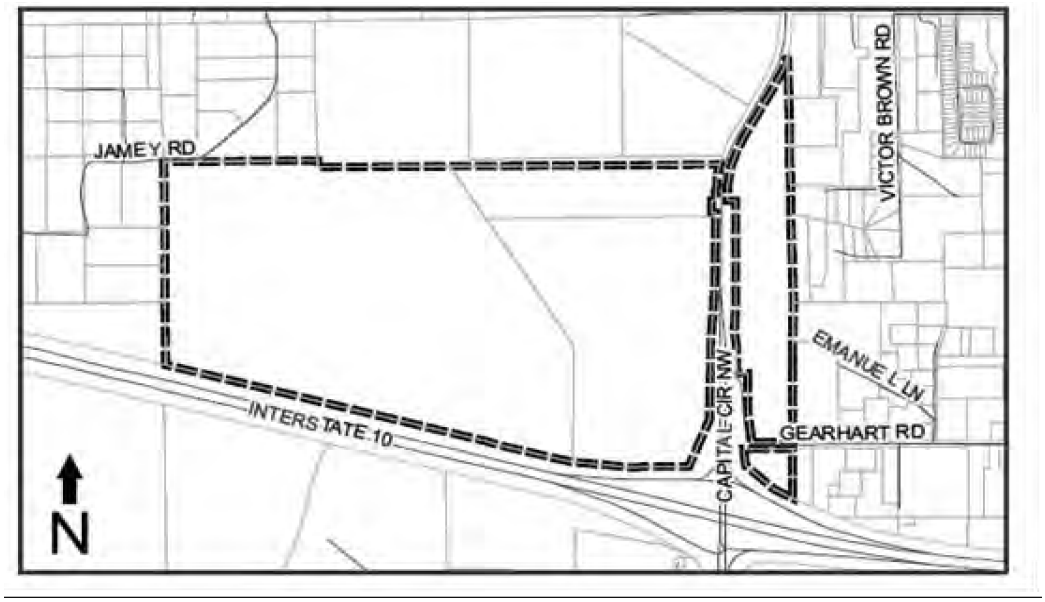
The following special conditions shall apply to the Sub-Urban Neighborhood Future Land Use category:

1. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Sub-Urban Neighborhood land use.
2. If central sanitary sewer is not available, non-residential development is limited to a maximum of 900 gallons of wastewater flow per day. Community service facilities are limited to no more than 5,000 square feet, or a sewage flow not to exceed 900 gallons per day. Also, refer to Sanitary Sewer Policies 1.2.3 and 2.1.2 of the Utilities Element of the Comprehensive Plan for additional requirements.

Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities. An integrated pedestrian and bicycle access system shall be provided to afford safe and accessible foot and bike travel between the land uses. The district is intended to facilitate efficient traffic flow by allowing only land uses developed with comprehensively planned access, egresses, and internal circulation systems through the land development review and approval process.

Residential land uses at a maximum density of up to 45 dwelling units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential uses. Mass transit stops should be located at large commercial centers with appropriate connections established between commercial and residential areas to reduce the automobile dependency of residents and employers. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated.



Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre except for in the scenarios outlined in the special conditions below.

The following special conditions shall apply in the Sub-Urban Mixed Use Commercial Land Use Category:

1. Except within mixed-use centers, larger-scale commercial development shall be buffered from residential neighborhoods.
2. If development within the Sub-Urban Mixed Use Commercial Land Use Category only contains residential land uses, at least 5% of the gross site must be used for passive or active open space such as pocket parks, green space, or trails. The required 5% of the site shall be contiguous.

3. Non-residential development that is a part of a mixed-use development that includes medical centers may have an intensity of up to 80,000 square feet per acre, and up to 176,000 square feet per acre if it includes a hospital.

4. Park Place is a designated Regional Activity Center subject to the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code.

Park Place meets the parameters for a Regional Activity Center as defined in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the map above. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan and the land development code.

Policy 2.8.11 – Urban Neighborhood Future Land Use Category (City of Tallahassee): The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities. The Urban Neighborhood area shall be characterized by a mix of uses on small lots, with residential uses being the predominant type, and a street network that generally connects to residential neighborhoods along corridors or behind the uses fronting major collectors or arterial roadways. Non-residential neighborhood-scale uses are allowed and intended to integrate into the surrounding neighborhood. Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services,

small to moderate scale grocery stores, and small pharmacies and offices. Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum gross density of 26 dwelling units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

A maximum intensity for commercial uses of 30,000 square feet per acre and a maximum intensity for office uses of 30,000 square feet per acre are allowed. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. The number of parking spaces may be reduced to reflect increased pedestrian access.

The following special conditions shall apply to the Urban Neighborhood Land Use Category:

1. Design and development standards for the Urban Neighborhood area shall detail the placement, scale, and relationship between buildings and the street, including landscaping standards, to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Urban Neighborhood land use category.

Policy 2.8.12 – Urban General Future Land Use Category (City of Tallahassee):
The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities that are arranged in a manner to promote walkability and bikeability, or reduce automobile use. This category includes a variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of ~~a~~ high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities.

A maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for commercial uses of 60,000 square feet per acre and a maximum intensity for office uses of 60,000 square feet per acre are allowed.

Development in this category located along public frontages shall incorporate uses that emphasize and encourage pedestrian foot traffic and contribute towards a visually-interesting environment for the adjacent public realm. This can be achieved through methods such as high percentage of transparency, frequent pedestrian opening with connections to adjacent streetscapes, and human-scaled architectural details. Development that is primarily served by automobile traffic and generates low foot traffic shall be subject to a maximum intensity of 30,000 square feet per acre.

The following special conditions shall apply to the Urban General Land Use Category:

1. Design and development standards in the land development regulations for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and safety, and a continuous walkable street network throughout the district.

2. Development standards in the Tallahassee Land Development Code may not require minimum parking requirements for uses in the Urban General land use category.

3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district.

4. Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements.

~~4.~~5. The land development regulations shall include standards for development that do not incorporate uses that emphasize and encourage pedestrian foot traffic or contribute towards a visually-interesting environment for the adjacent public realm. Standards shall include requirements such as enhanced bicycle and pedestrian amenities and streetscaping features, building façade enhancements, and building placement.

Policy 2.8.13 – Urban Center Future Land Use Category (City of Tallahassee):
The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed-use, pedestrian, bike and transit- oriented development.

2. Future Expansion of the Urban Center land use shall be subject to the following requirements.

a. The proposed parcels shall be:

i. Within the existing Downtown Overlay; and

ii. Contiguous to the existing Urban Center FLUM area.

iii. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.

iv. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.8.14 – Special Development Districts (City of Tallahassee/Leon County):
The following Special Development Districts are created to address unique uses and areas throughout the community:

- Manufacturing and Mining – Heavy industrial land uses that do not, typically, have a defined intensity or density and may have the potential to create significant offsite impacts to surrounding areas, have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic, and vibrations that are not regulated by federal and/or state laws shall be regulated by the City and County.
- Institutional - Heavy infrastructure community facilities which may be public or privately owned or established that provide significant public benefit but may have the potential to create off-site impacts.
- Parks and Civic Spaces – City, County, State and Federal areas utilized for passive and/or active recreation uses. The principal land use will not, typically, have a defined density or intensity.
- Planned Development – Large, undeveloped land areas within the Urban Services Boundary that are generally under single ownership that are required to be master planned prior to development.

Special Development Districts shall be subject to the provisions of the Comprehensive Plan except where otherwise specified by federal and state laws.

Policy 2.8.15 – Manufacturing and Mining Special District (City of Tallahassee/Leon County):
Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban

Services Area.

Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.

The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

- Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
- Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties.
- Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent impacts offsite or require mitigation and/or minimization techniques for impacts. Ancillary commercial uses designed to serve adjacent workers may be permitted.

The following special conditions shall apply to the Manufacturing and Mining Special District:

1. Noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented or mitigated to avoid negative impacts on properties in the vicinity of these uses. The City and Leon County Land Development Code shall provide minimum mitigation standards.
2. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Special District.
3. Site plans must demonstrate the protection of adjacent non-industry and non-mining properties through development standards outlined in the land development codes.
4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
5. Hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidizing, and similar activities, commonly referred to as fracking, are not permitted uses in the Industry and Mining Land Use.

Policy 2.8.16 – Institutional Special District (City of Tallahassee/Leon County):
The purpose of this Special District is to provide lands for heavy infrastructure community

facilities that must obtain federal and/or state approvals to be located, modified and/or expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90 percent of the entire site when located within the Urban Service Boundary or 75 percent of the entire site when located outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

The following special conditions shall apply to the Institutional Special District:

1. Institutional land uses have the potential to create offsite impacts to surrounding areas. Because institutional uses vary in their operations and their potential offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.
2. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from institutional uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Policy 2.8.17 – Parks and Civic Spaces Special District (City of Tallahassee/Leon County):

The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces.

The following special conditions shall apply to the Parks and Civic Spaces Special District:

1. Commercial active recreation land uses shall be established through the Planned Unit Development process.
2. Because commercial active recreation land uses vary in their operations and potential offsite impacts, the Planned Unit Development shall establish standards to address the potential offsite impacts, including, but not limited to noise, lighting, and traffic access and congestion.

Policy 2.8.18 – Planned Development Special District (City of Tallahassee/Leon County):

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior

to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned Development Special District is located.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

The following special conditions shall apply to the Planned Development Special District:

1. Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, public or private open space) that are integrated with each other, as well as with the unique characteristics of the development area.
2. Master Plans shall identify the following:
    a. Boundary of area subject to Planned Development.
    b. General depiction of mix, location and intensities of future land uses.
    c. Activities permitted within each land use.
    d. Total dwelling units.
    e. Total square footage of non-residential development.
    f. How natural resources on-site will be protected.
    g. Major transportation system improvements that are consistent with adopted transportation plans.
    h. Capacity maintenance, bicycle, and pedestrian accessibility, impacts to surrounding areas and protection of canopy roads, if applicable.
    i. Address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development.
    j. Facilities and development requirements to provide alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit.
    k. An infrastructure plan which identifies the type, demand, and general location of needed utilities in relation to existing and scheduled utilities in the areas of the development.
    l. The location and adequacy of proposed schools, parks, and open space.
    m. How the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses.
    n. How the development will comply with applicable affordable housing policies and/ordinances.
    o. How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed.
    p. A set of development guidelines that will direct the development of implementing PUD/PUDs. These guidelines shall address, but not be limited to, building height, setbacks, the interrelationships of uses, energy efficiency, pedestrian access. The

guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.

3. Previous approved Comprehensive Plan Area Plans shall constitute a Master Plan as required by this policy. The Southeast Sector Plan serves as the Master Plan for Southwood, Colin English Properties, and the former Southside DRI lands. The Welaunee Critical Area Plan serves as the Master Plan for the Welaunee Toe, Heel, and Arch. The Capital Circle Office Complex Planned Unit Development Master Plan Concept shall serve as the Master Plan for this area, and shall be exempted from the four use requirement of this policy.
4. Approved Master Plans are to be implemented by one or more Planned Unit Developments. Minimum size requirements for Planned Unit Developments within the district shall be established in the land development code. Minor and major amendments to the Master Plan may be approved through the Planned Unit Development requirements and procedures. The Planned Unit Development may serve as the Master Plan if it meets the requirements for a Master Plan enumerated in this policy.
5. Easements, right-of-way and other improvements located throughout the Planned Development District boundary may be required to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan.
6. Subdivision of a portion of a Planned Development District for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource-based recreation use shall not be contingent upon the adoption of a Master Plan or PUD.
7. Subdivision and development of a portion of a Planned Development area for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan or PUD. The land development code shall establish the process and requirements for siting and development of new schools and the expansion of existing schools. The conservation, preservation, passive recreation, educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduce the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.
8. Separate Master Plans may be approved for each Planned Development District that is divided by an interstate or arterial highway that limits integration across the entire development.
9. As demands from a rapidly increasing population may require the expansion of the Urban Service Boundary in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.
10. Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development areas shall be designated as Planned Development on the adopted Future Land Use Map and Zoning Map.

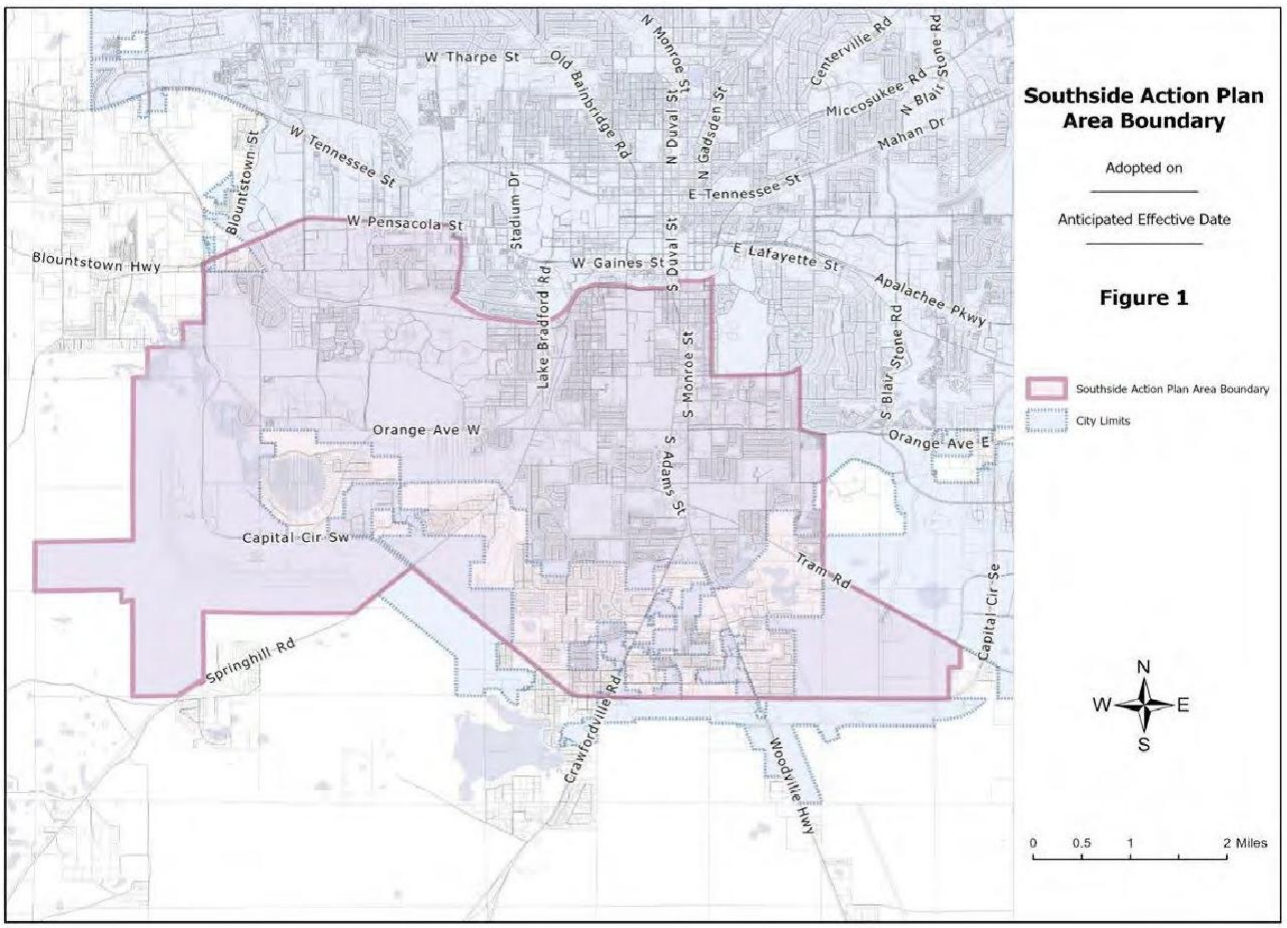
Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community facilities, including schools, community centers, and libraries.

Objective 3.1 – Residential Character (City of Tallahassee/Leon County):
Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.



Policy 3.1.1 – Residential Character Criteria (City of Tallahassee/Leon County):
Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

Policy 3.1.2 – Housing Diversity (City of Tallahassee/Leon County):
Maintain a viable mix of available residential densities to accommodate a variety of housing types.

Policy 3.1.3 – Healthy Food Options (City of Tallahassee/Leon County):
The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

Objective 3.2 – Southside Action Plan (City of Tallahassee/Leon County):
Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Policy 3.2.1 – Southside Action Plan Area (City of Tallahassee/Leon County):
The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

Policy 3.2.2 – Beautification (City of Tallahassee/Leon County):
Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Policy 3.2.3 – Investment (City of Tallahassee/Leon County):
Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Policy 3.2.4 – Active and Engaged Citizens (City of Tallahassee/Leon County):
Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

Policy 3.2.5 – Southside Action Plan Evaluation and Update (City of Tallahassee/Leon County):
The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

Objective 3.3 – Connectivity Access Management (City of Tallahassee/Leon County):
Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

Policy 3.3.1 – Access Management Design (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

Policy 3.3.2 – Intersection and Interchange Restrictions (City of Tallahassee/Leon County):
Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

Policy 3.3.3 – Unified Access and Circulation Plans (City of Tallahassee/Leon County):
Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.4 – Access Management Improvements (City of Tallahassee/Leon County):
Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that:

1. Address the transition of vehicles from arterial roadways to internal circulation systems.
2. Prioritize the redesign of median openings that are inadequately designed.
3. Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

Policy 3.3.5 – State Road Access Management (City of Tallahassee/Leon County):
The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Policy 3.3.6 – Neighborhood Through-Traffic (City of Tallahassee/Leon County):
Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies.

Policy 3.3.7 – Consolidated Properties (City of Tallahassee/Leon County):
Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

Policy 3.3.8 – Development Near Interchanges (City of Tallahassee/Leon County):
Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

Policy 3.3.9 – Access Management Deviations (City of Tallahassee/Leon County):
Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Objective 3.4 – Equitable Distribution of Land Uses (City of Tallahassee/Leon County):
Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

Policy 3.4.1 – Distribution of Land Uses (City of Tallahassee/Leon County):
The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

Policy 3.4.2 – Public Investments (City of Tallahassee/Leon County):
The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

Objective 3.5 – Safety (City of Tallahassee/Leon County):
Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

Policy 3.5.1 – Public Infrastructure Design (City of Tallahassee/Leon County):
Public infrastructure, relevant to transportation, shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization, pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its

users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures

Objective 3.6 – Land Development Regulations (City of Tallahassee/Leon County): Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 3.6.1 – Criteria for Amendments to Land Development Regulations (City of Tallahassee/Leon County): Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

Policy 3.6.2 – Implementing Zoning Districts (City of Tallahassee/Leon County): Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

Policy 3.6.3 – Site Requirements (City of Tallahassee/Leon County): Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Context-based transit amenities
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise mitigation

Policy 3.6.4 – Density and Intensity Incentives (City of Tallahassee/Leon County): Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the respective Future Land Use Category by up to 20%.

Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

Policy 3.6.5 – Planned Unit Developments (City of Tallahassee/Leon County):
The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

Policy 3.6.6 – Non-Conforming Uses (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on:

- The impact of the non-conformity to conforming land uses adjacent to the non-conformity.
- A determination that the non-conformity is not detrimental to public health, safety, and welfare.
- The ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between non-conforming uses which are to be terminated or amortized, and legally established non-conforming uses in nonresidential designations which may continue, but not be expanded.

Policy 3.6.7 – Previously Vested Development (City of Tallahassee/Leon County):
Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

Policy 3.6.8 – Landfill Redevelopment (City of Tallahassee/Leon County):
Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

Objective 3.7 – Urban Design (City of Tallahassee/Leon County):
Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging, accessible, and safe public spaces.

Policy 3.7.1 – Design Principles and Priorities (City of Tallahassee/Leon County):
General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

Policy 3.7.2 – Crime Prevention through Environmental Design (City of Tallahassee/Leon County):
Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to:

- Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private.
- Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces.
- Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users.
- Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability.
- CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

Policy 3.7.3 – Design Criteria for Mobility Hubs (City of Tallahassee/Leon County):
New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Goal 4 [LM] – Greater Housing Diversity:

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
    - Neighborhoods that are diverse in use and population.
    - Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
    - Places that offer inclusive access to public spaces and community institutions.

Objective 4.1 – Missing Middle Housing (City of Tallahassee/Leon County):
Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

Policy 4.1.1 – Accessory Dwelling Units (ADUs) (City of Tallahassee/Leon County):
Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

Policy 4.1.2 – Missing Middle Housing as Conforming Uses (City of Tallahassee/Leon County):
Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

Policy 4.1.3 – Community Character Analysis (City of Tallahassee/Leon County):
In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

Policy 4.1.4 – Pattern Books (City of Tallahassee/Leon County):
Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability

of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

Objective 4.2 – Mobility-Based Housing Incentives (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

Policy 4.2.1 – Coordinate Transit with Land Use (City of Tallahassee):
As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

Policy 4.2.2 – Transit-Oriented Development (TOD) Design Standards (City of Tallahassee/Leon County):
Land development regulations shall include design standards to encourage the following principles around transit centers:

- Site centers in locations with highest ridership potential and development opportunities.
- Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development.
- Create a range of densities with highest at centers, tapering down to existing neighborhoods.
- Design centers for seamless pedestrian connections to surrounding development.
- Create public plaza directly fronting one or more sides of the center building where feasible.
- Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible.
- Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets.
- Enhance multi-modal connections, making transfers easy, direct, and comfortable.
- Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas.
- Use centers as catalysts for major redevelopment of area and create placemaking around centers.

Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within ¼ mile of a transit stop. This density bonus shall not apply to the Residential Preservation land use category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4 – Coordinate Trails with Land Use (City of Tallahassee/Leon County):
As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.

Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards (City of Tallahassee/Leon County):
Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

Policy 4.2.6 – Trail-Oriented Development (TrOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 1/2 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Objective 4.3 – Affordability (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

Policy 4.3.1 – Inclusionary Housing Policy (City of Tallahassee/Leon County):
As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

Policy 4.3.2 – Establishing Community Land Trusts (City of Tallahassee/Leon County):
To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing models that:

- Do not include resale restrictions, or
- Include resale restrictions that are temporary, forgiven, or set to expire over time, or
- Rely on local government land donations without long-term affordability guarantees.

Policy 4.3.3 – Requirements of Community Land Trusts (City of Tallahassee/Leon County):
To qualify for local government assistance, Community Land Trusts shall:

- Require permanent affordability.
- Require that owners live in the homes as their primary residence.
- Include resale formulas in land leases.

Policy 4.3.4 – Affordable Housing Design Standards (City of Tallahassee/Leon County):
Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

Policy 4.3.5 – Affordable Housing Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

Objective 4.4 – Family Heir Subdivisions (City of Tallahassee/Leon County):
Provide a hardship provision by which owners of property outside of the Urban Services Area who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

Policy 4.4.1 – Family Heir Subdivision Eligibility (City of Tallahassee/Leon County):
The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Objective 5.1 – Economic Health (City of Tallahassee/Leon County):
Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

> **Policy 5.1.1 – Economic Development Strategic Plan (City of Tallahassee/Leon County):**
> The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan.

Objective 5.2 – Airport Access (City of Tallahassee):
Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

> **Policy 5.2.1 – Airport Master Plan (City of Tallahassee):**
> The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

Objective 5.3 – Freight and Cargo (City of Tallahassee/Leon County):
Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

Policy 5.3.1 – Intermodal Centers (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall maintain an inventory of intermodal freight centers, including the locations, types of facilities, and activities of the centers.

Policy 5.3.2 – Tallahassee International Airport (City of Tallahassee/Leon County):
Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

Policy 5.3.3 – Transportation Access (City of Tallahassee/Leon County):
Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal freight centers, or other freight transfer locations.

Objective 5.4 – Resilience Planning (City of Tallahassee/Leon County):
Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

Policy 5.4.1 – Post Disaster Redevelopment Plan (City of Tallahassee/Leon County):
The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

Policy 5.4.2 – Local Mitigation Strategy (City of Tallahassee/Leon County):
The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

Objective 5.5 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

Policy 5.5.1 – Regional Economic Development Coordination (City of Tallahassee/Leon County):
The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

Policy 5.5.2 – Grant Funding Opportunities (City of Tallahassee/Leon County):
Local governments shall pursue grant opportunities for projects or programs of regional significance.

Goal 6 [LM] – A Balanced Transportation Network:

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

Objective 6.1 – Land Use and Transportation Coordination for Livability (City of Tallahassee/Leon County):

Coordinate land use and transportation systems to foster vibrant communities across context areas with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl (City of Tallahassee/Leon County):

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities (City of Tallahassee/Leon County):

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts to the multi-modal transportation network.

Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors (City of Tallahassee/Leon County):
Transportation corridor maps showing the future land uses shall be developed and maintained to reflect the enhanced coordination between land use and transportation including new construction and improvements, reflecting the intended context classification.

Policy 6.1.4 (City of Tallahassee/Leon County) – Retrofit for Livability:
Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

Objective 6.2 – Network Connectivity Improvement (City of Tallahassee/Leon County) :
Improve the balance of transportation options, connectivity, and capacity of the multimodal transportation network.

Policy 6.2.1 – Enhance Connectivity (City of Tallahassee/Leon County):
Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

Policy 6.2.2 – Future Right-of-Way Needs (City of Tallahassee/Leon County):
Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through appropriate development review and other processes, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 6.2.3 – Build and Enhance the Network (City of Tallahassee/Leon County):
Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 6.2.4 – Corridor Management and Preservation (City of Tallahassee/Leon County):
Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

Policy 6.2.5 – Interconnectivity for Development (City of Tallahassee/Leon County):
Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments

when such connection has the potential to reduce the vehicular traffic on the external street system.

Policy 6.2.6 – Continuation of Streets (City of Tallahassee/Leon County):
All development plans shall incorporate and continue all sub arterial streets stubbed to the boundary of the development plan by previously approved development plans or existing development.

Policy 6.2.7 – Interconnectivity to Adjacent Uses (City of Tallahassee/Leon County):
Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

Objective 6.3 – Context Based Mobility (City of Tallahassee/Leon County):
Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

Policy 6.3.1 – Local Context Classification and Safe Systems (City of Tallahassee/Leon County):
A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use and zoning, and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

Policy 6.3.2 – Context Classification Application (City of Tallahassee/Leon County):
The context classification system shall be applied to City and County roadway resurfacing and enhancement projects in a manner that reflects the future vision and context of the area, and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

Policy 6.3.3 – Context Classification Map (City of Tallahassee/Leon County):
By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification Map and the Future Land Use Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

Policy 6.3.4 – Downtown Traffic (City of Tallahassee/Leon County):
By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

Policy 6.3.5 – Lane Repurposing (City of Tallahassee/Leon County):
Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Policy 6.3.6 – One-Way Pair Studies (City of Tallahassee/Leon County):
Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements. The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 6.3.7 – Speed Management (City of Tallahassee/Leon County):
By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

Policy 6.3.8 – Level of Service (LOS) (City of Tallahassee/Leon County):
Peak Hour Roadway Level of Service is established below and shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to

support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS) (City of Tallahassee):
In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

Objective 6.4 – Complete Streets (City of Tallahassee/Leon County):
Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 6.4.1 – Project Evaluation (City of Tallahassee/Leon County):
Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

Policy 6.4.2 – Share Transportation Information (City of Tallahassee/Leon County):
The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.3 – Bicycle and Pedestrian Network (City of Tallahassee/Leon County):
The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan (City of Tallahassee/Leon County):
In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature

upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

Policy 6.4.5 – Safe Routes to Schools (City of Tallahassee/Leon County):
Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 6.4.6 – Community Gateways (City of Tallahassee/Leon County):
Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

Policy 6.4.7 – Scenic Roadway Assessments (City of Tallahassee/Leon County):
In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

Policy 6.4.8 – Maintenance of Traffic (City of Tallahassee/Leon County):
When construction or repair work infringes on regular corridor operation, a project specific Maintenance of the Traffic Plan shall be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

Policy 6.4.9 – Multi-Modal Safety and Access (City of Tallahassee/Leon County):
Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction.
- A documented absence of current or future need.
- Procedures and criteria for approving exceptions will be identified in the Land Development Code.

New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and shall use innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 6.4.10 – Applicability (City of Tallahassee/Leon County):
All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present.

Policy 6.4.11 – Equity (City of Tallahassee/Leon County):
The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

Policy 6.4.12 – Design Standards (City of Tallahassee/Leon County):
Land Development Codes that apply to all development policies and programs shall be revised by 2030 to use the latest professionally accepted design guidance, standards, and recommendations for Complete Streets in coordination with the designated context classification Guidance resources shall include, but need not be limited to:

- Federal Highway Administration's Manual on Uniform Traffic Control Devices
- Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook)
- National Association of City Transportation (NACTO) published guidelines
- American Association of State Highway and Transportation Official (AASHTO) published guidelines
- U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach

Policy 6.4.13 – Pavement Markings and Signage (City of Tallahassee/Leon County):
All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

Policy 6.4.14 – Two-Way Left Turn Lane Replacement (City of Tallahassee/Leon County):
Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

Policy 6.4.15 – Measuring Progress (City of Tallahassee/Leon County):
The success of this Complete Streets Objective shall be measured by the Planning Department with assistance by the City and County during the Evaluation and Appraisal Review process, using but not limited to, the following performance measures:

- Total miles of new designated bike lanes
- Total miles of new shared-use paths (paved and natural surface)
- Total miles of neighborhood bikeways signed, marked, or constructed
- Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.)
- Number and type of crosswalk and intersection improvements and new installations
- Number of revenue service miles traveled by transit vehicles
- Rates of crashes, injuries, and fatalities by mode, as available
- Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices.
- Number of exceptions to this policy granted

The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

Policy 6.4.16 – Coordination with Placemaking Plans (City of Tallahassee/Leon County):
Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

Objective 6.5 – Bicycle Facilities (City of Tallahassee/Leon County):
Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance (City of Tallahassee/Leon County):
All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

Policy 6.5.2 – Bicycle Facilities in New Development (City of Tallahassee/Leon County):
New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at all non-residential uses, multi-family uses and other key destinations. Bicycle and trail

connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

Objective 6.6 – Pedestrian Facilities (City of Tallahassee/Leon County):
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

Policy 6.6.1 – Pedestrian Level of Comfort (City of Tallahassee/Leon County):
As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 6.6.2 – Crosswalks (City of Tallahassee/Leon County):
Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Local Context Classification.

Policy 6.6.3 – Pedestrian Infrastructure for New Development (City of Tallahassee/Leon County):
New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

Objective 6.7 – Mobility Hubs (City of Tallahassee/Leon County):
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

Policy 6.7.1 – Implementation of Mobility Hubs (City of Tallahassee/Leon County):
Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

Policy 6.7.2 – Mobility Hubs Location Coordination (City of Tallahassee/Leon County):
The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

Policy 6.7.3 – Mobility Hubs Design Guidelines Requirements (City of Tallahassee/Leon County):
Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

Objective 6.8 – Transportation Demand Management (City of Tallahassee/Leon County):
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.1 – Encourage Alternate Transportation Modes (City of Tallahassee/Leon County):
Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure (City of Tallahassee/Leon County):
City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 6.8.3 – Land Development Patterns (City of Tallahassee/Leon County):
The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

Policy 6.8.4 – Shared Parking Criteria (City of Tallahassee/Leon County):
Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

Policy 6.8.5 – Parking Reduction for Certain Development Types (City of Tallahassee/Leon County):
City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

Policy 6.8.6 – Private Parking Lots (City of Tallahassee/Leon County):
City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual

impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

Policy 6.8.7 – Drop-Off & Pick-Up Zones (City of Tallahassee/Leon County):
The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

Policy 6.8.8 – Intelligent Transportation Systems (ITS) (City of Tallahassee/Leon County):
City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.8.9 – Traffic Operations Management (City of Tallahassee/Leon County):
The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

Objective 6.9 – Transportation for the Disadvantaged (City of Tallahassee/Leon County):
Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk.

Policy 6.9.1 – Human Services Transportation (City of Tallahassee/Leon County):
Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

Policy 6.9.2 – Transport to Destinations (City of Tallahassee/Leon County):
Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

Policy 6.9.3 – Affordable and Cost-Effective Service (City of Tallahassee/Leon County):
Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on-demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

Policy 6.9.4 – Transportation Disadvantaged Needs Assessment (City of Tallahassee/Leon County):

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

Objective 6.10 – Transit (City of Tallahassee/Leon County):

Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

Policy 6.10.1 – Transit Development Plan (City of Tallahassee):

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 6.10.2 – Pedestrian Infrastructure Connectivity (City of Tallahassee/Leon County):

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

Policy 6.10.3 – Southside Transit (City of Tallahassee/Leon County):

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

Policy 6.10.4 – Employment and Activity Center Service (City of Tallahassee):

Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Policy 6.10.5 – Transit Corridors (City of Tallahassee/Leon County):

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

Objective 6.11 – Aviation (City of Tallahassee/Leon County):

Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

Policy 6.11.1 – Adjacent Land Use Compatibility (City of Tallahassee/Leon County):

Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 6.11.2 – Airport Master Plan (City of Tallahassee):

The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

Policy 6.11.3 – Compatibility of Land Use (City of Tallahassee/Leon County):

Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 6.11.4 – Compatibility for Noise and Safety (City of Tallahassee/Leon County):

Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

Policy 6.11.5 – Advanced Air Mobility (City of Tallahassee/Leon County):

Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas and not located within areas that may create compatibility issues. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

Objective 6.12 – Rail (City of Tallahassee/Leon County):

Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

Policy 6.12.1 – Railroad Crossings (City of Tallahassee/Leon County):

Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

Objective 6.13 – Intergovernmental Coordination (City of Tallahassee/Leon County):

Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan and manage transportation systems that extend beyond jurisdictional boundaries.

Policy 6.13.1 – Consistency with State Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

Policy 6.13.2 – Consistency with Regional Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 6.13.3 – Consistency with Local Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

Policy 6.13.4 – Signal Coordination Plans (City of Tallahassee/Leon County):

Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

Policy 6.13.5 – Project Planning Partnerships (City of Tallahassee/Leon County):

Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

Policy 6.13.6 – Evacuation Routes (City of Tallahassee/Leon County):

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.

Policy 6.13.7 – Emerging Technology (City of Tallahassee/Leon County):

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

County Status Update on Community Engagement 11/18/2025 Public Hearing Meeting*

Remainder of page left intentionally blank

The State Agency Comments identical to those in the Leon County Agenda item above are not repeated in this item

Leon County
Board of County Commissioners
Agenda Item#18

November 18, 2025

To:	Honorable Chairman and Members of the Board
From:	Vincent S. Long, County Administrator
Title:	Status Report on the Tallahassee-Leon County Comprehensive Plan Land Use and Mobility Element Update

Review and Approval:	Vincent S. Long, County Administrator
Department/Division Review and Approval:	Ken Morris, Assistant County Administrator Nawfal Ezzagaghi, Assistant County Administrator Artie White, Director, Planning, Land Management & Community Enhancement (PLACE) Mike Alfano, Director, Planning Department
Lead Staff/ Project Team:	Susan Poplin, Administrator of Comprehensive Planning Tyler Maldonado, Principal Planner Adam Moran, Planner II

Statement of Issue:

This item provides a status report on the Tallahassee-Leon County Comprehensive Plan Land Use and Mobility Element (LME) update, including information about additional community engagement directed by the Board on July 8, 2025. This item also seeks Board direction on specific policy recommendations developed in response to community and state agency input and further supported by staff analysis, and requests that the Board schedule the adoption public hearing for December 9, 2025.

Fiscal Impact:

This item has no fiscal impact.

Staff Recommendation:

Option #1: Accept the status report and direct staff to update the proposed Land Use and Mobility Element with the thirteen policy recommendations detailed in this report.

Option #2: Schedule the adoption hearing to consider adopting the proposed Comprehensive Plan Land Use and Mobility Element for December 9, 2025, at 6:00 p.m.

Report and Discussion

Background:

This item provides a status report on the Tallahassee-Leon County Comprehensive Plan Land Use and Mobility Element (LME) update, including information about additional community engagement directed by the Board on July 8, 2025. This item also seeks Board direction on specific policy recommendations based on community input and additional staff analyses, and requests that the Board schedule the adoption public hearing for December 9, 2025.

This status report advances the following FY 2022 – FY 2026 Strategic Initiatives:

- *Complete a comprehensive review and revision to the Land Use Element of the Comprehensive Plan. (2022-13)*
- *Host community outreach events on the Vision 2025 Comprehensive Plan Land Use and Mobility Elements Update to share information and solicit input from citizens, advocacy groups, and neighborhood representatives. (2024-83)*

These particular Strategic Initiatives align with the Board's Environment and Governance Strategic Priorities:

- *(EN3) Promote orderly growth and sustainable practices.*
- *(G3) Inform and engage citizens through multiple outreach platforms to ensure consistent, high-value, transparent communication on our most important issues.*

The City of Tallahassee (City) and Leon County Commissions initiated an update to the Tallahassee-Leon County Comprehensive Plan (Plan), beginning with the Land Use and Mobility Elements (LME)—two of the most critical components guiding future growth, development, and transportation planning. Launched in late 2022, the update was to revise the Plan to reflect current conditions, comply with statutory requirements, and align with the community's shared values and long-term vision.

On February 25, 2025, the City and County Commissions held a Joint Workshop to review draft goals, objectives, and policies for the proposed LME update. Feedback from both Commissions was used to refine the draft documents in preparation for formal review.

The Leon County Local Planning Agency (LPA) held a public hearing on April 1, 2025, following several work sessions to review the proposed elements. The LPA voted to recommend transmittal of the draft Land Use and Mobility Elements to the Board of County Commissioners.

At its May 13, 2025 meeting, the Board held the required Transmittal Public Hearing and voted to transmit the draft amendments to the Florida Department of Commerce, the Florida Department of Environmental Protection, and other state and regional review agencies for the mandatory 30-day review period pursuant to Section 163.3184, Florida Statutes.

During this same period, the City Commission considered the companion transmittal on June 11, 2025. In response to citizen concerns regarding residential density, neighborhood compatibility, and growth patterns, the City Commission deferred transmittal and directed staff to conduct additional community engagement before proceeding.

Subsequently, at its July 8, 2025 meeting, the Board directed staff to undertake additional public engagement focused on the proposed Land Use and Mobility Elements, to compile and summarize community feedback, and to return to the Board with a status report, policy recommendations, and a revised project schedule for consideration prior to adoption. Following that direction, staff launched a countywide community engagement effort, as further detailed in the Analysis section.

While the County's engagement process was underway, the City continued its review of the proposed LME. In response to community concerns about the proposed Urban and Sub-Urban Residential Preservation Future Land Use Categories (FLUCs), the City held a community meeting on August 18, 2025, attended by representatives from numerous neighborhood associations. Based on feedback from that meeting, the City Commission voted on August 20, 2025, to retain the existing Residential Preservation FLUC, with revisions to address legally established nonconforming uses. The City Commission then held its Transmittal Hearing on September 17, 2025, and voted to transmit the proposed LME—incorporating the updated Residential Preservation policies—to the state review agencies.

Building on the Board direction described above and the extensive public engagement that followed, staff have compiled and evaluated feedback from the community and state review agencies to develop policy recommendations. This agenda item provides a status report summarizing the outcomes of that engagement, presents policy recommendations, and requests that the Board schedule the adoption public hearing for December 9, 2025, at 6:00 p.m.

Analysis:

Consistent with the Board's direction at the July 8, 2025 meeting, staff launched a countywide community engagement effort to gather public input on the Comprehensive Plan update. This included organizing open houses in various locations across the County, developing informational materials for public engagement, and coordinating outreach with Leon County Community and Media Relations (CMR). Public awareness was promoted through social media, press releases, community fliers, and local media coverage. Staff also attended community events and meetings to share information and encourage participation, and these included the following community open houses in unincorporated Leon County:

- Lake Jackson Community Center on Thursday, September 25, 2025
- Miccosukee Community Center on Monday, September 29, 2025
- Chaires Community Center on Tuesday, September 30, 2025
- Fort Braden Community Center on Wednesday, October 1, 2025
- Bradfordville Community Center on Wednesday, October 8, 2025
- Woodville Community Center on Wednesday October 15, 2025, and Tuesday, October 21, 2025*

**The two Woodville sessions were held in coordination with the ongoing Woodville Sense of Place Plan engagement to ensure consistency between that planning effort and the Comprehensive Plan Land Use and Mobility Element.*

The Public Engagement Summary Report, included as Attachment #1, includes details of the public input received and copies of the materials presented at the community open houses. The draft LME presented during these sessions is included as Attachment #2.

During the County's engagement process, the City finalized its review of the proposed LME (as referenced in the background section) and transmitted them to the state review agencies. The City's revisions to the Residential Preservation Future Land Use Category are reflected in Attachment #2.

Following the conclusion of the countywide engagement effort, staff compiled and analyzed feedback received from each community meeting. The following summaries provide an overview of the input gathered at each open house location, highlighting recurring themes and community-specific considerations relevant to the Land Use and Mobility Element update.

Lake Jackson Area

The Lake Jackson Community Center open house, held on September 25, 2025, drew strong participation, with more than 67 residents in attendance and 55 submitting written comments.

Summary of Lake Jackson Area Input:

Input received from both the Lake Jackson open house and other community engagement efforts, pertaining to the Lake Jackson area, was centered on the following subjects:

- Protection of the Lake Jackson Aquatic Preserve and surrounding natural resources.
- Opposition to extending the Urban Services Area (USA) near Lake Jackson, Meridian Road, Bannerman Road, and Orchard Pond Parkway.
- Preservation of canopy roads, particularly Meridian Road, and concerns about increasing traffic volumes in the area.
- Desire to limit suburban sprawl and maintain existing rural areas in the Rural FLUC.
- Concerns over increased allowed density, should areas designated Rural be changed to Lake Protection.

Analysis of Lake Jackson Area Topics:

The Land Use and Mobility Element (LME) transmitted by the Board to the state review agencies on May 13, 2025, included a proposed expansion of the Urban Services Area (USA) in the Lake Jackson area. The proposal included changing certain properties west of Meridian Road from Rural to Lake Protection on the Future Land Use Map (FLUM) and adding new policy language requiring a master plan for developments larger than 100 acres within the Lake Protection area. The proposed amendments also identified a Lake Protection Node at the intersection of Orchard Pond Parkway and Bannerman Road and included related revisions to maintain consistency within the Comprehensive Plan.

Following the Board's transmittal hearing, the proposed LME was submitted to state review agencies, including the Florida Department of Environmental Protection (FDEP), which provided comments primarily focused on the Lake Jackson Basin and the proposed Urban Services Area (USA) expansion. FDEP expressed concern that the expansion could increase development pressure within the basin and potentially elevate nutrient loading to Lake Jackson. The agency also raised concerns about the proposed Lake Protection Node at the intersection of Meridian Road and Bannerman Road/Orchard Pond Parkway, noting that additional impervious surfaces in that location could adversely affect water quality.

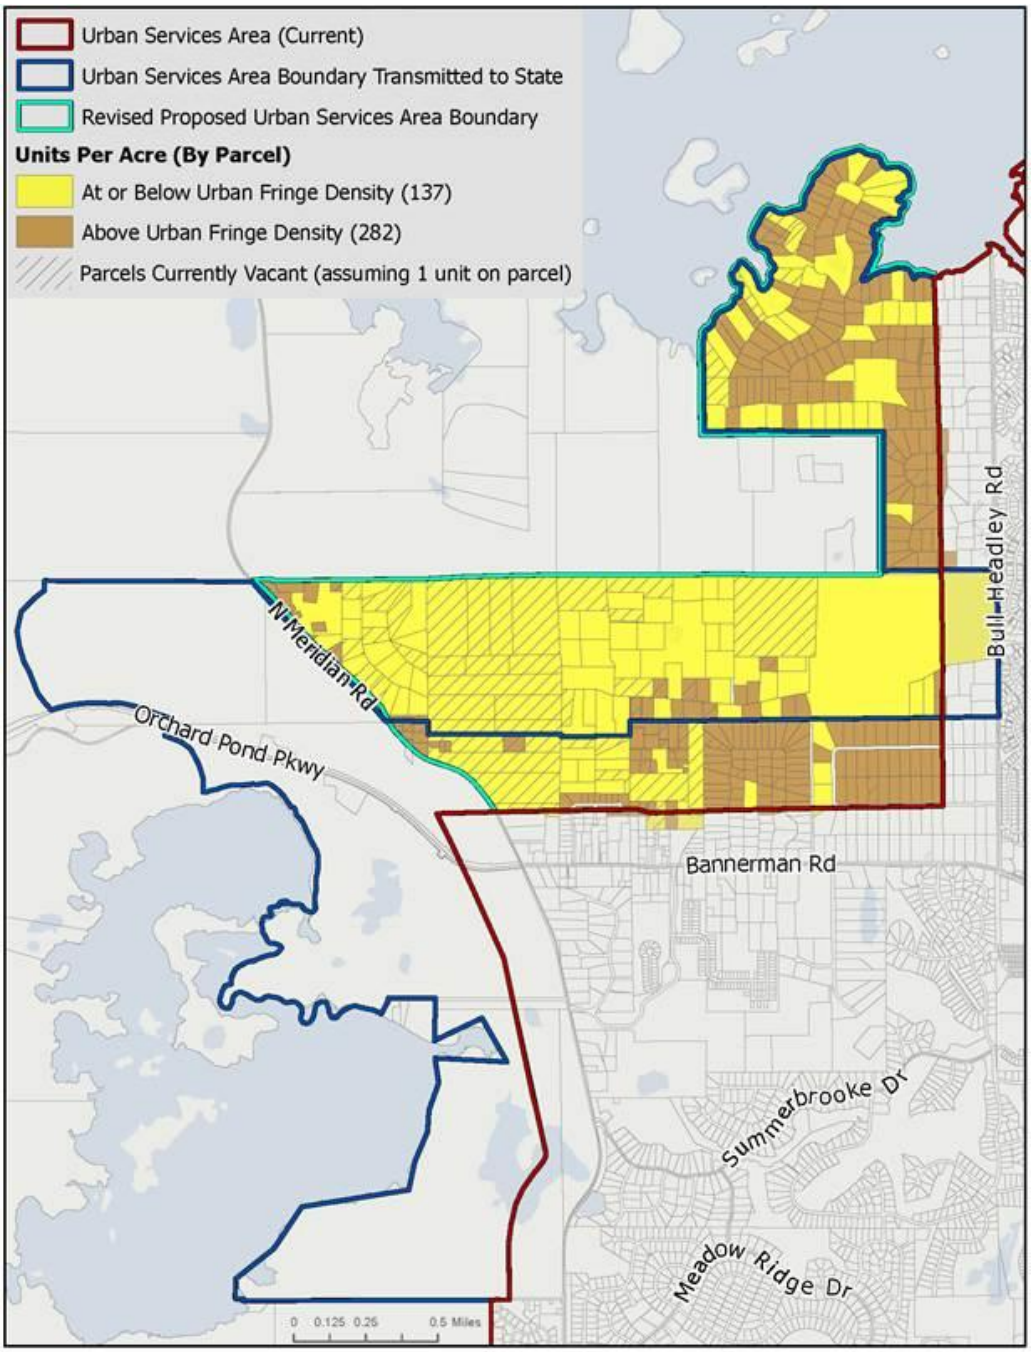
FDEP further recommended reevaluating the proposed Future Land Use Map (FLUM) changes from Rural to Lake Protection, emphasizing the need to ensure consistency with the Lake Jackson Aquatic Preserve management objectives and long-term water quality protection goals. In response to public input and comments received from the Florida Department of Environmental Protection (FDEP), staff conducted a comprehensive review of the transmitted Urban Services Area (USA) expansion in the Lake Jackson Basin, evaluating for environmental and transportation implications.

In response to the City's transmittal of the proposed LME, FDEP submitted a letter dated October 24, 2025 (Attachment #3). In this letter FDEP acknowledged text changes to the LME removing the previously proposed Lake Protection Node at the Meridian Road and Orchard Pond Parkway/Bannerman Road intersection and further acknowledged the efforts of the City and County to protect water quality through local regulations and compliance with state stormwater standards and indicated appreciation for the Planning Department's response to agency comments within the transmittal packet. FDEP also included their previously submitted comments to remain in consideration as the LME moves forward.

Environmental Review

The Lake Jackson Basin is one of Leon County's most environmentally sensitive areas and is protected under multiple layers of local and state regulation. The Leon County Environmental Management Act (EMA) contains development measures that are designed to prevent nutrient and sediment loading to Lake Jackson, which is an impaired waterbody under state criteria. In addition, other protections apply within the Lake Jackson Special Development Zones (SDZs). Within Zone A, which extends along the immediate shoreline and primary tributaries, disturbance is largely prohibited, and impervious surfaces and grading are restricted. Zone B provides an additional buffer where at least 50 percent of the land must remain in its natural state to protect vegetation, infiltration capacity, and surface-water quality. Together, these standards create a strong regulatory framework that limits the intensity and form of development around Lake Jackson.

However, the area west of Meridian Road presents heightened environmental risk even under these protective standards, especially during site clearing and construction when there is an increase potential for nutrient loading, sedimentation, and hydrologic disruption of the lake. Any expansion of the USA into this area would introduce greater potential for runoff and erosion that could challenge stormwater management systems during construction and compromise long-term water-quality objectives for the Lake Jackson Basin.



Transportation Review

From a transportation standpoint, North Meridian Road serves as a key north–south connector through the Lake Jackson Basin and is designated as a canopy road—a protected corridor defined by its continuous tree canopy that limit opportunities for widening or realignment. The corridor already experiences significant peak-hour congestion. Without major capacity improvements—which are impractical due to canopy protections, narrow right-of-way, and topographic limitations—additional development in the surrounding area would likely push the roadway to experience heavier congestion and longer travel times during commute periods. Such conditions would impact the local transportation network, increasing congestion at nearby intersections. Prolonged delays could also impede emergency vehicle response times and degrade the corridor's scenic and environmental qualities by prompting pressure for roadway modifications inconsistent with its canopy-road character.

In addition, staff analyzed and evaluated existing development patterns and densities within this area, more specifically east of Meridian Road, and north of Bannerman Road. This analysis reviewed current densities of developed properties in this area, and what densities would be on vacant parcels. The Urban Fringe (proposed to be renamed as Rural Residential) FLUC allows densities of 1 dwelling unit per 3 acres. This FLUC is intended to serve as a buffer between areas intended for urban services and the Rural lands. As such, properties largely having a density above 1 unit per 3 acres would not be appropriate for the Urban Fringe/Rural Residential FLUC. Moreover, there are existing subdivisions north of the USA boundary transmitted to the State that are included in the revised proposed USA boundary. Figure #1 depicts this analysis of existing densities and development patterns.

Privately-owned parcels that are currently within the USA should not be removed from the USA Boundary, as that could cause conflict with the recent State SB 180 legislation, which took effect July 1, 2025, or the Bert Harris Act. As such, a small area previously proposed for removal from the USA is proposed to remain in the USA as shown on Figure #1.

Figure #1. Densities In Proximity to Bannerman Road and Meridian Road.

Lake Jackson Area Policy Recommendations for Board Consideration:

Based on the evaluation of environmental and transportation factors, staff finds that maintaining the existing Rural Future Land Use Map (FLUM) designation west of Meridian Road—and not

expanding the Urban Services Area (USA) in that location—provides the most balanced and sustainable approach. This course of action preserves the County's established environmental and stormwater protections, while avoiding additional traffic demand on the already constrained North Meridian Road canopy corridor.

This recommendation does not preclude property owners from seeking future changes through the Comprehensive Plan amendment process, which remains the appropriate mechanism for considering site-specific development proposals.

To reflect existing conditions and promote logical service boundaries, staff further recommends adjusting the Urban Services Area boundary east of Meridian Road only, limited to areas where existing development patterns and previously subdivided parcels already demonstrate urban-scale characteristics.

Collectively, these actions provide a deliberate and balanced approach that aligns with community input and advances shared priorities: protecting Lake Jackson, preserving the environmental integrity of the basin, and maintaining the scenic and functional character of the Meridian Road corridor.

Miccosukee Area

The **Miccosukee Community Center** open house, held on **September 29, 2025**, had six residents participating and one submitting a written comment.

Summary of Miccosukee Area Input:

Input received from both the Miccosukee open house and other community engagement efforts, pertaining to the Miccosukee area, primarily focused on the following topics:

- Preserving lands in our Rural FLUC.
- Discussions about family heir subdivisions.
- The need for increasing economic development opportunities throughout the community.
- One citizen (who attended all the community engagement events) expressed concern for USA boundary expansion near Lake Jackson.

Analysis of Miccosukee Area Topics

The Miccosukee area is characterized by predominantly rural land uses with low-density residential and agricultural activities. The existing FLUC continues to provide an appropriate policy framework for this area by preserving environmentally sensitive lands and maintaining the community's rural character.

Feedback from residents regarding family heir subdivisions reflects the importance of maintaining flexibility for multigenerational land ownership while ensuring consistency with rural development

standards. These interests are already accommodated within existing subdivision and rural zoning provisions, which allow for limited divisions of land among family members without altering the broader Rural FLUC intent.

Similarly, the community's interest in expanded economic development opportunities are supported through compatible rural commercial and agricultural activities permitted under the current FLUC and zoning standards, without necessitating any boundary changes or increases in development intensity.

Concerns expressed about potential USA expansion near Lake Jackson are addressed in the Lake Jackson recommendations outlined earlier in this agenda.

Miccosukee Area Policy Recommendations for Board Consideration:

Staff recommends maintaining the existing policies and development standards for the Miccosukee Area, as they continue to align with the community's input. The current framework upholds the area's rural character while allowing for compatible, small-scale residential and economic activities.

This recommendation reflects and responds to the feedback received, which emphasized preserving rural character, supporting family heir subdivisions, and encouraging locally appropriate economic opportunities. Staff's review found that these priorities are already well-integrated into existing land use policies, ensuring continued protection of the Miccosukee community's distinctive rural identity and development patterns.

Chaires Area

The **Chaires Community Center** open house, held on **September 30, 2025**, had twelve residents in attendance, with three submitting written comments.

Summary of Chaires Area Input:

Input received from both the Chaires open house and other community engagement efforts, pertaining to the Chaires area, primarily focused on the following topics:

- The proposed change from the Urban Fringe FLUC to Rural Residential.
- The USA expansion near Lake Jackson and south of Old St. Augustine Road.
- A concern raised by a landowner with property adjacent to the City's Welaunee Toe-East Planned Unit Development (PUD), known as the Bexar property. The property had previously been amended on the Future Land Use Map (FLUM) from Urban Residential 2 to Suburban. The landowner expressed concern that the newly proposed FLUC of Sub-Urban Neighborhood would be more restrictive than the current Suburban designation and requested consideration for a designation to preserve his current zoning **entitlements.**

Analysis of Chaires Area Topics:

Rural Residential Land Use: The proposed LME renames the current Urban Fringe FLUC to the Rural Residential FLUC. This update ensures compliance with state requirements, which call for each land use category to include both a density standard (how many homes are allowed per acre) and an intensity standard (how much non-residential activity is allowed).

No change is proposed to the existing residential density limit—it remains the same as in the current plan. To meet the statutory requirement for an intensity standard, the proposed LME carries forward the same rule already in place under the existing zoning code for non-residential uses. This approach maintains consistency between the Comprehensive Plan and zoning regulations without changing what is currently permitted.

Urban Services Area (USA): During the development of the proposed LME, two Growth Scenarios to evaluate potential adjustments to the USA boundary south of Old St. Augustine Road and east of Southwood Plantation Road were developed. The intent of these adjustments was to align the boundary with existing parcel lines—rather than splitting parcels or subdivisions—and to accommodate logical, managed growth in areas where urban infrastructure can be efficiently extended.

Staff's analysis determined that the proposed USA adjustment, encompassing approximately 1,375 acres, lies adjacent to existing development that is already served or can reasonably be served by central water and sewer along the Southwood Plantation Road corridor. This area also connects to Southwood's transportation and trail networks, supporting integrated mobility and utility planning.

The proposed expansion is consistent with both the Growth Scenarios prepared by the LME consultant team and prior recommendations from the Residential Land Availability and Affordability Committee (2003), which identified a need for additional residential land to help stabilize housing supply and prices in Leon County. The proposed adjustment represents a scaled-down version of those earlier recommendations—targeting only the most suitable lands and excluding environmentally sensitive areas. No opposition was received from the public regarding the proposed USA expansion during community engagement.

Bexar Property: The Bexar property consists of approximately 39 acres of vacant land located east of Centerville Road and south of I-10, adjacent to the Welaunee Toe-East PUD. The property was the subject of a 2019 Comprehensive Plan amendment, which changed its FLUC from *Urban Residential-2* to *Suburban* to reflect its proximity to planned urban infrastructure. Although the land use designation was updated, the property retained its R-3 (Single-Family Detached and Attached Two-Family Residential) zoning because a rezoning was not pursued at that time. The owner indicated that a rezoning application would be submitted in the future once access via Welaunee Boulevard and public utilities became available.

Under the proposed LME, the property was designated as Sub-Urban Neighborhood when transmitted to the State for review in May 2025. This designation would reduce the potential development intensity compared to the existing *Suburban* FLUC, effectively limiting the flexibility

previously approved through the 2019 amendment. To address this concern, staff reviewed the property's planning history and determined that designating the site as Sub-Urban Mixed-Use Commercial would best preserve the development potential already recognized by the Board in 2019 while maintaining consistency with Florida Statute SB 180 (effective July 1, 2025), which prohibits publicly initiated plan amendments that impose more restrictive standards.

This designation would not alter the property's existing zoning, and any future request for higher-intensity development would still require a rezoning process, supported by evidence of available infrastructure and changed site conditions. The proposed change also ensures that adjacent and nearby properties would continue to receive notification and opportunity for input through the public hearing process.

Lake Jackson Area: The concern regarding the USA boundary expansion near Lake Jackson is addressed in the *Leon County Lake Jackson Area Community Input* section above.

Chaires Area Policy Recommendations for Board Consideration:

Input received from the Chaires Area focused on the proposed change from the *Urban Fringe* Future Land Use Category (FLUC) to *Rural Residential*; potential adjustments to the Urban Services Area (USA) boundary near Lake Jackson and south of Old St. Augustine Road; and a request from the owner of the Bexar property to maintain development potential consistent with the prior Comprehensive Plan amendment approved in 2019. Based on this input and staff's subsequent analysis, the following policy recommendations are provided for Board consideration:

- Maintain the proposed USA boundary in the Chaires Area as previously transmitted to the State Land Planning Agency and review agencies.
- Change the land use designation of the Bexar property from Sub-Urban Neighborhood to Sub-Urban Mixed-Use Commercial to reflect the comprehensive plan map amendment approved in 2019.

Fort Braden Area Community Input

The Fort Braden Community Center open house, held on Wednesday, October 1, 2025 had 10 residents sign in, with eight (8) submitting written comments.

Summary of Fort Braden Area Input:

Input received from both the Fort Braden open house and other community engagement efforts related to the Fort Braden area, primarily focused on the following topics:

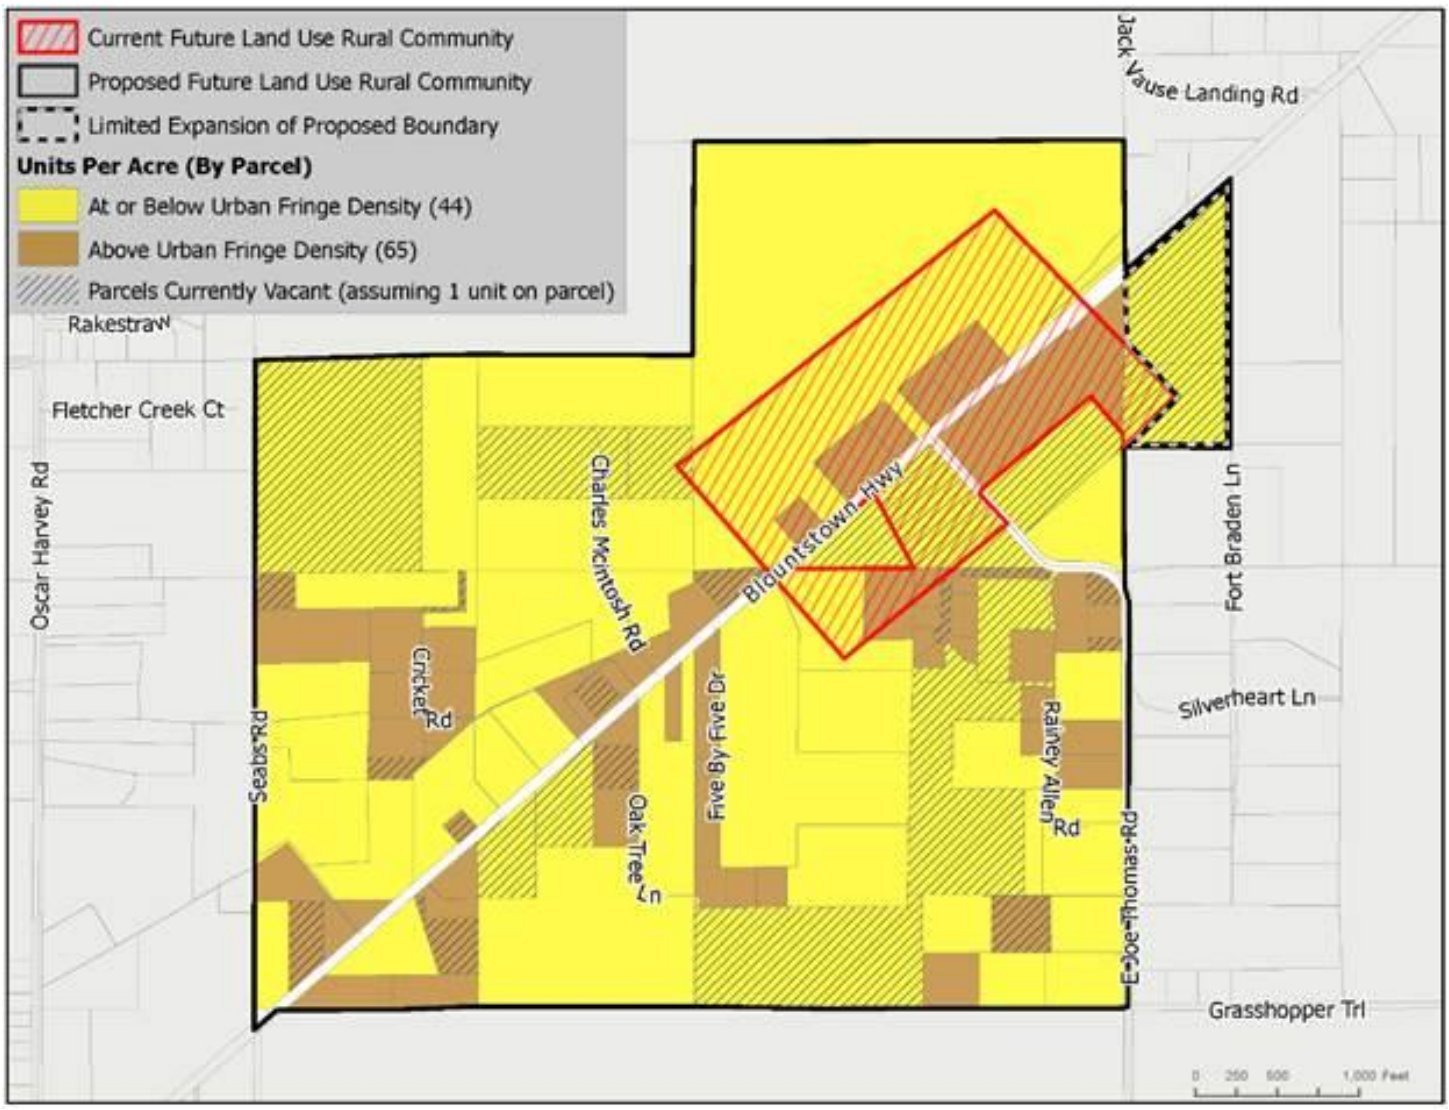
- The proposed expansion of the Rural Community FLUC in Fort Braden.
- The increased base density of the Rural Community FLUC of 4 dwelling units per acre.

Analysis of Fort Braden Area Topics:

Rural Community Boundary: The proposed LME transmitted to the State Land Planning Agency and review agencies in May 2025, included expanding the existing Fort Braden Rural Community designation by approximately 1,000 acres to include nearby parcels, several of which are currently partially designated as Rural Community. The current Rural Community boundary for Fort Braden splits multiple parcels, causing those parcels to have two FLUC designations. The proposed Rural Community aligns with parcel boundaries to avoid the parcels having multiple FLUC designations.

The proposed expansion would provide increased opportunities for additional retail, such as a grocery store, or residential uses to be developed in close proximity to the Leon County Community Center, which serves as a focal point on the corridor.

Rural Community Density: The proposed LME transmitted to the State Land Planning Agency and review agencies in May 2025, included an increase in base density of Rural Community FLUC from 2 units per acre to 4 dwelling units per acre. The purpose of the increase was to further facilitate the creation of rural community hubs with increased access to services for the surrounding rural areas.



Rural Community Boundary: The proposed LME includes adjustments to the Fort Braden Rural Community designation to align with existing development patterns and correct split-parcel conditions. The updated boundary expands the Rural Community area by approximately 1,000 acres to include nearby parcels, several of which are currently only partially designated as Rural Community. This adjustment eliminates split Future Land Use Category (FLUC) designations within single parcels and ensures the boundary more accurately reflects existing lot configurations.

The proposed expansion is intended to strengthen the Fort Braden community center area by supporting a mix of residential and neighborhood-scale uses near existing public facilities such as the Leon County Community Center and nearby schools. These uses may include small-scale services—such as a grocery store or other neighborhood-serving businesses—that improve accessibility for residents of the surrounding rural area, while maintaining the area's overall rural character and development pattern.

Staff reviewed existing development densities within and surrounding the proposed expansion area. Many of the parcels proposed for inclusion currently have densities greater than those permitted under the *Urban Fringe* FLUC (proposed to be renamed *Rural Residential*), which allows one dwelling unit per three acres. Including these parcels within the Rural Community FLUC more accurately reflects existing conditions and avoids inconsistencies between existing development and future land use designations.

Additionally, the analysis (as depicted in Figure #2 below) identified two parcels currently designated partially as Rural Community that were not included in the expansion. Removing the Rural Community designation from these parcels could create conflicts with Florida Senate Bill 180 (2025), which prohibits publicly initiated Comprehensive Plan amendments that impose more restrictive standards. Therefore, staff recommends that these parcels remain within the Rural Community boundary.

Figure #2. Existing and Proposed Rural Community Designation with Densities

Rural Community Density: Staff reviewed the proposed base density of four dwelling units per acre established in draft LME Policy 2.8.6 and identified a conflict with Policy 1.2.1 [SS] of the Comprehensive Plan's Sanitary Sewer Sub-Element. Policy 1.2.1 [SS] requires that areas served by septic systems maintain a minimum lot size of one-half acre—or a maximum density of two dwelling units per acre—to ensure consistency with environmental and health standards.

Because the Fort Braden area is not served by central sewer, this density limitation applies. Accordingly, the maximum allowable density within the Fort Braden Rural Community FLUC should remain at two dwelling units per acre. This clarification aligns the proposed LME with existing utility policies and ensures development remains consistent with available infrastructure and environmental protection standards.

This limitation does not apply to the Woodville Rural Community, where urban services are available. In Woodville, the Rural Community FLUC continues to allow higher densities of up to eight dwelling units per acre where central sewer service is provided.

Fort Braden Area Policy Recommendations for Board Consideration:

Based on community input and further staff analysis, staff recommends the following policy approaches:

- Maintain the proposed Rural Community boundary in the Fort Braden Area as previously transmitted to the State Land Planning Agency and review agencies, with the minor expansion to include two parcels currently partially designated as Rural Community.
- Reduce the maximum allowed density in Rural Community from 4 units per acre to 2 units per acre for properties that do not have sewer available. Maintain the max allowed density of 8 units per acre for parcels where central sewer is available, which is primarily relevant to Woodville.

Bradfordville Area Community Input

The Bradfordville Community Center open house, held on Wednesday, October 8, 2025, had 34 residents sign in and staff received 30 exit surveys/written responses at this open house.

Summary of Bradfordville Area Input:

Input received from both the Bradfordville open house and other community engagement efforts related to the Bradfordville area primarily focused on the following topics:

- A concern for the Lake Jackson Aquatic Preserve.
- Opposition and concern for extending the Urban Services Area (USA) near Lake Jackson, Meridian Road, Bannerman Road, and Orchard Pond Parkway.
- Concerns over preservation of canopy roads (especially Meridian Road) and traffic volumes on Meridian Road.
- Concern about suburban sprawl and keeping rural areas in the Rural FLUC.
- Environmental concerns such as the importance of habitat preservation, water quality, and opposition to tree clearing.
- Concern over increased density allowed should areas designated Rural be changed to Lake Protection.
- A request from landowners with property north of the intersection of Meridian Road and Bannerman Road, east of Meridian Road, to be included within the Urban Services Area boundary. The landowners are members of a family that owns several adjacent parcels and wish to have their properties considered as part of the USA

Analysis of Bradfordville Area Topics:

Community input from the Bradfordville Area reflected the same key issues identified in the Lake Jackson Area, including protection of the Lake Jackson Aquatic Preserve, potential adjustments to the Urban Services Area (USA), preservation of canopy roads, and maintenance of rural character. These matters were evaluated as part of the Lake Jackson Area analysis and are fully addressed through the environmental and transportation evaluations and corresponding recommendations presented in that section of this report.

The request from a family owning multiple parcels north of the intersection of Meridian Road and Bannerman Road, east of Meridian Road, to be included within the USA boundary was also reviewed as part of that analysis. These parcels are small, mostly developed lots that currently exceed the density limits of the *Urban Fringe* Future Land Use Category (FLUC) and were determined to be appropriate for inclusion within the proposed USA boundary adjustment discussed in the Lake Jackson section.

Bradfordville Area Policy Recommendations for Board Consideration:

While information was shared with attendees, no additional policy recommendations resulted from the Bradfordville Area input. The policy recommendations addressing the Lake Jackson area are addressed in the *Lake Jackson Area Community Input* section above.

Woodville Area

The Woodville Community Center open houses were held on Wednesday October 15, 2025, and Tuesday, October 21, 2025. As noted above, these were in coordination with the ongoing Woodville Sense of Place Plan engagement to ensure consistency between that planning effort and the Comprehensive Plan's Land Use and Mobility Element. 43 residents signed into the Woodville Open Houses.

Summary of Woodville Area Input:

Prior to the Woodville Open Houses, a community survey was available to the public starting in mid-June. The survey gained input from Woodville residents on topics ranging from infrastructure improvement to beautification efforts. These topics and potential placemaking-related recommendations will come back to the Board with the Woodville Sense of Place Plan. Land use-related input received from the Woodville open houses, the community survey, and other community engagement efforts focused on the desire for additional restaurants, retail, shopping, and commercial opportunities that are currently designated as allowed uses by the adopted Woodville Rural Community FLUC and will continue to be allowed in the proposed Rural Community FLUC. Input related to transportation safety improvements and additional multi-use trail facilities was also received and will continue to be supported by the proposed Land Use and Mobility Element policies.

Analysis of Woodville Area Topics:

Community input from the Woodville Area related to the Land Use and Mobility Element Update included questions regarding the proposed Future Land Use Categories in Woodville, and questions related to proposed allowable uses and densities. No suggested changes related to the LME were provided by community members. Other input received, not related to the Land Use and Mobility Element Update, will be further analyzed and vetted with additional public engagement and included in the Woodville Sense of Place Plan.

Woodville Area Policy Recommendations for Board Consideration:

While information was shared with attendees, no additional policy recommendations resulted from the Woodville Area input. While no specific policy recommendations are included related to the Land Use and Mobility Element Update, the input received from the Woodville Area will result in recommendations for Board consideration as part of the Woodville Sense of Place Plan. The Woodville Sense of Place Plan will come before the Board in Early Spring 2026.

State Agencies Feedback

In addition to community engagement, the proposed Land Use and Mobility Element (LME) was reviewed by state and regional agencies pursuant to Section 163.3184, Florida Statutes. Formal comments were received from the following review partners:

- *Florida Department of Environmental Protection (FDEP):* Provided comments focused on the Lake Jackson Basin and the proposed Urban Services Area expansion. FDEP expressed concern regarding potential increases in nutrient loading and stormwater impacts and recommended maintaining the existing Rural Future Land Use designation west of Meridian Road.
- *Florida Department of Commerce (DOC):* Requested that the LME be supported by updated data and analysis on public facilities — including potable water, sewer, solid waste, stormwater, and recreation facilities — to ensure consistency with statewide planning standards. Staff prepared a supplemental report addressing these items for inclusion in the final adoption package.
- *Florida Department of Agriculture and Consumer Services (FDACS):* Commented that state-managed conservation lands within the Natural Areas FLUC should continue to follow approved management plans, including the use of prescribed fire. Policy 2.8.3 has been revised accordingly.

Staff has incorporated revisions addressing all substantive agency comments, as reflected in the recommended policy updates contained below.

Policy Recommendations for Board Consideration:

Based on community input, state agency feedback, and further staff analysis, the following updates to the proposed Land Use and Mobility Element (LME) are recommended:

1. **Adjust the Urban Services Area (USA)** east of Meridian Road where development patterns already reflect urban or previously subdivided parcels.
2. **Do not expand the USA** or change land use designations west of Meridian Road to protect the Lake Jackson Basin and maintain established rural and environmental protections.
3. **Maintain the USA boundary in the Chaires Area** as previously transmitted to the State Land Planning Agency and review agencies.
4. **Change the Bexar property designation** from *Sub-Urban Neighborhood* to *Sub-Urban Mixed-Use Commercial* to reflect the 2019 Comprehensive Plan amendment.
5. **Maintain the Fort Braden Rural Community boundary** as transmitted, with a minor expansion to include two parcels currently partially designated as Rural Community.
6. **Clarify Rural Community density standards** by limiting properties without sewer to a maximum of two dwelling units per acre and maintaining up to eight units per acre where central sewer service is available, primarily within the Woodville area.
7. **Clarify that public schools are directed to the USA**, while remaining allowable in all Future Land Use Categories (FLUCs) except Natural Areas.
8. **Confirm that existing Planned Developments**—Southwood, Colin English, and Welaunee—continue to be governed by their adopted master plans.
9. **Clarify the Lake Protection FLUC** to emphasize sewer connections and redevelopment of existing developed nodes, with central sewer required in Conservation Subdivisions and Lake Protection Nodes along U.S. Highway 27 to achieve maximum density.
10. **Confirm that Mahan Gateway Nodes** correspond to the Sub-Urban Mixed-Use Commercial FLUC and remain implemented through existing Mahan Corridor Node and Ring zoning districts.
11. **Standardize terminology** to ensure consistent use of "Community Facilities" and "Community Services" throughout the LME, aligned with the Comprehensive Plan glossary and implementing zoning districts.
12. **Remove the Urban and Sub-Urban Residential Preservation FLUCs** and replace them with updated language addressing non-conforming uses, as directed by the City Commission on August 20, 2025.
13. **Revise the Natural Areas FLUC** to recognize the State's authority to manage publicly owned lands consistent with approved management plans, including the use of prescribed fire.

Next Steps for LME Update

The Board approved the transmittal of the proposed LME to the State Land Planning Agency and review agencies on May 13, 2025. The review agencies provided comments on June 24, 2025, in response to the Board-approved transmittal. State statute dictates that local governments have 180 days to adopt amendments following the receipt of review comments, or may request an extension. As such, the current adoption deadline is December 15, 2025. Option #1 would direct staff to revise the proposed LME with the policy recommendations enumerated as 1 through 13 as described in this item, and Option #2 would schedule the adoption hearing for December 9, 2025, which would be within the 180 deadline.

Policy 1.8.1 of the Intergovernmental Coordination Element requires both the County and City to adopt amendments to the text of the Comprehensive Plan. As such, the proposed LME would not become effective unless or until both the Board and the City Commission adopt the Element.

Upon adoption by both the Board and City Commission, the adopted amendment will be submitted to the State Land Planning Agency. The proposed LME would then become effective 31 days after the State Land Planning Agency notifies the County and City that the plan adopted amendment package, which includes the proposed LME and any relevant data analysis, is complete.

Conclusion:

This item provides a status update on the Tallahassee–Leon County Comprehensive Plan Land Use and Mobility Element (LME) update, summarizing the results of the additional community engagement directed by the Board on July 8, 2025, and the follow-up analyses conducted in response to public input and agency review comments.

Based on that input and analysis, staff has identified thirteen recommended policy adjustments to the proposed LME. These include refining the Urban Services Area (USA) boundary near Lake Jackson and Meridian Road, maintaining the transmitted boundaries for the Chaires and Fort Braden areas with targeted updates, revising the Bexar property designation for consistency with prior Board action, clarifying the Rural Community density standards, and incorporating minor text and agency-related revisions for clarity and consistency.

To move the LME update toward completion within the statutory adoption period, the following actions are recommended:

- Option #1: Accept this status report and direct staff to update the proposed Land Use and Mobility Element with the thirteen policy recommendations detailed in this item.
- Option #2: Schedule the adoption hearing to consider adoption of the proposed Land Use and Mobility Element for December 9, 2025, at 6:00 p.m.

Together, these actions will complete the County's portion of the adoption process and advance the coordinated update of the Tallahassee–Leon County Comprehensive Plan.

Options:

1. Accept the status report and direct staff to update the proposed Land Use and Mobility Element with the thirteen policy recommendations detailed in this report.

2. Schedule the adoption hearing to consider adopting the proposed Comprehensive Plan Land Use and Mobility Element for December 9, 2025, at 6:00 p.m.

3. Board direction.

Recommendation:

Options #1 and #2

OVERVIEW, HISTORY, AND CONTEXT

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

This report serves as a summary for community engagement efforts, which were directed by the Leon County Board of County Commissioners in summer and fall of 2025. The community engagement efforts summarized in this report were conducted in late September and early October 2025. The efforts consisted of meeting with neighborhoods and community groups, and open house community meetings.

On August 18, 2025, Planning staff attended a community meeting hosted by the Mayor's office held in response to concerns raised by the community to the proposed Urban and Sub-Urban Future Land Use Categories (FLUCs). This meeting was attended by nearly 30 individuals representing the following City neighborhoods: the Alliance of Tallahassee Neighborhoods, Woodland Drives, Greater Bond, Griffin Heights, Frenchtown, Wellswood-Suburban Hills, Jake Gaither, Oak Ridge Place, Richview Park, Ox Bottom Crest, Oak Grove Plantation Rd, Old Town, Southwood, Copper Creek, Summerbrooke, Breakwood Drive, Ventanas, Hillcrest Village, Grey's Run, Lafayette Park, Betton Hills, Myers Park, and Sherwood Park. After the Mayor presented the proposal to keep the existing Residential Preservation Future Land Use Category, with discussed revisions, the neighborhood representatives voiced strong support for this action and indicated they would come in support for the Land Use and Mobility Update.

OVERVIEW, HISTORY, AND CONTEXT

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

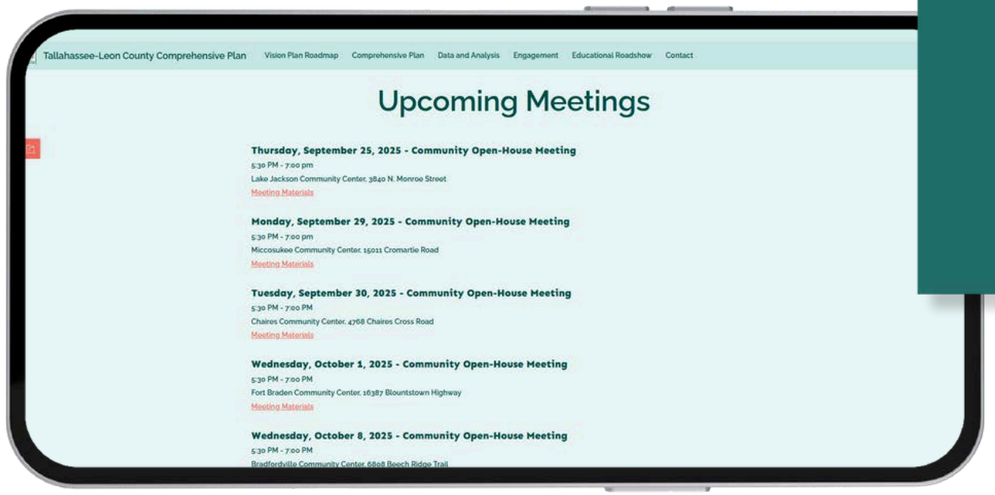
TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

At the August 20, 2025 City Commission Meeting, the City voted to direct staff to hold a Transmittal Hearing on September 17, 2025 with the Urban and Sub-Urban Residential Preservation FLUCs replaced with the existing Residential Preservation FLUC, with language addressing non-conforming uses. At the September 17, 2025 City Commission Meeting, the City Commission voted to transmit the Land Use and Mobility Element of the Comprehensive Plan to State reviewing agencies. This change to keep the existing Residential Preservation FLUC was incorporated into the materials presented at the Board-directed community engagement.

The emphasis of these community meetings was to inform and educate on the ongoing efforts and provide details about the proposed plan amendments. A secondary emphasis was to engage with neighborhood residents about the Comprehensive Plan update specifically, answering any questions and collecting feedback on the draft Plan as it moves towards adoption.

MEETING OUTREACH

COMMUNITY ENGAGEMENT SUMMARY REPORT



Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

For these five meetings conducted at the direction of the Board of County Commissioners, the targeted population was the unincorporated areas of the County. Planning Department staff coordinated with the Leon County Community and Media Relations Office (CMR) to share information on their social media accounts, put up fliers, and undertake other promotional efforts to inform the community of these meetings in the weeks leading up to them.

Planning staff also visited the five locations where the meetings were scheduled to occur to let citizens know about the upcoming meetings at each of the community centers. Local activity groups regularly meet at the Community Centers for monthly luncheons. These events were a great opportunity to let people know about the upcoming meetings.

Local news also covered the engagement efforts with articles and reporting in print, online, and on television broadcasts. Please see examples on the following pages of media coverage leading up to and during the engagement efforts.

ABOUT THE MEETINGS

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

Five meetings were scheduled from September 25th to October 8th where Planning Department staff conducted open house style community meetings. The meetings were conducted at the following dates, times, and locations. All meetings were open to the public from 5:30 PM to 7:00 PM.

Lake Jackson Community Center
- 3840 N Monroe Street
- Thursday, September 25th

Miccosukee Community Center
- 15011 Cromartie Road
- Monday, September 29th

Chaires Community Center
- 4768 Chaires Cross Road
- Tuesday, September 30th

Fort Braden Community Center
- 16387 Blountstown Highway
- Wednesday, October 1st

Bradfordville Community Center
- 6808 Beech Ridge Trail
- Wednesday, October 8th

ABOUT THE MEETINGS

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

The community engagement events on the Comprehensive Plan included an introduction station which allowed participants to sign-in. Posters displayed proposed Goals, Objectives, and Policies along with a series of related maps. A rolling visual presentation (PowerPoint) also provided a summarized version of the material. Staff were available to assist with explaining the planning process, what a comprehensive plan is, substantive changes being proposed in the updated Plan, and how it may impact conservation and development in the County over the next 25 years.

The informational boards and maps were clustered into stations relating to each of the six Goals of the Plan:

1. ***A Healthy Environment***
2. ***Distinct Urban and Rural Areas***
3. ***Healthy Neighborhoods and Vibrant Places***
4. ***Greater Housing Diversity***
5. ***A Robust Economy***
6. ***A Balanced Transportation Network***

Citizens were encouraged to sign-in, view the boards and maps, ask questions of staff, view the rolling visual presentation, leave written feedback on comment cards, and complete an exit questionnaire. Planning staff members were present to explain the material, answer questions, and receive feedback. This feedback has been collected for analysis and follow-up with citizens. After the meeting, staff followed up with attendees who requested additional information or explanations based on the material at the meetings.

ABOUT THE MEETINGS - MATERIALS

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

The primary materials for the meetings consisted of 15 poster boards and maps that displayed the Goals, Objectives, and Policies of the Comprehensive Plan update as well as corresponding maps.

The following 15 pages consist of the boards and maps displayed at the community meetings.

BOARD 1

GOAL 1 - A HEALTHY ENVIRONMENT

1

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

OBJECTIVE 1.1

Identification of Natural Resources and Historic Features:
Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

POLICY 1.1.1
Geographic Data:

Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network
- Primary Springs Protection Zone
- Perpetual conservation easements

POLICY 1.1.2
Designated Canopy Roads:

Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

POLICY 1.1.3
Historic District Boundaries and Historically Significant Properties:

Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

POLICY 1.1.4
Soils and Water Features:

Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

OBJECTIVE 1.2

Preservation of Natural Areas:
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use,transportation, and infrastructure location and expansion.

POLICY 1.2.1
Acquisition of Conservation and Preservation Lands:

The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

POLICY 1.2.2
Environmental Analysis:

Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

POLICY 1.2.3
Transportation Impact Mitigation:

The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

POLICY 1.2.4
Transportation Corridor Environmental Features:

The City and the County shall consider context-based beautification, landscaping, and stormwater facility and land development regulations that provide environmental protection measures for transportation corridors, where feasible by: Increasing the amount of site and adjacent green spaces/open spaces; Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff; Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built; Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan; Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

POLICY 1.2.5
Connected Open Space:

Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected green spaces.

POLICY 1.2.6
Conservation Element:

Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

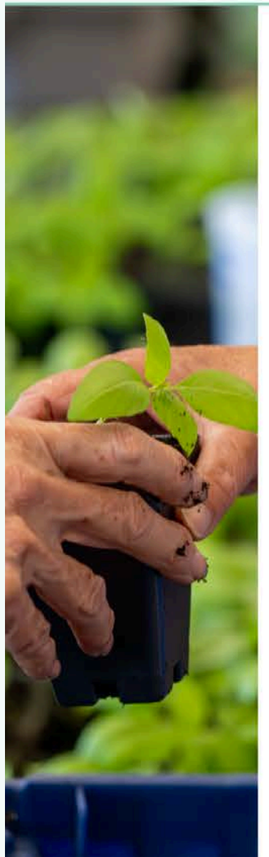
OBJECTIVE 1.3

Access to Parks and Recreation:
Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

POLICY 1.3.1
Greenways and Trails Master Plan:

The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

POLICY 1.3.2
Urban Recreation Spaces:



Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

POLICY 1.3.3
Bicycle Parking at Parks and Civic Spaces:

All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

POLICY 1.3.4
Multimodal Access to Parks and Recreation:

All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

OBJECTIVE 1.4

Urban Forests:
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

POLICY 1.4.1
Priority Planting Sites:

The City and County shall identify priority planting sites to guide the planting of trees to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

POLICY 1.4.2
Species Suitability:

The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

POLICY 1.4.3
Public Tree Inventory:

The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

POLICY 1.4.4
Public Development Tree Prioritization:

Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

POLICY 1.4.5
Private Development Tree Standards:

Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees.

OBJECTIVE 1.5

Green infrastructure:
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

POLICY 1.5.1
Community Wide Green Infrastructure:

The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that: Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide a feasible opportunity for street-level stormwater management; Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking; Ensure a robust urban tree canopy through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors; Support off-site regional stormwater solutions for new or infill walkable development; Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC); Supporting transit and alternative transportation modes.

POLICY 1.5.2
Site Specific Green Infrastructure:

Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

POLICY 1.5.3
Design Guidelines for Green Infrastructure:

Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

OBJECTIVE 1.6

Community Resilience:
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

POLICY 1.6.1
Energy Efficiency:

The City and County shall develop regulations and design standards for compact development and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

POLICY 1.6.2
Multimodal Connectivity:

Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

POLICY 1.6.3
Smart Growth Strategies for Community Resilience:

The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

POLICY 1.6.4
Urban Heat Islands:

The local governments shall develop strategies that minimize effects of heat islands with strategies that may include tree and vegetation cover, green roofs and rooftop gardens, roof coatings or materials with high albedo that significantly reflect heat away from a building, and/or alternative pavements that mitigate heat island effects.

POLICY 1.6.5
Resiliency of Transportation Facilities:

Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

POLICY 1.6.6
Urban Forests and Climate Resilience:

Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

OBJECTIVE 1.7

Intergovernmental Coordination:
Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

POLICY 1.7.1
Key Regional Partners:

Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

POLICY 1.7.2
Colleges and Universities:

Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

BOARD 4

GOAL 2 – DISTINCT URBAN AND RURAL AREAS

2

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide a variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

OBJECTIVE 2.1

Growth and Population Accommodation: Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

POLICY 2.1.1
Comprehensive Planning Periods:

The comprehensive plan shall have two planning periods.The short-term planning period shall be for a 10-year horizon from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

POLICY 2.1.2
Population Projections:

Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

OBJECTIVE 2.2

Efficient Growth: To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

POLICY 2.2.1
Urban Services Area (USA):

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

POLICY 2.2.2
Improvement of Capital Infrastructure:

Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

POLICY 2.2.3
Planning for Urban Services:

Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

POLICY 2.2.4
Urban Services Outside of the Urban Services Area:

Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process. Emergency repairs and improvements necessary to maintain the public health, safety, and well- being shall be allowed without inclusion in the capital improvement planning process.

POLICY 2.2.5
Densities and Intensities:

Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

POLICY 2.2.6
Exceptions to the Urban Services Area:

Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and Rural Community in Woodville or west of the Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

POLICY 2.2.7
Roadway Improvements:

The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

POLICY 2.2.8
Adaptive Reuse, Infill Development, and Redevelopment:

The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

POLICY 2.2.9
Greyfields & Brownfields:

The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses, waiver of development fees or some combination of the two.

Policy 2.2.10
Transportation Corridors:

Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1, Section 337.273, and Section 334.03(29)—and protect it from development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below. The Corridor Preservation map, table, and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected.

Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Actual road location and design will be determined by specific corridor alignment studies, engineering studies, or other design studies.

Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

In addition to the number of travel lanes, the following are important considerations in the determination of right-of-way needs for future corridors: Space for sidewalks to provide safe and convenient movement of pedestrians; The provision of bike lanes or separate bike paths; Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged; Accommodation of stormwater at the surface or in storm drains; Accommodation of auxiliary lanes at intersections; Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter; Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

OBJECTIVE 2.3

Public Infrastructure: Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

POLICY 2.3.1
Public Facilities Siting:

Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state, and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

POLICY 2.3.2
Public Infrastructure Resilience:

To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

POLICY 2.3.3
School Siting Review & Criteria:

All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

OBJECTIVE 2.4

Preservation of Rural Areas: Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

POLICY 2.4.1
Transfer of Development Rights:

A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

POLICY 2.4.2
Criteria for Urban Service Area Expansion:

To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

OBJECTIVE 2.5

Reconnecting Urban Sprawl: Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

POLICY 2.5.1
Suburban retrofit:

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to: Adaptively reuse vacant and underutilized buildings for new uses; Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features; Build compact, walkable, mixed-use developments using Complete Streets design principles; Reduce block sizes to improve walkability; Establish more continuous streetscapes with liner buildings close to the street; Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way; Interconnect street networks; Include more diversity in residential building types; Provide transit amenities.

OBJECTIVE 2.6

Recognizable Places: Foster and protect distinctive, attractive places that are recognizable and important to the community.

POLICY 2.6.1
Beautifying Public Spaces:

The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

POLICY 2.6.2
Gateway Corridors:

Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

POLICY 2.6.3
North Monroe Corridor:

In addition to the Gateway Corridor components identified in Policy 2.6.2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

POLICY 2.6.4
Woodville Sense of Place:

Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

POLICY 2.6.5
Future Downtown Development:

The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

POLICY 2.6.6
Bradfordville Study Area:

The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

OBJECTIVE 2.7

Multimodal Transportation District (MMTD): Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

POLICY 2.7.1
MMTD Implementation:

The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

POLICY 2.7.2
Land Use Within the MMTD:

The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets: Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities; Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

POLICY 2.7.3
Land Development Regulations in the MMTD:

Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall address building placement, block size standards to encourage small blocks and an interconnected street network, sidewalks with widths based on context, facade transparency, and parking location.

POLICY 2.7.4
Minimum Parking Requirements:

Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

POLICY 2.7.5
Transit in the MMTD:

The MMTD shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

POLICY 2.7.6
Transportation Mitigation:

Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

POLICY 2.7.7
MMTD Evaluation:

The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.

MATERIALS: BOARDS AND MAPS

BOARD 6

GOAL 2 – DISTINCT URBAN AND RURAL AREAS

2

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide a variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

OBJECTIVE 2.8

Community Context:
Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.

POLICY 2.8.1
Tallahassee-Leon County Future Land Use Map:

Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.

POLICY 2.8.2
Context Area Densities, Intensities and Mix of Uses:

The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Natural Areas

State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.

Rural

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of 1 unit per 10 acres. Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways.

Rural Residential

The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to 1 unit per 3 acres, except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

Community facilities, minor commercial activities, and minor offices are permitted. The maximum allowable gross square footage in Rural Residential may not exceed 20,000 square feet per acre for minor commercial and 100,000 square feet per acre for neighborhood commercial.

Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

Rural Community

The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of 4 units per acre. Where central sewer is available, the maximum density allowed is 8 units per acre.

Community facilities, minor offices, and commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage clustering of businesses to discourage strip development, provide for utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

Lake Protection

The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary.

The Lake Protection category shall allow for residential uses at a density of 1 unit per 2 acres. To encourage compact and efficient development, three density bonus options are available for properties within the category. A residential density of up to 4 units per acre may be permitted within developments designed as a Conservation Subdivision. A residential density of up to 8 units per acre may be permitted within the Lake Protection Corridor (LPC), where served by central water and sewer systems. A residential density of up to 20 units per acre may be permitted within the Lake Protection Node (LPN), where served by central water and sewer systems and where design standards established in the land development code are met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted in areas designated LPC or LPN, with commercial intensities of 10,000 square feet per acre in LPC and 20,000 square feet per acre in LPN. Mixed-use commercial intensity bonuses may apply.

Residential Preservation

The intent of the Residential Preservation category is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development will primarily consist of infill housing due to the built-out nature of the areas.

Commercial use, including office as well as any industrial land uses, are prohibited. Future arterials roadways and expressways should be planned to minimize impacts within this category. Single family, townhouse, and cluster housing may be permitted within a range of up to 6 units per acre.

Existing legally established residential uses exceeding 6 units per acre shall be deemed conforming; however, expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Non-residential uses, other than community facilities and recreational facilities, are not permitted.

Sub-Urban Neighborhood

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 units per acre. Allowed residential building types are single-family detached, single-family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

Sub-Urban Mixed-Use Commercial

The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities.

Residential land uses at a maximum density of up to 45 units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential uses. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated. Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre. Established by the special conditions of this policy, additional commercial intensity may be allowed.

Urban Neighborhood

The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum density of 26 units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active. A maximum commercial intensity of 30,000 square feet per acre is allowed.

Urban General

The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities. This category includes a variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of a high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities. A maximum residential density of 50 units per acre is allowed, and a maximum commercial intensity of 60,000 square feet per acre is allowed.

Urban Center

The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to pedestrian, bike, and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities. A maximum residential density of 150 units per acre is allowed. Commercial development intensity in Urban Center is allowed with up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use. Intensity for non-residential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

Parks and Civic Spaces

The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces. Additional special conditions may apply to parks and recreational lands established through the Planned Unit Development process.

Institutional

The purpose of the Institutional Special District is to provide lands for heavy infrastructure community facilities that must obtain federal and/or state approvals to be located, modified and/or expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90% of the entire site when located within the Urban Service Boundary or 75% of the entire site when located outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

Given that Institutional land uses have the potential to create offsite impacts, performance and locational criteria shall be established in the land development code. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Manufacturing and Mining

Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services Area.

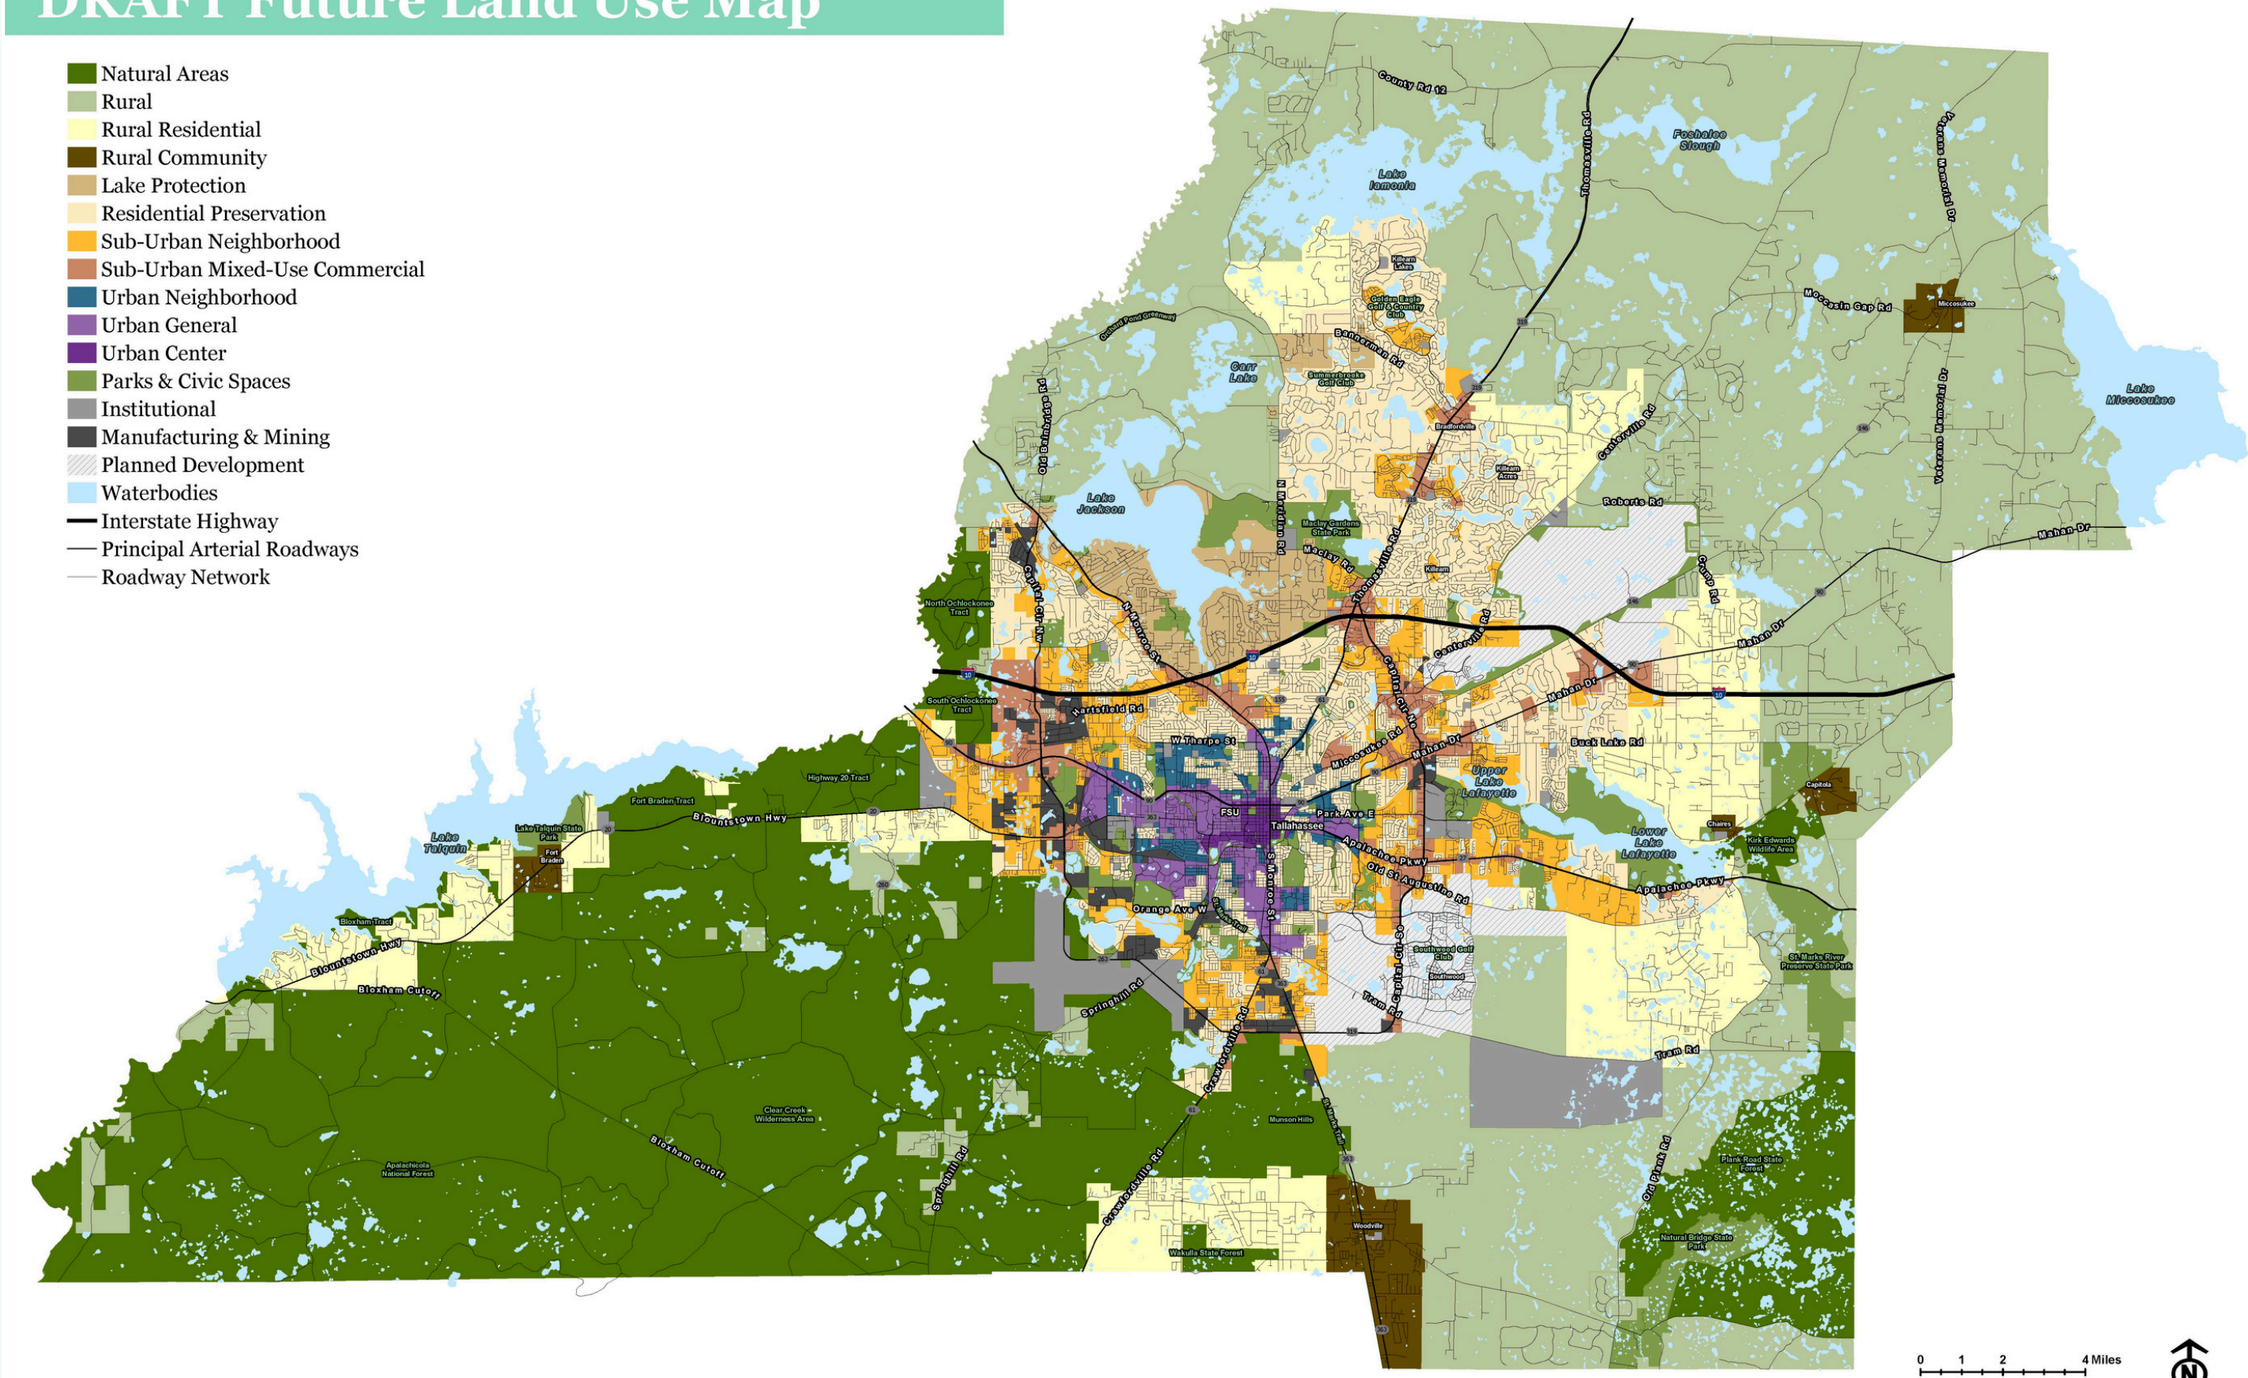
Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the land development codes. The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

Planned Development

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned Development Special District is located.

Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. Master plans shall include at least 4 different land uses.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.



TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

MATERIALS: BOARDS AND MAPS

BOARD 9

GOAL 3 – HEALTHY NEIGHBORHOODS AND VIBRANT PLACES:

3

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community facilities, including schools, community centers, and libraries.

OBJECTIVE 3.1

Residential Character: Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.

POLICY 3.1.1
Residential Character Criteria:

Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

POLICY 3.1.2
Housing Diversity:

Maintain a viable mix of available residential densities to accommodate a variety of housing types.

POLICY 3.1.3
Healthy Food Options:

The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

OBJECTIVE 3.2

Southside Action Plan: Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

POLICY 3.2.1
Southside Action Plan Area:

The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

POLICY 3.2.2
Beautification:

Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

POLICY 3.2.3
Investment:

Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city, and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

POLICY 3.2.4
Active and Engaged Citizens:

Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

POLICY 3.2.5
Southside Action Plan Evaluation and Update:

The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

OBJECTIVE 3.3

Connectivity Access Management: Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

POLICY 3.3.1
Access Management Design:

The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation, and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

POLICY 3.3.2
Intersection and Interchange Restrictions:

Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

POLICY 3.3.3
Unified Access and Circulation Plans:

Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

POLICY 3.3.4
Access Management Improvements:

Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that address the transition of vehicles from arterial roadways to internal circulation systems, prioritize the redesign of median openings that are inadequately designed, and require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

POLICY 3.3.5
State Road Access Management:

The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

POLICY 3.3.6
Neighborhood Through-Traffic:

Utilize context-sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets policies.

POLICY 3.3.7
Consolidated Properties:

Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

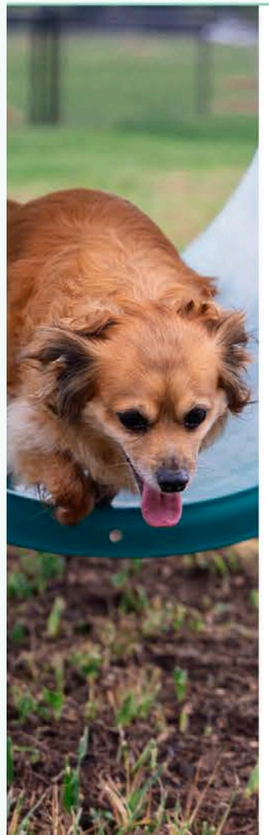
POLICY 3.3.8
Development Near Interchanges:

Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

POLICY 3.3.9
Access Management Deviations:

Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

OBJECTIVE 3.4



Equitable Distribution of Land Uses: Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

POLICY 3.4.1
Distribution of Land Uses:

The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

POLICY 3.4.2
Public Investments:

The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

OBJECTIVE 3.5

Safety: Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

POLICY 3.5.1
Public Infrastructure Design:

Public infrastructure, relevant to transportation, shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization, pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures.

OBJECTIVE 3.6

Land Development Regulations: Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

POLICY 3.6.1
Criteria for Amendments to Land Development Regulations:

Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

POLICY 3.6.2
Implementing Zoning Districts:

Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

POLICY 3.6.3
Site Requirements:

Land development regulations shall include requirements for context-based stormwater management, open space, setbacks, buffers, screening, on-site traffic circulation, roadway access, context-based transit amenities, land uses, subdivision of land, signage, standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations, areas known to be vulnerable to natural or human-caused hazards, lighting, and noise mitigation.

POLICY 3.6.4
Density and Intensity Incentives:

Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural environment or community character. These incentives shall allow densities or intensities that exceed un incentivized limits set out in the Future Land Use Category by up to 20%. Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

POLICY 3.6.5
Planned Unit Developments:

The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

POLICY 3.6.6
Non-Conforming Uses:

The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on the impact of the non-conformity to conforming land uses adjacent to the nonconformity, a determination that the non-conformity is not detrimental to public health, safety, and welfare, and the ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between non-conforming uses which are to be terminated or amortized, and legally established non-conforming uses in nonresidential designations which may continue but not be expanded.

POLICY 3.6.7
Previously Vested Development:

Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

POLICY 3.6.8
Landfill Redevelopment:

Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

OBJECTIVE 3.7

Urban Design: Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging, accessible, and safe public spaces.

POLICY 3.7.1
Design Principles and Priorities:

General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

POLICY 3.7.2
Crime Prevention through Environmental Design:

Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to achieve the following: Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private; Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces; Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users; Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability; CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

POLICY 3.7.3
Design Criteria for Mobility Hubs:

New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility, and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

BOARD 11

GOAL 4 – GREATER HOUSING DIVERSITY

4

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
- Neighborhoods that are diverse in use and population.
- Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
- Places that offer inclusive access to public spaces and community institutions.

OBJECTIVE 4.1

Missing Middle Housing: Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

POLICY 4.1.1
Accessory Dwelling Units (ADUs):

Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

POLICY 4.1.2
Missing Middle Housing as Conforming Uses:

Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

POLICY 4.1.3
Community Character Analysis:

In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

POLICY 4.1.4
Pattern Books:

Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

OBJECTIVE 4.2

Mobility-Based Housing Incentives: Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

POLICY 4.2.1
Coordinate Transit with Land Use:

As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

POLICY 4.2.2
Transit-Oriented Development (TOD) Design Standards:

Land development regulations shall include design standards to encourage the following principles around transit centers: Site centers in locations with highest ridership potential and development opportunities; Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development; Create a range of densities with highest at centers, tapering down to existing neighborhoods; Design centers for seamless pedestrian connections to surrounding development; Create public plaza directly fronting one or more sides of the center building where feasible; Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible; Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets; Enhance multi-modal connections, making transfers easy, direct, and comfortable; Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas; Use centers as catalysts for major redevelopment of area and create placemaking around centers.

POLICY 4.2.3
Transit-Oriented Development (TOD) Density Bonus:

Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 0.25 mile of a transit stop. This density bonus shall not apply to the Residential Preservation land use category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4
Coordinate Trails with Land Use:

As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.

POLICY 4.2.5
Trail-Oriented Development (TrOD) Design Standards:

Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

POLICY 4.2.6
Trail-Oriented Development (TrOD) Density Bonus:

Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 0.5 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

OBJECTIVE 4.3

Affordability: Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

POLICY 4.3.1
Inclusionary Housing Policy:

As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

POLICY 4.3.2
Establishing Community Land Trusts:

To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing models that do not include resale restrictions, include resale restrictions that are temporary, forgiven, or set to expire over time, or rely on local government land donations without long-term affordability guarantees.

POLICY 4.3.3
Requirements of Community Land Trusts:

To qualify for local government assistance, Community Land Trusts shall require permanent affordability, require that owners live in the homes as their primary residence, and include resale formulas in land leases.

POLICY 4.3.4
Affordable Housing Design Standards:

Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

POLICY 4.3.5
Affordable Housing Density Bonus:

Land development regulations shall include provisions that allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

OBJECTIVE 4.4

Family Heir Subdivisions: Provide a hardship provision by which owners of property outside of the Urban Boundary who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

POLICY 4.4.1
Family Heir Subdivision Eligibility:

The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990, or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

GOAL 5 – A ROBUST ECONOMY

5

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

OBJECTIVE 5.1

Economic Health: Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

POLICY 5.1.1
Economic Development Strategic Plan:

The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan.

OBJECTIVE 5.2

Airport Access: Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

POLICY 5.2.1
Airport Master Plan:

The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

OBJECTIVE 5.3

Freight and Cargo: Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

POLICY 5.3.1
Intermodal Centers:

The City of Tallahassee and Leon County shall maintain an inventory of intermodal centers, including the locations, types of facilities, and activities of the centers.

POLICY 5.3.2
Tallahassee International Airport:

Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

POLICY 5.3.3
Transportation Access:

Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal stations, orother freight transfer locations.

OBJECTIVE 5.4

Resilience Planning: Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

POLICY 5.4.1
Post Disaster Redevelopment Plan:

The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

POLICY 5.4.2
Local Mitigation Strategy:

The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

OBJECTIVE 5.5

Intergovernmental Coordination: Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

POLICY 5.5.1
Regional Economic Development Coordination:

The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

POLICY 5.5.2
Grant Funding Opportunities:

Local governments shall pursue grant opportunities for projects or programs of regional significance.

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

MATERIALS: BOARDS AND MAPS

BOARD 12

GOAL 6 – A BALANCED TRANSPORTATION NETWORK

6

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

OBJECTIVE 6.1

Land Use and Transportation Coordination for Livability: Coordinate land use and transportation systems that foster vibrant communities with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

POLICY 6.1.1
Mitigate Sprawl:

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

POLICY 6.1.2
Context-Based On-Site Facilities:

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts on the multi-modal transportation network.

POLICY 6.1.3
Tallahassee-Leon County Transportation Corridors:

Transportation corridor maps showing the future land uses shall be developed and maintained to reflect the enhanced coordination between land use and transportation including new construction and improvements, reflecting the intended context classification.

POLICY 6.1.4
Retrofit for Livability:

Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

OBJECTIVE 6.2

Network Connectivity Improvement: Improve the balance of transportation options, connectivity, and capacity of the multimodal transportation network.

POLICY 6.2.1
Enhance Connectivity:

Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

POLICY 6.2.2
Future Right-of-Way Needs:

Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through the development review process, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

POLICY 6.2.3
Build and Enhance the Network:

Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects.

All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

POLICY 6.2.4
Corridor Management and Preservation:

Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

POLICY 6.2.5
Interconnectivity for Development:

Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments when such connection has the potential to reduce the vehicular traffic on the external street system.

POLICY 6.2.6
Continuation of Streets:

All development plans shall incorporate and continue all collectors and local streets stubbed to the boundary of the development plan by previously approved development plans or existing development, unless deemed infeasible by the respective local government.

POLICY 6.2.7
Interconnectivity to Adjacent Uses:

Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

OBJECTIVE 6.3

Context Based Mobility: Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

POLICY 6.3.1
Context Classification and Safe Systems:

A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use and zoning and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

POLICY 6.3.2
Context Classification Application:

The context classification system shall be applied to City and County roadway resurfacing and enhancement projects in a manner that reflects the future vision and context of the area and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

POLICY 6.3.3
Context Classification Map :

By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification Map and the Future Land Use Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

POLICY 6.3.4
Downtown Traffic:

By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

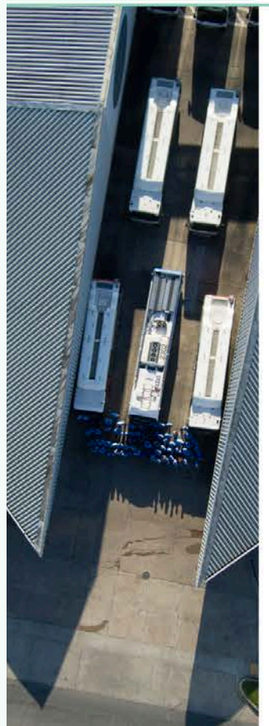
POLICY 6.3.5
Lane Repurposing:

Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

POLICY 6.3.6
One-Way Pair Studies:

Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements.The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

POLICY 6.3.7
Speed Management:



By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

POLICY 6.3.8
Level of Service (LOS):

Peak Hour Roadway Level of Service shall be established and shall be assessed during the Evaluation and Appraisal Report every 7 years. For Minor Arterials, and for Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

POLICY 6.3.9
Multimodal Transportation District Area Wide Level of Service (LOS):

In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the performance standards targeted for the Multimodal Transportation District shall be LOS C for Pedestrian, LOS C for Transit, LOS D for Bicycle, and LOS E+50% for Automobile. By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

OBJECTIVE 6.4

Complete Streets: Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

POLICY 6.4.1
Project Evaluation:

Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

POLICY 6.4.2
Share Transportation Information:

The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

POLICY 6.4.3
Bicycle and Pedestrian Network:

The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

POLICY 6.4.4
Bicycle and Pedestrian Master Plan:

In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

POLICY 6.4.5
Safe Routes to Schools:

Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

POLICY 6.4.6
Community Gateways:

Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

POLICY 6.4.7
Scenic Roadway Assessments:

In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

POLICY 6.4.8
Maintenance of Traffic:

When construction or repair work infringes on regular corridor operation, a project specific Maintenance of the Traffic Plan shall be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

POLICY 6.4.9
Multi-Modal Safety and Access:

Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions: For emergency repair and routine maintenance; In locations where specific users are prohibited, such as interstate freeways or pedestrian malls (In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction); A documented absence of current or future need. Procedures and criteria for approving exceptions will be identified in the Land Development Code.

New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and shall use innovative or non-traditional design options where a comparable level of safety for users is present.

POLICY 6.4.10
Applicability:

All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present.

POLICY 6.4.11
Equity:

The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

POLICY 6.4.12
Design Standards:

Land Development Codes that apply to all development policies and programs shall be revised by 2030 to use the latest professionally accepted design guidance, standards, and recommendations for Complete Streets in coordination with the designated context classification. Guidance resources shall include, but need not be limited to: Federal Highway Administration's Manual on Uniform Traffic Control Devices, Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook), National Association of City Transportation (NACTO) published guidelines, American Association of State Highway and Transportation Official (AASHTO) published guidelines, and U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach.

POLICY 6.4.13
Pavement Markings and Signage:

All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

POLICY 6.4.14
Two-Way Left Turn Lane Replacement:

Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

POLICY 6.4.15
Measuring Progress:

The success of this Complete Streets Objective shall be measured by the Planning Department with assistance by the City and County during the Evaluation and Appraisal Review process using, but not limited to, the following performance measures: Total miles of new designated bike lanes; Total miles of new shared-use paths (paved and natural surface); Total miles of neighborhood bikeways signed, marked, or constructed; Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.); Number and type of crosswalk and intersection improvements and new installations; Number of revenue service miles traveled by transit vehicles; Rates of crashes, injuries, and fatalities by mode, as available; Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices; Number of exceptions to this policy granted. The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

POLICY 6.4.16
Coordination with Placemaking Plans:

Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

OBJECTIVE 6.5

Bicycle Facilities: Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

POLICY 6.5.1
Build Bike Facilities Concurrent with Maintenance:

All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

POLICY 6.5.2
Bicycle Facilities in New Development:

New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at all non-residential uses, multi-family uses and other key destinations. Bicycle and trail connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

MATERIALS: BOARDS AND MAPS

BOARD 13

WHAT ARE COMPLETE STREETS?

PLANNING DEPARTMENT

SPACE FOR PEOPLE

A well-connected network of sidewalks, curb ramps, crosswalks, and curb extensions promote safety and comfort for pedestrians

SPACE FOR BIKES

Shared-use paths and bike lanes support alternative transportation options and encourage active lifestyles that benefit community health

SPACE FOR CARS

Roadway safety measures and complete street design principles aim for zero traffic casualties and serious injuries for all users

SPACE FOR TRANSIT

The availability, speed, frequency, duration, and reliability of public transit provides access to employment and activity centers

SPACE FOR MICROMOBILITY

Drop-off, pick-up, and dedicated parking zones for ride sharing, e-bikes, and scooters facilitate additional micromobility options

SPACE FOR INTERACTION

Context-based roadway systems ensure that street design, streetscaping, and land uses work together to create vibrant public spaces

BOARD 15

GOAL 6 – A BALANCED TRANSPORTATION NETWORK

6

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

OBJECTIVE 6.6

Pedestrian Facilities:
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

POLICY 6.6.1
Pedestrian Level of Comfort:

As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

POLICY 6.6.2
Crosswalks:

Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Context Classification.

POLICY 6.6.3
Pedestrian Infrastructure for New Development:

New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

OBJECTIVE 6.7

Mobility Hubs:
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

POLICY 6.7.1
Implementation of Mobility Hubs:

Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

POLICY 6.7.2
Mobility Hubs Location Coordination:

The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

POLICY 6.7.3
Mobility Hubs Design Guidelines Requirements:

Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

OBJECTIVE 6.8

Transportation Demand Management:
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

POLICY 6.8.1
Encourage Alternate Transportation Modes:

Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car- share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

POLICY 6.8.2
Enhance Bicycle and Pedestrian Infrastructure:

City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

POLICY 6.8.3
Land Development Patterns:

The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

POLICY 6.8.4
Shared Parking Criteria:

Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

POLICY 6.8.5
Parking Reduction for Certain Development Types:

City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

POLICY 6.8.6
Private Parking Lots:

City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

POLICY 6.8.7
Drop-Off & Pick-Up Zones:

The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

POLICY 6.8.8
Intelligent Transportation Systems (ITS):

City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

POLICY 6.8.9
Traffic Operations Management:

The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

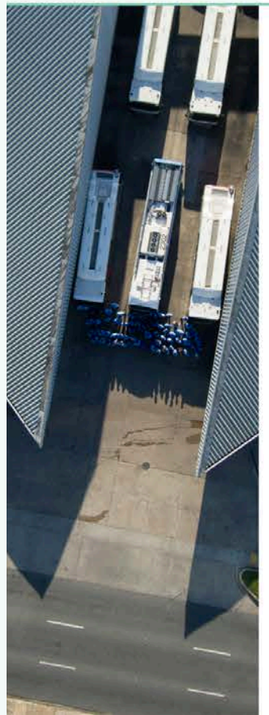
OBJECTIVE 6.9

Transportation for the Disadvantaged:
Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk.

POLICY 6.9.1
Human Services Transportation:

Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

POLICY 6.9.2
Transport to Destinations:



Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

POLICY 6.9.3
Affordable and Cost-Effective Service:

Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on- demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

POLICY 6.9.4
Transportation Disadvantaged Needs Assessment:

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

OBJECTIVE 6.10

Transit:
Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

POLICY 6.10.1
Transit Development Plan:

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

POLICY 6.10.2
Pedestrian Infrastructure Connectivity:

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

POLICY 6.10.3
Southside Transit:

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

POLICY 6.10.4
Employment and Activity Center Service:

Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

POLICY 6.10.5
Transit Corridors:

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

OBJECTIVE 6.11

Aviation:
Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

POLICY 6.11.1
Adjacent Land Use Compatibility:

Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

POLICY 6.11.2
Airport Master Plan:

The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

POLICY 6.11.3
Compatibility of Land Use:

Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

POLICY 6.11.4
Compatibility for Noise and Safety:

Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

POLICY 6.11.5
Advanced Air Mobility:

Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

OBJECTIVE 6.12

Rail:
Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

POLICY 6.12.1
Railroad Crossings:

Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

OBJECTIVE 6.13

Intergovernmental Coordination:
Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan and manage transportation systems that extend beyond jurisdictional boundaries.

POLICY 6.13.1
Consistency with State Transportation Plans:

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

POLICY 6.13.2
Consistency with Regional Transportation Plans:

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

POLICY 6.13.3
Consistency with Local Transportation Plans:

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

POLICY 6.13.4
Signal Coordination Plans:

Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

POLICY 6.13.5
Project Planning Partnerships:

Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

POLICY 6.13.6
Evacuation Routes:

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.

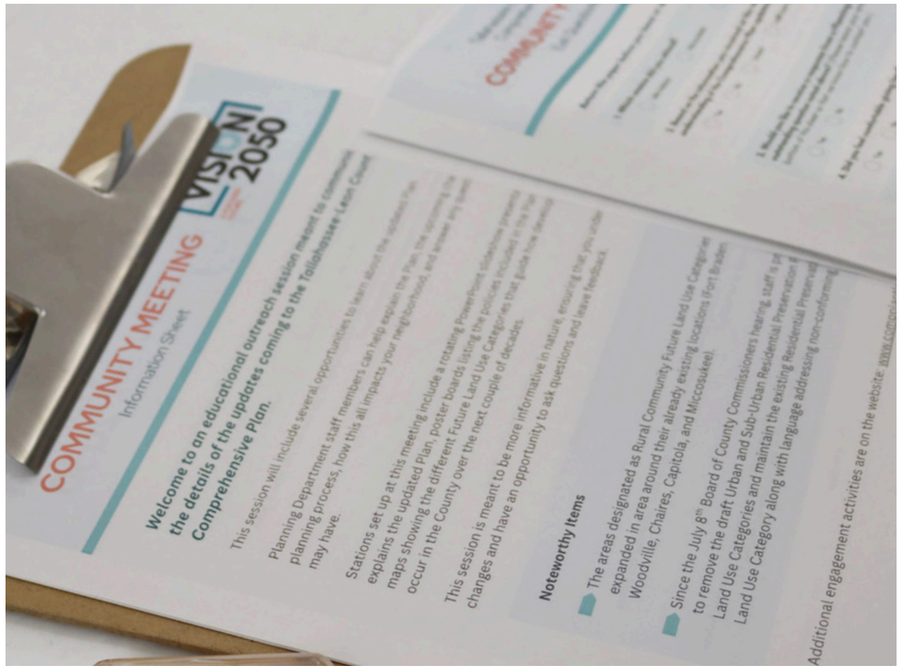
POLICY 6.13.7
Emerging Technology:

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

ABOUT THE MEETINGS - MATERIALS

COMMUNITY ENGAGEMENT SUMMARY REPORT



Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

PowerPoint Presentation

This presentation showed the highlights of the six goals of the Land Use and Mobility Element comprehensive plan update and maps illustrating the areas most directly impacted by the goals. It also provided a brief description of the planning process and anticipated next steps. Information about where to find more details on the Plan and plan update were provided as well. The plan website, **www.compplantlc.com**, was highlighted in the PowerPoint presentation, and promoted in discussions by staff, to give citizens a way to find out more details about the Plan.

Opportunities for Comment and Feedback

Opportunities to provide feedback consisted of an exit questionnaire distributed at the sign-in table. The exit questionnaires consisted of 7 questions primarily focused on assessing the community meetings. These questionnaires were collected as attendees exited the meeting. Additionally, comment cards were available around the room and at tables with chairs to allow citizens to leave written feedback or comments if desired.

Tallahassee-Leon County Comprehensive Plan
COMMUNITY MEETING
Information Sheet

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

Welcome to an educational outreach session meant to communicate the details of the updates coming to the Tallahassee-Leon County Comprehensive Plan.

This session will include several opportunities to learn about the updated Plan.

Planning Department staff members can help explain the Plan, the upcoming changes, the planning process, how this all impacts your neighborhood, and answer any questions you may have.

Stations set up at this meeting include a rotating PowerPoint slideshow presentation that explains the updated Plan, poster boards listing the policies included in the Plan, and maps showing the different Future Land Use Categories that guide how development will occur in the County over the next couple of decades.

This session is meant to be more informative in nature, ensuring that you understand the changes and have an opportunity to ask questions and leave feedback.

Noteworthy Items

- The areas designated as Rural Community Future Land Use Categories have expanded in area around their already existing locations (Fort Braden, Woodville, Chaires, Capitola, and Miccosukee).
- Since the July 8th Board of County Commissioners hearing, staff is proposing to remove the draft Urban and Sub-Urban Residential Preservation Future Land Use Categories and maintain the existing Residential Preservation Future Land Use Category along with language addressing non-conforming uses.

Additional engagement activities are on the website: www.compplantlc.com.

Tallahassee-Leon County Comprehensive Plan
COMMUNITY MEETING
Exit Questionnaire

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

Return this paper before you leave or send your responses to Planning@Talgov.com.

1. Which session did you attend?
◯ Lake Jackson ◯ Miccosukee ◯ Chaires ◯ Bradfordville ◯ Fort Braden

2. Based on the information you received at the meeting today, do you feel like you have a good understanding of the Comprehensive Plan updates?
◯ Yes ◯ No ◯ Unsure ◯ I still have a question about: _____

3. Would you like to receive a response from a Planning Department staff member about your outstanding question noted above? (Please leave your email address or phone number at the bottom of this sheet so that we know how to contact you.)
◯ Yes ◯ No

4. Did you feel comfortable giving feedback at the community meeting today?
◯ Yes ◯ No

5. Was there anything about this session that could be improved?
◯ Yes ◯ No ◯ If Yes, please provide more details: _____

6. Are you interested in receiving updates about the Comprehensive Plan, including any future public engagement opportunities?
◯ Yes ◯ No

7. OPTIONAL: If you would like to receive updates, please provide your contact information below.
(Your information will only be used to send updates related to the Comprehensive Plan.)

Name: _____ Phone Number: _____

Email Address: _____

Mailing Address: _____

COMMUNITY FEEDBACK

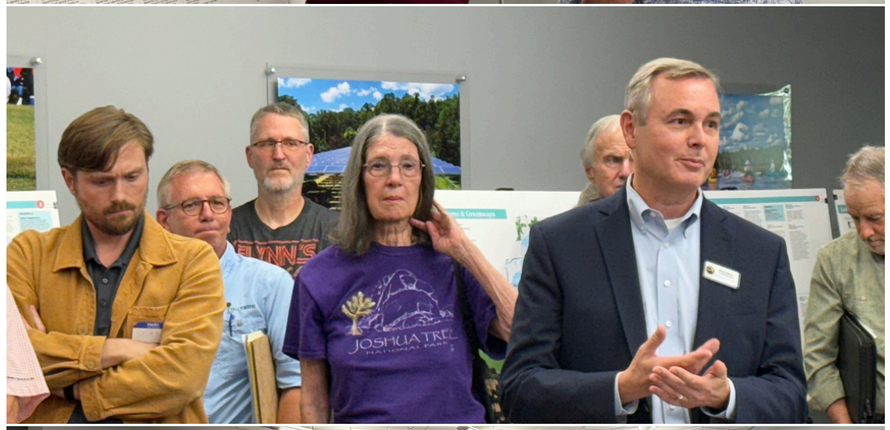
COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

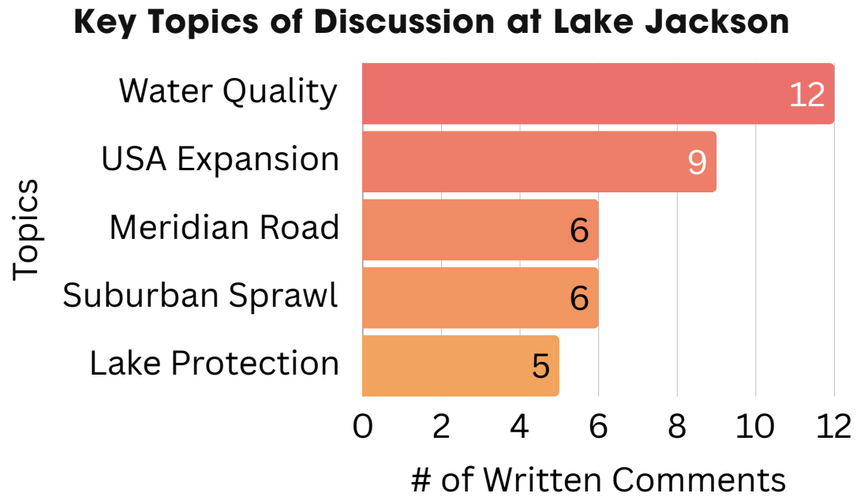
The purpose of this engagement effort was to educate and inform the public on the update to the Land Use and Mobility Elements of the Comprehensive Plan. Much of the interaction at the meetings consisted of citizens reviewing the provided material and Planning staff providing explanations of the ongoing planning process and how the Plan will guide development in the County for the next 25 years.

Feedback was received in the form of comment cards and exit questionnaires. Summaries of each meeting including the primary topics of discussion at each meeting are included later in this report. Additionally, information regarding the broad themes of the cumulative feedback, attendance numbers, and analysis of the exit questionnaires and comment cards are also provided.



COMMUNITY FEEDBACK

LAKE JACKSON COMMUNITY CENTER



Thursday, September 25th

The first meeting, at the Lake Jackson Community Center, had 58 attendees. Community feedback primarily consisted of questions regarding the Lake Protection Future Land Use Category and the proposed boundary of the Urban Services Area (USA) around Lake Jackson, Meridian Road, and Orchard Pond Parkway. Discussion surrounding the USA included the comparison of the environmental impacts of very-low-density development served by septic systems as compared to low- to medium-density development served by centralized sewer and water service. Concerns related to future development along the Meridian Road corridor included the preservation and protection of canopy roads and impacts to traffic volumes created by future development. The US 27 – North Monroe Street corridor was another topic of conversation in relation to commercial redevelopment and the Lake Protection future land use category.

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

COMMUNITY FEEDBACK

MICCOSUKEE COMMUNITY CENTER

Monday, September 29th

The second meeting, at the Miccosukee Community Center, had 4 attendees. Community feedback at this meeting primarily consisted of questions regarding the Rural Community future land use category and policies regarding the subdivision of family heirs' property. Staff explained the expansion of the Rural Community future land use category, that parcels were previously split between two categories, but the updated Future Land Use Map helped to alleviate that complication. No written comments were received.

Key Topics of Discussion at Miccosukee

- Rural Community Expansion
- Urban Services Area Near Lake Jackson
- Family Heir Property Subdivision and Use

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

COMMUNITY FEEDBACK

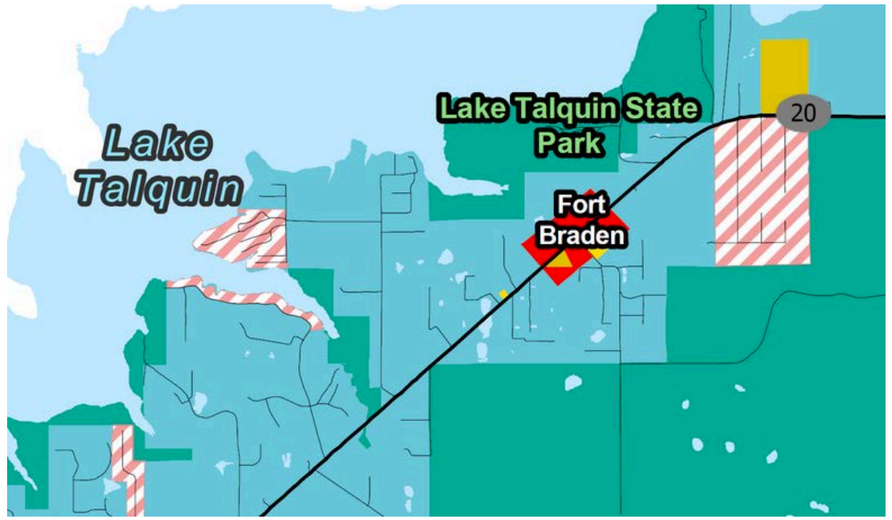
CHAIRES COMMUNITY CENTER

Tuesday, September 30th

The third meeting, at the Chaires Community Center, had 9 attendees. Community feedback primarily consisted of questions regarding the Rural Community future land use category, traffic along Benjamin Chaires Road, and ongoing development in the area (a conservation subdivision on Hidden Pond Road). No written comments were received.

Key Topics of Discussion at Chaires

- Rural Community Future Land Use Category
- Traffic on Benjamin Chaires Road
- Nearby Conservation Subdivision



TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

COMMUNITY FEEDBACK

FORT BRADEN COMMUNITY CENTER

Wednesday, October 1st

*The **Current** Future Land Use Map (above) shows the smaller, existing Rural Community future land use category in red. The **Draft** Future Land Use Map (below) shows the expanded, proposed Rural Community future land use category in brown.*

The fourth meeting, at the Fort Braden Community Center, had 10 attendees. Community feedback primarily consisted of questions regarding the expansion and density of the Rural Community future land use category, the desire to keep the Fort Braden area as a low-density, rural land use pattern, and traffic and potential adjustments along State Road 20 – Blountstown Highway. The need for a small grocery store was also conveyed through comments. The specific request, echoed by multiple residents, is to keep the Rural Community future land use category the same size as it is on the current Future Land Use Map.

Key Topic of Discussion at Fort Braden

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

COMMUNITY FEEDBACK

BRADFORDVILLE COMMUNITY CENTER

Wednesday, October 8th

The fifth and final meeting, at the Bradfordville Community Center, had 34 attendees. Community feedback primarily consisted of questions and concerns regarding the potential expansion of the Urban Services Area (USA) boundary near Lake Jackson, Carr Lake, and the intersection of Meridian Road, Bannerman Road, and Orchard Pond Parkway. Discussion surrounding the USA included the comparison of the environmental impacts of low-density development served by septic systems as compared to higher density development served by centralized sewer and water service. Concerns related to future development along the Meridian Road corridor included the preservation and protection of canopy roads and impacts to traffic volumes created by future development. Concern over continued development in the Bannerman Road corridor was also discussed in relation to environmental and traffic impacts and the Lake Protection future land use category. Environmental concerns over habitat corridor preservation and impaired water quality were also frequent topics of public comment. Attendees noted that one solution for sprawl that should be considered is increasing density and promoting infill in the urban core of Tallahassee.

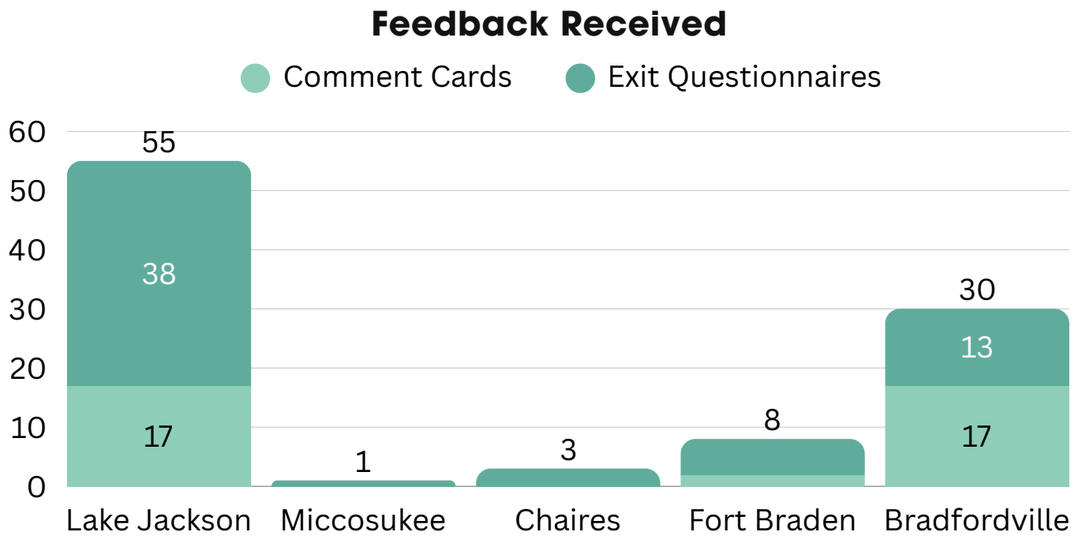
COMMUNITY FEEDBACK

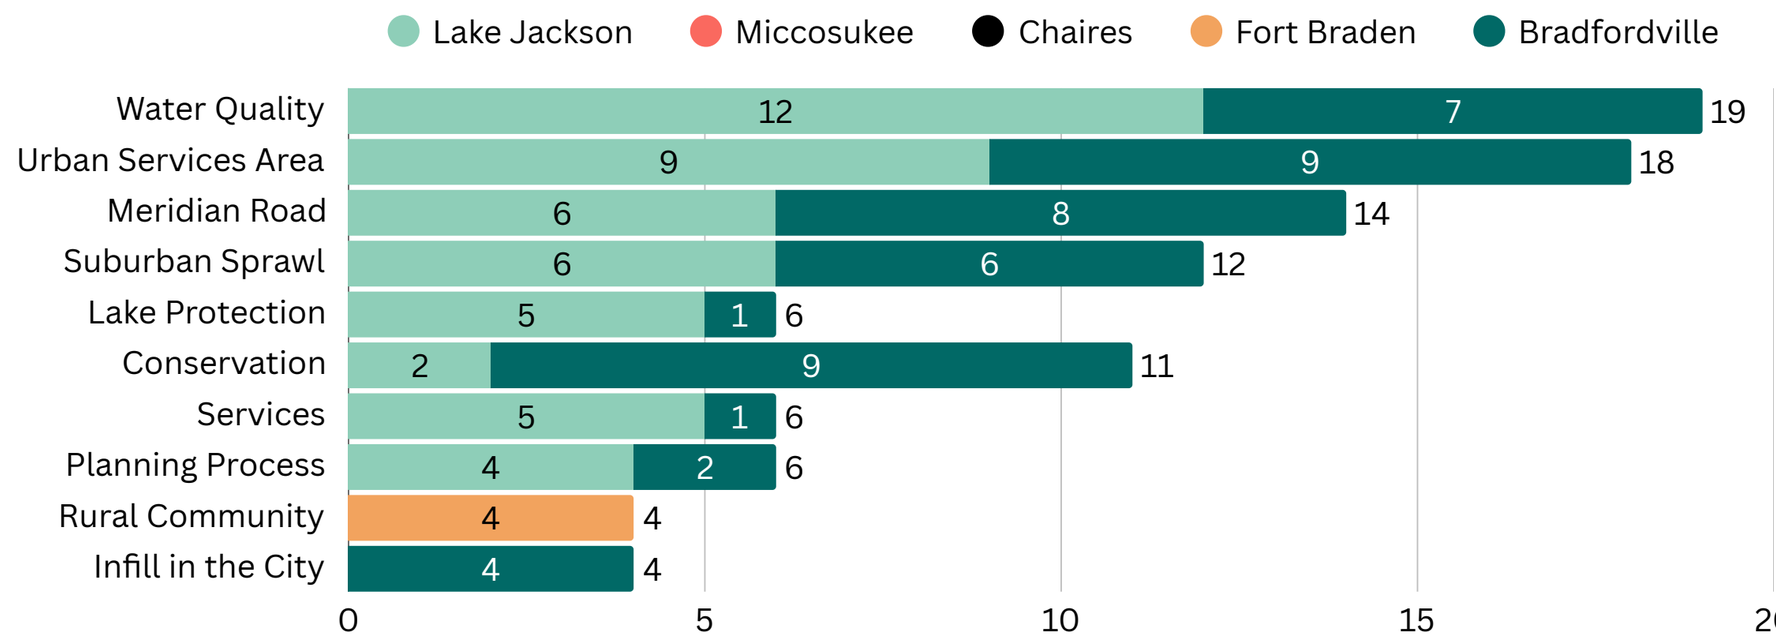


COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY
VISION 2050
A FOCUSED FUTURE

For respondents who requested follow-up from Planning staff about a particular question, staff called or emailed each resident to ensure any remaining questions were addressed and to encourage future citizen engagement in the comprehensive planning process.



Written feedback from members of the public at the community engagement meetings were gathered via two methods. The exit questionnaires consisted of 7 questions primarily focused on gauging the effectiveness of the meeting itself in terms of the goal of helping the public better understand both the comprehensive planning process and the specific policies laid out in the draft comprehensive plan update being prepared for adoption currently by Planning staff. Comment cards were also available to allow citizens to leave specific feedback related to policies and the substance of the Plan itself. Some respondents left feedback related to the Plan on the exit questionnaires and others left feedback on the comment cards. There were some attendees who filled out exit questionnaires, but did not leave written comments related to the Plan.

WRITTEN FEEDBACK RECEIVED

CHART SHOWING THE MAJOR TOPICS NOTED IN WRITTEN FEEDBACK

NOTES*:

- **Water Quality**
  - Concern for the water quality of lakes (especially Lake Jackson) due to impacts of future development
- **Urban Services Area (USA)**
  - Opposition and concern about the expansion of the USA near Lake Jackson, Meridian Rd, Bannerman Rd, and Orchard Pond Parkway
- **Meridian Road**
  - Concerns over traffic and roadway capacity; desire to protect Canopy Roads
- **Suburban Sprawl**
  - Opposition and concern about sprawl; desire to keep rural areas rural (1 dwelling unit per acre); and the fiscal impact of sprawl
- **Lake Protection (Future Land Use Category)**
  - Opposition to the density that an amended Lake Protection category could bring
- **Environmental Conservation**
  - Concern over development's impact on habitat, water quality, and opposition to tree clearing
- **Services**
  - Expressed the need for increased fire coverage, access to medical offices, ensuring adequate fresh water access; desire for development impact fees
- **Comprehensive Planning & Development Processes**
  - The process is confusing or lacks transparency to citizens; local governments should coordinate more
- **Rural Community (Future Land Use Category)**
  - Opposition to expanding the Rural Community FLU category and allowing increased density
- **Residential Infill in the City**
  - Support for the densification of the urban core to allow for habitat preservation on the urban fringe

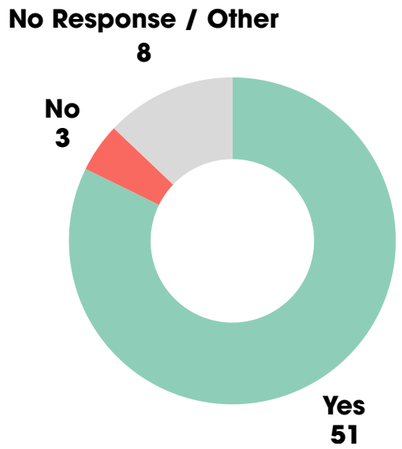
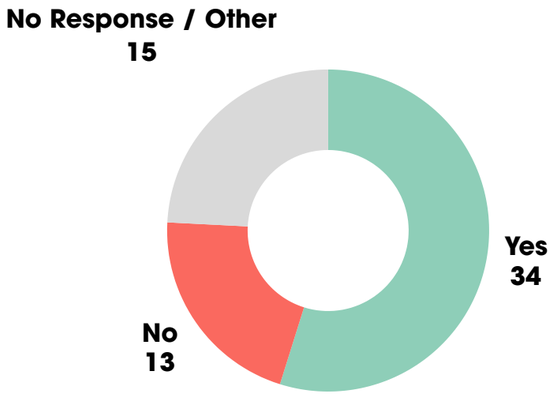
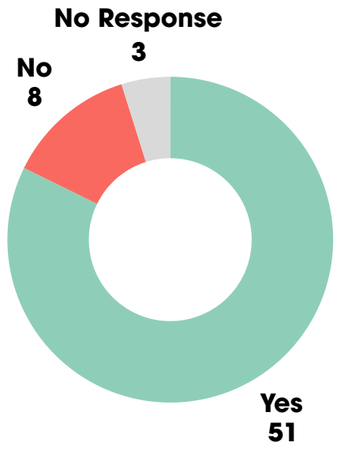
QUESTION 1
Which session did you attend?



QUESTION 2
Based on the information you received at the meeting today, do you feel like you have a good understanding of the Comprehensive Plan update?



QUESTION 3
Would you like to receive a response from a Planning Department staff member about your outstanding question noted above?



QUESTION 4
Did you feel comfortable giving feedback at the community meeting today?

QUESTION 5
Was there anything about this session that could be improved?

QUESTION 6
Are you interested in receiving updates about the Comprehensive Plan, including any future public engagement opportunities?

***Please see Appendix for a complete record of feedback.**

NEXT STEPS

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

NEXT STEPS FOR COMMUNITY ENGAGEMENT

Based on the feedback received from citizens during these five meetings and the follow-up and additional interactions afterward through email or phone call, the following are potential next steps:

1. Continue to analyze the received feedback and data to assess the need for additional public outreach efforts such as the ones described in this report.
2. Use the contact information voluntarily provided by citizens during this engagement effort to create a community contact list that will allow staff to continue to receive feedback throughout the planning process and encourage these residents who have been involved in the process during this engagement effort to stay involved in the process moving forward towards Plan adoption and in the next stage of implementation of the Plan.

NEXT STEPS FOR THE COMPREHENSIVE PLAN

This report will be provided to the Board at their November 18, 2025 meeting as part of a status update on the Land Use and Mobility Elements (LME). Included in their status report will be options for Board consideration and direction on moving this project forward. Among these options will be the option to direct staff to schedule an adoption public hearing on December 9, 2025. The County transmitted the proposed LME amendment on May 20th and received comments from reviewing state agencies June 18th. The City transmitted the proposed amendment on September 19th and received comments from reviewing state agencies October 18th.

Between transmittal and adoption, the Plan may be updated to respond to state agency and community comments (community comments such as the ones received during this engagement process), and as directed by the governing board. Leon County is required to adopt amendments within 180 days of receipt of comments, but may request an additional 180 days in agreement with the State Land Planning Agency. The current adoption due date is December 15, 2025.

Policy 1.8.1 of the Intergovernmental Coordination Element requires both the County and City to adopt amendments to the text of the Plan, which would include clear designations of whether policies apply to the County, the City, or both. Accordingly, the amendment will become effective only after adoption by both the Board and the City Commission.

CONCLUSION

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

These five community engagement meetings touched on a broad cross-section of concerns of the unincorporated areas of the County. Environmental and water quality concerns, preservation of rural and low-density areas, family heir subdivisions, traffic, and the provision of community services (including centralized sewer and water service) were among the primary topics of discussion.

Over 110 citizens engaged with the planning process through these meetings and the interactions between the public and the Planning Department staff initiated or continued an open dialogue that encourages residents to be involved in the comprehensive planning process now and into the future as implementation of the Plan commences.

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

QUESTION 2: Based on the information you received at the meeting today, do you feel like you have a good understanding of the Comprehensive Plan update?

I Still have a question about:

Participant 1	I learned a lot, but it was hard to see what changes are being proposed for land use categories especially.	Participant 32	Lake pollution from septic tanks, classification of property at 3892 N. Montoe
Participant 2	Financial Impact: Will this bring revenue to us? How? Q2: How much additional water demand will this create? Is there a plan to provide water w/o harming existing sources?	Participant 33	Future development of the phipps property
Participant 6	Revising multi-modal district to support street trees, will require building set backs	Participant 34	What this means in 25 years & is Lake Jackson a prairie in 25 years? Is the aquifer a bismol (sp? Abysmal?)? Do we still have a canopy road on Meridian?
Participant 10	Need to read the plan	Participant 35	The May draft USA expansion of Carr Lake, possibility does not show on the draft FLUM map
Participant 20	Would like to review materials in a quiet place	Participant 36	Too much information, too many people standing in front of boards, noise
Participant 22	For Lake Protection areas; what are the options for Grants to improve current septic systems around the Lake Jackson area.	Participant 38	Not enough time to review last minute changes
Participant 26	The differences in the USA between the May Map & the July Map.	Participant 46	I'll email my question.
Participant 27	Info at meeting was too vague	Participant 51	Why isn't a traffic impact and environmental impact study being done to measure these proposed changes BEFORE the CP is approved? That seems to be a fatal flaw. Once approved, the CP is a rubber stamp.
Participant 28	How adding more opportunities for development in a Lake Protection Area won't harm Lake Jackson due to increased runoff & how Meridian Road could possibly accommodate more traffic.	Participant 55	# of units proposed or allowable
Participant 29	How to protect lake Jackson from pollution, traffic concerns, Will developer be required to build affordable housing	Participant 56	Lake Jackson > Over Use MERIDIAN TRAFFIC
Participant 30	Light Rail/Mass Transit	Participant 58	Still learning, confused why city/county have 2 different plans
Participant 31	USA

APPENDIX

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

QUESTION 5: Was there anything about this session that could be improved?

If Yes, please provide more details:

Participant 1	I appreciated the staff answering questions & having small conversations. However, a short overview presentation would have served as a good introduction to the detailed information.	Participant 19	Better Planning for Road Development before Building
Participant 2	More handouts about possible impact: forestry, water, taxes, etc.	Participant 20	Would have liked an outline presented instead of having to read everything
Participant 4	High-level crosswalk. Whare are the main 3-4 changes in each area?	Participant 21	Short explanations at each station so one could understand what we're looking at
Participant 5	Allow for public speakers	Participant 25	Expected more of a presentation
Participant 6	Great location, but we need more space, a bit loud.	Participant 26	A planning staff presentation on the proposed changes.
Participant 7	Have current & future maps side by side	Participant 27	Explain the proposals a little more at the start so everyone has more context for the meeting
Participant 10	Provide comment cards at sign in desk	Participant 28	More answers. Most of the answers I was given were "We won't know that until we get an application for development," but that seems backwards i.e. Meridian can't accommodate more traffic, but you can't say that until you've opened the door for development which would add more traffic.
Participant 11	More Chairs	Participant 31	More info about the benefits to the community related to USA & rural areas.
Participant 12	More seating	Participant 32	More space, colder
Participant 14	Better seating, USA is very scary, developers finger prints all over it.	Participant 33	Traffic information related to the development of the phipps property
Participant 17	Larger Space	Participant 34	More than one "vote" should have been present and accountable
Participant 18	N/A got here late

NOTE: Additional written responses are listed on the next page.

APPENDIX

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

QUESTION 5: Was there anything about this session that could be improved?

If Yes, please provide more details:

Participant 36	Easier access to all information provided at the meeting online	Participant 51	Better Publicity!
Participant 38	Disclosure of stakeholders for development	Participant 52	Increased advertising of events such as these
Participant 43	Better Advertisement	Participant 53	More Commissioner Present at the Meeting
Participant 44	Big area maps so you can see the Ft. Braden area	Participant 56	PLEASE BE TRANSPARENT
Participant 47	Absolutely no advertisement meaningful to us.	Participant 57	A little more space for people inside & parking; quiter, loud crowd; Nice & convenient otherwise
Participant 48	Need more local people to attend w/ announcements	Participant 58	INFILL into the city is Good; EVERYONE at the meeting was really talking about Lake Jackson! Hugh intense concern about this.
Participant 49	Was loud & chaotic, so a formal sit down meeting w/ questions afterward.	Participant 61	?

Comment Card Feedback

NOTE: Additional written responses are listed on the next page.

1	Staff mentioned specific areas with specific plans for encouraged development or change (e.g. Monroe corridor) but I didn't see that. Is that project specific information on the website? I am concerned about the method of development allowed at the Lake Protection Node @ Bannerman & Bull Headley. It appears that vegetation has been clearn to the edge of the lake at the bottom of the hill, so that waterbody was not protected from the development. Staff said there would be a vegetated buffer around the lake, but maintaining the existing buffer would give better protection & habitat.
2	We need a Fire House on Miller Landing Road.
3	Please look into the Brevard County Lagoon's successful plan that has provided improved water quality & increased marine life.
4	Florida Native Plant Society - Magnolia Group - Sign up on email list
5	A Parable for the Commission In parenting, if you give in once, to one concession, to one kid, to adjust the rules to please that child in that circumstance, then in the next circumstance, to the next kid, the rules no longer apply and the parent is no longer an enforcer but a figure head to be persuaded. Stick to the rules. Be the adult in the room. The family depends on it, the home depends on it, the title depends on it. Rules can't change overnight because one kid wants something for them. This is about all of us. Do the right thing. Live your title. Don't concede our town, our water, our identity.
6	Sidewalks on HWY 27. I why like to know when the various sidewalks between I-10 to Capital Circle North on HWY 27 will be connected to allow pedestrians to easily navigate North Monroe without having to walk in the grass or along the highway. This also applies to bikes so that people can safely ride along North Monroe & not next to trucks & cars on the road
7	How does upping density near Carr Lake square with city/county's own lake protection standards? Where is the capacity analysis proving Meridian Rd. can absorb thousands more daily trips without tree removal or canopy loss? Meridian is formally designated rd. Why convert 2,000 rural acres instead of directing growth to already planned urban areas? And how does this align with your own comp plan language about avoiding premature conversion of rural land?
8	As a resident of Crowder Rd and citizen who enjoys recreation on Lake Jackson we support efforts to responsibly allow redevelopment of existing commercial uses in Lake Protection. Commercial use should be allowed on N. Monroe St., residential uses do not make sense, allow improvements. Would be supportive of efforts to reduce septic that outfalls to Lake Jackson, but believe larger scale water quality and volume improvements would make a bigger impact than removing the small number of residential septic systems. Make Monroe Street beautiful and restore our local Aquatic Preserve. Thank you!
9	I wonder if there is a defined plan for Meridian Road in improving the rush hour traffic flow in the near future and with the projected development (4 now - to 10 new houses north of Miller Landing Rd) Is anyone planning to widen Meridian Road? (Little Thomasville Rd)?
10	Reminder: Ref Master Plan in Planned Development. How are current development restrictions around Buckhead enforceable in the new plan?

Comment Card Feedback

NOTE: Additional written responses are listed on the next page.

11	The Draft Urban Service Area expansionmap shows a may 2025 option to expand into the Lake Protection zone on land, just east of Carr lake. That option (which must still be on table since it's depicted) is NOT on the Draft Flum for the county-it should be. The land just east of Carr lake will need to be treated carefully since Carr-Lake is in the Aquatic Preserve is an OFW.
12	My neighborhood - Lake Breeze (off CROWDER RD) IS BEING REPAVED, ONCE THAT IS DONE, COULD WE PLEASE HAVE DAYGLO PAINTED LINES ON SIDE OF ROADS & MIDLINE and DOTS that GLO at nite?? It is a dark neighborhood, because we save our trees; We are not asking for more LIGHTS; just for Painted lines on our ROADS. Lake Breeze Neighborhood borders Lake Jackson, we are all on septic tanks that may effect the quality of the lake. When are we going to transferred to sewer? What will the cost to homeowners be? We have 87 houses on 100 lots in our neighborhood.
13	1) Limit expansive & urban service area boundary to protect Lake Jackson and Meridian Road (Canopy) 2) Create a text legend across all maps - label major landmarks (roads & lakes). Points (?) used for same land use survey change amongst maps 3) Focus on filling in gaps in bike/pednetwork & sidebars, bike lanes, paved shoulders, shared use paths. 4) Focus on providing urban services (sewer, water) to those areas already developed, not expanding Urban Service Area 5) Expand green necklace around Tallahassee by purchasing fee simple conservation easements fo existing natural areas, open space 6) great job in complete street policies
14	Hello friends, What will be used to monitor the increased nutrient load to the State Aquatic Preserve? I personally know only ONE family that is able to carpool to work. How are you all planning to encourage more carpooling should TENS OF THOUSANDS of additional commuters join regularly used thoroughfares??? What is the current method for quantify the baseline you expect to increase after mass developments? Most general practitioners of medicine are located near the center of Urban Tally; if these businesses felt there were a demand they might have already moved North to serve that area. Why do you believe they would do so post-dev? Then "affordable housing" will also need access to things like healthcare - is there any consideration being made to have a health dept or emergency medical facility? This falls under your coveted goal of a healthier community, yeah? If anything - We hope our leadership can find a way to develop (a bit!) and grow the city of their constituents WITHOUT decimating our special ecosystems. <3
15	Please provide community with reports on habitat connectivity + threatened species. Are our current water + sewage capacity sufficient? If not, where will it come from? Will it impact already existing systems? Provide traffic studies showing how future of transportation is affected. Tallahassee should focus on developing under used parcels in urban area - ie., Northwood Mall Tallahassee Mall. Access is much more available due to road size + transportation. There are very little opportunities to widen the roads around Meridian (Maclay, Ox Bottom, ex) We don't have the infrastructure to support growth off of Meridian Rd. I feel as if there is a push to expand North TLH + Bradfordville due to its reputation as a "good area", instead of investing in other areas of Tallahassee for Safety + education. Often, Suburban sprawl costs more in Public services than it generates in taxes. Therefore, Leon County residents Should not subsidize private profit. No to developing of of Meridian!
16	I think a power point presentation for everyone to explain all the posters would have been helpful because it was hard to talk to someone already engaged with someone and their concerns. I only got to one side of the room in 1hr and 15 min. Concerned about horrible traffic on N. Meridian. Trying to turn left to go North is very hard. Bumper to bumper and relying on Kindness for someone to let you in. Utility (electric) frequently shutting off sometimes short, sometimes hours. Cannot handle more developments using N. Meridian

COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE

Comment Card Feedback

NOTE: Additional written responses are listed on the next page.

17	I am very opposed to extending the USA to the 2000 acres adjacent to Lake Jackson. The vast amount of runoff from further development would outweigh adding sewer etc. Lake Jackson is already very impaired so adding more from the development on the southside of the lake so adding more opportunities to development to the north is nonsensical. Further, it is madness to add more traffic to Meridian Road. I also don't understand why you would propose opening this area up for development when there are other areas that are not environmentally sensitive. No one I've spoken to thinks this is a good idea and the damage it will cause is unrepairable. Please remove the amendment allowing this change.
18	We really do not need or want more people out here.
19	I do not agree to expand the 4 houses per acre. We don't want people out here. No developer.
20	In addition to traffic density, has anyone researched the impact of the elevated traffic emissions on the health of the canopy road (Meridian?)?
21	INFILL into the city is Good; EVERYONE at the meeting was really talking about Lake Jackson! Hugh intense concern about this.
22	Keep rural areas rural w/ 1 home per 10 acres and not allow any variances. Also protect our waterways & canopy roads.
23	I am deeply concerned by the proposed possible expansion of the Urban Service area in the ~2000 acre plot adjacent to Orchard Pond Rd, Meridian and Bannerman. The change in density from 1 home/10 acre to up to 20 homes/acre is appalling and environmentally shortsighted. Even with the addition of a sewer system, area water experts have said the impact to Lake Jackson and the connected waterways would be highly damaging. The runoff from fertilized yards, roads, parking lots as well as the addition emissions of countless vehicles on the Meridian Canopy cannot avoid a deleterious environmental impact. Additionally, human nature follows the most direct path for transit, which for the vast majority of new residents of that area and Meridian is already a mess in the am and pm (exacerbated by the school traffic of Maclay and NFC). The quality of life and home values of existing residents will be negatively impacted by the prospective traffic and the whole of Leon County will suffer from the impacts to the environment and watershed.
24	I am writing in opposition for the proposed development of land at the corner of Bannerman, Meridian and the Orchard Parkway on the northside of Leon County. This development would only increase traffic and ruin the appeal of this area of town. Meridian Road cannot be widened in general due to the canopy, so why increased development. The commercial need is also unnecessary. Natural features are better for the area.
25	Let’s leave it better than we found it. Adding more development around Tallahassee’s crown jewel of Lake Jackson Aquatic Preserve and the iconic canopy road of Meridian, will forfeit both. The lake will be a prairie and the road will be clear cut.

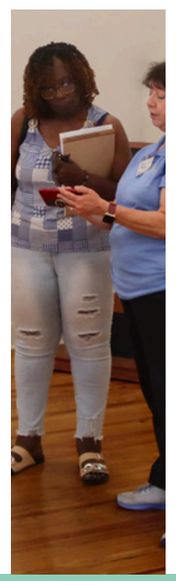
COMMUNITY ENGAGEMENT SUMMARY REPORT

Fall 2025

TALLAHASSEE LEON COUNTY VISION 2050 A FOCUSED FUTURE



Comment Card Feedback

NOTE: Additional written responses are listed on the previous pages.

26	There is no demonstrated need for an increase to the urban service boundary. I oppose rezoning east of Carr Lake. As a city, we should be prioritizing increased density within the existing urban center.
27	The expansion of the USA should be a separate amendment. The Lake Jackson Aquatic Preserve should be protected at all costs. A wildlife corridor should be maintained if not improved.
28	The Orchard Pond rezoning by Meridian & Bannerman is the STUPIDEST idea I think you all can support. It will destroy everything that Tallahassee stands for as far as pristine beauty & nature. You will destroy this area both nature & community. The only way this can even be considered is pure inept or as a puppet. All this is, is a money grab without any consideration to who this impacts/harms. Shame on whoever voted to support this!
29	The development @ Orchard Pond is a horrible idea. Tallahassee is special because of its natural beauty. Once these are sacrificed there is no going back. I urge you to resist this zone change with the best interest of Tallahassee at heart. We deserve long term visions from our leaders, not short term agendas to fatten wallets. Please focus on infill development, revitalization of underutilized spaces, & sustainable planning that balances progress with preservation.
30	NO URBAN SPRAWL 2.8.7 LAKE PROTECTION OF LAKE JACKSON Don't hide behind "better water quality" to allow The Phipps to develop their property north of Lake Jackson. Sorry – we cannot allow Phipps to develop this precious resource. OUR WILD AREAS cannot be destroyed by more development. No more Welaunee sprawl.
31	*[No comment beyond contact info.]*
32	Leon County continues to allow high density development w/o the infrastructure to support. The developers should pay for the roads & impact to existing residents & property owners.
33	1. 1st priority — build transportation corridors (roads) before further development takes place. Include / expand bike lanes (wider) on new roads. Traffic up here is a nightmare. 2. Prohibit extensive tree cutting for any commercial or residential development. 3. Focus on development / affordable housing in lower-income areas in NE. I mean really affordable like new apt. complex on Orange Avenue. 4. Repair roads in Bradfordville, N. part of Killearn Acres; put center lines on above roads. Post more speed limit signs. 5. Limit wanton approval of junk food restaurants, gigantic gas stations, and convenience stores. More small Publixes + dedicated farmer's market locations.
34	The city seems to have not taken much regard to D.E.P.'s argument. That being said, has city planning taken any steps as to how they would protect the lake in the midst of this massive development project? Is it even possible to maintain the lake's "health" while building as many developments as has been proposed? We shouldn't sacrifice our home's beauty for the sake of money and projected population growth.
35	I am very opposed to the change in zoning for the area at Meridian and Bannerman Roads. Meridian can't take additional traffic and the only way to expand it is by cutting away Tallahassee's most majestic canopy road. Also, the detrimental impact this will have on Lake Jackson & Carr Lake would be irreversible. Please do not make this change to the Comp Plan.
36	One landowner should not be able to single-handedly control what part of our city/county gets rezoned for growth. This is shameful and bad for our community. Vote no on this change.

NOTE: Lake Jackson: Comments 1-17; Fort Braden: Comments 18-19; Bradfordville: Comments 20-36

TALLAHASSEE LEON COUNTY

VISION 2050

A FOCUSED FUTURE

PLANNING DEPARTMENT

a division of PLACE

LAND USE AND MOBILITY ELEMENT
GOALS, OBJECTIVES AND POLICIES

Goal 1 [LM] – A Healthy Environment:

Our community will maintain a healthy environment with drinkable water, breathable air, unpolluted lakes, rivers, and soils, renewable energy sources, conservation areas that protect valuable or irreplaceable natural resources, and open spaces available and accessible to all residents and visitors to our community.

To achieve this goal, our community will:

- Identify natural resources that contribute to a healthy environment and human well-being. Prioritize the preservation of natural areas (including conservation areas, environmentally sensitive features, and water resources) when making land use and transportation decisions.
- Provide access and opportunities for passive and active open spaces that promote healthy active lifestyles for all citizens.
- Coordinate between the City and County, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively support protection of natural resources that extend beyond jurisdictional boundaries.

Objective 1.1 – Identification of Natural Resources and Historic Features (City of Tallahassee/Leon County):
Identify natural, cultural, archaeological, and historic resources that contribute to human well-being and community character.

Policy 1.1.1 – Geographic Data (City of Tallahassee/Leon County):
Local governments shall maintain a geographic information system enabling mapping and spatial analyses that includes, at a minimum, the following data:

- Wetlands, waterbodies, watercourses
- Floodplains and floodways
- Significant and severe grades
- Drainage basins and related features
- High quality successional and native forests
- Active and other karst features
- Significant trees
- Canopy road corridors
- Local soil types and conditions
- Known operating and abandoned landfill sites
- Known active and former mining sites
- Historic resources of national, state and local significance
- Florida Ecological Greenway Network Primary Springs Protection Zone
- Perpetual conservation easements

Policy 1.1.2 – Designated Canopy Roads (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict designated canopy roads.

Policy 1.1.3 – Historic District Boundaries and Historically Significant Properties (City of Tallahassee/Leon County): Local governments shall maintain a map and spatial data that identify and depict historic district boundaries and historically significant properties meriting protection. This map shall be included in the Land Use Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Policy 1.1.4– Soils and Water Features (City of Tallahassee/Leon County):
Local governments shall maintain a map and spatial data that identify and depict surface water features, the primary springs protection zone and soils. These maps shall be included in the Land Use and Mobility Element Addendum and updated with current data during the Evaluation and Appraisal Review process or as needed.

Objective 1.2 – Preservation of Natural Areas (City of Tallahassee/Leon County):
Preserve important natural areas, including conservation areas, environmentally sensitive features, and water resources through a combination of identification, analysis, designation of resources on the Future Land Use Map, policies in the Conservation Element, land development regulations, and acquisition. Prioritize the protection of these areas when making decisions regarding land use, transportation, and infrastructure location and expansion.

Policy 1.2.1 – Acquisition of Conservation and Preservation Lands (City of Tallahassee/Leon County):
The City and County shall monitor existing and potential funding sources for the acquisition of land to restore, connect, and protect natural habitats and sensitive lands. The Planning Department shall coordinate with the appropriate departments, agencies, or partners to support application and securing of funding for priority acquisition areas.

Policy 1.2.2 – Environmental Analysis (City of Tallahassee/Leon County):
Planning Department staff shall conduct an environmental analysis when amendments to the Comprehensive Plan are proposed. The analysis shall include natural resources and geographic features, including those listed in Policy 1.1.1, that contribute to human well-being and community character and identify the potential impacts to environmental and human health.

Policy 1.2.3 – Transportation Impact Mitigation (City of Tallahassee/Leon County):
The planning and design of new or the expansion of existing local transportation facilities shall account for natural, cultural, and historic resources and existing neighborhoods. These projects shall prioritize avoiding and minimizing impacts to those features. Where avoidance and minimization are not feasible or practical, impacts to the features shall be mitigated.

Policy 1.2.4 – Transportation Corridor Environmental Features (City of Tallahassee/Leon County):
The City and the County shall consider context-based beautification, landscaping, and stormwater facility and land development regulations that provide environmental protection measures for transportation corridors, where feasible by:

a. Increasing the amount of site and adjacent green spaces/open spaces.
b. Utilizing native or adapted vegetation and natural systems, such as bioswales, to control runoff.
c. Maintaining and/or enhancing ground cover, canopy, and understory vegetation where new roads are built.
d. Protecting designated canopy roads by designing public infrastructure improvements to minimize development impacts consistent with the Conservation Element and Canopy Roads Management Plan.
e. Enhancing the character of transportation corridors and gateways to the community through access management strategies, preserved green space for landscaping, and consolidated signage.

Policy 1.2.5 – Connected Open Space (City of Tallahassee/Leon County):
Open space that is proposed in a development application shall be organized in a manner that prioritizes natural areas with sensitive onsite environmental features and creates continuous and contiguous open space areas to the greatest extent possible to minimize habitat fragmentation. Where feasible, the siting of open space shall occur in a manner that creates cohesive and connected open space across property boundaries to ensure interconnected greenspaces.

Policy 1.2.6 – Conservation Element (City of Tallahassee/Leon County):
Should conflicts arise between implementation of policies in the Land Use and Mobility Element and the Conservation Element on matters of natural resources, the Conservation Element policies shall take precedent.

Objective 1.3 – Access to Parks and Recreation (City of Tallahassee/Leon County):
Provide equitable public access to existing and future recreation areas, open spaces, greenways, and parks.

Policy 1.3.1 – Greenways and Trails Master Plan (City of Tallahassee/Leon County):
The Planning Department shall maintain a Greenways and Trails Master Plan that identifies opportunities to expand or create a network of shared use paths that connect areas of the City and County. The master plan shall guide the implementation of the local greenway system, in coordination with the State of Florida and other conservation funding, managing, and landholding entities. The master plan shall be updated at least every 10 years to reflect completed projects, new additions and opportunities, and other changes to the greenway system.

Policy 1.3.2 – Urban Recreation Spaces (City of Tallahassee/Leon County):
Urban recreation spaces shall be developed and maintained to provide accessible opportunities for skateboarding, art installations and exhibitions, and nature-based experiences. These spaces may include educational elements such as signage or kiosks.

Policy 1.3.3 – Bicycle Parking at Parks and Civic Spaces (City of Tallahassee/Leon County):
All parks shall have bicycle parking facilities co-located with park amenities. Local government land development regulations shall specify requirements, including amount and location, for bicycle parking.

Policy 1.3.4 – Multimodal Access to Parks and Recreation (City of Tallahassee/Leon County):
All new and substantial improvements to parks and recreational facilities within the Urban Services Area shall provide public sidewalks in accordance with applicable streetscaping requirements, accessible pedestrian connections, for users of varying abilities, from amenities to all adjacent public street frontages, and pathway, trail and bicycle facility interconnections to all adjacent trails, public facilities, and neighborhoods. Coordination with StarMetro for evaluating new stop facilities or improving existing bus stop facilities shall be required within the City limits.

Objective 1.4 – Urban Forests (City of Tallahassee/Leon County):
Using the best available data, manage urban forests through strategies that address preservation of trees, planting of new trees, removal of unhealthy trees or trees in unsuitable locations for that species, maintenance of existing trees, and minimization of infrastructure conflicts.

Policy 1.4.1 – Priority Planting Sites (City of Tallahassee/Leon County):
The City and County shall identify priority planting sites to guide the planting of trees to improve wildlife habitat by reducing urban forest fragmentation, and provide for the preservation or creation of connected, wooded, and environmental corridors. The general recommendations of the Urban Forest Master Plan shall be used to inform the priority planting sites.

Policy 1.4.2 – Species Suitability (City of Tallahassee/Leon County):
The City and County shall maintain lists of tree species that are not invasive, nonindigenous species, that minimize hardscape conflicts, minimize overhead utility conflicts, and are wind resistant. These lists will be used to guide and promote the planting of suitable and preferably native species for different site locations and scenarios.

Policy 1.4.3 – Public Tree Inventory (City of Tallahassee/Leon County):
The City shall support the maintenance and updating of the Public Tree Inventory to gain data to better manage urban forests, including through identifying and securing funding opportunities.

Policy 1.4.4 – Public Development Tree Prioritization (City of Tallahassee/Leon County):
Public transportation projects shall prioritize the protection of existing high-quality trees during transportation systems planning, development, and maintenance without compromising transportation safety. Protected and preserved trees should be of a suitable species for their location, be in good health, and provide screening, landscape, runoff control, and shade without compromising safety or urban forest quality.

Policy 1.4.5 – Private Development Tree Standards (City of Tallahassee/Leon County):
Local government land development regulations shall prioritize and incentivize protection of high-quality trees through requirements for tree preservation and removal. Regulations shall include methods of relief from other development standards that commonly conflict with preservation of existing trees to reduce the need for deviations when preserving qualifying trees.

Objective 1.5 – Green infrastructure (City of Tallahassee/Leon County):
Implement green infrastructure strategies, where feasible, as a cost-effective, resilient approach to reduce flooding and treat stormwater while delivering environmental, social, and economic benefits.

Policy 1.5.1 – Community Wide Green Infrastructure (City of Tallahassee/Leon County):
The City and County shall incorporate the use of green infrastructure into their land development regulations as a viable and preferred option for achieving a connected network of natural areas that provide habitat, flood protection, cleaner air, and cleaner water. Strategies include those that:

- Create green streets and alleys by retrofitting streets and alleys as part of any repair, maintenance, or other disturbance to the road, sidewalk, or transportation right-of-way that would provide a feasible opportunity for street-level stormwater management. Implement green parking standards such as requiring parking facilities to have certain percentages of shaded parking.
- Ensure a robust urban tree canopy through implementation of the Urban Forest Master Plan and Canopy Road Management Plan, or their successors.
- Support off-site regional stormwater solutions for new or infill walkable development.
- Reference national models, including the Green Infrastructure standards of the United States Green Building Council (USGBC).
- Supporting transit and alternative transportation modes.

Policy 1.5.2 – Site Specific Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall incentivize the use of green infrastructure stormwater management systems in the land development regulations and/or form-based code by reducing minimum green space requirements or offering other incentives in exchange for the provision of green infrastructure. Green infrastructure mimics nature to soak up and store water and may include strategies such as rain gardens, planter boxes, bioswales, and green roofs.

Policy 1.5.3 – Design Guidelines for Green Infrastructure (City of Tallahassee/Leon County):
Local governments shall establish guidelines for incorporating the use of green infrastructure techniques in public infrastructure and private development applications. Guidelines should identify the appropriate conditions for applying green infrastructure techniques, minimum and maximum design thresholds, and contemplate variations in design for urban/suburban/rural contexts.

Objective 1.6 – Community Resilience (City of Tallahassee/Leon County):
Foster community resilience by strengthening the reliability of our infrastructure and encouraging sustainable building practices, protecting a robust natural environment and local economy, and empowering self-sufficiency across the community.

Policy 1.6.1 – Energy Efficiency (City of Tallahassee/Leon County):
The City and County shall develop regulations and design standards for compact development and encourage green building techniques to reduce greenhouse gas emissions from energy generation and transportation. These regulations shall be implemented as prescribed in the land development codes to conserve land; to promote livability, walkability, and transportation efficiency, including reduced vehicle distance traveled; to leverage and support transit

investments; and to reduce public health risks by encouraging daily physical activity associated with walking and bicycling.

Policy 1.6.2 – Multimodal Connectivity (City of Tallahassee/Leon County):
Within the Urban Services Area, the City and County shall use zoning and development standards for subdivision and planned unit developments to promote the location of homes, jobs, stores, parks, schools, and other destinations within 20 minutes walking distance of each other so that people can easily walk, bike, use public transit, or drive shorter distances. Development standards shall provide for interconnected pedestrian, bicycle, and transit amenities and account for the potential for future connection and expansion of pedestrian and bicycle networks on adjacent properties.

Policy 1.6.3 – Smart Growth Strategies for Community Resilience (City of Tallahassee/Leon County):
The City and County shall develop smart growth strategies to help our community adapt to the effects of climate change, natural disasters, and other events that may challenge the resilience of the City of Tallahassee and Leon County. Such strategies may include hardening infrastructure; constructing stormwater conveyance systems with greater capacity; developing complete, walkable streets; supporting agriculture and local food production; reducing indoor and outdoor water use; reducing pollutant emissions; supporting transit; and increasing renewable energy production.

Policy 1.6.4 – Urban Heat Islands (City of Tallahassee/Leon County):
The local governments shall develop strategies that minimize effects of heat islands, such strategies may include:

a. Tree and vegetation cover.
b. Green roofs and rooftop gardens.
c. Roof coatings or materials with high albedo that significantly reflect heat away from a building.
d. Alternative pavements that mitigate heat island effects.

Policy 1.6.5 – Resiliency of Transportation Facilities (City of Tallahassee/Leon County):
Design, construct, and maintain transportation facilities to prevent flooding, minimize pollution, and maintain natural stormwater runoff volume, timing, rate, and direction of flow characteristics consistent with the adopted Stormwater Level of Service Standard.

Policy 1.6.6 – Urban Forests and Climate Resilience (City of Tallahassee/Leon County):
Ensure the urban forest is managed within the urban core to balance and reduce conflicts, when feasible, between long-term urban forest health and coverage and above-ground utilities.

Objective 1.7 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Coordinate with neighboring jurisdictions to effectively address and support the protection of natural resources that extend beyond jurisdictional boundaries.

Policy 1.7.1 – Key Regional Partners (City of Tallahassee/Leon County):
Coordinate with key partners, such as the Northwest Florida Water Management District (NWFWMD), and Florida Department of Environmental Protection (FDEP) on the protection and management of water resources and other environmentally sensitive features.

Policy 1.7.2 – Colleges and Universities (City of Tallahassee/Leon County):
Florida State University, Florida A&M University, and Tallahassee State College shall be subject to environmental protections identified within the Comprehensive Plan. This will be accomplished through the statutorily required campus master planning process for Florida State University and Florida Agricultural and Mechanical University.

Goal 2 [LM] – Distinct Urban and Rural Areas:

Our community will provide residents with diverse options for where they live or visit by maintaining a distinction between rural, sub-urban, and urban areas.

By maintaining a distinction between these areas, our community will:

- Provide variety of lifestyle and housing choices while reducing sprawl.
- Foster economic development in urban areas and identified activity centers.
- Promote efficient development patterns.
- Support revitalization and redevelopment efforts within the Urban Services Area.
- Reduce infrastructure costs.
- Protect agricultural and forest management uses.
- Preserve and create natural resource-based activities, ecosystem functions and ecosystem services, and scenic vistas and pastoral landscapes.

Objective 2.1 – Growth and Population Accommodation (City of Tallahassee/Leon County):
Tallahassee and Leon County will accommodate our population growth in a responsible manner. A growth and development strategy that provides for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility shall be leveraged to maximize economic and environmental stewardship while accommodating the increased population.

Policy 2.1.1 – Comprehensive Planning Periods (City of Tallahassee/Leon County):
The comprehensive plan shall have two planning periods. The short-term planning period shall be for a 10-year horizon from 2025 to 2035. The long-term planning period shall be the year 2050. The long-term planning period shall be amended during the Evaluation and Appraisal Review (EAR) process to reflect available population projections and relevant data and analysis of public facilities.

Policy 2.1.2 – Population Projections (City of Tallahassee/Leon County):
Population growth for the long-term planning period shall be based on University of Florida's Bureau of Economic and Business Research (BEBR) medium population projections.

Objective 2.2 – Efficient Growth (City of Tallahassee/Leon County):
To support the projected population growth, infrastructure shall be provided economically and efficiently while protecting surrounding forestry uses and agricultural lands from unwarranted and premature conversion to urban land uses. Growth and development shall be directed toward areas with existing or planned infrastructure in a manner that maintains distinct natural, rural, sub-urban, and urban areas.

Policy 2.2.1 – Urban Services Area (USA) (City of Tallahassee/Leon County):

Urban Services Area Map Placeholder

To provide for well-managed, orderly growth that preserves natural resources and promotes fiscal responsibility, the City and County's growth management strategy shall include an Urban Services Area (USA). The USA shall include all areas where public facilities and services, including central water and sewer, are available or are identified in the 5-year schedule of capital improvements. The USA will be sized to include approximately 50% more vacant and developable land than is necessary to accommodate the projected population growth expected within the USA by the long-term planning horizon and will account for both the ability to provide urban infrastructure and the presence of environmentally sensitive lands and water bodies.

Policy 2.2.2 – Improvement of Capital Infrastructure (City of Tallahassee/Leon County):
Capital infrastructure improvements shall be targeted for areas within the Urban Services Area within the long-term planning period. These improvements shall be phased incrementally through annual updates to the Capital Improvements Schedule.

Policy 2.2.3 – Planning for Urban Services (City of Tallahassee/Leon County):
Local government infrastructure master plans, and updates to master plans, shall account for the Urban Services Area when determining where to provide sewer, water, electricity, paved streets, sidewalks, and other related urban services.

Policy 2.2.4 – Urban Services Outside of the Urban Services Area (City of Tallahassee/Leon County):
Urban services may be provided outside of the Urban Services Area where necessary to address critical environmental issues, critical public health issues, and/or other critical hazard vulnerabilities. Exceptions shall be substantiated in the capital improvement planning process.

Emergency repairs and improvements necessary to maintain the public health, safety, and well-being shall be allowed without inclusion in the capital improvement planning process.

Policy 2.2.5 – Densities and Intensities (City of Tallahassee/Leon County):
Residential densities and non-residential intensities are established in the Future Land Use Categories and reflected on the Future Land Use Map, and are supported by available capital infrastructure. New growth shall be directed to areas within the Urban Services Area. Residential density and/or non-residential intensity of development allowed for individual site shall be determined by the infrastructure capacity to serve each proposed development, adopted levels of service, and/or the ability to implement conditions of approval or mitigation of potential impacts for the proposed development.

Policy 2.2.6 – Exceptions to the Urban Services Area (City of Tallahassee/Leon County):
Properties in southern Leon County designated Rural or Rural Residential on the Future Land Use Map that are located either between the Urban Services Area and Rural Community in Woodville or west of the Rural Community in Woodville may be designated with a higher density land use when central sewer service is available without requiring an amendment to the Urban Services Area. Any development that utilizes this provision must connect to central sewer.

Policy 2.2.7 – Roadway Improvements (City of Tallahassee/Leon County):
The planning, design, and construction of new streets and roads and the widening of existing streets and roads shall be consistent with the priority of urban services, the Future Land Use Map, and the Urban Services Area.

Policy 2.2.8 – Adaptive Reuse, Infill Development, and Redevelopment (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall incentivize brownfield reclamation, building reuse, and the adaptive reuse of existing structures through land development regulations. These measures will support efficient growth, preserve historic buildings, protect natural resources, maintain affordable housing, and prevent the premature conversion of rural and agricultural land into suburban and urban development. Incentives may include density and intensity bonuses of up to 25%, modified development review thresholds, prioritized permitting, and fee waivers to encourage redevelopment and sustainable land use as specified in the land development code.

Policy 2.2.9 – Greyfields & Brownfields (City of Tallahassee/Leon County):
The local governments may incentivize the redevelopment and/or restoration of value to contaminated or under-utilized land on greyfield, brownfield, or other adaptive reuse/infill sites through strategies including possible density bonuses where appropriate, waiver of development fees or some combination of the two.

Policy 2.2.10 – Transportation Corridors (City of Tallahassee/Leon County):
Identify right-of-way (ROW) needed for planned future transportation improvements—in accordance with Florida Statutes Section 163.3177(6)(b)1., Section 337.273, and Section 334.03(29)—and protect it from development encroachment as development occurs to preserve the corridor for transportation use, to maintain transportation level of service standards and ensure that infrastructure occurs concurrent with the impact of development, meet concurrency, to improve coordination between land use and transportation, and to minimize the adverse social, economic, and environmental impacts of transportation facilities.

The future right-of-way needs for selected transportation corridors designated for improvement in the Tallahassee-Leon County Comprehensive Plan are depicted in the table below. This map, table and corresponding land development regulations are intended to provide a basis for coordinating new development with the provision of transportation facilities by designating corridors where the construction and improvement of transportation facilities is expected

Future Right-of-Way Needs WITHOUT an Existing Corridor Alignment	
Functional Classification	**ROW Width (ft.)[1-3]**
Blueprint Principal Arterial	230
Principal Arterial	200
Minor Arterial	176
Major Collector	146
Minor Collector	100

1) Widths represent maximum anticipated ROW needs for generalized corridors; not precise alignments. Actual road location and design will be determined by specific corridor alignment studies, engineering studies, or other design studies.

2) Alternative widths may be established by the local government, in consultation with other affected agencies, pursuant to an adopted Critical Area Plan or based upon an analysis of existing constraints, community planning objectives, and other considerations unique to the roadway or surrounding land development.

3) In addition to the number of travel lanes, the following are important considerations in the determination of right-of- way needs for future corridors:

   a. Space for sidewalks to provide safe and convenient movement of pedestrians.

   b. The provision of bike lanes or separate bike paths.

   c. Space for current or future location of utilities so that, when necessary, they can be safely maintained without undue interference with traffic. The utility strip needs to be of sufficient width to allow placement of a water main so that in the case of rupture, neither the roadway pavement nor adjacent property will be damaged.

   d. Accommodation of stormwater at the surface or in storm drains.

   e. Accommodation of auxiliary lanes at intersections.

   f. Placement of trees to improve the aesthetic qualities of the roadway, to shade pedestrians, and improve community appearance. The space needs to be adequate to accommodate tree growth without damaging sidewalks, abutting development, or curb and gutter.

   g. Allowing changes in the paved section, utilities, or other modifications that may be necessary to meet unseen changes in vehicle, pedestrian, bicycle, or other transportation needs resulting from changes in land use and activity patterns.

PLANNING DEPARTMENT

March 21, 2025

Objective 2.3 – Public Infrastructure (City of Tallahassee/Leon County):
Provide public infrastructure, public facilities, and public services that are necessary for public health, safety, and well-being efficiently, effectively, and equitably.

Policy 2.3.1 – Public Facilities Siting (City of Tallahassee/Leon County):
Public facilities, including community services, light infrastructure, and post-high school educational uses that provide for the operation of and provision of services on property owned or operated by local, state and federal government shall be allowable in any future land use category. Public infrastructure facilities may include public services and uses provided by private entities operating on property owned by the local, state, or federal government.

Policy 2.3.2 – Public Infrastructure Resilience (City of Tallahassee/Leon County):
To maintain resiliency and assist with post-disaster continuity of government, the siting of public infrastructure and facilities shall account for hazards by locating outside of hazard areas and evacuation zones or mitigating against potential impacts.

Policy 2.3.3 – School Siting Review & Criteria (City of Tallahassee/Leon County):
All proposals to site public or private schools shall be reviewed for consistency with the Comprehensive Plan.

Objective 2.4 – Preservation of Rural Areas (City of Tallahassee/Leon County):
Protect and create agricultural and silvicultural uses, natural resource-based activities, ecosystems, scenic vistas, and pastoral landscapes by preserving rural areas of the community and preventing the premature conversion of rural lands into low density, single-use districts.

Policy 2.4.1 – Transfer of Development Rights (City of Tallahassee/Leon County):
A transfer of Development Rights program may be established to transfer development rights from areas designated Rural on the Future Land Use Map to areas designated Rural Community or Rural Residential on the Future Land Use Map where central sewer service is available. In no instance shall the level of development be inconsistent with the provisions of the Utilities and Conservation Elements.

Policy 2.4.2 – Criteria for Urban Service Area Expansion (City of Tallahassee/Leon County):
To avoid premature conversions of rural areas to higher density and intensity uses, expansions to the Urban Services Area shall be contiguous with the Urban Service Area boundary, shall demonstrate the availability of or ability to provide central water and sewer service, and shall be based on an analysis of population projections and growth trends and an analysis of developable vacant land currently within the Urban Services Area.

Objective 2.5 – Reconnecting Urban Sprawl (City of Tallahassee/Leon County):
Mitigate the impacts of automobile-oriented, single-use developments by leveraging transportation connectivity, land use, and urban design principles that focus on reducing environmental impacts, incorporating a mix of uses, reducing vehicle miles traveled, and improving mobility, especially for people walking, riding bicycles, and using transit.

Policy 2.5.1 – Suburban retrofit (City of Tallahassee/Leon County):

The City of Tallahassee and Leon County shall develop and maintain land development regulations that encourage and incentivize redeveloping suburban areas to:

- Adaptively reuse vacant and underutilized buildings for new uses.
- Reconstruct degraded wetlands and watercourses to either "natural" functionality or repurpose them to complimentary functionality with additional community-use features.
- Build compact, walkable, mixed-use developments using Complete Streets design principles.
- Reduce block sizes to improve walkability.
- Establish more continuous streetscapes with liner buildings close to the street.
- Retrofit streets with appropriate design elements and sidewalks based on the designated Roadway Context Classification and available right-of-way.
- Interconnect street networks.
- Include more diversity in residential building types.
- Provide transit amenities.

Objective 2.6 – Recognizable Places (City of Tallahassee/Leon County):
Foster and protect distinctive, attractive places that are recognizable and important to the community.

Policy 2.6.1 – Beautifying Public Spaces (City of Tallahassee/Leon County):
The local governments shall provide land use regulations that require investment in the streetscape by adding features such as benches, planters, bike racks, tree boxes with trees with a healthy canopy; and providing space for public art installations where appropriate for a given context.

Policy 2.6.2 – Gateway Corridors (City of Tallahassee/Leon County):
Encourage the redevelopment and improvement of Gateway Corridors by providing higher density and intensity land uses along with design standards that promote complete streets and require enhanced landscaping along the corridors. Where appropriate and feasible, Gateway Corridors shall be evaluated for other improvements, including regional stormwater, parking facilities, brownfield remediation, and infrastructure improvements. Gateway Corridors include South Monroe Street, North Monroe Street, West Pensacola Street, West Tennessee Street, Thomasville Road, Mahan Drive, Apalachee Parkway, Lake Bradford Road, South Adams Street, Orange Avenue, and Springhill Road.

Policy 2.6.3 – North Monroe Corridor (City of Tallahassee/Leon County):
In addition to the Gateway Corridor components identified in Policy 2.6.2, encourage the redevelopment of the North Monroe Corridor and by establishing and maintaining the Lake Protection Corridor zoning district for areas north of Interstate-10 that are within the Lake Jackson Basin. Land development regulations shall also provide provisions for non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the design standards and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.6.4 – Woodville Sense of Place (Leon County):
Upon the adoption of the Woodville Sense of Place Plan by the Board of County Commissioners, the Tallahassee-Leon County Planning Department shall evaluate the need for updates to the Comprehensive Plan and land development regulations to implement the recommendations of the plan.

Policy 2.6.5 – Future Downtown Development (City of Tallahassee):
The City of Tallahassee shall incorporate design standards in the land development regulations that require complementary development and redevelopment in the Downtown area, specifically with regard for the historic context and support for multi-modal transportation.

Policy 2.6.6 – Bradfordville Study Area (Leon County):
The Bradfordville Study Area is defined in the Bradfordville Sector Plan, as adopted by the Leon County board of County Commissioners on July 11, 2000, and is depicted on the following map. Development in the unincorporated area of Leon County in the Bradfordville Study Area shall continue to be subject to the development standards for the area included in Leon County land development regulations based on the Bradfordville Area Plan.

Objective 2.7 (City of Tallahassee) – Multimodal Transportation District (MMTD):
Facilitate the safe and comfortable use of multiple modes of transportation through the use of urban design standards to develop and maintain healthy neighborhoods and thriving businesses where travel by foot, bicycle, and transit will be easy and practical to reduce automobile reliance and vehicle miles traveled.

Policy 2.7.1 – MMTD Implementation (City of Tallahassee):
The Multimodal Transportation District (MMTD), established in 2009 under the requirements of Florida Statute Section 163.3180(15) (2009) for the purpose of promoting walking, bicycling, and transit use, shall be maintained, updated, and implemented by relevant City and County

departments through the Multimodal Transportation District Land Development Code and the project programming of the Capital Improvements Schedule.

Policy 2.7.2 Land Use Within the MMTD (City of Tallahassee):
The City of Tallahassee and Leon County shall periodically review the Future Land Use Map and land development regulations within the MMTD and modify them as necessary to facilitate appropriate densities, intensities, and mixture of land uses to support the goals of the district, based on the following targets:

a. Central nodes consisting of employment and services, relatively high density residential, and public spaces all oriented around convenient access to public transit facilities.

b. Areas designated primarily for residential uses should be no more than ½ mile from areas designated for shopping, services, and employment uses.

Policy 2.7.3 – Land Development Regulations in the MMTD (City of Tallahassee):
Adopt and maintain context-based land development regulations that ensure new development and redevelopment will contribute to walkable urban development patterns. Additionally, these regulations shall include and/or address the following:

a. Building placement.

b. Block size standards shall encourage small blocks and an interconnected street network.

c. Sidewalks with widths based on context.

d. Facade transparency.

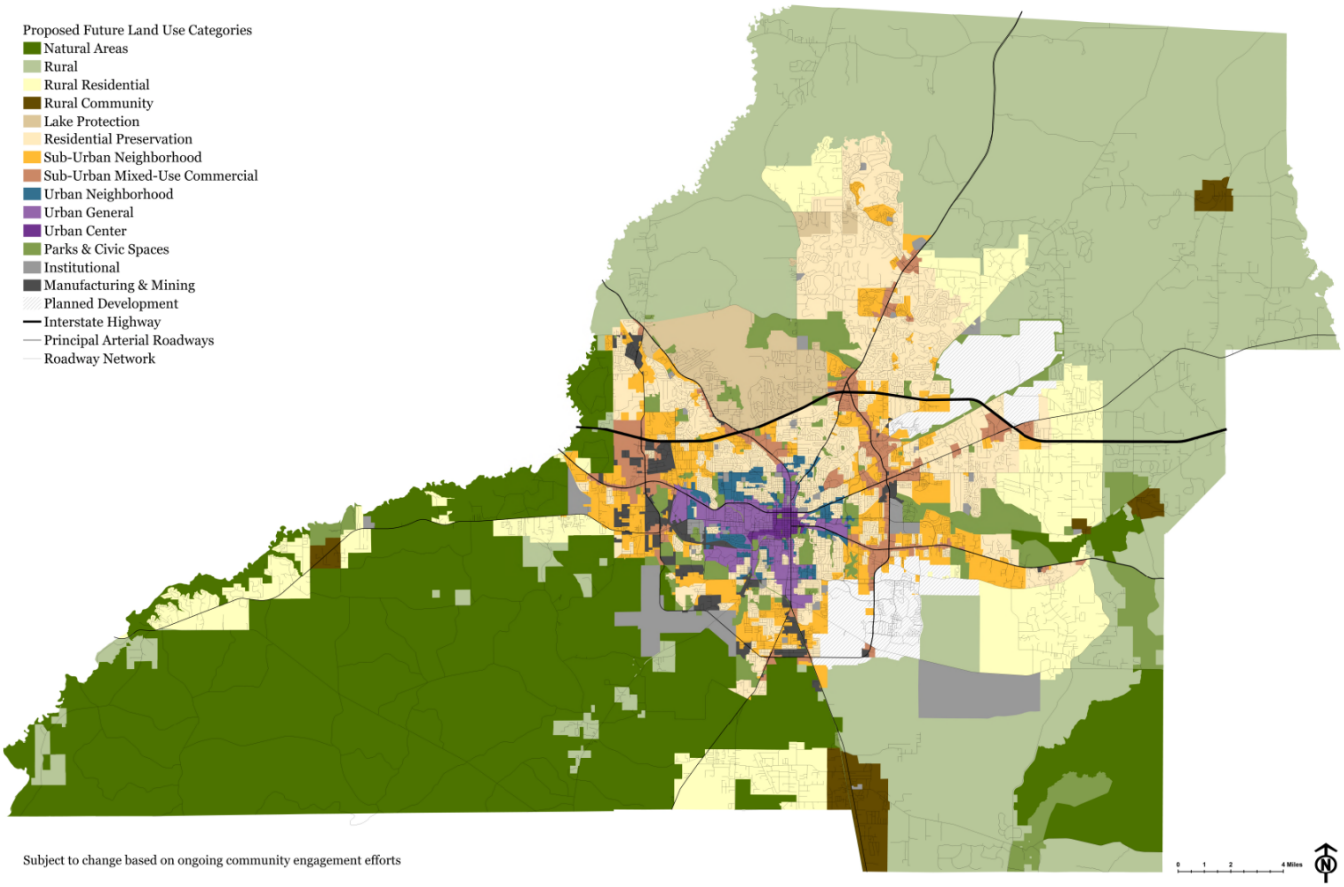
e. Parking location.

Policy 2.7.4 – Minimum Parking Requirements (City of Tallahassee):
Minimum parking requirements shall not be applied to areas designated Urban Center of the Future Land Use Map and shall be significantly reduced, removed, or made otherwise flexible for other areas in the MMTD.

Policy 2.7.5 – Transit in the MMTD (City of Tallahassee):
The MMTD shall be well-connected via transit to major trip generators and attractors both inside and outside the areas where feasible; transit stops and waiting areas shall be safe, accessible, and comfortable, and intermodal connections shall be made.

Policy 2.7.6 – Transportation Mitigation (City of Tallahassee):
Transportation mitigation funds collected within the MMTD shall be used for projects within the MMTD with priority given to bicycle, pedestrian, or transit projects.

Policy 2.7.7 – MMTD Evaluation (City of Tallahassee):
The MMTD code shall be evaluated for opportunities to incorporate FDOT Context Classification along state roads, consideration of implementation through form-based code, and opportunities to streamline infill development and redevelopment within the Urban Center land use category.



Objective 2.8 – Community Context (City of Tallahassee/Leon County):
Identify natural, rural, sub-urban, and urban context areas based on distinguishing characteristics of the different locations across the community. The distinguishing characteristics used to identify the

context areas will include existing development patterns, future development patterns based on land use and zoning, natural features, access to infrastructure, adjacent roadway classifications and proximity to employment centers, universities and schools, transit lines, trails and multi-modal facilities. The context areas shall be used as the basis for planning and design of land uses, transportation facilities, public facilities, and infrastructure in the City of Tallahassee and Leon County.

Policy 2.8.1 – Tallahassee-Leon County Future Land Use Map (City of Tallahassee/Leon County):
Identify the distribution, extent, and location of the different uses of land in the City of Tallahassee and Leon County in a manner that reflects community context and the vision for the community's future.

Policy 2.8.2 – Context Area Densities, Intensities and Mix of Uses (City of Tallahassee/Leon County):
The Future Land Use Map and Zoning Atlas shall include uses, densities, and intensities consistent with concentrating development within the Urban Services Area. Land uses and zoning within the Urban Context Areas shall have higher allowable densities and intensities than the Sub-Urban Context Areas, which shall have higher allowable densities and intensities than the Rural Context Areas. To ensure a mixture of uses in mixed-use land use categories, a minimum of 5% open space (which may include landscaping and stormwater facilities subject to land development regulations) is required and residential or non-residential land uses may develop from a range of 5% up to 95%. Public Schools are an allowable use in all future land use categories with the exception of the Natural Areas land use. This provision is intended to provide sufficient lands proximate to residential areas to allow existing and future school siting considerations.

Future Land Map

Future Land Use Categories (FLUCs)

Policy 2.8.3 – Natural Areas Future Land Use Category (City of Tallahassee/Leon County):

State and national forests, wildlife management areas, and other managed natural areas serve to sustain the health, diversity, and productivity of valuable ecosystems while integrating public use of these resources. The Natural Areas land use category represents conservation and preservation areas protected from development.

Natural Areas consist of lands approximating or reverting to wilderness conditions, including lands unsuitable for settlement due to topography, hydrology, or vegetation. Areas designated as Natural Areas shall be protected from development except for community services, light infrastructure, and recreational uses that are compatible with the natural surroundings. Silviculture (the growth and cultivation of trees) shall be allowed.

Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the managed natural areas. No residential uses shall exceed a density of one dwelling unit per 10 acres.

The following special conditions shall apply to the Natural Areas future land use category:

1. Ecotourism uses and structures ancillary to ecotourism uses (such as trailheads, interpretive kiosks, boat ramps, canoe/kayak launches, and campsite amenities) are allowable provided the structures preserve the scenic and natural character of this category.
2. Accessory uses directly associated with the operation of silvicultural, wildlife conservation, and recreational hunting shall be allowed.
3. Light infrastructure shall be allowed within the Natural Areas future land use category, provided there is no reasonable alternative location outside of Natural Areas future land use areas that provide the same public benefit.

Policy 2.8.4 – Rural Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Rural land use category is to maintain and promote agriculture, silviculture, and natural resource-based activities, to preserve natural systems and ecosystem functions, and to protect the scenic vistas and pastoral development patterns that typify Leon County's rural areas. Typical land uses within this category shall include agriculture, silviculture, and natural resource-based activities. Due to the very low intensity development pattern that is intended for the category, urban services are not planned or programmed for the area.

The Rural land use category shall allow single family residential uses at a maximum density of one dwelling unit per 10 acres.

Non-residential uses functionally related to and directly in support of agriculture, the growth and cultivation of trees, and other natural resource-based activities, including ecotourism activities, may be permitted at a maximum intensity of 2,000 square feet per acre. The location of such uses shall be limited to the intersection of major collector and arterial or the intersection of two arterial designated roadways with development standards provided in land development code regulations for these nodes, except for non-residential uses supporting ecotourism

activities, which shall be allowed near the waterbodies and natural features that are the focus of the ecotourism activity.

Community services, light infrastructure, and recreational uses may be permitted provided they are compatible with the natural and rural surroundings. Facilities associated with these uses may be permitted at a maximum intensity of 5,000 square feet per acre, with the primary structure not to exceed 7,500 square feet.

Active recreational uses not functionally related to or supportive of agriculture, silviculture, or natural resource-based ecotourism activities are prohibited. This includes, but is not limited to, golf course, drag strips, and racetracks.

To ensure that such uses are developed in a manner that is compatible with the rural nature of the area, additional design standards and limitations shall be included in the land development code.

The following special conditions shall apply to the Rural Land Use category:

1. Development proposals within the Rural Land Use category shall be evaluated for compatibility with adjacent agricultural and silvicultural uses and shall consider the land management activities associated with such uses, including prescribed fires which result in smoke. Development that is incompatible with agricultural uses, or has the potential to fragment, encroach upon, or displace such uses, shall not be permitted.
2. Property within the Rural Land Use category shall not be converted to a more intense land use category unless the subject site adjoins the Urban Services Area or a designated Rural Community.
3. Non-residential development shall be subject to design standards that preserve the scenic and rural character of this category and protect existing rural residential development from offsite impacts of non-residential development. Design standards shall include, but not be limited to, signage, lighting, parking, landscape buffers, and building materials.
4. Existing uses and structures listed on the local or national historic register as of July 6, 2015, shall be considered conforming.
5. Because urban services are not planned or programmed for areas within the Rural land use category, the Rural land use category shall not be applied to properties within the Urban Services Area.

Policy 2.8.5 – Rural Residential Future Land Use Category (Leon County):
The intent of the Rural Residential category is to provide the opportunity for very low-density residential areas mixed with open space and agricultural activity on the periphery of the Urban Services Area.

Residential land uses in Rural Residential shall be permitted at a density of up to one dwelling unit per three acres except in Conservation Subdivisions developed in accordance with the special conditions for the Rural Residential land use.

Community facilities, minor commercial activities, and minor offices are permitted. The maximum allowable gross square footage in Rural Residential may not exceed 20,000 square

feet per acre for minor commercial and 100,000 square feet per acre for neighborhood commercial and shall be further detailed in the land development code.

Industrial, office, and more intensive commercial land uses are prohibited due to lack of present infrastructure services or potential negative environmental impacts. Present or future agricultural, silviculture and forestry activities may be allowed.

The following special conditions shall apply to the Rural Residential Land Use category:

1. To promote a mix of residential areas and perpetually protected open space and agricultural lands, Conservation Subdivisions are allowed and encouraged. Conservation Subdivision design in the Rural Residential land use may be permitted at a gross density of up to one unit per three acres with units clustered on no more than 50% of the site. Conservation Subdivisions must also permanently set aside at least 50% of the total site as open space and restrict development to the least environmentally sensitive and otherwise significant portions of the land. Residential lot size shall be a minimum of 0.5 acre.
2. To protect rural areas from premature development, facilitate infill and redevelopment inside the Urban Services Area, and in recognition of the significant area already mapped as Rural Residential, no additional lands designated Rural or Rural Residential shall be converted to a more dense or intense land use category unless it is within the Urban Services Area and adjoining lands are also within the designated Urban Services Area.
3. Existing, lawfully established, non-residential uses within the Rural Residential land use category that are compatible with surrounding uses shall be considered permitted uses.
4. Existing lots of record shall be considered vested for the purposes of single-family residential use regardless of lot size or density provided all other development standards can be met.
5. Drive-in and drive-thru facilities are not permitted in Rural Residential.

Policy 2.8.6 – Rural Community Future Land Use Category (Leon County):
The intent of the Rural Community land use is to distinguish long-established unincorporated communities located outside of the urban service area. These unincorporated rural communities have historically grown independently as communities outside of the Tallahassee urban area and are not extensions of urban sprawl. The Rural Community land use represents geographically compact concentrations of developed areas, including many historic towns, immediately surrounded by rural and natural areas.

Residential uses within the Rural Community land use are allowed at a base maximum density of 4 dwelling units per acre. Where central sewer is available, the maximum density allowed is 8 dwelling units per acre.

Community facilities, minor offices and small to moderate-sized commercial development that provide local and surrounding rural residents access to basic shopping opportunities are limited to a maximum intensity of 10,000 square feet per acre. Maximum building size shall not exceed 50,000 square feet. The Land Development Code shall incorporate standards to minimize potential adverse effects of non-residential uses on surrounding residential property, encourage

clustering of businesses to discourage "strip" development, provide for utility space minimums to avoid traffic interference, limit building mass, and encourage pedestrian access.

The following special conditions shall apply to the Rural Community Land Use category:

1. Water and wastewater systems used to serve areas designated Rural Community shall be designated for lower density service as this category is not intended to create an area that attracts regional development.
2. Rural Communities within the Primary Springs Protection Zone shall implement development provisions per the Conservation and Utilities Elements.

Policy 2.8.7 – Lake Protection Future Land Use Category (City of Tallahassee/Leon County):

Lake Jackson, designated both an Outstanding Florida Water (OFW) and Aquatic Preserve, is one of the most unique waterways in Florida. The intent of the Lake Protection category is to ensure that development within the Lake Jackson basin occurs in a sustainable and environmentally sound manner, achieving measurable reductions in nutrient pollutants and improving water quality. The bounds of this category are to be based on the Lake Jackson basin boundary. The boundaries of the Lake Protection category may be applied to areas outside but adjacent to the Lake Jackson basin where application of the category promotes cohesive development patterns along a mixed-use corridor or node.

The Lake Protection category shall allow for residential uses at a density of one dwelling unit per two acres. To encourage compact and efficient development, three density bonus options are available for properties within the category:

- A residential density of up to 4 dwelling units per acre may be permitted within developments designed as a Conservation Subdivision.
- A residential density of up to 8 dwelling units per acre may be permitted within the Lake Protection Corridor (LPC) zoning district, where served by central water and sewer systems.
- A residential density of up to 20 dwelling units per acre may be permitted within the Lake Protection Node (LPN) zoning district, where served by central water and sewer systems, and where design standards, including buffering to adjacent low and density residential, as established in the land development code is met.

Non-residential and mixed-use development within the Lake Protection category may only be permitted within areas designated with the LPN and LPC zoning districts. Within these districts, single use, non-residential development shall be allowed at a maximum intensity of 10,000square feet per acre in the LPC zone and 20,000 square feet per acre in the LPN zone where buffering to low-density residential as established in the land development code is met. Projects containing a vertical mixture of uses, including any combination of office, commercial and residential uses, may receive a bonus of 2,500 square feet per acre in the LPC zone and a bonus of 10,000 square feet per acre in the LPN zone.

Community services, light infrastructure, and recreational uses shall be permitted. Facilities associated with these uses shall be allowed at a maximum intensity of 10,000 square feet per

acre.

The following special conditions shall apply to the Lake Protection Future Land Use category:

1. The local governments shall implement the Lake Protection Land Use Category with a minimum of three zoning districts, including Lake Protection, LPC, and LPN.
2. The LPN zoning district shall only be permitted at the following intersections:
    a. Highway 27 North and Sessions Road
    b. Highway 27 North and Capital Circle NW/Old Bainbridge Road
    c. Highway 27 North and Fred George Road
    d. Bannerman Road and Bull Headley Road

    The exact extent of these Nodes shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the respective intersection and shall not include areas within a Special Development Zone (SDZ) or existing single-family subdivisions.
3. The LPC zoning district shall only be permitted along Highway 27. The exact extent of the LPC shall be specified in the City of Tallahassee and Leon County land development regulations but generally shall not extend beyond 0.25 miles from the centerline of Highway 27 and shall not include areas within a Special Development Zone (SDZ).
4. As an alternative to large-lot developments, Conservation Subdivisions shall be permitted within the Lake Protection land use category and shall include the following:
    a. Contain a minimum of 60% open space preserved in perpetuity through a conservation easement and comprised of such things as preservation and conservation features, Special Development Zones, undeveloped uplands, passive recreation areas, and storm water facilities designed as a community amenity; and
    b. Be developed at a maximum gross density of two dwelling units per acre or a maximum gross density of four dwelling units per acre when served by central water and sewer systems.
5. Land development regulations shall include stormwater treatment standards for all development and redevelopment within the Lake Protection land use category. To encourage redevelopment in the Lake Protection category, land development regulations may provide for a partial credit applied toward existing impervious surface on previously developed sites.
6. Minimum open space requirements, Low Impact Development strategies, and maximum building footprints shall be included as development standards for the zoning districts implementing the Lake Protection land use category. Additional development standards deemed necessary to protect Lake Jackson from further degradation and/or improve existing water quality may be included in the land development code.
7. The land development regulations shall provide provisions for legally established non-conforming uses and properties in the Lake Protection land use category to be deemed conforming when redevelopment or site improvements result in the site meeting the

design standards, including buffering to adjacent low-density uses, and water quality standards for the Lake Jackson basin established in land development regulations.

Policy 2.8.8 – Residential Preservation Future Land Use Category (City of Tallahassee/Leon County):

Characterized by existing homogeneous residential areas within the community that are predominantly accessible by local streets. The primary function is to protect existing stable and viable residential areas from incompatible land use intensities and density intrusions greater than 6 units per acre. Future development primarily will consist of infill due to the built-out nature of the areas. Commercial, including office as well as any industrial land uses, are prohibited. Future arterials and expressways should be planned to minimize impacts within this category. Single family, townhouse and cluster housing may be permitted within a range of up to six units per acre. Notwithstanding the maximum densities in this policy, existing legally established residential uses exceeding 6 units per acre shall be deemed conforming; and expansion of residential uses exceeding 6 units per acre or other non-conforming uses are prohibited. Nonresidential uses, other than community facilities and recreational facilities are not permitted. Community facilities are limited to a maximum of 60% impervious surface.

The Residential Preservation category shall be based on the following general criteria. For inclusion, a residential area should meet most, but not necessarily all of these criteria:

1) Existing land use within the area is predominantly residential
2) Majority of traffic is local in nature
    a) Predominance of residential uses front on local street
    b) Relatively safe internal pedestrian mobility
3) Densities within the area generally of six units per acre or less
4) Existing residential type and density exhibits relatively homogeneous patterns
5) Assessment of stability of the residential area, including but not limited to:
    a) Degree of home ownership
    b) Existence of neighborhood organizations

In order to preserve existing stable and viable residential neighborhoods within the Residential Preservation land use category, development and redevelopment activities in and adjoining Residential Preservation areas shall be guided by the following principles:

a) Limitation on future commercial intensities adjoining low-density residential preservation neighborhoods.

New or redeveloped commercial uses adjoining residential preservation designated areas shall mitigate potential impacts by meeting land development regulation requirements for buffers, screenings, landscaping, noise, setbacks and stepbacks to be compatible with low density residential development in terms of size and appearance. The factors cited in paragraph (d) below shall be used when determining the compatibility and design techniques. The design and layout of adjoining commercial uses shall be oriented to place the section of the development with the least potential negative impacts next to the residential preservation area.

b) Limitations on existing light industry adjoining residential preservation neighborhoods.

Expanding or redeveloped light industrial uses adjoining low-density residential areas within the residential preservation land use category shall mitigate potential negative impacts and provide

screening or buffering between the light industrial uses and the low and medium density residential uses. The factors cited in paragraph (d) below shall be considered when determining compatibility and design techniques.

The design and layout of expanding or redeveloping light industrial uses adjoining residential preservation areas shall be oriented to place the section of the development with the least potential negative impacts in the area next to the existing and/or future low density residential area in the residential preservation land use category. New light industrial uses shall prevent or mitigate off-site impacts in accordance with the Institutional Special District or the Manufacturing and Mining Special District t and applicable Land Development Regulations.

c) Additional development requirements for allowed community facilities when adjoining low density residential areas, except for cemeteries or religious facilities to be used solely for religious functions.

Such development requirements will also apply to ancillary facilities when proposed in conjunction with religious facilities and are to result in effective visual and sound buffering (either through vegetative buffering or other design techniques) between the community facilities and the adjoining residential preservation area.

d) Land use compatibility with low-density residential preservation neighborhoods

A number of factors shall be considered when determining a land use compatible with the residential preservation land use category. The following factors shall continue be maintained in the land development regulations used to determine whether a new development is compatible with existing low density residential uses and with the intensity, density, and scale of surrounding development within residential preservation areas: proposed use(s); intensity; density; scale; building size, mass, bulk, height and orientation; lot coverage; lot size/ configuration; architecture; screening; buffers, including vegetative buffers; setbacks; signage; lighting; traffic circulation patterns; loading area locations; operating hours; noise; and odor.

e) Limitations on Planned Unit Developments in the Residential Preservation land use category.
Planned Unit Developments proposed within the interior of a Residential Preservation area designated recorded or unrecorded subdivisions shall be generally consistent with the density of the existing residential development in the recorded or unrecorded subdivision. Parcels abutting arterial roadways and/or major collectors may be permitted to achieve six dwelling units per acre.

Policy 2.8.9 – Sub-Urban Neighborhood Future Land Use Category (City of Tallahassee/Leon County):

The intent of the Sub-Urban Neighborhood land use category is to allow for neighborhood-scale development that provides a mix of housing types and neighborhood scale commercial within a walkable and bikeable area It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct, legal non-conforming uses and/or densities. Principal uses within the district shall include residential development, neighborhood commercial, and neighborhood supportive facilities such as community facilities, recreational amenities, and light infrastructure.

The Sub-Urban Neighborhood category shall allow for residential uses at a maximum density of 20 dwelling units per acre. Allowed residential building types are single-family detached, single-

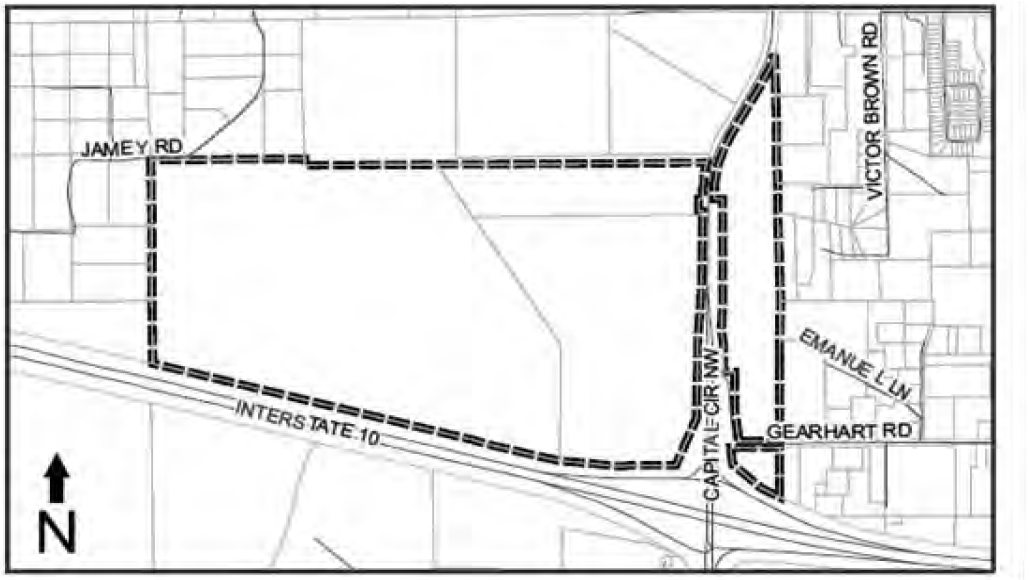
family attached, duplexes, triplexes, fourplexes, multiplexes, multi-family, and live-work units.

Office, commercial, and community service uses are allowed up to 20,000 square feet per acre. The intensity of all non-residential land uses shall be kept minimal to reduce the intrusive impact upon the predominant residential land use. Land development regulations shall include development standards to maintain low traffic volumes, vehicular speeds, and parking for non-residential uses.

The following special conditions shall apply to the Sub-Urban Neighborhood Future Land Use category:

1. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Sub-Urban Neighborhood land use.
2. If central sanitary sewer is not available, non-residential development is limited to a maximum of 900 gallons of wastewater flow per day. Community service facilities are limited to no more than 5,000 square feet, or a sewage flow not to exceed 900 gallons per day. Also, refer to Sanitary Sewer Policies 1.2.3 and 2.1.2 of the Utilities Element of the Comprehensive Plan for additional requirements.

Policy 2.8.10 – Sub-Urban Mixed-Use Commercial Future Land Use Category (City of Tallahassee/Leon County):



The intent of the Sub-Urban Mixed Use Commercial Land Use Category is to establish activity centers and mixed-use nodes that provide community wide or regional commercial activities and housing. This land use category promotes the efficiency of the transportation system through consolidation of trips and discouragement of the unabated sprawl of commercial activities. An integrated pedestrian and bicycle access system shall be provided to afford safe and accessible foot and bike travel between the land uses. The district is intended to facilitate efficient traffic flow by allowing only land uses developed with comprehensively planned access, egresses, and internal circulation systems through the land development review and approval process.

Residential land uses at a maximum density of up to 45 dwelling units per acre shall be allowed in the Sub-Urban Mixed Commercial Land Use Category. Recreational opportunities, cultural activities, commercial goods and services should be located nearby to complement residential uses. Mass transit stops should be located at large commercial centers with appropriate connections established between commercial and residential areas to reduce the automobile dependency of residents and employers. For infill development and redevelopment projects, a variety of residential types, employment, office, and commercial uses should be incorporated.

Non-residential uses including office, recreation, light infrastructure, community services, and educational facilities shall be allowed up to 25,000 square feet per acre except for in the scenarios outlined in the special conditions below.

The following special conditions shall apply in the Sub-Urban Mixed Use Commercial Land Use Category:

1. Except within mixed-use centers, larger-scale commercial development shall be buffered from residential neighborhoods.
2. If development within the Sub-Urban Mixed Use Commercial Land Use Category only contains residential land uses, at least 5% of the gross site must be used for passive or active open space such as pocket parks, green space, or trails. The required 5% of the site shall be contiguous.
3. Non-residential development that is a part of a mixed-use development that includes medical centers may have an intensity of up to 80,000 square feet per acre, and up to 176,000 square feet per acre if it includes a hospital.
4. Park Place is a designated Regional Activity Center subject to the increased Development of Regional Impact guidelines and standards consistent with Rule 28-24.014(10)(a), Florida Administrative Code.

Park Place meets the parameters for a Regional Activity Center as defined in Rule 28-24.014(10)(c)2, Florida Administrative Code, and is depicted on the map above. Multi-use land uses for a Regional Activity Center can be accommodated by the currently designated Planned Development future land use category and development shall occur consistent with the guiding land use policies within the local comprehensive plan and the land development code.

Policy 2.8.11 – Urban Neighborhood Future Land Use Category (City of Tallahassee): The intent of the Urban Neighborhood Land Use is to provide medium density housing, live/work housing, and a mix of uses set within small to medium blocks that are defined by walkable streets characterized by narrow travel lanes, on-street parking, sidewalks, and planter strips. It is not intended to be applied within the interior of an existing established low-density neighborhood, unless to correct legal non-conforming uses and/or densities. The Urban Neighborhood area shall be characterized by a mix of uses on small lots, with residential uses

being the predominant type, and a street network that generally connects to residential neighborhoods along corridors or behind the uses fronting major collectors or arterial roadways. Non-residential neighborhood-scale uses are allowed and intended to integrate into the surrounding neighborhood. Pedestrian safety and comfort shall be prioritized over vehicle speed.

Allowed land uses include residential and neighborhood-scale non-residential uses. The scale of all non-residential land uses shall remain accessible to pedestrians living in surrounding residences. Emphasis on commercial uses shall be limited to convenience goods and services, small to moderate scale grocery stores, and small pharmacies and offices. Community facilities, office, and commercial development in scale with surrounding residential areas are appropriate.

A maximum gross density of 26 dwelling units per acre is allowed. Residential development should include a mix of densities and housing types and be located to maximize pedestrian access to shops, public facilities and recreational opportunities that are passive or active.

A maximum intensity for commercial uses of 30,000 square feet per acre and a maximum intensity for office uses of 30,000 square feet per acre are allowed. Traffic volumes and speeds shall be kept low, and parking for nonresidential uses shall be small in scale. The number of parking spaces may be reduced to reflect increased pedestrian access.

The following special conditions shall apply to the Urban Neighborhood Land Use Category:

1. Design and development standards for the Urban Neighborhood area shall detail the placement, scale, and relationship between buildings and the street, including landscaping standards, to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Urban design standards, buffering standards, and screening standards shall be included in the City of Tallahassee and Leon County land development regulations to ensure compatibility between residential and non-residential uses within the Urban Neighborhood land use category.

Policy 2.8.12 – Urban General Future Land Use Category (City of Tallahassee):
The intent of the Urban General Land Use is to provide a mixture of uses including a variety of residential land uses, employment (including light manufacturing), office and commercial activities. This category includes a variety of building types, short setbacks, wide sidewalks, and a street scape with trees, typically defining medium-sized blocks within walking distance of a high activity or employment centers; essentially a walkable urban area with a mix of housing options and significant non-residential uses related to and supporting housing. The land use category provides higher density residential opportunities near university campuses and the downtown area. Infill and potential redevelopment and/or rehabilitation activity are encouraged.

Allowed land uses include residential, commercial, office, and community facilities.

A maximum gross density of 50 dwelling units per acre is allowed.

A maximum intensity for commercial uses of 60,000 square feet per acre and a maximum

intensity for office uses of 60,000 square feet per acre are allowed.

The following special conditions shall apply to the Urban General Land Use Category:

1. Design and development standards for the Urban General area shall detail the placement, scale, and relationship between buildings and the street to support an area of high pedestrian comfort and a continuous walkable street network throughout the district.
2. Development standards in the Tallahassee Land Development Code may not require minimum parking requirements for uses in the Urban General land use category.
3. Street access by nonresidential uses may be permitted within the City limits of Tallahassee so long as site design complies with land development regulations to mitigate potential incompatibility with residential uses within the land use district.
4. Development at universities and colleges shall be regulated by the respective campus master plans and development agreements. Coordination on development in the proximity of universities and colleges shall be subject to development agreements.

Policy 2.8.13 – Urban Center Future Land Use Category (City of Tallahassee):
The intent of the Urban Center land use category is to be a vibrant, 18-hour urban activity center with quality development that includes a variety of residential and nonresidential uses at high densities and intensities. The land use is characterized by buildings in close proximity to one another, featuring retail on the ground floor and residential units above, wide sidewalks, consistent street trees, and a strong emphasis on pedestrian activity. The emphasis in this area, which is within the Multimodal Transportation District, is to facilitate a shift from cars to pedestrian, bike and transit modes of transportation. The land use intends to promote a mix of uses and higher densities and intensities within its Urban Center, while promoting multiple modes of transportation.

Allowed land uses include residential, commercial, office and community facilities.

A maximum gross residential density of 150 dwelling units per acre is allowed. Development intensity in Urban Center is up to 100% lot coverage. Land development regulations may establish more restrictive lot coverage, building heights, and design standards for different locations, neighborhoods, and special character districts within the Urban Center land use.

Intensity for nonresidential uses shall be identified in the Downtown regulating land development code that shall include lot coverage and maximum building height.

The following special conditions shall apply to the Urban Center Land Use Category:

1. The development regulations within the Urban Center area shall establish Design Guidelines for the land use in order to allow for more mixed-use, pedestrian, bike and transit- oriented development.
2. Future Expansion of the Urban Center land use shall be subject to the following requirements.
    a. The proposed parcels shall be:
        i. Within the existing Downtown Overlay; and

ii. Contiguous to the existing Urban Center FLUM area.

iii. Served by available and adequate infrastructure to support the densities and intensities allowed in the Urban Center land use.

iv. Demonstrated to exhibit a need for the expansion (e.g.: parcel of sufficient size not available in the Central Core FLUM for the proposed development).

Policy 2.8.14 – Special Development Districts (City of Tallahassee/Leon County):
The following Special Development Districts are created to address unique uses and areas throughout the community:

- Manufacturing and Mining – Heavy industrial land uses that do not, typically, have a defined intensity or density and may have the potential to create significant offsite impacts to surrounding areas, have specific federal and/or state requirements and must receive federal and/or state approval in addition to local government approval. Impacts such as noise, lighting, traffic, and vibrations that are not regulated by federal and/or state laws shall be regulated by the City and County.
- Institutional - Heavy infrastructure community facilities which may be public or privately owned or established that provide significant public benefit but may have the potential to create off-site impacts.
- Parks and Civic Spaces – City, County, State and Federal areas utilized for passive and/or active recreation uses. The principal land use will not, typically, have a defined density or intensity.
- Planned Development – Large, undeveloped land areas within the Urban Services Boundary that are generally under single ownership that are required to be master planned prior to development.

Special Development Districts shall be subject to the provisions of the Comprehensive Plan except where otherwise specified by federal and state laws.

Policy 2.8.15 – Manufacturing and Mining Special District (City of Tallahassee/Leon County):
Advanced manufacturing and mining are important parts of the economy in the City of Tallahassee and Leon County. Dramatic shifts in the technologies used by these sectors are resulting in operations that are often cleaner, quieter, and less noxious to neighboring uses than traditional heavy industrial uses. Manufacturing and mining uses in appropriate locations provide necessary jobs and the raw materials needed to support growth and development in the community.

Manufacturing and mining uses intended for the distribution of manufactured goods should be encouraged in areas with access to the Tallahassee International Airport or the Florida Department of Transportation's (FDOT) Strategic Intermodal System (SIS) facilities. The Manufacturing and Mining Special District shall not be applied to areas outside the Urban Services Area.

Because heavy industrial uses vary in their operations and potential for offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.

The Manufacturing and Mining Special District accommodates a variety of uses that may have similar demands on public infrastructure. Light industrial, mining, and heavy industrial uses are allowable in the Manufacturing and Mining Land Use.

- Light Industrial – Light Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. Ancillary residential uses (intended for caretaking, maintenance, the temporary lodging of employees, or security) may not exceed two units per acre.
- Mining – Mining uses shall be permitted subject to applicable landscaping and natural area requirements and the dimensional standards included in land development regulations. A land reclamation plan shall be submitted demonstrating that upon termination of the activity, the land shall be returned to a condition that will allow an effective reuse compatible with surrounding properties.
- Heavy Industrial – Heavy Industrial uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre. These areas shall have stringent locational criteria and require extensive buffering and/or relative distance from other land uses. These uses may require employment of techniques to prevent impacts offsite or require mitigation and/or minimization techniques for impacts. Ancillary commercial uses designed to serve adjacent workers may be permitted.

The following special conditions shall apply to the Manufacturing and Mining Special District:

1. Noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from industry and mining uses shall be prevented or mitigated to avoid negative impacts on properties in the vicinity of these uses. The City and Leon County Land Development Code shall provide minimum mitigation standards.
2. Administrative offices that support and are functionally related to onsite activities are allowed in any of the implementing zoning districts for the Industry and Mining Special District.
3. Site plans must demonstrate the protection of adjacent non-industry and non-mining properties through development standards outlined in the land development codes.
4. A plan for vehicular access to and from the site addressing heavy trucks and equipment must be submitted with site plans and must demonstrate compatibility with adjacent land uses.
5. Hydraulic fracturing, proppant fracturing, acid fracturing, matrix acidizing, and similar activities, commonly referred to as fracking, are not permitted uses in the Industry and Mining Land Use.

Policy 2.8.16 – Institutional Special District (City of Tallahassee/Leon County):
The purpose of this Special District is to provide lands for heavy infrastructure community facilities that must obtain federal and/or state approvals to be located, modified and/or

expanded within the community. Institutional facilities and uses may be public or privately owned or established but must provide significant public benefit.

Principal uses for institutional facilities and uses may not have a defined density or intensity. Generally, facilities and accessory uses shall not occupy more than 90 percent of the entire site when located within the Urban Service Boundary or 75 percent of the entire site when located outside of the Urban Services Boundary. Primary buildings for institutional uses shall be permitted at a maximum intensity of 30,000 square feet of gross building floor area per acre.

The following special conditions shall apply to the Institutional Special District:

1. Institutional land uses have the potential to create offsite impacts to surrounding areas. Because institutional uses vary in their operations and their potential offsite impacts, performance and locational criteria shall be established in the City and County land development codes for the implementing zoning districts.
2. Whenever possible, noise, vibrations, smoke, dust and particulate matter, odor, and lighting resulting from institutional uses shall be prevented. In cases where the impacts cannot be prevented, they shall be mitigated to avoid negative impacts on properties in the vicinity of these uses.

Policy 2.8.17 – Parks and Civic Spaces Special District (City of Tallahassee/Leon County):

The Parks and Civic Spaces Special District may be applied to publicly or privately owned lands and is intended to provide areas within the community for the resource conservation and recreational facility needs of the community. Non-residential uses that enhance parks with active recreational facilities, such as a clubhouse at a golf course or restaurant and retail uses at parks in urban areas, are allowed if designed to complement the park's intended use.

The maximum intensity for non-residential uses in areas designated Parks and Civic Spaces Special District is 1,000 square feet per acre. Residential uses shall be limited to hosts and resident volunteers involved in the maintenance or operation of the parks and civic spaces.

The following special conditions shall apply to the Parks and Civic Spaces Special District:

1. Commercial active recreation land uses shall be established through the Planned Unit Development process.
2. Because commercial active recreation land uses vary in their operations and potential offsite impacts, the Planned Unit Development shall establish standards to address the potential offsite impacts, including, but not limited to noise, lighting, and traffic access and congestion.

Policy 2.8.18 – Planned Development Special District (City of Tallahassee/Leon County):

The Planned Development Special District is intended to identify large, undeveloped land holdings that will be developed with various mixes of land uses for which more detailed planning is required to establish the appropriate mixture and arrangement of uses. Undeveloped areas within the Urban Service Area that, as of January 1, 2007, are predominantly in the same ownership or control and encompassing more than 200 acres shall be defined as a Planned Development Special District. These Planned Development Special Districts shall require, prior to subdivision or development, a Master Plan approved by the jurisdiction in which the Planned

Development Special District is located.

The Planned Development Special District allows intensities of 25,000 square feet per acre and densities shall not exceed 20 dwelling units per acre. Storage areas within buildings, warehouses, mini-warehouses and self-storage facilities may have a gross floor area up to 50,000 square feet per acre.

The following special conditions shall apply to the Planned Development Special District:

1. Master Plans shall show the location, intensity and mix of proposed land uses, as well as the transportation network necessary to serve the proposed development. To provide for a more self-supporting development pattern that is less oriented to the use of automobiles, the Master Plan area shall include at least four different land uses (e.g., residential, office, commercial, recreation, light industrial, public or private open space) that are integrated with each other, as well as with the unique characteristics of the development area.
2. Master Plans shall identify the following:
    a. Boundary of area subject to Planned Development.
    b. General depiction of mix, location and intensities of future land uses.
    c. Activities permitted within each land use.
    d. Total dwelling units.
    e. Total square footage of non-residential development.
    f. How natural resources on-site will be protected.
    g. Major transportation system improvements that are consistent with adopted transportation plans.
    h. Capacity maintenance, bicycle, and pedestrian accessibility, impacts to surrounding areas and protection of canopy roads, if applicable.
    i. Address mass transit, if transit facilities are available or planned within the plan horizon for the Tallahassee-Leon County Comprehensive Plan to serve the Planned Development.
    j. Facilities and development requirements to provide alternative modes of transportation, such as bicycle and pedestrian mobility and, if available, mass transit.
    k. An infrastructure plan which identifies the type, demand, and general location of needed utilities in relation to existing and scheduled utilities in the areas of the development.
    l. The location and adequacy of proposed schools, parks, and open space.
    m. How the development will reduce transportation demand by allowing for internal trip capture at project build-out through a mixture of land uses.
    n. How the development will comply with applicable affordable housing policies and/ordinances.
    o. How the unique characteristics of the area, including cultural and historic resources, preservation and conservation features, and greenways, will be addressed.
    p. A set of development guidelines that will direct the development of implementing PUD/PUDs. These guidelines shall address, but not be limited to, building height,

setbacks, the interrelationships of uses, energy efficiency, pedestrian access. The guidelines shall include basic design elements that generally address crime prevention, such as landscaping and lighting considerations, Crime Prevention through Environmental Design (CTPED) principles, or other design concepts intended to improve safety and deter crime.

3. Previous approved Comprehensive Plan Area Plans shall constitute a Master Plan as required by this policy.
4. Approved Master Plans are to be implemented by one or more Planned Unit Developments. Minimum size requirements for Planned Unit Developments within the district shall be established in the land development code. Minor and major amendments to the Master Plan may be approved through the Planned Unit Development requirements and procedures. The Planned Unit Development may serve as the Master Plan if it meets the requirements for a Master Plan enumerated in this policy.
5. Easements, right-of-way and other improvements located throughout the Planned Development District boundary may be required to be dedicated in conjunction with proposed development applications to ensure adequate facilities can be constructed consistent with the Master Plan.
6. Subdivision of a portion of a Planned Development District for sale or donation to a public or quasi-public entity for the purpose of conservation, preservation, or passive resource-based recreation use shall not be contingent upon the adoption of a Master Plan or PUD.
7. Subdivision and development of a portion of a Planned Development area for sale or donation for the purpose of providing schools (pre-kindergarten through twelfth grade) and/or infrastructure to serve primarily offsite needs shall not, likewise, be contingent upon the adoption of a Master Plan or PUD. The land development code shall establish the process and requirements for siting and development of new schools and the expansion of existing schools. The conservation, preservation, passive recreation, educational facilities and types of infrastructure that are intended to be accessible by the public shall be designed for integrated auto, pedestrian and bicycle access, and shared access. The school facilities and infrastructure shall include adequate buffering for the remainder of the Planned Development. If any of these public acquisitions reduce the remaining acreage of the Planned Development below 200 acres, the Planned Development provisions of this Plan shall apply to all remaining acreage.
8. Separate Master Plans may be approved for each Planned Development District that is divided by an interstate or arterial highway that limits integration across the entire development.
9. As demands from a rapidly increasing population may require the expansion of the Urban Service Boundary in the future, additional areas will be identified as Planned Development Areas upon their inclusion within the Urban Service Area.
10. Upon expansion of the Urban Service Area, properties that meet the definitions for Planned Development areas shall be designated as Planned Development on the adopted Future Land Use Map and Zoning Map.

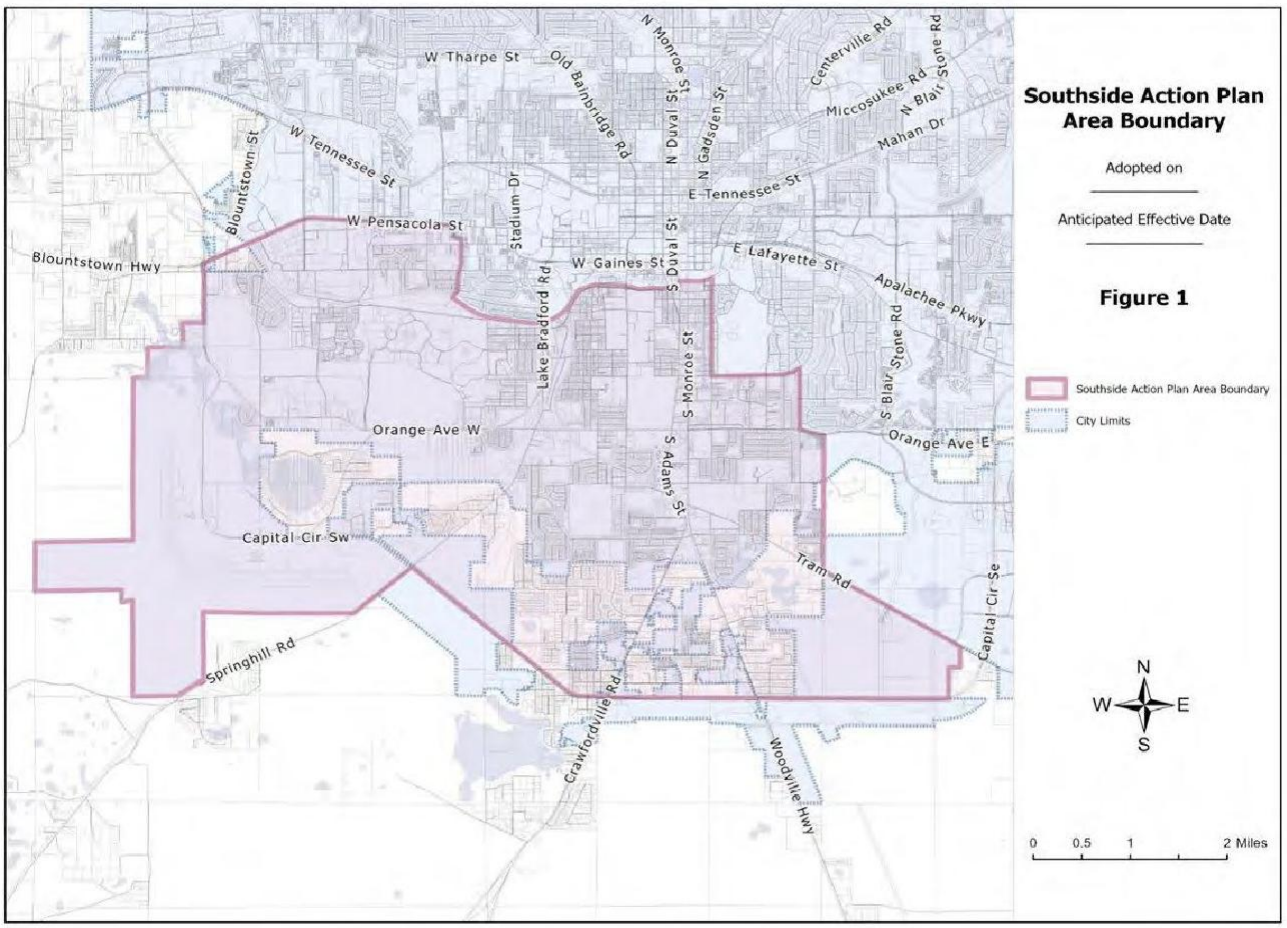
Goal 3 [LM] – Healthy Neighborhoods and Vibrant Places:

Our community will plan for the development of healthy neighborhoods, vibrant places, and places of employment that are designed and built to be lively, inclusive, safe, and sustainable to ensure the equitable treatment and involvement of all citizens, recognize the importance of public spaces and private property, address the importance of civic and institutional uses, and account for community context.

These places will provide for:

- Recreational opportunities.
- Pedestrian and bicycle facilities.
- Healthy food options.
- Health services.
- Community facilities, including schools, community centers, and libraries.

Objective 3.1 – Residential Character (City of Tallahassee/Leon County):
Provide for connectivity and a balanced mix of residential uses that allow for greater housing diversity while protecting the character of existing, viable residential areas and neighborhoods.



Policy 3.1.1 – Residential Character Criteria (City of Tallahassee/Leon County):
Maintain land development code regulations that protect existing residential areas from encroachment of incompatible uses. These regulations shall include context-based requirements for setbacks, buffering, open space, landscaping, tree protection, stormwater, and access management. Development proposals shall be reviewed for compliance with these requirements during the site plan review process.

Policy 3.1.2 – Housing Diversity (City of Tallahassee/Leon County):
Maintain a viable mix of available residential densities to accommodate a variety of housing types.

Policy 3.1.3 – Healthy Food Options (City of Tallahassee/Leon County):
The land development regulations shall foster healthy food options by promoting community public gardens and supporting neighborhood scale grocery uses within and adjacent to residential areas.

Objective 3.2 – Southside Action Plan (City of Tallahassee/Leon County):
Develop and monitor the Southside Action Plan to align with the community's desire for a framework of action in the southern part of the Tallahassee urban area. To achieve this objective, the local governments shall develop a Southside Action Plan that complements long term public and private investment with small scale visible improvements that are relatable and community driven. This approach recognizes that the vision of Southside citizens is essential to guiding the development, redevelopment, and rehabilitation of the Southside; and that the community's vision focuses on three main areas of improvement: Beautification, Investment, and Engaged and Activated Citizens.

Policy 3.2.1 – Southside Action Plan Area (City of Tallahassee/Leon County):
The objective and policies for the Southside Investment Strategy apply to the designated Southside Action Plan area.

Policy 3.2.2 – Beautification (City of Tallahassee/Leon County):
Focus local government beautification efforts in shared public spaces by frequently maintaining and enhancing existing public areas. Support citizen and business investment on private property and shared spaces.

Policy 3.2.3 – Investment (City of Tallahassee/Leon County):
Identify projects that initiate further investment opportunities in the Southside Community. Support partnerships across federal, state, city and county governments with non-profits and private organizations to identify resources for housing, homeownership, business, and infrastructure for the public. Investment within the Southside Action Plan area shall not occur at the expense of the natural environment or water quality in a manner which is found to be inconsistent with local government initiatives, policies, rules or regulations.

Policy 3.2.4 – Active and Engaged Citizens (City of Tallahassee/Leon County):
Encourage citizens, neighborhoods, and businesses in the Southside to be engaged and actively involved in community-led projects. Promote projects, empower residents, and connect efforts with resources.

Policy 3.2.5 – Southside Action Plan Evaluation and Update (City of Tallahassee/Leon County):
The local governments will monitor project implementation of the Southside Action Plan by reporting annually, or as requested by the City Commission or County Commission, on Southside Action Plan policies.

Objective 3.3 – Connectivity Access Management (City of Tallahassee/Leon County):
Require effective interconnectivity and access management to reduce vehicle trip demand, increase access and safety for bicyclists and pedestrians, and preserve the integrity of the transportation system.

Policy 3.3.1 – Access Management Design (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall adopt and maintain access management standards and supporting design guidelines to control the location, spacing, operation and design of access connections and median openings. Development access shall be designed to protect the maximum service volume, safety, and operating characteristics of transportation facilities that it impacts, taking into account impacts to all modes and users of transportation.

Policy 3.3.2 – Intersection and Interchange Restrictions (City of Tallahassee/Leon County):
Restrict vehicular access connections (e.g., driveways) close to the intersection of streets, roads, and highway interchanges. Regulations specifying the appropriate location and spacing of access connections from intersections and interchanges will be provided in the land development regulations or local policies.

Policy 3.3.3 – Unified Access and Circulation Plans (City of Tallahassee/Leon County):
Alternative access connections and unified access and circulations plans shall be used to minimize access connections on arterial roadways. All development plans shall provide circulation systems that create multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 3.3.4 – Access Management Improvements (City of Tallahassee/Leon County):
Improve access management to support the movement of through traffic, reduced crashes, and decrease vehicle conflicts by implementing standards and strategies that:

1. Address the transition of vehicles from arterial roadways to internal circulation systems.
2. Prioritize the redesign of median openings that are inadequately designed.
3. Require the closure or modification of excessive, overly wide, or unsafe driveway connections during resurfacing, repair, and rehabilitation projects.

Policy 3.3.5 – State Road Access Management (City of Tallahassee/Leon County):
The local governments shall coordinate with the Florida Department of Transportation and utilize access management and permitting policies adopted, or recommended, by FDOT on state highways.

Policy 3.3.6 – Neighborhood Through-Traffic (City of Tallahassee/Leon County):
Utilize context sensitive roadway design and traffic calming to allow connectivity while mitigating the effects of through-traffic on neighborhoods and supporting complete streets

policies.

Policy 3.3.7 – Consolidated Properties (City of Tallahassee/Leon County):
Properties under the same ownership, consolidated for development, or part of phased development plans shall be considered one property for the purposes of access management. Access points to such developments shall be the minimum necessary to provide reasonable access.

Policy 3.3.8 – Development Near Interchanges (City of Tallahassee/Leon County):
Circulation systems for new development and redevelopment at interstate interchange areas shall be designed to provide safe and efficient multimodal traffic flow through the implementation of strategies and standards such as access spacing or the utilization of service roads.

Policy 3.3.9 – Access Management Deviations (City of Tallahassee/Leon County):
Flexibility shall be provided in the administration of access spacing standards to accommodate minor deviations, where safe and appropriate, and to ensure that no property is denied reasonable access to the transportation system. Major deviations from access spacing standards shall not be granted until every feasible option for meeting access management standards has been explored and deemed impractical.

Objective 3.4 – Equitable Distribution of Land Uses (City of Tallahassee/Leon County):
Provide for the geographic distribution of land uses in a manner that meets the needs of a growing and diverse population while ensuring that the benefits and burdens of public sector projects are shared across the community equitably.

Policy 3.4.1 – Distribution of Land Uses (City of Tallahassee/Leon County):
The Future Land Use Map shall provide for the balanced and orderly growth and development of the community with a distribution of land uses that allow residential, commercial, office, institutional, and manufacturing uses throughout the community while accounting for natural resources, the geology and geography of the community, and available transportation facilities.

Policy 3.4.2 – Public Investments (City of Tallahassee/Leon County):
The City and County will strive to distribute major infrastructure projects and other public investments geographically across the community with consideration given to the unique and specific infrastructure needs of different areas.

Objective 3.5 – Safety (City of Tallahassee/Leon County):
Prioritize safety as a foundational principle in the development and amendment of policies and guidelines. Apply best practices and best available data to land development regulations, street design, and urban design to enhance and promote the safety of all people regardless of age or ability.

Policy 3.5.1 – Public Infrastructure Design (City of Tallahassee/Leon County):
Public infrastructure, relevant to transportation, shall be designed to increase the safety of its users through strategies such as the application of context-based design and design speed, Complete Streets principles, Crime Prevention through Environmental Design (CPTED), and other nationally recognized strategies. This infrastructure design shall include sidewalks, street trees, and on-street parking. For roadways, public infrastructure including signalization,

pedestrian facilities, on-street parking, and associated streetscaping elements such as lighting, pavement markings, and crosswalks shall follow design principles that increase the safety of its users. To support the goal for zero deaths and serious injuries on our roadways, design shall follow a Safe System Approach and utilize Proven Safety Countermeasures

Objective 3.6 – Land Development Regulations (City of Tallahassee/Leon County):
Maintain specific and detailed land development regulations that implement and are consistent with the goals, objectives, and policies of the Tallahassee-Leon County Comprehensive Plan.

Policy 3.6.1 – Criteria for Amendments to Land Development Regulations (City of Tallahassee/Leon County): Proposed amendments to the City of Tallahassee and Leon County Land Development Regulations shall be evaluated for consistency with the overall intent of the adopted Goals, Objectives, and Policies of each Element of the Comprehensive Plan.

Policy 3.6.2 – Implementing Zoning Districts (City of Tallahassee/Leon County):
Each Future Land Use Map Category shall be implemented by one or more zoning districts that are consistent with the intent of that respective land use category. Each zoning district shall specify allowable land uses and activities with appropriate development and design standards, including density and intensity of development, as applicable.

Policy 3.6.3 – Site Requirements (City of Tallahassee/Leon County):
Land development regulations shall include requirements for:

- Context-based stormwater management
- Open space
- Setbacks
- Buffers
- Screening
- On-site traffic circulation
- Roadway access
- Context-based transit amenities
- Land uses
- Subdivision of land
- Signage
- Standards for the regulation of development within and adjacent to areas subject to seasonal or periodic flooding compliant with state and federal regulations
- Areas known to be vulnerable to natural or human-caused hazards
- Lighting
- Noise mitigation

Policy 3.6.4 – Density and Intensity Incentives (City of Tallahassee/Leon County):
Land development regulations shall include incentives for greater development density and intensity to facilitate growth in areas that minimize and/or mitigate impacts on the natural

environment or community character. These incentives shall allow densities or intensities that exceed unincentivized limits set out in the respective Future Land Use Category by up to 20%. Incentives for greater density and intensity up to 25% will be permitted for developments along Gateway Corridors as defined in Policy 2.6.2 of this Element within the Urban Services Area for developments that incorporate urban design standards resulting in more attractive developments.

Policy 3.6.5 – Planned Unit Developments (City of Tallahassee/Leon County):
The City of Tallahassee or Leon County Land Development Regulations shall provide for the creation of Planned Unit Developments (PUD) zoning districts to accommodate development proposals that are consistent with the Comprehensive Plan but are not provided for or allowed in the zoning districts otherwise established. Planned Unit Developments may establish site-specific standards by ordinance.

Policy 3.6.6 – Non-Conforming Uses (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County Land Development Regulations shall provide a procedure to substantially mitigate or eliminate legally established non-conforming land uses or deem an existing use to be conforming. These procedures shall include a process for evaluating and determining eligibility for a waiver of non-conforming status based on:

- The impact of the non-conformity to conforming land uses adjacent to the non-conformity.
- A determination that the non-conformity is not detrimental to public health, safety, and welfare.
- The ability to prevent or substantially mitigate impacts of the non-conformity.

The development regulations shall distinguish between non-conforming uses which are to be terminated or amortized, and legally established non-conforming uses in nonresidential designations which may continue, but not be expanded.

Policy 3.6.7 – Previously Vested Development (City of Tallahassee/Leon County):
Any development approved under earlier comprehensive plan versions, but not yet commenced, shall still have that approval vested as such until the expiration of the approved development or until development is approved under the current comprehensive plan.

Policy 3.6.8 – Landfill Redevelopment (City of Tallahassee/Leon County):
Local governments shall adopt and maintain land development regulations that ensure redevelopment of mapped landfill sites will not adversely impact health, safety, or welfare.

Objective 3.7 – Urban Design (City of Tallahassee/Leon County):
Incorporate urban design standards and design guidelines into the City of Tallahassee and Leon County Land Development Regulations to support distinctive and adaptable places that promote engaging, accessible, and safe public spaces.

Policy 3.7.1 – Design Principles and Priorities (City of Tallahassee/Leon County):
General urban design principles included in land development regulations shall prioritize pedestrian safety and comfort within an interconnected network of small blocks supported by a

mixture of land uses and housing types in urban areas. Outside of urban areas, design principles shall prioritize conservation and preservation of natural resources.

Policy 3.7.2 – Crime Prevention through Environmental Design (City of Tallahassee/Leon County):
Land development regulations shall incorporate principles of Crime Prevention Through Environmental Design (CPTED) to:

- Incorporate landscaping, walkways, fencing, signage, and/or other design elements that are intended to provide visual cues on whether property is public, semi-public, or private.
- Selectively place entrances and exits, fencing, lighting, and landscaping to control access to private spaces.
- Place physical features, activities, and amenities in ways that maximize the visibility of public spaces and their users.
- Standards shall be designed taking all people into consideration, regardless of age, physical ability, or mental ability.
- CPTED principles shall be applied thoughtfully and equitably so that the implementation of the principles does not reduce quality of life or inequitably burden any part of the community.

Policy 3.7.3 – Design Criteria for Mobility Hubs (City of Tallahassee/Leon County):
New developments or redevelopment projects shall contribute to providing a safe, convenient, comfortable, and aesthetically pleasing transportation environment that promotes walking, cycling, and transit use. Mobility Hubs, that offer multiple transportation options in a centralized area, promoting the use of public transit, cycling, car-sharing, micro-mobility and other sustainable modes of transportation available to users of all ages and abilities, will be encouraged through incentives to increase access to community facilities and employment opportunities, including those for underserved communities. Design standards and incentives for including mobility hubs shall be adopted into land development regulations.

Goal 4 [LM] – Greater Housing Diversity:

Our community will strive for greater housing diversity that expands affordable housing opportunities and housing options for people with varying income levels, offers more flexibility for people in different stages of life and with different abilities, and promotes options that are supported by transit, on-demand transportation, and non-motorized forms of transportation.

While working toward greater housing diversity, our community will:

- Protect the character of existing, viable residential areas through neighborhood design, building types, buffering, and screening.
- Promote development practices to support:
    - Neighborhoods that are diverse in use and population.
    - Communities that are designed for people walking, riding bicycles, and using transit as well as driving motorized vehicles.
    - Places that offer inclusive access to public spaces and community institutions.

Objective 4.1 – Missing Middle Housing (City of Tallahassee/Leon County):
Ensure diverse housing options along a spectrum of affordability and housing types in residential areas to support walkable neighborhoods, neighborhood commercial uses, and multimodal transportation options. Allow for diverse housing options in new and existing neighborhoods to ensure that the housing types are not homogeneous and provide a solution to the mismatch between the available housing stock, shifting demographics, and growing demand for walkability.

Policy 4.1.1 – Accessory Dwelling Units (ADUs) (City of Tallahassee/Leon County):
Maintain land development regulations that allow and encourage the development of accessory dwelling units in most residential and mixed-use zoning districts to attract young graduates, support families with aging parents and grandparents, and provide additional income for homeowners.

Policy 4.1.2 – Missing Middle Housing as Conforming Uses (City of Tallahassee/Leon County):
Existing, legally established single-family detached dwellings, accessory dwelling units, single-family attached dwellings or townhomes, and two-family homes or duplexes shall be deemed conforming uses notwithstanding any density or permitted use provisions of the Comprehensive Plan or land development regulations.

Policy 4.1.3 – Community Character Analysis (City of Tallahassee/Leon County):
In order to facilitate the development of diverse housing options, form-based zoning districts may be developed indicating a specific range of housing types that are permitted. Form-based zoning districts will be based on a Community Character Analysis to identify a range of housing types appropriate accounting for the existing physical development patterns.

Policy 4.1.4 – Pattern Books (City of Tallahassee/Leon County):
Pattern books shall be developed to identify a specific range of housing types allowed for different land use categories. These pattern books would serve as a tool to provide predictability

of the housing types allowed in various areas of the community and to provide residents, developers, and homebuilders with an understanding of allowable housing types in the community.

Objective 4.2 – Mobility-Based Housing Incentives (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that encourage compact, mixed-use communities near transit and trail corridors and mobility hubs.

Policy 4.2.1 – Coordinate Transit with Land Use (City of Tallahassee):
As transit centers are planned, the Planning Department shall evaluate adjacent land uses for opportunities to implement Transit-Oriented Development.

Policy 4.2.2 – Transit-Oriented Development (TOD) Design Standards (City of Tallahassee/Leon County):
Land development regulations shall include design standards to encourage the following principles around transit centers:

- Site centers in locations with highest ridership potential and development opportunities.
- Designate 0.5-mile radius around centers as higher density, mixed-use, walkable development.
- Create a range of densities with highest at centers, tapering down to existing neighborhoods.
- Design centers for seamless pedestrian connections to surrounding development.
- Create public plaza directly fronting one or more sides of the center building where feasible.
- Create retail and cafe streets leading to center entrances along main pedestrian connections where feasible.
- Reduce parking at centers and locate parking in areas that direct pedestrian flow along retail streets.
- Enhance multi-modal connections, making transfers easy, direct, and comfortable.
- Incorporate bikeshare, a comprehensive bikeway network, and large ride-in bike parking areas.
- Use centers as catalysts for major redevelopment of area and create placemaking around centers.

Policy 4.2.3 – Transit-Oriented Development (TOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations may include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within ¼ mile of a transit stop. This density bonus shall not apply to the Residential Preservation land use category. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Policy 4.2.4 – Coordinate Trails with Land Use (City of Tallahassee/Leon County):
As shared use paths and protected bike lanes are planned and designed, adjacent land uses shall be evaluated by the Planning Department for opportunities to implement trail-oriented development.

Policy 4.2.5 – Trail-Oriented Development (TrOD) Design Standards (City of Tallahassee/Leon County):
Trail Oriented Development shall be mixed-use areas and feature a Mobility Hub connected to the trail network to serve as a focal point that brings multiple modes of personal mobility together.

Policy 4.2.6 – Trail-Oriented Development (TrOD) Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 20% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for development located within 1/2 miles of a trailhead. This density bonus may be applied in addition to other eligible density bonuses. Total density bonuses shall not exceed 30% of the residential density allowed in the underlying land use category.

Objective 4.3 – Affordability (City of Tallahassee/Leon County):
Provide density bonuses and other incentives that expand affordable housing opportunities and options for people with varying income levels, including opportunities and options not adequately supplied by the market.

Policy 4.3.1 – Inclusionary Housing Policy (City of Tallahassee/Leon County):
As part of an overall affordable housing strategy, the City and County shall develop and maintain inclusionary housing policies in their respective land development regulations in order to increase private development of affordable housing. The inclusionary housing policies may include a range of incentives, including density bonuses up to 30% greater density than otherwise provided by the applicable zoning district.

Policy 4.3.2 – Establishing Community Land Trusts (City of Tallahassee/Leon County):
To support long-term affordable homeownership, prioritize the use of Community Land Trusts (CLTs) when possible. In doing so, give preference to CLTs over other affordable housing models that:

- Do not include resale restrictions, or
- Include resale restrictions that are temporary, forgiven, or set to expire over time, or
- Rely on local government land donations without long-term affordability guarantees.

Policy 4.3.3 – Requirements of Community Land Trusts (City of Tallahassee/Leon County):
To qualify for local government assistance, Community Land Trusts shall:

- Require permanent affordability.
- Require that owners live in the homes as their primary residence.
- Include resale formulas in land leases.

Policy 4.3.4 – Affordable Housing Design Standards (City of Tallahassee/Leon County):
Develop design standards for affordable housing, including Aging in Place design that could be incorporated into the County and City's Housing Programs.

Policy 4.3.5 – Affordable Housing Density Bonus (City of Tallahassee/Leon County):
Land development regulations shall include provisions that allow for densities up to 25% higher than otherwise allowable in a given land use category with a minimum density bonus of one additional unit for the provision of affordable housing units. Land development regulations may include qualifying criteria, design standards, and site design flexibility for the implementation of the density bonus.

Objective 4.4 – Family Heir Subdivisions (City of Tallahassee/Leon County):
Provide a hardship provision by which owners of property outside of the Urban Services Area who meet defined eligibility requirements may have the ability to create smaller parcels of land for family members for use as homesteads.

Policy 4.4.1 – Family Heir Subdivision Eligibility (City of Tallahassee/Leon County):
The use of a parcel of property solely as a homestead by an individual who is the grandparent, parent, stepparent, adopted parent, sibling, child, stepchild, adopted child, or grandchild of the person who conveyed the parcel is permitted per this policy, notwithstanding the density or intensity of use assigned to the parcel by the Future Land Use Map and official zoning atlas. The parcel to be subdivided must be in the same configuration as it was on February 1, 1990; or the parcel must have been created through subdivision pursuant to the family heir provision and the applicant is an originally intended heir or an heir through successive generations of the originally intended heir. The parcel shall be conveyed within 90 days of subdivision approval to the intended heir, who shall hold uninterrupted title for at least two years.

Goal 5 [LM] – A Robust Economy:

Our community will facilitate the development, attraction, and cultivation of innovative businesses and associated job creation to position the local economy for sustained, directed growth, raise the quality of life for residents, and alleviate poverty in the community.

Our community will foster a robust economy by:

- Supporting target industry cluster development and innovation districts.
- Retaining and creating new employment opportunities emphasizing Tallahassee-Leon County's target industries.
- Reducing barriers to starting and growing businesses.
- Increasing access to job opportunities and training.
- Ensuring adequate and suitable lands are designated for commercial and industrial uses.

Objective 5.1 – Economic Health (City of Tallahassee/Leon County):
Initiate community planning, urban development, and redevelopment strategies that prepare businesses, production facilities, trades, and related activities that provide the livelihoods of the population to take advantage of positive opportunities and withstand negative changes in the economy and to continue providing jobs and incomes to support the community.

> **Policy 5.1.1 – Economic Development Strategic Plan (City of Tallahassee/Leon County):**
> The Tallahassee-Leon County Office of Economic Vitality (OEV) shall maintain a strategic plan that includes, at a minimum, target industries and objectives for business development and job creation. During development project reviews, the Planning Department and OEV shall coordinate on issues of land use and development to support economic health consistent with the OEV strategic plan.

Objective 5.2 – Airport Access (City of Tallahassee):
Provide access to the Tallahassee International Airport to ensure the movement of people and commerce while maintaining the safety and security of the airport.

> **Policy 5.2.1 – Airport Master Plan (City of Tallahassee):**
> The airport master plan developed for the Tallahassee International Airport shall account for transportation facilities and access to both the General Aviation and the Commercial Service facilities at the airport. The airport master plan shall be coordinated with the plans of the US Army Corps of Engineers, the Federal Aviation Administration, FDOT, and the CRTPA. The planning, design, and construction of transportation facilities in the vicinity of the Tallahassee International Airport shall account for existing airport access as well as planned development at the airport.

Objective 5.3 – Freight and Cargo (City of Tallahassee/Leon County):
Provide a network of transportation facilities that are coordinated across different modes of travel to support the movement of freight and cargo.

Policy 5.3.1 – Intermodal Centers (City of Tallahassee/Leon County):
The City of Tallahassee and Leon County shall maintain an inventory of intermodal freight centers, including the locations, types of facilities, and activities of the centers.

Policy 5.3.2 – Tallahassee International Airport (City of Tallahassee/Leon County):
Coordinate land uses adjacent to the Tallahassee International Airport, access to the airport, and access to other transportation facilities to enhance the express shipment, transfer, and movement of air cargo, including air freight and mail.

Policy 5.3.3 – Transportation Access (City of Tallahassee/Leon County):
Industrial uses and other freight-related uses shall be located in proximity to and have direct access to major transportation routes and intermodal freight centers, or other freight transfer locations.

Objective 5.4 – Resilience Planning (City of Tallahassee/Leon County):
Plan for post-disaster recovery and redevelopment to help resume economic activities following damage or destruction by a natural or human-made disaster.

Policy 5.4.1 – Post Disaster Redevelopment Plan (City of Tallahassee/Leon County):
The community shall maintain a countywide post-disaster redevelopment plan to better prepare the community for long-term recovery and redevelopment after a disaster. The post-disaster redevelopment plan shall address business resumption and economic redevelopment; infrastructure restoration and mitigation; housing repair and reconstruction; sustainment of services; sustainable land use; and financial management.

Policy 5.4.2 – Local Mitigation Strategy (City of Tallahassee/Leon County):
The community shall maintain the Local Mitigation Strategy to identify those strategies and projects that improve the resiliency of critical public infrastructure assets of the community based on potential hazards.

Objective 5.5 – Intergovernmental Coordination (City of Tallahassee/Leon County):
Increase the economic strength of the Tallahassee Metropolitan Statistical Area (MSA) by leveraging opportunities, programs, land uses, and transportation facilities across the region to grow existing businesses and attract new businesses.

Policy 5.5.1 – Regional Economic Development Coordination (City of Tallahassee/Leon County):
The Department of PLACE shall coordinate economic development projects and programs with the State of Florida, Apalachee Regional Planning Council, Capital Region Transportation Planning Agency, and/or appropriate neighboring jurisdictions to leverage opportunities, programs, land uses, and transportation facilities across the region to support business retention and expansion, and to attract new businesses.

Policy 5.5.2 – Grant Funding Opportunities (City of Tallahassee/Leon County):
Local governments shall pursue grant opportunities for projects or programs of regional significance.

Goal 6 [LM] – A Balanced Transportation Network:

Our community will support a balanced and viable transportation network with convenient and context-sensitive options, so pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities can travel safely around the community.

The transportation network shall:

- Include streets, sidewalks, bicycle lanes, shared use paths, trails, aviation facilities, rail lines, transit, and on-demand transportation options.
- Account for land use context, right-of-way constraints, and the short-term and long-term costs of transportation infrastructure.
- Account for emerging technologies and best practices.
- Discourage the negative effects roadway widening can have on neighborhoods and community character.
- Provide safe routes to schools and options for the transportation disadvantaged and vulnerable road users.
- Maintain adopted roadway level of service (LOS) measures and retain multimodal level of service targets.
- Be coordinated between the local governments, with neighboring jurisdictions, and with regional, state, and federal agencies to cooperatively plan and manage transportation systems that are within the community but managed by FDOT.

Objective 6.1 – Land Use and Transportation Coordination for Livability (City of Tallahassee/Leon County):

Coordinate land use and transportation systems to foster vibrant communities across context areas with compact urban forms and a mixture of uses to minimize travel distances, reduce greenhouse gas emissions, and enhance pedestrian, bicycle, and transit mobility.

Policy 6.1.1 – Mitigate Sprawl (City of Tallahassee/Leon County):

New and substantial improvements to roadways, shall be identified and programmed consistent with the context (Context Classification) where design and environmental constraints allow that supports the Urban Services Area policies to promote efficient growth and urban infill, and discourage urban sprawl.

Policy 6.1.2 – Context-Based On-Site Facilities (City of Tallahassee/Leon County):

Development projects shall contribute to a safe, convenient, and comfortable transportation environment that promotes walking, cycling, and transit use consistent with the development's context-classification. Land development regulations shall specify the conditions and standards for provision of on- and off-site roadway extensions, sidewalk and trail connections, and transit facilities. Context-appropriate improvements or enhancements shall be required as a condition of development approval, such as, but not limited to sidewalks and bicycle facilities, plantings, and building configuration, buffers, setbacks and stepbacks. Development shall mitigate impacts to the multi-modal transportation network.

Policy 6.1.3 – Tallahassee-Leon County Transportation Corridors (City of Tallahassee/Leon County):
Transportation corridor maps showing the future land uses shall be developed and maintained to reflect the enhanced coordination between land use and transportation including new construction and improvements, reflecting the intended context classification.

Policy 6.1.4 (City of Tallahassee/Leon County) – Retrofit for Livability:
Roadways with design characteristics inconsistent with their assigned Context-Classification shall be inventoried and prioritized for retrofit including but not to limited lane width adjustments, street lighting, stormwater management retrofits, and streetscape improvements such as sidewalks, bicycle lanes, shared-use paths, transit amenities, and plantings to improve livability for the adjacent land uses consistent with the Future Land Use Map.

Objective 6.2 – Network Connectivity Improvement (City of Tallahassee/Leon County) :
Improve the balance of transportation options, connectivity, and capacity of the multimodal transportation network.

Policy 6.2.1 – Enhance Connectivity (City of Tallahassee/Leon County):
Local governments shall identify, prioritize, and engage in the necessary collaboration to establish crossings that connect road and trail networks across interstates, railroads, and other dividing features such as stormwater ditches. Locations where informal crossing regularly occurs shall be prioritized and where appropriate mid-block crossing may be assessed and implemented. Locations where high-quality and/or sensitive natural features exist shall be deprioritized.

Policy 6.2.2 – Future Right-of-Way Needs (City of Tallahassee/Leon County):
Local governments shall secure anticipated right-of-way needs, including supporting stormwater management, for additional travel lanes and/or turn lanes, as well as multimodal facilities, through appropriate development review and other processes, targeted acquisitions, or other suitable means to address motor vehicle traffic volume on roadway segments that will be impacted by targeted development areas within the long-term planning period. Roadways shall not be constructed to accommodate development anticipated beyond the long-term planning period.

Policy 6.2.3 – Build and Enhance the Network (City of Tallahassee/Leon County):
Where appropriate, create new minor and major collector roadways to relieve motor vehicle traffic congestion and increase network connectivity. Additionally, include network-enhancing local and minor collector street projects. All development plans shall contribute to developing a local and collector street and unified circulation system that will allow multimodal access to and from the proposed development, as well as access to surrounding developments.

Policy 6.2.4 – Corridor Management and Preservation (City of Tallahassee/Leon County):
Transportation corridors requiring additional right of way and/or corridor management are designated for preservation and management as provided in §337.273, F.S.

Policy 6.2.5 – Interconnectivity for Development (City of Tallahassee/Leon County):
Require vehicle, pedestrian, and bicycle interconnections between adjacent, compatible development; and require these interconnections between adjacent, incompatible developments

when such connection has the potential to reduce the vehicular traffic on the external street system.

Policy 6.2.6 – Continuation of Streets (City of Tallahassee/Leon County):
All development plans shall incorporate and continue all collectors and local streets stubbed to the boundary of the development plan by previously approved development plans or existing development, unless deemed infeasible by the respective local government.

Policy 6.2.7 – Interconnectivity to Adjacent Uses (City of Tallahassee/Leon County):
Require private developers within the Urban Service Area to include bikeways, pathways, or sidewalks in their proposed developments, with connections to nearby properties and land uses.

Objective 6.3 – Context Based Mobility (City of Tallahassee/Leon County):
Plan, design, and build the transportation system to reflect the existing context areas and what the context areas will be based on future land use and zoning.

Policy 6.3.1 – Local Context Classification and Safe Systems (City of Tallahassee/Leon County):
A Local Context Classification system shall be implemented for all publicly maintained streets and roads that reflects Future Land Use and zoning, and follows nationally accepted professional guidelines to best identify and classify facilities. Additional criteria shall be developed for local streets. The Context Classification system shall incorporate design characteristics that reflect Safe Systems approaches using proven safety countermeasures and complete streets design principles. These measures shall aim for zero deaths and serious injuries along roadways and recognize that transportation systems users inherently make mistakes and ensure that the transportation system will be constructed in a manner that mitigates frequency and severity of crashes when errors occur.

Policy 6.3.2 – Context Classification Application (City of Tallahassee/Leon County):
The context classification system shall be applied to City and County roadway resurfacing and enhancement projects in a manner that reflects the future vision and context of the area, and considers available rights-of-way and environmental constraints where the project is located by accounting for the Future Land Use map, zoning, and Context Classification. Land Development Regulations shall provide for the implementation of context classification design standards as a requirement or condition of development approval.

Policy 6.3.3 – Context Classification Map (City of Tallahassee/Leon County):
By 2030, a Local Context Classification map shall be developed and maintained through the planning timeframe that recognizes local roadway functional classification and context classification in addition to land use context. The Local Context Classification map shall be updated concurrently with amendments to the Local Functional Classification Map and the Future Land Use Map. As part of map series, the FDOT context classification and functional classification maps are included as a reference and resource document.

Policy 6.3.4 – Downtown Traffic (City of Tallahassee/Leon County):
By 2035, in alignment with the vision of a vibrant 18-hour Downtown, strategies to reduce the negative effect of high-volume multi-lane through traffic in the Urban Core including managing speed and streetscaping shall be implemented.

Policy 6.3.5 – Lane Repurposing (City of Tallahassee/Leon County):
Evaluate the need for road lane repurposing to accommodate existing and future capacity, land uses, and multi-modal demand through the planning timeframe. Reducing, narrowing, or repurposing automobile lanes to support multimodal or travel by modes other than by automobile will not require transportation concurrency mitigation. Outside of the Multimodal Transportation District (MMTD), an analysis of transportation and land use impacts on parallel roadways must be conducted prior to implementation.

Policy 6.3.6 – One-Way Pair Studies (City of Tallahassee/Leon County):
Studies completed by the City and/or County for one-way pairs shall evaluate potential safety, operational, and aesthetic improvements. Improvements considered in the studies may include pedestrian crossings, speed reduction, one-way pair conversions, landscaping, and other potential improvements. The policy aims to strengthen neighborhood connectivity, support local businesses, and foster a more livable urban environment. Reduced levels of service due to improvements shall be acceptable within the Multimodal Transportation District (MMTD), prioritizing safety and complete networks for pedestrians and bicyclists over traffic efficiency.

Policy 6.3.7 – Speed Management (City of Tallahassee/Leon County):
By 2035, the City and County shall implement speed management programming based on the most recent American Association of State Highway and Transportation Officials (ASHTO), Federal Highway Administration (FHWA), Florida Department of Transportation (FDOT), and National Association of City Transportation Officials (NACTO) guidelines to reduce the frequency and severity of crashes and collisions. Additional speed management criteria shall be established in the land development code for local streets.

Policy 6.3.8 – Level of Service (LOS) (City of Tallahassee/Leon County):
Peak Hour Roadway Level of Service is established below and shall be assessed during the Evaluation and Appraisal Report every 7 years.

Functional Classification	Inside the Urban Service Area	Outside the Urban Services Area
Interstate, Intrastate, Limited Access Parkways	C	B
Principal Arterials	D	C
Minor Arterials	D/E*	C
Major and Minor Collectors	D/E*	C
Local Streets	D	D

*For Minor Arterials, and Major and Minor Collectors located inside the Urban Service Area and south of U.S. 90, the Level of Service shall be "D" for purposes of establishing priorities for programming transportation improvements, and "E" for meeting concurrency requirements, to

support the Southside Action Plan. Roads north of U.S. 90 shall be LOS D for both programming improvement and concurrency purposes.

Policy 6.3.9 – Multimodal Transportation District Area Wide Level of Service (LOS) (City of Tallahassee):
In order to create community design that supports mobility and prioritizes a safe, comfortable and attractive pedestrian environment with convenient interconnection to transit, the following performance standards are targeted for the Multimodal Transportation District:

MMTD Areawide Multimodal Level of Service Standards

Areawide Multimodal Level of Service Standards Pursuant to F.S. 163.3180(5)(f)2			
Pedestrian	**Transit**	**Bicycle**	**Automobile**
C	C	D	E+50%

By 2030, assess MMTD Areawide LOS standards to determine if revisions to the measures should be made.

Objective 6.4 – Complete Streets (City of Tallahassee/Leon County):
Design, construct, and operate streets and roads, consistent with context-sensitive design principles, to provide safe and convenient facilities, and access for pedestrians, bicyclists, motorists, and public transportation users of all ages and abilities.

Policy 6.4.1 – Project Evaluation (City of Tallahassee/Leon County):
Road projects, including resurfacing projects, shall be evaluated for the inclusion of bicycle lanes or paved shoulders, sidewalks, shared use paths, appropriate sidewalk shade plantings, right-sized traffic lanes, on-street parking, stormwater management, street lighting, utility improvements, and transit amenities where they did not previously exist. Where design criteria allow, bicycle and pedestrian facilities shall be separated from vehicular traffic.

Policy 6.4.2 – Share Transportation Information (City of Tallahassee/Leon County):
The City and County shall share information across departments and with policy makers and the general public regarding the health benefits and existing laws related to motor vehicle, bicycle and pedestrian operation and interaction.

Policy 6.4.3 – Bicycle and Pedestrian Network (City of Tallahassee/Leon County):
The City and County shall maintain and enhance the local system of bicycle lanes, sidewalks, and shared-use paths in conjunction with the Greenways and Trails Master Plan. Enhancements shall be prioritized in the vicinity of schools, community facilities, parks, recreation facilities, and mixed-use areas with a retail and service focus.

Policy 6.4.4 – Bicycle and Pedestrian Master Plan (City of Tallahassee/Leon County):
In coordination with the Capital Region Transportation Planning Agency, the City and County shall maintain a bicycle and pedestrian master plan through the planning timeframe that identifies projects to address bicycle and pedestrian network connectivity and safety feature

upgrades, and pursue implementation funding. The bicycle and pedestrian master plan shall identify gaps where facilities do not exist in the bicycle and sidewalk networks.

Policy 6.4.5 – Safe Routes to Schools (City of Tallahassee/Leon County):
Provide a safe, accessible environment and support active living for students by developing and maintaining programs to increase biking, walking, and transit to schools, prioritizing sidewalk and bicycle infrastructure within a two-mile radius of schools, and continuing to identify, fund and build Safe Routes to Schools projects.

Policy 6.4.6 – Community Gateways (City of Tallahassee/Leon County):
Designate preferred entrance corridors into and connecting Tallahassee and Leon County. City and County departments with interests in the public right-of-way shall identify funding sources to convert these corridors into shaded bicycle and pedestrian ways to create attractive gateways into the community. These entrance corridor gateways shall include an appropriate gateway from the airport to Downtown, the Capitol Center, and University destinations.

Policy 6.4.7 – Scenic Roadway Assessments (City of Tallahassee/Leon County):
In the planning and construction of new roads in the suburban and rural areas and for needed improvement of existing roads, the City and County shall require a scenic roadway assessment, environmental assessment, and landscape component for the purposes of preserving those scenic features, protecting natural resources and providing interesting and aesthetically preferred places.

Policy 6.4.8 – Maintenance of Traffic (City of Tallahassee/Leon County):
When construction or repair work infringes on regular corridor operation, a project specific Maintenance of the Traffic Plan shall be developed that specifies one or more alternate routes accounting for all modes of transportation, including vehicles, bicycles, pedestrians, transit and freight.

Policy 6.4.9 – Multi-Modal Safety and Access (City of Tallahassee/Leon County):
Development shall provide safe and convenient access to transportation facilities for pedestrians, cyclists, and transit users, with the following exceptions:

- For emergency repair and routine maintenance.
- In locations where specific users are prohibited, such as interstate freeways or pedestrian malls. In these instances, a safe and convenient alternate route shall be identified and, if needed, prioritized for improvement or construction.
- A documented absence of current or future need.
- Procedures and criteria for approving exceptions will be identified in the Land Development Code.

New transportation facilities shall follow generally accepted or adopted design standards when implementing improvements intended to fulfill this Complete Streets policy and shall use innovative or non-traditional design options where a comparable level of safety for users is present.

Policy 6.4.10 – Applicability (City of Tallahassee/Leon County):
All new roadway facilities, whether publicly or privately designed and constructed, shall comply with this Complete Streets Objective and associated policies, in coordination with standards of the designated Context Classification, shall follow nationally accepted or recommended Complete Street design standards as specified in Policy 6.4.12. When circumstances do not allow for full compliance, innovative or nontraditional design options may be utilized, provided a comparable level of safety for users is present. .

Policy 6.4.11 – Equity (City of Tallahassee/Leon County):
The implementation of Complete Streets shall reflect equity by facilitating safe streets for all users, regardless of ability or income, and that enables travel to destinations with or without a car.

Policy 6.4.12 – Design Standards (City of Tallahassee/Leon County):
Land Development Codes that apply to all development policies and programs shall be revised by 2030 to use the latest professionally accepted design guidance, standards, and recommendations for Complete Streets in coordination with the designated context classification Guidance resources shall include, but need not be limited to:

- Federal Highway Administration's Manual on Uniform Traffic Control Devices
- Florida Department of Transportation (FDOT) Context Classification Guide, Complete Streets Handbook, FDOT Design Manual, and Manual of Uniform Minimum Standards for Design, Construction and Maintenance for Streets and Highways (the Florida Greenbook)
- National Association of City Transportation (NACTO) published guidelines
- American Association of State Highway and Transportation Official (AASHTO) published guidelines
- U.S. Department of Transportation's National Roadway Safety Strategy (NRSS), including the Safe System Approach

Policy 6.4.13 – Pavement Markings and Signage (City of Tallahassee/Leon County):
All projects, whether public or private, that provide vehicle, bicycle, and/or pedestrian infrastructure shall provide proper pavement markings and signage to enhance recognition of infrastructure elements such as bicycle lanes, neighborhood bikeways, and pedestrian crossings. The City and County shall identify, prioritize, and install or update any such pavement markings or signage that are absent or out of date with current practices during the course of required maintenance.

Policy 6.4.14 – Two-Way Left Turn Lane Replacement (City of Tallahassee/Leon County):
Identify and prioritize replacement of existing continuous two-way left turn lanes with raised medians and exclusive turn lanes on multi-lane arterials. Replacement shall be contingent upon funding availability.

Policy 6.4.15 – Measuring Progress (City of Tallahassee/Leon County):
The success of this Complete Streets Objective shall be measured by the Planning Department with assistance by the City and County during the Evaluation and Appraisal Review process, using but not limited to, the following performance measures:

- Total miles of new designated bike lanes
- Total miles of new shared-use paths (paved and natural surface)
- Total miles of neighborhood bikeways signed, marked, or constructed
- Linear feet of new and repaired sidewalk and other pedestrian accommodations (paths, trails, etc.)
- Number and type of crosswalk and intersection improvements and new installations
- Number of revenue service miles traveled by transit vehicles
- Rates of crashes, injuries, and fatalities by mode, as available
- Identification and updates to existing codes, policies, or programs to incorporate updated guidance from FDOT, FHWA, NACTO, AASHTO, and other best practices.
- Number of exceptions to this policy granted

The Joint City-County Bicycle Working Group and Advisory Committee for Quality Growth may review these measures and make recommendations annually.

Policy 6.4.16 – Coordination with Placemaking Plans (City of Tallahassee/Leon County):
Implementation of Complete Streets policies for development shall be coordinated with the existing placemaking plans by including reference to those that are applicable.

Objective 6.5 – Bicycle Facilities (City of Tallahassee/Leon County):
Develop a network of bicycle facilities that provides safe, comfortable, and direct connections for all users throughout the community.

Policy 6.5.1 – Build Bike Facilities Concurrent with Maintenance (City of Tallahassee/Leon County):
All roadway or trail resurfacing, restoration, and rehabilitation projects shall be evaluated for the ability to add bicycle facilities where they currently do not meet bicycle facility selection and design standards.

Policy 6.5.2 – Bicycle Facilities in New Development (City of Tallahassee/Leon County):
New development shall prioritize the provision of and maintain continuous bicycle networks, including connections to transit stops and adjacent properties, and to provide bicycle parking at all non-residential uses, multi-family uses and other key destinations. Bicycle and trail

connections shall be required consistent with and coordinated with the Leon County Greenways Master Plan per the City or the County when development contains or is adjacent to planned greenway projects.

Objective 6.6 – Pedestrian Facilities (City of Tallahassee/Leon County):
Improve walkability by designing and providing facilities that create an environment where walking is useful, safe, comfortable, and aesthetically interesting. Prioritize the pedestrian network over other transportation modes in the Multimodal Transportation District within the most urbanized and densely populated areas of the community.

Policy 6.6.1 – Pedestrian Level of Comfort (City of Tallahassee/Leon County):
As part of development review and approval, pedestrian level of comfort shall be enhanced through planting of shade trees and other amenitization including but not limited to installation of water fountains, benches, overhead pavilions, street and trail lighting, and installation of wayfinding signage.

Policy 6.6.2 – Crosswalks (City of Tallahassee/Leon County):
Programming of sidewalks projects in the budget and capital improvement schedule shall include provisions for crosswalk installations to provide regular crossings that align with the roadway's Local Context Classification.

Policy 6.6.3 – Pedestrian Infrastructure for New Development (City of Tallahassee/Leon County):
New development shall maintain continuous pedestrian networks, including connections to transit stops, adjacent lots, and between building entrances and the internal and external sidewalk network. Land development regulations shall include alternative options such as payment in lieu, the dedication of easements, and the dedication of right-of-way and shall identify when the alternative scenarios may apply.

Objective 6.7 – Mobility Hubs (City of Tallahassee/Leon County):
Support and incentivize the creation of mobility hubs to serve as connection points between public and private shared mobility services and multimodal options.

Policy 6.7.1 – Implementation of Mobility Hubs (City of Tallahassee/Leon County):
Implement a network of mobility hubs in partnership with transit providers, incorporating transit with other shared mobility services, such as bikeshare and car-share where feasible.

Policy 6.7.2 – Mobility Hubs Location Coordination (City of Tallahassee/Leon County):
The City and County shall work with community-based organizations to ensure the appropriate geographic placement of mobility hubs and outreach regarding transportation options.

Policy 6.7.3 – Mobility Hubs Design Guidelines Requirements (City of Tallahassee/Leon County):
Amend the land development regulations by 2028 to provide mobility hub design guidelines to support mobility hub implementation and provide flexibility for change as technology and travel behavior and patterns evolve over time.

Objective 6.8 – Transportation Demand Management (City of Tallahassee/Leon County):
Leverage transportation and parking demand management strategies to promote system efficiencies and alternate modes of travel and to spread the travel demand across more hours of the day that result in minimizing impacts on natural resources and neighborhoods and reducing vehicle miles traveled.

Policy 6.8.1 – Encourage Alternate Transportation Modes (City of Tallahassee/Leon County):
Through the planning timeframe, the use of alternate transportation modes through the promotion of public transit, provision of or coordination with on-demand, micromobility or car-share and van-share or pool programs, investment in bicycle and pedestrian infrastructure, and support for telecommuting policies shall be encouraged by public and private sector transportation entities.

Policy 6.8.2 – Enhance Bicycle and Pedestrian Infrastructure (City of Tallahassee/Leon County):
City and County shall prioritize bicycle and pedestrian enhancements in high-traffic areas, mixed use areas, and near transit stops for both public and private projects to ensure biking and walking are a safe, comfortable, and convenient alternative to driving.

Policy 6.8.3 – Land Development Patterns (City of Tallahassee/Leon County):
The City and County shall propose or maintain land development regulations that promote development patterns that reduce the need for personal automobile ownership including mixed use development, Transit Oriented Development (TOD), and pedestrian friendly design strategies.

Policy 6.8.4 – Shared Parking Criteria (City of Tallahassee/Leon County):
Private shared parking arrangements may be allowed as a method to meet parking requirements for development. Eligibility criteria may be adopted regarding proximity of sites, timing of peak parking demand, requirements for a written and recorded parking agreement, availability of parking spaces, availability transit amenities, and other criteria that ensure the effectiveness of shared parking arrangements.

Policy 6.8.5 – Parking Reduction for Certain Development Types (City of Tallahassee/Leon County):
City and County land development regulations, if adopting minimum or maximum parking requirements, shall provide for reduced minimum parking requirements for mixed use developments, Transit Oriented Development (TOD), Trail Oriented Development (TrOD), and other development types that have a reduced parking need. Reductions from standard parking requirements shall be based on the peak parking demand for the mix of uses and account for mode shift.

Policy 6.8.6 – Private Parking Lots (City of Tallahassee/Leon County):
City and County land development regulations shall include provisions for privately owned and operated parking lots as a principal use in urban center and urban mixed use land use categories. Development and design criteria shall be adopted with regard to minimum and/or maximum size, location relative to intersections or distance between such facilities, demonstration of parking demand within a walkable area, minimum landscaping requirements to reduce visual

impact and enhance aesthetics especially adjacent to public rights-of-way, lighting, and minimum requirements for safe and convenient pedestrian connections.

Policy 6.8.7 – Drop-Off & Pick-Up Zones (City of Tallahassee/Leon County):
The City and County shall adopt or maintain land development regulations through the planning timeframe for the provision of drop-off and pick-up zones to accommodate the increase in use of ride share services and autonomous vehicle use. Requirements shall apply to certain uses such as restaurants, bars, hotels, office parks, religious facilities, community facilities, sporting facilities, parks, and other uses with a high frequency of drop-off and pick-up activity. Criteria shall be with regard to size of the use, provide design standards, location on site, and the availability of porte cocheres or valet operations that meet the design requirements.

Policy 6.8.8 – Intelligent Transportation Systems (ITS) (City of Tallahassee/Leon County):
City and County transportation strategies, to the extent possible, shall incorporate intelligent transportation systems strategies including speed management programming, traffic signal control, and variable driver real-time messaging, to minimize environmental effects of congestion and improve safety.

Policy 6.8.9 – Traffic Operations Management (City of Tallahassee/Leon County):
The transportation management system in the land development code shall be maintained or revised to reduce demand for wider roads by evaluating traffic operations to maximize efficiency of the existing street system capacity and support modal shifts to public transit, bicycling, and walking.

Objective 6.9 – Transportation for the Disadvantaged (City of Tallahassee/Leon County):
Coordinate transportation options to empower members in the community who are unable to provide their own transportation to vital services, including seniors, and individuals with disabilities, people with low incomes, and children at risk.

Policy 6.9.1 – Human Services Transportation (City of Tallahassee/Leon County):
Through the planning timeframe, applicable projects shall comply with federal and state requirements regarding planning and coordination of human services transportation in meeting the needs of the Transportation Disadvantaged.

Policy 6.9.2 – Transport to Destinations (City of Tallahassee/Leon County):
Through the planning timeframe, the transit provider shall ensure Transportation Disadvantaged program services continue to provide transport to local goods and services, including medical services for all users.

Policy 6.9.3 – Affordable and Cost-Effective Service (City of Tallahassee/Leon County):
Transit providers, the Capital Region Transportation Planning Agency, Community Transportation Coordinator, and the Apalachee Regional Planning Council shall support innovative ways, such as utilizing emerging technology or negotiating fees and services with on-demand providers, to reduce costs and provide superior service for the transportation disadvantaged that also increases efficiency and provide local government savings.

Policy 6.9.4 – Transportation Disadvantaged Needs Assessment (City of Tallahassee/Leon County):

A needs assessment of the Transportation Disadvantaged shall be developed/updated every 5 years or as required by federal and state laws. This assessment of existing public and private transit programs shall be undertaken with an analysis to determine needs. A strategy to meet identified needs of the Transportation Disadvantaged shall be developed.

Objective 6.10 – Transit (City of Tallahassee/Leon County):

Ensure that the community is well-connected via transit to major employment and activity centers, that transit stops and waiting areas are safe and comfortable, and that transit is coordinated with other modes of transportation.

Policy 6.10.1 – Transit Development Plan (City of Tallahassee):

Through the planning timeframe, the Transit Development Plan shall identify transit improvements needs and capital improvements plans shall prioritize funding for transit projects that increase the availability, speed, frequency, duration, and reliability of transit. Development shall be consistent with and support the Transit Development Plan.

Policy 6.10.2 – Pedestrian Infrastructure Connectivity (City of Tallahassee/Leon County):

The annual infrastructure capital improvements list maintained by City and County shall prioritize sidewalks and pedestrian facilities that provide connectivity to transit stops.

Policy 6.10.3 – Southside Transit (City of Tallahassee/Leon County):

The City, County, and CRTPA shall prioritize improved transit service on the Southside by including, where appropriate and feasible, projects in the Transit Development Plan that would have a positive impact on the area.

Policy 6.10.4 – Employment and Activity Center Service (City of Tallahassee):

Systematically prioritize the extension and/or route modifications within the City limits to provide access to major employment, shopping, and business, recreational, and other activity centers. Transit service outside of City limits are not the responsibility of the City of Tallahassee.

Policy 6.10.5 – Transit Corridors (City of Tallahassee/Leon County):

Incentives shall be developed to encourage the donation of transit rights-of-way to establish and maintain transit corridors. Development agreements and land use regulations shall be used when available and in the best interest of transit service to preserve future transit corridors.

Objective 6.11 – Aviation (City of Tallahassee/Leon County):

Provide aviation facilities to meet the demand for commercial service, general aviation, freight and cargo, advanced air mobility, and military services and to enhance aviation and airport development opportunities.

Policy 6.11.1 – Adjacent Land Use Compatibility (City of Tallahassee/Leon County):

Protect the Tallahassee International Airport from the encroachment of incompatible land uses and the creation or establishment of airport hazards to ensure the continuation of normal airport operations, including landing and takeoff of aircraft, in order to promote public health, safety, and general welfare by implementing airport land use compatibility zoning regulations that include potential noise and safety impacts to surrounding land uses.

Policy 6.11.2 – Airport Master Plan (City of Tallahassee):

The Tallahassee International Airport shall maintain an airport master plan that establishes a logical set of development parameters and timelines that coincide with the airport's needs for general aviation, commercial service, freight and cargo, and advanced air mobility through the planning horizon.

Policy 6.11.3 – Compatibility of Land Use (City of Tallahassee/Leon County):

Airport land use compatibility zoning regulations shall include provisions for existing aviation facilities as well as planned aviation facilities identified in the airport master plan. The City and County shall coordinate with Airport staff to develop any additional regulations needed that are not identified in the airport master plan, such as for locations off-airport suitable for development under these categories and for advanced air mobility facilities and services.

Policy 6.11.4 – Compatibility for Noise and Safety (City of Tallahassee/Leon County):

Airport land use compatibility zoning regulations shall include potential noise and safety impacts to surrounding land uses.

Policy 6.11.5 – Advanced Air Mobility (City of Tallahassee/Leon County):

Advanced Air Mobility facilities, including any public-use vertiport facilities, shall be directed to appropriate areas. Land development regulations shall identify zoning districts and/or areas where Advanced Air Mobility facilities are either prohibited or restricted uses and include appropriate development standards for Advanced Air Mobility facilities.

Objective 6.12 – Rail (City of Tallahassee/Leon County):

Accommodate and mitigate impacts of existing rail-based freight and cargo services, support opportunities for commercial passenger service, and coordinate with rail owners to enhance the safety of existing crossings and seek additional safe crossings for pedestrian and bicycle users.

Policy 6.12.1 – Railroad Crossings (City of Tallahassee/Leon County):

Coordinate with the Federal Highway Administration and railroad companies to ensure railroad crossings are constructed and maintained to ensure safe crossings for drivers, pedestrians, and cyclists. Pedestrian crossings shall be constructed and maintained to ensure compliance with the Americans with Disabilities Act and other Federal and State Standards. Deficient crossings and new crossings of railroads shall be inventoried and prioritized in programming of the transportation network and trail system.

Objective 6.13 – Intergovernmental Coordination (City of Tallahassee/Leon County):

Coordinate with neighboring jurisdictions, the Florida Department of Transportation, and the Capital Region Transportation Planning Agency to effectively plan and manage transportation systems that extend beyond jurisdictional boundaries.

Policy 6.13.1 – Consistency with State Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support state transportation plans, including the Florida Transportation Plan and the Strategic Intermodal System Plan.

Policy 6.13.2 – Consistency with Regional Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with and support regional transportation plans, including the Capital Region Transportation Planning Agency's Regional Mobility Plan, Transportation Improvement Plan, and any future regional transit plans.

Policy 6.13.3 – Consistency with Local Transportation Plans (City of Tallahassee/Leon County):

Maintain consistency with other transportation plans for Leon County and the City of Tallahassee, including the Bicycle and Pedestrian Master Plan.

Policy 6.13.4 – Signal Coordination Plans (City of Tallahassee/Leon County):

Require conformance of new signals with signal coordination plans and FDOT signal spacing standards for the state highway systems.

Policy 6.13.5 – Project Planning Partnerships (City of Tallahassee/Leon County):

Forge partnerships and effectively coordinate with modal providers, state and regional agencies, and other local governments in mobility planning and project development.

Policy 6.13.6 – Evacuation Routes (City of Tallahassee/Leon County):

Coordinate with the Florida Department of Transportation to ensure that the transportation network provides the capability to facilitate the evacuation of the coastal population in the event of an impending natural disaster.

Policy 6.13.7 – Emerging Technology (City of Tallahassee/Leon County):

New advancements in transportation and mobility technologies shall be monitored for identification of potential infrastructure and safety needs, and implementation of these emerging technologies shall be coordinated with federal, state, regional, and local transportation authorities.

Additional Data

Remainder of page intentionally left blank

COMMUNITY SERVICES

Photo credit - City of Tallahassee

The City of Tallahassee and Leon County value the adequate availability of public facilities and services to support the community. The Community Services section provides a description and analysis of the level of service for potable water, sanitary sewer, solid waste, and parks and recreation facilities and services in the community.

POTABLE WATER SERVICES

The City of Tallahassee owns and operates a potable water utility that serves both incorporated and unincorporated portions of the community. The City Potable Water Utility also serves some portions of adjacent Wakulla County where efficiency of services and lines provide that opportunity.

The utility is subject to a franchise agreement with the County and another entity, Talquin Electric Cooperative. It generally lays out by mutual agreement where the service providers are anticipated to operate.

Tallahassee's Potable Water service is subject to a Water Master Plan that is updated every five years. It assesses current and projected operating capacity, demand, and level of service (LOS). The plan includes general operating assessments and any recommendations for maintaining the high-quality provision of potable water that may include improvements for facilities or operations.

Tallahassee's water service, quality, and cost are one of the highest ranked in the state and the community prides itself on maintaining this status. Master planning for the service and local coordination ensure that this remains the case.

Design Capacity: The total well production capacity is 79.416 million gallons per day (MGD) with a permitted combined average annual withdrawal of 33.7 MGD (1,470.0 million gallons per month maximum).

Current Demand on the Facility Capacity: The annual average daily withdrawal for existing portable water service is 29.42 MGD.

Potable Water Level of Service Provided by the Facility(ies): The level of service refers to the amount and availability of the potable water service to the community. It is expressed in the number of gallons that are provided per person per day receiving service, and it is derived by dividing the total production by the service population.

The currently adopted level of service per the Tallahassee-Leon County Comprehensive Plan and the Tallahassee Water Master Plan for potable water systems in the Urban Service Area (USA) is 160 gallons per capita per day (GPCD). This level of service includes residential, commercial, institutional, and industrial and recreational demands, and also unaccounted or non-categorized uses for water. The currently adopted level of service for potable water systems outside of the Urban Service Area (USA) is 100 gallons per capita per day (GPCD). These adopted levels of service are to be used as the basis for determining the availability of facility capacity and the demand generated by a development.

ANALYSIS:

Capacity analysis, by geographic service area, indicating capacity surpluses or deficiencies:

- 2040 Water Master Plan shows that currently 27 production wells and 8 elevated storage tanks provide regional service to franchised area in Leon County and portions of east Wakulla County with no known deficiencies.

Existing conditions, based on the facility design capacity and the current demand on the facility capacity:

1. The current Individual Water Use Permit (Permit Number 2B-073-264-10), issued in 2016, authorizes a combined average annual withdrawal of 33.7 MGD (1,470.0 million gallons per month maximum) of groundwater from the Floridan aquifer for public supply use. The existing permit will expire in 2036.
2. Total well production capacity is 79.416 MGD.
3. Current projected 2025 water demands based on the approved 2040 Water Master Plan Update are 29.42 MGD for annual average daily (AAD) with a maximum day demand (MD) of 44.54 MGD.

General performance of existing facilities currently meets the adopted level of service and is projected, based on average flow identified in the Water Master Plan, to have adequate permitted capacity through master planning timeframe based on:

1. Demonstration of adequate permitted capacity to serve anticipated growth;
2. Adequate pressure ranges as recommended by the American Water Works Association; and
3. Continuation of City regulation including Aquifer/ Well Head Protection Ordinances that have been adopted to protect critical elements of the Water Supply System.

Long-term planning to maintain level of service and/or assess the level of service appropriateness into the future will be assessed as part of the water master planning efforts that may:

1. Analyze and adjust the adopted level of service in the master plan and comprehensive plan;
2. Identify and target permitted capacity adjustments;
3. Identify facility improvements through the capital planning process including the annually updated Capital Improvement Plan (CIP).

Projected 2025*			Projected 2035*			Projected 2045*		
Permitted	Demand**	Service Level	Permitted	Demand**	Service Level	Permitted	Demand**	Service Level
33.7 MGD	29.42 MGD AAD, 44.54 MGD MD	160 GPCD inside USA, 100 GPCD outside USA	33.7 MGD	31.41 MGD AAD, 47.63 MGD MD	160 GPCD inside USA, 100 GPCD outside USA	TBD***	32.64 MGD AAD, 48.96 MGD MD	160 GPCD inside USA, 100 GPCD outside USA

Sources: 1. Permitted capacity is from the 2016 Individual Use Permit 2B-073-264-10 and as reported in the Evaluation and Appraisal Report 2021; and 2. Service Population: Tallahassee Water Master Plan - 2025: 278,376, 2035: 297,688, 2045: 313,333. .
* 2025 and 2035 projected demands included in approved 2040 Water Master Plan. 2045 projected demands to be included in the 2045 Water Master Plan Update.
**Projected demands include annual average day (AAD) and maximum day (MD)
**The permitted capacity permit is set to expire in 2036 and could be adjusted in a future permit to allow additional capacity. At this time the extent of the capacity is unknown.

Analysis of the problems and opportunities include facility replacement, expansion, and new facility siting.

Water master planning activities will continue to identify needed production well sites and elevated storage tank sites. These will continue to be put into the CIP as demands dictate and development and redevelopment activities occur.

Additionally, The level of service shall be analyzed during master plan update(s) and/or the next comprehensive plan Evaluation and Appraisal Report (EAR) to determine if adjustments to adopted levels of service in the comprehensive plan are needed and appropriate.

SANITARY SEWER SERVICES

The City of Tallahassee owns and operates a Sanitary Sewer Utility that serves both incorporated and unincorporated portions of the community. These areas include the Leon County Urban Services Area (USA) and suburban areas that are on the fringe of urban development as well as the Woodville Rural Community which is a priority for service.

The Thomas P. Smith Wastewater Treatment Facility is a primary facility for the utility and treats effluent to an Advanced Wastewater Treatment (AWT) level as a result of decisions, investments, and improvements in the early 2000s that were approved and completed in 2013. The AWT treatment commitment assists in reducing impacts from effluent including those to groundwater and natural resources.

The utility is subject to a franchise agreement with the County and another entity, Talquin Electric Cooperative. It generally lays out by mutual agreement where the service providers are anticipated to operate.

Tallahassee's sanitary sewer service is subject to the Sanitary Sewer Master Plan that is updated every five years. It assesses current and projected operating capacity, demand, and level of service (LOS). The plan includes general operating assessments and any recommendations for maintaining the existing system and connecting those areas that can benefit from sewer service to prevent further impacts to groundwater. It also includes recommendations for maintenance and any improvements for facilities and services.

Existing and Projected Sanitary Sewer Level of Service

Existing 2025			Projected 2035			Projected 2050		
Permitted	Demand	Service Level	Permitted	Demand	Service Level	Permitted	Demand	Service Level
26.5MGD	18.84 MGD	100 GPCD	26.5 MGD	21.8 MGD	100 GPCD	26.5 MGD	25.2 MGD	100 GPCD

Sources: 1. Permitted capacity is from the T P Smith Water Reclamation Facility Operating Permit FLA010139; and 2. Service Population: Tallahassee Water and Sewer Master Plan - 2025 283,972, 2035 302,033, 2050 317,964.

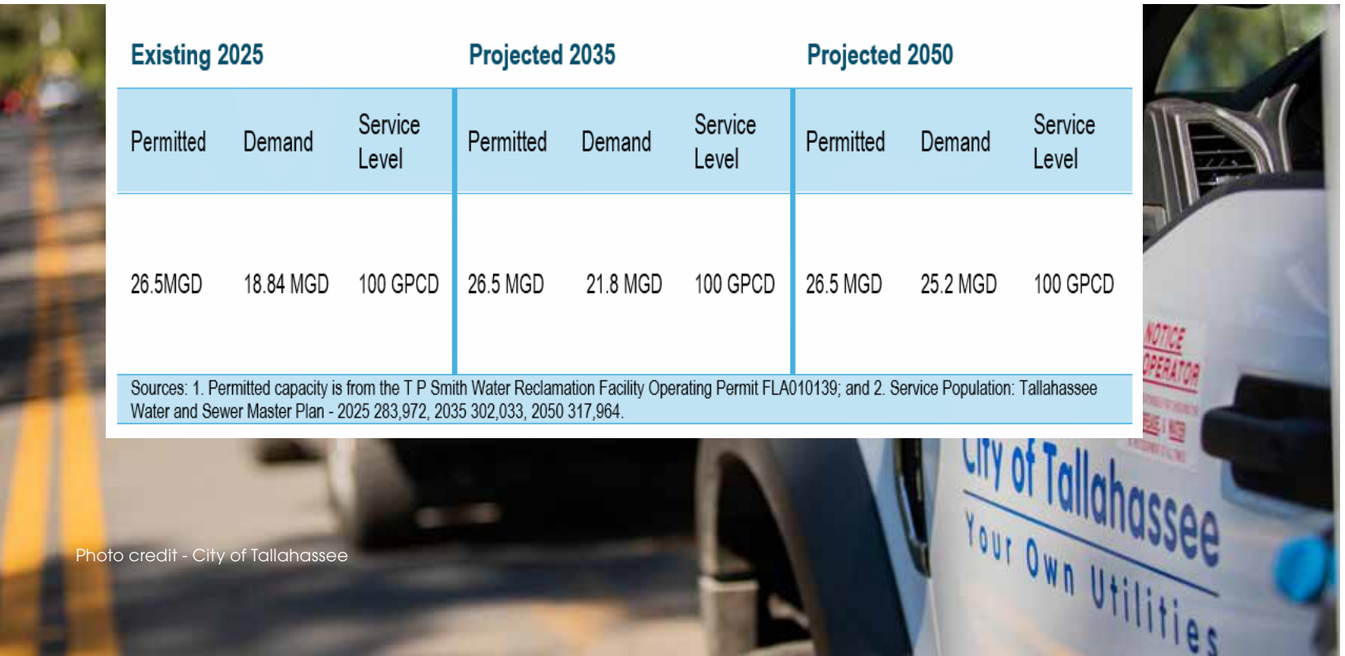

Photo credit - City of Tallahassee

Sewer is a priority in certain areas including the Primary Springs Protection Zone and the Woodville Rural Community. In coordination with Leon County, sanitary sewer is being provided through a "septic to sewer" initiative that has resulted in the conversion of homes and businesses from existing septic also referred to as On-Site Treatment Disposal Systems (OSTDS) to the City of Tallahassee Sewer System. It has also resulted in specific sewer related projects that are reflected in the City and County 5-Year Capital Improvements Plan.

These sewer connections and projects are intended to further protect groundwater, including the Floridan Aquifer and the water resources at Wakulla Springs, and to provide efficiency of service to new development and rural communities in the southern portion of the community.

Design Capacity: The current design capacity for sanitary sewer is 26.5 million gallons annual average daily flow.

Current Demand on the Facility Capacity: The current demand on the existing facility is 18.84 million gallons per day.

Level of Service Provided by the Facility(ies): The level of service refers to the ability to receive and treat wastewater. It is expressed in the number of gallons treated per person per day, and is derived by dividing the total amount of wastewater treated (in gallons) by the service population. The LOS for wastewater is 100 gallons per capita per day (GPCD).

ANALYSIS:

Capacity analysis, by geographic service area, indicating capacity surpluses or deficiencies:

- The City completed a 2040 Master Sewer Plan update for the collection, transport, treatment and assessment of effluent disposal systems. This plan includes current and projected population and system capacities, deficiencies, and required rehabilitation, replacement, and improvement projects for inclusion into the CIP.

Existing conditions, based on the facility design capacity and the current demand on the facility capacity:

1. Existing permitted capacity is 26.5 MGD while the current demand is 18.84 MGD.

2. Through 2040, the analysis of design capacity, current demand at adopted level of service standards vs. projected population, and Future Land Use Map distributions are addressed through the continued 5 Year Master Sewer Planning updates that identify needed sewer system improvements for inclusion into the annually updated CIP.

General performance of existing facilities through 2050 is anticipated to continue to meet the adopted level of service through the timeframe based on:

1. Demonstration of adequate permitted capacity to serve anticipated growth;

2. Demonstration of the general condition and expected life of existing facilities, and the impact of the facilities upon adjacent natural resources; and

3. Continuing maintenance has included several trunk line repairs or replacements; replacement of lines with heavy infiltration; pumping station replacement program has been underway for 5 years that replaces old stations with new stations with extended useful life and reduced operational and maintenance costs.

Reduction of extraneous waters entering the sewer system has created additional reserve sanitary sewer capacity to serve future growth in addition to improved system reliability and reduced potential for sewer system overflow. The current 2040 Master Sewer Plan update includes a detailed study of US EPA regulations regarding capacity, management, operations, and maintenance of the sewer system.

Analysis of the challenges and opportunities for facility replacement, expansion, and new facility siting include identification of the location of major facilities such as trunk lines, pumping stations, and force mains, as part of the Master Sewer Plan update(s). Needed facilities will be put into the CIP as demands dictate and as development or redevelopment activities occur.

TALQUIN ELECTRIC COOPERATIVE UTILITIES SERVICES

Talquin Electric Cooperative (TEC) has long been a contributor to ensuring services within the Community. Established in 1940 to serve rural areas, TEC is a member-owned, non-profit service distribution cooperative headquartered in Quincy, Florida.

TEC provides electricity to approximately 57,000 accounts and provides water and wastewater services to over 24,000 accounts. TEC provides services to homes and businesses across a four-county, 2,600 square mile service territory including Gadsden, Leon, Liberty, and Wakulla.

In Leon County, TEC provides electric, water, and sewer within a Franchise Agreement area that include suburban and rural areas. TEC continues to provide quality service to those areas within the community.

Leon Geographic Service Area: TEC serves specific areas per the Water and Sewer Agreement with the City of Tallahassee within the Urban Services Area (USA) and unincorporated Leon County for water and sewer services.

Predominant Types of Land Uses Served: TEC serves residential, commercial, industrial- heavy and light, institutional, and recreational uses.

Design Capacity: TEC has potable water design capacity of 14.1 million gallons per day (MGD). The permitted maximum daily operating capacity for sanitary sewer is 1.472 MGD permitted annual average daily flow.

Current Demand on the Facility Capacity: The current demand for potable water is 6.0 MGD. The maximum daily operating capacity for sanitary sewer is 0.9 MGD annual average daily flow.

Level of Service Provided by the Facility(ies): The currently adopted level of service for potable water systems in the Urban Services Area is 160 gallons per capita per day (GPCD) for average daily demand.

This level of service includes residential, commercial, institutional, and industrial demands, and also unaccounted for water. The currently adopted level of service for potable water systems outside of the Urban Service Area is 100 gallons per capita per day (GPCD). These adopted levels of service are to be used as the basis for determining the availability of facility capacity and the demand generated by a development.

The current level of service is derived by dividing the total production by the service population.

ANALYSIS:

Potable Water: Talquin Electric provides services as authorized under the existing Water and Sewer Service Agreement. Talquin provides potable water service to approximately 32,715 cooperative members in Leon County.

Sanitary Sewer: Talquin Electric provides services as authorized under the existing Water and Sewer Agreement. Talquin provides sanitary sewer service to approximately 4,982 cooperative members in Leon County.

Leon County: Talquin's projects include improvements and expansion at the Killearn Waste Water Treatment Plan to increase treatment to 1.2 MGD and add treatment wetlands for effluent disposal.

Photo credit - City of Tallahassee

SOLID WASTE SERVICES

The community is committed to ensuring efficient collection of solid waste and to recycling. The City contracts with a third-party for residential waste collection. Commercial waste collection in the City is handled by City collection crews. The County provides solid waste collection and disposal services to the unincorporated area of the County through a third-party contractor. Alternatively, unincorporated residents may utilize one of the County's four Rural Waste Service Centers. The County also operates drop-off Hazardous Waste Centers for household hazardous waste and electronics disposal for use by all residents.

Recycling services for the City and the County are provided through a contracted third-party, which processes both Class III (standard recyclables) and Construction & Demolition debris.

Leon County's landfill is undergoing regulatory closure. The County-operated Transfer Station is the central site where all local solid waste is consolidated and hauled to Springhill Regional Landfill in Jackson County for proper disposal.

The community continues to prioritize reduction of the solid waste stream through recycling and efficiency of services.

Predominant Types of Land Uses Served: Residential, commercial, heavy and light industrial, institutional, and recreational are served by solid waste providers.

Design Capacity: Service is provided by a third party, Waste Management, through an agreement to transfer the waste from Leon County's Transfer Station to the Jackson County Springhill landfill facility. In 2022, the Jackson County Comprehensive Plan Evaluation and Appraisal Report stated that the County expanded its landfill by 450 acres and has a current capacity in excess of 60+ years given the current LOS standard.

Current Demand on the Facility Capacity: The current demand is 2.2M lbs/capita per day (LCPD). The population data source to calculate demand is the Census Bureau Quick Facts 2024 for Leon County with a population of 300,488 people.

Level of Service Provided by the Facility(ies): The level of service is 7.4 LPCD.

Existing and Projected Solid Waste Level of Service

Existing 2025			Projected 2035			Projected 2050		
Capacity	Demand	Service Level	Capacity	Demand	Service Level	Capacity	Demand	Service Level
60+ yrs	2.2M LCPD	7.4 LPCD	**50+ yrs**	2.4M LCPD	7.4 LPCD	**35+ yrs**	2.5M LCPD	7.4 LPCD

Sources: 1. Census Quick facts 2024 total county population 300,488 people; 2. OEV Data Center, existing and projected population, 2035 326,100 and 2050 343,300.

Photo credit - City of Tallahassee

PARKS SERVICES

City, county, state, and federal entities own and/or operate parks, recreation, or forest facilities within the community.

Leon County and the City of Tallahassee are committed to high-quality parks and recreation facilities that include nationally recognized and premier facilities like the Apalachee Regional Park. Some of these facilities, like the above-mentioned park, host national, international, state, regional, and local events.

Both the City and the County maintain robust strategic initiatives to continue to maintain, improve, and add to a strong parks and recreation inventory and management system. The City recently reached its goal of providing 100 parks and the County has completed over 34 miles of a 90-mile goal of sidewalks and trails. Park facilities are where the community shines and shows its successes. Most residents rank the available parks high on the list of amenities and positive community attributes. Additionally, it is a facility set for which the capacity and features will serve citizens well into the future.

Predominant Types of Land Uses Served:
Residential, commercial, and recreational

Level of Service Provided by the Facility(ies):

Tallahassee:

- **Regional Parks:** 4 acres per 1,000 population
- **Area Parks:** 1 acre per 1,000 population

Leon County

- **Regional Parks:** 8 acres per 1,000 population
- **Area Parks:** 1 acre per 1,000 population

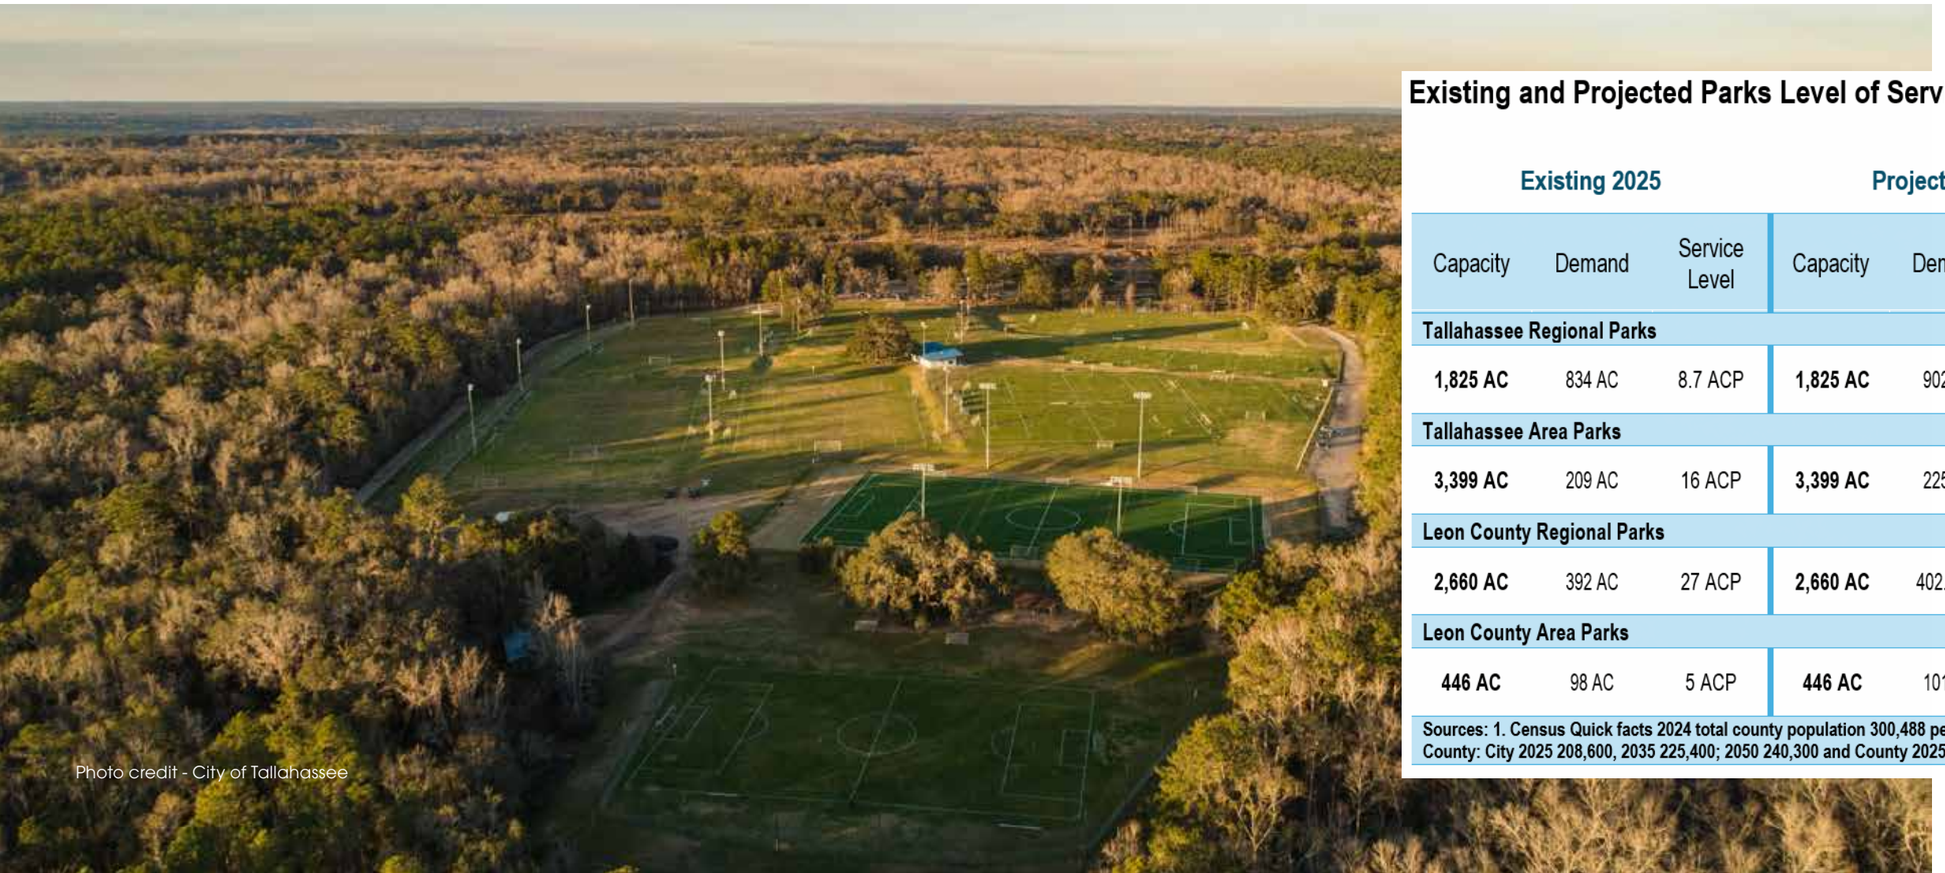

Photo credit - City of Tallahassee

ANALYSIS:

As identified in the 2022 Comprehensive Plan Evaluation and Appraisal Report (EAR), the City and County have far exceeded the adopted level of service for recreation and open space. Based on GIS data reflected in the table below, there are over 4,000 acres existing in regional and area parks in the City and 3,000 acres existing in regional and area parks in the County. These totals do not include significant state and federal parks managed by various entities that are available to Leon County residents. As mentioned above, the City owns and manages a number of parks and celebrated the "100-park" milestone that occurred in 2024. The City parks inventory includes the award-winning Cascades Park and a number of smaller, neighborhood-oriented parks.

The County is responsible for operation and maintenance of many parks, including the nationally recognized Apalachee Regional Park and locally enjoyed Miccosukee Greenway. The county also has 24 boat landings. Available boat ramp capacity stands at just over 6%. Boat ramp capacity has been reserved for all County and City residential demands.

No deficiencies exist for parks. Facilities to meet strategic objectives including new parks and trails in the County Parks system will be put into the CIP as demands dictate and as development or redevelopment activities occur. Sufficient capacity exists to meet the demands of the population for the next five years and well beyond.

MOBILITY AUDIT

Photo credit - City of Tallahassee

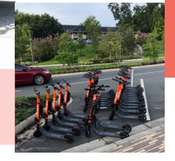

Photo credit - City of Tallahassee

INTRODUCTION AND REGULATORY FRAMEWORK

Mobility refers to the movement of people and goods from one place to another. Mobility is characterized by modes of transportation, the way in which people and goods move around. Modes include roadways, rail systems, infrastructure for airports as well as sidewalks and trails. These modes of transportation can serve people and freight. In January 2023, Tallahassee-Leon County received a response from the state review agency regarding their Evaluation Appraisal Report (EAR) notification letter. The letter stated that the Comprehensive Plan complied with Chapter 163,Florida Statures (F.S.), and Chapter 73C-49, Florida Administrative Code (FAC). The Tallahassee-Leon County submittal noted that the Land Use and Mobility Elements would be updated to reflect local conditions.

Tallahassee-Leon County is well represented by different modes of transportation. The region has a well-connected roadway network, with I-10 and US 90, 27, and SR 20 providing essential statewide links, along with a robust network of state and local roads. Tallahassee has a municipally-owned international airport supporting travelers and goods. The region also includes rail infrastructure, currently supporting area businesses and industrial locations with the transport of goods. The rail network previously supported commuter travel through Amtrak with the infrastructure present to resume service in the future.

A notable feature is the region's extensive trail network, which supports pedestrians, cyclists, and in some locations, equestrians. To provide for the equitable movement of people and to reduce congestion, the region is host to StarMetro, a public transport agency with a fleet of buses and routes throughout the City. Extra-regional bus transport is supported though the local Greyhound bus station located in the heart of Tallahassee, and various informal locations that serve as stops for other regional bus lines, including Red Bus.

The following data and analysis supports the updates and revisions to the Mobility Element goals, objectives, and policies of the Leon County-Tallahassee Comprehensive Plan. The forecast years are 2030 (to provide consistency with the Capital Improvements Element), and 2035 (to prepare for the first 10-year period after plan adoption) based upon Florida Statutory requirements (163.3177, F.S.). The data and analysis include:

- The levels of service of the existing transportation system services.
- Identification of transportation needs to support the projected transportation system.
- Existing and projected intermodal deficiencies and needs.
- The projected transportation system levels of service based on the historical and projected needs.
- Data supporting an integrated transportation system.

Tallahassee-Leon County is within the Capital Region Transportation Planning Agency (CRTPA) planning area under Chapter 339.175 F.S., hence, the analyses require the following:

- Alternative modes of travel, such as public transportation, trails, pedestrian, and bicycle travel.
- Aviation and rail facilities, access to those facilities, and intermodal terminals.
- Evacuation routes.
- Airports and projected airport and aviation development.
- Programs that promote public transportation systems in designated public transportation corridors.
- The needs of the transportation disadvantaged.

This background data and analysis report encourages the development of goals, objectives and policies aimed at:

- Pedestrian-friendly areas
- Improved access and connectivity
- Reduced vehicle miles traveled
- Healthier communities
- Mobility options for all users
- Energy-efficient development patterns
- Protection of the natural environment

FEDERAL, STATE, REGIONAL AND LOCAL AGENCIES

The section on existing conditions provides a portrayal of the current state of the community. The Mobility Element examines the data and analysis related to the usage and volume of the existing roadways, airports, transit services, rail lines, and trails. It also predicts future volumes based on development patterns.

Various government agencies budget, plan, maintain, and operate transportation systems. Understanding their statutory requirements for a comprehensive plan sets the stage for planning future needs and multi-jurisdictional collaboration.

AGENCIES

Photo credit - City of Tallahassee

FEDERAL

The region is traversed by the Interstate Highway System and receives federal funding for the maintenance of these roads. On November 15, 2022, the Bipartisan Infrastructure Law (BIL) was signed into law to rebuild transportation infrastructure including:

- Roads, bridges, and major projects
- Passenger and freight rail
- Public transportation to make public transportation accessible and replacing diesel buses with clean, electric buses across school bus and transit fleets
- Airports and Federal Aviation Administration facilities
- Ports and waterways
- Safety
- Electric vehicles, buses, and ferries

STATE

The Florida Department of Transportation (FDOT) is responsible for the planning, construction, maintenance, and access to the state highway system, as well as the State Rail Plan and the Florida Aviation System Plan. FDOT's primary statutory responsibility is to coordinate the planning and development of a safe, viable, and balanced state transportation system serving all regions of the state.

The state highway system is established by Florida Statutes and consists of all state and federally designated roadways.

FDOT is decentralized in accordance with legislative mandates which means each of the districts is managed by a District Secretary. The districts vary in organizational structure, but in general each has major divisions for Administration, Production, and Operations. Leon County is within District Three that is comprised of 16 counties: Escambia; Santa Rosa; Okaloosa; Walton; Holmes; Washington; Bay; Jackson; Calhoun; Gulf; Liberty; Franklin; Gadsden; Leon; Wakulla; and Jefferson Counties.

The Strategic Intermodal System (SIS) is vital to the state's economy and mobility and includes the railroad, I-10, and Capital Circle Northwest and Southwest.

FDOT has adopted the Florida Transportation Plan (FTP), which is part of the State Comprehensive Plan and guides major transportation planning for state facilities. Every year, the FDOT develops, with the cooperation of the County Commission, the Five-Year Work Program, which establishes priorities and funding for specific transportation improvement projects. FDOT establishes minimum Level of Service (LOS) targets and plans and funds for SIS facilities. The FDOT 5-Year Work Program, provided in Appendix A, provides the projects and associated funding allocations for Leon County through 2028.

REGIONAL

Transportation projects are initiated, managed, and constructed by various agencies within the Tallahassee-Leon County community including the City's Underground Utilities & Public Infrastructure and the County's Public Works Departments. The Capital Region Transportation Planning Agency (CRTPA) serves as a liaison for FDOT and plans regional projects. It is responsible for coordinating transportation planning within Florida's Capital Region. The CRTPA includes all of Gadsden, Jefferson, Leon, and Wakulla counties. The CRTPA Board is comprised of representatives from Gadsden, Jefferson, Leon, and Wakulla Counties. The CRTPA's committees are the Citizens Multimodal Advisory Committee and Technical Advisory Committee.

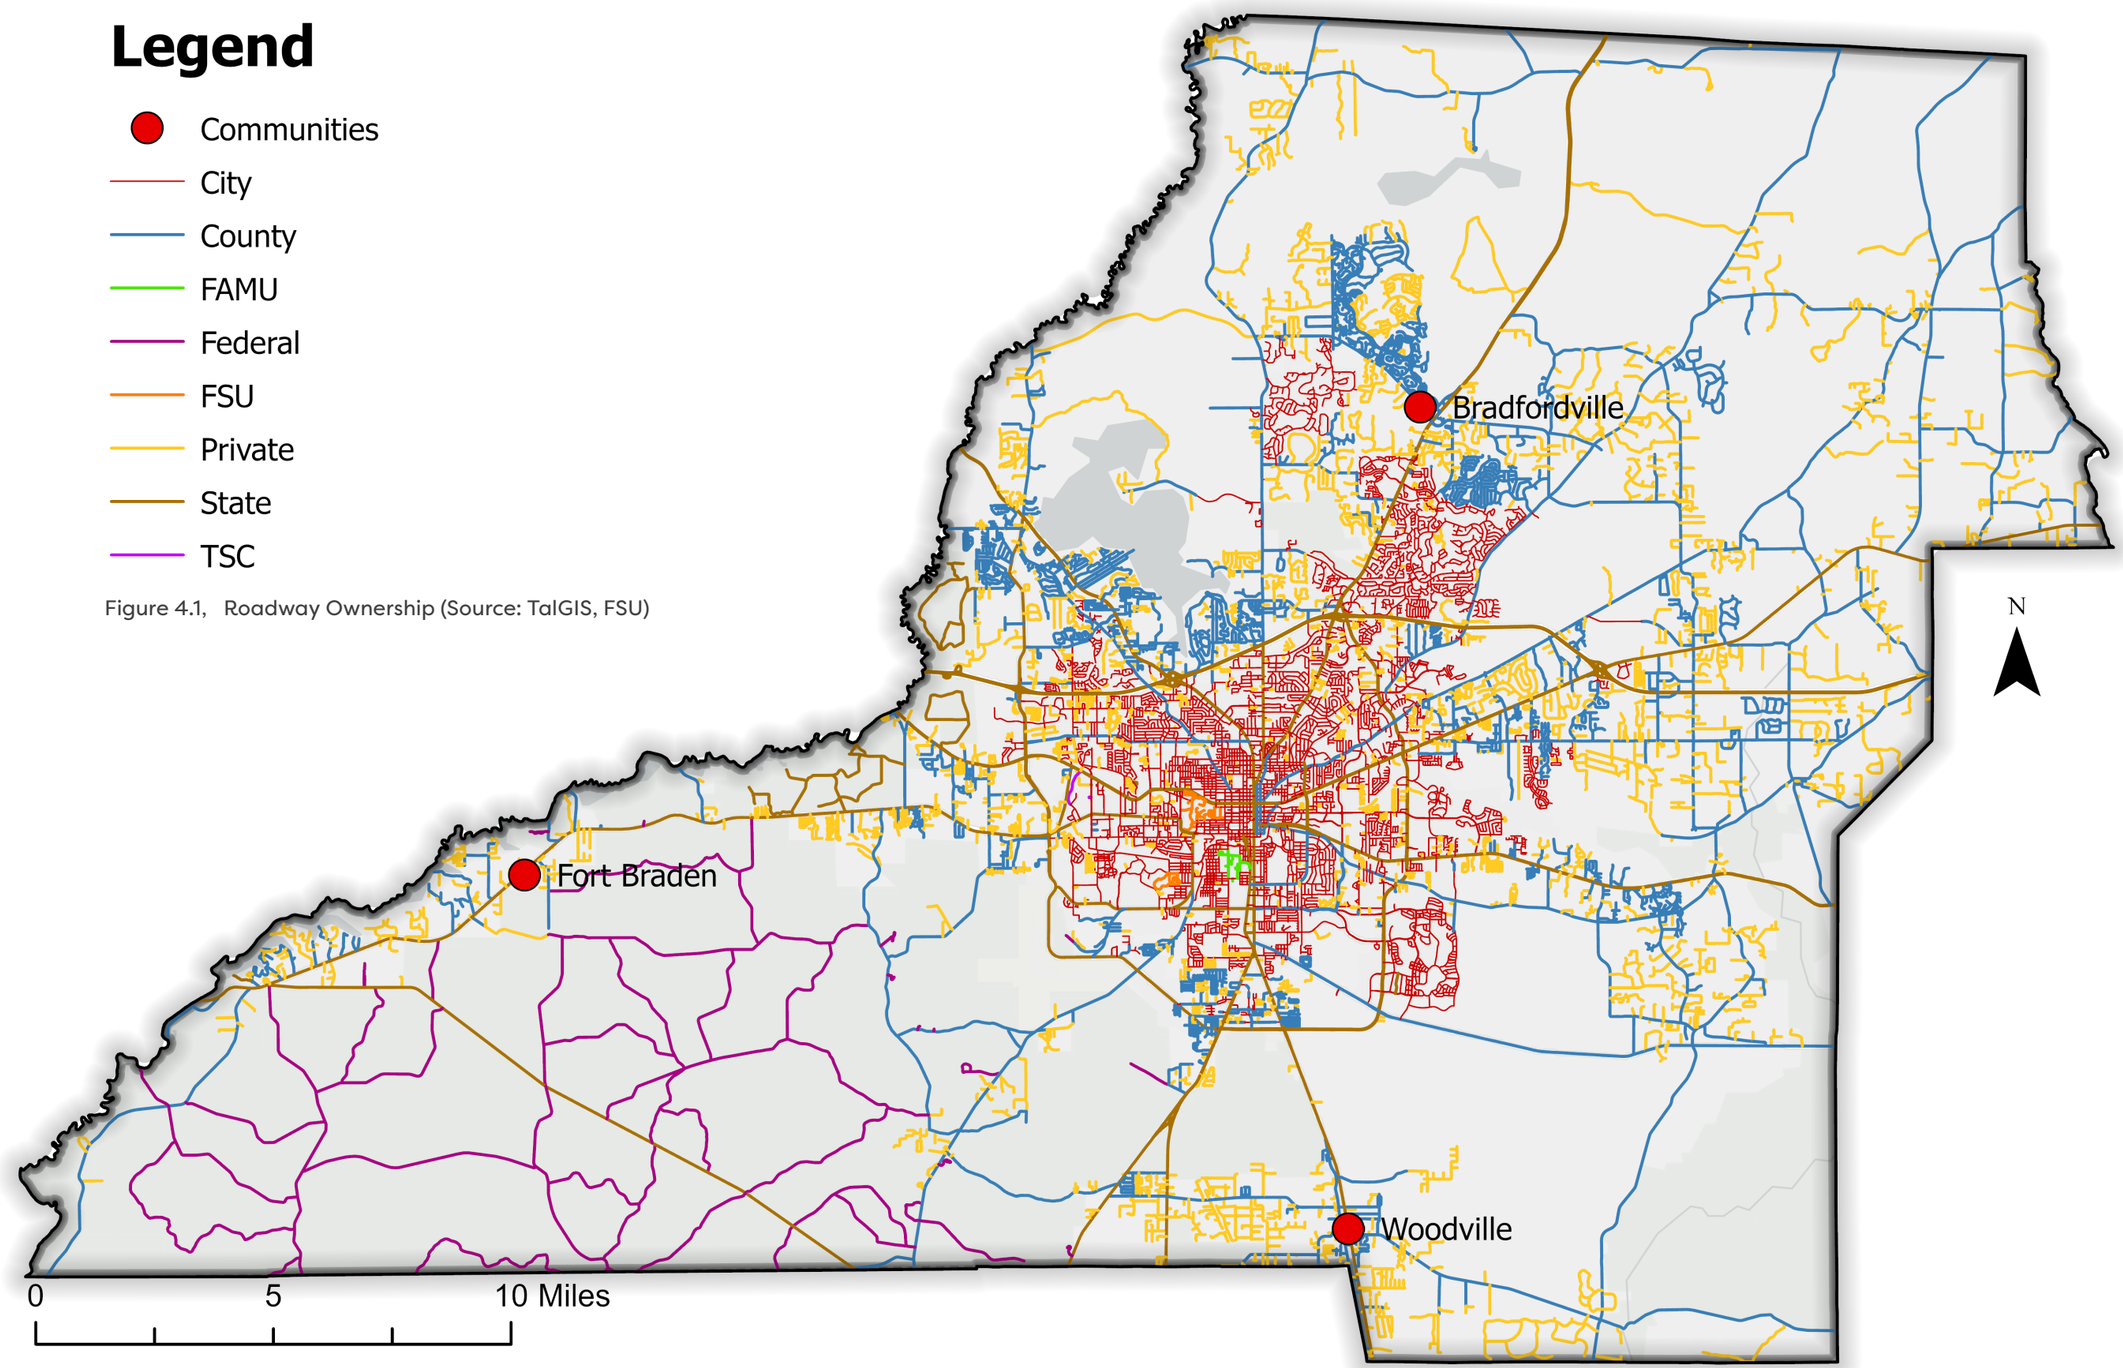
The CRTPA develops plans and programs to guide the region's transportation planning process including the Long-Range Transportation Plan (LRTP) and the Transportation Improvement Program (TIP). Chapter 163, F.S., requires the schedule of capital improvements (CIP) and transportation elements of the local comprehensive plan to be consistent with the adopted LRTP. The CRTPA, in conjunction with the City and County, is responsible for updating their schedule of Capital Improvement Projects on an annual basis. Annually, the CRTPA adopts a Project Priority List (PPL). The CRTPA's project priority list for Fiscal Year (FY) 2025 – FY 2029 was adopted and amended on June 19, 2023. The CRTPA conducts studies and provides a regional forum for identifying and addressing transportation issues, including planning impacts and opportunities for automated, connected, electric, and shared-use vehicles. In addition, this addresses immediate needs by overseeing the delivery of services to the transportation disadvantaged and providing direct services to commuters and employers.

LOCAL

Both the City and County are responsible for maintaining 713.97 centerline-miles of roadways, according to the Pavement Management Master Plan by Hanson Sept. 2023 Program Update. Out of the over 700 miles of roadways, 670 miles are maintained by Leon County. Both the City and County have the responsibility of preserving rights-of-ways and acquiring new ones to improve the transportation network for all users, whether they are motorized or non-motorized.

BLUEPRINT INTERGOVERNMENTAL AGENCY (BPIA)

The Blueprint Intergovernmental Agency, created pursuant to Section 163.01(7), F.S., is a City-County agency established to implement an ambitious plan funded by a local government one-cent sales surtax. Endorsed by the Tallahassee-Leon County voters who approved the surtax in 2000 and again in 2014 to efficiently execute large, transformative, and generational projects that are aimed to enhance the community through coordinated planning and construction of transportation, utilities, stormwater management, parks, greenways, and economic development programs.



Comprised of two departments – Blueprint Infrastructure and the Office of Economic Vitality (OEV) – Blueprint operates with a clear mandate to drive progress and prosperity. Funded by the one-cent sales surtax, Blueprint Infrastructure receives 66 percent and the Office of Economic Vitality receives 12 percent. The City of Tallahassee and Leon County each receive 10 percent, while an additional 2 percent goes to Leon County for the "Livable Infrastructure for All" (LIFE) Program, highlighting a commitment to inclusive growth.

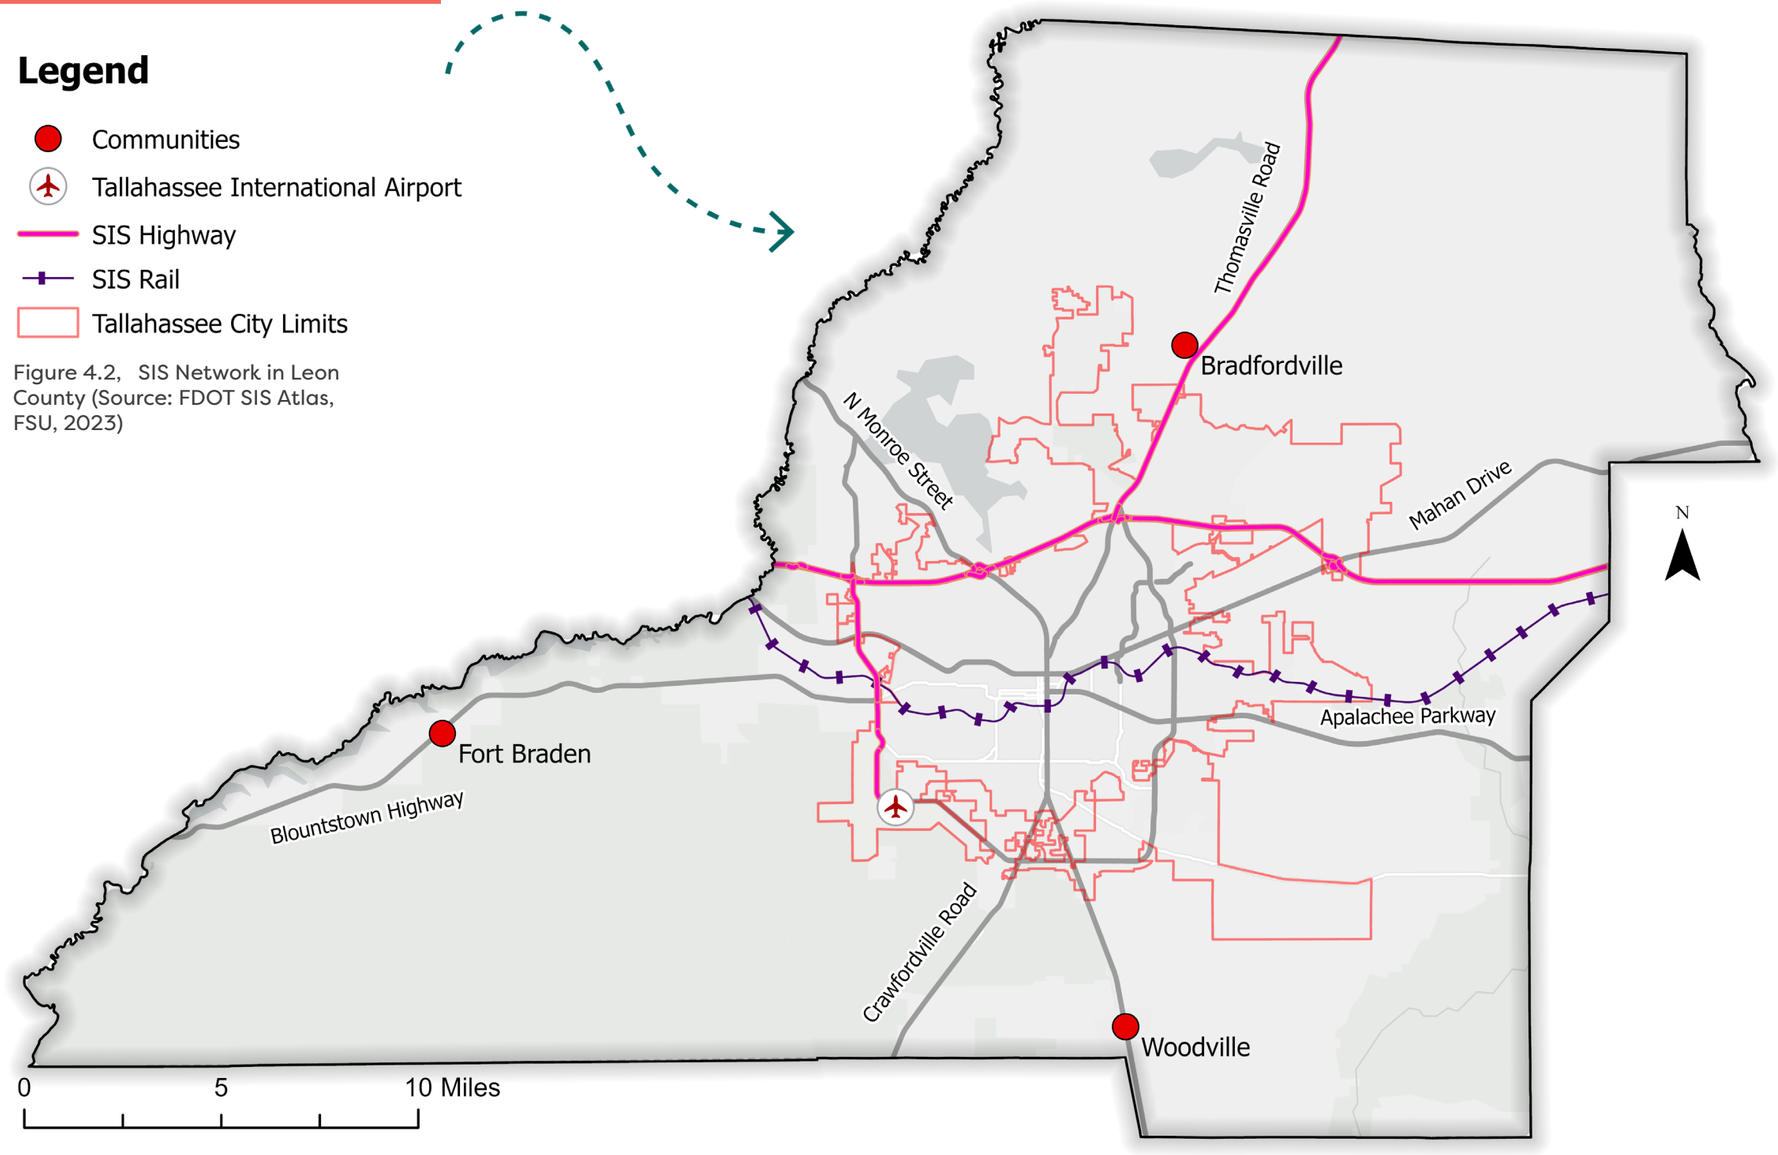
FREIGHT

Trucking, railway, airport assets, and government and economic development leaders work together to enhance Tallahassee-Leon County's geographic advantages and ensure a favorable business climate for companies of all sizes. Of note is the large Amazon robotics fulfillment center in Tallahassee. The center is located on Mahan Drive, west of I-10 and east of Thornton Road. In addition to the fulfillment center, Amazon has also begun construction on a parcel of land off Capital Circle Northwest for a 123,000 square foot "Last Mile" facility. This facility will be used to transport goods from the fulfillment center directly to customers' doorsteps. The clustering of businesses in the major urbanized areas and along state routes in the region allows for a more in-depth review of potential transportation recommendations for the future. Both the clusters of businesses and the total number of employees highlight areas of increased freight policy considerations for existing and future transportation needs. The following sections contain recommendations from the CRTPA Capital Regional Freight Plan in 2024.

ROADWAY

Through coordination with municipalities, the development of delineated truck routes or exclusion zones may be beneficial. Communities may wish to route trucks away from narrow roadways that don't accommodate their size. The study did not identify major areas where routing or exclusion should be developed at this time; however, the Monticello Roundabout (US 90 and US 19) should be reviewed for design limitations due to reports of oversized loads having issues in the area.

SIS NETWORK



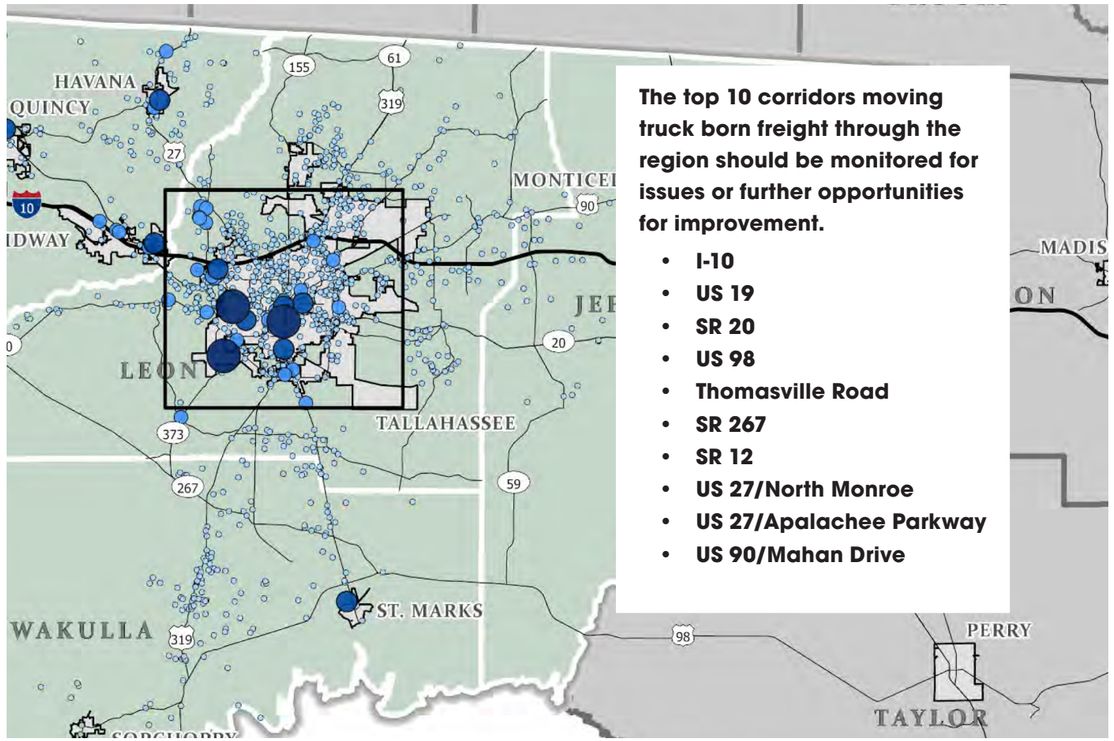


Figure 4.2, SIS Network in Leon County (Source: FDOT SIS Atlas, FSU, 2023)

Photo credit - City of Tallahassee

The top 10 corridors moving truck born freight through the region should be monitored for issues or further opportunities for improvement.

- **I-10**
- **US 19**
- **SR 20**
- **US 98**
- **Thomasville Road**
- **SR 267**
- **SR 12**
- **US 27/North Monroe**
- **US 27/Apalachee Parkway**
- **US 90/Mahan Drive**

Figure 4.3, Freight and Heavy Vehicle Related Businesses by Employee County (Source: ESRI Community Analyst, 2022)

The provision of truck parking spaces is largely being provided through private businesses such as Flying J and Pilot near Midway. These facilities often offer safe parking within amenities such as showers and restaurants for truck drivers. Though FDOT is working to add spaces to its existing rest areas, it is anticipated that the nationwide truck parking shortage will continue. Opportunities for public and private partnerships may efficiently generate additional truck parking without either group bearing the sole responsibility. Coordination on truck parking development and the possibility of partnerships is encouraged.

Coordination with law enforcement will be key to discouraging unauthorized parking.

As the nation continues to experience a truck parking shortage it is important to consider additional options for the development and safe parking of large trucks. Coordination with municipalities to development truck-driver friendly considerations is recommended. The development of zoning/design requirements which mandate the development of adequate internal truck parking for freight related businesses may help reduce unauthorized parking in the area. Additionally, the coordination with law enforcement officials on the enforcement of unauthorized parking may be beneficial to increase driver safety. Trucks parked in dark areas and/or along active roadways pose safety issues for both the drivers and other travelers.

Photo credit - City of Tallahassee

AIR

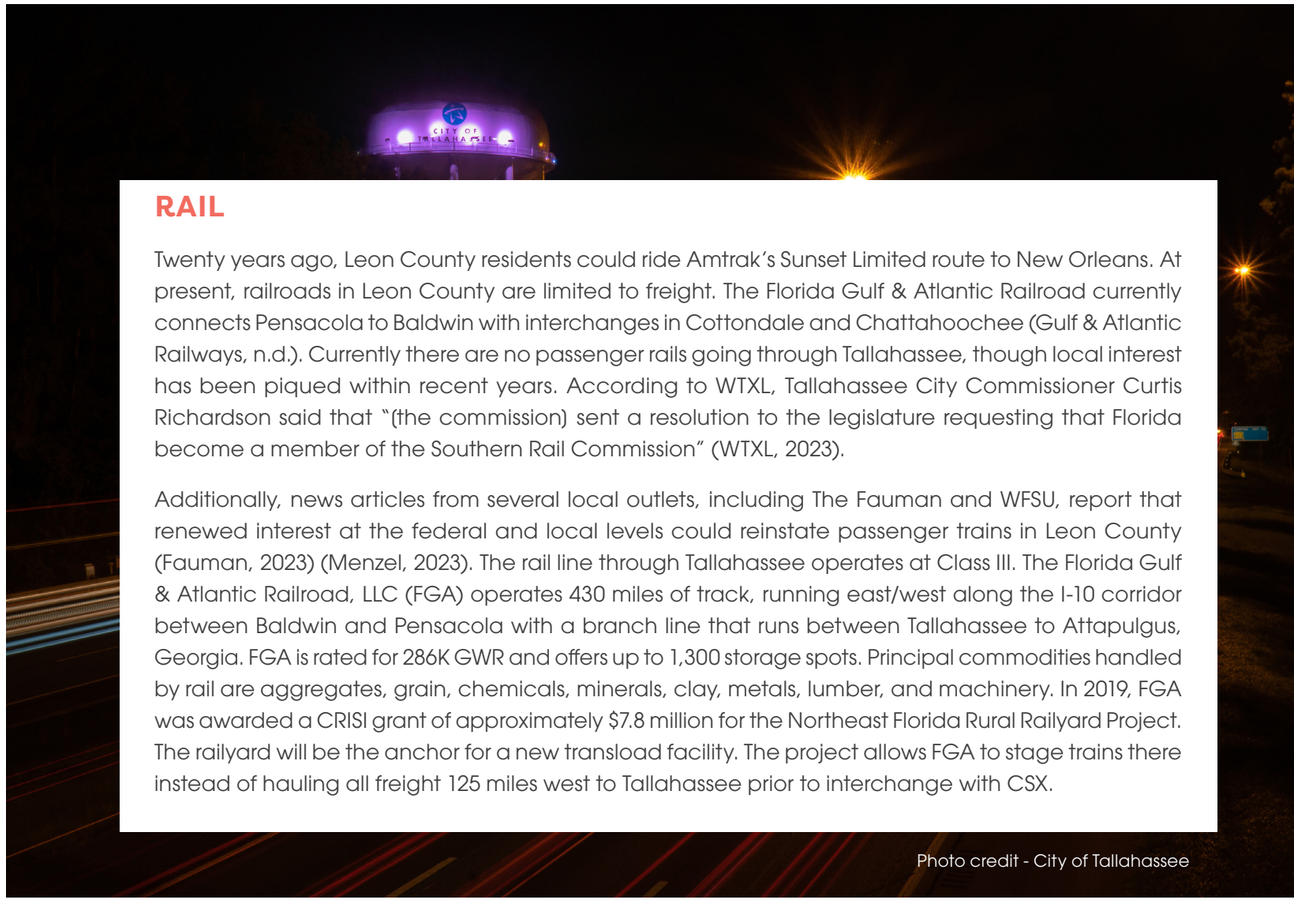
As TLH continues to grow and increase the cargo movement throughout the area, continued coordination on their foreign trade zone will be beneficial. The development of a foreign trade zone may have far-reaching impacts that could provide significant economic benefit to the entire region. Additionally, newer technology and use of Advanced Air Mobility vehicles, like drones, may facilitate the need to include servicing facilities at the airport.

SEA

Though the closest port, Port of Port St. Joe is not within the region, its future development may greatly impact the area. Increases in industry or freight movements supporting increased activity at the port will likely utilize major through routes in the region such as US 98 and I-10.

CARGO BUSINESS PORT

FREIGHT INTERMODAL



Similar to seaports, transload or intermodal facilities help transfer freight from one mode to another. (I.e. from freight train to freight truck). Though largely a land use and private sector industry driven condition, the region is encouraged to consider these development styles to support freight in the region. Other states are finding success in the development of "inland port" facilities which function to transition freight rail (often leaving seaports) onto trucks. The region's proximity to seaports, location along I-10, and existing rail network may provide opportunities for this development in the future.

Currently, the future land use plans for each of the CRTPA member counties have prioritized limited locations for the specific development of industries or freight centric businesses. Though the communities may not desire to encourage these development types, coordination with municipal partners in the future will help guide the development of freight related growth into desired areas. Management of this growth pattern will also allow for increased planning for the transportation network.

The identification of freight clusters can help guide development of comprehensive planning and future zoning/land use decisions. Working with municipalities on the development of freight clusters may help further improve safety and efficiency within the region. By clustering freight uses, more opportunities to reduce conflict and promote rapid access to vital networks will be available.

Coordination related to freight development should not be limited to municipal or MPO boundaries. Freight related movements are boundary agnostic and often traverse significant distances and as such, broad communication and awareness are key to continuing to understand trends and needs of the greater area.

FDOT staff will continue to be involved in conversations related to freight movements within the area. This cooperative engagement with FDOT Freight and Rail Office may help identify funding opportunities for the transportation network. Additionally, the pursuit of freight specific funding sources may increase project feasibilities into the future.

RAIL

Twenty years ago, Leon County residents could ride Amtrak's Sunset Limited route to New Orleans. At present, railroads in Leon County are limited to freight. The Florida Gulf & Atlantic Railroad currently connects Pensacola to Baldwin with interchanges in Cottondale and Chattahoochee (Gulf & Atlantic Railways, n.d.). Currently there are no passenger rails going through Tallahassee, though local interest has been piqued within recent years. According to WTXL, Tallahassee City Commissioner Curtis Richardson said that "(the commission) sent a resolution to the legislature requesting that Florida become a member of the Southern Rail Commission" (WTXL, 2023).

Additionally, news articles from several local outlets, including The Fauman and WFSU, report that renewed interest at the federal and local levels could reinstate passenger trains in Leon County (Fauman, 2023) (Menzel, 2023). The rail line through Tallahassee operates at Class III. The Florida Gulf & Atlantic Railroad, LLC (FGA) operates 430 miles of track, running east/west along the I-10 corridor between Baldwin and Pensacola with a branch line that runs between Tallahassee to Attapulgus, Georgia. FGA is rated for 286K GWR and offers up to 1,300 storage spots. Principal commodities handled by rail are aggregates, grain, chemicals, minerals, clay, metals, lumber, and machinery. In 2019, FGA was awarded a CRISI grant of approximately $7.8 million for the Northeast Florida Rural Railyard Project. The railyard will be the anchor for a new transload facility. The project allows FGA to stage trains there instead of hauling all freight 125 miles west to Tallahassee prior to interchange with CSX.

Photo credit - City of Tallahassee

INTERMODAL

AIRPORT

Aviation plays a vital role in supporting economic growth by attracting business and tourism, developing local economies, and retaining jobs that might otherwise be lost. Tallahassee International Airport (TLH) is a City-owned airport five miles southwest of downtown Tallahassee. In 2023, the airport had 74,363 aircraft operations, average 204 per day: 57 percent general aviation, 10 percent air taxi, 21 percent military and 13 percent airline. 207 aircraft are based at this airport: 178 single-engine, 7 multi-engine, 8 jet and 14 helicopters.

Data recently released from the Florida Department of Transportation (FDOT) reports Tallahassee International Airport's annual economic impact grew to $859 million, up 43 percent from $599 million in 2019.

Year	Total Cargo (lbs.)	Total Operations (Aircraft)
2015	19,045,447	1,370
2025	22,891,341	1,513
2035	25,286,281	1,672

Table 4.1, TLH Cargo Forecasts (Source: Tallahassee International Airport Master Plan Update, 2019)

PASSENGER

Current airlines operating at TLH are American Airlines, Delta Air Lines, and Silver Airways. Jet Blue began operations in January 2024 and discontinued all flights from Tallahassee in October 2024. In 2023 TLH saw an increase in passenger traffic of 7.3 percent from the previous year.

CARGO

The Tallahassee International Airport (TLH) recently updated its Master Plan to evaluate the airport's compliance, maintenance, and development needs in the short- and long-term. This update is particularly important as the airport has recently started the process of becoming eligible as a free trade zone and the master plan update highlights the path forward for TLH to become a more comprehensive facility for air travel, business development, and trade. One of the most relevant takeaways from the master plan update is the discussion of current and projected cargo activity. The cargo apron area at TLH contains facilities for Delta, DHL, FedEx, and USPS. FedEx is the primary cargo carrier at TLH, conducting regular flights between TLH and their hub at Memphis International Airport (MEM) using Boeing 757-200 freighter jets. Additionally, FedEx uses Cessna 208 Caravan turboprops for feeder routes to airports like Orlando International, Jacksonville International, and Mobile Downtown. Delta also carries some belly cargo on its scheduled passenger flights.

The master plan outlines preferred expansion of air cargo facilities that would include the eastward expansion of the current air cargo apron, development of three additional air cargo handling/processing facilities along the east side of the expanded apron and associated private vehicle/truck parking and access. Expanding the cargo apron approximately 8.3 acres would accommodate a variety of large and mid-sized aircraft.

In May 2022, construction began on an International Passenger Processing Facility (IPPF) at TLH that was described in the master plan update's Terminal Alternative section. The $28 million project that will be a major economic driver for the entire region when operational, is expected in 2025. The IPPF is a key project in the City of Tallahassee's Five-Year Strategic Plan to enhance and modernize infrastructure to enable capacity for continued growth and increase the airport's annual economic impact to $1.25 billion. The facility will allow TLH to accommodate international flights and give the ability for goods to be shipped to and received from worldwide destinations. In coordination with the passenger related improvements, TLH is currently expanding their cargo apron area by over eight acres. This improvement would allow additional aircraft to utilize the airport and the associated support structures are intended to support additional freight volumes and freight types. Related to these improvements TLH is pursuing Foreign Trade Zone (FTZ) Designation to promote additional economic development. Listed in Table 4.2 is Leon County's corridors with significant freight volumes (10 million tons). The freight truck volumes are high and highlight areas of increased maintenance needs that can be reflected in the Comprehensive Plan Goals, Objectives, and Policies.

TLH FORECASTS

The master plan provides forecasts for airline travel and cargo travel out to 2035 and show a continued growth in the airport operations. The continued growth and expansion will have a positive impact on travel accessibility and the movement of goods throughout Tallahassee and Leon County

IMPACTS

EVACUATION ROUTES AND RESILIENCE

Hurricane-related impacts have affected Tallahassee-Leon County in the past and will continue to have an effect as severe storms increase in quantity. The most severe projected risk is that of wind-related damage. In Tallahassee, 89 percent of homes are at risk of wind-related damage in the next 30 years (First Street Foundation, n.d.). These risks will primarily come from extreme wind events that occur during hurricanes, including direct damage to homes, fallen trees, scattering of debris, and subsequent damage to utilities and emergency services. As an inland City, Tallahassee will not feel the direct effects of sea level rise but will experience secondary effects caused by migration and economic interruption. The City of Tallahassee's flood risk is minor, with only 12 percent of properties within the City being at an elevated risk of flooding in the next 30 years (First Street Foundation, n.d.). However, a lower risk factor does not reduce the urgency of addressing this vulnerability.

The Post-Disaster Redevelopment Plan is intended to be a flexible framework that can be implemented regardless of the hazard. This plan helps operations transition between short-term recovery operations and long-term recovery and redevelopment efforts. The plan identifies agencies, subcommittees, and their relationships and responsibilities. The plan highlights early, short-term measures that need to take place. Historically, the area has been impacted by hurricanes, droughts, fires, and related disasters. There are several models that outline expected risks and impacts based on the disaster to help the area plan better for expected negative outcomes and losses.

MULTIMODAL TRANSPORTATION DISTRICT (MMTD)

A multimodal transportation district is an area where primary emphasis is placed on pedestrian, bicycle and transit mobility and secondary emphasis is placed on automobile mobility. The MMTD Code is a set of regulations that apply to all areas within the MMTD, particularly downtown. Its aim is to enhance the urban fabric of the Capital City by emphasizing urban design and the public realm, thereby creating a district that is friendly to pedestrians and supportive of transit. The standards set out in the code seek to achieve the following goals:

- Enhance urban design, like what has been done along Gaines Street.
- Improve mobility for cyclists and pedestrians.
- Increase the comfort of pedestrians by adding more sidewalks and street trees.
- Encourage the development of amenities and destinations within the district.
- Make it easier to build within the district.
- Support the efforts of StarMetro.

The new development standards contained in the MMTD Code were developed in response to feedback from the public over the last few years, which included comments made in various sector and neighborhood plans. The feedback highlighted the need for more attention to be paid to urban design and the mobility of cyclists and pedestrians.

According to the land use analysis conducted in this recent data and analysis update, the MMTD accounts for 2.6 percent of the total acreage of the designated future land use categories. Most of these acres are designated for Residential Preservation and Suburban use.

The City and Leon County partnered with FDOT to create a program, the Significant Benefit Program, that funds active transportation improvements by using mitigation fees from development. This program prioritizes transit, bicycle, and pedestrian projects over road widening, which is crucial in Tallahassee's core area since there is limited space to expand roads without negatively impacting the community. The Significant Benefit program was established by a MOU with FDOT and included the Capital Improvements Schedule. It is the community's concurrency approach which allows pipelining funds to certain pre-identified and agreed to transportation facilities. Projects are organized by the implementing agency and project statuses are updated biannually. There are currently five agencies funding and constructing multimodal improvements in Leon County:

1. City of Tallahassee
2. Leon County
3. Capital Region Transportation Planning Agency (CRTPA)
4. Blueprint 2000
5. Florida Department of Transportation (FDOT)

CONTEXT SENSITIVE SOLUTIONS

Context-Sensitive Solutions" refers to the approach in transportation planning and design where the needs of all users are taken into consideration. The goal is to create a transportation system that is safe, efficient, and accessible for everyone, including pedestrians, cyclists, transit riders, drivers, and freight handlers. The design should be context-sensitive to local land development patterns. Safety, quality of life, and economic development should be prioritized. The Multimodal Transportation District was created as a context- sensitive solution to the downtown area.

TRANSIT

The data and analysis should contain sufficient information and analysis to assist in developing policies that will create a well-connected transportation network. The policies should also support increased residential densities and commercial intensity, making walking more practical for short trips and enabling bicycling for both short- and long-distance trips. Additionally, improving transit to serve frequented destinations will conserve energy resources, reduce greenhouse gas emissions, and air pollution, while still maintaining vehicular access and circulation.

STARMETRO

StarMetro is the City of Tallahassee's public transportation system. It offers fixed route, demand response, and flex services. StarMetro services Tallahassee, as well as parts of the County that fall within the unincorporated Tallahassee Urban Service Area (USA) (StarMetro, 2021). As detailed in their 2022-2031 Transit Development Plan, StarMetro strives to improve the following: economic development, poverty, organizational effectiveness, public infrastructure, public safety, and public trust (StarMetro, 2021). Goals from previous plans focused primarily on multi-modal mobility and land use.

StarMetro provided over 3.48 million passenger trips in Fiscal Year (FY) 2019. StarMetro is currently engaging in two major projects to expand its services to residents of the City and County (StarMetro, 2023). The agency is currently creating a 10-year strategy for system development and is working on the Comprehensive Operational Analysis. The agency is also in the process of creating the Southside Transit Center, which will operate as a hub for public transit in the southern portion of the City. A groundbreaking ceremony for the new transit center was held on April 24, 2024.

STARMETRO ENERGY AND FLEET

The current fleet is a mix of gasoline, diesel, compressed natural gas (CNG), and electric powered vehicles. By 2035 the City Commission has mandated 100 percent of StarMetro's fleet be electric. Currently, they are replacing 2-4 diesel buses per year. Sustainable transportation is available through carpooling/vanpooling or emergency ride home services by Commuter Services of North Florida.

STARMETRO SERVICES

There are 967 bus stops in the StarMetro system. Express flex services are provided to Havana, Quincy, Gretna, Greensboro, Chattahoochee, and Monticello.

STARMETRO AND CAMPUS SERVICE

The City of Tallahassee provides special campus service to FSU branded as the Seminole Express (since 1973). StarMetro operates eight regular Seminole Express routes and one special event route (the Spirit Express) during home football games.

STARMETRO FLEX PROGRAMS.

StarMetro also offers two FLEX routes which connect residents in the Lake Jackson and Southside areas to available transit stops within the respective areas, including "superstops" like the Lake Jackson Town Center. Riders are able to use StarMetro provided transport to safely arrive at transit stops/centers. For the Lake Jackson FLEX route, the transit center at the Lake Jackson Town Center offers access to available fixed routes and facilitates transfers to other popular routes such as the Big Bend and Forest routes. The other FLEX route serves residents in the Southside, where riders can transfer to the Dogwood, Gulf, Live Oak, and Moss routes. Southside will also offer another transit facility on Orange Avenue in 2025 that will be a major hub and destination for transit riders. This FLEX route is a free service within the selected areas offering another option where automobile travel from the home may not be possible for the rider.

Photo credit - City of Tallahassee

STARMETRO DIAL A RIDE PROGRAM

Dial-A-Ride service began in 1984, and StarMetro currently operates a fleet of 23 accessible paratransit vehicles. Users with a qualifying disability can schedule a pick-up at their homes or another location online or via phone. Expenses for the service are rising since the demand for Dial-A-Ride services is increasing at a rate of 7 percent per year. However, StarMetro has received funding from federal, state, and local sources that have been able to cover the rising cost of providing the service. Rides cost $2.50 to the user, and StarMetro subsidizes the remaining cost of the service.

Achieving inclusivity requires addressing the needs of disabled populations as well as income and racial disparities. An interconnected and accessible transportation network facilitates the mobility of residents to access housing, essential health services, employment, parks, and recreational centers. Policies promoting accessibility-based measures ensure that residents have access to a variety of transportation modes. The Americans with Disabilities Act (ADA) has established guidelines to ensure that all residents facing disability-related transit challenges are accommodated.

The ADA requires public transit agencies to ensure the provision of paratransit service to people with disabilities who are unable to use a fixed route system (Disability Rights Florida, 2023). This promotes accessibility for those who, due to a disability, are unable to access public transit. The inability to access public transit can stem from difficulty in navigating the system independently, physical barriers to board vehicles, or obstacles that prevent the user from reaching a bus stop or transit center.

OTHER BUS SERVICES

Greyhound is a bus service operated by FlixBus in Tallahassee. Greyhound has five bus routes in Tallahassee with 39 bus stops.

TRANSPORTATION DISADVANTAGED PROGRAM

The Transportation Disadvantaged Service Plan is an annually updated tactical plan with components of development, service, and quality assurance. StarMetro offers Dial-A-Ride as part of the Transportation Disadvantaged program. The Apalachee REgional Planning Council (ARPC) serves as FDOT's Designated Official Planning Agency for the regional Transportation Disadvantaged program and those planning efforts are found on the agency's website.

FSU

FSU has the Seminole Express and Night Nole which provides bus services to, around, and from campus to surrounding Tallahassee areas for students, faculty and staff, and visitors. The transit lines, parking facilities, commuting options and maps are located at https://transportation.fsu.edu/bus.

FAMU

FAMU has the Venom Express Shuttle Line that provides three 25-passenger shuttle buses that leave campus every 15 minutes along the "orange and green" routes that circle the interior and perimeter of the campus. The Venom Shuttles can be tracked in the FAMU Mobil App or at https://www.famu.edu/students/bus-routes.

TSC

Tallahassee State College has partnered with the City of Tallahassee to offer TSC students, faculty, and staff discounted passes for unlimited StarMetro bus services during the Fall, Spring, and Summer semesters. The resource is provided at the TSC Police Department. Further information is available at https://www.tsc.fl.edu/admissions/ financial-aid;cashiers-office/student-bus-pass.

BUS SERVICE

Photo credit - City of Tallahassee

FSU

FSU has the Seminole Express and Night Nole which provides bus services to, around and from campus to surrounding Tallahassee areas for students, faculty and staff, and visitors. The transit lines, parking facilities, commuting options and maps are located at https://transportation.fsu.edu/bus.

MICRO MOBILITY

Micro-mobility is considered an efficient solution for transportation in cities. Increased micro-mobility options could ease traffic congestion and improve access to local businesses.

Tallahassee launched e-scooters as part of its micro-mobility program in 2019. The dockless scooters offer a flexible private sector transportation option for residents and visitors, reducing the number of cars on the roads. E-scooters are authorized for use on sidewalks, in bike lanes, and on the roadway. However, riders must follow the same rules as cyclists.

The City of Tallahassee has established slow zones (6 miles per hour) around Lake Ella to ensure safety between pedestrians and scooters. The City's micro-mobility services are not permitted on the campus of Florida State University, Florida Agricultural and Mechanical University, Tallahassee State College, the State Capitol, and Cascades Park. The program generated the following data 2023.

- Total Trips: 130,051
- Total Trip Distances: 151,997 miles
- Average Single Trip Distance: 1.14 miles
- Average Trip Duration: 14.01 minutes
- The most active month was October 2023 with 15,326 rides
- The least active month was December 2023 with 4,025 rides

TRANSPORTATION NETWORK COMPANIES

Transportation network company or "TNC" means an entity operating in the state pursuant to this section using a digital network to connect a rider to a TNC device who provides prearranged rides (Section

627.748, F.S.). TNCs may provide nonemergency medical transportation services under Chapters 409.905 and 409.973, F.S., to a Medicaid recipient and this program is administered by the Agency for Health Care Administration.

Numerous cities and transit agencies in the United States have established partnerships with Lyft, Uber, Via, and several other smaller transportation network companies (TNCs) to address mobility challenges. These partnerships often involve the provision of on-demand services that either supplement public transit, bridge mobility gaps, or replace under-performing bus routes.

ADA TRANSITION PLAN

An ADA Transition Plan identifies barriers to accessibility as outlined by the ADA and requires jurisdictions to self-assess and plan to bring their facilities up to federal standards; an ADA transition plan also protects municipalities from litigation regarding ADA issues. Tallahassee-Leon County's plan was written by Leon County Public Works Department but covers facilities within the City and County jurisdiction. The City's Underground Utilities and Public Infrastructure Department published an ADA Transition Plan in March 2024.

Current barriers to accessibility in Tallahassee-Leon County include uneven or cracked sidewalks, lack of curb ramps, and obstructions such as utility poles and parked cars that impede pedestrian traffic. ADA guidance also identifies strategies for removing these barriers, which include conducting a comprehensive inventory of all sidewalks and pedestrian rights-of-way in the County, prioritizing repairs and improvements based on need and public input, and implementing a regular maintenance schedule to ensure ongoing accessibility.

The ADA Transition Plan for Tallahassee-Leon County represents a comprehensive and proactive approach to allow individuals with disabilities equal access to the County's pedestrian right-of-way infrastructure. Achieving inclusivity requires addressing the needs of disabled populations as well as income and racial disparities. An interconnected and accessible transportation network facilitates the mobility of residents to access housing, essential health services, employment, parks, and recreational centers. StarMetro offers several services to make public transportation more accessible and more affordable. For example, StarMetro offers reduced fares for people with disabilities, for those that have a Medicare card, or for individuals over the age of 60, children under five and Kindergarten-12th grade students. FAMU and FSU partner with Moovit which allows users to plan their trips and track their buses in real time.

According to the 2021 decennial census, 8.4 percent of residents under the age of 65 identify as having a disability (U.S. Census Bureau, 2021). Residents with disabilities may encounter physical obstacles like inaccessible buildings, walkways, and transportation systems. While a significant percentage of Tallahassee is provided with transit access within a 10-minute walk to a stop, it does not necessarily mean the route to each stop is accessible for all. It is important to evaluate the pedestrian infrastructure for transit stops and address any obstacles to accessibility.

Additionally, individuals could come across social and economic hindrances that restrict their freedom of movement within their communities, such as prejudice and a lack of finances. Implementing infrastructure improvements, such as accessible sidewalks, ramps, and transportation systems will enable individuals with disabilities to move more freely through their communities.

Tallahassee-Leon County is supporting its commitment to accessibility by consistently planning for it as a priority in new development. This is to ensure pedestrian rights-of-way remain accessible for all citizens by supporting regular maintenance activities and asking the public for comment on these actions. One essential element tied to the ADA Transition Plan's overall success is the procedure included for gathering feedback from the public.

SAFETY AND CRASH ANALYSIS

A recent 2021 ACS 5-year estimate from the U.S. Census Bureau reported almost 8,000 occupied housing units in Tallahassee-Leon County lack access to motor vehicles (U.S. Census Bureau, 2021b). Bicycling and walking create alternatives to fill in transportation gaps in under-resourced neighborhoods and by students, urban commuters, and many other travelers. However, increased use of active transportation in both the City and the County depends on the safety of current facilities in addition to planned improvements expected on many local roads. The community's unique standing as a Silver Bicycle Friendly Community per the League of American Bicyclists emphasizes a strong commitment to addressing these concerns (CRTPA, 2019). The Capital Region Transportation Planning Agency also updated the Tallahassee- Leon County Bicycle and Pedestrian Master Plan (BPMP) in 2019. In conjunction with the Tallahassee- Leon County Comprehensive Plan, the BPMP has an overall vision and goals to continue to promote and enhance pedestrian and bicycle mobility. (Tallahassee-Leon County Comprehensive Plan, Land Use, Policy 2.1.5)

Road transport is the most prevalent mode of transportation in Tallahassee-Leon County. This mode includes cars for personal and micro transit use, buses for local and extra-regional transit, and freight-oriented trucking. Unfortunately, while the most common mode of transportation, road transport is also the most dangerous.

CAR-ON-CAR CRASHES

Car-on-car crashes account for 95 percent of road-related incidents in Leon County (Florida Department of Highway Safety and Motor Vehicles (FLHSMV), 2023). According to the Office of Economic Vitality (OEV), the total number of automobile crashes from 2017 to 2021 averaged 6,772 annually, with an average of 16,407 person involved incidents (OEV, 2023). Crash fatalities averaged 36 per year for that period. As stated in a recent 2021 FLHSMV crash report for Florida counties, Leon County experienced an 18.01 percent increase in its total crashes between 2020 to 2021.

This high rate of car crashes can be attributed to a multitude of factors. These may include a lack of adherence to posted speed limits, distracted driving, impaired driving, a disregard for appropriate safety measures, insufficient enforcement as well as the physical road infrastructure. According to FLHSMV, distracted driving and speeding are among the top causes of car crashes (FLHSMV, 2021). Additionally, according to National Highway Traffic Safety Administration (NHTSA) data, distracted driving resulted in six times more crashes than intoxicated driving (FLHSMV, 2020).

Along with car-related accident numbers, fatalities resulting from traffic crashes are similarly high. Between 2017 and 2021, there were a total of 33,858 car crashes in Leon County, with a total of 181 crashes resulting in fatalities (OEV, 2023). From 2018 to 2022, statewide data indicates that there were almost two million car crashes, with 16,868 of these resulting in fatalities (OEV, 2023). Findings from the NHTSA indicate that for the first half of 2022, Florida ranked the fifth highest in car-related fatalities, with an average of 1.58 traffic deaths per one hundred million vehicle miles traveled (NHTSA 2022). Given a high rate of car crashes and fatalities, local policy solutions in Tallahassee-Leon County should center on promoting infrastructure that reduces the rate of crashes and enforcing current regulations. Figure 4.4, shows where crashes within Leon County were most prevalent from 2007-2016.

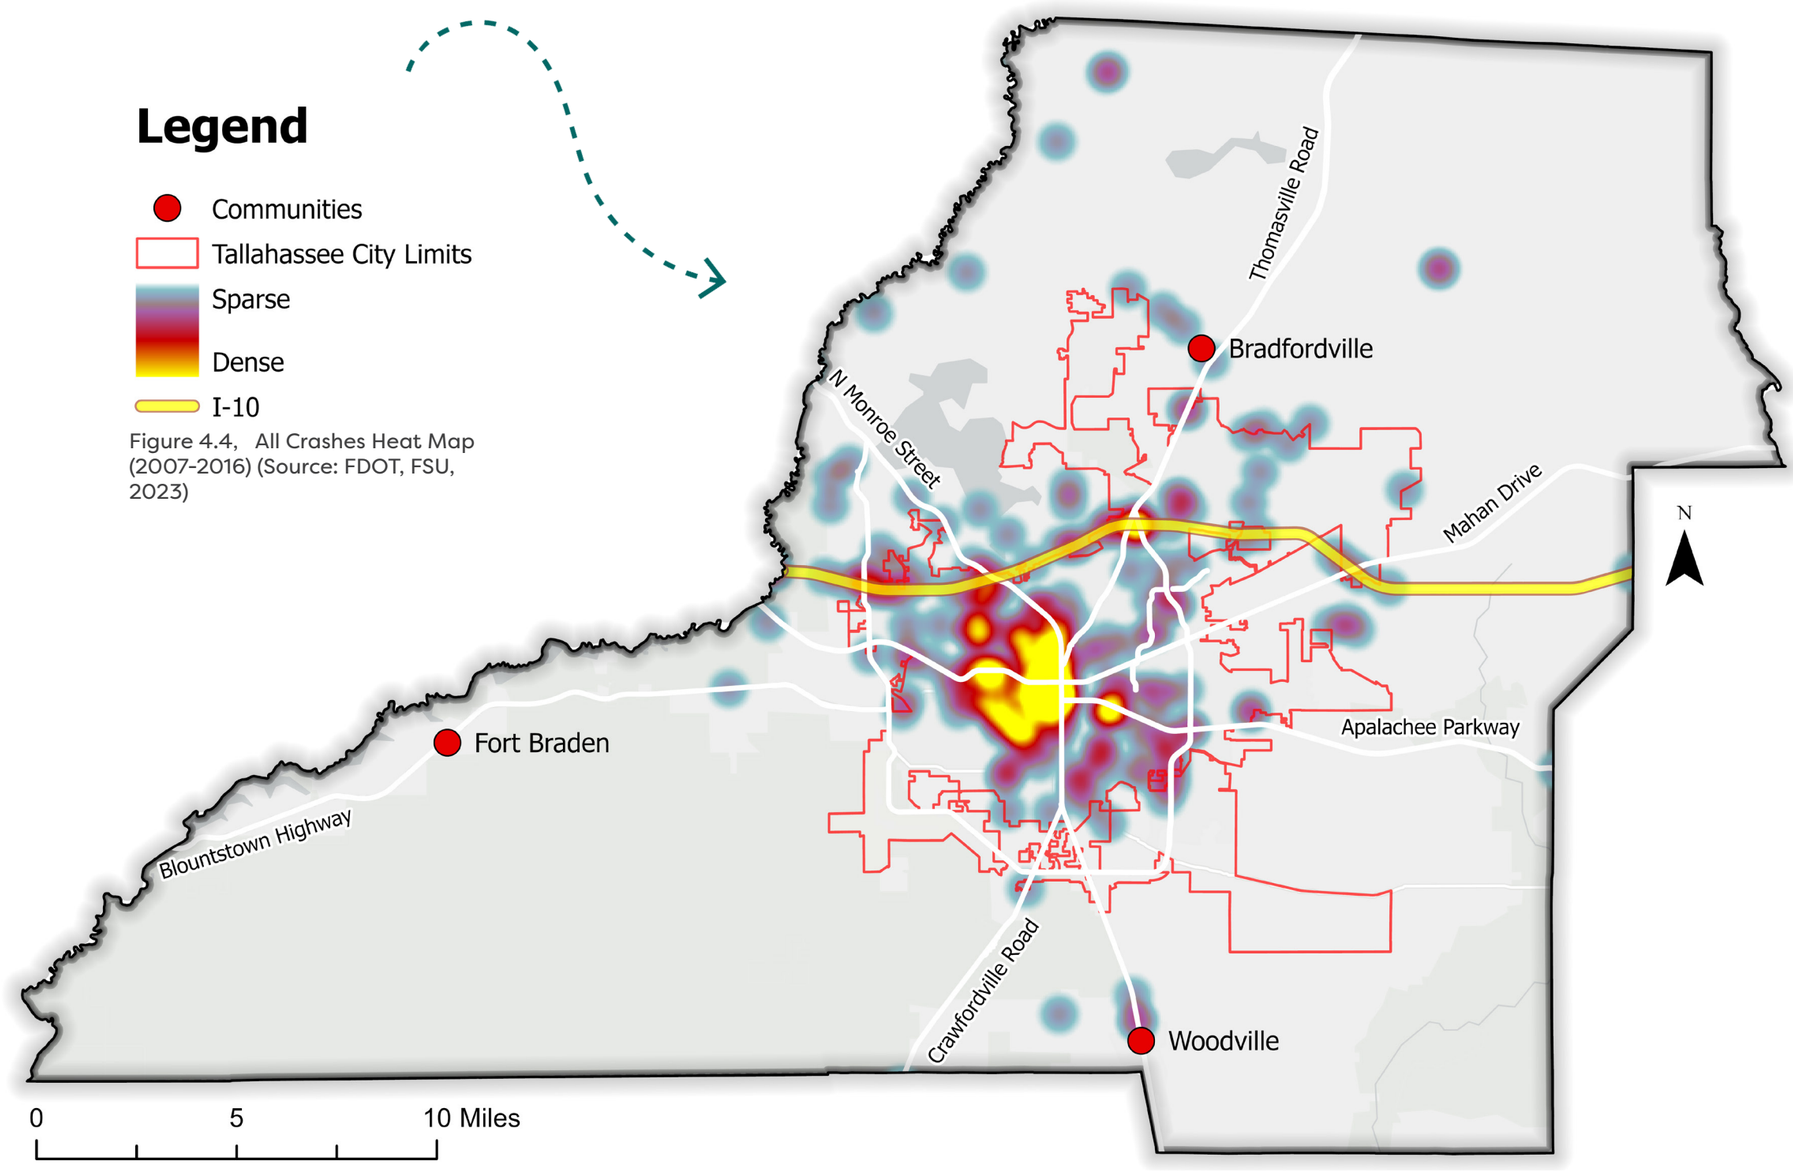

Figure 4.4, All Crashes Heat Map (2007-2016) (Source: FDOT, FSU, 2023)

BICYCLE AND PEDESTRIAN RELATED CRASHES

According to the FLHSMV report, there has been a noteworthy 20 percent increase in bicycle- related crashes from 2020 to 2021 in Leon County, increasing from 55 to 66 (FLHSMV, 2022). In this time, crash fatalities increased from one to two.

As identified in the Florida Crash Dashboard, there were 934 pedestrian-involved crashes in Leon County between January 1, 2018 and December 31, 2022 (FLHSMV, n.d.). The total number of pedestrian-involved crashes has remained constant over time, approximately 187 pedestrian-involved crashes on average during these years (FLHSMV, n.d.). The FLHSMV reports that in 2022, Leon County had 36 fatal crashes. Additionally, pedestrian fatalities made up 36 percent of the total fatal crashes in Tallahassee- Leon County. Figure 4.5 illustrates where there have been the greatest number of bicycle and pedestrian related crashes in Leon County from 2007 to 2016.

Bike crashes are densest around Tennessee Street from the intersection with Thomasville Road to Capital Circle Southwest. This is due to the amount of traffic and density on Tennessee Street and nearby and suggests that extra care be taken to prevent future crashes in this area.

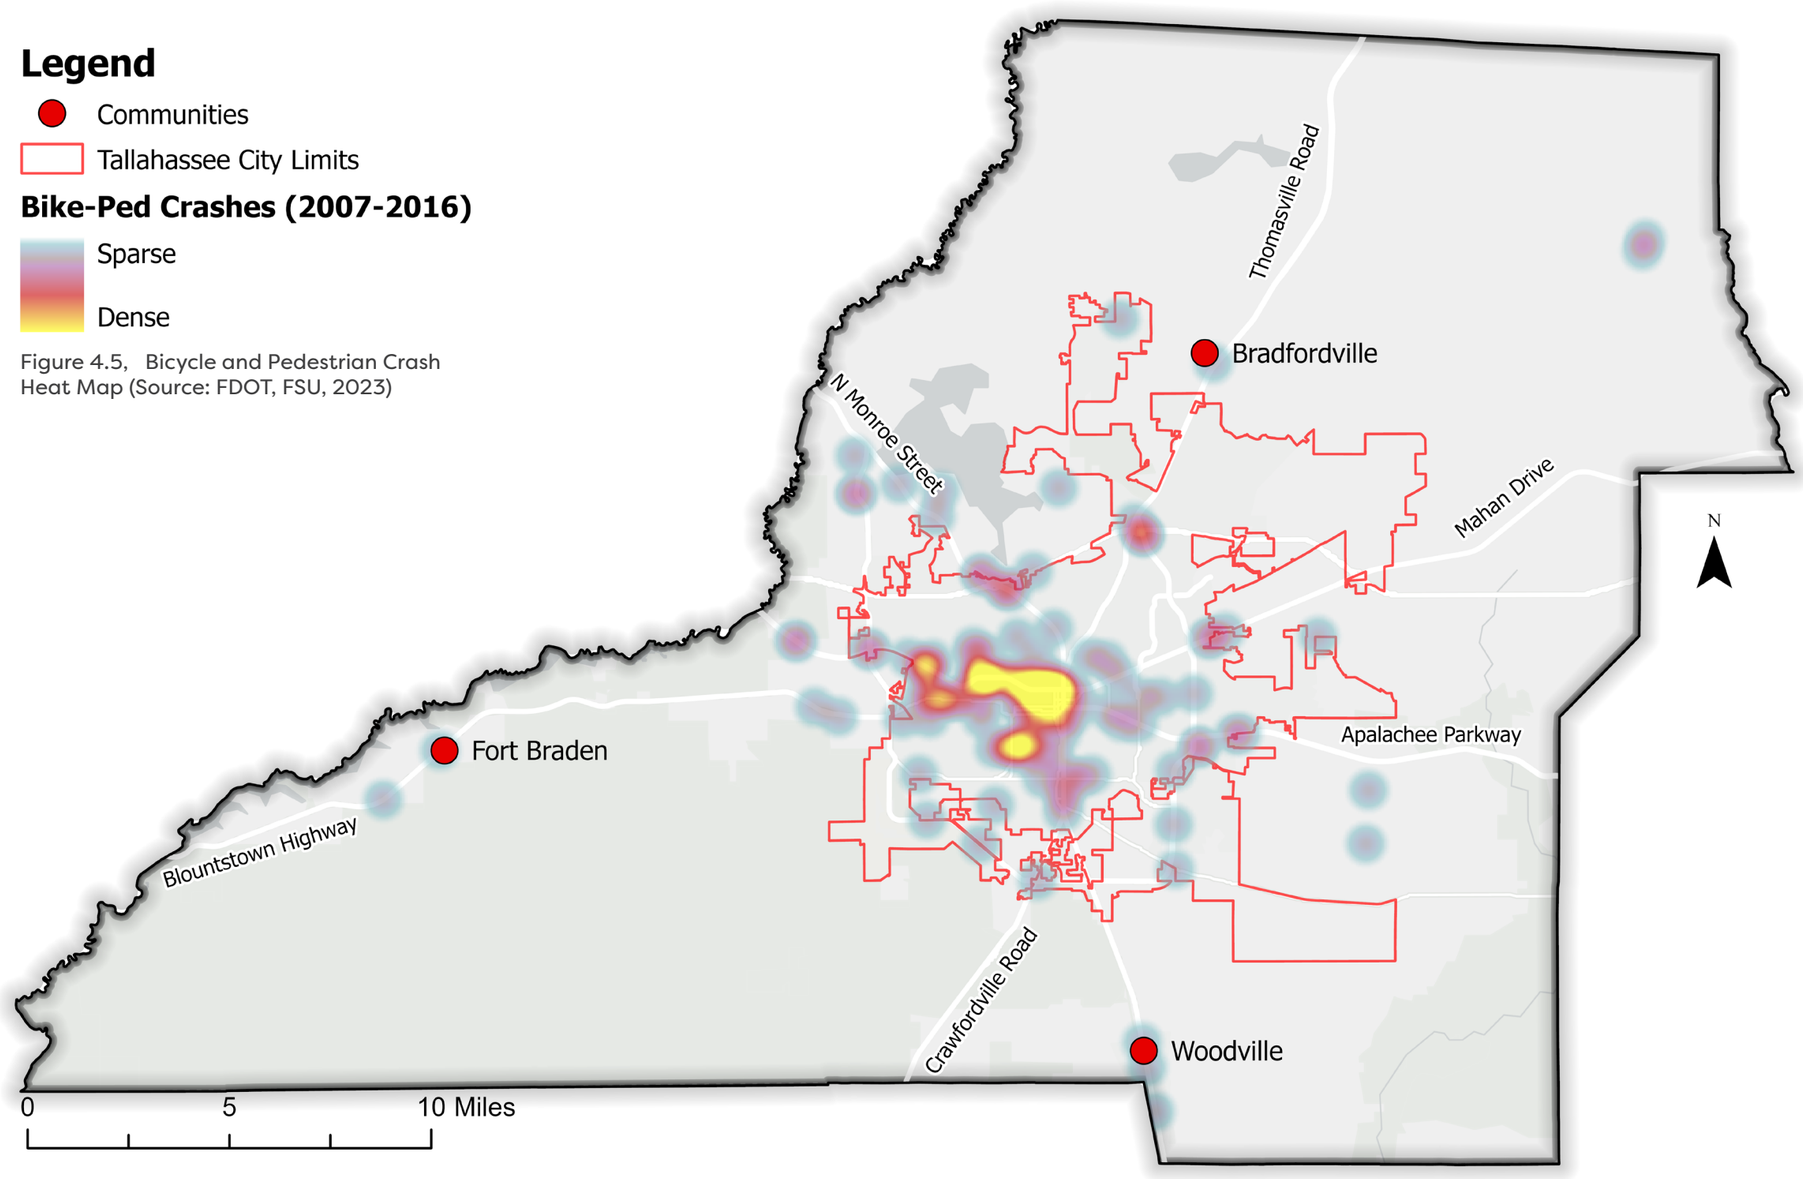

Figure 4.5, Bicycle and Pedestrian Crash Heat Map (Source: FDOT, FSU, 2023)

SAFETY

PLANNED IMPROVEMENTS

Blueprint Intergovernmental Agency Projects are proposed to include the following activities within a "medium" timeframe: providing multimodal enhancements, landscaping, signage and lighting:

- Airport Gateway(numerous locations in SW Tallahassee-Leon County)
- Bike Route System - Downtown-University Protected Bike Lane (numerous locations between FSU, FAMU, and Downtown)
- Bike Route System – Ridge Road: Crawfordville Highway to Springsax Road
- Bike Route System: SW Area Connector (various locations)
- Greenways: Lake Jackson Greenway (various locations)
- Greenways: University Greenway (various locations)
- Magnolia Drive Trail (South Adams Street to Apalachee Parkway
- Northwest Connector Corridor: Tharpe Street (Capital Circle NW to Ocala Road)

Leon County Projects are proposed to include the following activities within a "short to medium" timeframe: providing multimodal enhancements and sidewalks:

- Old Bainbridge Road (I-10 to Laurel Trace Way)
- Old Bainbridge Road (West Georgia Street to West Brevard Street)
- Old Bainbridge Road (West Brevard Street to West 7th Avenue)
- Old St. Augustine Road (Paul Russell Road to Urban Service Area Boundary)
- Tennessee Street (Aenon Church Road to Lukeman Lane)
- Tram Road (Crossing Rocks Road to Capital Circle SE)
- Magnolia Drive Trail (South Adams Street to Apalachee Parkway)
- Northwest Connector Corridor: Tharpe Street (Capital Circle NW to Ocala Street)

City of Tallahassee CIP and PASS Projects are proposed to include the following activities within a "short" timeframe: providing multimodal enhancements:

- Bennett Street (Rollins Street to West 6th Avenue)
- Blountstown Street (West Tharpe Street to West Tennessee Street)
- Dent Street (Dewey Street to Old Bainbridge Road)
- Dun Street (North Woodward Avenue to Old Bainbridge Road)
- Gibbs Drive (Monticello Drive to West 10th Avenue)
- North Ridge Road (Springsax Road to Estates Road)
- Paul Russell Road (Apalachee Parkway to Monda Road)
- Rollins Street (Bennett Street to Old Bainbridge Road)
- West 6th Avenue (Bennett Street to North Monroe Street)

University's Projects are proposed to include the following activities within a "medium" timeframe: providing multimodal enhancements:

- Copeland Street (West Pensacola Street to West Call Street)
- Wahnish Way (Osceola Street to Robert and Trudie Perkins Way)

For further information on these and other items located in the SS4A 2023 Report, please go to crtpa.org.

FUTURE CONDITIONS

Major interstate highways and U.S. highways tend to experience the highest traffic density, as do roads located in Tallahassee proper. As per the Capital Region Transportation Planning Agency (CRTPA), many of these roads have remained consistently congested since 2020. Several road segments exhibit a high volume-to-capacity ratio, denoting the number of vehicles that use the road in comparison to the designed capacity (Capital Region Transportation Planning Agency, 2020). A substantial portion of the City of Tallahassee, and even some segments in Leon County more generally, score highly. A variety of factors impacted traffic and congestion in Tallahassee between 2015 and 2021, most notably rapid growth and the COVID-19 pandemic. A recent initiative aimed at mitigating traffic congestion includes infrastructure improvements that were identified under the Moving Florida Forward Infrastructure Initiative. The initiative allocates $90 million towards improvements for State Road 263, stretching from State Road 61 to County Road 2203. This includes widening the existing roadway, adding lighting, constructing stormwater management facilities, and implementing intersection improvements (Florida Department of Transportation, 2023).

The Department works with the local governments and establishes appropriate levels of service targets for its state facilities. The automobile mode level of service targets for the State Highway System during peak travel hours are "D" in urbanized areas and "C" outside urbanized areas. The targets are for all users, for context, roadway function, network design, and user safety.

The maximum number of vehicles that can pass through a point or a section of the road in one hour, considering the road, traffic, and control conditions is known as the level of service (LOS). Each road infrastructure has five levels of traffic service rates, ranging from A to E and is set for the peak during rush hour in the late afternoon/evening. Level F is not used because it is considered unstable as well as an infeasible standard. Table 9.2 in Appendix B shows the current and projected LOS for state facilities in tabular form.

FDOT has Annual Average Daily Trips (AADT) for the state highway system (SHS) roads on their website; however, Level of Service (LOS) has not been calculated or provided for every segment of roadways within Tallahassee or Leon County. The TLCGIS website provides LOS data for intersections that provide the following layers: Cameras, LOS Maintenance, Street Congestion, Traffic Signals, and Vehicle Crash Ratios. The following segments have the highest volumes of Annual Average Daily Trips (AADT) roadways in Leon County/Tallahassee. While I-10 and Northeast Tallahassee have the highest traffic volumes, FDOT references the AADT on the SHS link Florida Traffic Online.

- I-10: From US27 to Thomasville Road, AADT: **70,094**
- I-10: From Capital Circle Northwest to US 27, AADT: **60,500**
- Capital Circle Northeast: From Centerville Road to Raymond Diehl, AADT:57,000
- Thomasville Road: From Timberlane Road to Killarney Way, AADT: **55,500**
- Thomasville Road: From Killarney Way to Kerry Forest Parkway, AADT: **54,500**
- Capital Circle Northeast: From Miccosukee Road to Centerville Road, AADT: **50,000**

In addition, the City of Tallahassee's GIS Department, or TLCGIS, provides the Level Of Service for intersections that are measured as the worst performing/highest delay intersections in Leon County. Red representing failure ("F") with the highest Volume-to-Capacity (V/C) Ratio:

- Capital Circle NE and Park Avenue: V/C PM Peak = 1.86
- Capital Circle Northeast and Mahan Drive: V/C PM Peak = 1.37
- Apalachee Parkway and Blairstone Road: V/C Mid Peak = 1.2

These failing intersections would require a significant investment to address the delay such as urban interchange design, displaced lefts, Diverging Diamond Interchange (DDI), etc. or other major intersection redesign. Studies could be initiated to identify potential project solutions.

Functional classification is the process of grouping roads according to their service and connectivity. It is used for planning, budgeting, programming, and fiscal management.

The Regional Mobility Plan is a long-range plan with a minimum 20-year plan horizon. The plan must be reviewed and updated every five years. In addition, the plan must be fiscally constrained, meaning that CRTPA cannot plan to spend more money than the MPO can expect to receive for project implementation through the year 2045. A further consideration is that the eligibility of projects to receive federal funding is dependent on their inclusion in the RMP.

The Tallahassee-Leon County Planning Department has identified areas for placemaking initiatives. These areas include Frenchtown, Miccosukee, Huntington, Market District, Midtown, and Monroe Adams Corridor. These areas are consistent with quality growth scenarios. The CRTPA's Connection 2045 RMP includes several quality growth areas. The areas are consistent with quality growth scenarios identified with local placemaking efforts.

The southwest area of Tallahassee is undergoing planning efforts to improve transportation and development potential. New developments and roadway improvements are expected between the airport and FSU/FAMU campus areas. The Eastern Tallahassee Corridor along US 90 (Mahan Drive) is also undergoing improvements, serving as a direct route between Tallahassee and Monticello, with roadway widening, aesthetic improvements, and access management improvements to the area.

The Needs Plan is a comprehensive list of projects that will be further assessed to determine the most feasible ones in terms of cost. The Cost Feasible Plan is a list of financially viable projects that have been prioritized based on their regional importance when compared to others. The Unfunded Plan consists of the remaining projects that have been identified in the region which were found to be less important during the RMP analysis.

FUNCTIONAL CLASSIFICATION

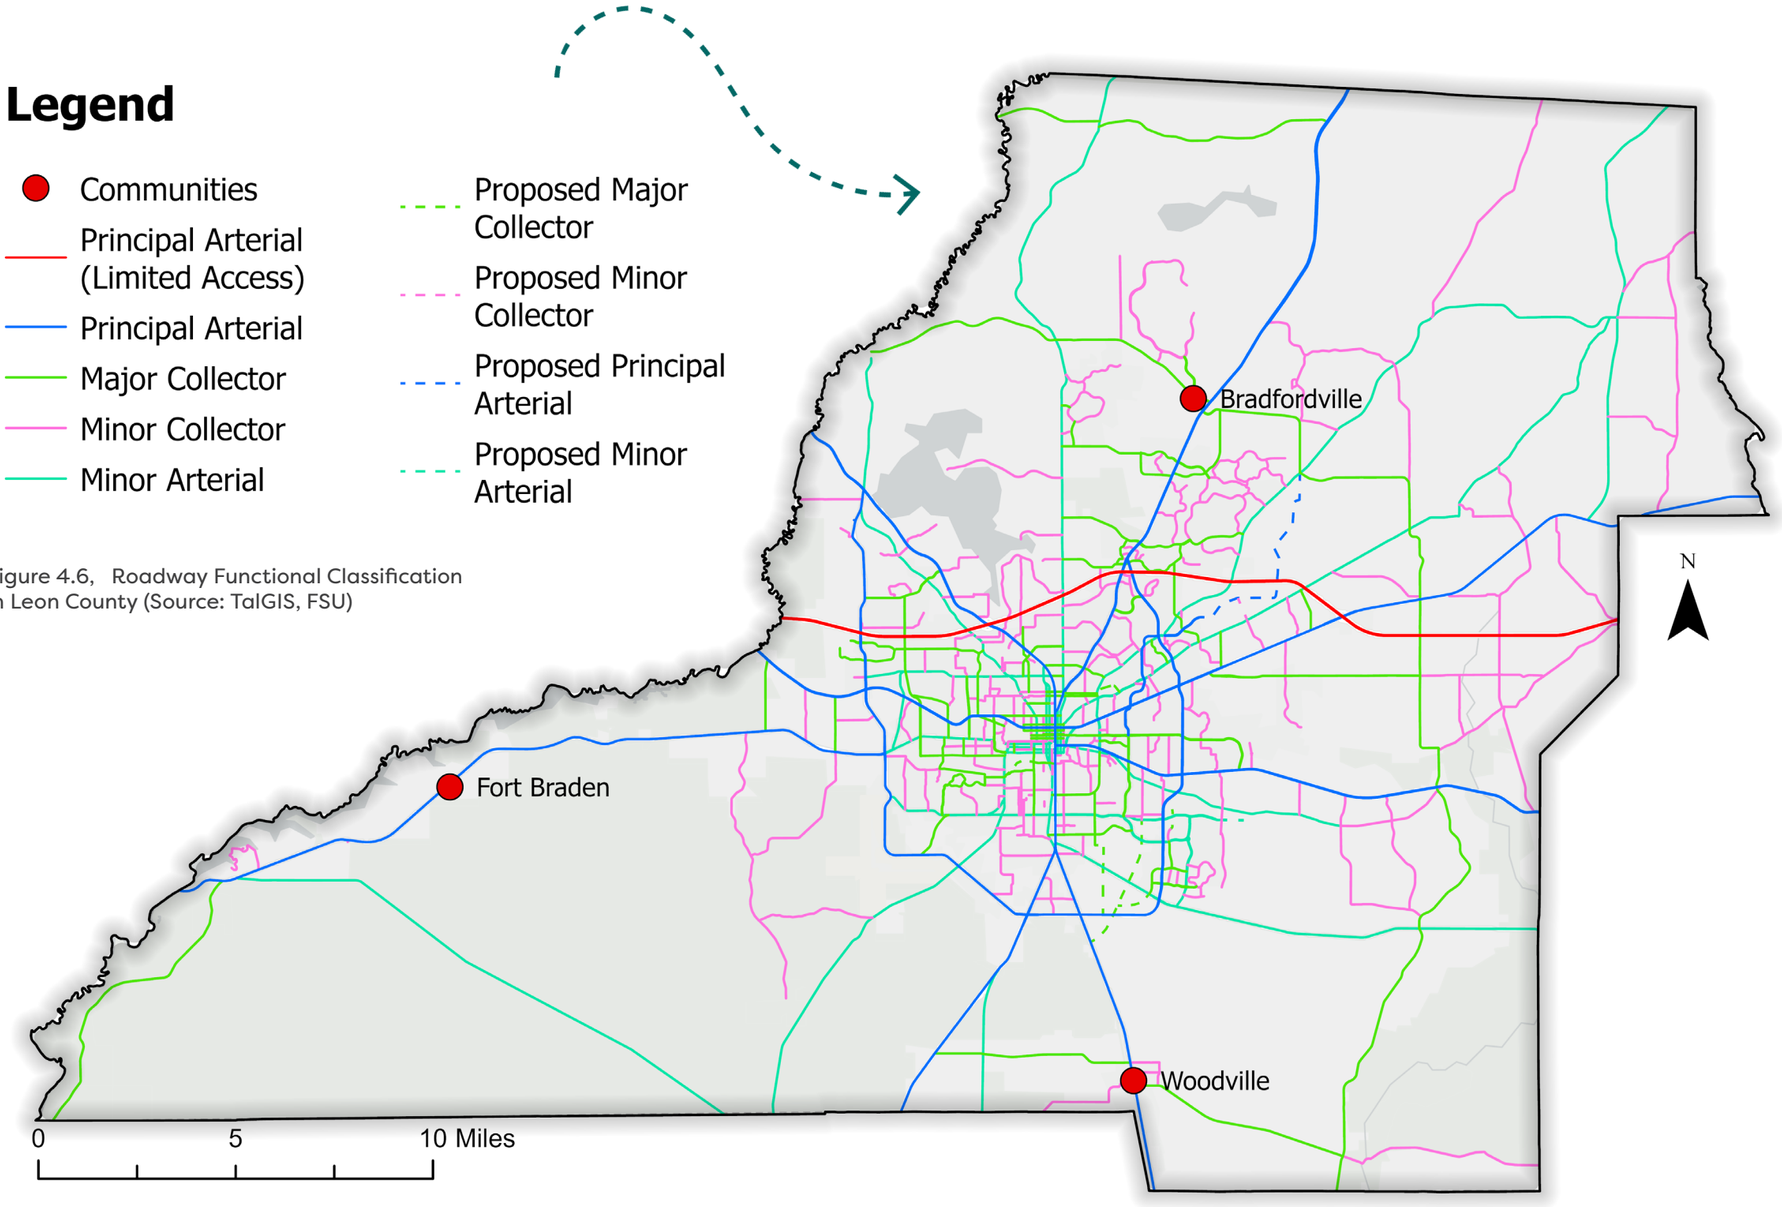

Figure 4.6, Roadway Functional Classification in Leon County (Source: TalGIS, FSU)

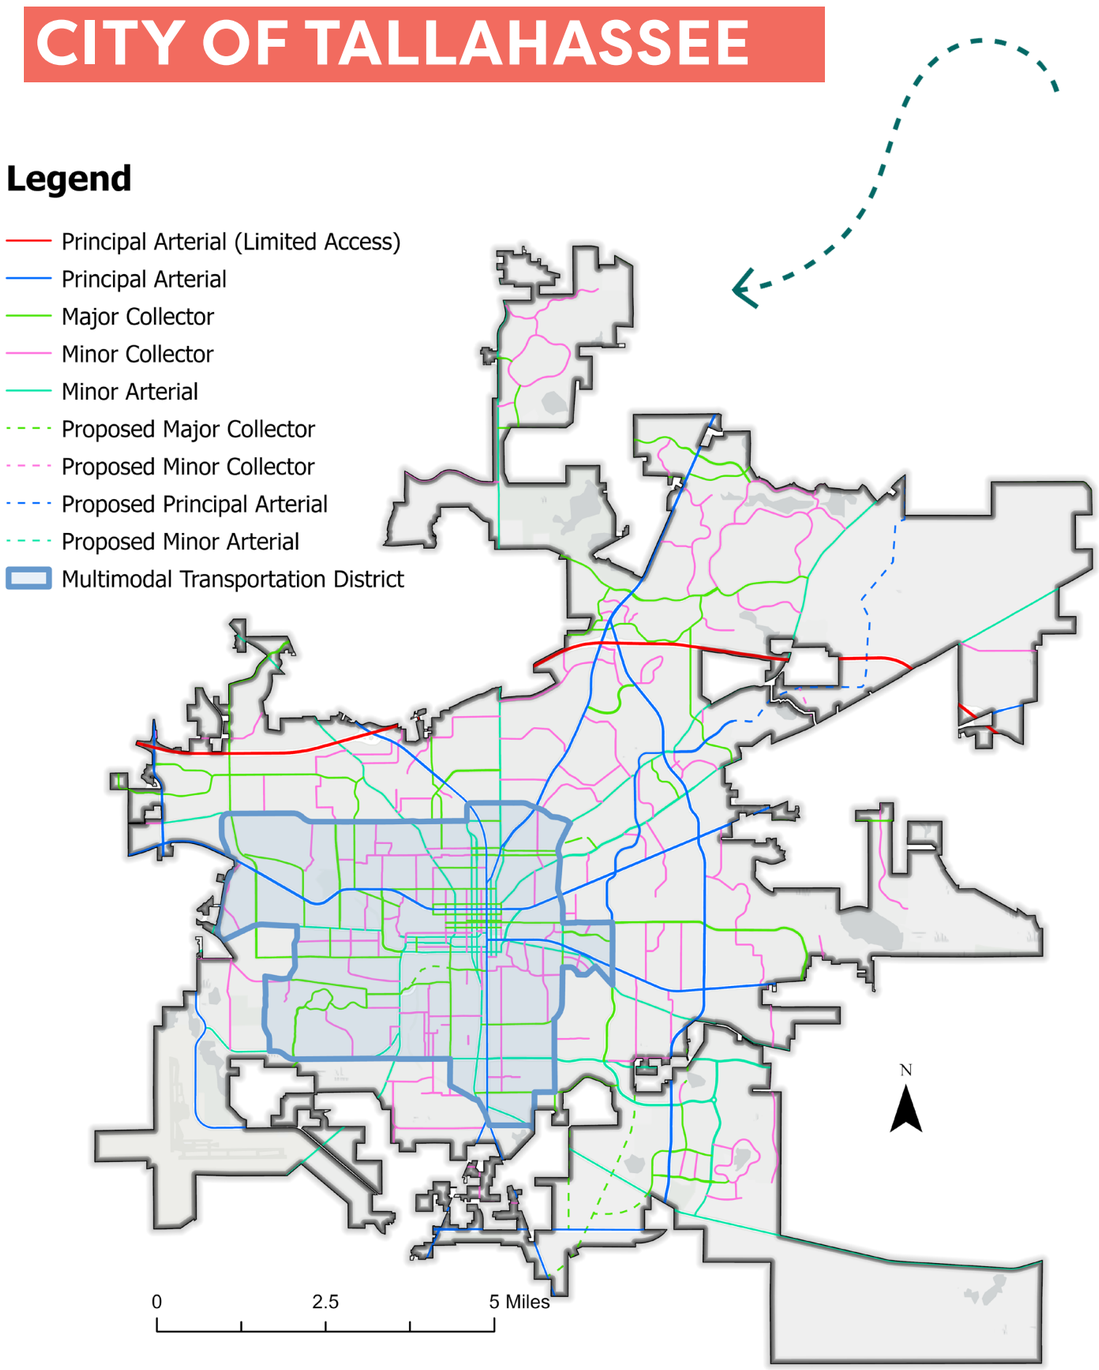

Figure 4.7, Roadway Functional Classification in City of Tallahassee (Source: TalGIS, FSU)

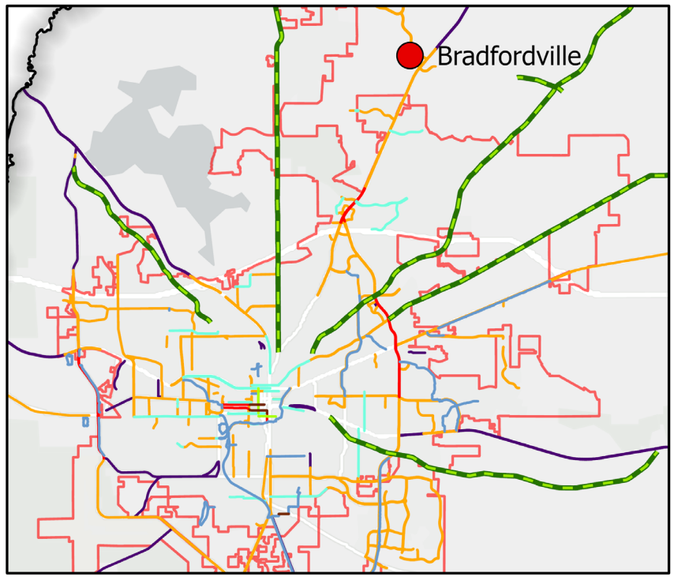
THE ALTERNATIVE MOBILITY SYSTEMS STUDY

The City of Tallahassee and Leon County have jointly funded an Alternative Mobility Funding Systems Study (AMFSS) to review and recommend potential mobility funding systems. The ultimate goal of the study is to identify recommendations and establish a legal basis for a continuous funding source to develop and maintain a multimodal transportation system that services the present and future residents of the City of Tallahassee and Leon County. The AMFSS study Phase I, which has been completed, included an analysis of the existing transportation concurrency system and evaluation of plans, programs, policies, land use patterns, travel characteristics, and infrastructure. The AMFSS is currently in Phase II.



Phase II aims to fulfill specific requirements outlined in the Florida Impact Fee Act. These requirements include ensuring that the impact fee calculation uses recent and localized data and is connected to the need for additional facilities. The study will also evaluate the possibility of transitioning from a concurrency model to a mobility fee model to finance the transportation system.

Phase II will develop a Multimodal Transportation Plan for Tallahassee and Leon County, determining the necessary steps for future implementation of a Tiered Fee System. The AMFSS Phase IIA identifies priority multimodal transportation projects for the next 20 years and establishes a Tiered Fee System. The plan provided information on the funded improvements map, funded improvements needs, and unfunded improvements map. This categorization helped in understanding the state of funded and unfunded projects, and where the gaps in multimodal transportation might lie. Based on these lists of projects, an analysis was undertaken to identify gaps where corridors or intersections currently lack existing multimodal facilities and were not identified for a planned project. Following this gap analysis, an additional analysis was undertaken to identify all gaps on arterial and collector corridors that fall into the Level of Traffic Stress, or LTS, categories 3 and 4. Level of Traffic Stress classifies roads based on discomfort and stress that cyclists experience on different streets. Level of Traffic Stress was originally mapped for the City of Tallahassee and Leon County as part of the 2019 Bicycle and Pedestrian Master Plan. Projects from the Bicycle and Pedestrian Master Plan and transit improvements to StarMetro are included, as well as other projects already in the City, County, and state budgets. The CRTPA has produced an Annual Project Priority List that includes:

- REGIONAL MOBILITY PLAN ROADWAYS PROJECT PRIORITY LIST
- BICYCLE AND PEDESTRIAN PROJECT PRIORITY LIST
- REGIONAL TRAILS PROJECT PRIORITY LIST
- INTELLIGENT TRANSPORTATION SYSTEMS (ITS) PROJECT PRIORITY LIST
- TALLAHASSEE INTERNATIONAL AIRPORT PROJECT PRIORITY LIST
- STARMETRO PROJECT PRIORITY LIST
- URBAN ATTRIBUTABLE ALLOCATIONS PROJECT PRIORITY LIST

NOVEMBER 2020

Capital Region Transportation Planning Agency

State of the Region

Chapter 2

"This chapter provides a foundation for understanding the region's economy, its people, and infrastructure."

connections regional mobility plan 2045

State of the Region

The State of the Region chapter highlights and assesses demographic, economic, and transportation elements in the study area. The report also includes a review of previous plans, policies, and regulations that are related to the future growth and transportation of communities in the region. The existing conditions highlighted in this chapter inform the creation of regional transportation strategies as for the *RMP*.

The CRTPA study area is located directly south of the southwest Georgia border, east of Panama City Beach, and west of Jacksonville. The study area is approximately 2,388 square miles and incorporates all of Gadsden, Jefferson, Leon, and Wakulla Counties in the Florida Panhandle. It contains 10 municipalities and is home to more than 382,000 people.

People

Population Growth

With an increase of over 21,000 people between 2010 and 2019, the Capital Region grew approximately 6% during that time period. While less than the state's growth rate of 12% during that time period, this increase in population has affected the regional transportation network. This growth was not evenly distributed across the study area, with Leon and Wakulla Counties experiencing at least a 7% population increase from 2010 to 2019. Jefferson and Gadsden Counties saw their populations decline. Leon County added the most people overall, with an increase of over 19,000 people (a 7% increase). The 2019 population by county within the CRTPA region is shown in Figure 2-2.

Figure 2-2: CRTPA Population by County (2019)

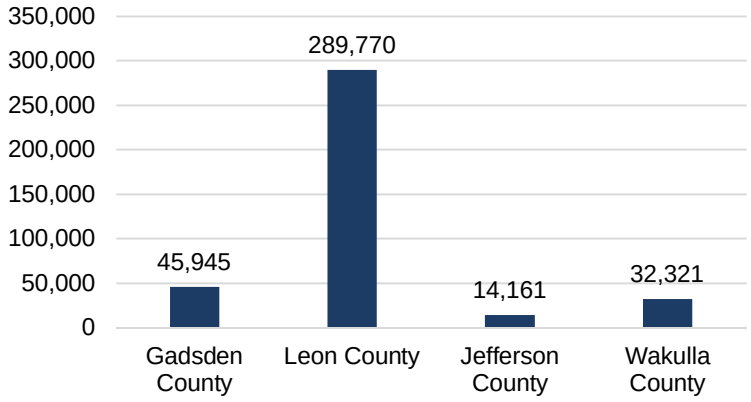

Figure 2-1: Population Information

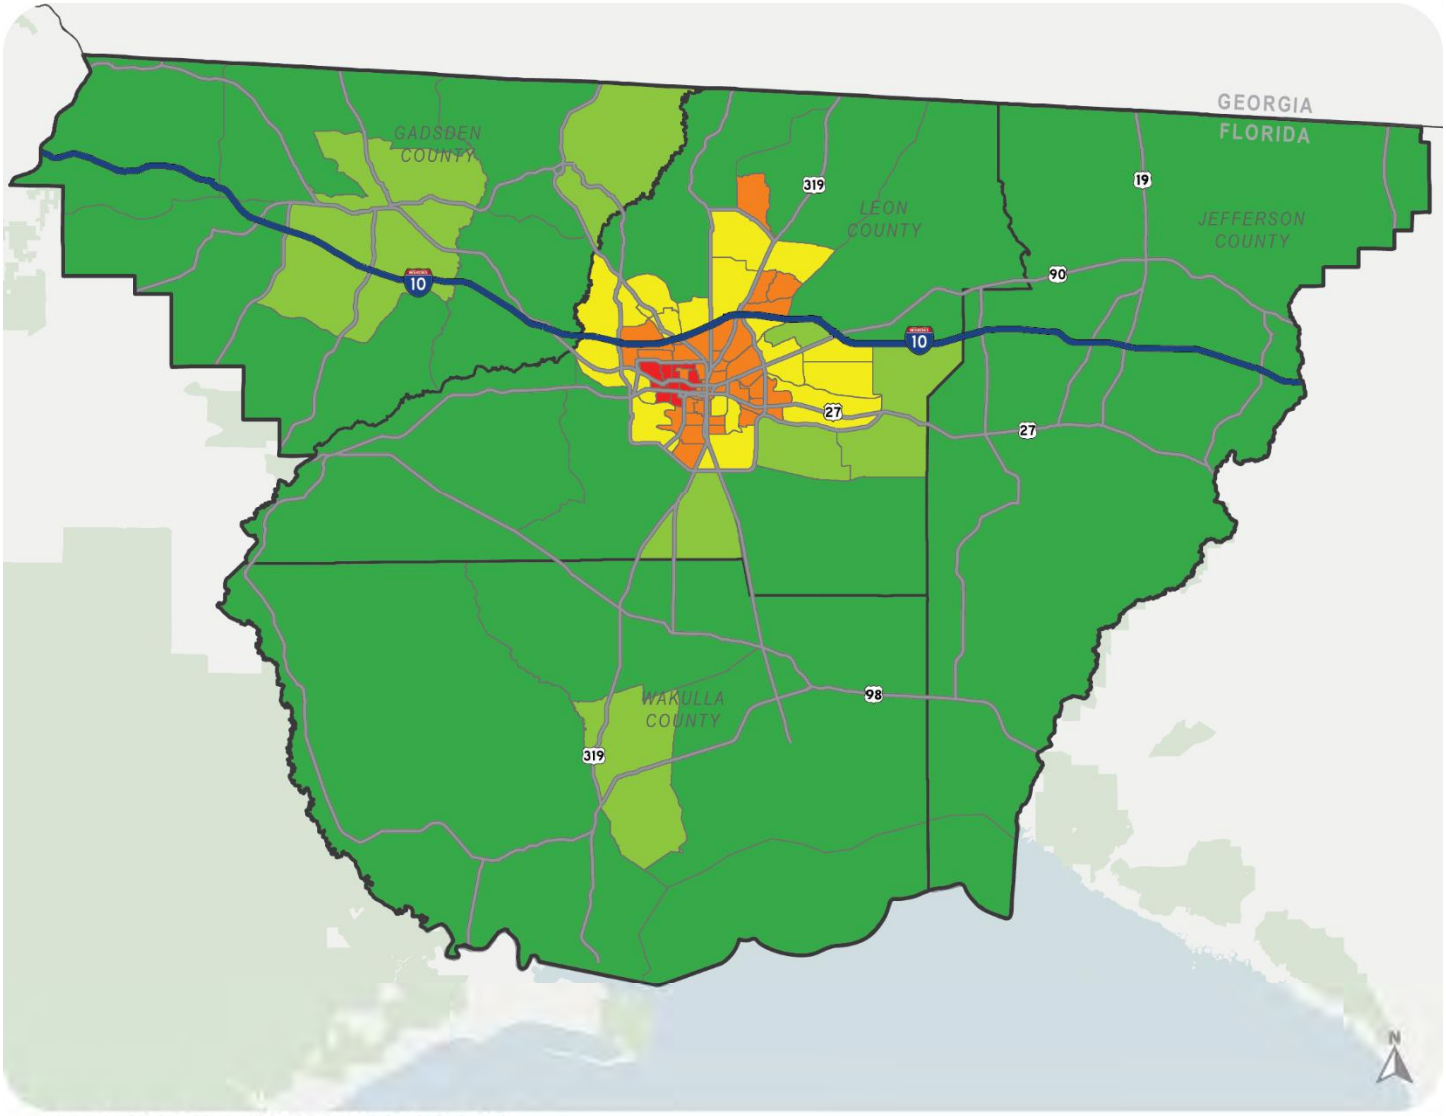
382,197
2019 Population



1.8%
of the state of Florida's population

360,391
2010 Population

Population Density

Population density varies throughout the study area, with the highest concentrations around Tallahassee and much lower densities in the outlying counties. It should be noted that Gadsden, Jefferson, and Wakulla Counties have very large census tract areas. Because of this, the population density is less granular than that in Leon County. Based on population growth and area trends, the densest areas of the region are in and around Tallahassee, where the built environment takes on a more urban development pattern. Rural, undeveloped areas around the edges of the study area are predictably those that are unincorporated and lack most urban services. The CRTPA region's population density as of 2017 is shown in Figure 2-3.

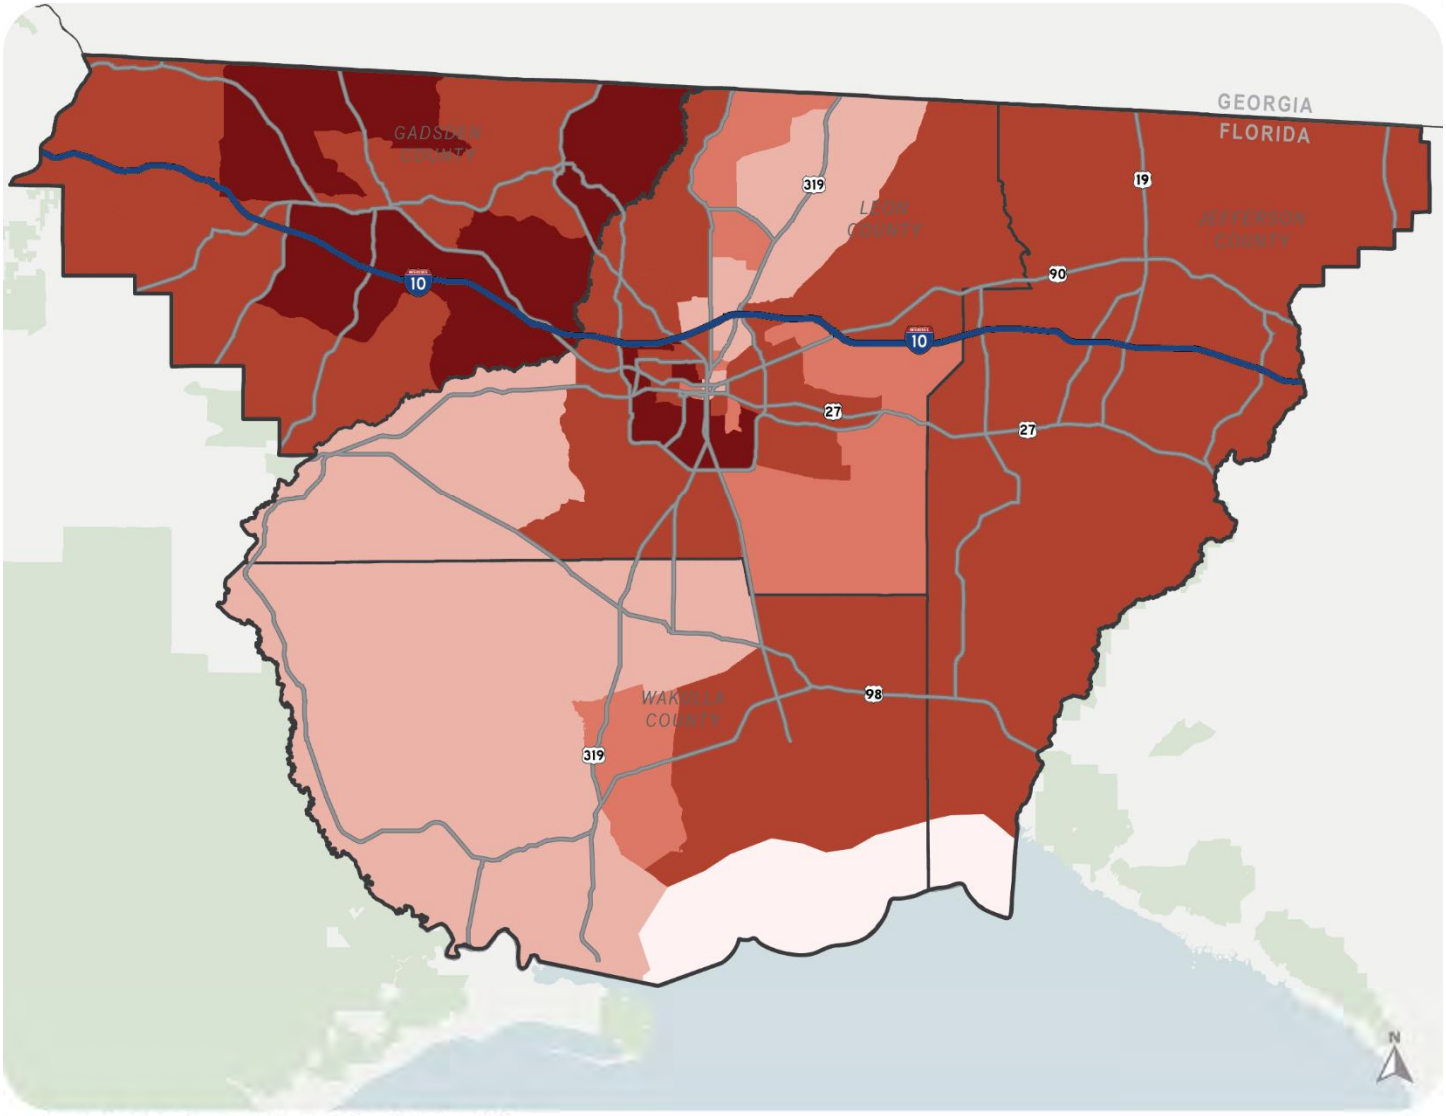
Demographic Trends

Aging Population

Reflecting state and national trends, the CRTPA community is aging. The study area's median age has increased from 38.7 years in 2010 to 40.7 years in 2017, reflecting an increased proportion of the population that is now retirement age or older. While the study area's population distribution is largely in balance with Florida and the United States as a whole, aging communities present significant mobility challenges in comparison with younger populations. Nearly 75% of older persons across the nation live in areas that require a high level of vehicular dependency, requiring the transportation system to be responsive to the needs of older residents particularly if residents choose to age in place. Maintaining the flexibility and foresight to accommodate a variety of lifestyles and ensuring that viable multimodal options exist for residents will be extremely important for the future health of the region.

Figure 2-4: 2010 vs. 2019 Age Trends

Source: American Community Survey 5-Year Estimates (2010, 2019)



Minority Population

On average, 37.6% of the population within the CRTPA region identifies as a race other than white alone, with Gadsden County having the highest minority population. Figure 2-5 shows the percent minority population within the CRTPA region as of 2017. Gadsden County additionally has the highest concentration of people who identify as Hispanic/Latino. Areas around Greensboro and Gretna have the highest percentages with more than 50% of the population being Hispanic/Latino. Approximately 16.7% of the population within the CRTPA region was born outside of the United States, following both a state and national trend. The most common countries of origin are Cuba, Haiti, and Mexico. Figure 2-6 shows the percent Hispanic/Latino population within the CRTPA region as of 2017.

Community Resources

The CRTPA study area is adjacent to multiple national wildlife refuges and national forests. Connections to and from these locations are essential as they serve as focal points for recreational activities. Community resources (e.g., hospitals, schools, fire stations, etc.) often serve a different type of trip purpose but require special attention in terms of transportation. For example, approximately 20% of CRTPA's population are school-aged children and teenagers. Taking a look at how students travel to and from school can offer insight into whether safe routes exist for students to walk or bike. Having continued access to community facilities plays a vital role in maintaining and improving the quality of life for the residents. Figure 2-7 displays the community resources existing within the region.

Prosperity

Employment Trends

Over the past several years, Leon, Wakulla, and Jefferson Counties have seen a 2% increase in job growth, while Gadsden County has seen a slight decrease. The region as a whole employs over 182,000 people. The top employers in the region are predominately composed of government, education, and health sectors. The State of Florida and Florida State University are the largest employers in the region, followed by Florida A&M University and the numerous medical facilities in the area. Table 1-1 provides an overview of the major employers in the Capital Region.

Table 1-1: Major Employers in the CRTPA Region

Employer
State of Florida
Florida State University
Florida A&M University
Capital Regional Medical Center
Coastal Plywood Company
Correction Department, Chattahoochee
Florida State Hospital

Education

Eighty-five percent of residents in the Capital Region have attained a high school diploma or higher, 2% lower than the state and national averages. Twenty-seven percent of residents have a bachelor's degree or higher, which is on par with the state average.

K-12 Education

There are over one hundred schools within the CRTPA region ranging from preschool to high school, and special academies to private institutions. With regard to public school, each county operates its own school system and together the four counties educate over 43,000 students. Adult education and home schooling is offered, as well as schools that specialize in particular subjects such as art or math.

Post-Secondary Education

There are six post-secondary institutions in the Capital Region: Florida State University, Florida A&M University, Flagler College (Tallahassee Campus), Keiser University, Lively Technical College, and Tallahassee Community College. Combined, close to 100,000 students are educated in a variety of fields. Both Florida State University and Florida A&M University are large employers in the region and contribute greatly to the economic vitality of the area.

Health

The Capital Region has two main hospitals, Tallahassee Memorial Hospital and Capital Regional Medical Center, both of which are located in Tallahassee. Both hospitals boast a wide variety of services ranging in everything from cancer care, cardiac rehabilitation, mental health, and robotic surgery. Additionally, Tallahassee Memorial Hospital, in partnership with Florida State University's College of Music, offers one of the most comprehensive and nationally recognized training programs for music therapy. The region as a whole has a high density of mental health and psychiatric clinics, the two most prominent being Florida State Hospital and Apalachee Center.

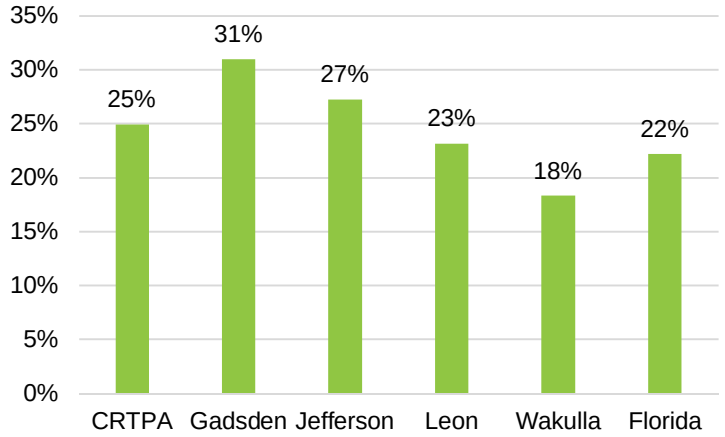
On average, 89% of the region has health care coverage, with Leon County having the highest percentage with 92.5% of the population having health care. When looking at health risks, Gadsden County has the highest prevalence of diabetes in the state, Leon County is the most at-risk county in the state for sexually transmitted diseases, and Jefferson County is the second most at risk county in the state for violent crimes.

Income and Housing

The poverty levels on average in the region are slightly higher than the Florida average, as shown in Figure 2-8. Generally, Gadsden County has the highest percentage of residents below the poverty line, while Wakulla County has the lowest. As shown in Figure 2-9, the median household income in the Capital Region is $49,234, while slightly lower than both the state and national average, the region overall has a moderate income level. Wakulla County has the highest median income with $57,866, followed by Leon County with $51,642.

Generally, a significant percentage of homes in the CRTPA region are rented. Wakulla County has the highest home ownership percentage at 80.4%, which is higher than both the state and national averages. Leon County has the lowest rate of home ownership, likely in part due to the number of university students in the area.

Figure 2-8: Percent Below Poverty Line



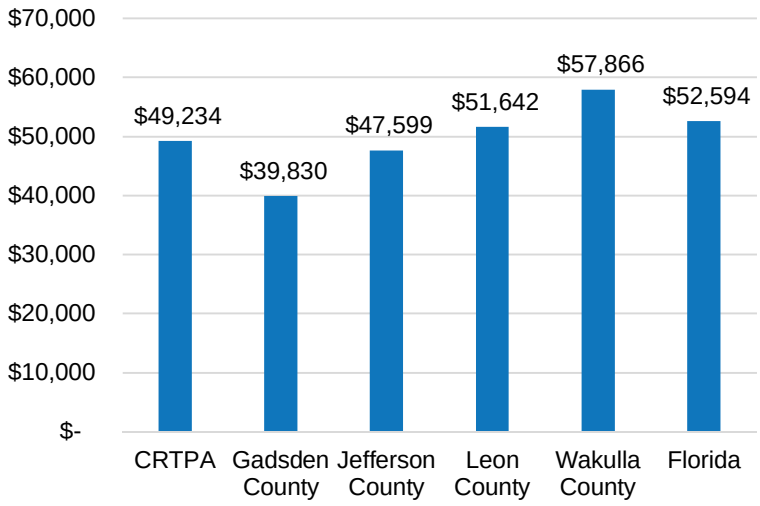


Figure 2-9: Median Household Income

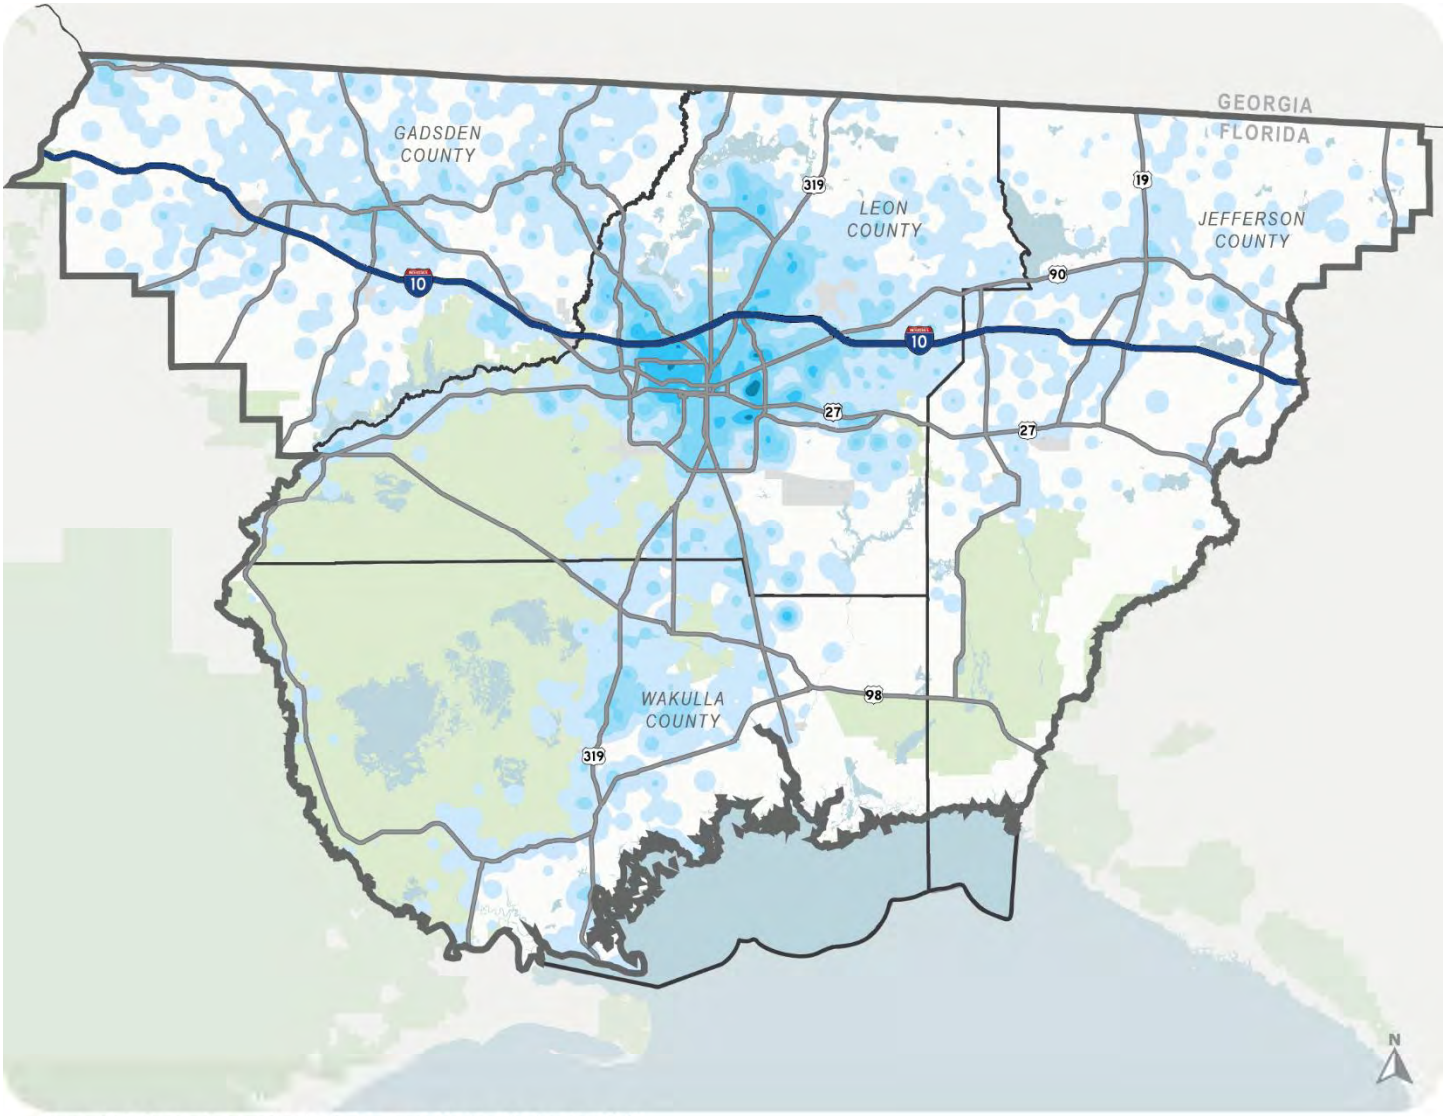
Mobility

Commuting Patterns

The Interstate 10 (I-10) corridor runs through three of the four Capital region counties, which connects the area with the western half of the panhandle and Mobile, Alabama, as well as the northern part of the state to Jacksonville in the west. I-10 is a key corridor not only within the region but also the state, as it provides connection to multiple ports, acts as an emergency evacuation route, and provides a true east/west connection across the northern part of the state. Other essential corridors in the region are US 319, US 27, and US 90, which connect surrounding cities to Tallahassee.



Travel Patterns

As of 2017, 52,945 people commute into the region for work, but live outside of the CRTPA boundary; 126,667 live and work within the CRTPA boundary; and 29,929 live within the CRTPA boundary but commute outside of the area for work. Figure 2-11 shows a regional outlook of where workers in the CRTPA area live, and Figure 2-12 depicts where CRTPA residents work.

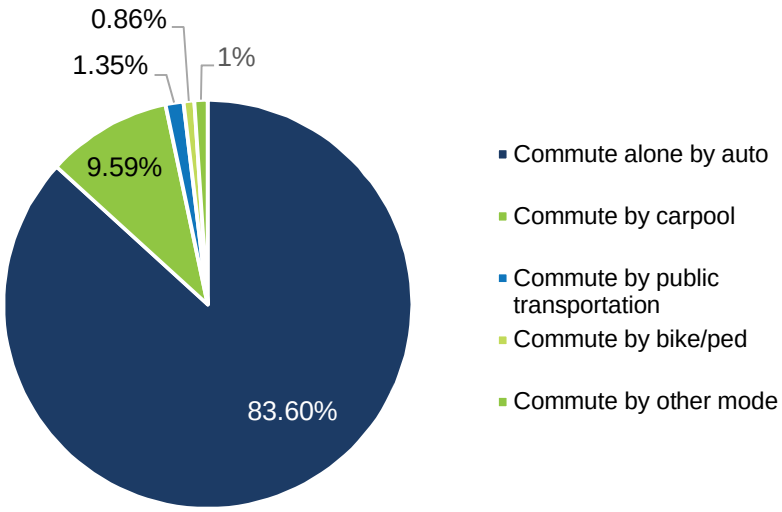
Getting to Work

The average commute time in the Capital Region is 27 minutes. This is slightly more than both the state and national averages (26.1 minutes for both). Residents of Wakulla County generally have a longer commute time at 31 minutes. Additionally, 1.76% of commuters in the area have what is known as a "super commute" or a commute in excess of 90 minutes. Capital Region residents predominately drive alone to work, but do carpool at a slightly higher precentage than the rest of the state. Additionally, most residents commute to work via auto (93.19%). This is higher than the statewide average of 88.4% commuting by auto. Figure 2-13 shows the means of transportation to work for residents of the CRTPA region.

Vehicle Access

The majority of households in the Capital Region have access to two cars, which is consistent with both state and national trends. Inversely, 2.46% of households within the region own no cars. Geographic areas with lower vehicle ownership generally coincide with the overall lower median income areas, indicating that low vehicle ownership may be out of necessity rather than by choice. The availability of travel options such as transit service should be considered as a high priority within these areas. Figure 2-14 provides more information on the households without access to vehicles in the CRTPA region.

Figure 2-13: CRTPA Region Means of Transportation to Work



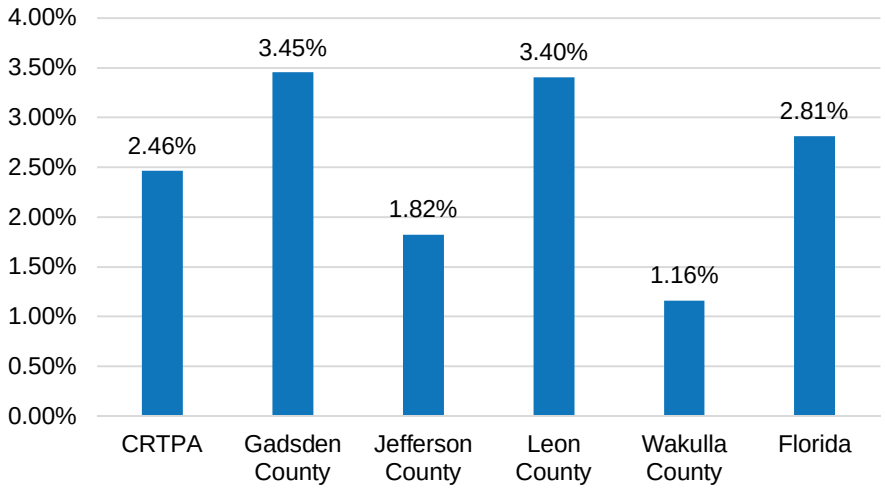


Figure 2-14: Households without Access to Vehicles

Network Characteristics

Annual Average Daily Traffic (AADT)

The corridors with the highest AADT, as shown in Figure 2-15, reflect the most frequently traveled roads in the area. AADT data for 2018 was obtained from FDOT. These roads include major freeways and arterials such as Interstate 10, US 319, US 90/Tennessee Street, Old Bainbridge Road, US 19, US 98. The roads with the most travelers per day all fall within Tallahassee city limits. The highest traffic volumes are experienced on Interstate 10 from US 27 to US 319 with an AADT of more than 69,500.

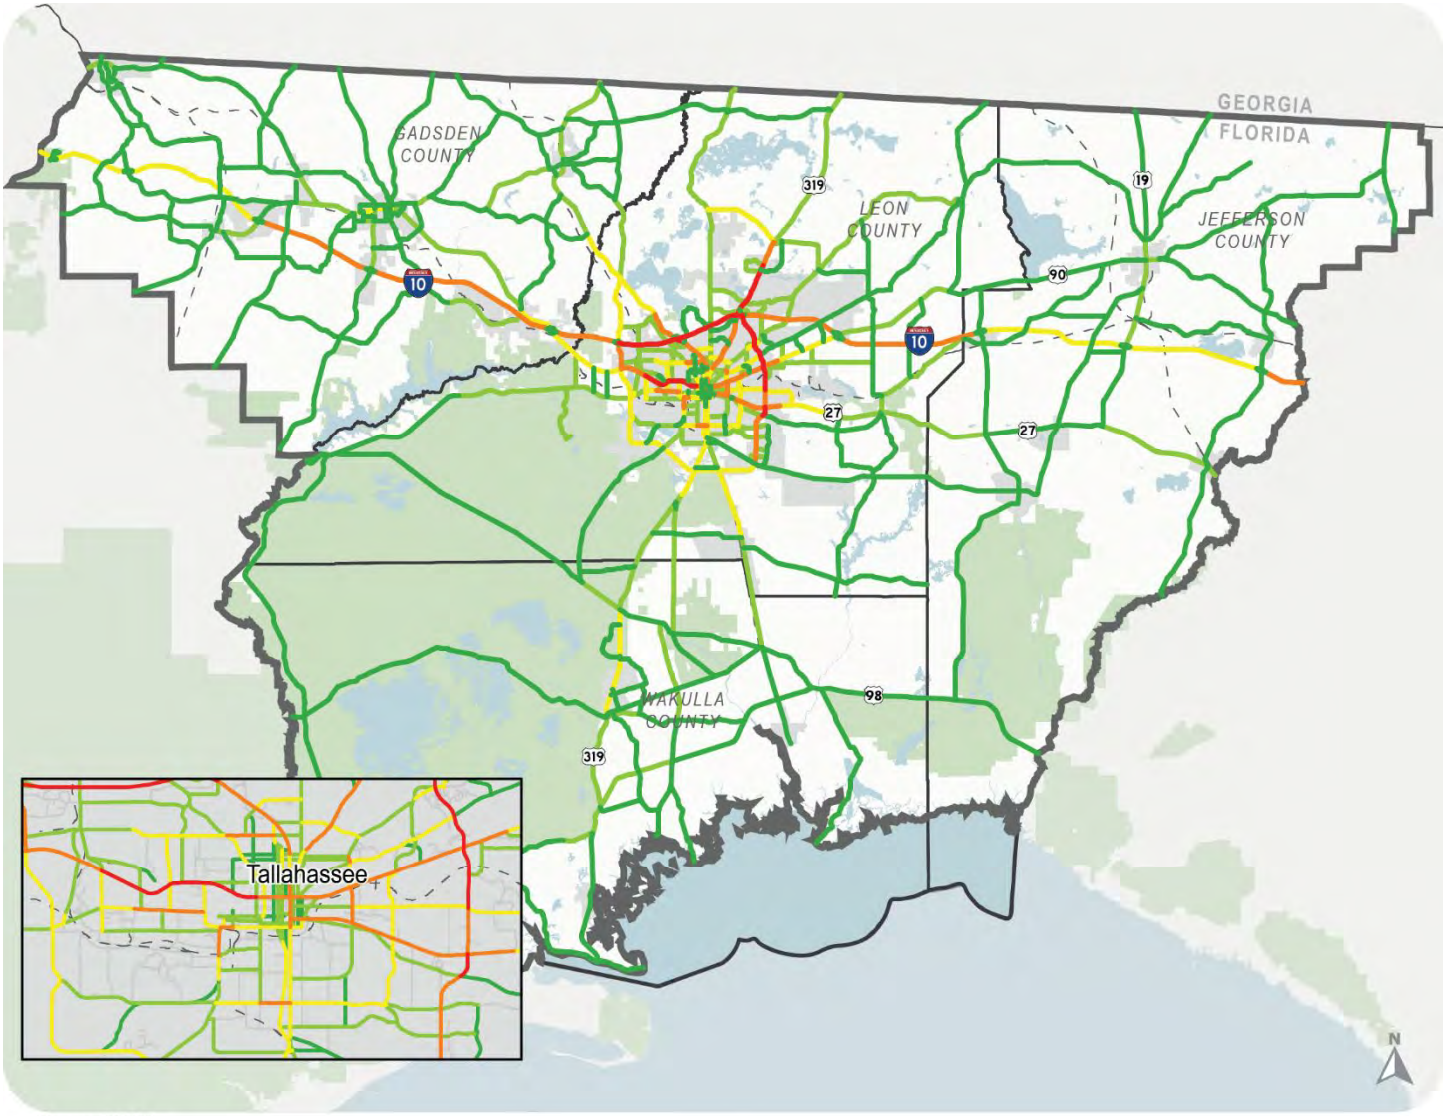
Congestion

Figure 2-16 below shows the existing 2015 Volume-to-Capacity (V/C) Ratios in the CRTPA region. Roadways considered to operating at or above capacity are shown in orange and red. It is important to note two things about travel demand model generated volume-to-capacity ratios. One, the map shows the daily volume-to-capacity, so travel in the peak hour may be worse than the aggregate full day. Second, the volume-to-capacity ratios depicted on this map represent links only. If the volume on the roadway exceeds the capacity (V/C >1.0), the link is considered to be congested. While also a contributing factor to congestion levels, delay associated with poorly operating intersections is not represented in this analysis. It is possible, therefore, for a road to operate at a higher V/C ratio than shown in the map if the intersections are not operating at full efficiency along a corridor.

Model Note: Small variabilities in the distribution of population and employment in the more rural areas can potentially lead to higher V/C rations being shown in the model. Additionally, more rural areas tend to have fewer traffic analysis zones (TAZs) with fewer loading points onto the network, which can sometimes lead to certain segments showing up higher than they are in real live conditions. The information in the model is used as a guide for recommendation development but is further vetted with local knowledge and available FDOT traffic data. The model used for existing conditions data and prioritization is an interim model. The final model is still under development.

Bridges

Bridges represent critical components of a safe and efficient transportation system. As a result, deficient bridges can introduce safety and congestion concerns along a properly operating corridor. The Federal Highway Administration (FHWA) requires bridge inspections every two years with updated bridge sufficiency ratings. The sufficiency rating is determined by evaluating factors that indicate a bridge's ability to maintain and remain in service. The ratings go from 0 to 100, where a score of 0 represents a bridge entirely deficient while a score of 100 represents a structurally acceptable bridge. A bridge with a score of under 50 is considered as a candidate for replacement. According to the FDOT Bridge Inventory – 2019 Annual Report, the relative percentage of bridges in need of repair or replacement within the CRTPA region is higher than percentages across the state. In 2019, FDOT reported that only 2.9% of all bridges were structurally poor and 7.7% were in fair condition, meaning they need maintenance. Figure 2-17 shows the bridge sufficiency ratings for the CRTPA region as of 2018.



Out of 403 bridges:

19 (4.7%)
Candidate for replacement

91(22.5%)
Candidate for maintenance

293
Structurally acceptable

Safety

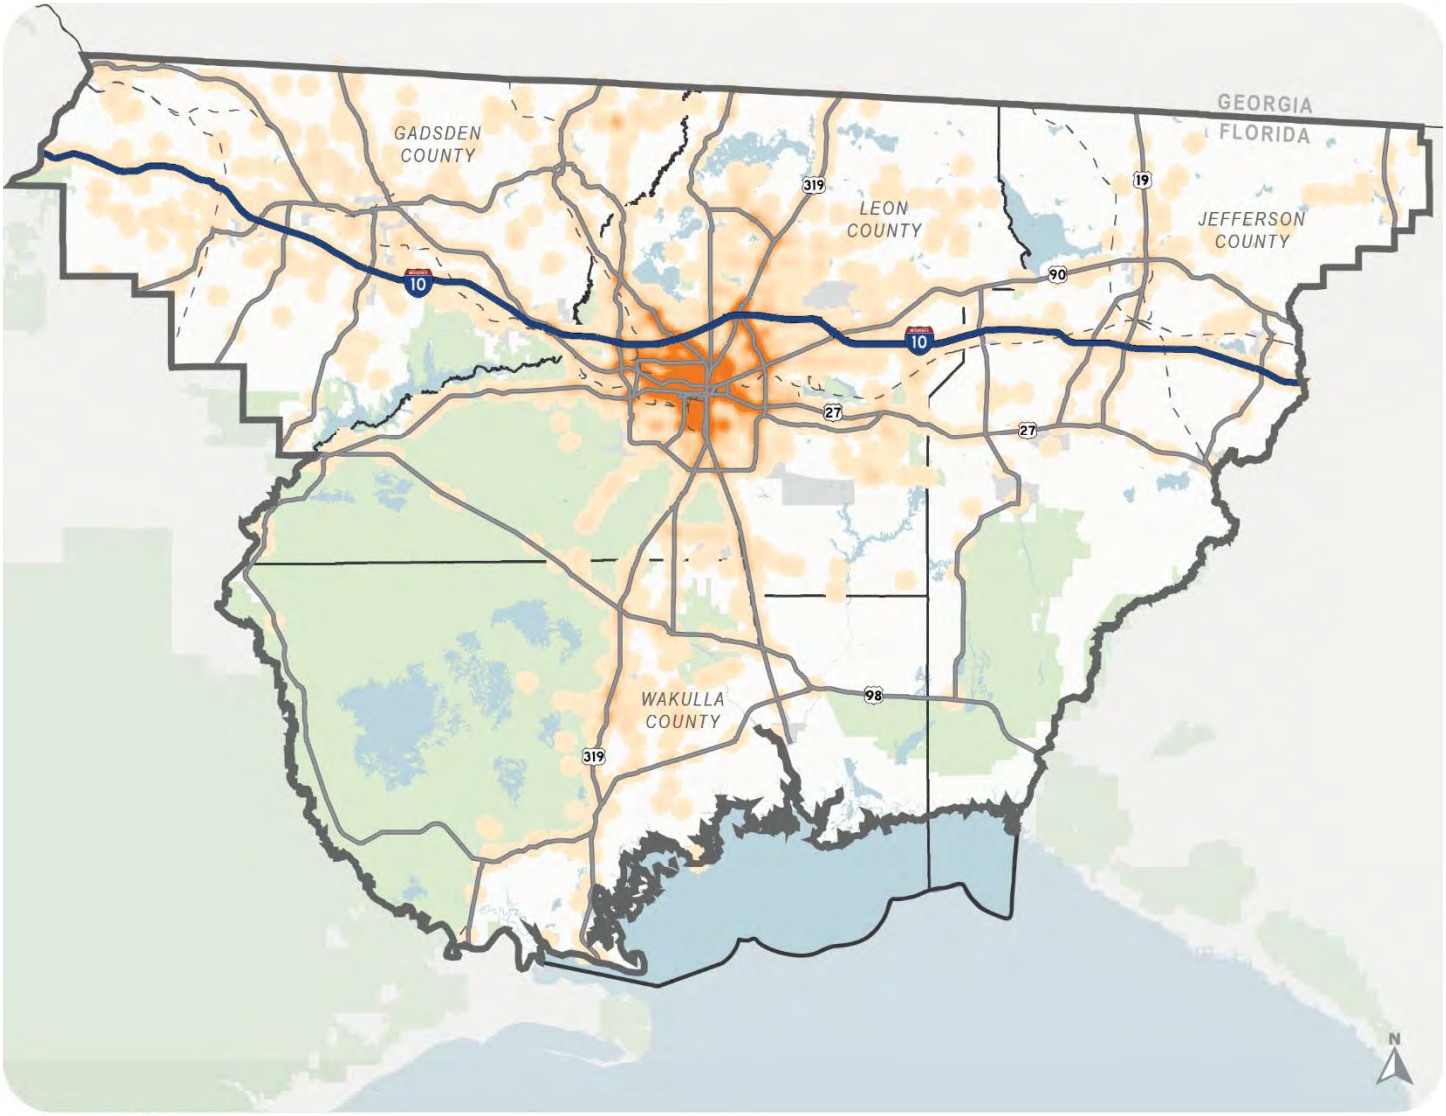
When assessing transportation safety within the CRTPA region, it is important to consider both the frequency and severity of crashes. The majority of crashes within the region are in and around Tallahassee, with particularly high crash frequencies on Apalachee Parkway, Capital Circle, Pensacola Street, and Tennessee Street. Other roads with high crash frequencies outside of Tallahassee include:

- US 90
- US 27
- US 319
- US 19

Total Number of Crashes by County (2016)

- Gadsden County 671
- Jefferson County 294
- Leon County 6,893
- Wakulla County 338

Most Common Causes of Crashes (2016)



- Drove too fast for conditions (wet, icy, snow, etc. road surface)
- Failed to keep in proper lane
- Failed to yield right or way
- Followed too closely
- Operated vehicle in careless fashion
- Ran red light

Table 2-2 provides insight into the total crashes in each county that involved specific circumstances such as impaired or distracted driving, bicyclists or pedestrians, or teenage or older drivers. A better understanding of the areas of highest crash frequency within the CRTPA region can be found from the crash density map shown in Figure 2-18.

Table 2-2: Total Number of Crashes Involving Particular Circumstances (2016)

	Gadsden County	Jefferson County	Leon County	Wakulla County
Impaired Driving	36	17	148	18
Distracted Driving	103	36	984	75
Crashes Involving Bicyclist and/or Pedestrian	9	2	223	2
Crashes Involving Teen Driver	67	39	1,189	70
Crashes Involving 65+ Aged Driver	89	48	918	48

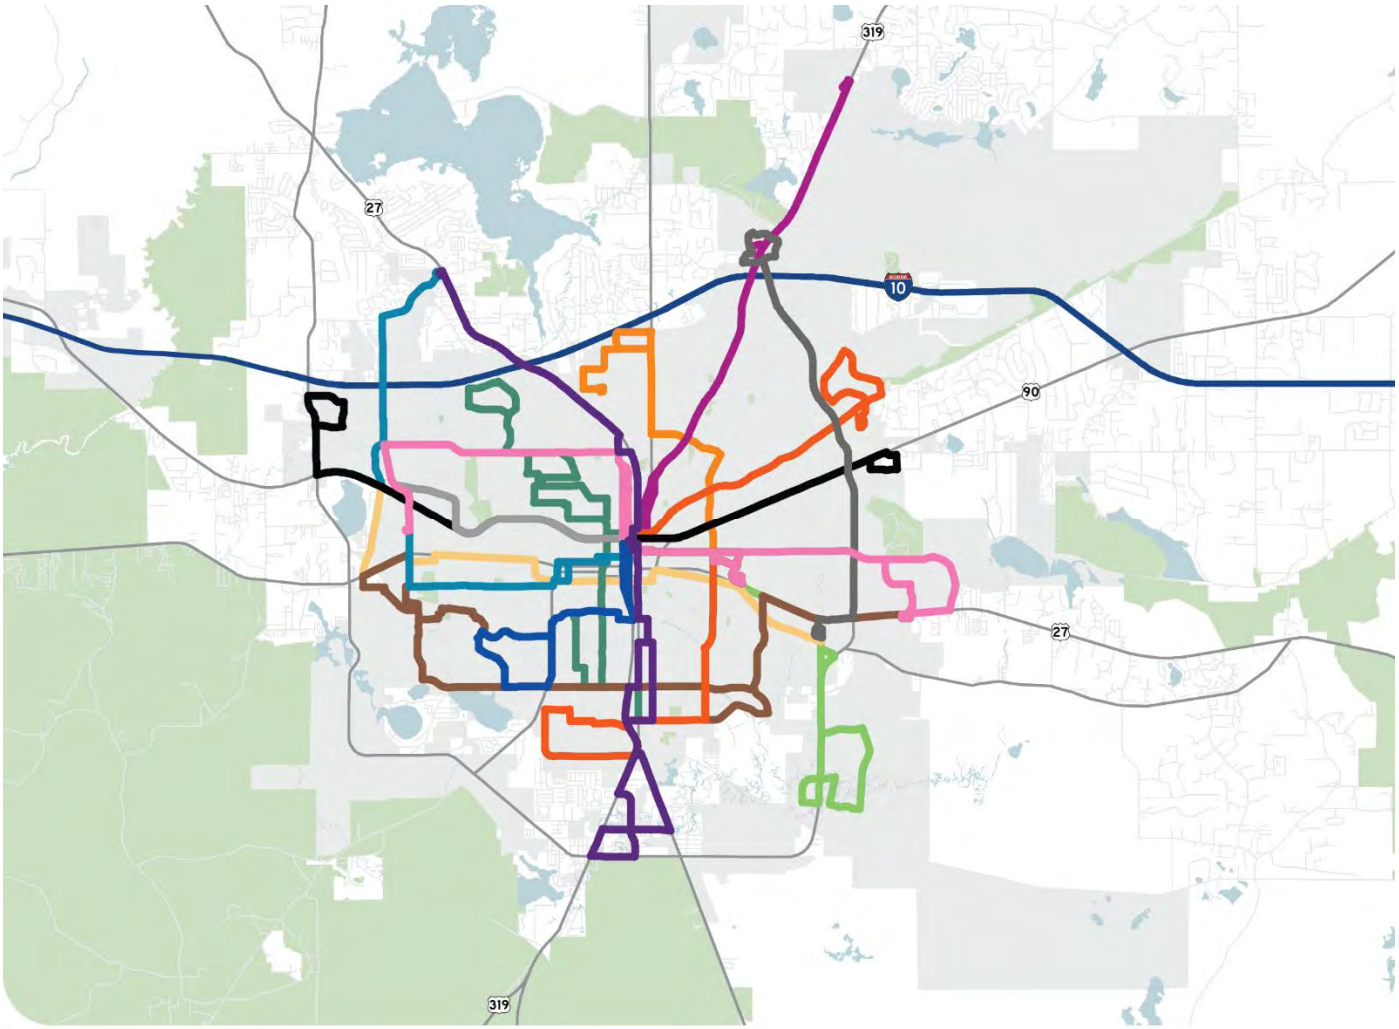
Transit

Several services provide public transportation within the Capital Region. StarMetro operates transit in and around Tallahassee with 15 routes operating on weekdays, 4 routes operating nights, and a variation thereupon during weekends. Additionally, StarMetro operates Florida State University's (FSU) Seminole Express transit. Eight routes that connect throughout the campus and into downtown Tallahassee are provided to students, faculty, and staff at no cost. FSU affiliates can ride on all regular StarMetro routes free of charge with a valid university ID. The existing transit routes in the region as of 2017 are showin in Figure 2-19.



Outside of Tallahassee, Big Bend Transit, in coordination with Commuter Services of North Florida, provides transit services to more rural areas of Leon, Gadsden, and Jefferson Counties. In addition to paratransit and van pool amenities, Big Bend Transit operates the Quincy Shuttle (weekday service within the City of Quincy), the Gadsden Express (weekday and Saturday service between Quincy and Tallahassee), and the Gadsden Connector (weekday service between Havana and Chattahoochee). Each of these routes is $1 per trip, with Saturdays being $3 per trip on the Gadsden Express.

Active Transportation

The Capital Region has a relatively robust network of bicycle and pedestrian facilities. Dating back to the early 1990s, the region has planned for alternative networks to allow residents to connect to key destinations through non-motorized means. Most recently, the 2011 CRTPA Trails Plan and county-specific plans for all four counties (including the recently completed Tallahassee-Leon County Bicycle and Pedestrian Master Plan) addressed the creation of a network of hard-surface paths that focused on creating commuting routes.

In total, there are approximately 166 miles of bikeways, including designated bike lanes, buffered bike lanes, and sharrows. Additionally, there are over 1,600 miles of other shared bicycle and pedestrian facilities made up of trails and multi-use paths. Furthermore, there are over 400 miles of exclusive pedestrian facilities within the region. Figure 2-20 provides a map of the region's existing bicycle and pedestrian facilities.

Air, Rail, and Freight

The CRTPA region offers several forms of travel with relation to freight. The area is home to one major airport with several auxiliary airports and airfields/landing strips scattered throughout the four counties. Tallahassee International Airport, located off Capital Circle SW (State Route 263) in Tallahassee, offers commercial flights to six major cities on three airlines. The airport additionally provides cargo services to FedEx with destinations in Memphis, Orlando, and Tampa. Generally, the airport has seen a significant uptick in traffic since 2014 with total enplanements and deplanements increasing by 13% in 2018. Figure 2-21 shows enplanement growth at the Tallahassee International Airport between 2014 and 2018.

Interstate 10 acts as the main freight route in the region, linking Gadsden, Leon, and Jefferson Counties to those in the east and west. The route leads to both the Port of Pensacola and Jaxport while also providing nearby access to the Port of Port St. Joe, making it a key corridor for freight transportation.

There are more than 150 miles of rail lines in the Capital Area. CSX Railroad runs services on these facilities through operating agreements or short line partnerships with smaller companies. There are no CSX commodity-handling facilities within the study area; however, there is a Georgia Pacific panel products facility outside of Lowry, not far from the study area boundary.

A map of the region's air, rail, and freight facilities is shown in Figure 2-22.

Environment

Like much of the state, the CRTPA region has a variety of environmental concerns. There is a high concentration of wetlands, particularly in the southern part of the study area moving toward the coast. Additionally, the area has several marine protected areas through the Florida Department of Environmental Protection, the Florida Fish and Wildlife Conservation Commission, and the U.S. Fish and Wildlife Service. Generally, these areas follow along the coastline, the Ochlockonee River, the Aucilla Wildlife Management Area, and the Aucilla River. Furthermore, near the Flint Rock Wildlife Management and Aucilla Wildlife Management Areas, Frosted Flatwoods Salamanders are listened as a threatened species. Special consideration should be taken for projects that fall within these areas as they are at a higher risk for general environmental endangerment. Figure 2-24 shows the areas of environmental consideration in the CRTPA region.

Previous Planning Efforts

The *Connections 2045 Regional Mobility Plan* will build on previous planning efforts completed in the Capital Region. The many municipalities involved in this region have completed a wide range of planning efforts that will affect future transportation recommendations, including comprehensive plans, long range transportation plans, corridor studies, and transit plans. Table 2-3 below captures the most recent and major studies that affect the region.

Table 2-3: Previous Planning Efforts

Name	Date	Description
Crawfordville Town Plan	2006	The Crawfordville Town Plan identifies the steps to implement the town's overall vision. The plan is a consolidation of past visioning efforts with steps and suggestions for recommendations and implementation.
The Trails Plan	2011	The Trails Plan addresses the need for a connected hard-surface trail system within and throughout the CRTPA region. The plan describes a system that is intended to provide a commuting alternative for residents seeking alternative transportation options with an emphasis on limiting exposure to cars along the route.
Gadsden County Bicycle and Pedestrian Facilities Master Plan	2012	The Gadsden County Bicycle and Pedestrian Facilities Plan outlines projects that Gadsden County is interested in pursuing locally and through the CRTPA planning process. The plan focuses on improving the quality of existing and future facilities while creating connections to schools, jobs, and other key destinations.
Wakulla County Bicycle, Pedestrian, and Blueways Master Plan	2012	The Wakulla County Bicycle, Pedestrian, and Blueways Master Plan identifies specific project and policy recommendations that focus on improving the quality and quantity of multimodal facilities in Wakulla County. The plan was supplemented with the following: an engineering study, design guidelines, a marketing plan, a bicycle route map, and a mobile application to help provide the County with a ready-to-implement plan.
Comprehensive Plan 2025 Jefferson County Florida	2012	The Jefferson County Comprehensive Plan describes the policies and objectives for development in Jefferson County. The plan is separated into the following ten sections: Future Land Use, Traffic Circulation, Housing, Utilities, Conservation, Coastal Management, Recreation and Open Space, Intergovernmental Coordination, and Capital Improvement.
Jefferson County Bicycle, Pedestrian and Master Plan	2013	The Jefferson County Bicycle and Pedestrian Master Plan was developed in an effort to connect the City of Monticello with rural unincorporated areas of the County to key destinations in the area. It identifies desirable destinations, routes and facilities, priority projects for future funding, and consistent design guidelines for all bicycle and pedestrian infrastructure.
Connections 2040 Regional Mobility Plan	2015	The Connections 2040 RMP is the long range transportation plan for the region that addresses all modes of transportation including: road, bike, pedestrian, transit, and freight. The plan examines transportation opportunities in the four-county area (Gadsden, Jefferson, Leon, and Wakulla counties).
Tallahassee-Leon County Greenways Master Plan	2015	The Tallahassee-Leon County Greenways Master Plan identifies 29 separate greenway projects and proposes 139 miles of trails within the area. This plan builds off of previous planning efforts dating back to 1993.
Town of Havana: Main Street Assessment		US 27/Main Street is a four-lane divided Rural Principal Arterial that is the major north-south route through the Town of Havana. The Town of Havana was interested in identifying potential treatments within the downtown area between 9th Avenue and 5th Avenue to improve the pedestrian experience and manage traffic, as well as improving the aesthetics of the corridor in support of the overall goals of the Town.
Tallahassee-Leon County 2030 Comprehensive Plan	2017	The Comprehensive Plan is comprised of multiple Elements, each addressing certain aspects of the community. Each Element is made up of

Name	Date	Description
		aspirational goals, measurable objectives, and strategic policies. Goals are the long-term ends to which programs and activities are ultimately directed. Objectives are specific, measurable, intermediate ends that are achievable and mark progress towards goals. Policies are programs and activities conducted to achieve identified objectives and goals.
Wakulla County Comprehensive Plan	2018	The Wakulla County Comprehensive Plan lays out the policies and objectives for development in Wakulla County. The plan is separated into the following twelve sections: Future Land Use, Concurrency Management System, Housing, Infrastructure, Transportation, Coastal Management, Conservation, Recreation and Open Space, Intergovernmental Coordination, Capital Improvement, Economic Development, Public School Facilities.
Traffic and Operations Analysis – Corridor Studies		This effort was focused around the analyses of Pensacola Street, Tharpe Street, and Bannerman Road within the City of Tallahassee. Each of these corridors were identified for this technical analysis to identify potential projects to improve mobility and efficiency without major capacity expansions. Based on the safety and congestion analysis, a list of projects to address both safety and congestion issues, as well as pedestrian and bicycle accessibility and connectivity, was developed for each corridor. In addition to the identified projects, a broad range of strategies, policies, and engineering solutions were developed to address the identified needs.
CRTPA Congestion Management Process	2018	The Congestion Management Process (CMP) was developed to evaluate and address congestion in the MPO region with mitigation strategies designed to improve both recurring and non-recurring congestion on critical corridors within the Capital Region Transportation Planning Agency CRTPA boundary. The CMP update provided the development of tools and strategies focused on the reduction of peak hour vehicle miles of travel, reduction of congestion, safety improvements, the improvement of connectivity between employment centers and areas with concentrations of transportation disadvantaged populations, and support access to jobs. The final CMP included specific, project based solutions to address the areas of identified congestion and safety concerns.
Southwest Area Transportation Plan	2019	The purpose of this transportation plan was to study potential alternatives on Orange Avenue, Springhill Road, South Lake Bradford Road, and North Lake Bradford Road. Major areas of focus include improving student safety, improving bicycle and pedestrian travel, enhancing access management, protecting adjacent neighborhoods, and improving transit service.
Midtown Area Transportation Plan	2020	Located just north of downtown Tallahassee, the Midtown area provides a vibrant mixture of commercial uses surrounded by close-in neighborhoods. As the area has grown in vibrancy, increased private sector investment has occurred as has public sector transportation proposals to improve the mobility of the area. The Midtown Area Transportation Plan builds upon the above efforts by identifying and reviewing potential changes to the transportation network to enhance Midtown's mobility. The Plan has been completed in two phases to study traffic operations and multimodal needs while gathering public feedback.
Tallahassee-Leon County Bicycle and Pedestrian Master Plan	2020	The goal of the Tallahassee-Leon County Bicycle and Pedestrian Master Plan (BPMP) is to make traveling as a bicyclist or pedestrian safer and easier within Tallahassee and Leon County. Additionally, the Plan is to provide connectivity to other transportation systems, reduce vehicle conflicts, promote a healthier mode choice, and provide equity for transportation disadvantaged populations.

Overview

The goal of the ITS Master Plan is to identify strategies and tools to enable the City to manage the regional transportation network more efficiently. ITS includes communications and field technologies that are integrated into the transportation network such as traffic signals, cameras, fiber optic communications, and central management software. ITS technologies are widely deployed throughout the Tallahassee region and the City is in a unique position to create a plan to expand its ITS program as it continues to grow in population. As the largest city in the Panhandle Region and the only incorporated municipality in Leon County, Tallahassee continuously strives to innovate and integrate technology for the purpose of operating, improving, and managing the existing multi-modal transportation system.

Benefits

As the City continues this trend to be at the leading edge of traffic management it is important to recognize the benefits of an expanded ITS program:

- Improving the safety and reliability of the regional Tallahassee transportation network
- More travel information to the general public resulting in an elevated travel experience for motorists, transit riders, bicyclists, and pedestrians
- The opportunity to coordinate with City departments to share data and projects beneficial to each other's operations
- Leveraging the program to collaborate with agencies in the region on initiatives to provide quality services to the public

Vision

Maximize the transportation system efficiency and performance using innovative technologies and regional collaboration to promote reliable mobility throughout the vibrant capital city region.

Project Recommendations

The following series of ITS projects proposed for future deployment have been developed based on the needs assessment, stakeholder input, direction from the City, and industry best practices. These recommendations are envisioned to meet the needs and challenges of the City's transportation system. The established vision and objectives were used as guiding principles to develop the proposed projects.

The implementation plan shown in the table to the right provides guidance to assist the City in implementing the recommendations in a prioritized and efficient manner. The City's strategic approach includes a deployment implementation plan of devices in new areas of the City, sufficient communications network for the additional expansion, and leveraging existing projects to facilitate expansion.

Prioritization Criteria

A methodology was developed to provide a consistent approach to prioritizing project recommendations demonstrating fiscal responsibility and accountability. All recommended projects identified were scored and prioritized using the below prioritization criteria.

Staffing Plan

In addition to identifying ITS infrastructure needs, this ITS Master Plan identifies appropriate staffing levels that will allow the City to manage its traffic signal system and ITS network and to support the traveling public more effectively. The number of traffic signals in the City has steadily increased without a corresponding increase in staff to operate and maintain them. This has created a situation where the City is understaffed for both operations and maintenance of the traffic signal system and ITS network. This Master Plan recommends one additional Traffic Signal Timing Engineer, one additional Traffic Operations Specialist, one Traffic Operations Analyst, and two additional ITS Maintenance Technicians to account for staffing needs as the ITS Program grows.

Implementation Plan

	Project Title	Estimated Cost
Near-Term (2-5 year horizon)	CCTV Camera Upgrade	
	CCTV Cameras - Phase 1	
	Adaptive Traffic Signal Control (US 90)	
	Traffic Signal Management Plan	
	Near Term Subtotal	**$2,670,000**
Mid-Term (5-10 year horizon)	I-10 Trailblazers	
	Cabinet Upgrades	
	Smart Work Zones	
	Transit Signal Priority	
	CCTV Cameras - Phase 2	
	Travel Time Reliability System - Phase 1	
	Travel Time Reliability System - Phase 2	
	Mid-Term Subtotal	**$9,517,000**
Long-Term (over 10-year horizon)	Adaptive Traffic Signal Control (US 27)	
	Connected Vehicle Infrastructure	
	Managed Field Ethernet Switch Replacement	
	Communications Network – Redundancy Expansion	
	Website Connectivity	
	Long-Term Subtotal	**$12,210,000**
Programmatic Projects (yearly recurrence)	ATMS Upgrades	
	ATSPM Dashboard/Performance Monitoring	
	System Detectors	
	FYA Upgrades	
	Bicycle Detection	
	Programmatic Subtotal	**$390,000**

Introduction

The City of Tallahassee's established history of investing in Intelligent Transportation Systems (ITS) began in 1999 with the original installation of a City-funded advanced transportation management system (ATMS), fiber optic cable, and arterial traffic cameras. Today, the City remains at the leading edge of transportation management. As the largest city in the Panhandle Region and the only incorporated municipality in Leon County, Tallahassee continuously strives to innovate and integrate technology for the purpose of operating, improving, and managing the existing multi-modal transportation system.

Tallahassee is home to both Florida A&M University and Florida State University, as well as the Florida State Capitol. On any given day, the diverse population of Tallahassee, including over 67,000 students, legislative members, and local residents, relies on the transportation network. Maintaining a technologically advanced ITS and a robust communications network are essential to manage a safe and reliable transportation system in the state's capital city. As the future growth of Tallahassee is inevitable, strategically planning for it is essential.

The City of Tallahassee partnered with the Capital Region Transportation Planning Agency (CRTPA) to develop this ITS Master Plan and identify opportunities to expand and develop technology to support City operations and accommodate the growing demand on the mobility infrastructure. The purpose of this document is to provide a comprehensive roadmap for planning, development, and implementation of ITS technologies and communications assets.

DOCUMENT ORGANIZATION

This document is organized into the following major sections:

- **Introduction**: This section provides an overview of the project, summarizes the plan's purpose, and documents the process used to develop this plan.
- **Stakeholder Coordination**: This section discusses the vision and operational goals identified by key project stakeholders.
- **Existing Conditions**: This section details the information collected during the course of this effort to document how the City currently operates with respect to ITS.
- **Needs Assessment**: This section identifies the needs identified based on stakeholder input.
- **Deployment Recommendations**: This section includes the methodology for project development and proposed device locations.
- **Prioritized Implementation Plan**: This last section identifies the schedule, partnerships, and funding required to support the recommended projects.

PROJECT PROCESS

The process of developing this ITS Master Plan was a phased approach. Figure 1 displays the major milestones that occurred during this process. Each section of this Plan corresponds to a major milestone and provides more details on the methodology and summarizes all relevant data.

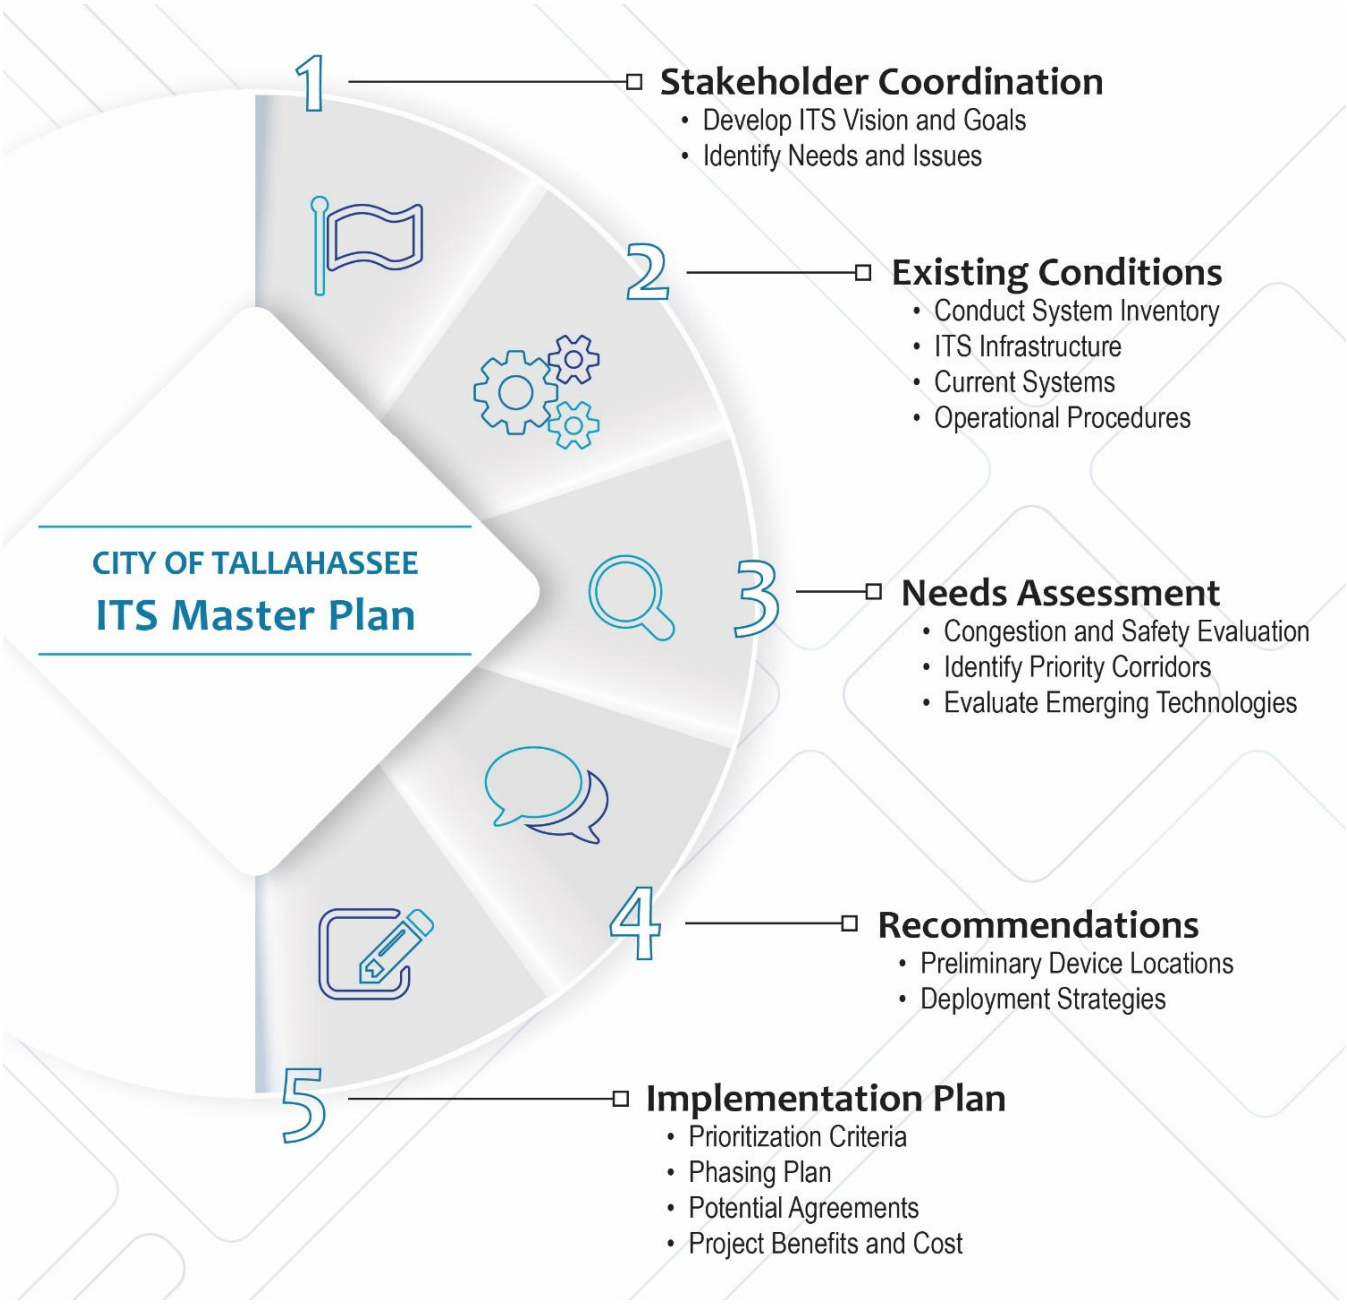

Figure 1: Tallahassee ITS Master Plan Process

Stakeholder Coordination

The ITS Master Plan process began with a kick-off meeting to engage relevant stakeholders in a discussion on the City's existing ITS. This effort was facilitated to collect data and gather information on existing City infrastructure and devices, day-to-day operational procedures, future planned and programmed projects for both the City and adjacent agencies (Leon County, FDOT District 3). The information gathered gave insight to the existing and expected countywide conditions.

The main objectives of the initial meeting were to bring together key stakeholders to discuss the current inventory of ITS devices in the Tallahassee metro area and establish the underlying vision, goals, and objectives for the ITS Master Plan. The attendees also provided insight on processes and current coordination between the various departments in the City to support traffic, incident, work zone, and special event management. The insight helped identify needs and gaps in the existing system. The list of attendees is shown below in Table 1.

Table 1: Stakeholder List

AGENCY	DEPARTMENT
City of Tallahassee	Traffic Operations
Capital Region Transportation Planning Agency	--
City of Tallahassee Transit	StarMetro
City of Tallahassee	Traffic Engineering
City of Tallahassee	Growth Management
Leon County	Public Works
Leon County	Growth Management
Florida Department of Transportation	Central Office TSM&O
Florida Department of Transportation	District 3 Traffic Operations

The stakeholders were crucial in providing a background of the City's ITS and its role in the region. Through this engagement, a comprehensive system inventory was completed and summarized in the sections that follows. Handouts, presentation material, and meeting notes from this meeting are provided in **Appendix A**.

A second workshop to review project recommendations and the high-level implementation plan was also held. The workshop provided information about existing and future needs for the City of Tallahassee ITS and introduced the high-level project recommendations. During the workshop participants discussed each of the recommendations and provided feedback for inclusion and refinement. The attendees scored recommendations on a priority scale from one to three, with

one being the lowest priority and three being the highest. The priority ranking assigned by each of the stakeholders were averaged and included in the final project ranking.

Vision, Goals, and Objectives

The information and guidance provided during the stakeholder workshops steered the development of the City of Tallahassee ITS Master Plan vision. This vision was used to guide the development of ITS project recommendations and as a means to clearly define a focus and direction moving forward. The ITS Master Plan vision defines the future of ITS in Tallahassee:

Vision

Maximize the transportation system efficiency and performance using innovative technologies and regional collaboration to promote reliable mobility throughout the vibrant capital city region.

Statement

Goals and objectives were also established consistent with input gathered from stakeholder discussions. Table 2 summarizes the goals and objectives for this Master Plan. These goals and objectives are derived from the vision stated above and form the framework for implementation strategies by establishing manageable and tangible statements. The recommended ITS projects and solutions developed through the ITS Master Plan strive to achieve these goals and objectives.

Table 2: Master Plan Goals and Objectives

GOAL	OBJECTIVE
Document Opportunities for Considering Deployment of New Technologies	• Identify technologies that may be appropriate to integrate into the system in the future • Develop deployment strategy for future implementation • Stay at the forefront of technology to provide system users with more traveler information
Partner Internally and Externally	• Coordinate with City departments to share data and projects beneficial to each other's operations

GOAL	OBJECTIVE
	• Collaborate with agencies in the region on initiatives to provide quality services to the public • Leverage existing projects
Establish a Strategy for Future Deployment of Additional Equipment	• Include deployment implementation plan of devices in new areas of the City • Include sufficient communications network for additional expansion • Develop high-level funding expenditure plan for deployment of future equipment

The continued maturity of the City's ITS, and the ongoing evolution of technologies will require the City to refocus and develop refined ITS goals and objectives to enhance the longevity and sustainability of the system.

Existing Conditions

The City of Tallahassee owns, operates, and maintains a wide array of ITS and signal system elements. The City's signal system has evolved from a mainframe Urban Traffic Control System (UTCS) in a small office at City Hall to a full featured advanced transportation management system (ATMS) supporting arterial management, freeway management, advanced traveler information systems (ATIS), and incident management systems. This system is housed in the Tallahassee Regional Transportation Management Center (RTMC) at the Tallahassee-Leon County Public Safety Complex (PSC).

The sections that follow describe the existing City ITS infrastructure, systems, and operational procedures. Data collection to support this inventory consisted of gathering City maps, stakeholder engagement, reviewing Capital Improvement Program (CIP) lists, and various other documents to provide insight into the existing ITS conditions. This section provides a comprehensive picture of the ITS existing conditions and communications network throughout the City as of June 2018.

SYSTEM OVERVIEW

Actively managed arterials and the array of bus, bicycle, and pedestrian facilities all compose the City's multimodal transportation network. The City offers a wide network of roadways (highlighted in **Figure 1**) including Interstate 10 (I-10), US Route 27, US Route 90, US Route 319, State Road 20 (SR 20), State Road 61 (SR 61), and State Road 363 (SR 363). Along this extensive roadway network, the City of Tallahassee operates and maintains ITS infrastructure owned by the following entities:

- City of Tallahassee
- Leon County
- Gadsden County
- Florida State University
- Florida Department of Transportation (FDOT)

The sections that follow detail the ITS infrastructure operated and maintained by the different city agencies including the City of Tallahassee, StarMetro, and Florida State University.

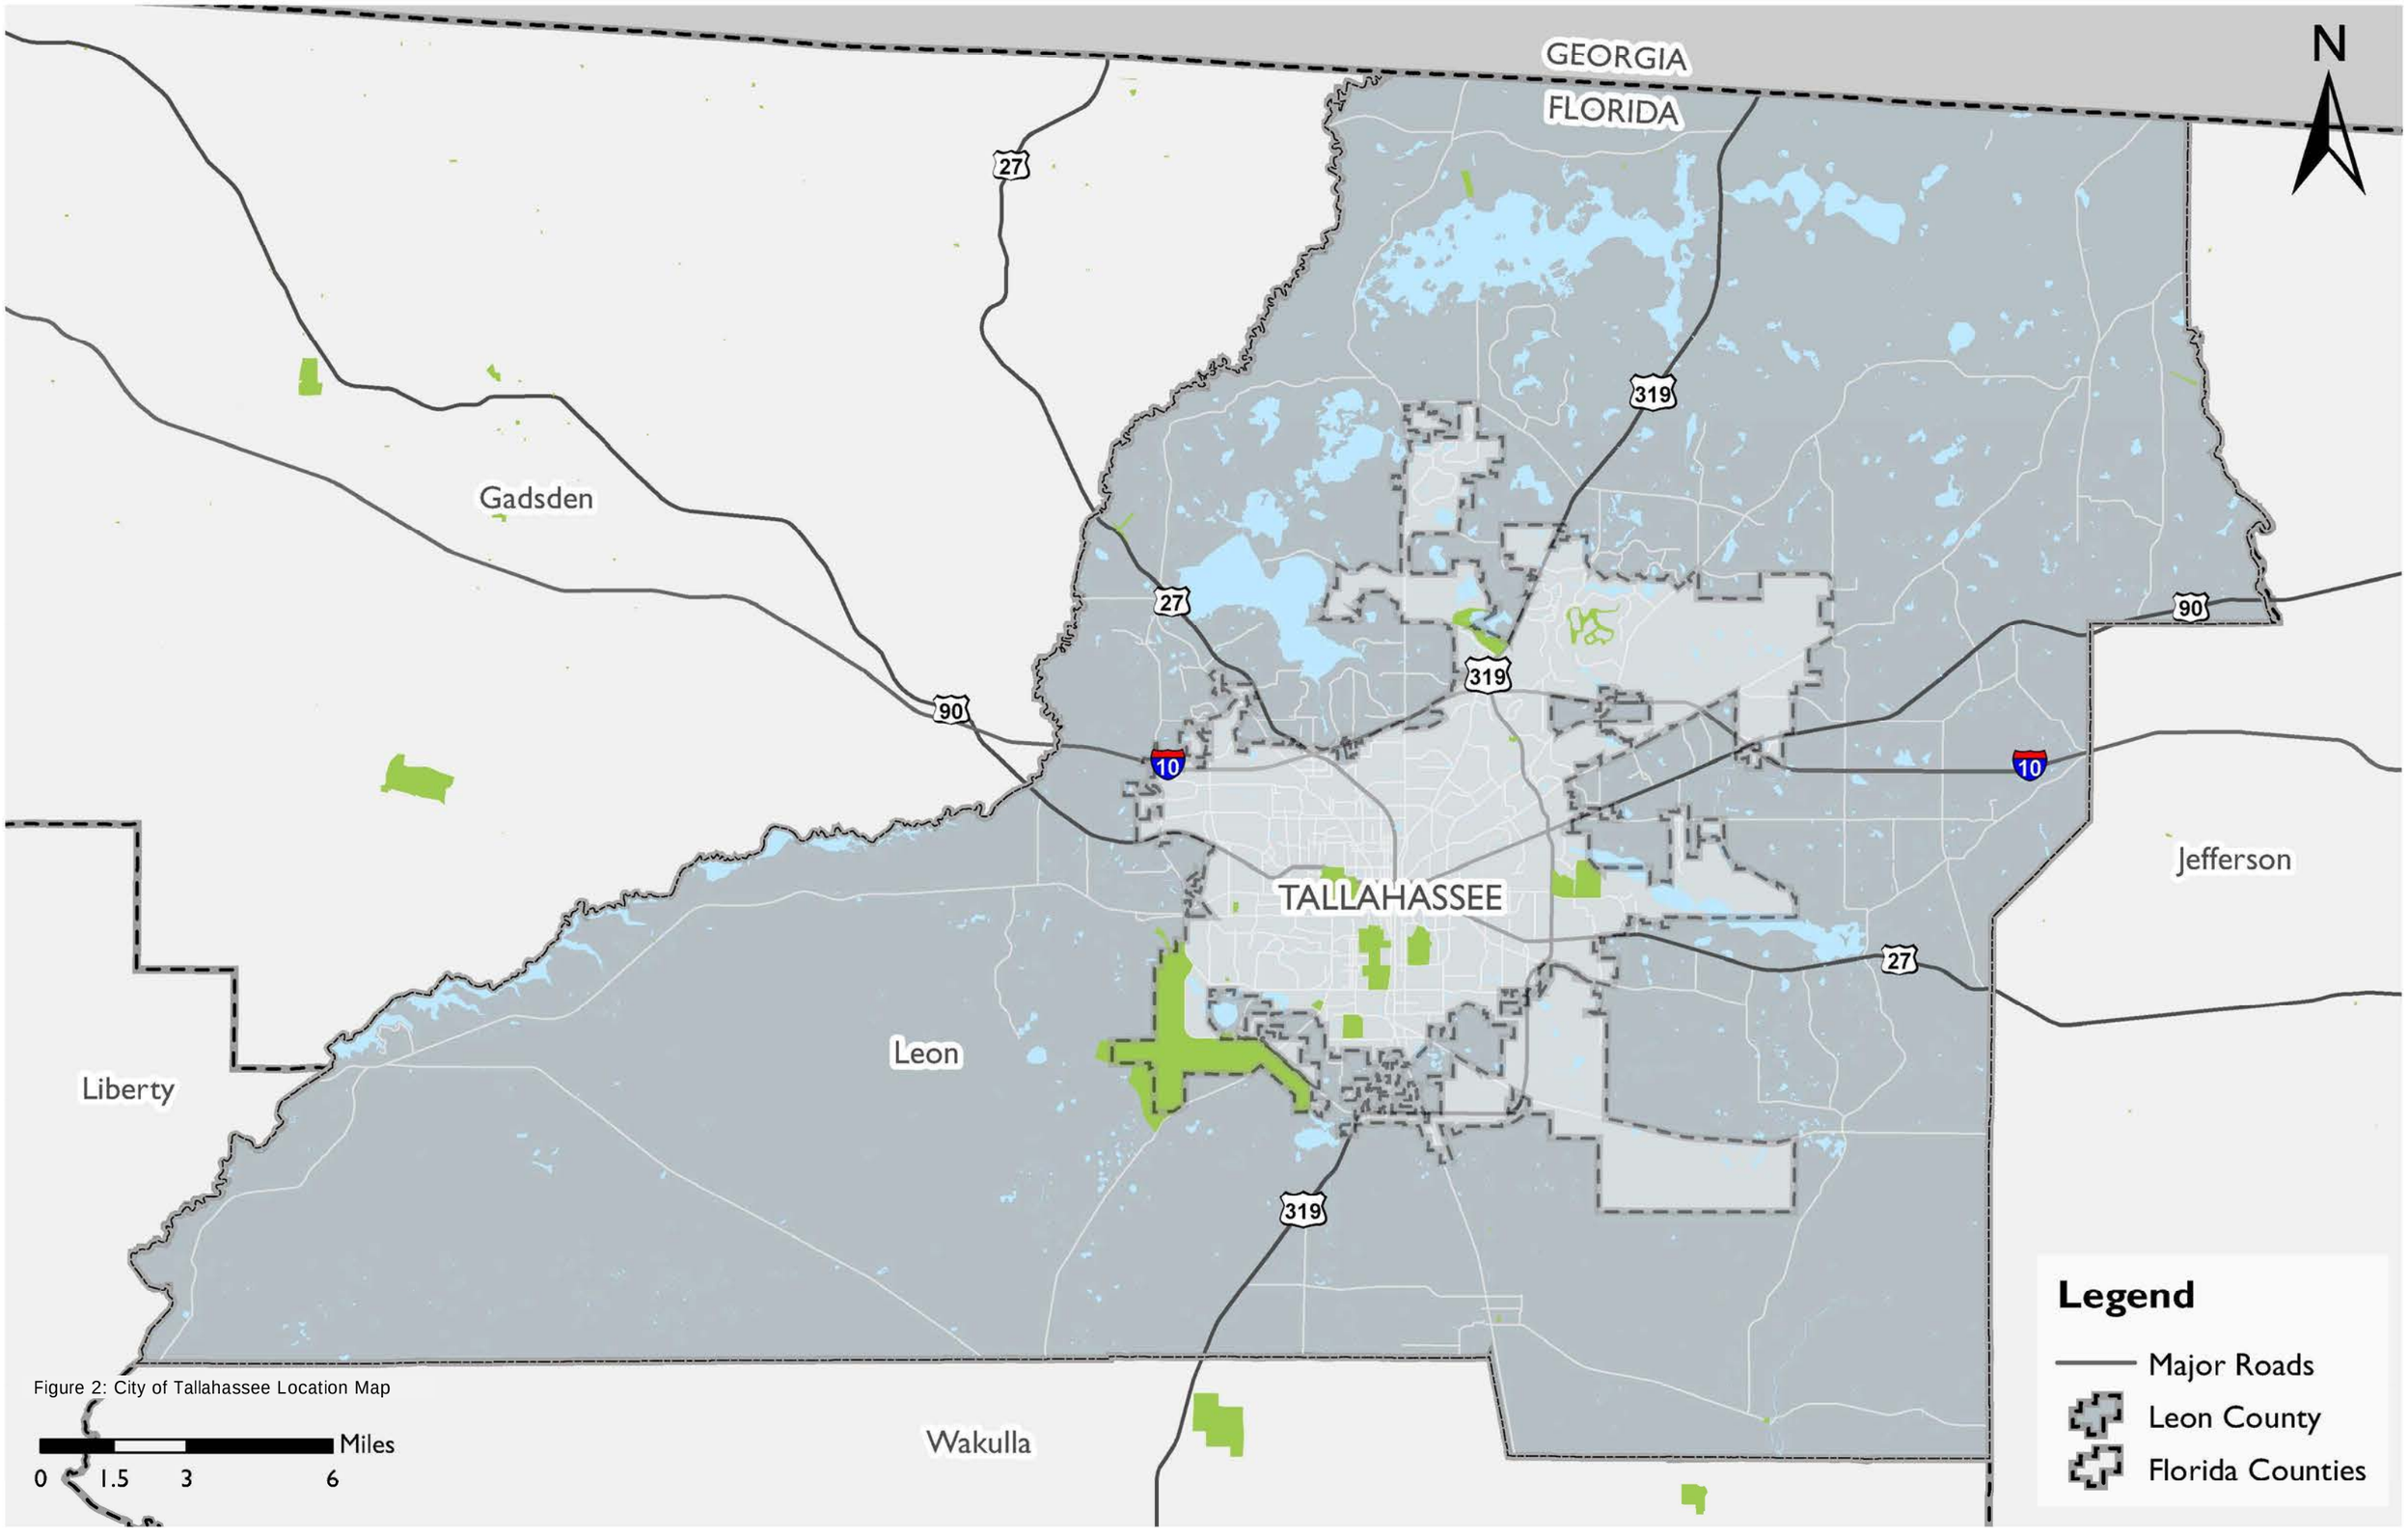

Figure 2: City of Tallahassee Location Map

CITY OF TALLAHASSEE

ITS Infrastructure

The ITS field devices are the most visible components of the system. ITS infrastructure includes dynamic message signs (DMS), closed circuit television (CCTV) cameras, and traffic signal controllers. The devices are used for traffic monitoring, detection, and traveler information.

The City currently operates and maintains 357 traffic signals, 97 CCTV cameras, and 80 BlueTOAD devices. In 2008, the City entered into a Joint Participation Agreement with FDOT, which identified the I-10 corridor as a site for an ITS Freeway Management System (FMS). The FMS elements along the 19-mile stretch of I-10 in Leon and Gadsden counties include 26 CCTV cameras, 51 microwave vehicle detection devices (MVDS), eight DMSs, eight license plate readers (LPR), and one Road Weather Information System (RWIS). All devices, listed in the table below, are connected to the telecommunications infrastructure and linked to the RTMC for monitoring by the City.

Table 3: City of Tallahassee ITS Devices

DEVICE	CITY	FMS
Traffic Signals	357	-
System Detectors	400	-
CCTV Cameras	97	28
Dynamic Message Signs	1	8
BlueTOAD	80	-
Microwave Vehicle Detection System	-	51
Universal Power Supply	98	19
Fiber Optic Cable	190 miles	-
Cellular Communications	24 Verizon Cell Modems	-

Figure 3 through Figure 6 provide an overview of the locations of these devices.

Effective July 2020, the City and the Department transitioned FMS control to the Northwest Florida Regional Transportation Management Center (NWFRTMC). A new Joint Participation Agreement (JPA) was executed with FDOT for the expansion of the Active Arterial Management (AAM) Program. This program, operated by the City, will monitor and control traffic flow along the State Highway System (SHS) within the Leon County region.

Communications

The City of Tallahassee's communication infrastructure is comprised of approximately 190 miles of fiber optic cable. Fiber optic cable is the main method of communication for the majority of the city's ITS network, as it links all field devices back to the TMC. The ATMS fiber infrastructure

includes seven existing fiber-optic trunk lines, with fiber counts on each cable varying throughout the City (36-72 strands) and terminate at City Hall downtown. A 144 and 288 count underground trunk connects City Hall to the RTMC. A fiberoptic backbone was also installed along I-10 and US 90 from western Gadsden County to the RTMC. This 96-fiber trunk line expanded the City's current ATMS by incorporating the interstate system. In 2020 FDOT will connect the NWFRTMC fiber to the Tallahassee FMS fiber. FDOT District 2 will complete a project to expand the Tallahassee fiber optic backbone to the Madison County line providing the NWFRTMC with complete FMS coverage from the Alabama state line throughout District 3.

ATMS communication is additionally enhanced using 24 cellular modems. These devices are located throughout the City where fiber optic cable was determined not feasible due to cost, time, or physical obstacles. Figure 7 provides an overview of the current fiber network.

Traffic Management Center

The City's ITS devices and traffic signal system are monitored and controlled from the Tallahassee RTMC located at 911 Easterwood Drive in Tallahassee, Florida. The RTMC serves as the control center for the state-of-the art Tallahassee Advanced Transportation Management System (TATMS). The City constructed the RTMC with 12 operator workstations, ten offices, and a conference room. The RTMC includes a double stacked video wall comprised of 48-inch video monitors. The bottom half includes 21 monitors utilized by the traffic operations staff to monitor and manage the traffic system. The top half, which also includes 21 monitors, is controlled by the Leon County Emergency Operations Center to display weather and news.

City staff are currently responsible for monitoring the ATMS Monday through Friday from 6:00 AM to 7:00 PM, as well as during all Florida State University home games. The RTMC also provides a backup, redundant system for monitoring the FDOT District 3's FMS. As a designated FDOT Satellite Transportation Management Center (STMC), the Tallahassee RTMC will serve as the emergency backup for the NWFRTMC. The RTMC allows for center-to-center communications with the District 3 TMC in Chipley, Florida and FDOT Central Office. The unique RTMC facility co-locates a number of key public safety related agencies including:

- Consolidated Dispatch Agency
- Leon County Emergency Medical Services Administration
- Operations Building for Emergency Medical Services
- City of Tallahassee Fire Department Administration
- Leon County Emergency Operations Center
- City of Tallahassee RTMC
- City of Tallahassee City Manager Emergency Management Command Center
- Leon County Emergency Management
- Consolidated Data Center

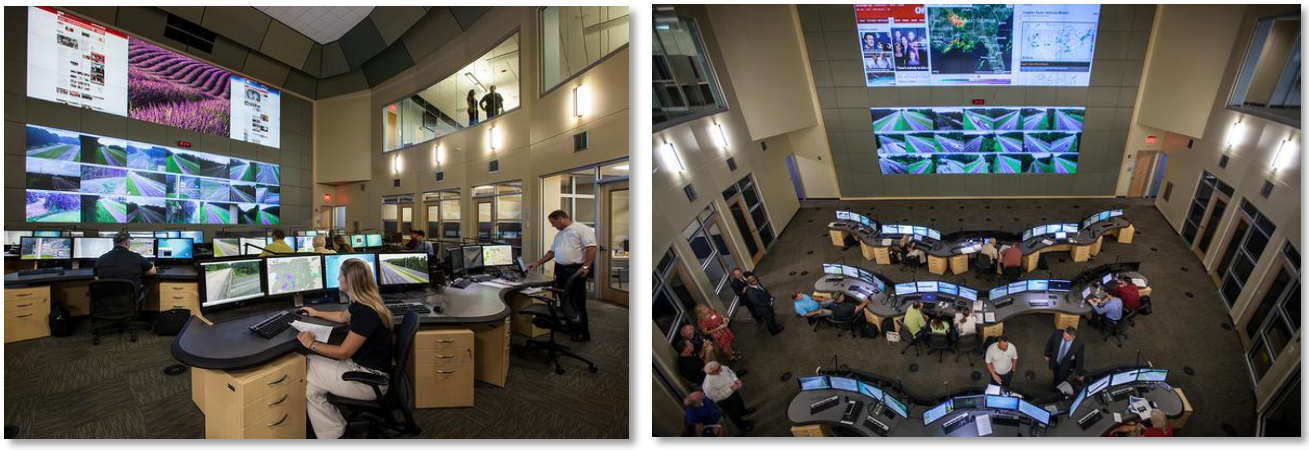

Figure 8: Tallahassee RTMC

Traffic Signals

The City of Tallahassee signal system currently includes 357 signalized intersection. The traffic signal system uses Intelight MaxTime local controller software monitored with Kimley-Horn's *KITS*™ central system software. Kimley-Horn served as the software design, supply, and integration consultant for the implementation of a distributed control-based signal system facilitating a transition from the City's existing UTCS to its current Windows™-based distributed central system in 1999.

Tallahassee *KITS*™ is configured to accommodate up to 256 control sections; 1,024 intersections; 12,288 system detectors; 1,000 count stations; 24 workstations; eight remote workstations; 16 docking workstations; 128 CCTV cameras; and 20 DMS with no modification to the software sizing constraints. In 2017, support was added for *Intelight MaxTime* controller software. The central system software also incorporates the ITS features of CCTV surveillance, video wall scheduling, and DMS control.

Signal Phasing and Timing Challenge

The Signal Phasing and Timing (SPaT) Challenge was issued to state and local public-sector transportation agencies to collaborate in an effort to achieve deployment of Dedicated Short-Range Communications (DSRC) infrastructure. The challenge entailed deploying DSRC with SPaT broadcasts in at least one corridor or network (approximately 20 signalized intersections) in each of the 50 states by January 2020.

FDOT Transportation Systems Management and Operations (TSM&O) Program has a renewed focus on arterial traffic management solutions and partnered with the City of Tallahassee for this challenge. Roadside Units (RSU) were deployed at 22 traffic signal intersections on US 90, (West Tennessee Street and Mahan Drive) from Duval Street to Walden Road just west of I-10. The RSUs broadcast SPaT and MAP (the geometric layout of the associated intersection) data for each individual signal location using 5.9 GHz DSRC.

FDOT is completing testing of portable on-board units (OBUs) and has confirmed the RSUs are broadcasting SPaT and MAP data via the DSRC. This implementation will support the advancement of Vehicle-to-Infrastructure (V2I) capabilities, especially related to intersection safety applications. Figure 9 highlights the signalized intersections included as part of this effort.

Performance Measures

Performance monitoring is the collection, analysis, and reporting of data to track and assess resources used, work produced, and whether specific goals are achieved. The ultimate purpose of performance monitoring is not just reporting the performance of the system, but the development of actions that improve performance. It can also be used to demonstrate the value of operations through a process of continuous evaluation. An important aspect of performance monitoring is an analysis of why goals are (or are not) being achieved, and accomplishments to

meet goals. Once a performance program is in place, it is a simple matter to focus it on before and after conditions for implemented projects and policies.

Many agencies across the country are using Automated Traffic Signal Performance Measures (ATSPMs) as the foundation of their performance monitoring program. ATSPMs consist of a high-resolution data-logging capability added to existing traffic signal infrastructure and data analysis techniques. This provides agency professionals with the information needed to proactively identify and correct deficiencies. The City currently uses an ATSPM dashboard to collect high-resolution data which allows the City to manage traffic signal maintenance and operations in support of the agency's safety, livability and mobility goals.

The technology is cost effective, as ATSPMs can be applied to a wide range of signalized intersections and use existing infrastructure to the greatest extent possible. ATSPMs will also support the validation of other technologies and operational strategies, such as adaptive signal control and emerging connected vehicle applications.

Bicycle Technology

Three automated bicycle counters are deployed within the City. These counters are located within protected bike lanes at two intersection locations:

- Pensacola Street and Martin Luther King Jr Boulevard
- West Madison Street and Martin Luther King Jr Boulevard

Additionally, on the west end of the Capital Cascades bridge, the City installed a digital counter that displays daily and annual counts of cyclists and pedestrians that cross the bridge.

Figure 9: Bicycle Technology

Sources: EcoCounter and Nue Urban Concepts

TRANSIT

StarMetro, Tallahassee's public transportation system, serves the metro area with fixed-bus routes and dial-a-ride services. The existing fleet of 66 buses has Automatic Vehicle Location (AVL) systems deployed, which is an automated means of tracking vehicle location. In addition, arrival and departure boards are installed at several bus shelters allowing riders to take advantage of next bus arrival technology.

Average route ridership was historically tracked through the use of the on board farebox. StarMetro is transitioning out of that practice and have installed Automated Passenger Counters (APC) on 12 fleet vehicles. As of July 1st, 2019, StarMetro received grant funding that will be used to retrofit the rest of the fleet with APCs. The process for calibration takes nearly two years but preliminary on time performance data by route will be available late 2019.

FLORIDA STATE UNIVERSITY

FSU is a public university located in central Tallahassee. The institution has been recognized as one of the world's most innovative universities and has deployed various transportation technologies throughout the campus. These deployments have been essential in streamlining parking procedures and increasing the safety of students. The current and future ITS technology deployed across the FSU campus are detailed below.

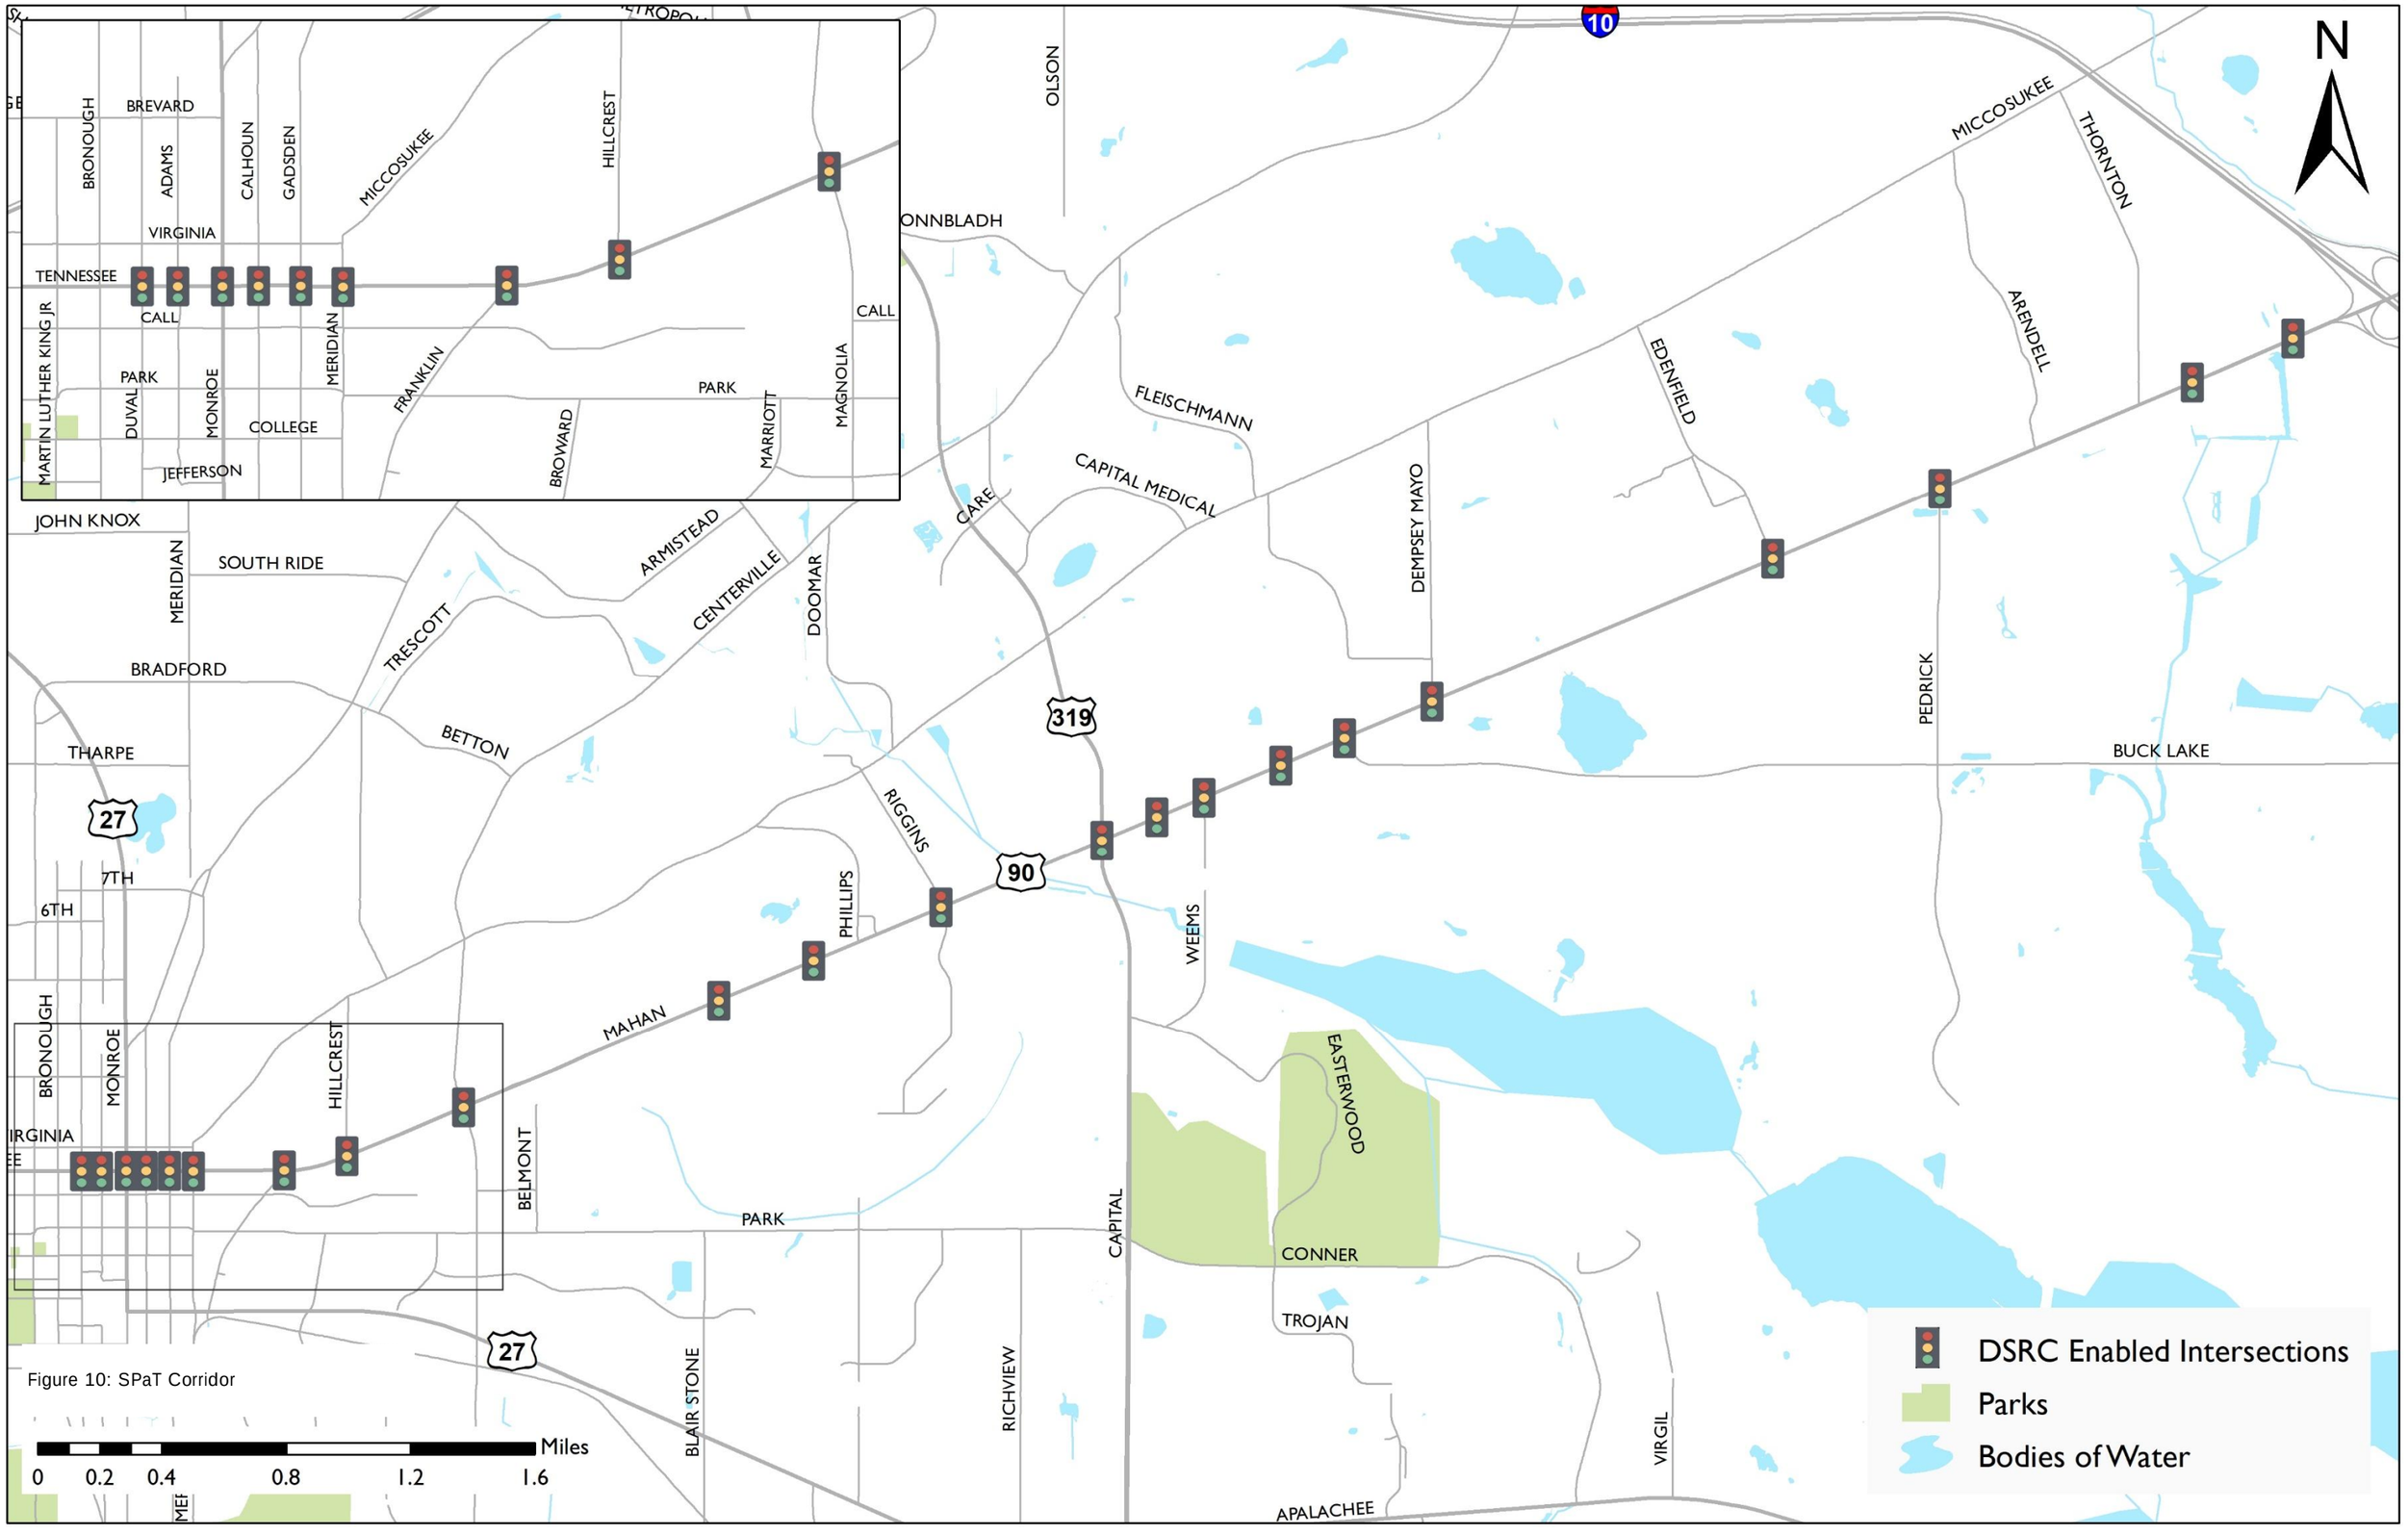

Figure 10: SPaT Corridor

FSU Parking Technology

Currently, there is loop based counting equipment deployed in all six garages on campus. These loop sensors track the daily entry and exit volume. This real-time garage occupancy data is displayed on variable message signs and provided to students through an in-house developed mobile application (*FSU TRANZ*). In the near future, FSU is planning to deploy license plate recognition (LPR) cameras at every garage access point. These cameras will ultimately replace the loop sensors, simultaneously conducting counts and collecting license plate information. This information will be shared with campus law enforcement as needed for security purposes.

FSU Transit Technology

One of FSU's goals is to possess an all-electric fleet of transit vehicles. Currently, the University has 20 new electric buses and has transitioned to a new tracking system (*TransLoc*). This new tracking system conducts automatic passenger counts, allowing students to have real-time information of space availability on each bus and bus location data. Wi-Fi and cellphone charging stations are included in FSU's future transit plans as well.

FSU Bicycle Technology

The University is in the process of installing covered bicycle parking across the campus. Bike lanes are proposed to be included in plans for all future roadway improvements that take place throughout the campus. The mobile application, RideShark provides its users the ability to search for rideshare opportunities, increasing the possibility of carpooling and creating an avenue for bike share opportunities.

Students also have access to a new kind of bike-sharing called Pace. Through the mobile applications, user have access to the fleet of 300 bicycles and information regarding the location of 50 racks concentrated mainly in Downtown Tallahassee. Unlike the traditional infrastructure, Pace bikes can be picked up or returned from any public bike rack in addition to the dedicated Pace racks.

Needs Assessment

A needs assessment is the evaluation of information from meetings and documents to identify needs that should be addressed by this ITS Master Plan. The combination of information from the inventory, the stakeholder engagement process, City staff expertise, congestion data, and safety statistics was used to assemble this assessment. The needs were used in conjunction with other criteria to develop project recommendations and map out an implementation plan for the City. It is the ultimate goal of this ITS Master Plan to recommend projects and strategies to address these existing needs and gaps. The project recommendations also consider future growth, anticipate future high-level needs, and consider emerging technologies.

SAFETY AND MOBILITY NEEDS

Residents of Tallahassee experience a variety of safety and mobility challenges every day such as unreliable commute times, crashes, and road closures due to work zones. Improving the safety and reliability of the Tallahassee transportation network will largely benefit motorists, bicyclists, pedestrians, and transit riders.

Congestion Data

Congestion was evaluated using probe data provided by the Regional Integrated Transportation Information Systems (RITIS). RITIS is a web-based platform that aggregates travel times and speed data from roadway sensors and probe-based systems along the road network. The RITIS platform allows users to access available historical and real-time data for arterials throughout the state of Florida using data visualization and data analysis tools. The tools provided allow users to query and analyze performance measures from the historical data set.

Analysis

Data provided by RITIS was analyzed to determine information regarding existing congestion status and hot spots throughout the City. These tools allows users to analyze traffic conditions on one or more stretches of road, providing data on metrics including travel time index, congestion, and historical speed over the selected time frame. A weekday analysis was conducted using data from January 1st, 2018 through December 31st, 2018.

The RITIS analysis network was created to include the entire Tallahassee arterial roadway network. The analysis network was loaded into the Bottleneck Ranking tool, which allows users to identify, rank, and explore bottleneck locations within an identified study area. Results are generated from the archived data set based on the specified date ranges. The tool ranks bottleneck corridors based on multiple factors including maximum queue length, daily duration, speed differential, and total delay. This visualization tool produced the following list of top bottleneck locations in the City.

Table 4: Top Bottleneck Locations

Rank	Road	Direction
1	US-27/Monroe Street at US-90/SR-10/Tennessee Street	Southbound
2	US-90/Tennessee Street at US-27/SR-61/Monroe Street	Westbound
3	SR-61/Monroe Street at US-90/Tennessee Street	Northbound
4	SR-61/Monroe Street at SR-371/CR-1555/Gaines Street	Southbound
5	US-27/Apalachee Parkway at SR-265/S Magnolia Drive	Westbound
6	US-319/Capital Circle NE at US-90/SR-10/Mahan Drive	Northbound
7	US-27/Monroe Street at SR-61/Thomasville Road	Southbound
8	US-90/Mahan Drive at US-319/SR-261/Capital Circle NE	Westbound
9	US-319/Capital Circle NE at US-90/SR-10/Mahan Drive	Southbound
10	US-27/Monroe Street at Bradford Road/M.L. King Jr Boulevard	Northbound

The average travel time index was also retrieved for all available corridors within the City. RITIS defines travel time index as the ratio of travel time in a peak period to travel time in free flow conditions. A travel time index of 1.50 would indicate that a 30-minute free flow trip would take 45 minutes in the peak period. The figures on the pages that follow visually shows the travel time index recorded for all available corridors during each one-hour morning and afternoon peak. The figures help to illustrate where the congestion occurs during the morning and afternoon peak hours. Understanding these priority corridors helps to identify locations that can significantly benefit from ITS solutions.

Mobility challenges impact residents, commuters, and the delivery of goods and services. The corridors identified in the figures and listed in the table above are the top congestion areas, or “trouble spots” for the City of Tallahassee. The transportation technology solutions developed during the development of this ITS Master Plan target congestion mitigation along these priority corridors.

Safety Data

Signal Four Analytics is a statewide interactive, web-based geospatial crash analytical tool developed by the University of Florida. This system was designed to support the crash mapping and analysis needs of law enforcement, traffic engineering, transportation planning agencies, and research institutions in the state of Florida. Crash data – long and short form, collected electronically by Florida Highway Patrol and local law enforcement officers at crash sites throughout the state – is transmitted nightly to the GeoPlan Center and loaded into the Signal Four Analytics database.

A query was completed for all crashes within the City of Tallahassee in 2018. The following corridors had the highest crash rate for the year 2018:

- US-90/Tennessee Street
- Thomasville Road
- US-27/Apalachee Parkway
- US-319/SR-261/Capital Circle NE
- SR-61/US-27/Monroe Street
- Mahan Drive
- Pensacola Street
- Monroe Street
- Tharpe Street

The data provided by Signal Four Analytics included a detailed crash type description for each reported crash. The table below lists the crash type by location for each of the corridors, with the most predominant crash type being rear end crashes.

Table 5: Crash Type by Location

Major Street	Tennessee St W	Thomasville Rd	Apalachee Pkwy	Capital Cir NE	Monroe St N	Tharpe St W	Mahan Dr	Pensacola St W	Monroe St S
Angle	31	22	14	12	11	7	5	4	9

Total	**484**	**276**	**258**	**231**	**222**	**126**	**113**	**113**	**107**

The corridors identified above are the top crash locations, or "hot spots" in the City of Tallahassee. The ITS strategies and technologies developed during the development of this ITS Master Plan contribute to improving safety along these priority corridors. Fewer incidents enhance the safety of the area and reduce congestion.

Priority Corridors

Understanding where the congestion is during the morning and evening peak hours as well as the crash hot spots helps identify locations that can significantly benefit from the proposed transportation technology solutions. It is anticipated that congestion will continue to be a challenge within these areas and worsen over time as the City continues to grow and development increases. While there are several effective measures that agencies use to maximize system mobility and safety, ITS is effective in harnessing the benefits of emerging technologies to achieve that end efficiently. The City of Tallahassee recognizes the benefits of ITS operations and is committed to the inclusion of ITS into their suite of transportation initiatives.

ADDITIONAL ITS NEEDS

Based on the collective input of the regional stakeholders, additional needs in which enhanced ITS strategies or technologies can provide the greatest benefit were identified. These needs were largely related to changes in processes and policies to help support the success of the City's ITS:

- Educate internal City Departments on ITS capabilities to increase the awareness and understanding of the benefits an ITS Program can provide to all City services.
- Mainstream ITS components (devices, communications, data collection, shared control) into capital and transportation improvement programs and processes to expand/leverage the City's ITS Program.
- Expand the use and availability of ITS infrastructure, systems, and data that could benefit certain departments or external partner agencies in the region.
- Provide sufficient and knowledgeable staffing (foundational staffing, organizational structure, and pursuing appropriate training and ongoing knowledge development) to support functions of the ITS Program.
- Increase ability to distribute relevant information tailored to audience (i.e. provide real-time traveler information).

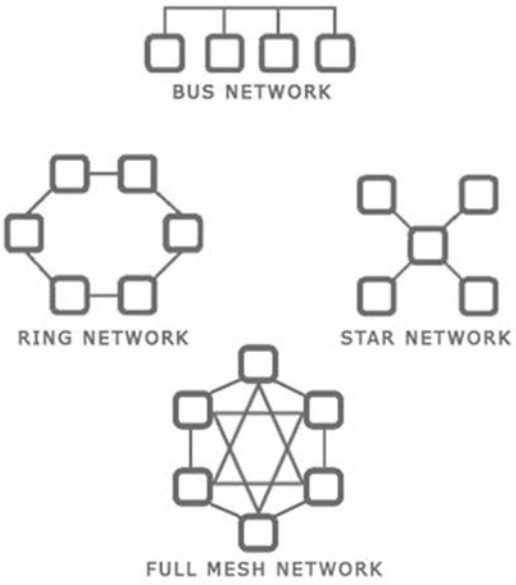
EMERGING TECHNOLOGY CONSIDERATIONS

The City of Tallahassee anticipates significant growth and further dependency upon its existing and planned ITS with the continued evolution of technology in the transportation industry. In addition to the forthcoming recommended ITS projects, broader ITS technologies that encompass and bridge multiple focus areas were evaluated. This section includes a brief technical overview of several existing and some emerging ITS technologies identified for consideration as part of this ITS Master Plan. These applicable technologies were taken into consideration as project recommendations were developed.

Communications for Autonomous and Connected Vehicles

As autonomous vehicle (AV) technologies are being implemented around the country, two options of wireless technology are leading: DSRC radio and 5G wireless technology. DSRC is currently the predominant technology in the U.S. Connected Vehicle (CV) market. The wireless technology enables vehicles to send and receive brief digital packets of information about their location, intentions, and speed. This communication option requires two components: OBUs and RSUs. An OBU is a transceiver that is normally mounted in or on a vehicle, or in some instances may be a portable unit. An RSUs is a transceiver that is mounted along a road or pedestrian passageway. An RSU broadcasts data to OBUs or exchanges data with OBUs in its communications zone. DSRC currently accommodates all necessary vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communications in modules that are already commercially available. However, there is no demand for DSRC, beyond connected vehicle applications.

Alternatively, wireless mobile carriers are preparing to deploy 5G technology. Today select carriers are working with state regulators to receive permission to install the thousands of micro cells necessary to support 5G transmission. Although the standards for this technology have yet to be defined, some of the potential benefits include greater interoperability, wider bandwidth, increased cybersecurity, and a decentralized network that runs on private cell



towers. 5G technology eliminates the need for dedicated roadside units, allowing agencies to reduce deployment and maintenance costs.

Both DSRC and 5G technologies offer the prospect of direct V2V and V2I communications. Both technologies also enable communications between vehicles and pedestrians. The two technologies use the same wireless frequencies, but have incompatible protocols and therefore cannot communicate directly.

Network Architecture Enhancement

A network's topology is a representation of the physical and/or logical layout of the communications between devices and how they are connected. The four common communication topologies are bus, star, ring, and mesh. In most cases, networks use a combination of these four types (shown in the figure below).

Figure 15: Network Topology Layouts

Bus topology interconnects multiple devices along the same communications link or channel, similar to a multi-drop channel in a serial network. Bus topologies are rarely (if ever) used in newly deployed, IP/Ethernet networks. A star topology uses a point-to-point connection similar to a bus topology, but the network appears to radiate outward from a single point. A ring topology uses a closed-loop, point-to-point connection between adjacent devices. A mesh topology uses multiple-point, multiple-path connections between devices. Each topology strikes a balance between resiliency and required communication links that correlate with cost.

The City of Tallahassee has both serial and IP/Ethernet communications architecture. The transition to an entirely IP/Ethernet architecture would provide the City with enhanced interoperability, sustainability, and redundancy. The best way to plan for emerging technologies is to provide a robust, high quality network capable of expansion.

Recommendations

The following series of ITS projects proposed for future deployment were developed based on the needs assessment, stakeholder input, direction from the City, and industry best practices. The established vision and objectives were used as guiding principles to develop the proposed projects. The overall process to develop and identify projects is summarized below. For each project identified, an overall project description, identification of the project coverage area, and a summary of benefits is provided. Additionally, high-level budgetary estimates were developed for planning purposes. The projects were then prioritized based on adherence to the established vision and objectives, estimated cost, and potential to provide the greatest benefit.

Project Identification

Present and future needs were identified based on a review of current data and served as the foundation for the project recommendations developed. The project development approach consisted of analyzing data to identify needs, considering various ITS solutions, and determining the feasibility of the projects. The recommended projects include strategies, technologies, and staffing that will allow the City of Tallahassee to progress towards achieving the vision developed for the ITS Master Plan: *Maximize the transportation system efficiency and performance using innovative technologies and regional collaboration to promote reliable mobility throughout the vibrant Capital City region*.

The recommended projects have been categorized into eight functional areas:

- Traffic Management
- Transit Management
- TMC
- Traveler Information
- Asset Management
- Performance Measures
- Bicycle Detection
- Communications

The project recommendations are mapped back to the initial needs, providing a level of traceability for each. Creating this traceability is important to ensure the ITS Master Plan addresses the needs specific to the City of Tallahassee and provide benefits. Having a clear connection between the ITS Master Plan and the needs identified by staff helps foster trust from the stakeholders.

TRAFFIC MANAGEMENT

Traffic management refers to the typical day-to-day congestion management of roadways. The management of traffic focuses on the use of ITS infrastructure to improve congestion and disseminate roadway conditions to the public. Current day-to-day operations at the Tallahassee RTMC focus primarily on active arterial management.

Traffic signal control systems are the primary tools used for active arterial management. Traffic signals throughout the City of Tallahassee currently operate with actuated-coordinated timings during peak hours and actuated-uncoordinated timings during overnight hours, with varied coordinated settings by time-of day. City staff routinely conduct studies on intersections based on recurring congestion, known issues, and complaints received from the public. Additionally, the staff will actively manage the downtown arterial network and change the signal timing plans based on the special events in the downtown area.

This functional area includes strategies targeted at proactive operation of the City's traffic signal system to deliver solutions that improve efficiency, safety, and reliability of signalized intersection operations. The primary objective of this functional area is improved traffic management focused on both recurring and non-recurring congestion. Based on this need, recommended strategies for consideration are listed below. Implementation of these recommendations will improve the traffic management capabilities of the City and provide additional opportunities for active arterial management.

Adaptive Traffic Signal Control

Adaptive traffic signal control (ATSC) is the dynamic adjustment of traffic signal timing using vehicle detection to accommodate real-time changes in traffic patterns and demand. ATSC systems continuously monitor arterial traffic conditions and the queuing at intersections to dynamically adjust the signal timing. The system's predictive algorithms account for real-time data collected from field equipment, as well as historical traffic data stored in a central database.

Timing adjustments are implemented by the local controllers by transitioning from existing time-of-day plans. The predictive algorithms evaluate the traffic data as much as once per second to determine the future traffic patterns and demand, and implement traffic signal timing modifications in anticipation of that future traffic demand. ATSC systems can adjust to accommodate traffic conditions more proactively than time-of-day coordination which are typically more fixed or reactive to recurring traffic conditions.

Coverage Area

In an effort to improve traffic flow and reduce delay throughout the Tallahassee area, select corridors in the city may benefit from an adaptive traffic system. According to the Federal Highway Administration (FHWA), ATSC technologies are best suited for arterials that experience highly variable or unpredictable traffic demand for which multiple signal timing solutions are necessary during a typical time-of-day period.

A review of the major corridors throughout the City were completed with special consideration given to those with a higher Average Annual Daily Traffic (AADT). AADT is a measure that looks at total volume of vehicular traffic on a roadway for a year divided by 365 days. Consideration was also placed on the surrounding land uses of each major corridor. 2017 AADT and current land use composition was obtained from FDOT's Transportation Data and Analytics GIS Data Directory. A high-level evaluation was conducted, and the following corridors were identified as recommended locations for deployment of ATSC systems:

- US 27 from South Monroe Street to Conner Boulevard – 14 intersections
- US 90 from North Monroe Street to Capital Circle NW – 18 intersections

Both corridors contain diverse land use composition including retail, office space, residential, public/institutional, and industrial. The project limits are illustrated in Figure 16.

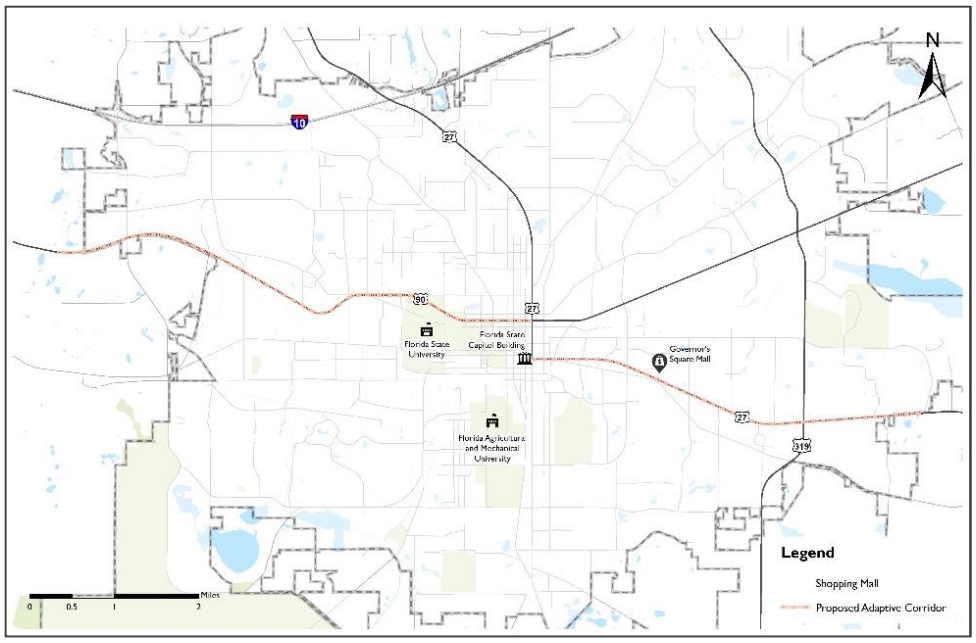


Figure 16: Proposed Adaptive Corridors

Project Benefits

ATSC is typically deployed to mitigate corridors with erratic peak travel times, large amounts of pedestrian traffic, and a need to reoptimize periodically. This includes being able to manage tourist, weather, or special event generated traffic demands beyond traditional peak periods experienced on most roadways. According to FHWA, the main benefits of ATSC technology over conventional signal systems are that it can[1]:

- Continuously distribute green light time equitably for all traffic movements
- Improve travel time reliability by progressively moving vehicles through green lights
- Reduce congestion by creating smoother flow
- Prolong the effectiveness of traffic signal timing

It is important to note that ATSC systems will not increase the capacity of a facility but can serve to optimize the throughput of traffic. A significant issue with ATSC systems is the importance of

[1] FHWA. *EDC-1: Adaptive Signal Control Technology.* 2017. https://www.fhwa.dot.gov/innovation/everydaycounts/edc-1/asct.cfm

the system's ability to detect both vehicle presence and vehicle queues. For this reason, the vehicular detection configuration is a significant cost factor when considering the implementation of ATSC systems. Careful evaluation should be completed regarding the feasibility of each corridor before deploying a system.

System Detectors

Detection at signalized intersections is primarily used to determine presence, volume, speed, and occupancy of motorized vehicles. The in-pavement inductive loop detector is the most common sensor used in traffic management applications. When a vehicle stops on or passes over the loop, the inductance of the loop is decreased causing the electronics unit to send a pulse to the controller, indicating the presence or passage of a vehicle. With the installation of inductive loops, speed can be measured by using two sensors a known distance apart or estimated from one sensor using the effective detection zone and approximate vehicle lengths. Most of the existing traffic signals in the City are actuated and equipped with loop detectors that detect vehicle presence, but do not detect speed or flow. Additionally, wireless magnetic sensors embedded in the road, sometimes referred to as pucks or pods, can be used to detect vehicles. The system works by sensing the disturbances in the earth's magnetic field that occur due to the presence of a car or motorcycle[2].

Alternate detection types such as radar detectors, classified as microwave (non-intrusive) technology, can collect velocity, flows, and occupancy data when they are deployed along the roadside. A single above-ground radar sensor mounted on a pole adjacent to the roadway can monitor multiple lanes of traffic. Since the radar detection is strongly impacted by the road environment, radar is more widely implemented on highways rather than in urban areas.

Alternatively, video-based detectors analyze the video image input. Different approaches are used by video detection sensors. Some analyze the video image of a target area on the pavement and as a vehicle passes through the target area this change in the image is processed as occupancy data. Another approach identifies when a target vehicle enters the video field of view and tracks the target vehicle through this field of view.

Coverage Area

Currently, the City of Tallahassee has loop detectors deployed at several signalized intersections. The current loops detect occupancy at each signal approach for signal actuation. This deployment project recommends the installation of loops at every intersection to allow for detection of speed and volume in addition to occupancy. With over 350 intersections a phased deployment that occurs over multiple fiscal years is recommended. The ideal time to undertake this sort of project would be during intersection projects with potential digging or trenching. Also, all newly constructed signalized intersections should include the installation of two loop detectors in every lane for every intersection approach.

[2] Klein, et al., *Sensor Technologies and Data Requirements for ITS*. 2001.

Project Benefits

As the City progresses with collecting advanced performance metrics, deploying traffic responsive and adaptive traffic signal control, more advanced detection is necessary to collect the required data. Upgrading the system detectors will benefit the active management of the roadway network. According to FHWA, the benefits of in-pavement inductive loop include[3]:

- Provides basic traffic parameters (e.g., volume, presence, occupancy, speed, headway, and gap)
- Insensitive to inclement weather such as rain, fog, and snow
- Provides best accuracy for count data as compared with other commonly used techniques
- Common standard for obtaining accurate occupancy measurements

Inductive loop detectors continue to be widely used to monitor traffic flow and control signals because of their relatively low cost, maturity, and aesthetics. The operation of inductive loop sensors is well understood and their application for providing basic traffic parameters represents a mature technology. The equipment cost of inductive loop sensors is lower when compared to over-roadway sensors.

CCTV Cameras

CCTV cameras play an important role in the operation of the transportation network. CCTV cameras provide the ability to see traffic situations in real-time and assist with verifying the existence of incidents prior to dispatching response crews. Additionally, CCTV cameras monitor traffic flows along a corridor, enabling City staff at the RTMC to provide active arterial management by selecting timing plans or adjusting signal timings based upon the observed traffic flow patterns.

The City of Tallahassee currently has 97 analog cameras deployed. A recommended strategy based on the traffic management needs of the City is to expand the network of arterial cameras and upgrade all analog cameras to Internet Protocol (IP) cameras. These cameras will provide surveillance capability for the City to help identify incidents, equipment malfunctions, or general traffic conditions around intersections. This strategy also contributes to reduction in incident response time, which has a direct impact on incident clearance times and congestion. The installation of new CCTV cameras and the upgrade of the existing camera system will include the process of integrating the cameras for operations at the RTMC.

Coverage Area

Cameras should be installed at major intersections along major arterials. Locations for additional CCTV deployments throughout the City were determined based on any gaps in CCTV coverage, and other factors including:

- Locations that experience high crash rates

[3] FHWA. *Overview of Vehicle Detection and Surveillance Technologies.* 2014.

- Locations where signal timing may need to be changed frequently based on traffic or weather-related conditions
- Locations where unplanned events frequently occur with negative impacts on progression and cause severe delays

A review of the major corridors was completed with special consideration placed on the traffic and safety focus areas throughout the City. As discussed in the Needs Assessment section, data provided by RITIS was analyzed to determine information regarding existing congestion status and bottlenecks. As a result of the high-level evaluation, the following signalized intersections were identified as ideal locations for deployment of CCTV cameras.

1. Capital Circle NW & Monroe Street
2. Miller Landing Road & Meridian Road
3. Brickyard Road & Highway 90 W Midway
4. Capital Circle NW & Fred George Road
5. North Monroe Street & Talpeco Road
6. Monroe Street & Sessions Road
7. Meridian Road & Timberlane Road
8. High Road & Old Bainbridge Road
9. John Knox Road & Meridian Road
10. Centerville Road & Fleischmann Road
11. Fleischmann Road & Welaunee Boulevard
12. Capitol Plaza Boulevard & Thomasville Road
13. Betton Road & Centerville Road
14. 7th Avenue & Duval Street
15. 6th Avenue & Gadsden Street
16. Aenon Church Road & Tennessee Street
17. Blountstown Highway & Tennessee Street
18. Basin Street & Tennessee Street
19. Bronough Street & Virginia Street
20. Calhoun Street and Virginia Street
21. Aenon Church Road & Blountstown Highway
22. Pensacola Street & White Drive
23. College Avenue & Duval Street
24. Calhoun Street & College Avenue
25. Gadsden Street & Park Avenue
26. Park Avenue & Victory Garden Drive
27. Ausley Road & Jackson Bluff Road
28. Jackson Bluff Road & Lipona Road
29. West Gaines Street & Stone Valley Way
30. Apalachee Parkway & Conner Boulevard
31. Magnolia Drive & Monroe Street
32. Orange Avenue & Wahnish Way
33. Adams Street & Paul Russell Road
34. Monroe Street & & Paul Russell Road
35. Capital Circle SW & Springhill Road

The proposed locations listed above are illustrated in Figure 17. It is recommended that the project be segmented into phases to allow deployment in stages. Locations with higher traffic volumes and of higher importance as noted by City staff were assigned Priority 1. All other locations are considered Phase 2. The numbering of the locations in the graphic directly correlate to the list above.

Project Benefits

Upgrading the City's existing cameras to IP has several benefits including:

- real-time video streams at a higher resolution

- accommodation of increased scalability
- providing the potential for video analytics

High quality video allows for real-time observation of traffic conditions, incident management, hurricane/disaster management, signal display verification and maintenance, and roadway maintenance/construction. Video observation can be used for verifying the results of traffic management strategies, such as signal timing changes or work zone diversions, and for detection and verification of crashes.

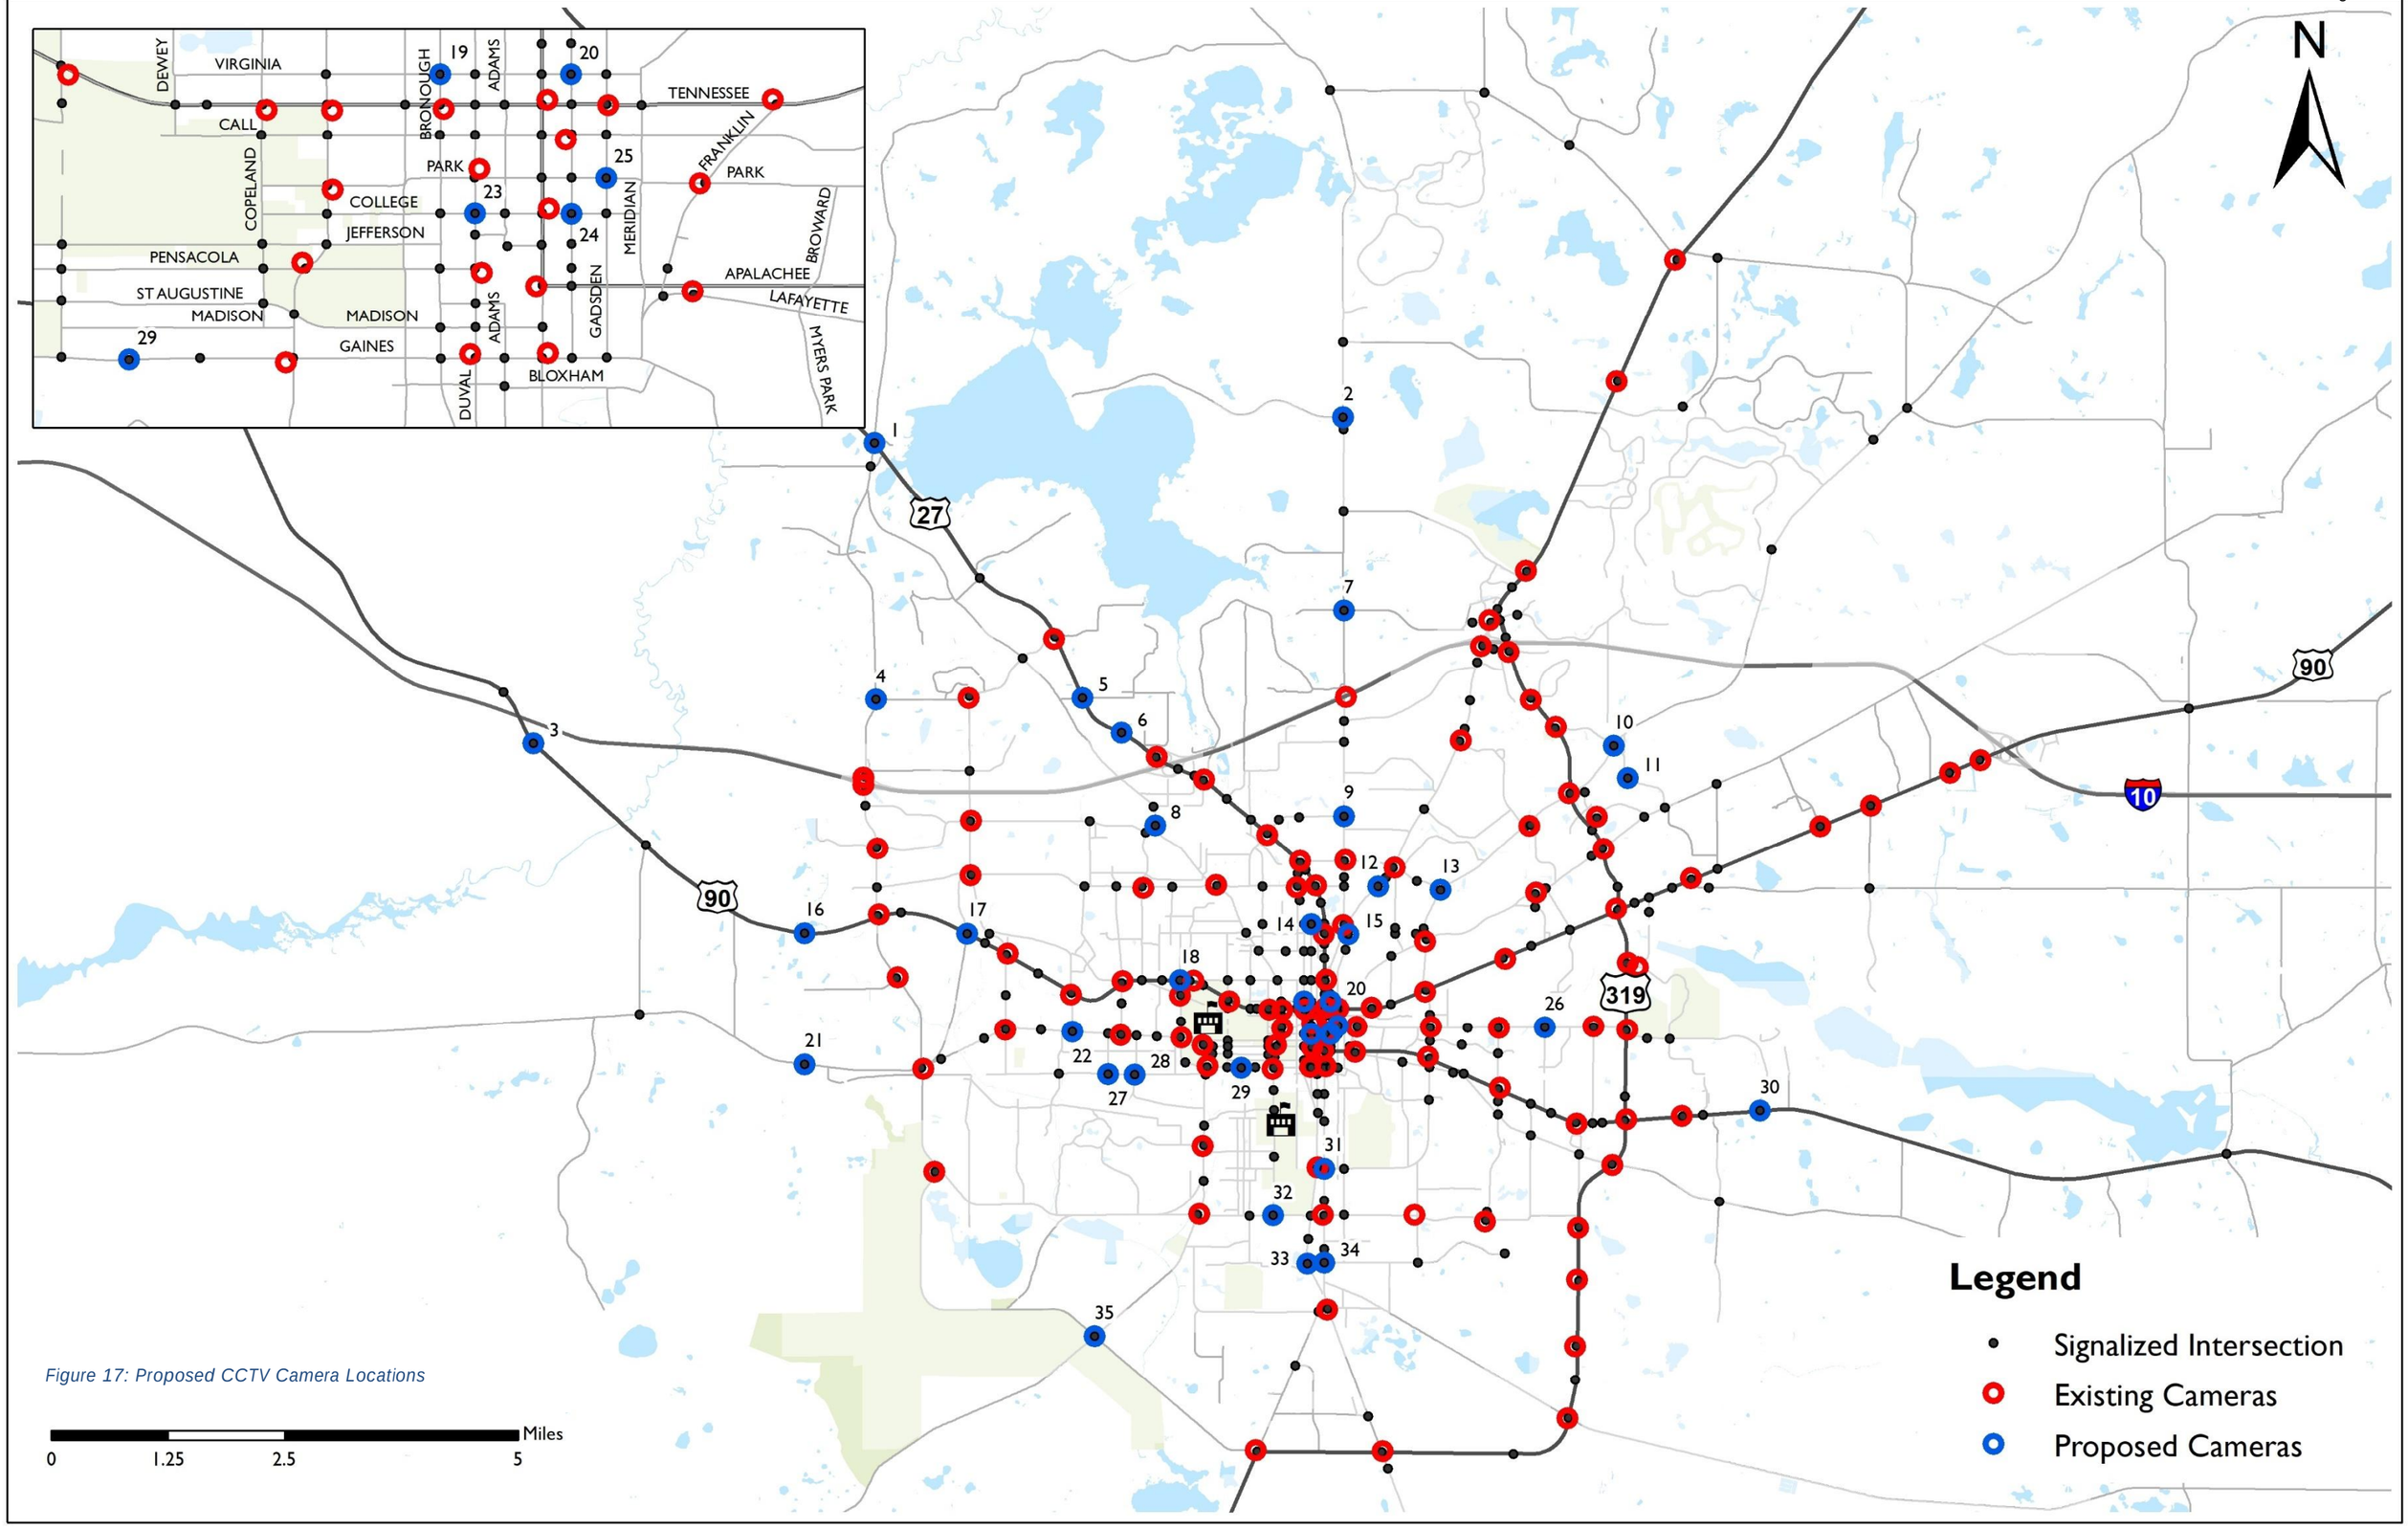

Figure 17: Proposed CCTV Camera Locations

Smart Work Zones

Smart Work Zones refer to the deployment of ITS technologies and strategies to increase the safety of construction workers, provide real-time travel information, and efficiently route motorists in and around a work zone. Portable traffic management systems, dynamic message signs, dynamic lane merge systems, and variable speed limit systems are a few examples of technologies that can be deployed individually or in combination as a smart work zone during major construction projects. They are usually deployed on a temporary basis until the interruptions from roadway construction are over.

These technologies typically produce data and images that are processed for actionable information. In some cases, the technology is designed to process the data instantly and then take immediate action without human intervention (e.g. end of queue detection triggering an upstream portable changeable message sign to alert approaching motorists). In other cases, the data is used by operators to achieve situational awareness. Once alerted to unfavorable conditions, operators quickly follow, or verify pre-planned protocols to respond to these incidents and situations[4].

Coverage Area

The components of a smart work zone system are portable and designed to be deployed at various locations throughout the City as the need arises.

Project Benefits

Deployment of smart work zones improves traffic safety and efficiency ahead of and through construction areas. A review of 2018 crash data provided by Signal Four Analytics for the City of Tallahassee was completed and 25 work zone related crashes were reported over the course of the year. Demand for smart work zones is imminent as the number of construction projects programmed by the City of Tallahassee continues to increase.

Figure 18: Mobile Camera Trailer
Source: EarthCam.net

As a strategy to improve safety in work zones throughout the City, this project includes the procurement of portable camera trailers and queue detection trailers. These devices will allow City staff to monitor congestion at or near active work zones, as well as adherence to Maintenance of Traffic requirements. Because smart work zones typically involve the production and use of information, feedback from these systems in the form of performance metrics can be used to refine strategies to achieve the goal of improving efficiency and reducing the crash rate in construction work zones.

[4] TxDOT. *Design Guidelines for Deployment of Work Zone Intelligent Transportation Systems.* 2018.

Flashing Yellow Arrows

Flashing yellow arrow (FYA) traffic signals feature a flashing yellow arrow in addition to the standard red, yellow, and green arrows. When illuminated, the FYA allows waiting motorists to make a left turn after yielding to oncoming traffic. This signal improves intersection efficiency by allowing more left turns during each signal cycle.

The FYA improves intersection safety by providing clearer instruction to left-turn drivers during the entire signal phase. Their use in the same signal head with a solid green arrow provides traffic engineers with more options to handle variable traffic volumes. During higher traffic volume periods of the day the solid green arrow for protected left turns can still be used if appropriate for traffic and site conditions. But when traffic volumes decrease, the permissive FYA can be displayed to reduce the delay motorists experience in making left turns.

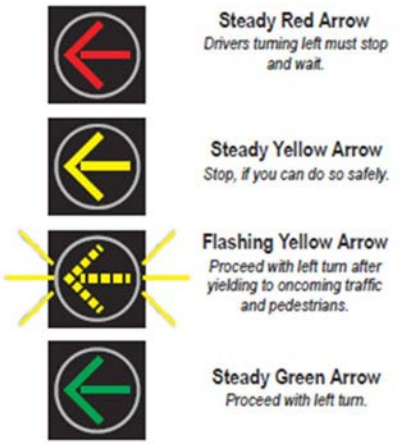

Figure 19: Flashing Yellow Arrow

Source: Indiana Department of Transportation
https://www.in.gov/indot/3202.htm

Coverage Area

The FYA is the City's preferred alternative over the traditional five-section head (shown in Figure 20 to the right) for protected/permissive left turn phasing. This project targets new traffic signals and upgrades to existing locations where the current traffic signals' service life has been reached.

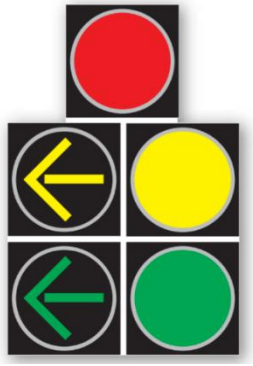

Figure 20: Five-Section Head

Project Benefits

A comprehensive National Cooperative Highway Research Program (NCHRP) study demonstrated that FYAs are superior to traditional yield-on-green indications in terms of driver understanding and compliance, reducing severe crashes by 25 percent, while at the same time delivering greater operational efficiency (less delay). Also, left-turn traps are avoided when the FYA is tied to the opposing through green indication. A left-turn trap occurs when a driver is making a left on a permissive phase and then becomes trapped in the intersection while the light turns yellow. The driver sees that the adjacent through traffic also receives a yellow light and assumes the same for the opposing through. The driver then proceeds through the intersection, possibly causing a T-bone type crash. The FYA offers better driver recognition and eliminates left turn traps, all resulting in a safer intersection. Additional benefits of the transition to FYAs include keeping motorists safer during heavy traffic, reducing delays when traffic is light, and providing more opportunities to make a left turn.

Travel Time Reliability System Expansion

Bluetooth detectors are used alongside a data aggregation software as a travel time reliability system for agencies to gather real-time traffic data. Bluetooth travel time detectors scan an area to check if any Bluetooth enabled devices are detected. Once a vehicle equipped with Bluetooth devices drives into the detection range of a Bluetooth reader, entry and exit time stamps of the devices are recorded. Therefore, travel time and travel speed can be determined between points on the roadway. The Bluetooth data gives a straight measurement of travel time between pairs of scanners. The data includes the "duration" of time required for the vehicle to pass the range detection limits of the Bluetooth scanner.

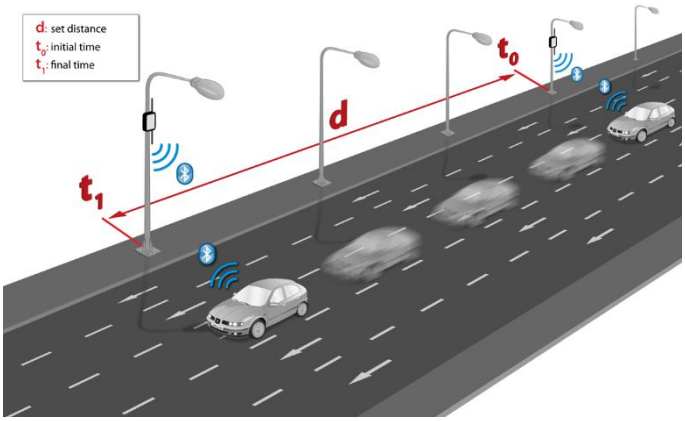

Figure 21: Travel Time Detection Concept

To achieve the City's need of managing nonrecurring congestion, expanding the travel time system is recommended in conjunction with an ATSPM dashboard. The expansion will allow the City to calculate travel times, report the performance of the system, and further analyze collected data (e.g. travel time index, buffer index, etc.). The software capabilities would include calculations from the timestamps of paired detections to identify the travel time and recorded speed across the known distance between detectors. This information can then be displayed on a website, via mobile applications, or on variable message signs installed along the road network.

Coverage Area

Bluetooth detectors should be installed at major intersections, along major arterials, and key points along freeways. Locations for additional deployments throughout the City were determined based on gaps in Bluetooth coverage, the planned communications network expansions, and other factors including:

- Locations where signal timing may need to be changed frequently based on traffic or weather-related conditions
- Locations where unplanned events frequently occur with negative impacts on progression and cause severe delays

A review of the major corridors was completed with special consideration placed on the traffic and safety focus areas throughout the City. As discussed in the Needs Assessment section, data provided by RITIS was analyzed to determine information regarding existing congestion status and bottlenecks. Specifically, a weekday travel time index analysis was conducted using data from January 1st, 2018 through December 31st, 2018. As a result of the high-level

evaluation, the following arterial corridors were identified as ideal locations for deployment of Bluetooth detectors:

1. Bannerman Road & Meridian Road
2. Monroe Street & Perkins Road
3. Fred George Road & Mission Road
4. Brickyard Road & Highway 90 W Midway
5. Centerville Road & Roberts Road
6. Centerville Road & Shamrock Street
7. Capital Circle NW & Tharpe Street
8. Old Bainbridge Road & Salmon Drive
9. High Road & Old Bainbridge Road
10. Bradford Road & Meridian Road
11. Armistead Road & Thomasville Road
12. Betton Road & Centerville Road
13. Blair Stone Road & Miccosukee Road
14. Centerville Road & Fleishmann Road
15. Dempsey Mayo Road & Miccosukee Road
16. Mahan Drive & Pedrick Road
17. Blountstown Highway & Geddie Road
18. Tennessee Street & White Drive
19. Calhoun Street & Virginia Street
20. Calhoun Street & Park Avenue
21. College Avenue & Duval Street
22. College Avenue & Gadsden Street
23. Magnolia Drive & Park Avenue
24. Pensacola Street & Railroad Avenue
25. Franklin Boulevard & Lafayette Street
26. Lafayette Street & Magnolia Drive

Figure 22 shows the locations graphically and the numbering of the locations in the graphic directly correlate to the list above.

Project Benefits

A comprehensive network of Bluetooth detectors allows real-time reporting of travel times. Live data is essential for critical operational decision making for events, traffic management operations, and active arterial management. It is also beneficial for archiving data captured for post-event project analysis and reporting and providing origin-destination information. These units will be used to provide real-time travel time to road users as well to provide archived travel time data to support operations and performance measurements.

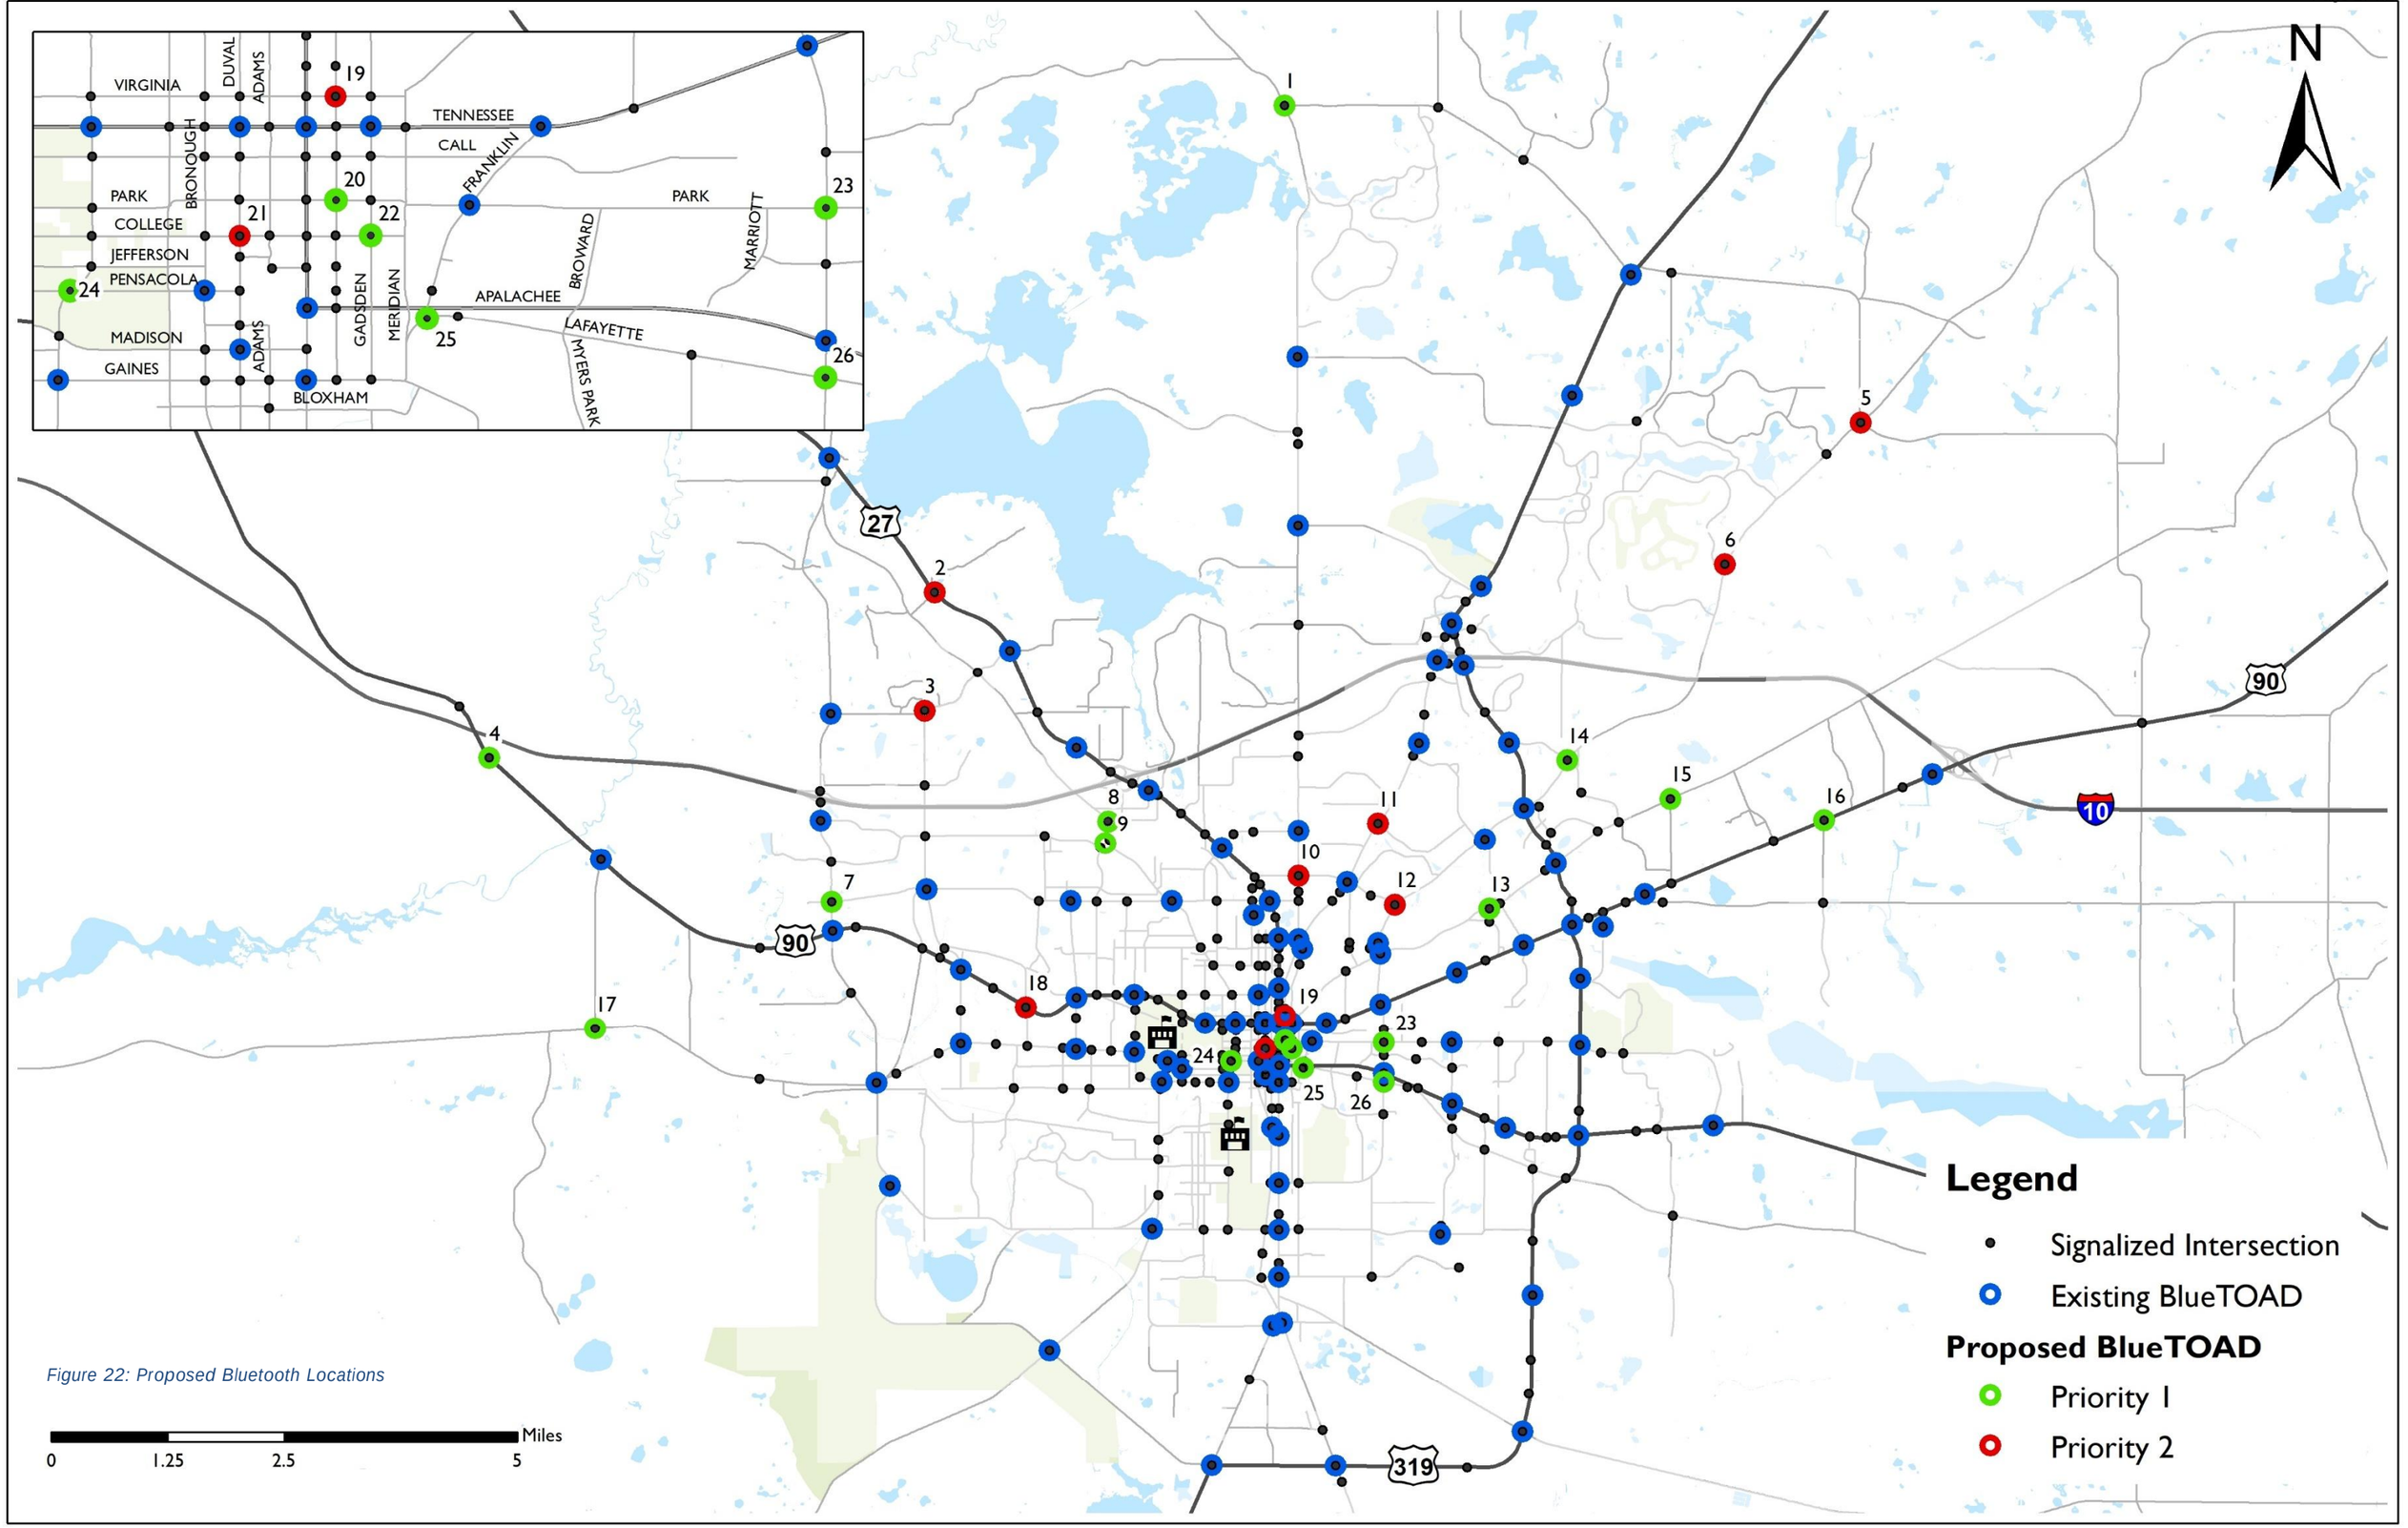

Figure 22: Proposed Bluetooth Locations

Cabinet Upgrades

The traffic cabinet houses the signal controller and other vital intersection electronic equipment that manages traffic flow. This project will contribute to the modernization of the City's traffic signal system. The replacement of the traffic controllers was completed in 2016. The detectors, switches, and cabinets are all equally integral components of the traffic signal system.

The City's current cabinets are a derivative of the Caltrans 332 style cabinets, 552, 660AT and 660ATX. New cabinets will be advanced transportation controller (ATC) high density cabinets with sufficient space for ITS devices. Upgraded cabinets will provide a more favorable environment for the new controllers and their operations.

Coverage Area

The coverage area for this project is countywide and covers all intersection locations.

Project Benefits

Cabinets meeting the proposed Advanced Traffic Controller (ATC) standard facilitate the movement of vehicles, people, and goods more safely and efficiently, while also providing a growth platform for operating in a connected and autonomous vehicle (CAV) environment. Upgrading the current cabinets to ATC cabinet will eliminate the need, expense, and space required to purchase and install additional cabinets to house additional cabinet equipment (e.g. battery backup system). Having adequate space in the cabinet for additional controller cabinet equipment means an increase in the limit of input and output devices. This translates to more features for more types of users than the previous cabinet, which will prove to be useful as the transportation system becomes more complex. The option also exists to obtain an energy-efficient ATC Cabinet which has lower power requirements ultimately costing less money to operate over time.

Managed Field Ethernet Switch Replacement

This project will contribute to the modernization of the City's traffic signal system which will include the replacement of the controllers (completed), detectors, switches, and cabinets. Replacement of hardened, device level managed field Ethernet switches for ITS projects is a long-term priority for the City.

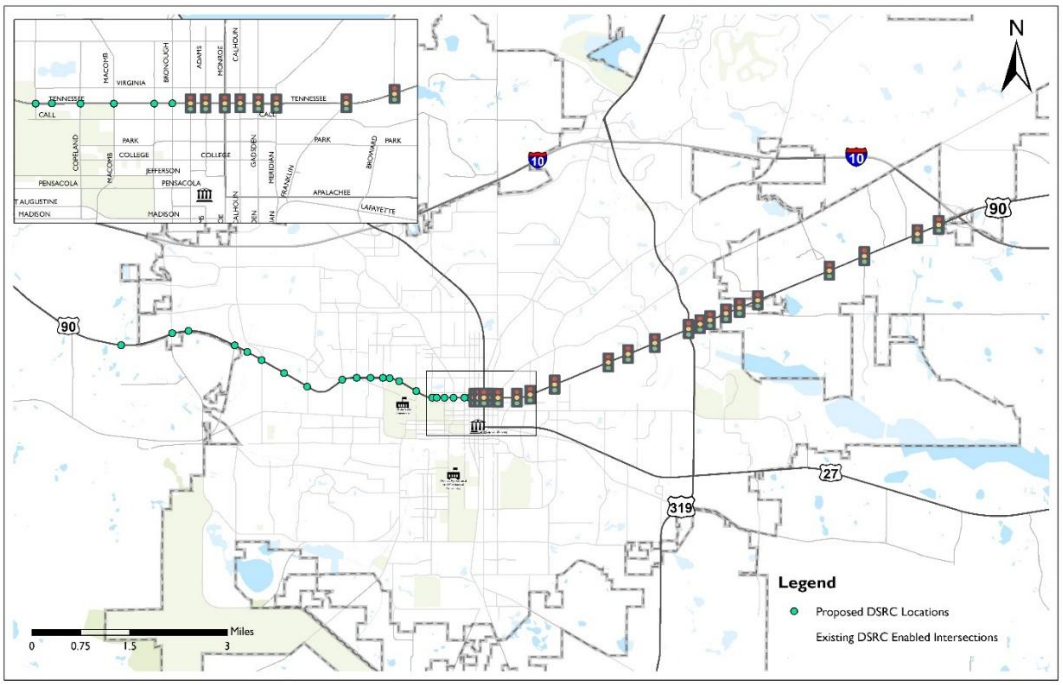
Managed switches are often referred to as intelligent switches, offering advanced control and used for applications requiring network traffic monitoring or segmentation and a high bandwidth. They use software to analyze and improve network performance, and users are able to choose the optimal operating parameters for the application at hand.

Coverage Area

The coverage area for this project is countywide and covers all intersection locations.

Project Benefits

The more complex or likely a network will grow in the future; the more managed switches are needed. The following have been identified as benefits for utilizing managed field ethernet switch[5]:



- Advanced management and troubleshooting capabilities – having the ability to manage and monitor diagnostics and network performance capabilities
- Network traffic optimization - the ability to examine the traffic flow and decide how to control and optimize it
- Cybersecurity features and security access – the ability to limit network access to only trusted devices and prevents users from setting up an unauthorized sub-network

Connected Vehicle Infrastructure

The *Emerging Technology* section included a discussion on Communications for Autonomous and Connected Vehicles. The SPaT challenge laid the foundation for DSRC deployment in the City. This project builds on that successful implementation and extends the existing DSRC corridor.

Coverage Area

Following successful testing of the pilot corridor, this project extends the DSRC deployment west along US 90 (Tennessee Street). The additional 21 intersections extends the corridor to create a 15-mile connected vehicle test bed for the City of Tallahassee.

[5] Advantech. *Top Benefits of Using Managed Ethernet Switches*. October 22, 2018

Project Benefits

The benefits of deploying DSRC is that it helps connected vehicles identify nearby and looming dangers and allows them to react accordingly. These applications can support improvements in both safety and mobility by reducing the risks of collisions.

ATMS Upgrades

ATMS Software is a long-term investment by a traffic management agency. The City of Tallahassee has used the TATMS platform since 1999. In the last 20 years, it has been necessary for Kimley-Horn to upgrade KITS (along with all major ATMS software suppliers in the industry) several times due to the continual evolution of software technology, computing hardware, and operating systems. For example, Windows 7™ is officially at end-of-life and will no longer be supported by Microsoft™ at the end of 2019.

While KITS is compatible today with Windows 10, and Windows 10 will likely be supported by Microsoft for at least the next five years, there is no guarantee that the operating software will not be replaced. Additionally, new technologies will be invented that could increase the efficiency or capabilities and may require updates to the ATMS software.

Coverage Area

The coverage area for this project is countywide.

Project Benefits

While standard procurement of software includes a warranty against defects, standard provisions of warranty do not typically include access to new features or functionality that is developed after procurement. Access to new features and modules, as well as support from developers or customer service representatives, is usually packaged in a service from the provider called software maintenance. Maintenance agreements protect the agency against unknown changes to underlying technologies such as operating systems, as well as providing agency access to upgrades and features at a lower cost of acquisition.

Software maintenance may provide other services such as off-site database backup redundancy, remote and on-site diagnostic support from software professionals, and peer-to-peer technology transfer opportunities. Budgeting for software system maintenance, just like field hardware maintenance, typically proves less costly over the long-run than a strategy of replacing mission critical software on a 10 to 15-year basis when the underlying hardware and software tools are at end-of-life.

TRANSIT MANAGEMENT

Transit service provided to the traveling public is one of the most important services for a City and a region to focus on due to its cross-jurisdictional services and connection with the arterial and freeway transportation networks. Coordination with local transit management agencies was

an important component while compiling this ITS Master Plan, in order to incorporate multi-modal users of the network and support mode shift. There is one major transit management agency in the Tallahassee area, StarMetro.

StarMetro manages the regional transit bus system including vehicle management and voice communications with each transit vehicle. StarMetro is responsible for regional transit planning, transit public information, the management and operation of regional bus and dial-a-ride services.

The primary objective of this functional area is strategies targeted at incorporating transit services in recurrent and non-recurrent congestion management. Transit agencies should be involved in the sharing of traffic information that may impact services including road construction, service complaints, special events, and road closures. Based on this need, the recommended strategy for consideration are listed below.

Transit Signal Priority

The primary goal of Transit Signal Priority (TSP) is to increase transit ridership by reducing bus travel times and improving on-time bus performance through minimizing delay at the signalized intersections. There are several available technologies for achieving TSP detection including optical and radio, and there are two types of TSP triggering approaches including locally triggered and centrally triggered.

For a locally triggered or distributed system, traffic signal equipment used for TSP operations works with the same preemption equipment allowing emergency vehicles to communicate with traffic signals. However, unlike the “high priority" emitters used by emergency vehicles, buses use “low priority" emitters. These emitters are installed inside the bus and typically cannot be controlled by the bus operator. Also, whereas high priority operations will truncate or skip signal phases, low priority operations do not skip phases, and the timing changes are limited to a portion of the signal cycle time. Low priority operation increases the likelihood that the buses will not stop at the signal, but it is not guaranteed. If a high priority emergency vehicle preemption call is received at an intersection after a low priority TSP call is received, the low priority call will be cancelled in order to serve the high priority call.

A TSP system adjusts traffic signals using sensors or probe vehicle technology to detect when a bus nears a signal-controlled intersection. When a vehicle is detected, and approved control strategies are met, the signal modifications typically turn the traffic signals to green sooner or extend the green phase longer thereby allowing the bus to more quickly pass through the intersection.

GPS-based TSP systems use pre-defined GPS mapped zones for each traffic signal to trigger TSP signal calls. When a bus enters the pre-defined zone, the TSP call is made via radio, from the on-board bus equipment to a phase selector at the traffic signal controller. When the bus leaves the zone, the call is terminated.

In a centrally triggered or centralized TSP control system, the vehicle communicates directly with a traffic management center. With this type of system, no preemption hardware is needed on the vehicle or at the intersection. A robust communication network is required that connects vehicles and intersections to the traffic management center. The entire system is managed and monitored from a central location.

Coverage Area

StarMetro, the transit system, for the City of Tallahassee, operates 12 cross-town routes, as well as university shuttles for Florida State University (FSU) and Florida Agricultural & Mechanical University (FAMU). A pilot TSP project along Tennessee Street has been discussed, however no additional information has been provided by StarMetro about this project or plans for future TSP deployments.

Project Benefits

According to the National Association of City Transportation Officials (NACTO), active TSP can reduce transit delay significantly. In some cases, bus travel times have been reduced around 10%, and delay was reduced up to 50% at target intersections.

TRAVELER INFORMATION

Motorists have an increasing desire and need for accurate, timely information to help them decide how to reach their destinations quickly and safely. Traveler information falls into two broad categories: pre-trip and en-route. This information may be distributed using several different communication technologies. Public agencies have historically collected the real-time information and distributed roadway conditions through either public or private channels.

The primary objectives of this functional area are strategies targeted at incorporating new technologies and systems to support additional real-time traffic condition and traveler information dissemination to the public. Based on this need, recommended strategies that provide travelers with a one-stop-shop for public information – incident warnings, work zone, and events – are described below.

Website Connectivity

Mobile technology is shifting the way transportation-related information is disseminated and obtained. The ability to access real-time information on smart phones or tablets provides a channel through which transportation agencies can push information to system users (internal and external). The City's need is to provide travelers with real-time travel-times, incident information, weather/roadway conditions, roadway construction activities, transit delay information, travel mode options and locations, parking availability, and other travel-related information to give travelers an opportunity to optimize their trips.

Currently the City disseminates information regarding current traffic conditions to motorists using the Driver Information System (https://www.talgov.com/gis/driverinfo/default.aspx) and the City of Tallahassee Twitter account. This project involves a reevaluation of current City processes to identify opportunities to provide more accurate, real-time data across multiple platforms. With information about travel conditions, travelers can make intelligent decisions about alternative routes or modes, and take mid-trip corrective actions to avoid delays.

Coverage Area

The coverage area for this project is countywide as the website will be accessible to all City residents.

Project Benefits

Website platforms are a popular way to make traveler information available to the public in a consolidated and easily accessible manner. The City should always consider opportunities to provide information through a mobile application, but should further investigate how the application is developed and where it would reside.

I-10 Trailblazers

Trailblazer signs are used to guide motorists along alternate routes during major incidents and freeway ramp closures. Typically, the signs route motorists exiting the freeway or inform motorists already traveling the alternate route to continue bypassing the freeway to entrance points further downstream.

A recommended strategy to address the traffic management needs related to incident management is expanding the use of dynamic signage to provide traffic information to travelers. Partnering the existing DMS deployed along I-10 with arterial trailblazer DMS would allow the City of Tallahassee to guide traffic along designated routes during incidents or special events, thus increasing throughput and allowing local streets to return normal operations quicker.

Trailblazer signs are any sign that serves the purpose of providing route guidance and traveler information to traffic along local arterials. Trailblazers can include a static sign (i.e. typical roadway guidance signs), an extinguishable sign (i.e. on/off), or arterial DMS (i.e. fully changeable matrix). Static signs and extinguishable signs provide information limited to the direction of travel only, and are most appropriately used during the deployment of one particular alternate route during an incident on another route. A static sign with a highway shield and an extinguishable message sign with multiple directional arrows can be installed at key decision points along alternate routes on existing traffic signal poles, streetlight poles, or new sign posts.

These signs in tandem are able to guide vehicles along pre-defined routes to allow the City to minimize traffic delays along local streets due to major incidents. Full DMS allow for the flexibility in displaying a variety of route guidance messages and incident information, as well as provide

the capability of displaying other special event messages. However, fully dynamic signs need to be larger to provide a variety of useful traveler information.

Therefore, construction costs and impacts are higher for full dynamic trailblazers than the static message sign option. Trailblazers implemented in concert with timing plans can serve to flush out traffic during incidents.

Coverage Area

Signs are typically installed at one or a combination of the following locations:

- In advance of an intersection on new poles to advise drivers of an upcoming decision point
- In advance of an intersection on existing luminaire pole
- At an intersection on existing traffic signal structure

The exact location and type of sign will be dependent on environmental conditions, field conditions, and structural evaluation. If smaller static message signs are deployed, existing traffic signal and street lighting poles may be utilized for the trailblazer signs instead of new sign posts.

Preliminary locations were identified by the City for an initial phase of trailblazer deployment, as shown on the map on the following page. FDOT District 3 and the City are evaluating these locations and developing a Concept of Operations in an ongoing Trailblazer Feasibility Study.

Project Benefits

Trailblazers need to be installed as a complete system to be fully effective. The optimal location for deployment is along routes where considerable traffic diverts off the freeway and utilizes arterials for cut-through routes. Deployment of this system provides the ability to transmit information on traffic flow and incidents to a greater number of travelers. This, in turn, can lead to benefits such as reductions in delays and traffic volume if travelers react to traffic advisories (whether via message signs, advisory radios systems, websites, applications, etc.) and use alternate routes or alternate modes of transportation.

PERFORMANCE MEASURES

Performance monitoring is the collection, analysis, and reporting of data to track and assess resources used, work produced, and whether specific goals are achieved. An important aspect of performance monitoring is an analysis of why goals are (or are not) being achieved, and accomplishments to meet goals.

Performance monitoring uses the science behind what agencies are doing to justify public funds. This approach is achieved through a tool set that provides both the general public and public agency staff with a way to assess the transportation system operations and identify the strengths and weaknesses of the system in order to maintain a high level of service to the public. Without consistent performance data updates, it is difficult to maintain reliable traffic system

performance. Through monitoring system performance, an agency can leverage a funding strategy to most efficiently improve the transportation system.

ATSPM Dashboard

For the City to successfully continue deployment of ITS central equipment, collection and documentation of benefits realized by City staff is necessary. This strategy involves gathering "big data" generated by all the deployed technologies and performing analytics to improve mobility and safety. Ultimately, performance metrics are measures used to assess the performance of a transportation system and capture the economic benefits of investments, tracking the progress made towards reducing congestion and improving safety.

Performance monitoring, in essence, requires data to examine progress against goals. Based on the goals established for this program, specific performance measures are first established, including frequency and method of data collection. Automated Traffic Signal Performance Measures (ATSPMs) consist of a high-resolution data-logging capability added to existing traffic signal infrastructure and data analysis techniques. ATSPMs provides agency professionals with the data to drive a dashboard application to provide actionable information to identify and correct deficiencies. With dashboards, operators can manage traffic signal maintenance and operations in support of an agency's safety, livability, and mobility goals.

The first phase of ATSPM implementation in Tallahassee started in the summer of 2017, where FDOT in partnership with the City of Tallahassee deployed ATSPM along the Mahan Drive (US 90) SPaT corridor. The City has since implemented several improvements to signal timing using the ATSPM metrics and has expanded the ATSPM system to all signals.

In an effort to reduce staff time spent analyzing data and improve the depth and breadth of traffic signal performance, it is recommended that the City of Tallahassee develop an ATSPM dashboard. The dashboard will provide near real-time transportation network performance information. The dashboard will help City staff analyze data to determine how the transportation system is operating compared with recent traffic trends and performance metrics associated with individual corridors. The system will automatically flag current operations that are outside accepted performance parameters. These checks are also monitored to determine if an occurrence is a one-time instance or an ongoing situation.

Coverage Area

The coverage area for this project is countywide.

Project Benefits

According to FHWA, the technology is cost effective, as ATSPMs can be applied to a wide range of signalized intersections and use existing infrastructure to the greatest extent possible. ATSPMs will also support the validation of other technologies and operational strategies, such

as adaptive signal control and CV applications. Several benefits of an ATSPM implementation include:[6]

- Increased Safety: A shift to proactive operations and maintenance practices can improve safety by reducing the traffic congestion that results from poor and outdated signal timing.
- Targeted Maintenance: ATSPMs provide the actionable information needed to deliver high-quality service to customers, with significant cost savings to agencies.
- Improved Operations: Active monitoring of signalized intersection performance lets agencies address problems before they become complaints.

ATSPMs uses the science behind what agencies are doing to demonstrate to the public that their dollars are being spent wisely. This approach is often achieved through a dashboard that provides both the general public and public agency staff with a way to assess how the transportation system is operating and to identify the strengths and weaknesses of the system in order to maintain a high level of service to the public. Without consistent performance data updates, it is difficult to maintain reliable traffic system performance. Performance measures build trust and a culture that agencies work for the public. The City currently has on ongoing subscription service with Traffop to provide a real-time ATSPM dashboard. This project includes the yearly service as well as any necessary future enhancements.

BICYCLE DETECTION

The City has invested in bike safety through the use of specific traffic signal applications and movement compliance at intersections. The primary objective of this functional area are strategies targeted at supporting bicycle movements through expanded ITS related safety applications. These strategies include innovative technology that aim to improve the safety and mobility of multi-modal facilities. Based on this need, recommended strategies for consideration are listed below.

Bicycle Detection Expansion

The City of Tallahassee's population demographics, including two major universities, make it critical to provide multiple transportation options around the City. These modes are important for daily travel but also for recreational purposes to draw in visitors to the City and help the City maintain its desired character and community feel. Tallahassee has recently earned the coveted Silver Level Bicycle Friendly Community (BFC) designation. This award recognizes communities for actively supporting bicycling by providing safe accommodations and encouraging community members to bike for recreation and transportation. As one of only seven Florida communities to receive the Silver Level Bicycle Friendly Community designation, installation of loops or other technology for detecting bicycles at intersections will allow the City to continue the trend of bicyclist safety.

[6] US DOT FHWA. *EDC-4: Automated Traffic Signal Performance Measures (ATSPMs)*. 2019.

Bicycle detection is used at actuated signals to alert the signal controller of bicycle crossing demand on a particular approach. Bicycle detection occurs either through the use of push-buttons or by automated means (e.g. in-pavement loops, video, microwave, mobile applications, etc.). Inductive loop vehicle detection at many signalized intersections is typically calibrated to the size or metallic mass of a vehicle. For bicycles to be detected, the loop must be adjusted to account for bicycle metallic mass. Otherwise, undetected bicyclists must either wait for a vehicle to arrive, dismount and push the pedestrian button (if available), or cross illegally. In lieu of loop detection, video or mobile applications may provide increased detection capabilities. Proper bicycle detection meets two primary criteria: 1) accurately detects bicyclists; and 2) provides clear guidance to bicyclists on how to actuate detection (e.g., what button to push, where to stand).

Coverage Area

Ideal candidates for bicycle detection include locations where cyclist volumes are heavy as well as locations where there are marked and signed routes for bicyclists. A review of data available provided by the Tallahassee–Leon County Planning Department was used to evaluate bicycle trip patterns. The data available through the planning department provides an overview of popular routes for cyclists based on yearly counts conducted at locations with high bicycle traffic. Data for the most recent four years were provided and the locations with the highest average bicyclists per hour are listed in the table below.

Table 6: Average Bicyclists per Hour – 2014 to 2018

Intersection	Average Bicyclists per Hour
Call Street at Stadium Drive	52.8
Tennessee Street at Call Street	52.8
Chieftan Way at Pensacola Street	21.5
Call Street at Stadium Drive	21.5
Call Street at Chapel Drive	17.2
Pensacola Street at Varsity Drive	14.3

Currently in-pavement loops are deployed at three locations near FSU, specifically along MLK Boulevard. Higher bicycle volumes are concentrated around the FSU campus as the table above and supporting data show. The top three locations identified below are ideal candidates for additional bicycle detection deployments near FSU:

- Call Street at Stadium Drive
- Tennessee Street at Call Street
- Chieftan Way at Pensacola Street

Project Benefits

The City currently uses in-pavement, inductive loops for bike lane detection. According to NACTO, the observed benefits for bicycle detection include:

- Improves efficiency and reduces delay for bicycle travel
- Increases convenience and safety of bicycling and helps establish bicycling as a legitimate mode of transportation on streets
- Discourages red light running by bicyclists without causing excessive delay to motorists
- Can be used to prolong the green phase to provide adequate time for bicyclists to clear the intersection

The City's existing traffic signal controllers have the capability to provide bicycle phase timings when a bike-only detector is triggered. Since the City has already deployed in-pavement bicycle detection, and it appears to be operating successfully and accurately, the City should continue to use inductive loops for bicycle detection. As additional intersections are added, inductive loops for bicycles should be considered to expand bicycle detection countywide. Additionally, deployment of a mobile application using GPS-based advanced detection that integrates with bicycle detection would further improve bicyclist safety and efficiency.

TRANSPORTATION MANAGEMENT CENTER

Traffic Signal Management Plan

A Traffic Signal Management Plan is designed to provide step-by-step instructions for current activities related to traffic signal design, operations, maintenance, and management. This plan is intended to clearly define objectives, relating them to the City's goals, and detail a structure to show how the activities of all staff involved in traffic signal management support those objectives.

This plan not only offers a platform for introducing new staff to the processes relevant to their roles, but illustrates the City's structured approach to traffic signal management. The plan will ultimately contribute to the following:

- Provide a succinct description of all activities required for agency staff to manage the traffic signal program
- Specify an approach to strategically shift maintenance, operation, and design from reactionary to proactive
- Effectively plan for needed capital improvement
- Improve internal and external support for the traffic signal program

An additional component of the Traffic Signal Management Plan is a staffing plan.

Coverage Area

This plan will be used by Traffic Signal System Operations staff at the TMC, Field Operations staff, and Signal Design staff in the Traffic Engineering Department.

Benefits

Developing a Traffic Signal Management Plan will streamline processes and create a more efficient training platform for newer TMC staff members. The detailed staffing plan would document future staffing needs and responsibilities. A staffing plan ensures appropriate staffing levels to accommodate the recommended strategies and technologies suggested within this Master Plan.

COMMUNICATIONS

The element of ITS infrastructure that ties everything together is communications. The quality, type, and distribution of communication infrastructure has profound impacts on the City's ability to expand its current ITS applications and deploy new applications. The City currently has 190 miles of fiber optic cable. Additionally, the City has buried fiber, which unlike aerial, is protected from weather damage by being buried below the freezing point in the ground. This makes buried fiber deployments more reliable than aerial fiber deployments in areas that experience extreme weather (e.g. hurricanes, freezing temperatures, etc.).

The City's current communication system includes both fiber optic cable and cellular modems. The ATMS fiber infrastructure includes six existing fiber-optic trunk lines, with fiber counts on each cable varying throughout the City (36-72 strands). A fiberoptic backbone was also installed along I-10 and US 90 from western Gadsden County to the RTMC. This 96-fiber trunk line expanded the freeway management system by incorporating the Tallahassee interstate system. The following sections present the high-level bandwidth analysis accounting for all recommended ITS devices previously discussed, as well as the recommended strategy for developing a more robust communications network.

Bandwidth Demand

At a high level, ITS and signal system elements are considered field devices. Communicating with field devices require communications bandwidth. With the proposed ITS technology expansion and upgrades, an increase in bandwidth to support the expanded systems is a necessary step for the City. This section reviews the bandwidth associated with center-to field links as well as the anticipated center-to-center requirements. Table 7 presents a high-level summary of the aggregate bandwidth demand for the planned system. The projected number of devices is based on the previously recommended number of additional devices. If no projected devices were quantified a ten percent growth rate was assumed.

Current, planned, and future connected vehicle devices account for the majority of the anticipated bandwidth demand. A conservative estimate of connected vehicle unit bandwidth demand was used to account for emerging technologies and potential unforeseen technological advancements. This assessment is important for developing an understanding of field-to-center bandwidth needs as well as center-to-center bandwidth needs for the back-up data center and gaining an overall perspective on system bandwidth utilization.

Table 7: Preliminary Bandwidth Analysis

	DEVICE	EXISTING NO. OF DEVICES	PROJECTED NO. OF DEVICES	PER UNIT BANDWIDTH DEMAND (MBPS)	BANDWIDTH DEMAND (MBPS)
Traffic Management	Traffic Signal Controllers	357	393	0.10	39.3
	UPS	117	129	0.02	2.58
				Traffic Management Subtotal	**41.88**
Traffic Monitoring	Microwave Detection	36	40	0.10	4.0
	HD CCTV Camera	1	36	3.50	126
	Trailblazers	-	13	1.00	13.0
	Road Weather Information System (RWIS)	1	2	0.02	0.04
	Bluetooth Detection	80	106	0.10	10.6
				Traffic Monitoring Subtotal	**153.64**
Connected and Autonomous Vehicles	DSRC Radios	22	43	27	1,161
				Connected and Autonomous Vehicles Subtotal	**1,161**
Center-to-Center Connections	RTMC to City Hall	1	1	10,000	10,000
	RTMC to FDOT	1	1	10,000	10,000
	Field Hub A to RTMC	1	1	10,000	10,000
	Field Hub B to RTMC	1	1	10,000	10,000
	Field Hub C to RTMC	1	1	10,000	10,000
				Center-to-Center Connections Subtotal	**50,000**

The high-level bandwidth analysis was used to guide preliminary communications network recommendations.

Communications Network – Redundancy Expansion

A robust fiber network is essential for maintaining communication with the recommended expanded ITS infrastructure. A high-level analysis was conducted to develop communications infrastructure and topology recommendations. Field devices were grouped with other devices along similar corridors or within close geographic proximity to form approximately 31 communication groups. To allow for future expansion within communication groups, it is recommended that initial grouping of network devices include approximately 15 devices per group. The communication groups were geographically grouped into rings along fiber trunk routes in a manner that attempted to balance bandwidth demands equally across all rings. Locations for potential field hubs and fiber expansion along new routes were identified to support the different communication groups.

Field hubs are central communication points to which various branch communication lines and field devices are connected. Field hubs are used to collect field device data, then transmit the data directly to the RTMC over the fiber trunk lines, thereby consolidating network traffic and

optimizing the use of the available fiber. This provide scalability and flexibility for the overall network.

FDOT District 3 currently has a communication hub at the western extents of the City along I-10. However, it is recommended that future communication planning consider where fiber upgrades will be required to support the field network. New field hubs may be needed to support the network as well. In addition, hubs can also provide improved accessibility to multiple infrastructure assets.

Preliminary proposed hub locations, areas of fiber expansion, and the proposed ring topology are illustrated in Figure 22 and Figure 23.

Coverage Area

The coverage area for this project is countywide and encompasses the current and future extents of the fiber network.

Benefits

With the bandwidth requirements and application impacts being preliminary estimates, the best way to plan for the future of the ITS deployments and connected vehicles is to provide high bandwidth capable infrastructure at points along important arterials and freeways. Fiber optic cable provides the most reliable, flexible, and robust communications infrastructure for supporting the network requirements of connected vehicles and other emerging technologies.

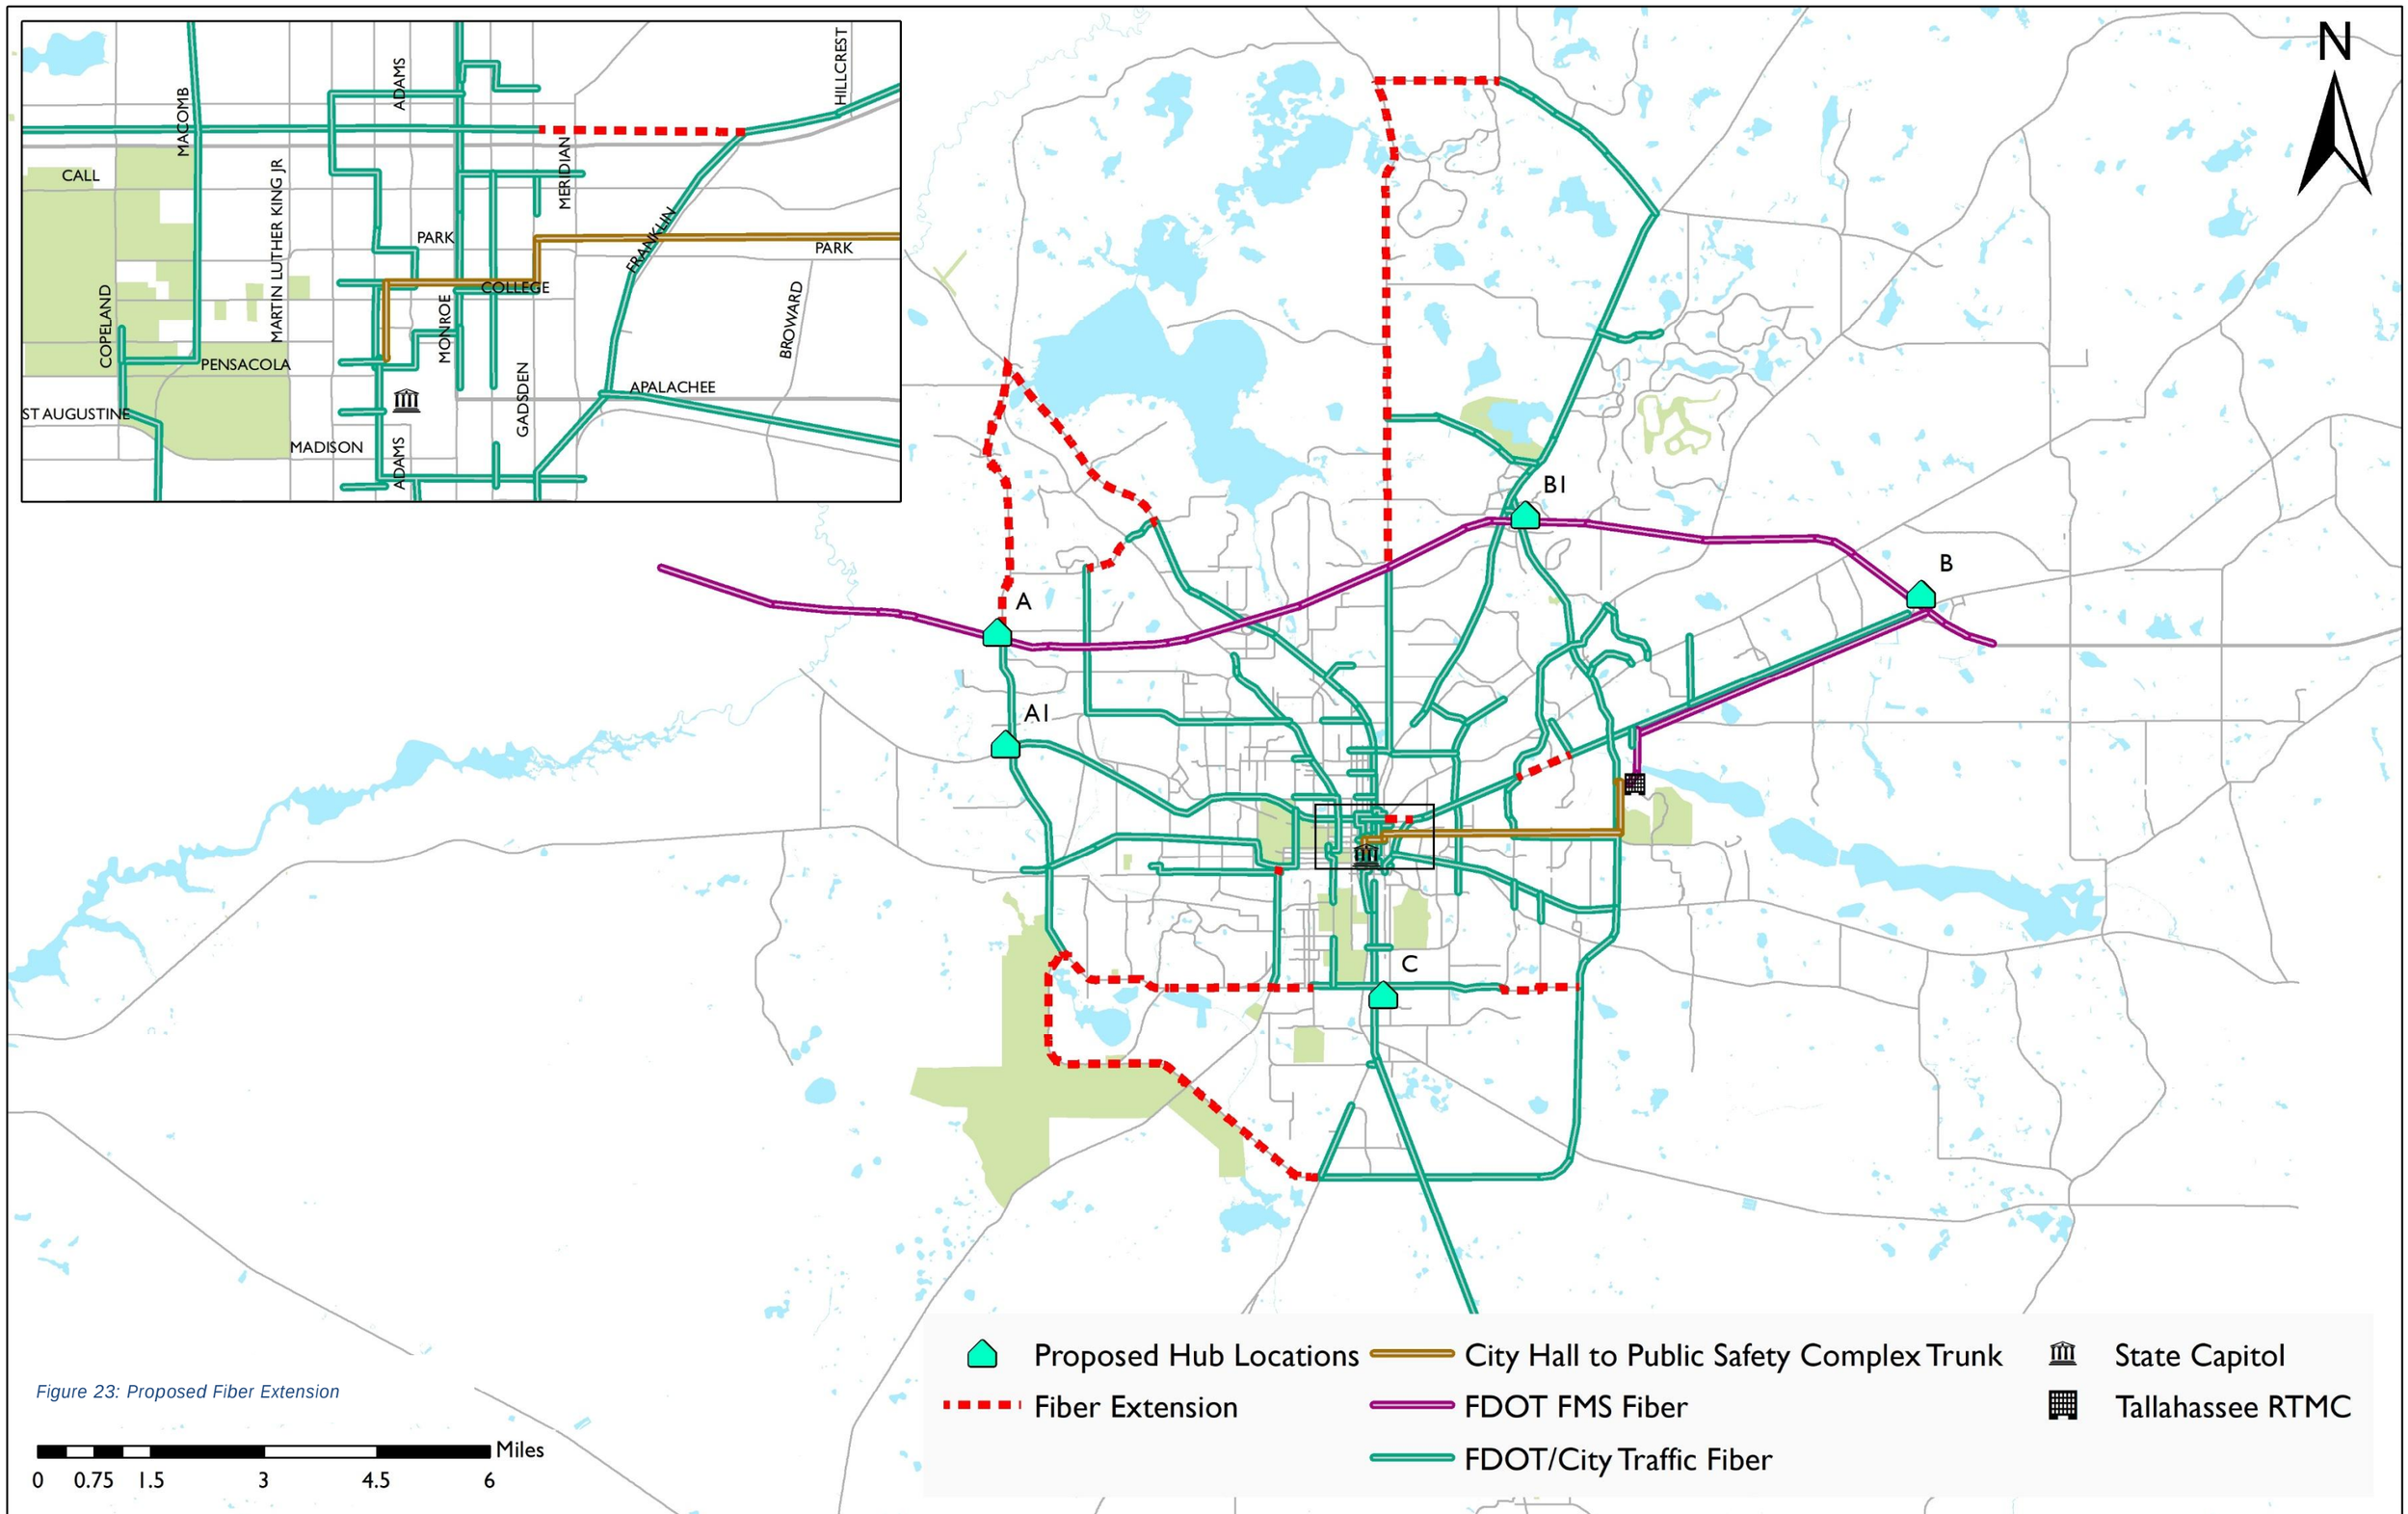


Figure 23: Proposed Fiber Extension

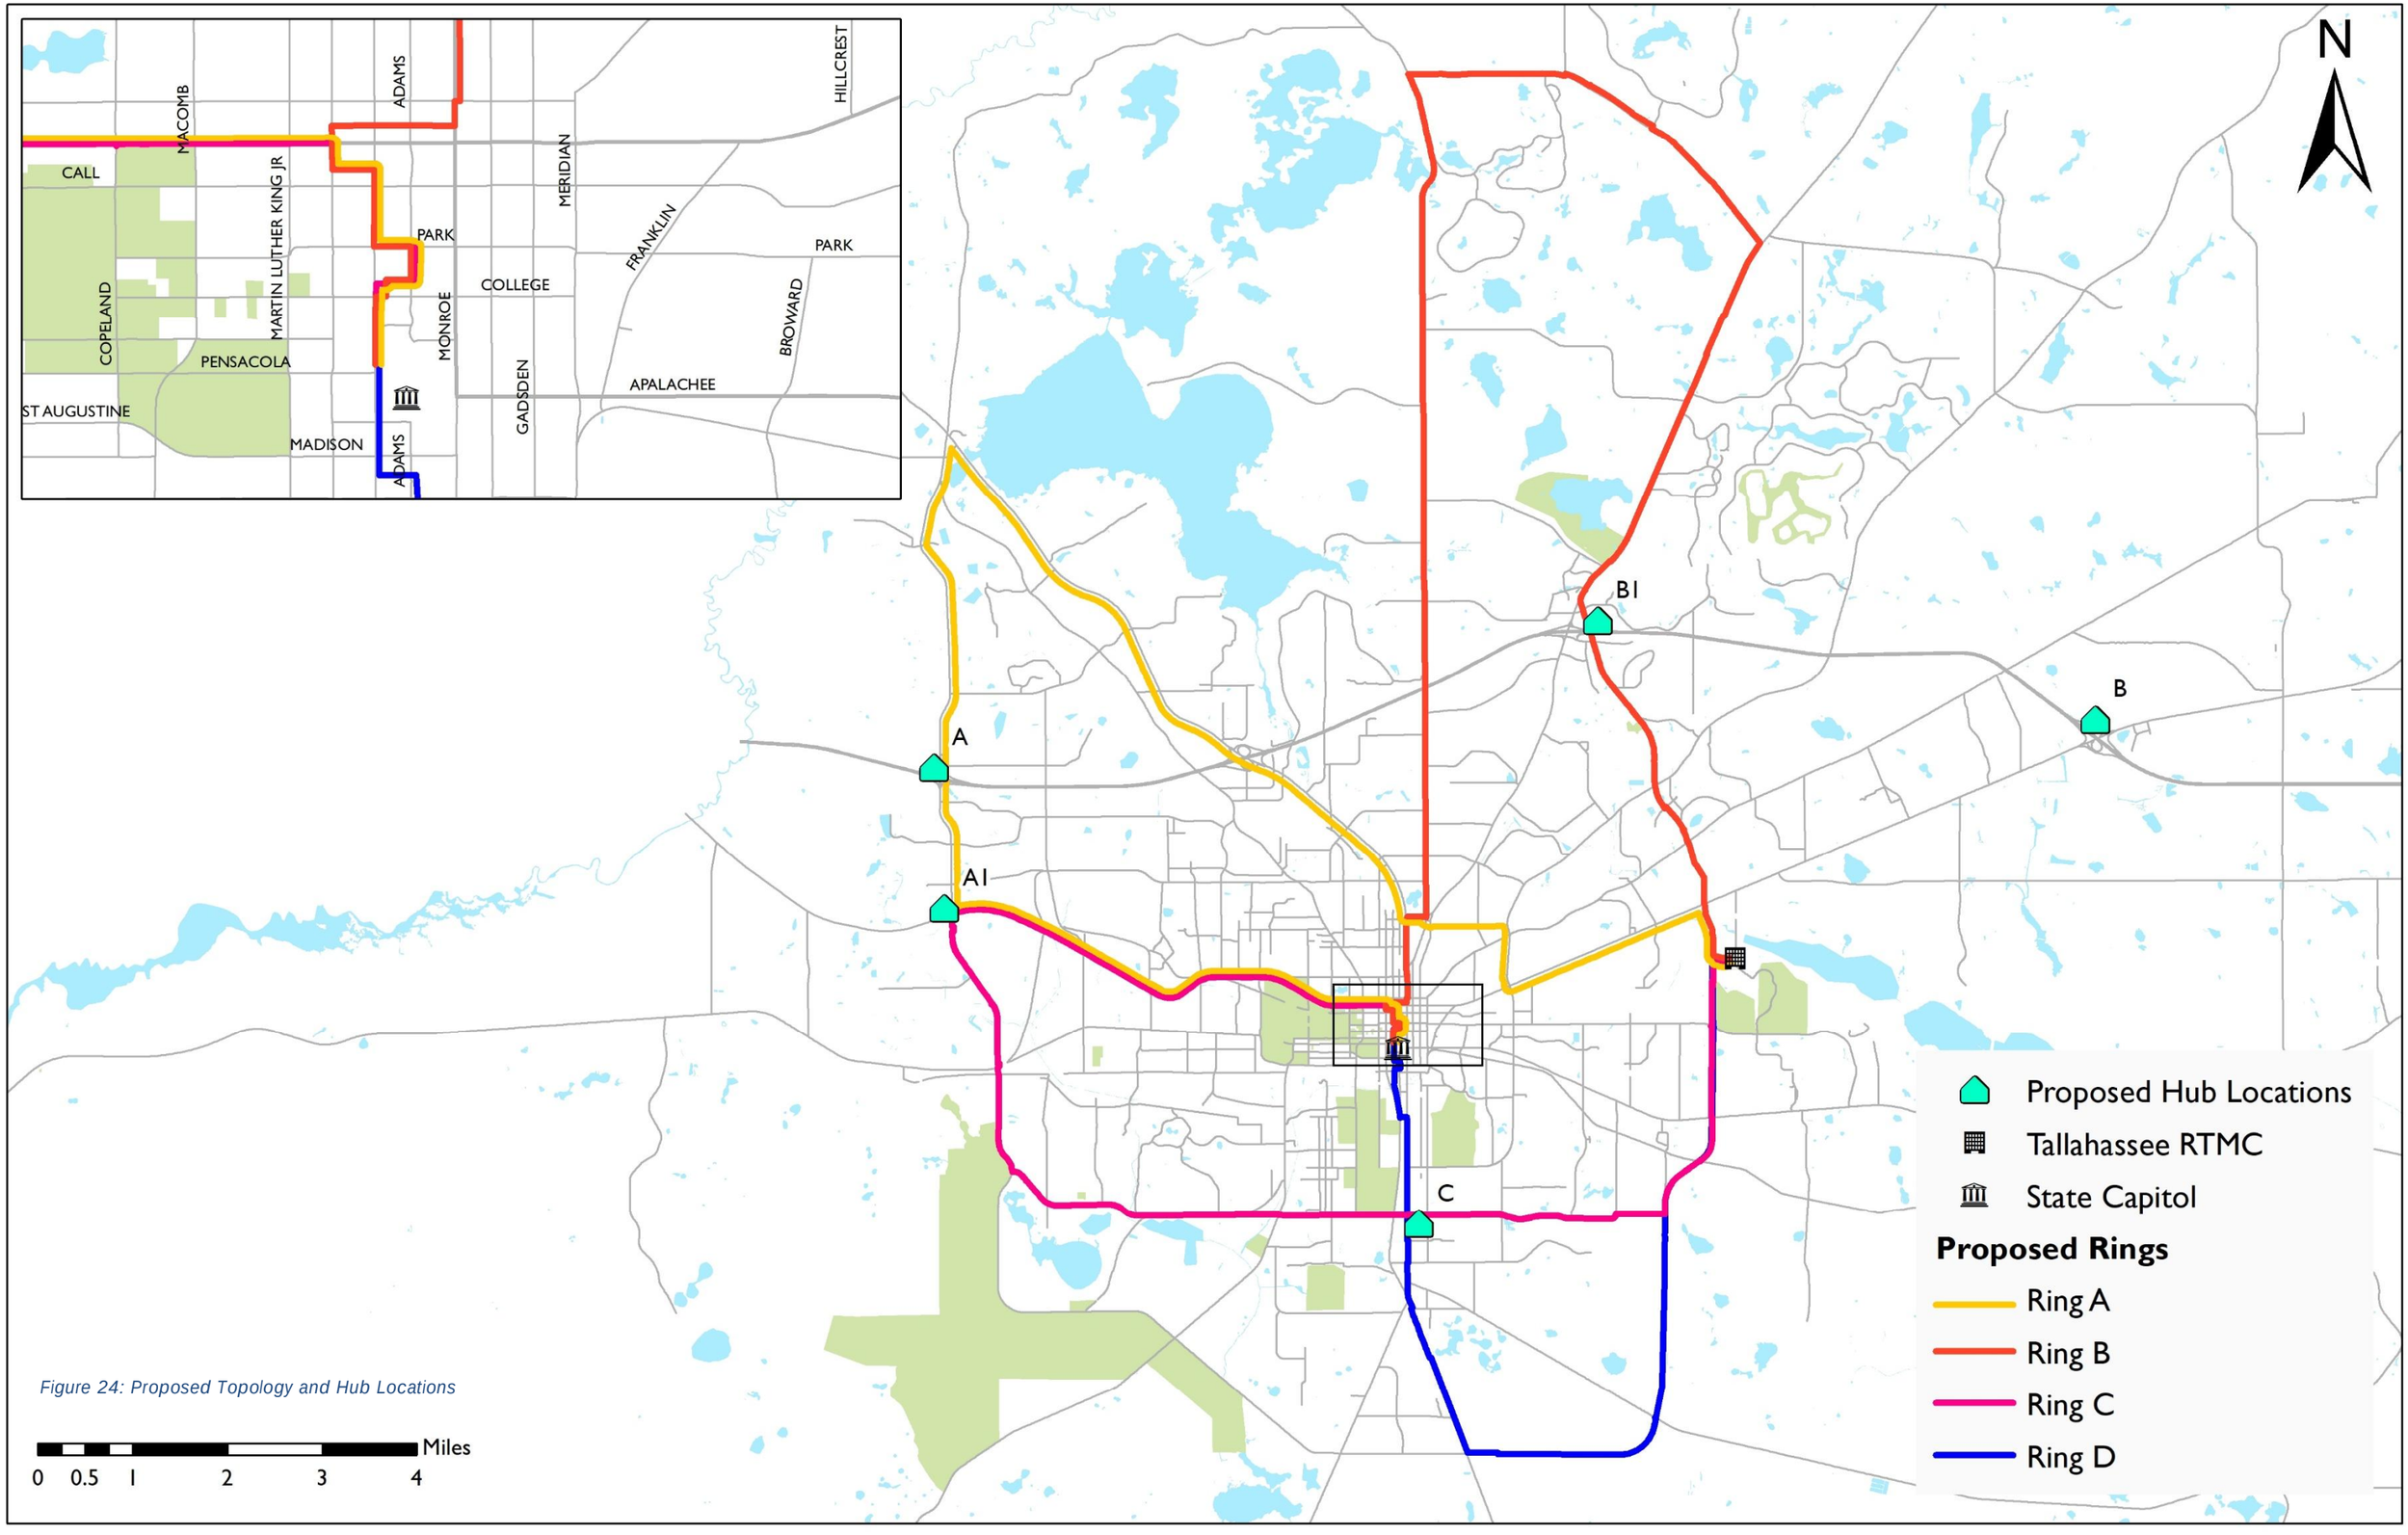

Figure 24: Proposed Topology and Hub Locations

Budgetary Estimates

High-level estimated costs were prepared for each recommended project. Total cost components include design, construction, capital, and operations and maintenance as applicable. Various high-level assumptions were made to serve as the basis for the cost analysis:

- Unit cost, unless otherwise noted, are based on FDOT historical project bid costs.
- Unit costs not available through FDOT are sourced from similar project deployments completed by other transportation agencies.
- A preliminary number of locations were assumed for non-geographic projects, where specific locations are not identified.
    - Flashing yellow arrow (FYA) program cost based on a project of 20 locations.
    - System Detectors program cost based on a project of 30 locations.
    - Switch replacement and cabinet upgrade projects based on number of traffic signals (357).
- Transit Signal Priority project cost developed based on preliminary route selected.
- Trailblazer project cost based on preliminary locations identified in early concept alternatives.

The table below presents each estimated total project cost. The costs are general and presented more as a means for planning level funding requests. High-level project costs with a breakdown by project component is provided in Appendix B. Detailed cost estimates will require refinement during early project level concept development and scoping.

Table 8: Estimated Project Costs

PROJECT TITLE	TOTAL COST
Adaptive Traffic Signal Control (US 27)	$1,120,000
Adaptive Traffic Signal Control (US 90)	$1,430,000
System Detectors	$110,000
CCTV Cameras - Phase 1	$210,000
CCTV Cameras - Phase 2	$130,000
Smart Work Zones	$20,000
FYA Upgrades	$120,000
Travel Time Reliability System - Phase 1	$230,000
Travel Time Reliability System - Phase 2	$140,000

PROJECT TITLE	TOTAL COST
Cabinet Upgrades	$7,570,000
Managed Field Ethernet Switch Replacement	$2,180,000
Connected Vehicle Infrastructure	$860,000
CCTV Camera Upgrade	$980,000
ATMS Upgrades	$30,000
Transit Signal Priority	$400,000
Website Connectivity	$100,000
I-10 Trailblazers	$3,267,000
ATSPM Dashboard/ Performance Monitoring	$70,000
Bicycle Detection	$60,000
Traffic Signal Management Plan	$50,000
Communications Network – Redundancy Expansion	$7,950,000

Implementation Plan

The City of Tallahassee recognizes the importance of implementing ITS projects. The goal is to better manage traffic and provide a safe travel experience for passenger vehicles, transit, as well as bicyclists and pedestrians. The implementation plan provides guidance to assist the City in implementing the recommendations in a prioritized, efficient manner. A high-level prioritization process was developed to help objectively guide project programming. Projects were prioritized based on four criteria which align with the stated ITS vision. Each of the four criteria were scored and weighted to create a final score for each project. This section summarizes the prioritization criteria and details the prioritization process.

PRIORITIZATION CRITERIA

A methodology was developed to provide a consistent approach to prioritizing project recommendations demonstrating fiscal responsibility and accountability. All recommended projects identified in the previous technical memorandum were scored and prioritized using the methodology described in this section.

Criteria Development

Criteria was developed to provide direction and guidance for project prioritization. The following criteria reflect the City's strategic approach to expansion and is consistent with the vision for the ITS Master Plan. The projects were analyzed based on the following criteria:

- Safety
- Mobility
- Accountability
- Regional Support

Project prioritization relied on a qualitative assessment to evaluate the project's potential impacts and a data driven process to estimate benefits. Current data used for this process include datasets such as statewide crash data, Regional Integrated Transportation Information System (RITIS), evacuation routes, and estimated infrastructure costs.

Project Evaluation

Proposed projects were organized into two categories: geographic and non-geographic. Those with defined project locations were classified as geographic projects and those without defined locations were classified as non-geographic projects. A high-level prioritization rubric was developed to help objectively guide the process. Each recommended project was evaluated using the developed prioritization rubric. Points were awarded to each project based on how well it satisfied each criterion. Projects with higher scores are identified as higher priorities than those earning lower scores.

Additionally, for those geographic projects that received identical scores, these projects were scored again based on a secondary rubric to determine which phase was a higher priority. The methodology for evaluating projects in both categories (geographic and non-geographic) is detailed below.

Safety

Determining where safety concerns exist and developing potential solutions to address these concerns is a priority for the City. Safety accounts for 30% of the total prioritization score and is an important element of project evaluation. For all projects, a qualitative safety assessment was completed. National case studies similar in nature to the proposed project were used as reference to determine how the proposed project will enhance the safety of the transportation system. A table summarizing the criteria is provided for reference at the end of this section.

For geographic projects, a secondary rubric was developed including a data driven safety criteria. One year of crash data, provided by Signal Four Analytics, was mapped to determine the number of crashes within the extents of a given project. Higher priority is given to projects with a higher number of crashes along the project corridor. Additional safety scoring is based on whether the project is identified as an evacuation route. More points were awarded for projects that support evacuation routes.

Table 9: Safety Criteria

CRITERIA	DATA SOURCE	RESPONSE	SCORE
Number of Crashes	Signals 4 Analytics *https://s4.geoplan.ufl.edu/*	300+	3
		151-300	2
		0-150	1
Percentage of Project Corridor Along an Evacuation Route	Florida Division of Emergency Management *https://maps.floridadisaster.org/county/EVAC_LEON.pdfn*	> 66%	3
		33% - 66%	2
		33% <	1

Mobility

Mobility is directly correlated to congestion levels and is a key consideration for project prioritization. Mobility accounts for 20% of the total prioritization score and is an important element of project evaluation. For all projects, a qualitative mobility assessment was completed. National case studies similar in nature to the proposed project were used as a reference to determine how the proposed project will mitigate recurring and non-recurring congestion. A table summarizing the criteria is provided for reference at the end of this section.

For geographic projects, a secondary rubric was developed including a data driven mobility criteria. Regional Integrated Transportation Information System (RITIS) Travel Time Index (TTI) data was utilized to identify corridors that have a higher-than-average level of congestion. This criterion awards more points to projects that will impact areas of higher congestion. One year of TTI data was pulled for all project corridors from January 2018 to December 2018. Points were awarded based on thresholds defined in a recent study[7] completed by the University of Alabama.

This study quantified congestion using the national performance management research data set and selected TTI thresholds to reflect user perceptions of congestion. Additional mobility scoring is based on whether the project impacts corridors with higher average annual daily traffic (AADT) volumes. Truck volumes were also taken into consideration, with more points awarded to projects along corridors with higher truck AADT.

Table 10: Mobility Criteria

CRITERIA	DATA SOURCE	RESPONSE	SCORE
TTI	RITIS	> 2.0	3
		1.5 - 2.0	2
		1.5 <	1
AADT	FDOT Transportation Data and Analytics Office	40,000+	3
		20,000 - 40,000	2
		0 - 20,000	1
Truck AADT	FDOT Transportation Data and Analytics Office	15,000+	3
		6,000 - 15,000	2
		0 - 6,000	1

Accountability

Project accountability refers to the benefits realized for each recommended project post implementation. A qualitative accountability assessment was completed using the US Department of Transportation's Research and Innovative Technology Administration (RITA) benefit cost library. Benefit-cost ratios of projects similar in nature were aggregated to estimate project performance post implementation. This criterion awards more points to projects with a higher estimated benefit-cost ratio. This criterion is 25% of the total prioritization score.

[7]https://res.mdpi.com/data/data-02-00039/article_deploy/data-02-00039.pdf?filename=&attachment=1

Table 11: Accountability Criteria

CRITERIA	DATA SOURCE	RESPONSE	SCORE
B/C Ratio	High-level estimated costs and anticipated benefits	> 15	3
		5 – 15	2
		5 <	1

Regional Support

In some instances, it may be possible to have a proposed project satisfy a significant need that is not demonstrated through available datasets. Consequently, additional consideration was given to stakeholder input on the importance of the needs specific to each project and is accounted for in the regional support criterion. This criterion awards more points to projects that are a consistent priority for local agencies and have strong support of public officials. Points awarded are based on stakeholder input. This criterion is 25% of the total prioritization score.

Weighting Scale

The weighting scale was designed with the understanding that each criterion is important to the project as well as overall system success. The weighting was developed to be consistent with the vision and goals established for this Master Plan. Points awarded for each category are weighted based on the percentages detailed below.

- Safety (30%)
- Mobility (20%)
- Accountability (25%)
- Regional Support (25%)

As a reference, a summary of the prioritization rubric is included in Table 12. Table 13 describes the secondary geographic that was used to differentiate priorities of projects that received identical scores.

Table 12: Prioritization Rubric

CRITERIA	DESCRIPTION	RANKING	RANGE	NO. OF POINTS
Safety	The project's effect on reducing accident rates as well as pedestrian and bicycle safety was assessed. National case studies similar in nature to the proposed project were used as reference to determine how the proposed project will enhance the safety of the transportation system.	High	Project provides significant reduction in crash rates.	3
		Medium	Project provides moderate reduction in crash rates.	2
		Low	Project provides some reduction in crash rates.	1
Mobility	The project's ability to improve or enhances movement of passenger vehicles and freight was assessed. National case studies similar in nature to the proposed project were used as a reference to determine how the proposed project will mitigate recurring and non-recurring congestion.	High	Project provides significant improvement to movement of vehicles and freight.	3
		Medium	Project provides moderate improvement to movement of vehicles and freight.	2
		Low	Project provides some improvement to movement of vehicles and freight.	1
Accountability	RITA's benefit cost library was used to determine a range of project's potential benefit cost ratio. A cost benefit analysis provides a common basis that can be used to compare projects. Those projects with a higher B/C ratio range were given a higher priority.	High	Project's annual benefits are expected to exceed the capital cost.	3
		Medium	Project's annual benefits are expected to exceed half of the capital cost.	2
		Low	Project's capital costs are expected to exceed the annual benefits.	1
Regional Support	Stakeholder input was used to determine projects that have been a consistent priority for local agencies and those that local jurisdictions support.	High	Project has strong support of project stakeholders.	3
		Medium	Project has moderate support of project stakeholders.	2
		Low	Project has little support of project stakeholders.	1

Table 13: Secondary Prioritization Rubric – Geographic Projects

		SAFETY		MOBILITY			ACCOUNTABILITY	REGIONAL SUPPORT
SCALE	POINTS	Consider the anticipated safety improvements of the proposed project.		Consider the anticipated mobility improvements of the proposed projects.			Consider how the proposed project will perform against established goals.	Consider community support for proposed project.
		No. of Crashes	Evacuation Route	RITIS TTI	AADT	Truck AADT	B/C Ratio	Stakeholder Input
High	3	300+	> 66%	> 2.0	40,000+	6,000+	> 15	Project has strong support of project stakeholders.
Medium	2	151 - 300	33% - 66%	1.5 - 2.0	20,000 - 40,000	3,500 - 6,000	5 – 15	Project has moderate support of project stakeholders.
Low	1	0 - 150	33% <	1.5 <	0 - 20,000	0 - 3,500	5 <	Project has little support of project stakeholders.

PROJECT RANKING

Each of the proposed ITS projects were scored based on the established evaluation criteria. The scores were then translated into a priority ranking, with higher scoring projects receiving a higher priority rank. The tables below illustrate the final project ranking. Appendix C provides the detailed scoring for each of the projects and any assumptions.

Table 14: Project Ranking

Rank	Project
1	CCTV Camera Upgrade
2	CCTV Cameras - Phase 1
3	I-10 Trailblazers
4	ATMS Upgrades
5	Cabinet Upgrades
6	ATSPM Dashboard/Performance Monitoring
7	System Detectors
8	Smart Work Zones
9	Transit Signal Priority
10	FYA Upgrades
11	Traffic Signal Management Plan
12	CCTV Cameras - Phase 2
13	Travel Time Reliability System - Phase 1
14	Adaptive Traffic Signal Control (US 90)
15	Travel Time Reliability System - Phase 2
16	Adaptive Traffic Signal Control (US 27)
17	Connected Vehicle Infrastructure
18	Managed Field Ethernet Switch Replacement
19	Communications Network – Redundancy Expansion
20	Website Connectivity
21	Bicycle Detection

HIGH LEVEL DEPLOYMENT PLAN

The rankings were used to group the recommended projects into tiered deployment timeframes. The recommended deployment timeframes does not align directly with the prioritization ranking. The final project sequencing was determined by City staff based on funding availability and City priorities. Projects that will be recurring over multiple fiscal years are listed as programmatic and the yearly cost included. Table 15 shows the recommended timeframes for each of the ITS projects along with estimated costs.

Table 15: Project Deployment Timeframes

DEPLOYMENT TIMEFRAME	PROJECT TITLE	ESTIMATED COST
Near-Term (2 to 5-year horizon)	CCTV Camera Upgrade	$980,000
	CCTV Cameras - Phase 1	$210,000
	Adaptive Traffic Signal Control (US 90)	$1,430,000
	Traffic Signal Management Plan	$50,000
	Near Term Subtotal	**$2,670,000**
Mid-Term (5 to 10-year horizon)	I-10 Trailblazers	$3,267,000
	Cabinet Upgrades	$5,330,000
	Smart Work Zones	$20,000
	Transit Signal Priority	$400,000
	CCTV Cameras - Phase 2	$130,000
	Travel Time Reliability System - Phase 1	$230,000
	Travel Time Reliability System - Phase 2	$140,000
	Mid-Term Subtotal	**$9,517,000**
Long-Term (over 10-year horizon)	Adaptive Traffic Signal Control (US 27)	$1,120,000
	Connected Vehicle Infrastructure	$860,000
	Managed Field Ethernet Switch Replacement	$2,180,000
	Communications Network – Redundancy Expansion	$7,950,000
	Website Connectivity	$100,000
	Long-Term Subtotal	**$12,210,000**
Programmatic Projects (yearly recurrence)	ATMS Upgrades	$30,000
	ATSPM Dashboard/Performance Monitoring	$70,000

System Detectors	$110,000
FYA Upgrades	$120,000
Bicycle Detection	$60,000
Programmatic Subtotal	**$390,000**

Mid-term and long-term projects could become a higher priority depending on funding or as opportunities for collaboration or efficiencies become available. However, actual deployment scheduling could be affected by the following implementation factors:

- **Project's Dependence on Other ITS Projects**: Project is dependent on other ITS and communications deployments to provide full or partial operations and/or benefit (i.e. the project depends on another project to be deployed first).
- **Proximity to Planned Programmed Roadway ITS Project**: Proposed project may be able to leverage deployment of support infrastructure and expedite schedule or potentially reduce implementation costs.
- **Proximity of Proposed Project to Existing ITS Project**: Project may be able to take advantage of an existing ITS project for communications network connectivity and/or infrastructure to reduce ITS project implementation costs.
- **Funding Opportunities/Availability**: The availability of funding will impact implementation timeframe and actual deployment. Depending on funding levels, a proposed ITS project could be segmented into phases to allow deployment in stages dependent on level of funding.

The City should pursue multiple funding sources for the deployment of the recommended system expansion and enhancement. As a result of the rapidly evolving ITS technologies and their applications to traffic operations and communications, it is recommended that the City continually monitor the recommendations and deployment timeframes proposed as part of this project. Furthermore, the City should closely track the implementation of individual projects to more comprehensively evaluate the overall plan implementation.

STAFFING PLAN

In addition to identifying ITS infrastructure needs, this ITS Master Plan identifies appropriate staffing levels that will allow the City to manage its traffic signal system and ITS network and to support the traveling public more effectively. A few of the projects developed for this plan (e.g., developing a Traffic Signal Management Plan) involve updating processes, which require minimal time and resources to implement. However, most of the recommended projects will require more resources, including increased staffing, in order to implement. Exploring the staffing needs within this ITS Master Plan ensures that there is a realistic consideration of the efforts that are needed to implement it.

The number of traffic signals in the City has steadily increased without a corresponding increase in staff to operate and maintain them. This has created a situation where the City is understaffed for both operations and maintenance of the traffic signal system and ITS network.

Several national sources provide guidance to signal maintaining agencies regarding the recommended staffing levels based on the number of traffic signals needed to be maintained. The Federal Highway Administration (FHWA) developed the *Traffic Signal Operations and Maintenance Staffing Guidelines* in 2009. This report provides a guideline to estimate the staffing and resource needs required to effectively operate and maintain traffic signal systems. According to the report, ineffective operation and maintenance of traffic signals may have safety implications and contributes annually to millions of hours of unnecessary traffic delays, congestion, fuel consumption and air pollution. The guidelines provided below are intended to assist managers and practitioners with prioritizing and evaluating operations and maintenance staffing needs.

Figure 25: Excerpt from FHWA Guidelines for Staffing (2009)

- A staffing level of 75-100 signals per engineer for agencies that operate a minimum of 150 signals will be appropriate to support the Constrained Ideal Traffic System. Smaller agencies will likely require fewer signals per engineer because economies of scale may be difficult to realize.

- A staffing level of 30-40 signals per technician for agencies that operate a minimum of 150 signals will be appropriate to support the Constrained Ideal Traffic System. Smaller agencies will likely require fewer signals per technician because economies of scale may be difficult to realize.

According to industry standards for traffic signal operations and maintenance, approximately 8.75 to 11.5 maintenance staff and 3.5 to 4.5 engineers are required to manage the City's 350 traffic signals. To date, the City has been able to complete necessary operations and maintenance functions for the existing traffic signal network. However, as the traffic signal system and ITS network grow, as well as demands on the transportation network, staffing resources for the City's ITS Program will need to be expanded. Taking into consideration the budgetary constraints of the City, the staffing recommendation is provided below and highlights staffing levels necessary to more effectively operate and maintain the ITS Program.

Table 16: Proposed City Staffing Levels

Staff Position	No. Of Current City Positions	No. Of Proposed City Positions	Additional Staff
STMC Manager	1	1	-
Traffic Signal Timing Engineer	1	2	+1
Traffic Operations Specialist	3	4	+1
Traffic Operations Analyst	0	1	+1
Operator	2	2	-
Network Administrator	1	1	-

Staff Position	No. Of Current City Positions	No. Of Proposed City Positions	Additional Staff
Administrative Assistant	2	2	-
ITS Maintenance Technician	6	8	+2
Senior ITS Maintenance Technician	1	1	-

Deploying the additional ITS infrastructure identified in this Master Plan will exacerbate the existing staffing challenges unless a plan is implemented to identify and account for staffing needs as the ITS Program grows. It is recommended that during project programming for traffic signals, ITS infrastructure, or communications projects consideration is given to the staffing levels required to operate and maintain the new infrastructure in addition to the existing infrastructure.

Conclusion

The City of Tallahassee has a forward-thinking approach to implementing state-of-the-art ITS, connected and automated vehicle, smart city, and internet of things applications based on the commitment to existing communications, traffic signal, and data-centric deployments. This ITS Master Plan will play a pivotal role in allowing the City to position for the adaptation of new technologies, to better maintain system infrastructure, to enhance the reliability of the communication network, and to enhance RTMC operations. This plan also provides solutions to meet needs that are focused on smart deployment of technologies which serve multiple purposes and create efficiencies in the services that Tallahassee provides to its residents and travelers.

This ITS Master Plan evaluated existing conditions, assessed current and future needs, identified recommendations to support the City's established vision, and will facilitate collaboration with partner agencies. The City's vision for this plan is to "*Maximize the transportation system efficiency and performance using innovative technologies and regional collaboration to promote reliable mobility throughout the vibrant capital city region*."

The City of Tallahassee has embraced the challenge of being at the forefront of emerging technologies. As a result of the rapidly evolving ITS technologies and their applications to traffic operations and communications, it is recommended that the City continually monitor the recommendations and deployment strategy included in this Master Plan. At a minimum the City should consider a thorough re-assessment of their vision, strategies, and application of technologies every five years. Furthermore, on an annual basis, the City should closely track the implementation of individual projects to more comprehensively evaluate the overall Plan implementation and continuity with new developments.

Kimley»Horn

Meeting Notes

To:	Wayne Bryan
From:	Jill Capelli, PE
	Kimley-Horn and Associates, Inc.
Meeting Date:	May 9, 2018
Subject:	ITS Master Plan Stakeholder Meeting

Meeting Participants

See attached sign-in sheet for meeting participants and contact information.

Meeting Summary

A power point presentation was provided by Kimley-Horn. The power point covered six main topics: Project Scope and Schedule; Existing Inventory; Operational Scenarios; Needs Discussion; Visioning; Next Steps. A copy of the power point is provided as an attachment. Additional discussion on the six main topics are provided below.

Project Scope and Schedule

- J. Capelli provided a summary of the project needs and goals.
- A tentative schedule was presented and reviewed with the team. J. Capelli provided a summary of the tasks to be completed as part of this project as well as the potential timeframes for deliverable submission.

Existing Inventory

E. Ekwere summarized the existing inventory that was previously collected from the Traffic Signal Operations group. A request was made for any additional data that would be relevant to the project. The information gathered during the meeting is listed below:

- ITS Devices: 1 Road Weather Information System (RWIS) on I-10; 80 BlueTOADs; cell modems have been deployed strictly for traffic signals not in school zones; regarding preemption, Opticom is currently deploying throughout the City (35 intersections are complete and all fire trucks have been retrofitted with devices); speed feedback signs, located on SR 20 and county roads, are currently gathering no data but effectiveness in speed reduction is a wishlist item; 22 intersections of Signal Phasing and Timing (SPAT)/connected vehicle/Dedicated Short Range Communications (DSRC); every school zone has flashers, a

radar unit, and cell modem linked to the TMC; inventory includes RRFBs but there is a desire for smart RRFBs to capture pedestrian counts; bike counters installed along Pensacola and Madison (west of MLK)

- Management: The Tallahassee TMC has both a Freeway Management and Arterial Management System; manages from MM 192 to MM 210; in 2020 the FMS will operate 24/7 and extend to MM 240; current hours of operation: 5am – 9pm Mondays through Friday
- FDOT District 2 Project: W. Bryan provided a summary of the upcoming District 2 project that will expand the FMS to the east up to the District Line. The City of Tallahassee will operate the D3 coverage area. Once this project is complete in 2020, the RTMC will begin 24/7 operations.
- Center to Center Communications: R. Allen provided a summary of the Center to Center Communications.
- Transit: StarMetro has arrival and departure boards; AVL on all existing fleet (73 buses)
- Additional Stakeholders:
  - School Board: it was requested that outreach to the school board occur regarding technology deployed within school zones
  - Judy Donahue – midtown parking
  - Matt Inman – FSU; reach out regarding parking technology on campus
  - Artie White – City of Tallahassee Planning
  - Sheree Bryant – Leon County Planning
  - Ryan Guthrie

Action Item: A transit specific discussion should be had, currently updating their TDP (include Transit IT)

Operational Scenarios

N. Smusz-Mengelkoch introduced scenarios specific to Tallahassee to facilitate discussion on future needs of the stakeholders. Key points from this discussion are described below:

- Incident Management: topics discussed included freeway closure due to ice, arterial crashes and work zones
  - Stakeholders agreed that the lines of communication need to remain open in these situations
  - It was also suggested that the incident debrief include lessons learned
  - Diversion routes have been identified but getting information to motorists is difficult
- Event Management: FSU football games, FAMU homecoming
  - Consistency with the event management plan is key; ensure that everyone involved knows the plan
  - The plans change annually and there should be better coordination with traffic operations on the event management plans

- Discussion on the TMC, transit, parking, bicycle, and pedestrian scenarios were tabled due to time.

Needs Discussion

- W. Bryan provided a breakdown of the projects funded under the Capital Improvement. He also presented a wishlist of future projects, including but not limited to:
  - Connected vehicles: The City is currently part of the SPAT challenge. 22 intersections are included and primed for connected vehicles with DSRC radios.
  - Transit Signal Priority: Monroe Street corridor would be a prime location for TSP.
  - Trailblazers: permanent wayfinding DMS to be used as part of diversion routes in the future.
- Preliminary transit needs were identified related to the Seminole Express. There are thoughts to making the Seminole Express an Automated Vehicle Transit Line. The first step is the replacement of the vehicles with all electric vehicles first.

Visioning

N. Smusz-Mengelkoch presented the vision statement for the City of Tallahassee as well as other key terms to generate dialogue on the potential vision for the ITS Master Plan. Key discussion points are highlighted below:

- J. Hollingsworth noted that the City has a lot of data but it is typically not in a format that can easily be shared with others. Which presents the question: how do we use resources to get to this point (keywords: data sharing/dissemination, data dashboard is on the wishlist)
- Developing an ITS working group would be beneficial that meets twice a year (keywords: collaboration)
- R. Allen suggested to keep track of not only how well the system is running, but what the benefit of having this system is. Suggested performance measures included: safety, mobility, benefit/cost, incident management, non-recurring congestion. The needs for data sharing and data dashboards were identified (keywords: streamline, effective, efficient)
- Evacuation route along 319

Next Steps

- Follow up on any outstanding information requests
- Finalize existing conditions summary technical memorandum
- Assess operational needs based on stakeholder input

Action Items

The action items identified during the meeting are summarized in the table below.

Kimley»Horn

Action Item	Responsible Party	Status
Reach out to additional stakeholders	Kimley-Horn	Pending
Set a follow-up meeting with Transit IT	Kimley-Horn	Pending
Develop draft of existing conditions technical memorandum	Kimley-Horn	Ongoing
Provide Wish List Items to Kimley-Horn	City of Tallahassee	Complete

Kimley»Horn

CITY OF TALLAHASSEE

SIGN-IN SHEET

Description:	**ITS Master Plan Stakeholder Meeting**
Date & Time:	**May 9, 2018 1:00PM**
Location:	**Tallahassee RTMC**

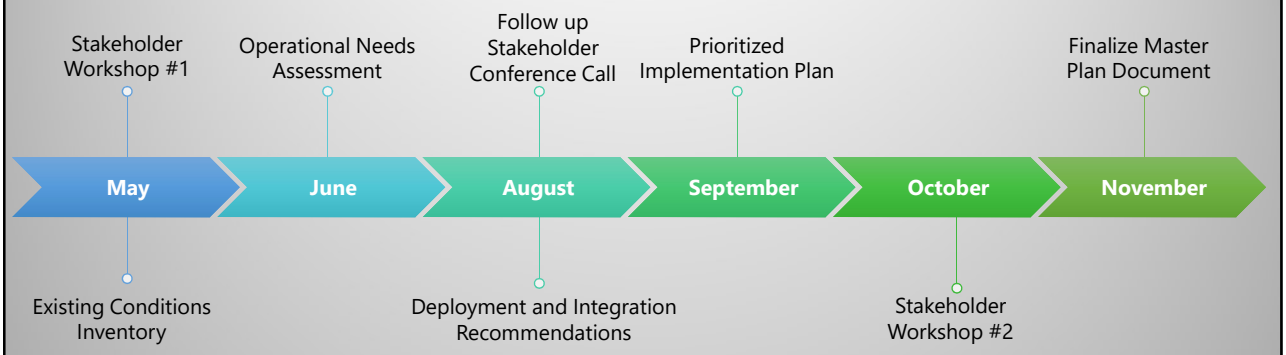
Why Are We Here?

The goal of this plan is to develop a comprehensive roadmap for planning, implementation, operation, and maintenance of ITS and ITS communications assets. It will enable the City of Tallahassee to evolve the current system to one that will meet the mobility, safety, and quality of life needs of the City.



CITY OF TALLAHASSEE

Today's Goal

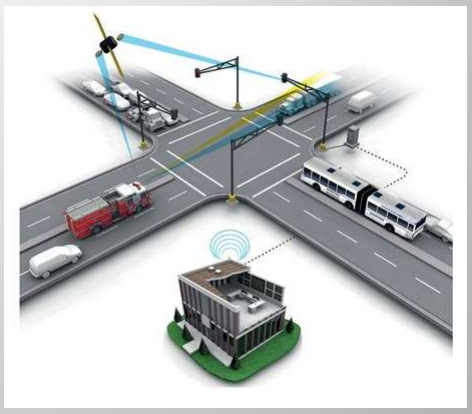
- Project Scope and Schedule
- Existing Inventory
- Operational Scenarios / Needs Discussion
- Visioning

CITY OF TALLAHASSEE

Tentative Schedule

CITY OF TALLAHASSEE

Existing Conditions



- Traffic Infrastructure
  - Traffic Signals: 357
  - System detectors: ~ 400
  - CCTV Cameras:
    - 97 City
    - 28 FMS
  - Dynamic Message Signs: 9
  - City Bluetooth Devices: 80
  - FMS MVDS: 36
  - City UPS: 98
  - FMS UPS: 19

CITY OF TALLAHASSEE

Existing Conditions

- Communications Infrastructure
  - ~190 miles of fiber
  - 24 cell modems on a Verizon VPN tunnel
  - Center-to-center communications
    - Chipley TMC
    - FDOT Central Office
- Transit
  - Transit Signal Priority
    - Corridors
    - Routes

CITY OF TALLAHASSEE

Capital Improvement Program

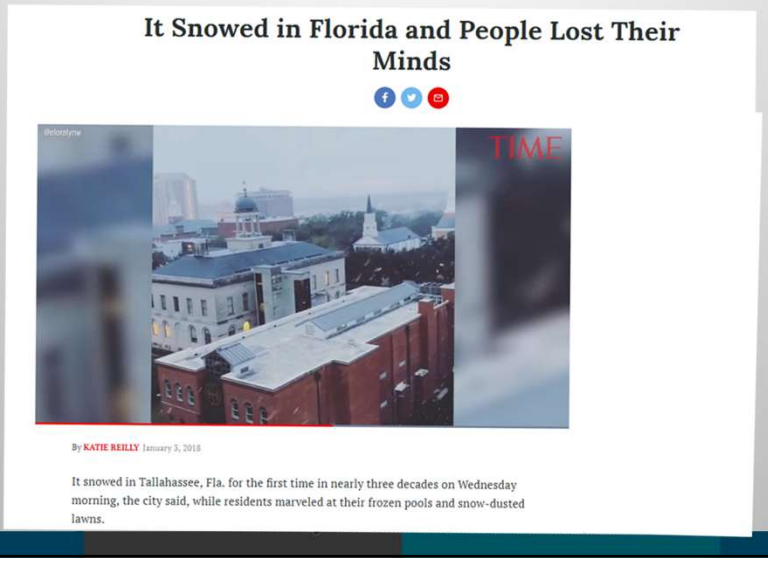
Project Name	Five Year Total	FY 2018	FY 2019	FY 2020	FY 2021	FY 2022
Camera Replacement	$ 300,000	$ 100,000	$ 100,000	$ 100,000	$ -	$ -
Intersection Detection System	$ 220,000	$ 44,000	$ 44,000	$ 44,000	$ 44,000	$ 44,000
Minor Intersection Safety Mods	$ 1,125,000	$ 225,000	$ 225,000	$ 225,000	$ 225,000	$ 225,000
Sustainable Traffic Signal Pil	$ 150,000	$ -	$ -	$ -	$ 150,000	$ -
TATMS Enhancements	$ 1,600,000	$ 300,000	$ 325,000	$ 325,000	$ 325,000	$ 325,000
Traffic A/R Master	$ 5,000,000	$ 1,000,000	$ 1,000,000	$ 1,000,000	$ 1,000,000	$ 1,000,000
Traffic Management Systems Improvements	$ 3,077,000	$ 615,000	$ 615,500	$ 615,500	$ 615,500	$ 615,500
Traffic Monitoring Travel Time	$ 308,000	$ 200,000	$ 27,000	$ 27,000	$ 27,000	$ 27,000
Traffic Preemption Equipment	$ 2,701,277	$ 2,701,277	$ -	$ -	$ -	$ -
Traffic Preemption Equipment	$ 295,600	$ 295,600	$ -	$ -	$ -	$ -
Traffic Signal Refurbishment	$ 1,250,000	$ 250,000	$ 250,000	$ 250,000	$ 250,000	$ 250,000
Turning Movement Count Program	$ 600,000	$ 150,000	$ 150,000	$ 150,000	$ 150,000	$ -
UPS Upgrade	$ 350,000	$ 350,000	$ -	$ -	$ -	$ -

Vision

Tallahassee, Florida, a city that remembers its past while focusing on the future – a vibrant capital city: fostering a strong sense of community, cherishing our beautiful natural environment, and ensuring economic opportunities for all our citizens.

---

safe, efficient, and reliable transportation network



strategically preparing for the future in a fiscally responsible manner

maximize the existing transportation system

innovative technologies and systems, interdepartmental coordination, and regional initiatives

CITY OF TALLAHASSEE

Operational Scenarios / Needs Discussion

It Snowed in Florida and People Lost Their Minds

TIME

By KATIE REILLY January 5, 2018

It snowed in Tallahassee, Fla. for the first time in nearly three decades on Wednesday morning, the city said, while residents marveled at their frozen pools and snow-dusted lawns.

Operational Scenarios / Needs Discussion

- Incident Management
  - Freeway and Arterial
    - closures due to ice
    - crashes
    - work zone

Appendix B
Project Cost Estimates

Appendix B - Unit Costs

Project ID	FDOT Pay Item *(if applicable)*	Description	Unit Price	Unit of Measure	Notes
TRAFF-01 TRAFF-02	0680 1112	System Control Equipment, Adaptive Signal Control System - NEMA, Furnish & Install	$ 37,800.00	EA	Cabinet Equipment
	0680 1113	System Control Equipment, Adaptive Signal Control System - NEMA, Furnish & Install	$ 8,100.00	EA	Above Ground Equipment
TRAFF-03	0660 5 13	Vehicle Detection System- Wireless Magnetometer, Furnish & Install	$ 1,104.95	EA	In Road Equipment
	0660 5 51	Vehicle Detection System- Wireless Magnetometer, Furnish & Install	$ 980.85	EA	Cabinet Equipment
TRAFF-04 TRAFF-05	0641 3163	Concrete CCTV Pole, Furnish & Install, with Lowering Device	$ 22,510.37	EA	This cost is for a 63 foot pole with lowering device.
	0682 1113	ITS CCTV Camera, Furnish & Install, Dome Enclosed Pressurized	$ 5,466.82	EA	Pan, Tilt, Zoom (PTZ), Internet Protocol, High Definition
TRAFF-06		Trailer Mounted Portable CCTV Camera Assembly	$ 7,438.37		Average of four projects https://www.itscosts.its.dot.gov/ITS/benecost.nsf/0/2CADC1F0755DF9628525814D00566292?OpenDocument&Query=Home https://www.itscosts.its.dot.gov/ITS/benecost.nsf/0/50B6323A1928CFBA8525814D00559040?OpenDocument&Query=Home https://www.itscosts.its.dot.gov/ITS/benecost.nsf/0/444B9793EF1BCBD78525814D0054ABB9?OpenDocument&Query=Home https://www.itscosts.its.dot.gov/ITS/benecost.nsf/0/CEAAEE930263E3A88525814D0053B84B?OpenDocument&Query=Home
TRAFF-07	0650 1 60	Vehicular Traffic Signal, Remove, Poles to Remain	$ 100.68	EA	
	0650 1 15	Vehicular Traffic Signal, Furnish & Install - Aluminum, 3 Section 2-4 ways	$ 1,487.95	EA	
	0650 1 17	Vehicular Traffic Signal, Furnish & Install - Aluminum, 4 Section, 2-4 ways	$ 3,430.00	EA	
	0650 1 19	Vehicular Traffic Signal, Furnish & Install - Aluminum, 5 Section-cluster, 1 way	$ 1,594.07	EA	
TRAFF-08 TRAFF-09		Bluetooth readers equipped with GPS and cellular communications	$ 5,000.00	EA	https://www.itsbenefits.its.dot.gov/ITS/benecost.nsf/0/E6936952DD735F8385257D9A006E2792?OpenDocument&Query=Home
		Bluetooth travel time detection	$ 8,000.00	EA	https://www.itsbenefits.its.dot.gov/ITS/benecost.nsf/0/77D2A8A6E739E12585257D7300654F00?OpenDocument&Query=Home
TRAFF-10	0676 2143	ITS Cabinet, Furnish & Install, Base, 334	$ 12,000.00	EA	New cabinets will be Advanced Traffic Controller (ATC) high density cabinets with additional space for ITS devices.
	0676 2600	ITS Cabinet - Removal	$ 247.03	EA	
TRAFF-11	0684 1 1	Managed Field Ethernet Switch, Furnish & Install	$ 3,523.39	EA	
TRAFF-12		Equipment Cost	$ 7,450.00	EA	Source: https://www.itscosts.its.dot.gov/ITS/benecost.nsf/SummID/SC2014-00325?OpenDocument&Query=Home
		Installation Cost	$ 3,550.00	EA	
		Planning and Design Cost	$ 6,650.00	EA	
		Average Total Cost	$ 17,650.00	EA	
TRAFF-13	0682 1600	ITS CCTV Camera, Remove and Disposal	$ 350.05	EA	
	0682 1113	ITS CCTV Camera, Furnish & Install, Dome Enclosed Pressurized	$ 5,466.82	EA	Pan, Tilt, Zoom (PTZ), Internet Protocol, High Definition
TRANS-01	0663 1121	Signal Priority and Preemption System, Furnish & Install, GPS	$ 6,049.78	EA	Cabinet Electronics
	0663 1122	Signal Priority and Preemption System, Furnish & Install, GPS, Detector	$ 5,291.77	EA	
TRAV-02	0700 8135	Front Access Dynamic Message Sign, Furnish & Install, Full Color, 51-100 ft^2	$ 67,348.47	EA	Furnish & Install with Uninterruptible Power Supply (UPS)
	0700 10122	Dynamic Message Sign Support Structure, Cantilever, 21-30 FT	$ 52,500.00	EA	
	0700 7111	Dynamic Message Sign- Embedded, Furnish & Install, Monochrome, 12-20 ft^2	$ 21,397.00	EA	
	0700 1 12	Single Post Sign, Furnish & Install Ground Mount, 12-20 ft^2	$ 1,160.74	EA	
BIKE-01		Bicycle Detection	$ 2,680.00		Source: http://pedbikesafe.org/bikesafe/countermeasures_detail.cfm?CM_NUM=36
			$ 7,730.00	per lane	https://activelivingresearch.org/sites/activelivingresearch.org/files/Dill_Bicycle_Facility_Cost_June2013.pdf
COMM-01	0633 1123	Fiber Optic Cable, Furnish & Install, Underground, 49-96	$ 2.61	LF	
	0633 1124	Fiber Optic Cable, Furnish & Install, Underground, 97-144	$ 2.82	LF	
	0630 2 11	Conduit, Furnish & Install, Open Trench	$ 6.50	LF	
	0630 2 12	Conduit, Furnish & Install, Directional Bore	$ 18.89	LF	
	0633 3 11	Fiber Optic Connection Hardware, Splice Enclosure	$ 802.79	EA	
	0633 3 15	Fiber Optic Connection Hardware, Patch Panel, Preterminated	$ 1,363.33	EA

Appendix B - Estimated Project Costs

Project ID	Project Name	Component 1		Quantity	Component 2		Capital Quantity
TRAFF-01	Adaptive Traffic Signal Control (US 27)	Cabinet Equip	$ 37,800.00	14	Above Ground Equip	$ 8,100.00	14
TRAFF-02	Adaptive Traffic Signal Control (US 90)	Cabinet Equip	$ 37,800.00	18	Above Ground Equip	$ 8,100.00	18
TRAFF-03	System Detectors	In Road Equip	$ 1,104.95	30	Cabinet Equip	$ 980.85	30
TRAFF-04	CCTV Cameras - Phase 1	CCTV Camera	$ 5,466.82	22			
TRAFF-05	CCTV Cameras - Phase 2	CCTV Camera	$ 5,466.82	13			
TRAFF-06	Smart Work Zones	Trailer Mounted Cam	$ 7,438.37	1			
TRAFF-07	FYA Upgrades Pilot	5 Section Signal Head	$ 1,594.07	40	Signal Removal	$ 100.68	40
TRAFF-08	Travel Time Reliability System - Phase 1	Bluetooth Reader	$ 8,000.00	16			
TRAFF-09	Travel Time Reliability System - Phase 2	Bluetooth Reader	$ 8,000.00	10			
TRAFF-10	Cabinet Upgrades	Cabinet	$ 12,000.00	357	Cabinet Removal	$ 247.03	357
TRAFF-11	Managed Field Ethernet Switch Replacement	Ethernet Switch	$ 3,523.39	357			
TRAFF-12	Connected Vehicle Infrastructure	DSRC Deployment	$ 17,650.00	28			
TRAFF-13	CCTV Camera Upgrade	CCTV Camera	$ 5,466.82	97	Camera Removal	$ 350.05	97
TRANS-01	Transit Signal Priority	TSP Cabinet Electronics	$ 6,049.78	20	Detector	$ 5,291.77	20
TRAV-01	Website Connectivity	Website Connectivity	$ 100,000.00	1			
TRAV-02	I-10 Trailblazers	Front Access DMS	$ 67,348.47	5	Support Structure	$ 52,500.00	5
PERF-01	ATSPM Dashboard/Performance Monitoring	Dashboard Subscription	$ 70,000.00	1			
BIKE-01	Bicycle Detection	Bicycle Detection	$ 7,730.00	4			
TMC-01	Traffic Signal Management Plan	Traffic Signal Man. Plan	$50,000	1			
COMM-01	Network Architecture	Fiber, 97-144 count	$ 2.82	210,936	Conduit Install	$ 18.89	210,936

Appendix B - Estimated Project Costs

Project ID	Project Name	Component 3		Quantity	Component 4		Quantity	Subtotal
TRAFF-01	Adaptive Traffic Signal Control (US 27)							$ 642,600.00
TRAFF-02	Adaptive Traffic Signal Control (US 90)							$ 826,200.00
TRAFF-03	System Detectors							$ 62,574.00
TRAFF-04	CCTV Cameras - Phase 1							$ 120,270.04
TRAFF-05	CCTV Cameras - Phase 2							$ 71,068.66
TRAFF-06	Smart Work Zones							$ 7,438.37
TRAFF-07	FYA Upgrades Pilot							$ 67,790.00
TRAFF-08	Travel Time Reliability System - Phase 1							$ 128,000.00
TRAFF-09	Travel Time Reliability System - Phase 2							$ 80,000.00
TRAFF-10	Cabinet Upgrades							$ 4,372,189.71
TRAFF-11	Managed Field Ethernet Switch Replacement							$ 1,257,850.23
TRAFF-12	Connected Vehicle Infrastructure							$ 494,200.00
TRAFF-13	CCTV Camera Upgrade							$ 564,236.39
TRANS-01	Transit Signal Priority							$ 226,831.00
TRAV-01	Website Connectivity							$ 100,000.00
TRAV-02	I-10 Trailblazers	Embedded DMS	$ 21,397.00	11	Single Post Sign	$ 1,160.74	11	$ 847,377.49

Appendix B - Estimated Project Costs

Project ID	Project Name	Assumptions
TRAFF-01	Adaptive Traffic Signal Control (US 27)	
TRAFF-02	Adaptive Traffic Signal Control (US 90)	
TRAFF-03	System Detectors	assumed wireless magnetometer detection
TRAFF-04	CCTV Cameras - Phase 1	
TRAFF-05	CCTV Cameras - Phase 2	
TRAFF-06	Smart Work Zones	
TRAFF-07	FYA Upgrades Pilot	for pilot project - assumed 20 locations replacing 5 section head for two approaches
TRAFF-08	Travel Time Reliability System - Phase 1	
TRAFF-09	Travel Time Reliability System - Phase 2	
TRAFF-10	Cabinet Upgrades	assumed deployment at all signalized intersections
TRAFF-11	Managed Field Ethernet Switch Replacement	assumed deployment at all signalized intersections
TRAFF-12	Connected Vehicle Infrastructure	
TRAFF-13	CCTV Camera Upgrade	
TRANS-01	Transit Signal Priority	current route chosen for TSP passes through 20 intersections
TRAV-01	Website Connectivity	cost could range from $20,000 to $500,000 depending on features and functionality
TRAV-02	I-10 Trailblazers	quantities based on preliminary locations identified in preliminary planning
PERF-01	ATSPM Dashboard/Performance Monitoring	
BIKE-01	Bicycle Detection	
TMC-01	Traffic Signal Management Plan	cost estimated based on similar documents previously completed
COMM-01	Network Architecture	40 miles of fiber being proposed; does not include cost of hubs

COMMUNITY AUDIT

Photo credit - Leon County

Photo credit - City of Tallahassee

INTRODUCTION

This section of the Community Conditions Report represents the baseline data and analysis for the land use element of the Comprehensive Plan, the assessment of public spaces, and community prosperity.

LAND USE AND DEVELOPMENT

In 2023, Leon County was the 23rd largest county in Florida, out of 67, with 297,369 residents. Due to its central location in northern Florida, regional draw, and growth in the employment and service sectors, it is expected that the County will experience moderate population growth through 2050.

In the 1940s, growth was primarily focused around downtown, with a northern limit near Tharpe Street and a southern extent of E. Magnolia Drive. By the 1950s, development started to expand outward from downtown, including the growth of the FSU campus and expanded growth south around E. Magnolia Drive. Suburban development patterns began to take hold post 1950s, and by 1970 development was seen by Lake Jackson to the northwest, Woodville to the south, at and north of Killearn. Today, many areas around Leon County are shielded from future development by parks, conservation areas, and national and state forests. While this section reviews the existing development patterns, it is also the foundation for aligning changes to the way land is used, and where growth should occur, into the future.

Land use and development patterns spatially depict how development has occurred over time, and shape how development will occur into the future.

Land use and development patterns spatially depict how development has occurred over time, and shape how development will occur into the future.

This section reviews development in various scales including:

- **Leon County** includes all of the land within the County limits, including that within the City of Tallahassee.
- **Unincorporated Leon County** includes the lands within Leon County that are not located within the municipal limits of Tallahassee.
- **The Urban Service Area (USA)** includes a majority of the land within the City of Tallahassee, and portions of unincorporated Leon County.
- **City of Tallahassee** includes the lands within the incorporated City limits and recognizes that there are potential growth areas for infill and redevelopment.
- **The Multimodal Transportation District (MMTD)** includes the area generally around downtown, the universities, midtown, and surrounding urban areas.

These scales of development allow a comparison based on different areas of the County and where different development patterns may be predominant based on a variety of factors. The development patterns that are looked at include:

- **Existing Land Use (2023)** which reviews how parcels of land are currently used and taxed by the property appraiser's office. There are instances where the existing land use may not directly align with either the zoning or future land use of a parcel.
- **Existing Zoning (2023)** identifies the designated zoning districts for the parcels of land within the City and County. This defines the development characteristics of a parcel of land.
- **Existing Future Land Use Designations (2023)** reviews how each parcel should be used in the future based on the Comprehensive Plan.
- **Vacant and Under-developed parcels (2023)** analyzes where vacant and under-utilized areas are located, and which can highlight potential growth areas for infill and redevelopment.

The data was provided by the TLC GIS Department in October 2023, and projected using NAD 1983 HARN StatePlane Florida North FIPS 0903 (US Feet). The Value Per Acre analysis and Vacant and Under-Developed Parcels utilize 2022 parcel data from the property appraiser to determine property values and uses.

CONSERVATION AND ENVIRONMENTAL LANDS

Conservation and environmentally sensitive lands are critical community resources to support long-term sustainability and resilience. These areas can be used to support water quality, protect the native landscape and habitats, and conserve the environment for generations to come.

The Comprehensive Plan includes policies, both within the Land Use and Conservation Elements, to support the long-term quality and delineation of wetlands and other environmentally sensitive lands. Conservation of natural and open areas also enhances recreation and exploration opportunities for residents and visitors.

Leon County includes considerable areas dedicated for conservation and environmental easements, including state and national parks such as Apalachicola National Forest, Lake Talquin State Forest, Plank Road State Forest, Natural Bridge State Park, Kirk Edwards Wildlife Area, and large conservation areas managed by other private and public partners such as Tall Timbers and the Florida Land Trust.

These conservation areas are important for managing growth and protecting regulated conservation and preserve features, as they provide a physical buffer around areas that are designated as environmental areas. Conservation policies can limit "leapfrog" development by limiting the feasibility of expanding infrastructure (such as water and sewer) to areas beyond the identified conservation areas.

The City and County GIS Department maintains a database of environmental easements, which include drainage, conservation, and dual easements. While the database may not include all recorded easements, it provides a snapshot of total recorded conservation areas in Tallahassee and Leon County today. Many of the large conservation areas are on the north side of Leon County.

Wetlands are areas of land that are either fully or partially covered in water during the year and can vary in hydrology, vegetation, and fauna depending on region. These areas provide diverse ecosystems for native and local flora and fauna. They are an important environmental resource for sustainability and environmental protection. The National Wetland Inventory (NWI) identifies that there are over 75,600

TREE CANOPY & NATIONAL PARKS

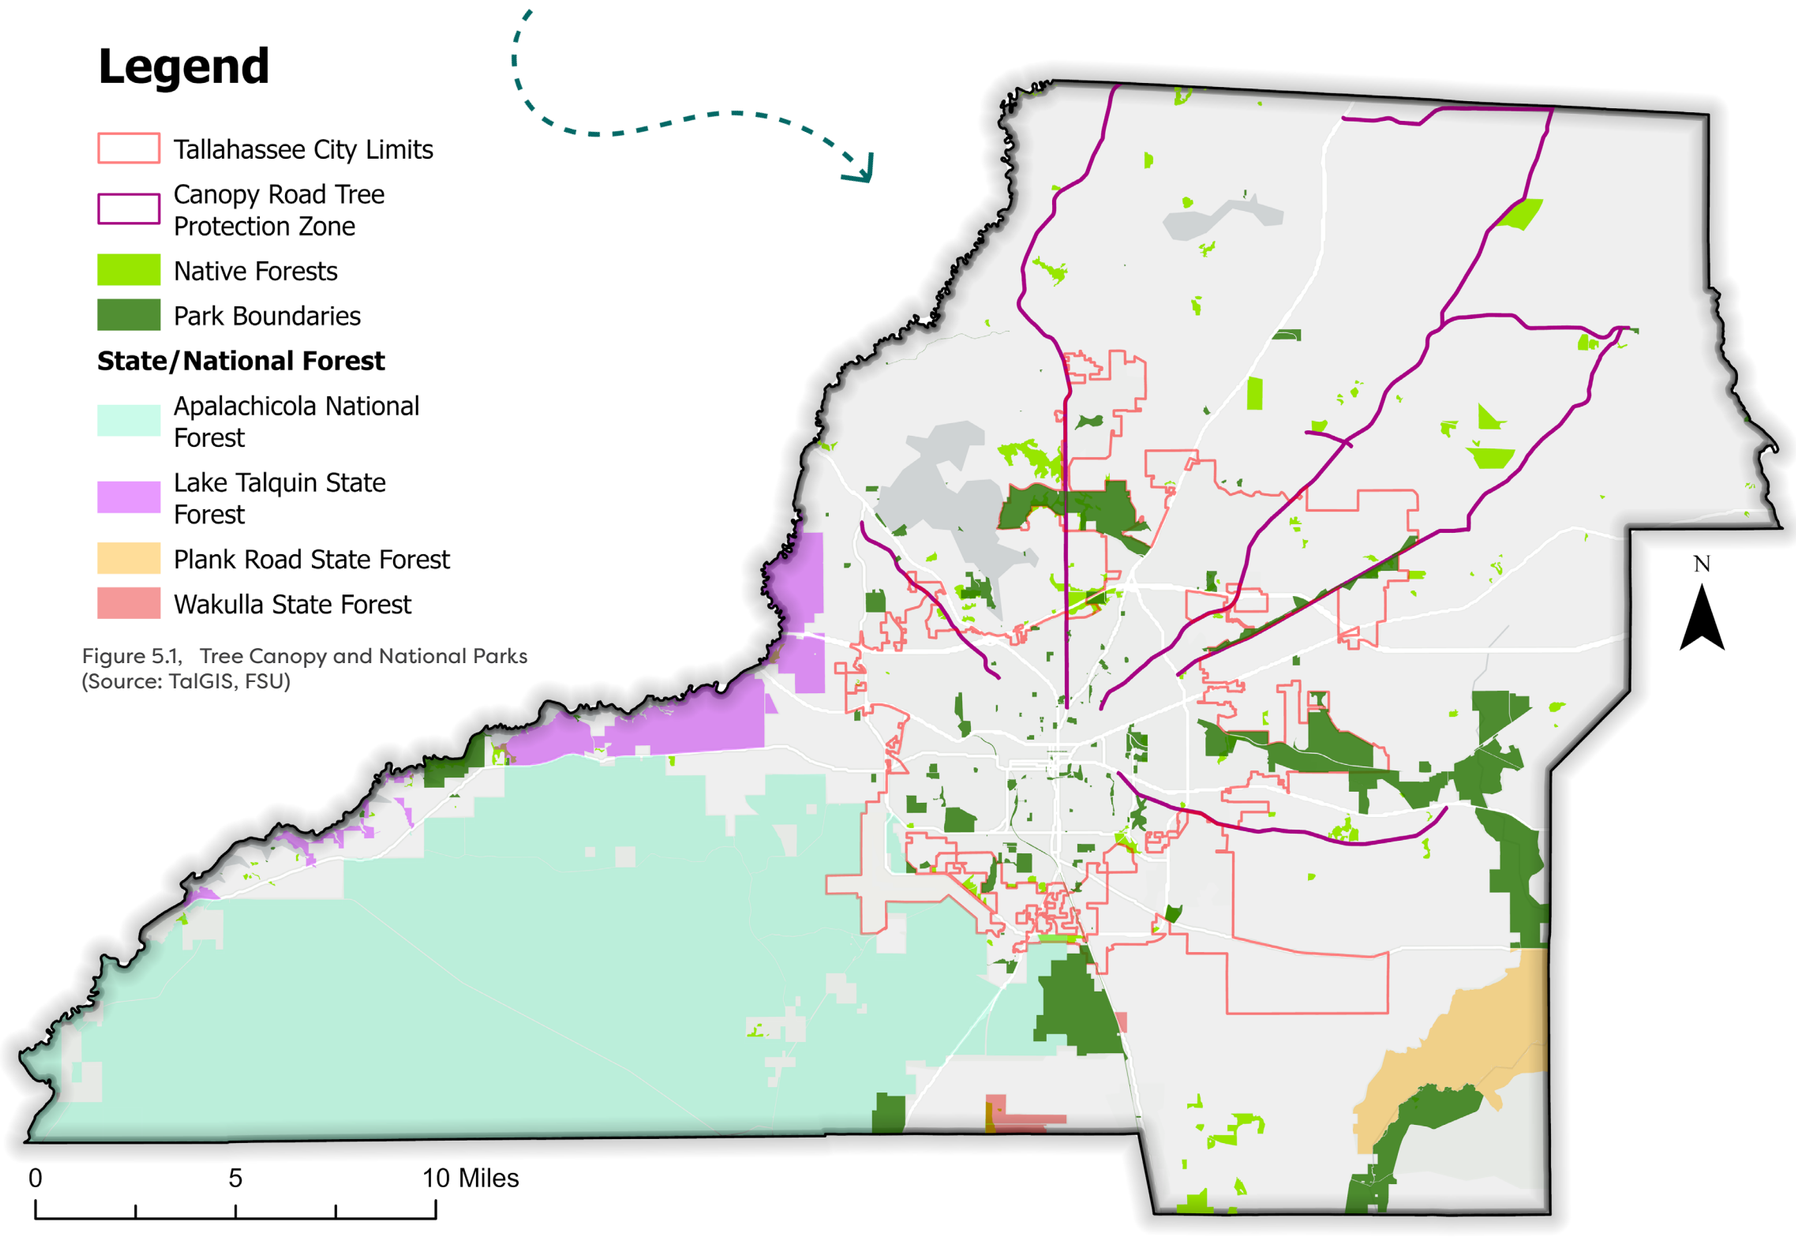

Figure 5.1, Tree Canopy and National Parks
(Source: TalGIS, FSU)

EASEMENTS

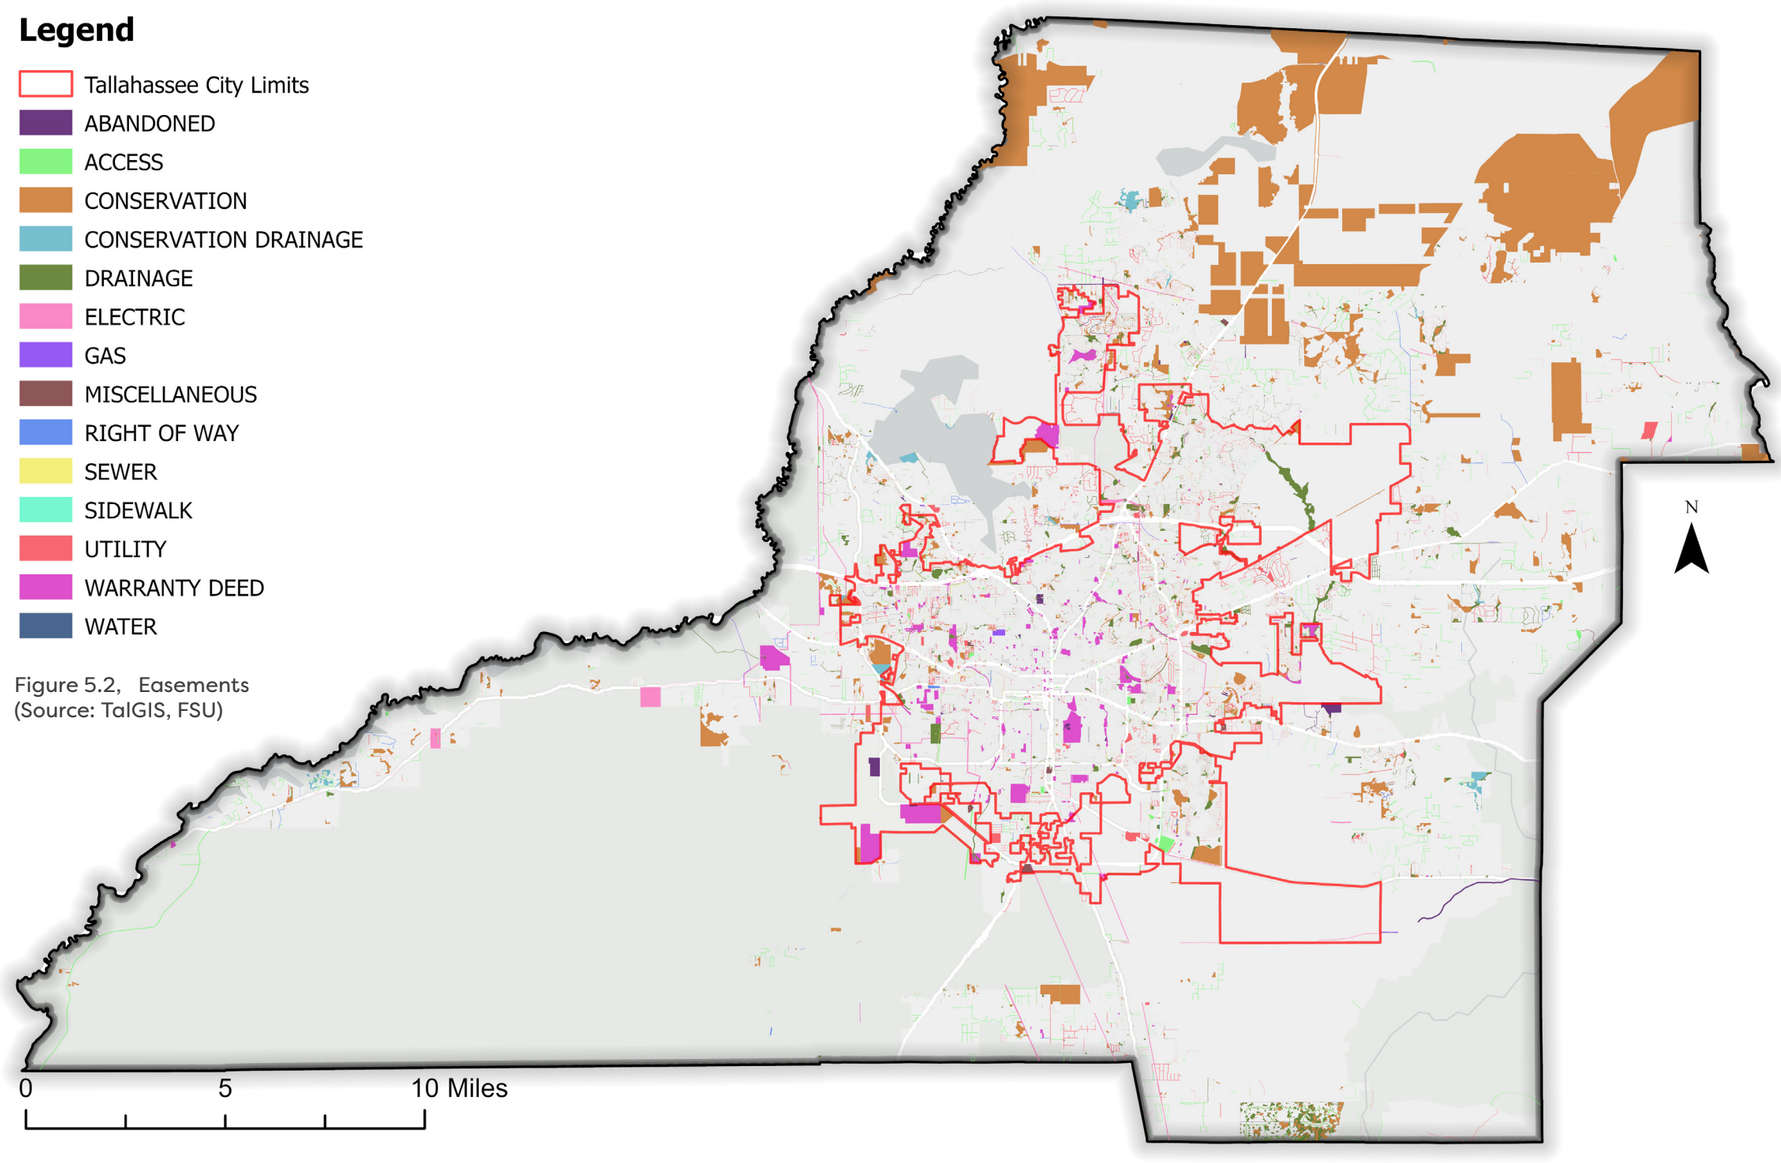

Figure 5.2, Easements
(Source: TalGIS, FSU)

acres of wetlands in Leon County. This is approximately 16.8 percent of the total land area of Leon County, inclusive of City limits. Within the City of Tallahassee, there are approximately 6,036 acres of wetlands or nine percent of the land area.

In addition to wetlands, there are significant water bodies in Leon County, including Lake Iamonia, Lake Jackson, Lake Lafayette, Lake Miccosukee, Lake Munson, Bird Sink Drainage Basin, Lost Creek Drainage Basin, Ochlockonee River Drainage Basin, Patty Sink Drainage Basin, and St. Marks River Drainage Basin, as well as miles of smaller creeks and streams. A primary spring protection zone exists on the south side of Leon County. These water bodies provide a range of benefits for residents of both the area and the state, including recreation opportunities, supporting native vegetation, and recharging aquifers for drinking water. Tallahassee and Leon County have used policies, guidance, and standards for the conservation of water bodies and protection of the natural environment. This includes landscaping standards, environmental regulations, stormwater maintenance, water reduction measures, and similar regulations to support the environment.

FEMA publishes flood maps, known as Flood Insurance Rate Maps (FIRM) to show areas at risk for flooding. FIRMs are used to determine where flood insurance is required. Areas delineated as "A" or "V" are areas that are high-risk for flooding. There are approximately 130,690 acres of flood zone "A" in Tallahassee and Leon County. Flood zones are shown in Figure 5.4. The City and County should use the FEMA Flood Zones to guide growth and development in a way that reduces the adverse impacts of flooding on the community. For example, there may be a determination to not construct public roads or expand water and sewer facilities in areas that frequently flood. For individual parcels of land, flood zone delineation can help determine where to build a building, and how the building should be constructed to limit flood impacts, including finished floor elevations (FFE). Floodplains can be used for open space and recreation areas as well as stormwater management facilities. These areas protect surrounding property values and improvements, provide residents with opportunities to experience nature, and contribute to the environmental quality of an area.

FLOOD ZONES

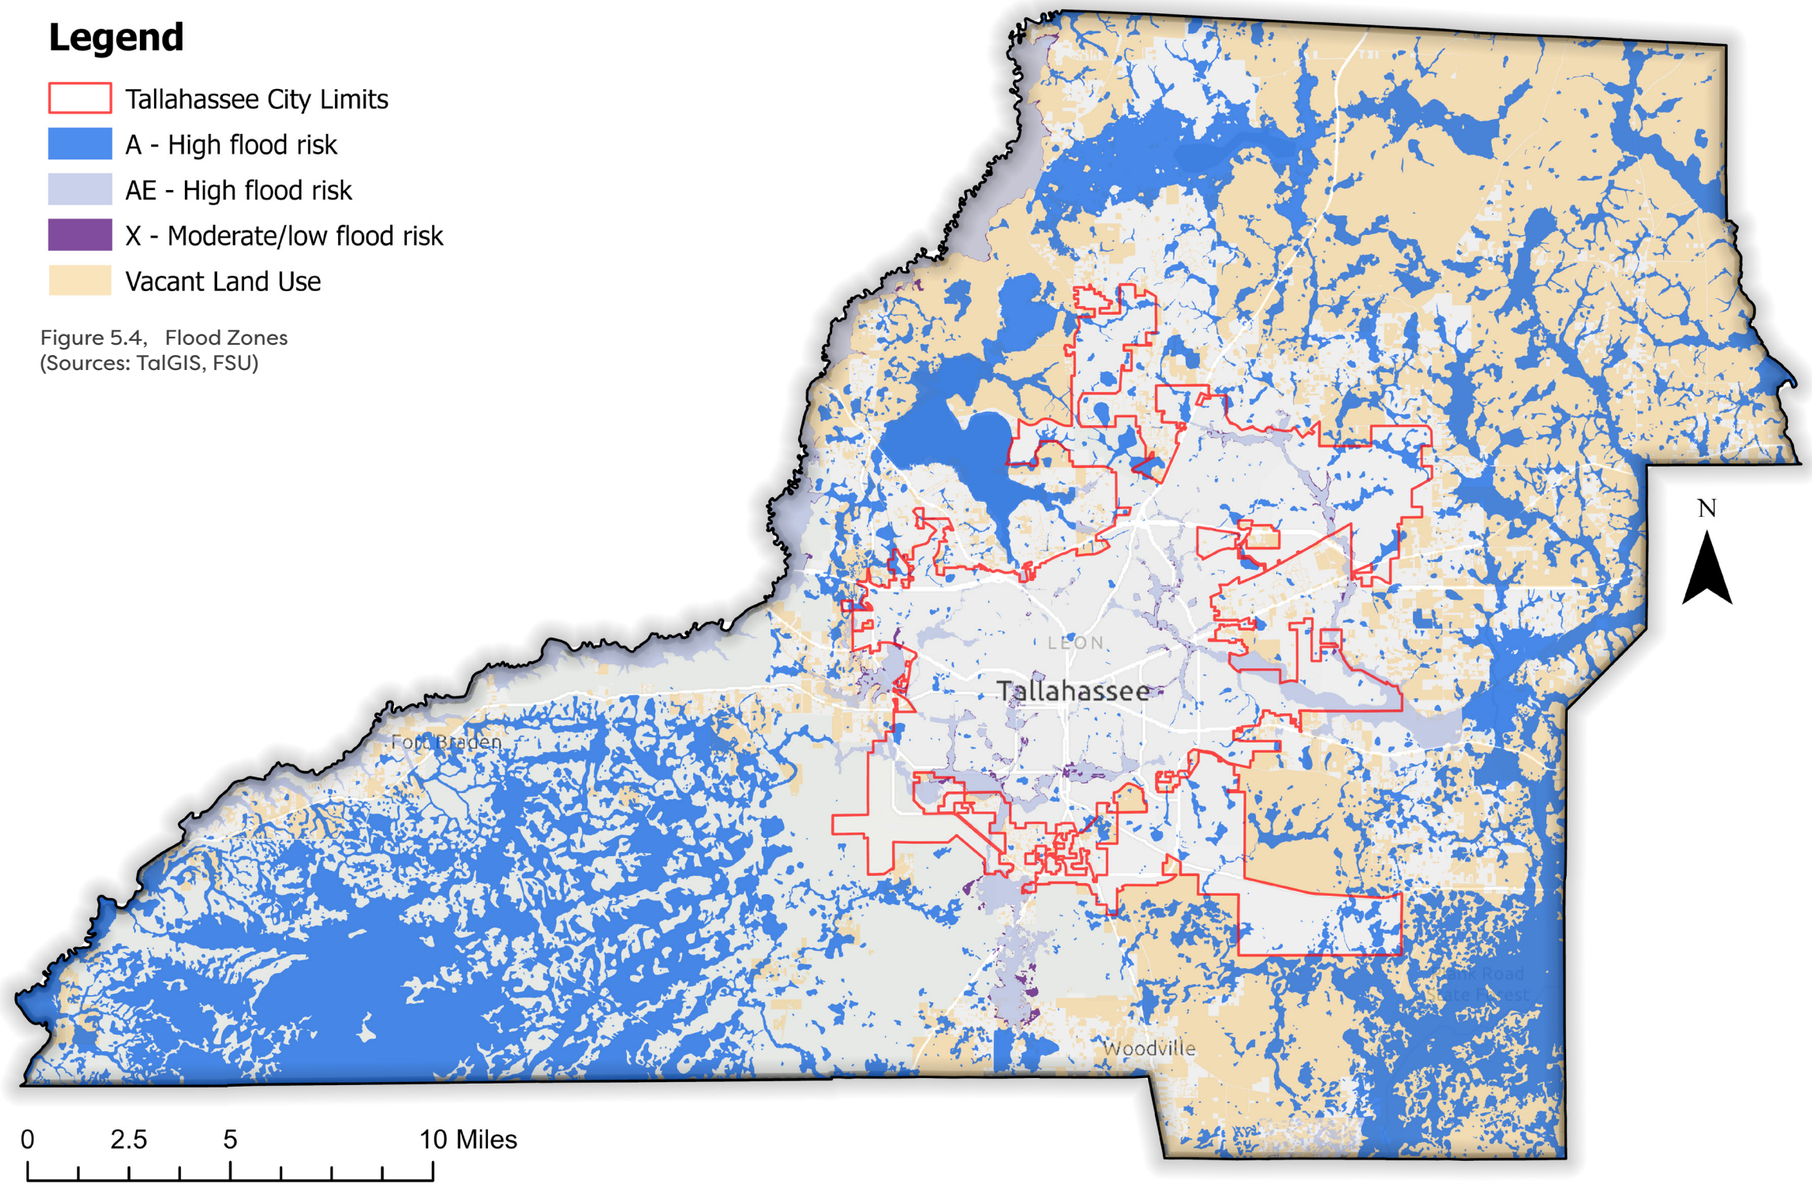

Figure 5.4, Flood Zones
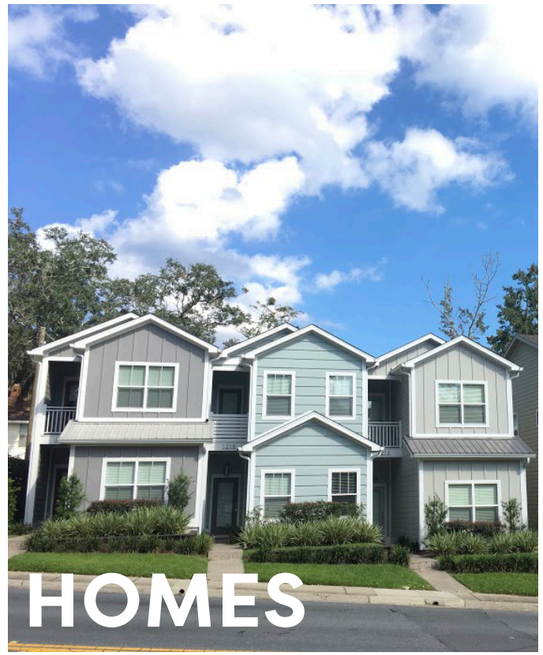
(Sources: TalGIS, FSU)

TALLAHASSEE – LEON COUNTY GREENWAYS MASTER PLAN

The Tallahassee-Leon County Greenways Master Plan was developed to facilitate new greenway systems and encourage connections throughout the County and protect, manage, and buffer environmentally sensitive areas such as floodplains. Safeguarding areas of historical and cultural significance as well as native plant and animal habitat in a time of rapid development helped promise a future with urban green spaces. The program also aimed to utilize the greenways to connect neighborhoods, schools, shopping, and offices through a system of shared use paths and trails. The 2013 update identifies approximately 139 miles of proposed trails across Tallahassee and unincorporated Leon County to add to the already expansive network.

The City of Tallahassee has a lush tree canopy that the City and its residents aim to protect it from development. Vibrant and healthy urban forests improve the vitality of a community's environment, economy, and social landscape. Trees assist with water and air pollution, reduce urban heat, and help with the prosperity of businesses and homeowners. The plan identifies goals to support and enhance the existing tree canopy.



COMMUNITY PROSPERITY

A community's success, or prosperity, is reliant upon a balance of core fundamentals such as social equity, attainable housing, labor force opportunities, higher education, healthcare, public services, and growth. The balance between them is symbiotic in that when there is an increase in need for one, most often, there is an increase in need for many of the others. When there is an influx of growth to a city, county or state, there are immediate needs that create an impact, yet resolutions may sometimes be long in the making. The City of Tallahassee and Leon County partner together in initiatives to address City/County concerns and involve the community to engage and work together to address challenges that need solutions.

Housing continues to be a challenge at a local level that is reflective of the national predicament with market rates rising with inflation and lending interest increases. Tallahassee has unique housing challenges as there are two large-scale universities and a community college within proximity to one another. This has added to the housing demand which is leading to an increase in off- campus student housing development. This has led to an increase in public services, multimodal transportation services and amenities, and more.

With an ever-growing student population, the need for off-campus housing to supplement campus dormitories has been increasing over time. Due to the transient nature of student populations, student housing developments operate in a way that differs from traditional housing developments. Developers who target student populations offer leases for single bedrooms within larger units rather than traditional unit leases.

Median rent in Tallahassee has been climbing over recent years from about $1,024 monthly in 2019 to about $1,147 in 2021 as shown in Figure 5.5. Multi-family housing developments in Tallahassee-Leon County are defined by having 20 Multi-family Dwelling Units or more (MF DUs +). As previously identified, developments that are intended to attract students

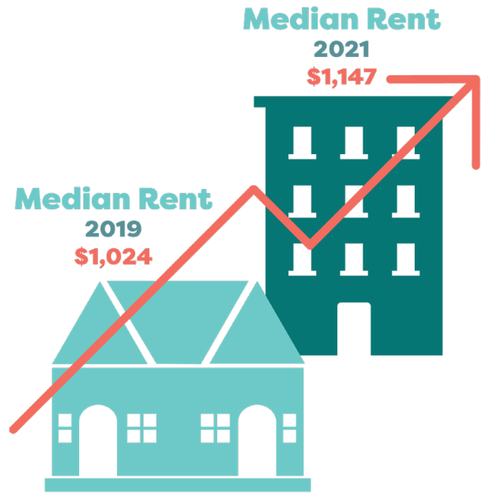


Figure 5.5, Median Rent

PLAN GREEN SPACES **RECOVERY**

typically offer leases that allow the rental of single bedrooms and access to shared spaces rather than the rental of an entire unit. While the market for multi-family housing is open and perhaps indistinguishable in some respects, students tend to find themselves drawn to student targeted housing due to amenities, lease flexibility and proximity to key locations such as commercial/retail outlets and school; however, that is starting to change. Students are gravitating to both the student targeted housing as well as market rate multi-family housing.

The lack of transportation can place households at risk for food security. 6.9 percent of occupied housing units in Leon County, do not own a vehicle. Based only on observation, Census tracts with more than 15 percent of households without a vehicle (2022 ACS5Y, Selected Housing Characteristics) are located within the 10-minute StarMetro walkshed to a transit stop. Therefore, it is suggested those households without a vehicle can access grocers (in this analysis, grocers includes both discount grocer, Dollar Tree, Dollar General, and regular grocers selling produce) via public transit Figure 5.7. However, a deeper analysis of food security in Leon County would need to be conducted to find the underlying cause and communities affected by it.

Parks and public spaces play a vital role in community life. Access to public green spaces and public services varies across racial and economic lines. Lack of access to disadvantaged communities reduces the opportunities for overall well-being. In city planning, the rule of thumb to determine access for public services is a quarter mile which is the average walking speed of 10 minutes.

For their 2029 Strategic Plan, the City of Tallahassee hopes to reach a target of 100 percent of its residents living within a 10-minute walk to a park or open space. Leon County has over 3,500 acres of community parks including state and national forest. The Trust for Public Lands provides a ParkScore® index for cities throughout the County identifying the percentage of residents who live within a 10-minute walk to a park with public access. Per the ParkScore ® index, 46 percent of residents within the City of Tallahassee have access to parks with 50 percent being of the Black race (TPL). By analyzing the StarMetro service area and the 10-minute walk, Leon County can identify gaps in the park system to allocate future investment to increase accessibility to those who are not within the 10-minute walk threshold.

ACCESSIBILITY

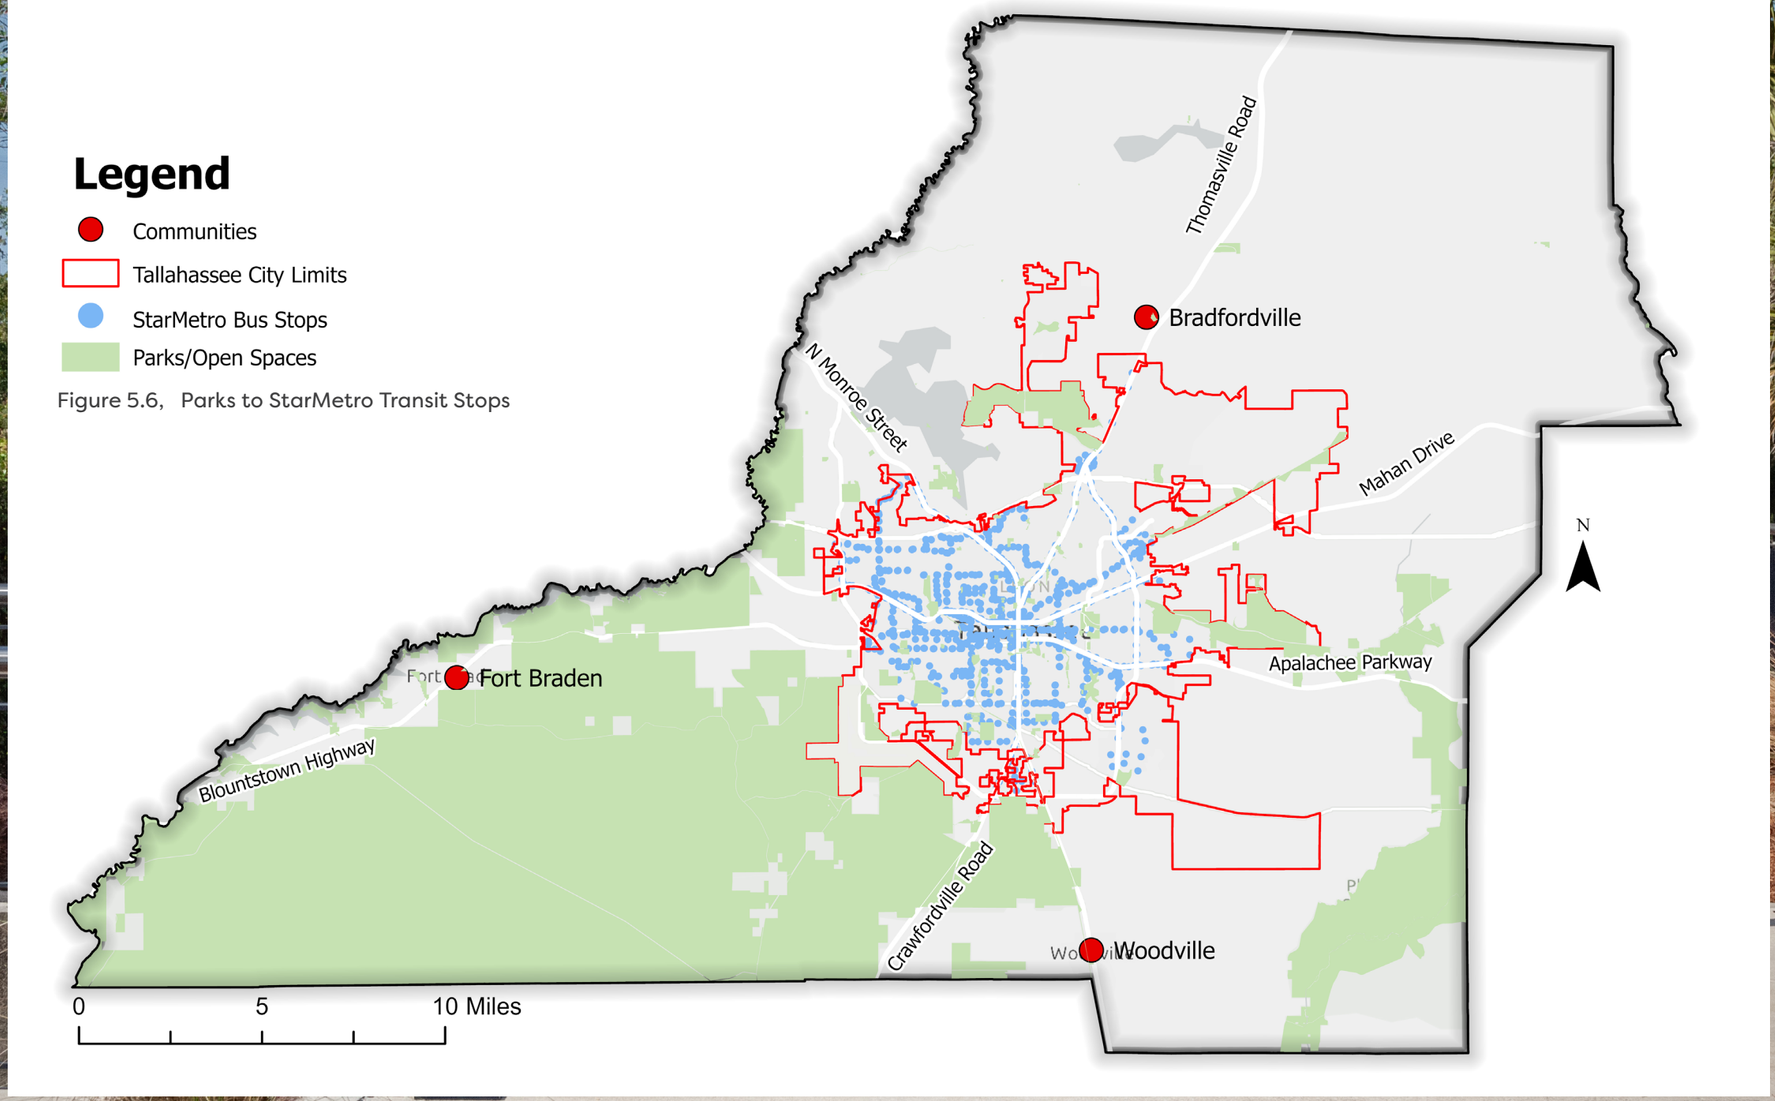

Figure 5.6, Parks to StarMetro Transit Stops

In considering additional information on this matter, other resources for livability, include the AARP Public Policy Institute's Livability Index. This initiative is intended to measure the quality of life in American communities across multiple dimensions including housing, transportation, neighborhood characteristics, environment, health, opportunity, and civic and social engagement. It uses the latest indicator data for each category of livability with in-depth insights into understanding the data with expanded details of methods and sources. Leon County's overall livability index score is 52 which is in the top half of communities in the United States. This score can be compared to other communities, and to provide additional information to members, policymakers, and advocates that may determine additional data gradients, adjust it based on preferences, and take actions based on preferences to improve community livability.

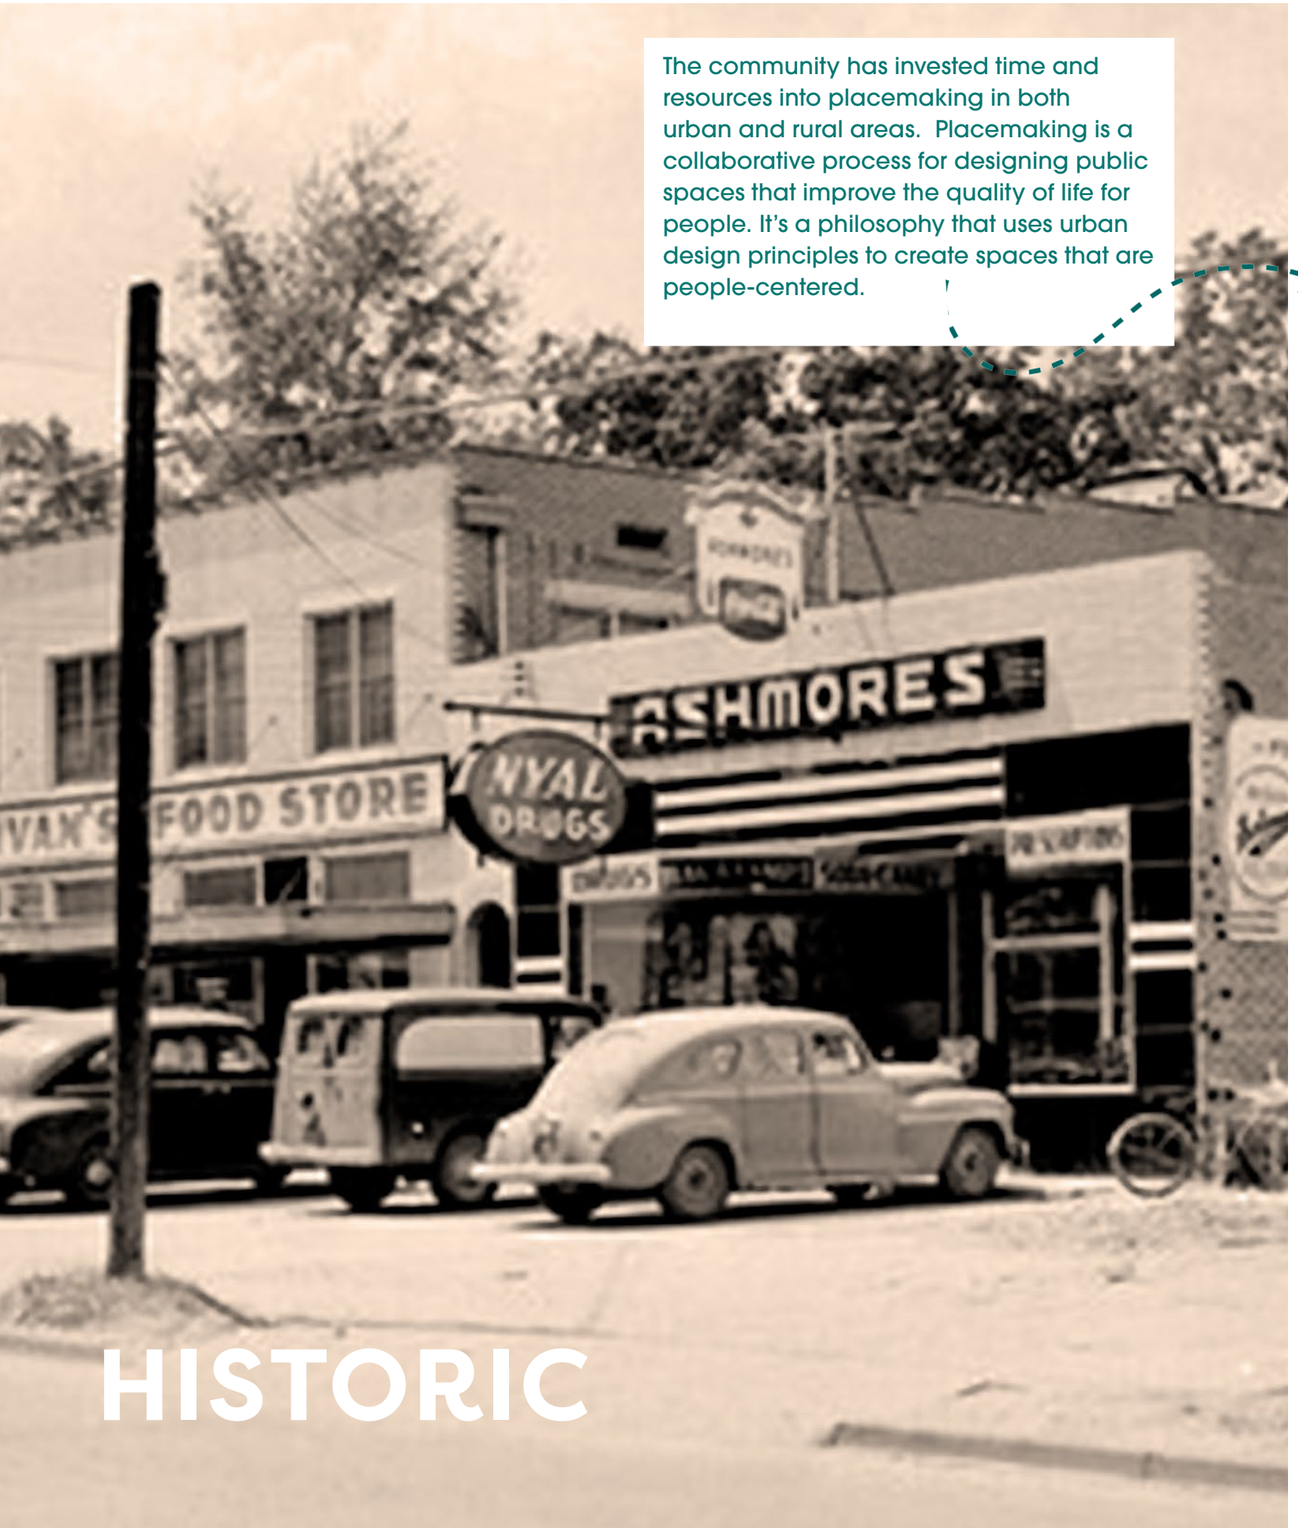
ECONOMIC DEVELOPMENT LEADERS

The State of Florida's capital city is Tallahassee which is home to its state legislature not to mention a multitude of employment hubs that serve the entire state of Florida. State agencies and administrations have their headquarters in Tallahassee which includes Florida Commerce, Trust for Historic Preservation, Department of Education, Department of Health, Department of Agriculture & Consumer Services, Business & Professional Regulation, Citrus, Environmental Protection, Department of Emergency Services, and the Department of Children & Families just to name a few. These agencies set the standards for all 67 counties throughout the state. Their presence dominates as the largest employers of the City.

Tallahassee has another significant employment hub, higher educational institutions. FSU, FAMU, and TSC are all located within the City limits of Tallahassee within less than a five-mile triangle from one another between West Tennessee Street, South Adams Street, and Pensacola Street. This concentration of employment is crucial to the vitality of the downtown area, its commercial and retail services and outer employment reliance. FSU provides jobs for over 15,000 employees, with FAMU providing over 2,000 jobs. In addition, Memorial Healthcare Incorporated sustains more than 5,000 employees.

EDUCATION LINKED WITH INDUSTRY SECTORS

Within the City of Tallahassee, there is a total of roughly 141,921 full-time employed persons of which approximately 89,000 commute to Tallahassee for employment. The home location of these commuters varies with more than 52 percent commuting from other locations outside of Florida cities close to Tallahassee and from surrounding bedroom counties. Almost 53,000 both live and work within the City, while the remaining 24,000+ live in the City but commute outside of Tallahassee for work. The working population is a reported 73,402 persons who are between the ages of 30 and 54 with 47.6 percent of them earning approximately $3,333 or more monthly.



Every year, FSU and FAMU have approximately a combined 13,000 students graduating with degrees. From those students, roughly 2,000 students stay within the area after graduation. From FSU, the top three degree educational programs enrolled in by students are biological science, psychology, and criminology. From FAMU, the top three degree educational programs enrolled in by students are social sciences, health services, and business & industry. The top trending career fields that graduate students emerge from and go into the labor force are public administration, educational services, healthcare/social assistance, and professional scientific and technical services. These leading career fields match similarly to the chosen top sectors within Leon County and Tallahassee. However, with a low retention rate of 15 percent, it can be assumed that these sectors have limited job capacities, which then leaves few graduates seeking employment opportunities elsewhere. As the administrations for the City and County, along with the state legislature, it is to be expected that public administration is the leading sector within both Leon County and the City of Tallahassee with more than 20 percent of the work force. Additionally, with the presence of FSU and FAMU enrolling annually more than 60,000 students combined creates a great need for services and growth. As such, education plays a key role in shaping the City and County. This means as the universities grow in population and expands in campus size, the greater the impact on the surrounding areas. The growth of the universities results in impacts on transportation, infrastructure, and economic revenue.

As of now, FAMU's Master Plan 2023 includes plans to expand the housing capacity on campus. Currently, the university has a total of 2,450 bed spaces in seven on-campus housing buildings. By the end of 2030, the university plans to increase the student bed spaces from 25 percent of student enrollment to 44 percent. This expansion of housing capacity would bring in additional students to the campus which would then have an influence on the work force on and surrounding the campus.

Table 5.1, Leading Employment Centers

LEAD

The community has invested time and resources into placemaking in both urban and rural areas. Placemaking is a collaborative process for designing public spaces that improve the quality of life for people. It's a philosophy that uses urban design principles to create spaces that are people-centered.

HISTORIC

PLACEMAKING

The Market District is located at the Thomasville Road interchange with I-10 and is a key gateway to Tallahassee. The area is near Maclay Gardens State Park which brings in many visitors. The district plans to develop semi-public spaces such as patios and plazas and some parcels of public property that could be used for future public spaces. The mixed-use district has a variety of businesses which can promote pedestrian activity with the addition of safety measures. The plan recommends areas for new sidewalk development, bicycle routes, and trail and bicycle connections. Additionally, adding gateways and signage will create a sense of place for visitors and add cohesion.

The Midtown area encompasses several subdistricts at the intersection of Monroe Street and Thomasville Road. This district is just north of downtown and is favorably located near many StarMetro routes. The area's historic urban form shapes it as a walkable, human-scaled district that is desirable to pedestrians and cyclists alike. The plan makes suggestions for improvement such as expanding the extensive tree canopy, improving traffic safety, and promoting local arts, culture and business.

The Monroe Adams Corridor Action Plan was initiated by the City Commission to create a sense of place for this area. The Action Plan was implemented to correct the damage done to walkability within the corridor from extensive automobile-oriented planning and implementation in the 20th century. The plan is organized into goals within three categories: Build Place, Promote Place, and Make Places Within.

Goal 1: Build Place, outlines ways to make streets safer and more comfortable for all users, improving aesthetics and encouraging urban infill.

Goal 2: Promote Place, highlights the importance of local businesses and the codes required to maintain and establish a business.

Goal 3: Make Places Within, focuses on initiating a Placemaking Project and using that project as a catalyst to promote more placemaking projects to the east-west streets in the corridor.

Frenchtown is a historic district located within the central heart of Tallahassee. Due to the development concerns from community members, the City Commission asked to create a placemaking study for the Frenchtown community. Through the placemaking study, a select number of goals were addressed.

Goal 1: Cultivate Community Character to Foster Long Term Viability, focuses on community involvement and how existing codes and policies can be altered to be more in-line with the community's vision.

Goal 2: Identify Community Enhancement Strategies, emphasizes the significance of relationships within the community and the improvement of the aesthetics of the neighborhood.

Goal 3: Enhance and Promote the Identity and History of Frenchtown, concentrates on activities for community engagement and the implementation of Frenchtown's history throughout the area by using art, placemaking strategies, and storytelling.

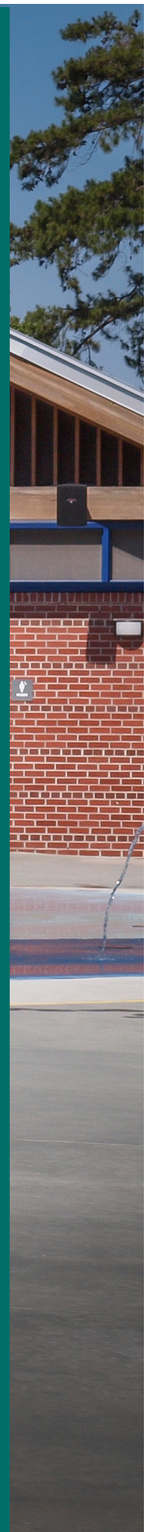
Goal 4: Improve Mobility, Connectivity, and Livability, points out strategies that can be implemented that would encourage pedestrian activity along the streets. The overall goal of this plan is to guide the enhancement of the Frenchtown community.

GOALS IMPROVEMENT PLACEMAKING

BEAUTIFICATION

The Tallahassee-Leon County Planning Department led a design charrette with the help of community members to create a plan for the North Monroe corridor. With the use of surveys, "share your thoughts boards," multiple discussions, and stakeholder interviews feedback was provided to the City regarding the multiple focal points of the community. A particular focus with regard to land use identified critical uses not allowed within the corridor. "This means that no new commercial and office uses are allowed to develop. It also creates limitations on what changes or redevelopments that owners can do to improve and enhance the appearance of their existing commercial buildings and properties" (North Monroe Charrette Report, February 2024).

Furthermore, existing businesses and residences developed prior to the adoption of the first Comprehensive Plan in 1990 are considered legally, non-conforming uses. "Property owners often have difficulty obtaining permitting for improvements to their properties. Financing can also be difficult to obtain for non-conforming properties. The result is that these properties may decline over time until they are no longer operable. Owners may sell or redevelop the property, but only in conformance with the Future Land Use Category. The unintended consequence is that properties remain stagnant and unimproved for extended periods of time, resulting in a declining aesthetic on the corridor" (Lake Protection Future Land Use Impacts: North Monroe Charrette Report, February 2024).



Common themes were pointed out throughout the design charrette that include the beautification of the corridor, improving pedestrian connectivity, the inclusion of safety features along the street, increasing accessibility to the public and natural amenities, and expanding mobility options. Recommendations for continued corridor improvement include: invest in public infrastructure; remove barriers to commercial property investment; identify opportunities to promote the unique sense of place; and enhance transit options.

EXISTING LAND USE

Existing land use refers to how a property is currently used. This valuation is important in showing how different uses are spatially located throughout the City. Table 5.2 illustrates the existing land use in tabular form, while Figures 5.8 and 5.9 graphically depict the existing land use. The existing land use acreages, derived from ArcGIS, are inclusive of environmental constraints. The total area excludes land area within public rights- of-way, so the total acreages are less than those found in the zoning and future land use tables in subsequent sections. Key findings related to existing land use include:

- Nearly a third of the land in Leon County is designated for open space, recreation, forests and state parks, and similar uses.
- While over 40 percent of the land is designated as “vacant,” a significant portion within the City limits is Welaunee and the Southside Sector Plan. In the unincorporated areas it includes much of the rural and agricultural lands.
- To promote infill and redevelopment, it will be important to focus on vacant land within the Urban Service Area (USA) boundary. This area includes future large-scale developments, as well as opportunities for smaller infill within residential areas and the redevelopment of aging commercial centers.
- Much of the residential land use is for single-family detached or mobile home, which illustrates that there is less diversity in the current housing stock. The MMTD accounts for a majority of the higher-density residential uses within the County, with over 2,000 acres dedicated to multi-family.

EXISTING LAND USE

FUTURE LAND USE DESIGNATIONS

Future Land Use (FLU) is outlined in the Comprehensive Plan to guide where, and how, future development occurs. FLU is regulated by state statue and should include the intent, densities, and intensities for each land use category. **Table 5.4, and Figure 5.11 and Figure 5.12,** respectively, show the tabular and depictions of future land uses in Tallahassee and Leon County today. Acreages were derived from ArcGIS and are inclusive of environmental constraints.

FUTURE LAND USE & ZONING RELATIONSHIP

Future land use guides which zoning districts can be applied spatially throughout a community. There may be multiple zoning districts allowed based on a future land use category. In a broader sense, the land uses are intended to be less specific, while the zoning district development regulations provide the details for how the given parcel of land must be developed. Table 5.5, below, shows which zoning districts (rows) may be compatible with the various existing future land use categories (columns) today. The land uses do not include those that include the residential preservation overlay, as the allowed zoning districts are the same as the base FLU category.

The number of zoning districts and future land use categories can lead to confusion in implementation of the comprehensive plan, inconsistencies in development patterns, and loss of community character. There are, in some cases, minimal differences in the land use categories, as well as within each zoning district. The update to the land use element explores modifications to the future land use categories to provide for more predictable development patterns, better organization and guidance in the categories, and easier implementation and understanding by staff, developers, and the community as a whole.

Table 5.5, Vacant and Underdeveloped Parcels by Size (2022 Evaluation)

Parcel Size (Acres)	#of Parcels	% of Parcels	Approx Acres	% of Total Acres
Less than 5 Acres	8501	94%	6093	28%
5-20 Acres	388	4%	3545	16%
20-50 Acres	94	1%	2913	13%
50-100 Acres	27	<1%	1771	8%
100+ Acres	27	<1%	7750	35%

URBAN SERVICES AREA

The Urban Service Area (USA) was established as part of the original plan and is a critical part of directing growth to appropriate areas, thereby discouraging urban sprawl. The 1990 Comprehensive Plan analyzed population and included a projection for where urban growth will occur in the next twenty years to serve an increasing population. This area, known as the Urban Service Area (USA), shown on Figure 5.13, includes the portions of the City and the County which are to be developed at urban levels of density and can expect the availability of urban infrastructure and services, such as roads, mass transit, stormwater facilities, sanitary sewer, solid waste, and parks. The USA has the urban center of the community as well as major planned developments or development nodes. Its relationship to the statutorily defined Urban Service Area in Chapter 163.3164, Florida Statutes, is that it is a defined area in the comprehensive plan but does not meet the strict definition because some areas within the USA do not have existing or programmed facilities in place.

The intent of the Urban Service Area is to:

- promote efficient and compact urban growth;
- protect the rural character of those areas outside the USA from incompatible uses and densities;
- assure that local government can afford to provide needed urban services to areas which we designate to receive such services; and
- make sure that areas we designate for urban development are not "under-utilized."

The USA concept is to have the community grow in a responsible manner, with infrastructure provided economically and efficiently, and surrounding forest and agricultural lands protected from unwarranted and premature conversion to urban land use. The USA is one of the primary mechanisms to discourage urban sprawl by directing development to an area sized to serve the projected population within the planning timeframe; providing a boundary between urban and rural uses; encouraging infill within it; facilitating accessibility among uses; and maximizing existing and planned public facilities.

There are objectives and policies in the Land Use Element that provide guidance regarding directing development within the Urban Services Area. In particular, the Urban Service Area (USA) is prescribed to accommodate 90% of new dwelling units, a minimum density of 2 dwelling units per acre and the ability to have a land area that is 50% above the demonstrated need.

The overage in acres allocated for residential and non-residential uses on the Future Land Use Map that is above demonstrated need, is identified as a market factor or multiplier. Best practices recommend a multiplier of 1.25 to 1.5 in order to accommodate the needed uses that support projected population and to ensure that supply, particularly of residential units, is available. An assessment of vacant, developable lands and population in another section of the report identifies an ability to accommodate 302,000 residential units for 343,300 people, which is a market factor of approximately 2.

ENCOURAGEMENT OF INFILL DEVELOPMENT

The City has various incentives or inherent benefits that work to encourage infill development, either built into Land Development Code or other fee structures such as traffic concurrency or utility fees. Some of the more notable efforts to encourage infill are included below:

Photo credit - City of Tallahassee

GROWTH

ENVIRONMENTAL MANAGEMENT ORDINANCE INCENTIVES

On redeveloped sites, developers have the ability to claim existing impervious area (asphalt, concrete, etc.) to reduce or eliminate stormwater management requirements.

Redevelopment projects on developed but vacant or underutilized sites typically result in reduced tree clearing and grading, and ultimately reduced tree debit fees. This further reduces Environmental Management Permit fees, which is not an explicit incentive but is a significant financial benefit for a developer.

Redevelopment of sites that involve no or minimal addition of impervious area have the option of reducing or eliminating some urban forest and landscape standards that would otherwise apply to new development.

ZONING AND LAND USE INCENTIVES

There is flexibility in parking requirements for redevelopment projects citywide, but additional parking flexibility within the MMTD. In the MMTD, projects can have significantly reduced parking and count any public parking within 1,000 feet of the projects towards their parking requirements. In the most intense zoning district, Central Core, there is no minimum parking requirement.

The MMTD (where any project would be considered infill) is the only area in the city that has density bonus incentives for market-rate housing.

The MMTD allows for flexible site design such as reduced setback requirements and higher lot coverage allowances. This makes more of the property developable and allows for creative site design that meets the goals of the MMTD.

For the conversion of hotel/motel rooms to livable units, the density is only calculated at a 3:1 ratio instead of 1:1. This makes it more feasible for developers to convert blighted hotel/motel properties into housing without conflicting with zoning district or Comprehensive Plan density requirements.

Any single-family residential property is eligible for the construction of an accessory dwelling unit (ADU) on its property. Within the MMTD, duplex properties can construct an ADU as well. This achieves the goals of providing for infill housing in a way that serves the needs of residential property owners, expands the locally available housing stock, and maintains the neighborhood sense of place.

OTHER

Redeveloped sites receive tap fee credit for existing water and sewer taps, whereas construction on an undeveloped property requires payment of thousands of dollars in water and sewer tap fees.

For projects located within the MMTD, traffic concurrency impacts are weighted to allow for flexibility in level of service ratings, resulting in a lower probability that a developer will be required to pay any mitigation fees.

URBAN SERVICE AREA

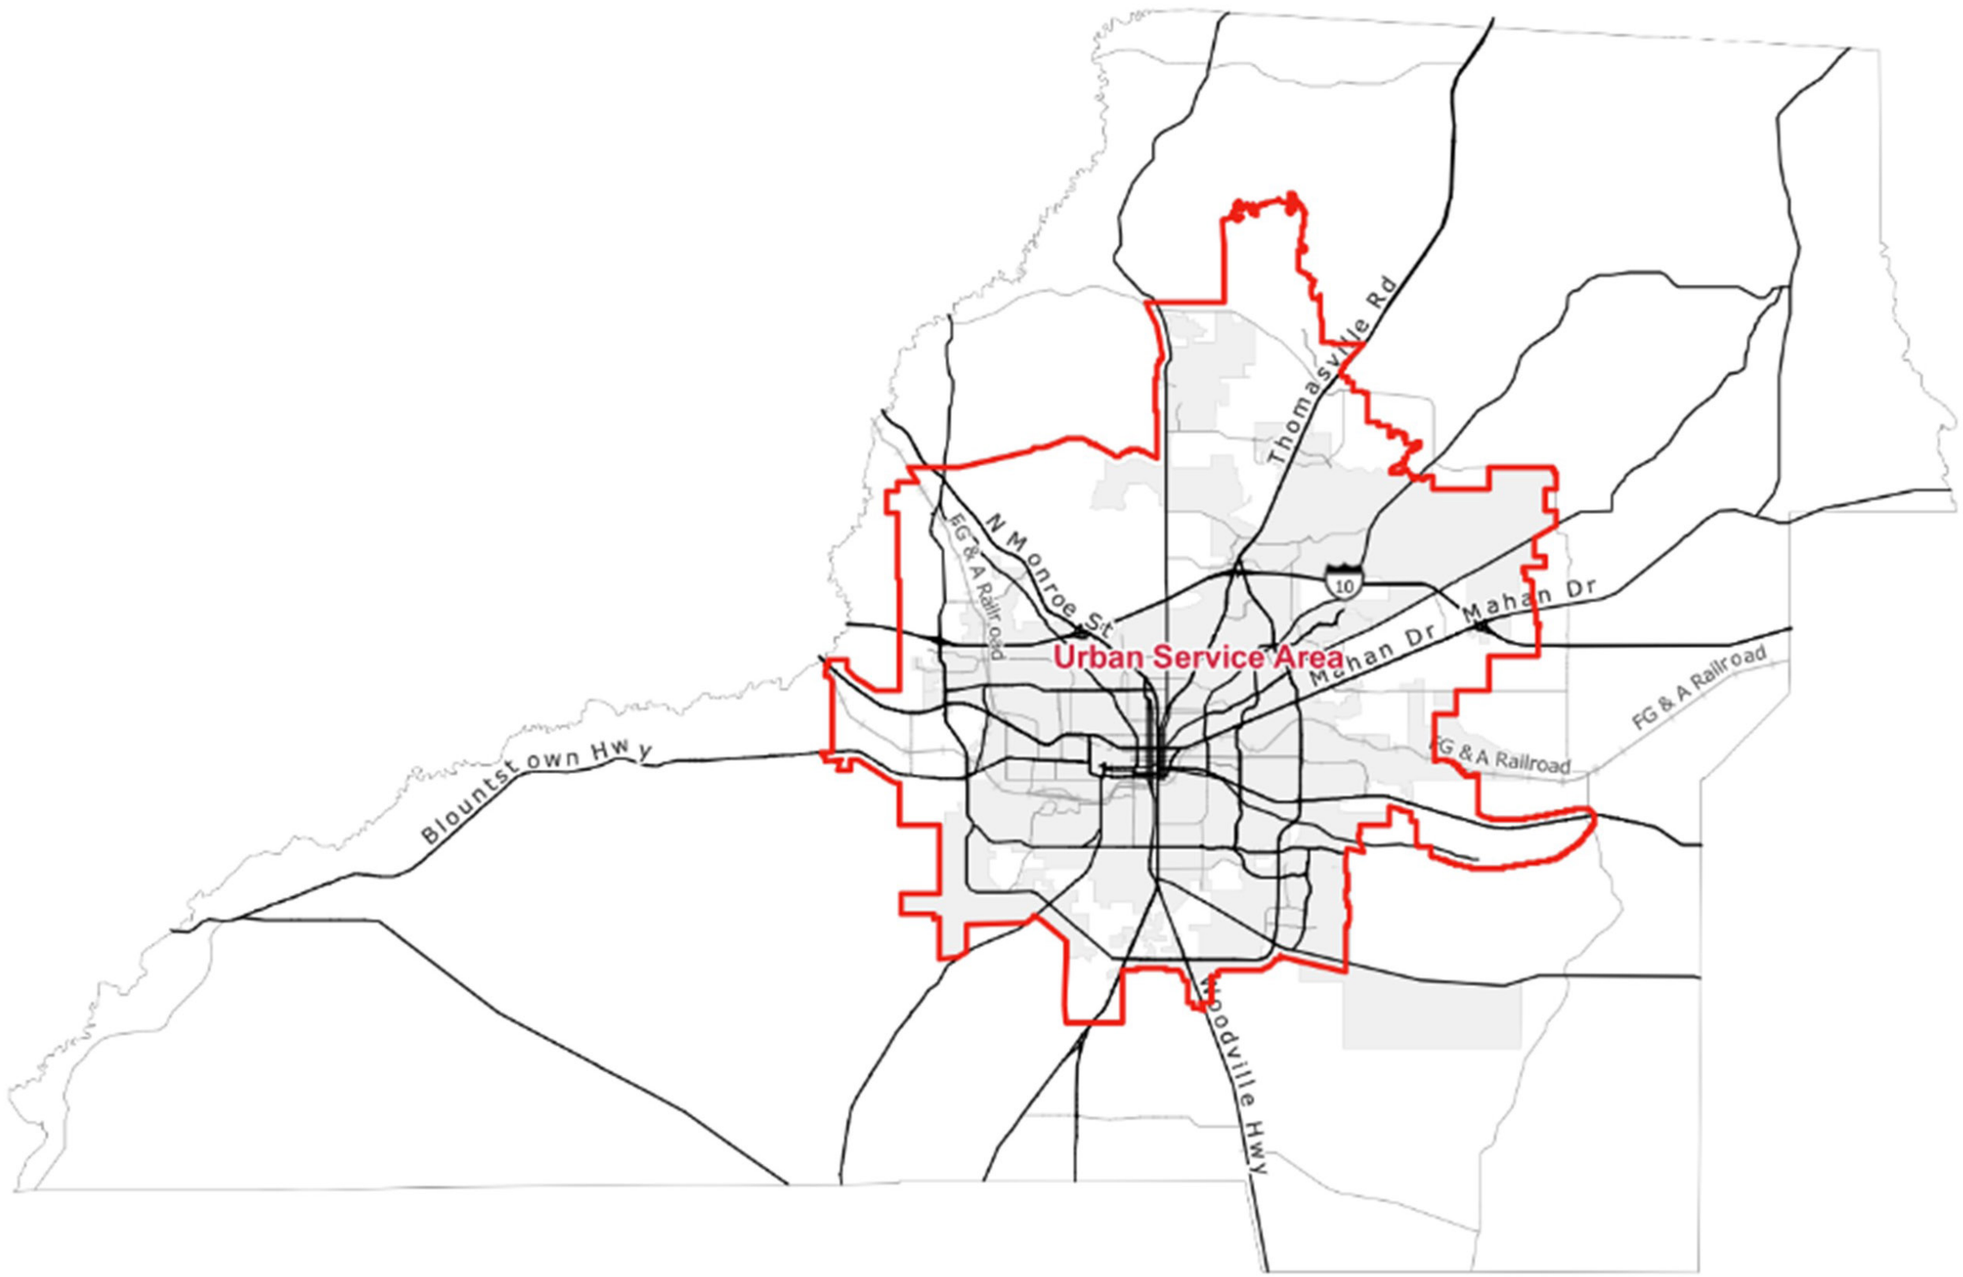

Figure 5.13, Urban Service Area

CHALLENGES TO INFILL DEVELOPMENT

While the analysis of vacant and potentially developable parcels indicated that there may be sufficient land available to accommodate population projections, there are still notable challenges to infill development that may not be evident in the analysis. Some of these challenges include lot availability, subdivision regulations, concurrency, and opposition to development.

Lot availability: It should be noted that "vacant and potentially developable" is not synonymous with "available for development." Private property is, of course, subject to the desire of the owner to sell, real estate market factors, and environmental constraints that may make a parcel unavailable or poorly suited for development.

Subdivision Regulations: Subdivision regulations may present challenges to infill development with regards to accommodating projected population. For example, the Leon County Land Development Code includes a Residential Preservation zoning district that allows up to 6 dwelling units per acre. Regardless of this maximum density, the code states "No newly created lot shall be smaller than the smallest lot of record approved as part of the original recorded (platted) or unrecorded subdivision, or any approved reconfiguration or re-plat that may have occurred consistent with the land development regulations in effect at that time." Therefore, the maximum density is driven by the size of other parcels instead of by the maximum density allowed by the zoning district. The City's Land Development Code includes similar provisions. The City's subdivision regulations include a provision that, "Lots created by re-subdivision of an existing lot in a recorded or unrecorded residential subdivision zoned residential preservation (RP-1 or RP-2), single family detached residential district (R-1 or R-2) or planned unit development (PUD) within the residential preservation future land use category shall be no more than ten percent smaller than the median size of all other lots in the subdivision, as originally platted in a recorded or unrecorded plat, and no less than the minimum lot size allowed by residential zoning and land use maps. If a subdivision was developed in phases, the median size of lots shall be determined by the lots in the phase affected by the proposed re-subdivision."

Concurrency: Development may be limited by the availability of infrastructure and services. As development is proposed, their impacts on infrastructure and services are calculated and may require concurrency payments to mitigate these impacts. Limitations in terms of capacity and/or mitigation requirements may limit development and redevelopment potential.

Phasing and Process Requirements: The timing of development being allowed can be delayed because of specific requirements for certain developments. For example, the Welaunee Arch Master Plan includes specific phasing requirements. While the Arch allows a maximum of 12,500 dwelling units, the entire Welaunee Arch is not available for development at once. To promote coordination of development with the provision of Urban Services, the Welaunee Arch Master Plan established three phases that have specific thresholds that must be met before development may begin in the subsequent phase.

While there are benefits to this approach, this requirement also means that the entire Arch is not available for development and that the maximum of 12,500 units would be constructed over a longer period of time. Additional processes that impact the timing of development are the requirements of implementing Planned Development Areas. For example, the Welaunee Heel is allowed a maximum of 2,107 residential units according to the adopted Critical Area Plan; however, one or more Planned Unit Developments (PUD) must be completed and approved before site plans or subdivisions can be approved.

Because the PUD would be the implementing zoning for the property, the total number of residential units may end up being lower than the maximum allowed by the Critical Area Plan. The Welaunee Critical Area Plan also requires stormwater facilities master plans for the Heel and for the Arch. These stormwater facilities master plans must be completed for the respective areas before PUDs for those areas may be approved. Only after these steps have been accomplished can site plans and subdivisions be approved followed then by permitting and construction. While there are benefits to this approach, these requirements do lengthen the process and therefore the time required before any construction can begin on these sites.

Neighborhood Opposition: Development and redevelopment may receive opposition from neighboring residents. This opposition may influence the type, density, and intensity of development. In many cases, infill development receives more neighborhood opposition due to the higher numbers of neighbors as compared to development located further away from urban areas.

Photo credit - Leon County

OTHER CONSIDERATIONS

Mixed-Use Districts: It should be noted that some land use categories allow for residential, commercial, or a mix of uses, so it is difficult to predict how a property will be developed and the impact it may have on population accommodation. For example, the Suburban Land Use category allows for commercial and/or residential development. The resulting development is typically determined by the zoning district, though some zoning districts, such as Office-Residential district, also allow commercial, residential, or a combination of both. While these mixed-use categories provide for desirable development patterns, it can be difficult to determine how they are included in analyses of population accommodation.

Housing Types: Another consideration for population accommodation is the types of residential development available and allowed (single-family detached homes, townhomes, duplexes, multiplexes, apartments, etc.). The mix of housing needed in a community is influenced by a variety of factors. These factors range from general market demand

OTHER CONSIDERATIONS

Photo credit - City of Tallahassee

to decisions made by local governments. For example, the Rooming House Ordinance was approved by the City in 2000 to prevent student rentals from locating in existing, low- density single-family neighborhoods. This policy redirected student housing away from existing neighborhoods thereby increasing the need for student housing elsewhere. Other factors include consideration for housing types that allow people to age in place or that are located near transit and other services that allow residents from all incomes to live where they play, shop, and work. Often called "missing middle" housing, this housing provides solutions along a spectrum of affordability to address the mismatch between available housing stock and shifting demographics combined with the growing demand for walkability. The trend toward adjusting residential code to allow for accessory dwelling units is a successful example of providing mixed housing types within established residential neighborhoods without impacting the overall sense of neighborhood in these areas.

In looking at the potential for redevelopment and infill, there are favorable prescriptions in the comprehensive plan including land use categories that allow for residential development and mixed-uses. Other sections state growth priorities for infill development, minimizing the premature conversion of rural areas into urban development, the desire to provide affordable housing and additional housing in the southern areas of the city and county. Challenges to infill which include site plan regulations, provide an opportunity to review and make adjustments that will encourage infill within the USA.

The USA was initially implemented with the adoption of the comprehensive plan and has been sparingly adjusted since that 1990 adoption date. It has been effective in expressing the community's intent to manage and direct growth. The provisions in the plan could benefit from additional clarity regarding the intended accommodation of land and development. Given these factors and the information presented in this USA section, it is recommended that the USA be maintained as part of the plan update.

VACANT AND UNDERUTILIZED LANDS

When evaluating future growth potential for an area, it is important to consider where the existing vacant and underutilized parcels are located. This can help to identify target areas for growth and redevelopment in the future. In some cases, the growth may be smaller-scale infill, and others larger redevelopment opportunities using existing public infrastructure. This can result in a reduction in sprawl and greater opportunities to protect environmentally sensitive areas.

Vacant and underutilized lands were evaluated based on the 2022 parcel data, including existing land use and valuations for parcels, and are shown on Figure 5.6. Acreage within wetland areas and conservation easements were excluded from the overall calculations. Current (2023) aerial imagery was used to identify new development since the 2022 parcels would not be aligned with current development. Underutilized parcels identify where the land value is greater than the building value. The evaluation of vacant and underutilized parcels included areas that both include and do not permit residential densities. If the areas currently designated for residential densities within the respective future land use categories were to build out at 100 percent, over 302,000 dwelling units could be entitled. It is unlikely that these areas would fully build-out, but even with a 50 percent absorption rate, there is enough entitlements for over 150,000 dwelling units. This would accommodate the anticipated population growth through the project horizon.

While it is important to acknowledge total allowable density per the Comprehensive Plan, considerations to how the development could occur is needed. Examining opportunities to remove barriers to infill development can be part of this process. Many of the vacant or potential redevelopment parcels are on lots smaller than five acres in size, which may limit developable area and building product type. Some parcels may only accommodate development when combined with adjacent properties.

Over 35 percent of the total acreage encompasses properties of at least 100 acres. This is consolidated to a few parcels, which include the Welaunee development area and Southeast Sector Planning Area. These two development areas already have parameters and programs. Other large parcels have non-residential future land use categories or include golf courses which may be difficult to redevelop.

Antiquated subdivisions: In Florida, an antiquated subdivision is a subdivision that was approved or recorded more than 20 years ago but has not been built out substantially. It is considered antiquated if it would be detrimental to the local economy, environment, and planning practices to continue building it out per Section 163.3164(5), F.S. In assessing the existence of antiquated subdivisions, the analysis does not identify any in Leon County that would detrimentally impact future development potential or consumption rate. Larger planned developments are guided by master plans, planned unit developments or development agreements.

COMMERCIAL AREAS

Large commercial strip centers may be considered for redevelopment but not meet the "underutilized parcel" analysis due to property valuations. To illustrate potential areas that could be redeveloped, the existing land use category was used to identify larger shopping centers with parcels over 2.5 acres in size. These areas are shown in red in Figure 6.6 These areas are primarily located along major roadway corridors within the USA. The 2.5-acre threshold was used as an example of a parcel which, depending on the development program, can accommodate a range of uses.

As Tallahassee and Leon County grew over time, suburban development patterns took hold outside of the center of the City. Suburban development patterns include large shopping centers that are generally disconnected from the surrounding community and necessitate automobile travel. These areas are already serviced by public utilities and have been impacted by development. Rather than greenfield development, some shopping centers can be redesigned to create walkable spaces that support a variety of lifestyle options.

Retrofitting shopping centers, an example of which is shown below, can help accommodate growth in a manner that reduces the impact to greenfield development, and incorporates a wide range of design techniques to create a more versatile environment that supports the community's vision. These centers may include infill or outparcel development along the edge of the property to increase services and improve the public realm, or may include the full redevelopment of the site to incorporate a mixture of uses including housing, retail, restaurants, and office spaces.

To support sustainable growth practices, the retrofitting of suburban commercial spaces should be considered and supported to create more intense nodes of development throughout the USA which can also support the surrounding lower density residential areas. Parking requirements should be evaluated to allow for greater flexibility for this development type.

Table 5.7, Major Developments - Approved Projects

CURRENT DEVELOPMENT TRENDS

Tallahassee and Leon County have a variety of residential and commercial developments either in the review process, or under construction. The volume of projects is an indicator that continued growth, both in the local economy and in population, is likely to occur for some time. The following tables highlight the types of development based on the phase of review or construction for larger development projects, such as residential development over 20 units and commercial projects over 10,000 square feet. These projects are shown in Tables 5.7 - 5.8.

Residential growth includes 16,119 units for single-family (detached and attached), multi-family, condominium, and hotel uses within Leon County that are approved and/or under construction today. An additional 4,121 are either in the pre-application or under review phase. Of the total proposed units, 6,393 are single-family detached and attached and the remainder are apartments or condominium multi-family units.

While some of the projects may be smaller and thus take less time to fully build-out, some of the projects, such as the Park Place and Welaunee PUDs may take the planning horizon to fully build out. These developments are primarily located within the USA Boundary.

Smaller infill development such as duplex to quad-plex, single lot redevelopment, and the addition of accessory dwelling units may not be reflected in the above tables but contribute to housing options in the City and County.

Non-residential growth factors are good indicators of the local economy and business development. Commercial growth includes retail, office, industrial, and civic uses. Within Tallahassee and Leon County, there is over 5,250,000 square feet of non-residential uses either approved or under construction. As with the residential, portions of the approved square footage are associated with large PUDs and may be constructed throughout the planning horizon. An additional nearly 1,300,000 square feet is either under review or in the pre-application process.

ASSESSMENT FINDINGS FOR THE FUTURE LAND USE DISTRIBUTIONS

There are 25 distinct land use categories, and an additional four which include a residential preservation overlay to further direct growth and development within Leon County.

Most of the land in the unincorporated areas of Leon County is designated to promote and maintain a rural lifestyle, including agriculture uses, lake protection, open space/recreation, rural, residential preservation, and urban fringe. These future land use categories support lower densities and intensities which do not require the provision of water and sewer to support growth and development. The rural land uses and conservation measures can be used as a method to align and focus future growth within the USA.

Within the USA, there is greater diversity in the FLU categories, as this area is intended to absorb a majority of the population growth. The mixture of uses includes suburban uses with low to medium densities and intensities, as well as higher densities and intensities near the urban center.

The Residential Preservation (RP) FLU category has a maximum dwelling unit allowance of six units per acre, which can limit opportunities for diverse residential infill options.

The suburban FLU is a broad category that allows for non-residential uses and densities up to 20 units per acre. This category is widespread throughout the USA and City limits. This category exhibits a wide range of character throughout the jurisdiction and is intended to encourage mixed uses.

While the MMTD is intended to support walkable design and communities, much of downtown Tallahassee is used for government offices, which typically only operate when the state legislature is in session, or until 5 PM. Downtown supports business and government but lacks a vibrant nightlife.

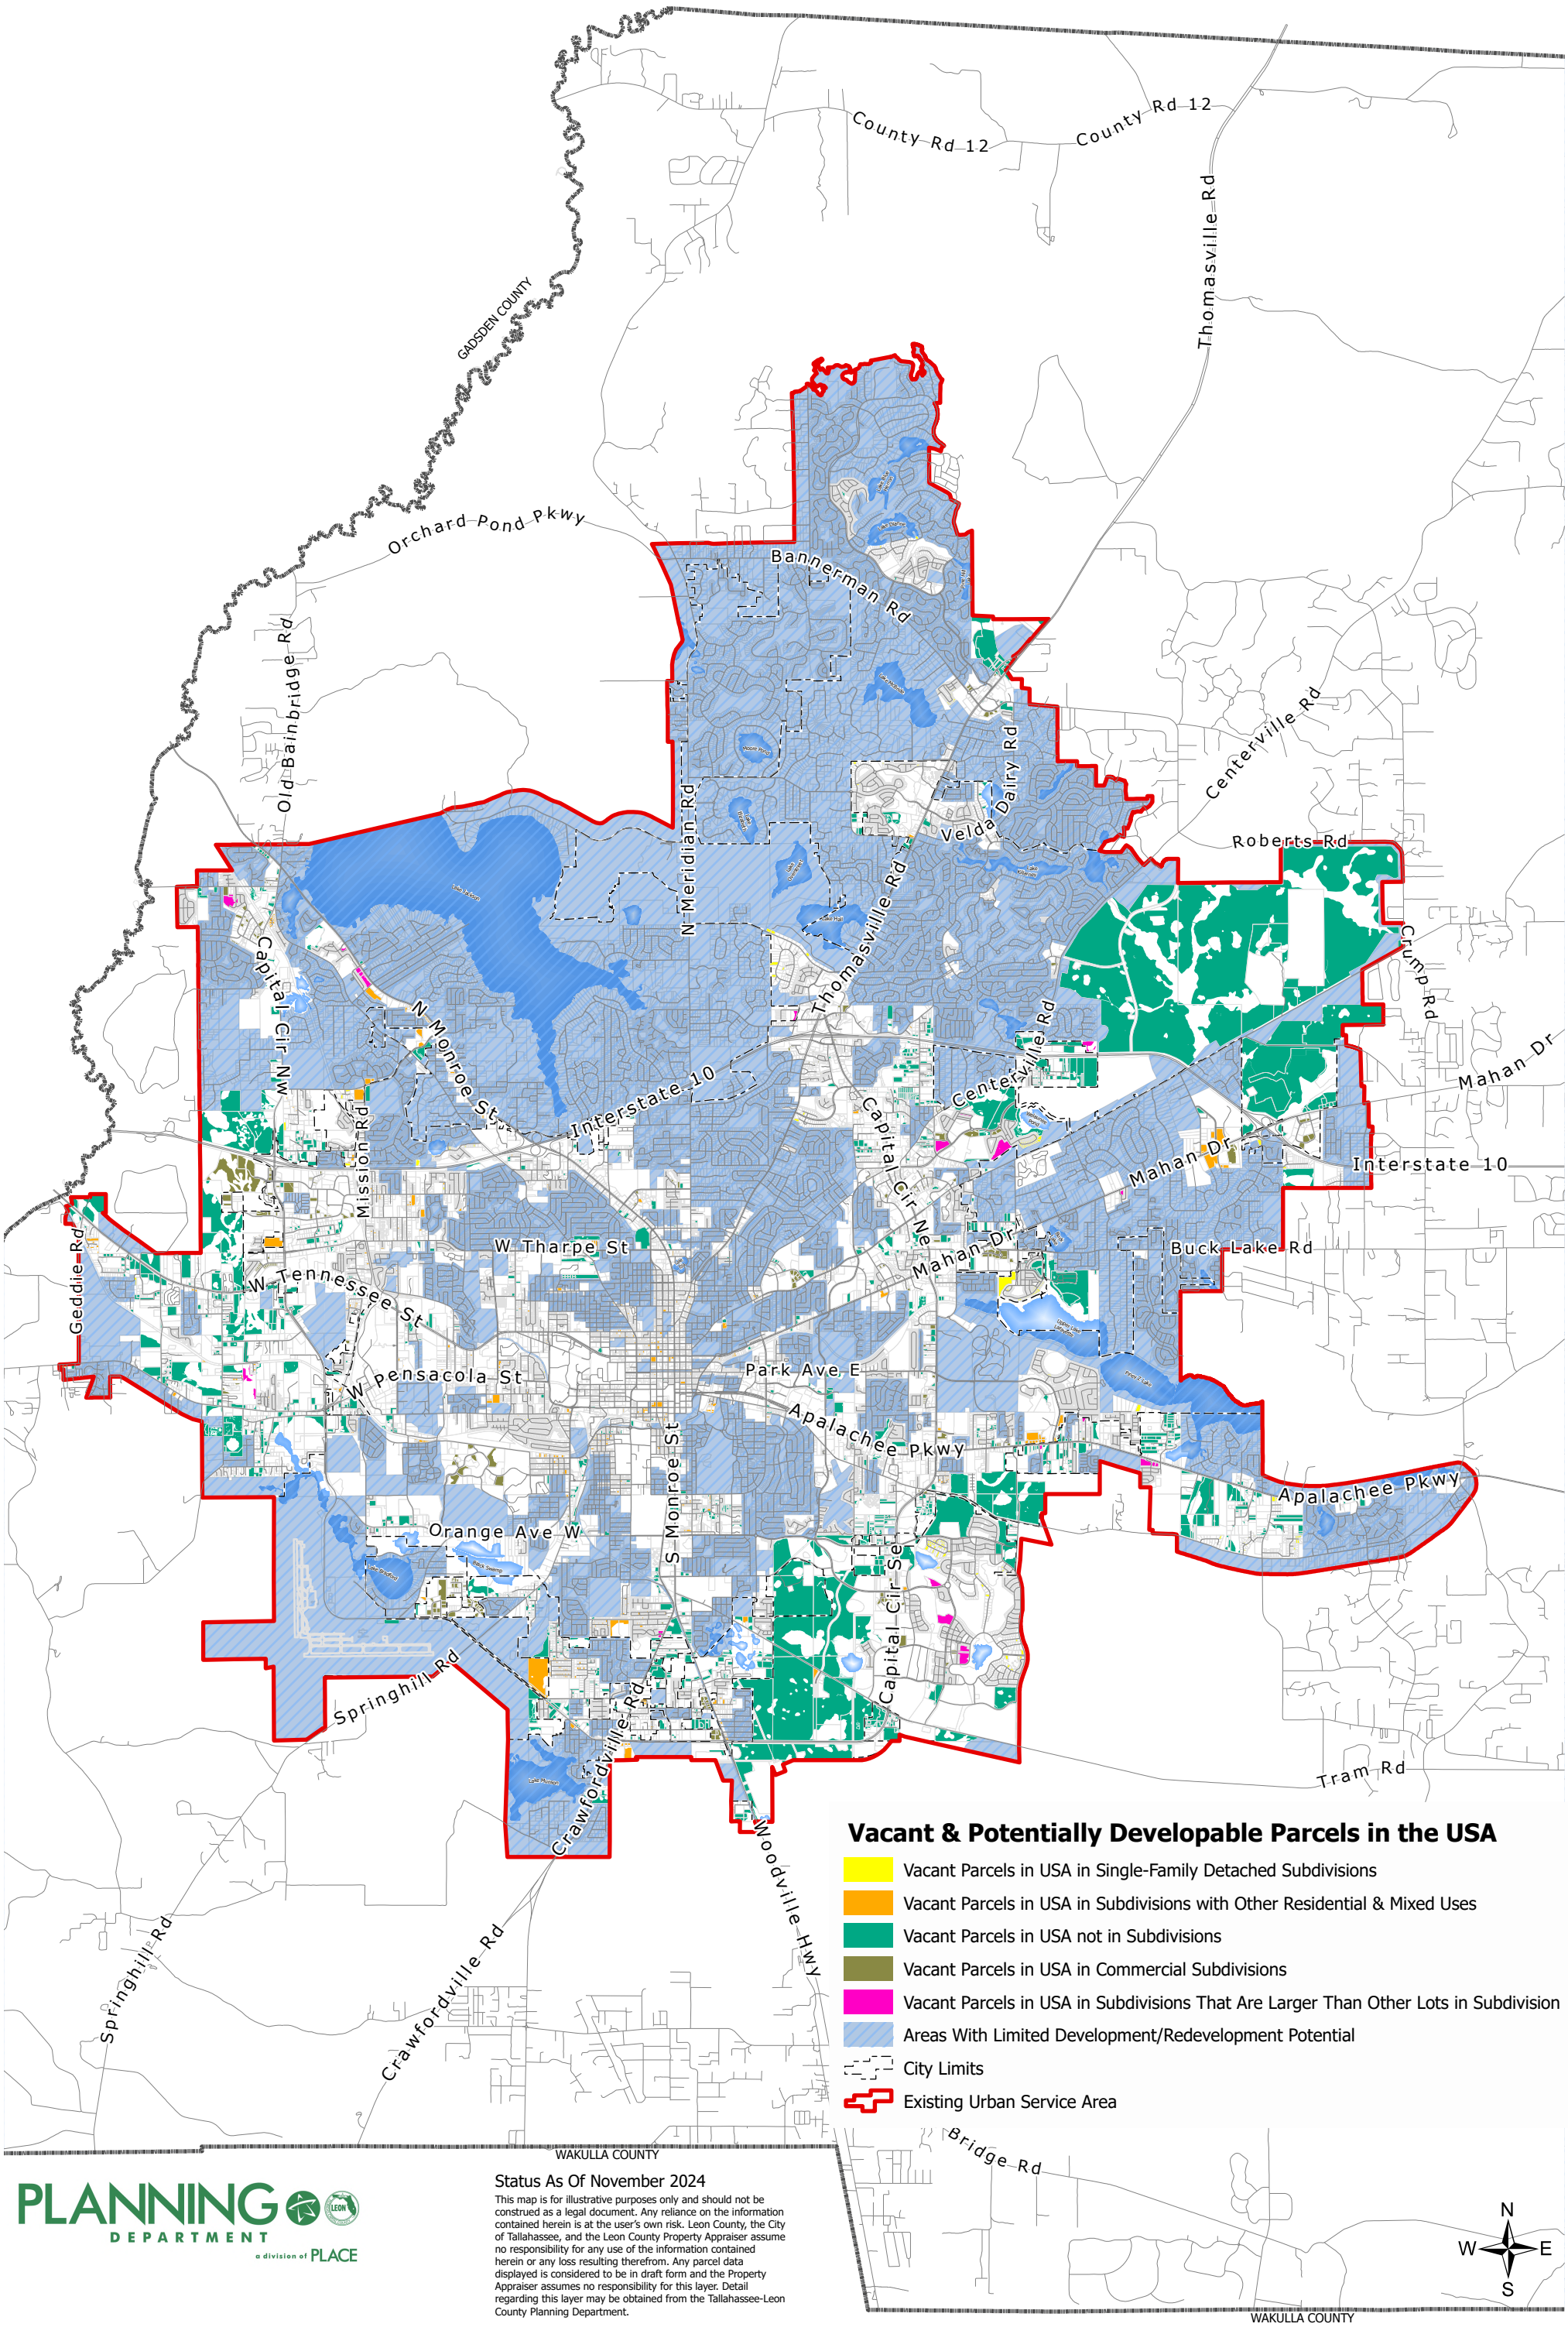
GENERAL LAND USE ELEMENT FINDINGS

The number of future land use categories can increase complexity when applying appropriate zoning or determining future land use amendment requests. In some cases, the differences between the land use categories are minimal and the categories could be consolidated or reformatted for easier implementation and guidance.

The format of the land use category descriptions, intent, and densities and intensities could be reformatted for clarity and use through graphics, text layout, and representative imagery.

Some of the goals, objectives, and policies in the current plan are outdated, with references to dates or statutes which are no longer applicable. The incremental updates to the Comprehensive Plan over time have created a lack of cohesion and consistency. Outdated and inapplicable policies should be removed from the Comprehensive Plan.

There are policies which provide more detail than what is required for a Comprehensive Plan and should be relocated to the Land Development Regulations.



There is language which is subjective in nature. Words such as “recommend” and “encourage” and “should” do not provide staff with measures to enforce the policies.

In an update, the existing goals, objectives, and policies must be evaluated to reduce redundancies, provide clearer guidance, and include implementable language.

* - The number of maximum residential units allowed **does not take into account zoning on-site, which the LME Update is not changing for any parcel, nor does it take into account constraints on development such as stormwater requirements, flood zones, special development zones, environmental features, other physical constraints, nor any market factors that impact development.**

** - These parcels include sites devoted to right-of-way, stormwater, properties owned by homeowners associations, and other uses that are not developable.

4.2.2 Development of a Study-Specific Model

As previously mentioned, the 2045 E+C scenario was used as the basis for developing a study-specific model to perform the traffic modeling for this study and has been modified as detailed below.

4.2.2.1 Analysis Years

Traffic modeling analyses were conducted for Base Year 2015, Opening Year 2025, and Design Year 2045. Zonal socioeconomic datasets for year 2025 were developed through linear interpolation between the 2015 Base Year model and 2045 Design Year model.

4.2.2.2 Roadway Network Assumptions

The roadway network from the 2045 E+C scenario was retained for the 2025 modeling scenarios and included additional potential future roadways that may be privately or publicly funded by an organization other than BPIA.

As mentioned previously, network updates were made to the model to include the Welaunee Boulevard extension and land use data, based on input provided by the CRTPA and the TLCPD.

4.2.2.3 Land Use Assumptions

The socioeconomic data associated with the 2015 Base Year and 2045 E+C scenario were used as the basis for developing socioeconomic datasets for the 2025 modeling scenarios. As previously mentioned, the raw dataset for 2025 was interpolated.

The study area for the modeling analysis consists of Bannerman Road from Thomasville Road (US 319/SR 61) to N. Meridian Road (CR 155). A map depicting the TAZs adjacent to the Bannerman Road Feasibility Study area is provided on **Figure 4.2.1** showing the TAZ boundaries and respective TAZ numbers. It was determined that the land use data for the eight (8) TAZs adjacent to the Bannerman Road Feasibility Study area would be reviewed and compared to future development information provided by TLCPD. Based on the review at the time of the modeling efforts, the land use data were found to be sufficient for these modeling purposes and no modifications were made to the 2045 TAZ data for existing zones. However, at the time of this modeling effort, there is an unapproved mixed-use development proposed at the southeast quadrant of the intersection of Bannerman Road at Bull Headley Road. To accurately model the impacts of this development, two additional TAZs (TAZ 2761 and 2762) were added to the model. TAZ 2761 has two accesses onto Bannerman Road—one of which is at the intersection of Bannerman Road at Bull Headley Road—and includes single-family residential, multi-family residential, and commercial land uses, while TAZ 2762 has a single access onto Preservation Road and includes single-family residential only. For this modeling effort, the development's full buildout was included for year 2045 scenarios, and 50% of the buildout was included for year 2025 scenarios.

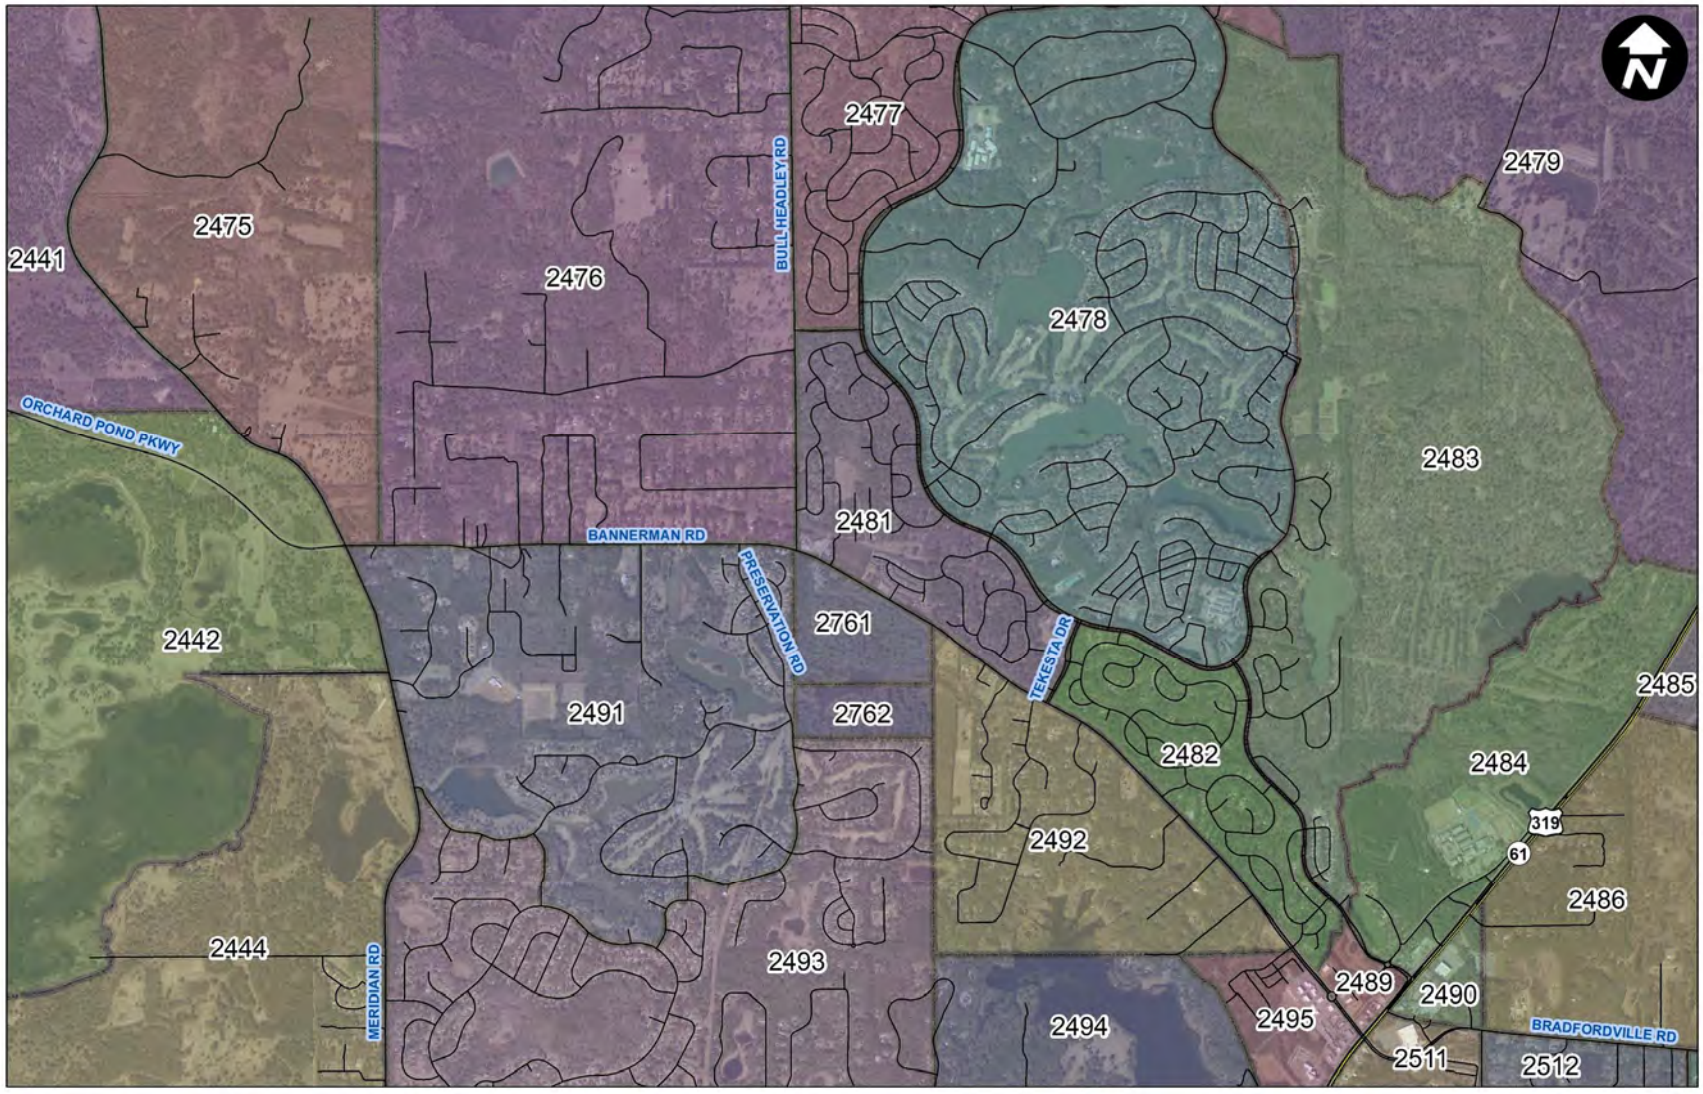

Table 4.2.1 shows the socioeconomic data associated with each zone for the modeling analysis years. The values within this table represent the number of single-family dwelling units, multi-family dwelling units, and total employees within each zone. A single-family dwelling unit is considered a detached, single-family home. A multi-family dwelling unit is considered a building that is designed to house several families, such as an apartment building. Total employees represent the non-residential land uses within a zone. The modeling methodology and findings

were summarized and sent to BPIA in a memorandum, which can be found in **Appendix C** of the Traffic Analysis Report.

Table 4.2.1: Bannerman Road Study Area TAZ Land Use Data (2015, 2025, 2045)

Transportation Analysis Zone (TAZ)	2015			2025 (Interpolated)			2045

Figure 4.2.1: Transportation Analysis Zone (TAZ) Map

4.3 Future Conditions Analysis

To perform the future conditions analyses, traffic operations are evaluated for peak hour conditions for the Opening Year and Design Year using the selected annual growth rate to forecast traffic volumes.

The future traffic analysis was evaluated for the Baseline scenario, Build Alternative 1, and Build Alternative 2.

4.3.1 Future Growth Rate

A variety of data sources were used to evaluate historical and projected growth both within and surrounding the study area. Multiple sources were used to develop the growth rates, including historical volume counts from surrounding areas and historical socioeconomic and demographic data, along with the travel demand model projections that were determined for each scenario. The growth rates for the three data sources were averaged for each segment and scenario to create a blended growth rate and they range from 0.77% to 2.12%. Applied growth rates are shown in **Table 4.3.1**.

Table 4.3.1: Applied Growth Rates by Segment and Scenario

Scenario	Bannerman Segment		
	N. Meridian Road to Preservation Road	Preservation Road to Tekesta Drive	Tekesta Drive to Thomasville Road
Baseline	1.88%	1.79%	0.77%
Build Alternative 1	1.92%	2.11%	0.84%
Build Alternative 2	1.96%	2.12%	0.84%
Build Alternative 3	1.88%	1.79%	0.77%

4.3.2 Future Alternatives Analysis

4.3.2.1 Baseline Scenario

The Baseline scenario analyzes the projected future traffic volumes on the existing roadway without modifications, while incorporating surrounding planned roadway improvements and land uses that influence the study area segment, which includes the widening of Bannerman Road from Tekesta Drive to Thomasville Road to a four-lane facility, divided by a raised median. The Baseline scenario serves as a baseline comparison for the Build Alternatives.

4.3.2.2 Baseline Scenario Volume Development

The segment volumes for Opening Year 2025, and Design Year 2045, are summarized in **Table 4.3.2**. The volumes shown have been developed using the segment volumes collected for Existing Year 2020, applying the seasonal factor of 0.96, then applying the calculated growth rate to forecast out to the analysis years. The seasonal factor was determined by using the seasonal adjustment factors from the closest permanent count stations.

Table 4.3.2: 2025 and 2045 Future Baseline Daily Segment Volumes

Road Name	Limits	2025 AADT (veh/day)	2045 AADT (veh/day)
Bannerman Road	N. Meridian Road to Preservation Road	6,400	9,200
Bannerman Road	Preservation Road to Tekesta Drive	10,500	15,000
Bannerman Road	Tekesta Drive to Thomasville Road	17,900	20,900

Baseline Segment Analysis

Each segment of Bannerman Road within the study area was analyzed using the information provided in the FDOT Q/LOS Handbook. The analysis compares future Baseline traffic volumes to maximum service volumes established for each roadway according to various characteristics of the roadways. The segment analysis was performed for the two-way peak hour volumes and the peak hour peak directional conditions.

The results of the future Baseline segment analysis are included in **Table 4.3.3** and **Table 4.3.4**, which present the two-way peak hour volume and the peak hour peak directional volumes, respectively.

Overall, the future Baseline segment analysis indicates that the segments of Bannerman Road from N. Meridian Road to Preservation Road and from Preservation Road to Tekesta Drive are anticipated to operate above capacity for two-way peak hour volumes during Design Year 2045 (V/C >1.0). For the Peak Hour Peak Directional Volumes, the segment of Bannerman Road from Preservation Road to Tekesta Drive is anticipated to operate above capacity by Interim Year 2035 as well as Design Year 2045, while the segment of Bannerman Road from N. Meridian Road to Preservation Road is anticipated to operate over capacity by Design Year 2045.

Bannerman Road	Preservation Road to Tekesta Drive	2U	35/45 mph	D	800	-10%	720	611	729	870	0.85	1.01	1.21
Bannerman Road	Tekesta Drive to Thomasville Road (Baseline)	4D	20/35/45 mph	D	1,820	-10%	1,638	959	1,036	1,119	0.59	0.63	0.68
**10% reduction for Non-State Signalized Roadway. 20% reduction for no exclusive turn lanes*													

4.3.2.3 Build Alternative 1 Scenario

Build Alternative 1 analyzes the projected future traffic volumes on a two-lane, undivided roadway, from N. Meridian Road to Preservation Road, and a four-lane, divided roadway, from Preservation Road to Thomasville Road, while incorporating surrounding planned roadway improvements that influence the study area segment. This alternative also includes adding turn lanes to Segment 1, from N. Meridian Road to Preservation Road.

Build Alternative 1 Scenario Volume Development

The segment volumes for Opening Year 2025, and Design Year 2045, are summarized in **Table 4.3.5**. The volumes shown have been developed using the segment volumes collected for Existing Year 2020, applying the seasonal factor of 0.96, then applying the calculated growth rate to forecast out to the analysis years.

Table 4.3.5: 2025 and 2045 Future Build Alternative 1 Daily Segment Volumes

Road Name	Limits	2025 AADT (veh/day)	2045 AADT (veh/day)
Bannerman Road	N. Meridian Road to Preservation Road	6,400	9,300
Bannerman Road	Preservation Road to Tekesta Drive	10,700	16,200
Bannerman Road	Tekesta Drive to Thomasville Road	17,900	21,200

Build Alternative 1 Segment Analysis

Each segment of Bannerman Road within the study area was analyzed using the information provided in the FDOT Q/LOS Handbook. The analysis compares future Build Alternative 1 traffic volumes to maximum service volumes established for each roadway according to various characteristics of the roadways. The segment analysis was performed for the two-way peak hour volumes and the peak hour peak directional conditions.

The results of the existing segment analysis are included in **Table 4.3.6** and **Table 4.3.7**, which present the two-way peak hour volume and the peak hour peak directional volumes, respectively, as well as volume to capacity ratios for each segment. Year 2035 analysis was also included to assess a better timeline of progression of congestion.

Overall, the Build Alternative 1 segment analysis indicates that both segments of Bannerman Road are anticipated to operate below capacity for two-way peak hour volumes, and peak hour peak directional volumes, during Design Year 2045. For Segment 1, from N. Meridian Road to Preservation Road, this is due to the added exclusive turn lanes.

Executive Summary

The Residential Land Availability and Affordability Committee was formed in December 2003 in response to concerns from the real estate and development community that the lack of vacant, available residential land in Leon County was contributing to rapidly escalating prices that are forcing buyers to seek housing elsewhere. The Committee developed the following mission statement to guide its efforts:

> *A group representing business, real estate, and environmental interests has agreed to look at the availability and affordability of residential real estate in Leon County and the extent to which the lack of availability and affordability is encouraging sprawl in neighboring counties.*

The Committee included a diverse group of individuals reflecting many different perspectives on the issues (see Technical Appendix for Committee membership). The Committee established sub-committees on Data Gathering and Analysis, Visioning, and Regulatory Reform to study various aspects of residential availability and affordability.

Committee members recognized the importance of ensuring consistency with the community vision as expressed in *Blueprint 2000*. Committee facilitator Henree Martin stated that, "Community vision must be the driving force and that vision is clear – 60 percent of the voters in the community supported *Blueprint 2000*." The Committee conducted a thorough examination of pertinent data on vacant lands in Leon County. The goal of the data analysis was to determine how much vacant land remains in Leon County, where is it located, how is it zoned, and how much of it is constrained by environmental features such as wetlands, floodplains and steep slopes.

Key results of the data analysis conclude that:

- The number of dwelling units built in Leon County and the City of Tallahassee has averaged 2,800 per year over the last three decades;
- Density has significantly increased inside the Urban Service Area (USA) and remained virtually unchanged outside the USA since the adoption of the Comprehensive Plan; and
- There is a significant quantity of vacant, potentially developable acreage in Tallahassee and Leon County.

The Committee identified several key findings based upon the data analysis:

- There is an important distinction between land that is "vacant" and land that is "available" for residential development. While the data analysis identified sufficient "vacant" land to satisfy residential growth needs for the next two decades, relatively little "vacant" land is actually finding its way on the market and can thus accurately

be described as "available." The lack of land that is available (on the market) is an important factor contributing to the rapidly rising price of housing in Leon County;

- The rapid increase in housing prices experienced here and throughout the state, has resulted in a lack of affordable workforce housing. While many factors have contributed in Tallahassee and Leon County, the escalating price of land is a key component;
- While Comprehensive Plan policies have contributed to increasing density inside the USA, there is a significant disparity in density between "actual" and "allowed" development; and
- There is a critical need for regulatory reform to remove impediments to achieving maximum "allowed" density.

The Committee developed a series of recommendations to address the lack of available and affordable land for residential development in Tallahassee and Leon County. The recommendations include:

- Regulatory reforms to increase opportunities for in-fill development;
- Modifications to the USA boundary to enhance opportunities for residential development consistent with the intent of *Blueprint 2000* and the Southern Strategy;
- Private sector initiatives to stimulate development of suitable vacant parcels and encourage the development of affordable housing; and
- Initiatives in support of *Blueprint 2000*.

Overview

The Residential Land Availability and Affordability Committee was formed in December 2003 in response to concerns from the real estate and development community that the lack of vacant, available residential land in Leon County was contributing to rapidly escalating prices and forcing buyers to seek housing elsewhere. The Committee developed the following mission statement to guide its efforts:

> *A group representing business, real estate, and environmental interests has agreed to look at the availability and affordability of residential real estate in Leon County and the extent to which the lack of availability and affordability is encouraging sprawl in neighboring counties.*

The Committee included a diverse group of individuals reflecting many different perspectives on the issues at hand (see Technical Appendix for Committee membership). The Committee selected as its facilitator, Henree Martin, a commercial realtor and member of the Economic and Environmental Consensus Committee (EECC) that developed *Blueprint 2000*. The Committee established several sub-committees to study various aspects of the issues affecting residential land availability and affordability. The sub-committees included Data Gathering and Analysis, Visioning, Regulatory Reform and Presentation. Jess Van Dyke, EECC member, documented the Committees' deliberations throughout the duration of this effort.

Community Vision

Early in the process, committee members recognized the importance of ensuring consistency with the community vision as expressed in *Blueprint 2000* and other policy documents in which the public was actively involved in creating. Committee facilitator Henree Martin stated that, "Community vision must be the driving force and that vision is clear – 60 percent of the voters in the community supported *Blueprint 2000*." One of the principal goals of *Blueprint 2000* was stimulating investment and activity in the Southern Strategy Area by expanding employment and housing choices; the Committee's recommendations further that goal.

Data Analysis

The Committee conducted a thorough examination of pertinent data on vacant lands in Leon County. The goal of the data analysis was to determine how much vacant land remains in Leon County, where is it located, how is it zoned, and how much of it is constrained by environmental features such as wetlands, floodplains and steep slopes. Key results of this analysis are as follows:

1. The number of dwelling units (single-family, multi-family and manufactured homes) built in Leon County and the City of Tallahassee has averaged 2,800 per year over the last three decades. It is reasonable to assume that the decade of 2000 to 2010 will produce similar results. Historically, single-family homes represent 43 percent of

dwelling units built, multifamily approximately 40 percent and manufactured homes approximately 17 percent of the total.

2. The overall average lot size for developed property is approximately 0.84 acres, not including agricultural land. The overall density is 1.18 dwelling units per acre. Inside the Urban Service Area (USA), the average lot size is 0.55 acres and the density is 1.83 dwelling units per acre. Outside the USA, the average lot size is 2.61 acres and the density is 0.38 dwelling units per acre. The density of single-family houses has greatly increased inside the USA since the adoption of Comprehensive Plan regulations in 1992.

3. While the policies in the Comprehensive Plan have helped increase densities inside the USA, there is still a substantial gap between "allowed" density and "actual" or "historical" density. As an example, the "allowed" density in the Residential One zoning category is 3.63 dwelling units per acre while the "actual" density is 0.69 dwelling units per acre. Similarly, the "allowed" density in the Residential Three zoning category is 8.0 dwelling units per acre while the "actual" density is 2.14 units per acre. The table below compares "actual" versus "allowed" density in the Residential land use category.

Figure 1: Comparison of "Actual" Versus "Allowed" Density

Category	Actual (Historical) Density	Allowed Density
Residential One	0.69	3.63
Residential Two	1.56	4.84
Residential Three	2.14	8.0
Residential Four	6.98	8.0
Residential Five	1.88	8.0

4. There are 16,384 vacant parcels in Tallahassee and Leon County, which comprise 167,191 acres of potentially developable land. Approximately 15 percent of vacant acreage is inside the USA while 85 percent is outside the USA. Taking into account recent development densities (1992 – 2002) and adjusting for environmental constraints, existing vacant parcels could produce 77,049 dwelling units (see Technical Appendix for details). These figures can be further updated by assuming that the number of potential dwelling units (77,049) could be adjusted downward by the average number of dwelling units presumed to have been built from January 2003 through May 2004 (4,200 units), resulting in the ability to develop approximately 72,850 potential dwelling units on vacant parcels as of June 2004. This potentially results in a 20 to 25 year supply of land for residential development (**see Findings section on following page**).

Findings

Committee members identified a number of key findings based upon the extensive analysis of data gathered for this project. These findings, together with the community vision outlined in the *Blueprint 2000* Plan, formed the basis for the recommendations outlined later in this Report.

1. There is a key distinction between land that is "vacant" and land that is "available" for residential development.

   The data analysis identifies sufficient "vacant" land to satisfy residential growth needs for between 20 and 25 years. However, relatively little "vacant" land is actually finding its way on the market and can thus accurately be described as "available." The lack of land that is both vacant and available (on the market) is an important factor contributing to the rapidly rising price of housing in Leon County.

   For example, in 1996, the average cost of a parcel of land smaller than one acre was $30,801 and the average selling price of a home built on such a lot was $147,453 (land cost = to 20 percent of the overall cost). In 2003, the average cost of a parcel of land smaller than one acre was $64,948 and the average selling price of a home built on such a lot was $194,178 (land cost = to 33 percent of the overall cost). In this example, land costs have risen from 20 percent of the overall cost of a new home in 1996 to 33 percent of the overall cost of a new home in 2003. (The information above was obtained from the Multiple Listing Service.)

   Further information describing the availability and affordability of vacant land was obtained from an analysis of the Multiple Listing Service (MLS) database in June, 2004. Key findings include:

   - A total of 82 vacant parcels of all sizes were on the market in Tallahassee and Leon County
   - The median price of all parcels was $75,000
   - The median price of parcels of one acre or less was $75,000
   - There were 25 parcels for sale in the southeast quadrant, 17 for sale in the southwest, 28 for sale in the northeast and 12 for sale in the northwest.

2. Tallahassee and Leon County have a lack of quality, affordable housing available for working class households.

   The rapid increase in housing prices experienced here and throughout the state, has resulted in a lack of affordable workforce housing. While many factors have contributed in Tallahassee and Leon County, clearly, the escalating price of land is a key component.

3. Comprehensive Plan Policies discouraging urban sprawl and encouraging in-fill development are showing some signs of success.

   Comprehensive Plan policies, which direct growth inward and encourage urban in-fill, are beginning to succeed. The average number of dwelling units inside the USA has increased from 1.6 units per acre in 1992 to 2.5 units per acre in 2002. The density of single-family houses outside the USA has not changed (0.36 dwelling units per acre). These policies (along with other factors) have result in a more efficient pattern of land utilization inside the USA. Policy recommendations by this Committee support this trend.

4. A significant disparity exists between "actual" and "allowed" development density.

   While the Comprehensive Plan's policies have contributed to increasing development density inside the USA, there is still a significant disparity between "allowed" and "actual" density (See Figure 1). One of the primary explanations is the critical need for regulatory reform to remove the impediments to achieving maximum "allowed" densities. These reforms, addressed in the Recommendations section of this report, are crucial for reducing sprawl and encouraging infill development that takes advantage of existing infrastructure in areas best suited for residential growth.

5. Design standards must be developed to ensure quality development that enhances existing neighborhoods.

   As infill development occurs and residential densities increase inside the USA, design standards must be developed and implemented to ensure quality development that protects the character of existing neighborhoods.

Recommendations

The Committee has developed a series of recommendations to address the lack of available and affordable land for residential development in Tallahassee and Leon County. Two objectives underlie these recommendations:

- Increase opportunities for infill development.
- Amend the USA boundary to enhance opportunities for residential development consistent with the intent of *Blueprint 2000* and the Southern Strategy.

The following recommendations are divided into several categories including regulatory reforms, land use changes, private sector initiatives, and *Blueprint 2000* recommendations.

A. Regulatory Reform Recommendations

The Committee requests that the City and County Commissions ask the Tallahassee-Leon County Planning Department to act on the regulatory reform recommendations as soon as possible.

1. Traffic Concurrency Exemptions. One of the Committee's goals is to increase the number of residential lots available inside the USA. Currently, the lack of available transportation concurrency is a major factor constraining such development in many areas designated for urban development. By limiting development potential, transportation concurrency requirements increase the demand for, and price of, residential land in urban areas and cause pressure to increase development in outlying areas. Therefore, the Committee recommends providing traffic concurrency exemptions for residential development inside the USA and in the Woodville Rural Community.

   The Committee recognizes that this change may result in increased congestion. However, de minimis development also continues to erode the level of service. As part of a long-term strategy to address transportation needs in the community, the committee also recommends:

   - Promoting alternate forms of transportation, such as transit, cycling, and walking, in urban areas.
   - Incorporating design standards for urban development that compliment the use of these forms of transportation.

2. Reduce or Eliminate Minimum Lot Sizes for Residential Uses. The Committee recommends revising development regulations that prohibit development from achieving maximum densities as allowed in the code by reducing or eliminating minimum lot size for residential uses in RA, R-1, R-2, R-3, R-4, and R-5 for, Central Urban, University Transition, and Downtown zoning districts. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

3. Allow Use of Small-Scale Amendments. The Committee recommends creating a new residential Future Land Use Category (FLUC) that would allow for small-scale amendments from Residential Preservation to a new category, up to six or eight dwellings units. Attached housing would be allowed in the new category. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

4. Create a New County RP Zoning District that corrects a Mapping Error. The Committee recommends creating a new County RP zoning district that corrects a mapping error and allows densities of up to six dwelling units per acre and rezoning 400 acres in metes and bounds properties to the new zoning district. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

5. Establish Minimum Development Densities. The Committee recommends establishing a minimum development density in the R-3 zoning category. Implementation can be achieved through revising the existing category or by creating a new zoning category (e.g. Urban Residential Three). This concept can be expanded to other residential zoning categories as appropriate. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

6. Implement Design Standards Concurrent with Minimum Densities. The Committee recommends implementing design standards concurrently with minimum densities to ensure that new development is compatible with and enhances existing residential development. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

7. Implement Conservation Subdivision Concept. The Committee recommends amending the County land development code subdivision regulations to implement the Conservation Subdivision concept, except in the Rural Future Land Use Category. (See Regulatory Reform Subcommittee Report in Technical Appendix for additional information and recommended actions.)

8. Revise Public Works Standards. Public work standards have dramatically raised the cost of developing land. The Committee recommends: revising public works standards to meet public needs while decreasing the cost and environmental impact of such standards; providing for community review of proposed City public work standards prior to final adoption; and provide City public work standards to the County for review and incorporation into County standards as appropriate.

9. Develop Urban Performance Design Standard. Create a design standard, similar to a Planned Unit Development, but with no existing standards applying that encourages developers to create communities that are free from current "cookie cutter" standards as long as they can prove that they meet community standards.

10. Review the Current Ordinance on Significant Slope Standards. Review the current ordinance on significant slopes for applicability to residential development inside the Urban Service Area.

phased approach
reconsider

B. Land Use Change Recommendations

1. Woodville Rural Community.
   In recognition of recent site specific re-zoning in Woodville, the community now has the regulatory mechanism to support development that is more intensive. What is lacking, however, is the necessary infrastructure.

   Recommended Action
   In light of anticipated future growth and consistent with efforts to encourage future growth in southern Leon County, the Committee recommends that Leon County apply for the expansion of sewer service to the Woodville community. The Committee also recommends that density in Woodville be increased from four to six units per acre with clustering allowed and minimum development densities established to ensure the efficient utilization of land and community services. Finally, the Committee recommends that Leon County and the City of Tallahassee jointly undertake a corridor design study on Woodville Highway from Capital Circle to the Wakulla County line to create a plan to protect and enhance the character and capacity of the roadway and Woodville through innovative planning techniques and design criteria.

2. St. Joe Land Development Company.
   The Committee recommends extending the USA boundary to include approximately 4,500 acres of land currently zoned Rural and located south of Apalachee Parkway, north of Tram Road, west of Williams Road and east of Southwood Plantation Road (See Map in Technical Appendix). While these parcels are in the *Rural* land use category, they are closer in proximity to Tallahassee's urban core and the existing USA boundary then more distant adjacent parcels with significantly higher densities. Extending the USA boundary to include these parcels will provide the opportunity for significant residential development, served by water and sewer services in the southeastern portion of Leon County.

   Recommended Action
   The Committee recommends that the City of Tallahassee and Leon County initiate this Comprehensive Plan change as soon as possible.

3. Silver Lake Road.
   The Committee recommends a land use change from *Rural* to *Urban Fringe* for approximately 500 aces of land located on Silver Lake Road, south of State Road 20 and north of Aenon Road. These lands are contiguous to parcels in the *Urban Fringe* land use category and surrounded by protected lands in the Apalachicola National Forest.

Recommended Action
The Committee recommends that Leon County initiate this Comprehensive Plan change as soon as possible.

4. Examine Future Land Use Categories Along Growth Corridors.

   In recognition of the recent expansion of the Transportation Planning Area to include eastern Gadsden and northern Wakulla Counties, local government should examine the Future Land Use categories from the USA along corridors leading to those areas.

   Recommended Action
   The Committee recommends that the Tallahassee-Leon County Planning Department, as part of the Evaluation and Appraisal Report, critically evaluate the Future Land Use categories along corridors leading to eastern Gadsden and northern Wakulla Counties. In addition, during the Evaluation and Appraisal Report process, Planning Department staff should also examine the transportation corridors to the other adjoining counties (Jefferson County and Grady and Thomas Counties in Georgia).

C. Private Sector Recommendations

1. Develop and implement a public information campaign. The Committee recommends developing and implementing a public information campaign aimed at owners of vacant property, directing them to local realtors and/or a single point of contact in local government for information on how to develop their property.

2. Seek private sector commitment to make land available for the development of affordable housing. The Committee recommends seeking a commitment from St. Joe Land Development Company officials to make land available for the development of affordable housing in Leon County's southeastern quadrant.

D. *Blueprint 2000* Recommendations

1. The Committee recommends supporting the full implementation of *Blueprint 2000*.

2. Provide developer incentives in urban areas, particularly in the Southern Strategy Area.

3. Waive permit fees for redevelopment of existing single-family housing and new development in the Southern Strategy Area.

4. In conjunction with other strategies, such as school and neighborhood improvement, provide sewer to areas designated for growth and redevelopment as part of the Southern Strategy and *Blueprint 2000* vision.

Conclusion

The Committee studied the availability and affordability of residential real estate in Leon County and the extent to which the apparent lack of availability and affordability is encouraging sprawl in neighboring counties. The Committee determined that while significant "vacant" land exists, relatively little land is finding its way to the market and can thus accurately be described as "available." The lack of land that is available is one important factor contributing to the rapidly rising price of housing in Leon County. The Committee developed a series of recommended regulatory reforms and land use changes that will maximize opportunities for infill development and provide additional opportunities for residential development consistent with the vision of *Blueprint 2000* and the Southern Strategy. Finally, the Committee is submitting this report to meet the deadline for proposed Comprehensive Plan changes during the July 2004 cycle. The Committee does not feel that we have adequately addressed the issue of housing affordability. Therefore, we will be submitting a supplemental report before the following Comprehensive Plan cycle to more fully address this important issue.

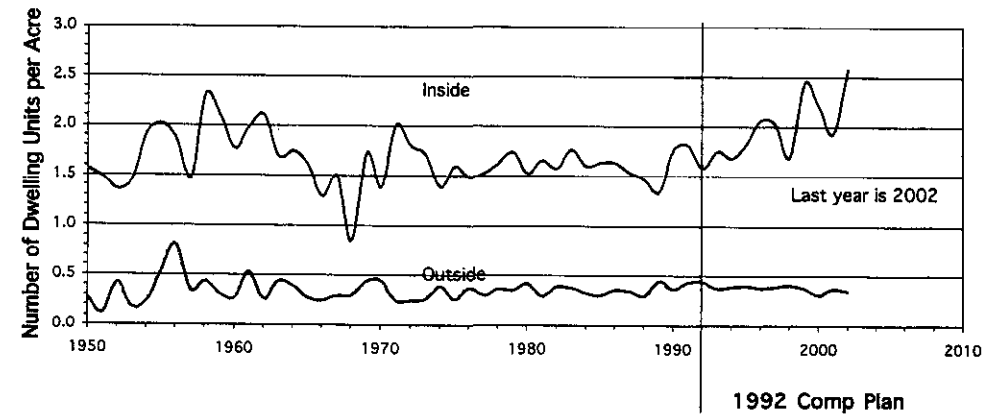
Data Analysis Summary



A. Average Annual Number of Dwelling Units Built by Decades

B. Annual Number of Single Family Units Built

C. Single Family Dwelling Units Built per Acre per Year

Res. Lot Avail. & Afford. 6/6/04

Figure 1, Legend

A. The number of dwelling units, for single family, multifamily and mobile homes and their summation is shown for each decade since 1950. The values shown are the average annual number of dwelling units for each housing type, averaged over one decade. The last point is the average for four years, 2000 through 2003.

B. The annual number of single family dwelling units (including townhouses and condominums with single tax identifications numbers) built since 1950. The last year of plotted data is 2002. Note the year at which the Comprehensive Plan policies began to be implemented.

C. The annual number of single family dwelling units (including townhouses and condominums with single tax identifications numbers) built since 1950 shown for the area inside the Urban Services Area (USA) and outside. The last year of plotted data is 2002.Note the year at which the Comprehensive Plan policies began to be implemented.

TABLE 1 LEGEND

1. SYNOPSIS OF PARCELS TYPES

The Property Appraisers tax rolls and information from the TLCPD on zoning and environmental conditions were used to determine how many parcels are available for development and the potential number of dwelling units that could be developed on these parcels. All parcels that are tax exempt were not included in this analysis. This includes all government owned land, public parks, open space, etc. All parcels that are not developable because they are SWMF, subdivision headers, subdivision open space, etc., were also eliminated from this analysis. Parcels were classified as vacant or improved depending upon whether there was any evidence in the database that a building of any type existed on the parcel. For further details on how the following classifications were done please refer to the detailed manual of analysis that accompanies the full report.

The following are the labels used in Table 1

A. RESIDENTIAL & VACANT (zoning only allows Residential)
- (1) platted (both recorded and unrecorded subdivisions)
- (2) undivided (metes and bounds property)

B. MIXED USED & VACANT (zoning allows Residential and other Uses)
- (3) PUD, CPA, TPA or DRI, platted
- (4) PUD, CPA, TPA or DRI, undivided
- (5) Bull Run (all Phases)
- (6) Southwood (Phases I and II)
- (7) Welaunee ("Toe" & "Arch")
- (8) Mixed Use zoning other than PUD, CPA, TPA or DRI, platted
- (9) Mixed Use zoning other than PUD, CPA, TPA or DRI, undivided

C. AGRICULTURAL EXEMPTION (Vacant or Improved, various zoning)
- (10) Inside the USA, parcel < 2 acres in size
- (11) Inside the USA, parcel >= 2 acres in size
- (12) Outside the USA, zoned other than Rural
- (13) Outside the USA, zoned Rural

D. RESIDENTIAL & IMPROVED (Large enough for more subdivision)
- (14) Inside the USA and >= 5 acres
- (15) Outside the USA and >= 10 acres

Subtotals are provided for each of the main classes (A, B, C, and D) and for some minor classes (inside and outside USA, etc.)

2. DEVELOPABLE ACREAGE

Developable acreage is the area of a parcel on which development can take place. Conservation easements and environmental constraints were taken into account to determine the amount of developable area for each parcel.

Conservation easements from Tall Timber Research Station were accounted for and any known others that preclude further development. If the conservation easement is part of a platted lot then the entire lot area is included as the lot is already platted for development as is.

The preservation features as defined in the Comprehensive Plan: wetlands, flood plain and steep slope were mapped and the portion of each parcel that contains these areas was computed. Most vacant parcels are free of these environmental constraints. Over 75% of all parcels did not have more than 10% of their area in such environments. The average area of environmental constraints for all developable lots that are currently improved (with houses) was 7%. The average area of environmental constraints for all vacant parcels and parcels with agricultural exemptions was 14%. Again, the vast majority of parcels (74%) had very little area in environmental constraints.

Gross density of residential development can be transferred from the undevelopable area under environmental constraints to developable area. In most cases all if not most of the gross density can be preserved on the entire parcel by such a transfer.

However, the actual amount of transfer is dependent on the specifics of the parcel and the development plan. Therefore, a very conservative adjustment was made to the acreage of each parcel by reducing the parcel size by the mean proportion of area of environmental constraints for all parcels. This results in a decrease for all parcels that is very similar to assuming the no transfer of density from undevelopable areas can ever occur, a highly unlikely scenario for most of the vacant land.

3. POTENTIAL DWELLING UNITS

The number of potential dwelling units was computed for each parcel based on the zoning of the parcel and its size (see Table 3).

DU = Density for zoning category * Developable area of parcel

The density for each zoning category was computed in three ways: 1) density as currently exists on developed land (HISTORICAL), 2) density as currently exists on land developed since 1992 (RECENT), and 3) the maximum density allowed by current zoning code (MAXIMUM). The dwelling units for the maximum density was computed using the entire area of a parcel except for conservation easements because the transfer of gross density from constrained land is allowed. Therefore, the environmentally constrained area was included for computation of MAXIMUM allowed. Density of development for 1992 could only be computed specifically for single family lots. Therefore, the historical density of development was used for non-single family zoning

categories for the computation of the potential number of dwelling units for RECENT number of potential dwelling units.

Table 2 LEGEND

Table 2 provides the distribution of vacant parcels and parcels on which further subdivision can be done as presented in Table 1. The number of parcels, the acreage of these parcels (DEVELOPABLE ACREAGE) and the number of potential dwelling units (RECENT) are divided into nine mutually exclusive locations: Urban Core (as delimited in the Comprehensive Plan), four quadrates by two categories of inside or outside the USA.

The values in Table 2 for the nine locations do not quite sum to the total number of potential dwelling units and developable acreage because the locations of two parcels relative to the USA boundary were missing.

Table 3 LEGEND

Table 3 contains the list of zoning categories used for the residential vacancy analysis as shown in Table 1. Zoning categories that do not allow residential development are not listed. Column contain: abbreviation and description of zoning or future land use category, types of allowed uses, and the densities (dwelling units per acre) of residential development used for the computation of potential dwelling units on vacant land. See Table 1 for further description on how these were determined. Types of uses allowed are abbreviated as follows: "mixed", residential and nonresidential uses; "res only", residential use only; "SF", single family housing included townhouses and duplexes with individual parcel tax identification numbers; "MF", multifamily housing.

Attachment C

Regulatory Reform Sub-Committee Report

Attachment # 1
Page 25 of 35

June 22, 2004
REPORT OF THE REGULATORY REFORM SUBCOMMITTEE

The Regulatory Reform Subcommittee reviewed city and county regulations in an effort to identify changes to the Comprehensive Plan and Land Development Regulations that would help increase the supply of residential lot, particularly affordable lots. The following people were part of this subcommittee:

Wendy Grey, chair*
Dwight Arnold
Tom Berger*
Rick Fausone*
Neil Fleckenstein*
Rick Geshwiler*
Jean Gregory
David McDevitt
Wade Pitt

* These subcommittee members are also member of the Full Committee

The following are the recommendation of the subcommittee.

Recommendation #1: Facilitate the development of a variety of residential housing types.

Problem: The Mixed Use future land use category as currently adopted is not eligible for use the small scale Comprehensive Plan amendment process. Land owners have wanted to change from Residential Preservation to Mixed Use not necessarily for higher density, but because they want to build attached houses, which are not permitted in RP. To do this, the property owner must now go through a large scale amendment process which takes close to one year.

(Note: The small scale amendment process can only be used for a category that has a defined density of less than 10 dwelling units per acre. There are further limitations that the individual parcel may not exceed 10 acres in size and a maximum of 80 acres may be approved annually through the small scale process.)

Solution: Expand use of the small scale amendment process and create a new Residential future land use category. Applicants would submit twice a year in January & July as they do now for large scale amendments. The small scale amendment would go through the same process as a large scale amendment (LPA public hearing and voting, City/County Commission public hearings and workshops), except at the Transmittal Hearing the small scale amendments

would be voted up or down in a final action. These amendments would become effective 30 days later. This would cut approximately 3-4 months off the approval process for an amendment.

Action: The City and County Commissions direct staff to write a future land use category that limits residential density to a maximum of 10 dwelling units/acre. This category should be introduced in the July amendment cycle.

Problem: Minimum lot sizes in Future Land Use Categories such as Urban Fringe do not allow for smaller lots sizes while preserving the low density character.

Solution: The City & County Commissions are scheduled to adopt a plan amendment on May 11, 2004 that will allow for the establishment of Conservation Subdivisions within the Urban Fringe Land Use category. Other categories, other than Rural, may be added without a Comprehensive Plan amendment. Conservation Subdivisions differ from existing clustering designs in that larger percentages of property are required to be set aside under permanent development restrictions. The configuration and layout of the lots is required to respect the character of the open space. The amendment will be effective August 2004.

Actions: Amend the County land development code subdivision regulations to implement the Conservation Subdivision concept.

Recommendation #2: Address inappropriate application of compatibility requirements.

Problem: A scrivener's error pertaining to Residential Preservation in the County is resulting in much lower densities than would otherwise be achieved. The density in County RP is 0 - 6 dwelling units /acres. The County code further restricts density in RP based on the density of adjacent residential development patterns that are also RP. While this compatibility requirement is difficult for staff to implement, it seems appropriate when applied within existing subdivisions. However, this language also applies to metes and bounds properties. It is estimated that approximately 400 acres of land not within subdivisions are affected by this restriction.

Solution: Create a new County RP zoning district that allows densities of up to 6 dwelling units per acre. Rezone the 400 acres in metes and bounds properties to the new zoning district. At some later date, the County may wish to consider creating more RP zoning districts with more specificity as to allowable densities.

However, the subcommittee does not believe this change will be helpful to the mission of the committee.

Action: County Commission to direct staff to develop new zoning district. After the district is adopted, direct staff to initiate the appropriate rezonings.

Recommendation #3: Revise development regulations that prohibit development from achieving maximum densities as allowed in the code.

Problem: The City and County zoning codes both have zoning districts which could yield a greater number of available lots without exceeding the permitted maximum density of the district.

Each district is governed by gross density and by restricted lot size. The lot size based on gross density does not take into account the loss of land for infrastructure (e.g., roads and stormwater facilities). The effect is a decrease in net density, and a reduction in the number of available lots for development.

Although a process to create smaller lots exists within the current LDC under the clustering provisions, staff advises that the clustering provision is rarely used. They believe this is in large part because it is not permitted as a straightforward "as of right" provision in the code.

Solution: Eliminate minimum lot size for residential uses in RA, R-1, R-2, R-3, R-4, and R-5 for, Central Urban, University Transition, and Downtown zoning districts. Developments will still be required to meet all other requirements (e.g., open space, stormwater, buffers, etc,) developers will have a greater degree of flexibility to achieve maximum allowable density.

Action: Amend the City and County land development codes eliminate minimum lot size and amend of other lot related requirements (e.g., setbacks) as necessary.

Problem: Public works design standards increase the cost of development and consume greater amount of land than necessary.

The subcommittee reviewed the new City Public Works Design Standards Manual, dated July 1, 2003 and has the following comments::

- From the standpoint of residential development the proposed design standards for public streets will give developers confidence that they can employ the minor local street standard (45' ROW) to serve portions of their development with 150 or less Average Daily Trips. Using standard trip generation tables

that should translate into 15 lots or less. For clarification, this standard should be restated as 15 single family units. This added flexibility should help produce a modest increase in the ability to fully utilize small parcels for development of housing.

- The road standards also differentiate between central city and suburban standards. The text also states that flexibility in application of these standards will be necessary for implementation in redevelopment. Both of these intents should help developers realize greater utilization of vacant, semi-vacant and redeveloping properties.

- The stormwater design standards present a unique challenge. There is a significant cost associated with long term maintenance of these facilities, therefore the standards are rigid. Regional stormwater facilities are needed to serve development and redevelopment within the Urban Service Area. The continued reliance upon project by project ponds is wasteful of valuable real estate and in the long term significantly increases the proportion of governmental spent on maintenance. Where regional facilities are not possible, more flexibility needs to be provided to developers regarding the design of stormwater ponds that meet adopted standards.

Solution: Revise public works standards to meet public needs while decreasing the cost and environmental impact of such standards.

Actions: Provide for development community review of proposed city public work standards prior to final adoption.

The City should provide final standards to the County for review and incorporation into County standards as appropriate.

Recommendation #4: Expand the use of minimum densities to maximize use of urban land.

Problem: Residential development often occurs at densities lower than those called for in comprehensive plans. For example, in Tallahassee, R-3 zoning has a maximum density of eight dwelling units per acre. However, the historical density in R-3 zones is 2.14 dwelling units per acre. Minimum density zoning is used as a means to allocate land use inside an urban service area more efficiently by requiring development to be at or near planned densities. Note that minimum densities are currently applied to Medium Density zoning without apparent problems.

Solution: Increase densities in urban areas by expanding the use of minimum zoning to other residential districts. Ensure quality design through the use of design standards. (Note that Recommendation # 3 is also related to achieving this solution.)

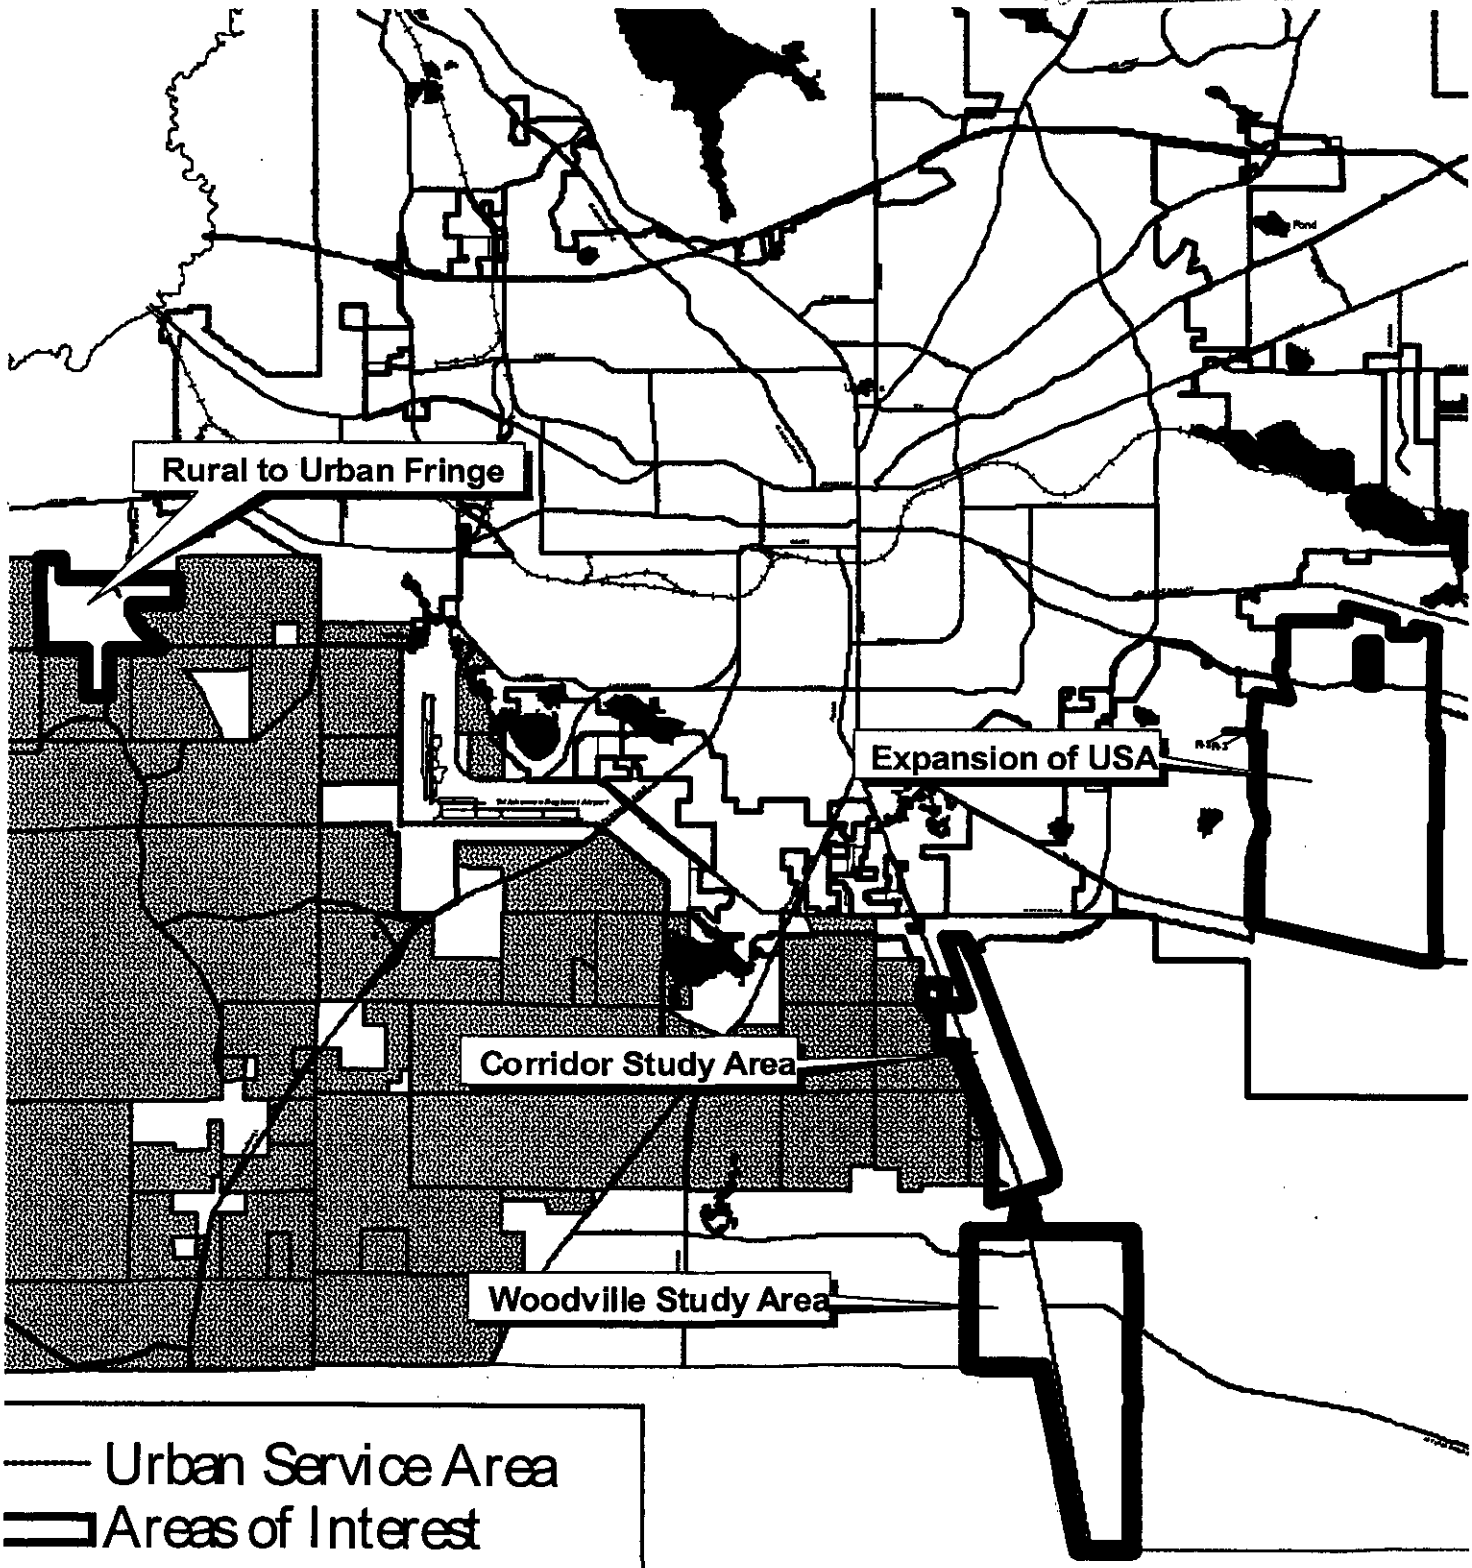
Actions:

1. Establish minimum densities in the R-3 zoning category. Implementation can be achieved through revising the existing categories or by creating a new zoning category (e.g. Urban Residential 3 and Urban Residential 4). Work closely with the development community to develop density guidelines and other program requirements that will be acceptable to the market.
2. Implement design standards concurrently with minimum densities to ensure that new is compatible with and enhances existing residential development.

Recommendation #5: In conjunction with other strategies, such as school and neighborhood improvement, provide sewer to areas designated for growth and redevelopment as part of the Southern Strategy and Blueprint 2000 vision.

Problem: Provision of sewer follows individual project demand and does not necessarily support the vision for the community. While do a large extent the provision of sewer is market driven, the City, County, and School Board are making major financial investments of taxpayers' dollars to promote the quality of life in the Southern Strategy Area. These investments should be supported and given an opportunity to show results. The City is undertaken an effort to develop a plan for the expansion of sewer system that is consistent with long term planning objectives.

Solution: The City, in coordination with the County, the development community and the environmental community, should continue the development of a long range sewer plan consistent with community goals and market demand. In addition to promoting development of the Southern Strategy, consideration should be given to providing sewer to the Woodville Rural Community.



Action: The City should develop a work plan and schedule to complete the development of the long range sewer plan.

LEON COUNTY GOVERNMENT
People Focused. Performance Driven.

Business Impact Estimate

In accordance with Section 125.66(3)(a), Florida Statutes (F.S.), a Business Impact Estimate (BIE) is required to be: 1) prepared before enacting certain ordinances and 2) posted on Leon County's website no later than the date the notice of intent to consider the proposed ordinance is advertised (which, per Section 125.66(2)(a), F.S., is at least ten (10) days before the Public Hearing).

Proposed Ordinance's title in full:

AN ORDINANCE OF THE BOARD OF COUNTY COMMISSIONERS OF LEON COUNTY, FLORIDA, AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM, MOBILITY ELEMENT, AND GLOSSARY; PROVIDING FOR APPLICABILITY AND EFFECT; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; PROVIDING FOR A COPY TO BE ON FILE WITH THE TALLAHASSEE-LEON COUNTY PLANNING DEPARTMENT; AND PROVIDING FOR AN EFFECTIVE DATE.

Proposed Ordinance Public Hearing Date: December 9, 2025

Pursuant to Section 125.66(3)(c), F.S., the following types of ordinances are exempt from the BIE requirement. As such, if one or more boxes are checked below, Leon County, Florida, believes that a BIE is not required by state law for the proposed ordinance referenced above. Leon County, Florida, reserves the right to revise this BIE following an initial posting.

☐ The proposed ordinance is required for compliance with Federal or State law or regulation;

☐ The proposed ordinance relates to the issuance or refinancing of debt;

☐ The proposed ordinance relates to the adoption of budgets or budget amendments, including revenue sources necessary to fund the budget;

☐ The proposed ordinance is required to implement a contract or an agreement, including, but not limited to, any Federal, State, local, or private grant, or other financial assistance accepted by a county government;

☐ The proposed ordinance is an emergency ordinance;

☐ The proposed ordinance relates to procurement; or

☐ The proposed ordinance is enacted to implement the following:

a. Development orders and development permits, as those terms are defined in Section 163.3164, F.S., and development agreements, as authorized by the Florida Local Government Development Agreement Act under Sections 163.3220 – 163.3243, F.S.;

b. Comprehensive plan amendments and land development regulation amendments initiated by an application by a private party other than the County;
c. Sections 190.005 and 190.046, F.S., regarding community development districts;
d. Section 553.73, F.S., relating to the Florida Building Code; or
e. Section 633.202, F.S., relating to the *Florida Fire Prevention Code*.

In accordance with Florida law Leon County, Florida, hereby posts the following BIE information for this proposed Ordinance on its website for public viewing and consideration on this 25th day of November, 2025:

1. Summary of the proposed ordinance (must include statement of the public purpose, such as serving the public health, safety, morals, and welfare):

The proposed ordinance revises the joint 2030 Tallahassee-Leon County Comprehensive Plan. Proposed amendments are to the Tallahassee-Leon County 2030 Comprehensive Plan to consolidate the Future Land Use and Mobility Elements into the Land Use and Mobility Element including replacement of the: A. Land Use Element text and maps, including the Future Land Use Map and Addendum; and B. Mobility Element text and maps; and revisions to the plan's Glossary of terms. The amendments serve the public purpose by providing an update to the comprehensive plan to reflect community priorities and best practices that meet planning goals. Additionally, the amendments are intended to meet the statutory requirements of Chapter 163.3177, F.S., for the Future Land Use and Transportation Elements of the comprehensive plan.

2. Estimate of direct economic impact of the proposed ordinance on private, for-profit businesses in the county, including the following (if any):

a.) Estimate of direct compliance costs that businesses may reasonably incur if the ordinance is enacted: None.

b.) Any new charge or fee imposed by the proposed ordinance for which businesses will be financially responsible: None.

c.) Estimate of Leon County's regulatory costs, including estimated revenues from any new charges or fees to cover such costs: None.

3. Good faith estimate of the number of businesses likely to be impacted by the proposed Ordinance:

No existing businesses are impacted by the proposed amendments.

4. Additional information Leon County deems necessary (if any): None.

Land Use and Mobility Element Update

CITY OF TALLAHASSEE
BUSINESS IMPACT ESTIMATE

The following Business Impact Estimate was prepared pursuant to s. 166.041(4), F.S., to address the proposed impact of City Ordinance No. 25-0-02AA.

Summary of Proposed Ordinance

Summarize the proposed ordinance and include a statement of public purpose to be served by the ordinance, such as serving the public health, safety, morals and welfare of the City and Leon County:
Ordinance 25-O-02AA revises the joint 2030 Tallahassee-Leon County Comprehensive Plan. Proposed amendments are to the Land Use Element including the Future Land Use Map and addendum; Mobility Element; and Glossary. The proposed amendments to the Tallahassee-Leon County 2030 Comprehensive Plan are to consolidate the Future Land Use and Mobility Elements into the Land Use and Mobility Element including replacement of the: A. Land Use Element text and maps, including the Future Land Use Map and Addendum; and B. Mobility Element text and maps; and revisions to the plan's Glossary of terms. The amendments serve the public purpose by providing an update to the comprehensive plan to reflect community priorities and best practices that meet planning goals. Additionally, the amendments are intended to meet the statutory requirements of Chapter 163.3177, F.S., for the Future Land Use and Transportation Elements of the comprehensive plan.

Estimate of Direct Economic Impact of Proposed Ordinance

1. Will the proposed ordinance require local, private, for-profit businesses to incur any **direct compliance costs**?

   Yes or **No**

   If yes, what are the estimated direct compliance costs? _____

2. Does the proposed ordinance impose any **new charge or fee** on local businesses or impose any new charge or fee for which local businesses will be financially responsible?

   Yes or **No**

   If yes, what is the charge or fee?

3. Will the proposed ordinance impact the **City's or County's revenues or costs**?

   Yes or **No**
   The amendments are not proposing impacts to the City or County revenue structure.

If yes, provide an estimate of the impact, including the revenue from any new charge or fee:

4. Provide an estimate of the number of businesses impacted by the proposed ordinance: No existing businesses are impacted by the proposed amendments. Future businesses may benefit from flexibility in location.

5. Provide any additional, useful information about the proposed ordinance: None.

NOTICE OF COMPREHENSIVE PLAN UPDATE ADOPTION PUBLIC HEARING

Notice is hereby given that the Board of County Commissioners of Leon County, Florida (the "County") will conduct a public hearing on Tuesday, December 9, 2025, at 6:00 pm, or as soon thereafter as such matter may be heard, at the County Commission Chambers, 5th Floor, Leon County Courthouse, 301 South Monroe Street, Tallahassee, Florida, to consider adoption of the ordinance entitled to wit:

LEON COUNTY ORDINANCE NO. _____

AN ORDINANCE OF THE BOARD OF COUNTY COMMISSIONERS OF LEON COUNTY, FLORIDA, AMENDING THE 2030 TALLAHASSEE-LEON COUNTY COMPREHENSIVE PLAN; ADOPTING AMENDMENTS TO THE LAND USE ELEMENT INCLUDING THE FUTURE LAND USE MAP AND ADDENDUM; MOBILITY ELEMENT; AND GLOSSARY; PROVIDING APPLICABILITY AND EFFECT; PROVIDING FOR CONFLICTS; PROVIDING FOR SEVERABILITY; PROVIDING FOR A COPY TO BE ON FILE WITH THE TALLAHASSEE-LEON COUNTY PLANNING DEPARTMENT; AND PROVIDING FOR AN EFFECTIVE DATE.

Amendments meet the requirements of Chapter 163.3177, F.S., for the Future Land Use and Transportation Elements of the comprehensive plan.

Applicant: Tallahassee-Leon County Planning Department

The proposed amendments consist of:

1. Consolidation of the Future Land Use and Mobility Elements into the Land Use and Mobility Element.
2. Replacement of the Land Use Element text and maps, including the Future Land Use Map and Addendum.
3. Replacement of the Mobility Element text and maps.
4. Revisions to the Glossary of terms.

The proposed comprehensive plan update amendments are available at https://www.compplantlc.com/. For more information, contact the Planning Department at (850) 891-6400.

Leon County will also broadcast the public hearing on Comcast channel 16, the Leon County Florida channel on Roku, and the County's Facebook page (https://www.facebook.com/LeonCountyFL/), YouTube channel (https://www.youtube.com/user/LeonCountyFL), and web site (www.LeonCountyFL.gov).

All interested parties are invited to present their comments at the public hearing at the time and place set out above.

Interested parties may also provide virtual real-time public comments during the public hearing. After the Board of County Commissioner's agenda is posted online, interested parties wishing to provide virtual real-time public comments must complete and submit the registration form provided at https://www2.leoncountyfl.gov/coadmin/agenda/ by 8:00 p.m. on Monday, December 8, 2025. Following submittal of the registration form, further instructions for participating in the meeting will be provided. Persons needing assistance with registering or providing real-time comments may contact County Administration via telephone at (850) 606-5300. Please note that Board of County Commissioners Policy 01-05, Article IX., Section E., entitled "Addressing the Board," and Article IX., Section F., entitled "Decorum," shall remain in full force and effect.

Anyone wishing to appeal the action of the Board with regard to this matter will need a record of the proceedings and should ensure that a verbatim record is made. Such record should include the testimony and evidence upon which the appeal is to be based, pursuant to Section 286.0105, Florida Statutes.

In accordance with the Americans with Disabilities Act and Section 286.26, Florida Statutes, persons needing a special accommodation to participate in this proceeding should contact Mathieu Cavell or Facilities Management, Leon County Courthouse, 301 South Monroe Street, Tallahassee, Florida 32301 or CMR@leoncountyfl.gov, by written request at least 48 hours prior to the proceeding. Telephone: 850-606-5300 or 850-606-5000; 1-800-955-8771 (TTY), 1-800-955-8770 (Voice), or 711 via Florida Relay Service.

4. Revisions to the Glossary of terms .

The proposed comprehensive plan update amendments are available at https://www.compplantlc.com/. For more information, contact the Planning Department at (850) 891-6400. Interested parties may appear at the meeting and be heard with respect to the proposed ordinance.

If a person decides to appeal any decision made by the City Commission with respect to any matter considered at such meeting, they will need a record of the proceedings and should ensure that a verbatim record of the proceedings is made, which record includes the testimony and evidence upon which the appeal is to be based.

A copy of the said ordinance for the comprehensive plan update may be inspected in the Office of the Treasurer- Clerk, City Hall, 300 S. Adams Street, Tallahassee, FL or by calling (850) 891-8130. A copy is also available online at: https://go.boarddocs.com/fla/talgov/Board.nsf/Public
In accordance with the provisions of the American with Disabilities Act (ADA), any person requiring special accommodations at the hearing or meeting because of a disability or physical impairment should contact the City Treasurer-Clerk's Office during business hours at 850-891-8130. Requests should be submitted at least two business days prior to the meeting. For those who are hearing or speech impaired, please contact the Florida Relay Service by dialing 7-1-1, or (800) 955-8771 (TTY), or (800) 955-8770 (Voice) for aid in contacting our Office.
